According to al-Yaʿḳūbī, the *mulūk al-ṭawāʾif* were not Madjūs [*q.v.*] but Ṣābiʾans who worshipped the sun, moon, fire, and the seven planets, and spoke and wrote Aramaic. Al-Thaʿālibī claims that Akfūrshāh recovered the *dirafsh-i Kāwiyān* [see KĀWAH] and books on medicine, astronomy, and philosophy that al-Iskandar had taken from Iran. Nearly 70 books, including *Kalīla wa-Dimna* [*q.v.*] and *Sindbad*, are said to have been composed in this period. The prophetic careers of Yaḥyā b. Zakariyyāʾ and ʿĪsā b. Maryam are integrated with Ashkānī history by Muslim historians. The claim that a king called Khardūs attacked Jerusalem to punish the Israelites for killing Yaḥyā may reflect the capture of Jerusalem in 40 B.C. by Pacorus, the son of Orodes II, 266 years before the accession of Ardashīr. The version in which Djūdharz b. Ashkān attacked the Israelites for killing Yaḥyā may reflect the massacre of the Jews of Seleucia in *ca.* 40 A.D. during the civil war between Gotarzes and Vardanes. Otherwise, they report that Titus destroyed the Bayt al-Maḳdis. The image of the period of the *mulūk al-ṭawāʾif* as a time of anarchy and cultural decay seems to be late Sasanian propaganda and may have contributed to Ṣāʿid al-Andalusī's comparison that after the Banū Umayya, al-Andalus was divided among a number of rulers "whose condition was like that of the *mulūk al-ṭawāʾif* of the Persians" (see 2. below).

2. In Muslim Spain.

Hispanised as *reyes de taifas*, and often used in this form in French and English, this phrase denoted the rulers of the states in al-Andalus between the fall of the Manṣūrid dictatorship which dominated the Umayyad caliph Hishām II of Cordova [see ḲURṬUBA] in 399/1009 and the invasions of the Almoravids at the end of the 5th/11th century. The immediate stimuli of this sharp political change lay in a combination of an unpopular dictator, his absence from the capital, and an Umayyad prince ambitious to recover power in the state for his own house, but other, more fundamental weaknesses in the structure of the Umayyad state in al-Andalus had helped to prepare the ground for the collapse. The metropolitan revolution successfully rid al-Andalus of the Manṣūrids, but simultaneously inaugurated some twenty years of Umayyad and other coups and revolts which finally destroyed the unity and cohesion of the state as a whole, and the caliphal institution with it.

The earliest taifas appear to have emerged by 403/1013 (Almeria [see AL-MARIYYA], Badajoz [see BAṬALYAWS], Denia [see DĀNIYA], Granada [see GHARNĀṬA], Huelva (Awnaba)-Saltes [see SHALTĪSH]), and possibly even before that date; one taifa, Saragossa [see SARAḲUSTA], lasted until the early years of the 6th/12th century before being first absorbed into the Almoravid empire [see AL-MURĀBIṬŪN] and then reconquered by Christian Spain.

The taifa states were of different types: some were set up, in the main on the Mediterranean seaboard, by so-called "Slavs" (A. *ṣaḳāliba* [*q.v.*]) expelled from Cordova in the immediate aftermath of the fall of the Manṣūrids; others (like Malaga [see MĀLAḲA] and Granada) represented attempts by recently imported groups of Berbers to establish states for themselves as a means to securing their future in the peninsula; others again, with Seville [see ISHBĪLIYYA] pre-eminent in this group, were ruled by local Muslims, who may be regarded as Arabs or Andalusians (for their ethnic identification, see the discussions by Guichard, Glick and Wasserstein listed in the *Bibl.*), who resented the imposition under the later Umayyads and the Manṣūrids of alien rule by "Slavs" and Berbers. Toledo [see ṬULAYṬULA], ruled by an Arabised family of distant Berber origin long settled in the peninsula, falls similarly into this category.

Until 422/1031 a unified peninsular state under an Umayyad caliph (whether as actual ruler or as a figurehead) was the aim of the main contenders of power, but the disappearance of the caliphal institution in Cordova at that time marked a recognition that this was no longer a possibility, although some states, notably Seville, continued to maintain a caliphal fiction and to aim at power beyond their own immediate neighbourhoods. Around forty taifa states are known (see Wasserstein, *Rise and fall*, 83-99 for lists of states and rulers), of which Toledo, Saragossa and Seville were the most important, ruled respectively by the Dhu 'l-Nūnid, Hūdid and ʿAbbādid dynasties [*q.vv.*]. Each of these had a solid economic base in agriculture, while other states, mainly on the eastern coast, had economies based on extensive maritime trade. Many states were simply the products of an energetic local leader and a city not yet dominated by one of its larger neighbours. As the century wore on, in consequence, many of the smaller and weaker states were absorbed by others; Seville was the most successful state in this respect, and eventually came to be that state which more than any other entertained some realistic ambition to reunite the territories in the peninsula formerly subject to the Umayyads.

Ethnically, the taifas were fairly mixed, but some, such as Granada and Málaga, or the small eastern coastal states, as well as Seville, were characterised by the dominance of one particular ethnic group, and the ethnic factor remained significant in taifa politics until mid-century. Thereafter it tended to become attenuated, reflecting the real political and military strengths and concerns of the members of the taifa system. Most of the taifas had minorities of Jews and Christians; though the sizes of these communities, like those of the populations as a whole, can only be guessed at, they seem to have formed relatively small elements in the overall population (about whose size there is no reliable information); the Christians appear to have been declining, both in numbers and in importance. For the Jews, by contrast, the taifa period marked a significant advance. Under the Umayyads the Jews had enjoyed tolerance and some economic well-being; but in the fissiparous political system of the 5th/11th century they entered upon an era of flourishing development, culturally as well as in other ways, and in a number of states, most notably Granada, Jews also played a variety of roles in government and politics, sometimes as a group, more often through individuals who rose to high office.

Culturally, the taifa period saw al-Andalus come of age. The large number of individual states, each of which sought to emulate the courts of the Umayyads and the Manṣūrids of the past, encouraged literary and artistic creativity as likely to magnify their achievements and perpetuate the memories of their petty dynasts. In some states a ruler was noted for public works (e.g., in Almeria, where an early "Slav" ruler, Khayrān, was remembered for his improvements to the local water supply), while in others, works of lesser immediate utility were constructed for rulers anxious to secure a well-founded reputation for patronage (e.g. Toledo, where the Dhu 'l-Nūnids

supported the building of a famous water-clock, said to have been taken apart under the later Christian rulers of the city in an attempt to discover its workings). Some rulers devoted considerable energy and resources to the building of mosques, as in Seville, where we have a good deal of information on the religious architectural activity of the dynasty.

On the literary side, the taifas were extremely productive. We possess great amounts of poetry from this period, thanks in part to the great anthologies, both contemporary and later, produced in al-Andalus. The basic study of this material remains that of Pérès (see *Bibl.*); the poetry of the last ʿAbbādid king of Seville, al-Muʿtamid [*q.v.*], has been made the subject of a detailed literary study recently, by Scheindlin, in an attempt to found a sounder understanding of such poetry on literary terms. Much of this poetry is, understandably, a product of the political and social circumstances of the time; thus we have long panegyrics of the most obscure taifa rulers and their courtiers (the Jewish poets, writing in Hebrew, produced much similar, parallel work), and all the other genres of Arabic poetry are represented as well. In the *zadjal* and the *muwashshaḥāt* [*q.vv.*], the Andalusians broke new ground, introducing strophic structures and also non-classical Arabic linguistic forms, as well as Romance expressions, into the standard repertory of Arabic literary canons and tastes.

The biographical dictionaries, which provide virtually complete chronological cover for Andalusian history from the conquest right up to the 9th/15th century, show us the integration of the *muwalladūn* into Andalusian society (and probably, in fact, their takeover of it) as well as the range of subjects and individual texts studied and/or available in al-Andalus at this time. On this basis, we can see that al-Andalus enjoyed access to the entire cultural production of the central areas of the Islamic world, and also contributed to it. Scholars, pilgrims and merchants travelled to the East, and returned to maintain and deepen Andalusian contact and integration with the Islamic heartlands.

Despite the internal political divisions, al-Andalus remained culturally and religiously a unity. Mālikism remained the norm, with other schools of law represented only in scholarship. Probably the best-known religious scholar (and polemicist) of the time was Ibn Ḥazm [*q.v.*] but as a Ẓāhirī (and a failed political careerist) he had little real or lasting influence during his own lifetime; his posthumous fame rests mainly on his *Fiṣal*, regarded widely though inaccurately as an early study in comparative religion. Scholars and littérateurs moved easily and frequently between rival states and rulers, and culture in general (and scholarship along with it) benefited from the competition between these different patrons. Besides Ibn Ḥazm, writers of note in this period include the historians Ibn Ḥayyān [*q.v.*] and Ṣāʿid [*q.v.*] of Toledo, as well as the last Zīrid ruler of Granada, ʿAbd Allāh b. Buluggīn [*q.v.*], whose memoirs were discovered fifty years ago by Lévi-Provençal; the religious scholars Ibn ʿAbd al-Barr and Abū ʿAmr al-Dānī [*q.vv.*], the latter of whom belonged to a veritable school of *ḳirāʾāt* scholars supported by the "Slav" ruler Mudjāhid of Denia; the medical scholars of the Ibn Zuhr [*q.v.*] family, and many others.

By the second half of the 5th/11th century, the taifa system was coming under increased strain. It was being squeezed between the rising power of the revivalist movement of the Almoravids in North Africa and the awakening strength of Christian Spain, expressed not only in military, political and economic pressure on the taifa states themselves but also in an increasingly assertive and potent religious and ideological claim to the whole of the peninsula. Most of the taifas found themselves paying tribute (Spanish: *parias*) to Christians, among whom the figures of Alfonso VI and the Cid stand out (the progressive debasement of the silver coinage during the century seems to be related in part to the draining of precious metals from the taifas in this way); but at the same time it remained possible for ideology to be ignored as some taifas allied themselves with Christians against other taifas.

The demands of the Christians grew steadily more burdensome as they became more aware of Muslim weaknesses; their easy takeover of Toledo in 1085 marked a great psychological, as well as military, advance for the Christians because of the city's significance as the old Visigothic capital, but the city's fall sent a tremor through al-Andalus, and the taifa rulers turned to the only possible source of salvation, the Almoravids. The latter saw in the taifa rulers dissolute and immoral tyrants, and were not slow to take advantage of their opportunity; in a swift series of campaigns, interrupted by the victory against the Christians at the battle of Sagrajas or Zallāḳa [*q.v.*] in 1086, the North Africans made away with the taifa states one by one, destroying Spanish Islamic autonomy but saving the day for Islam in the peninsula.

Bibliography: The political history of the period is covered in varying detail by R.P.A. Dozy, *Histoire des musulmans d'Espagne*, iii², Leiden 1932 (revised by E. Lévi-Provençal) (still useful); R. Menéndez Pidal, *La España del Cid*, Madrid 1929 (and many later editions) (coloured by the author's view of the centrality of the Cid); W.M. Watt, *A history of Islamic Spain*, Edinburgh 1965 (general survey); H. Monés, *Consideraciones sobre la época de los reyes de taifas*, in *Al-And.*, xxxi (1966), 305-28; J.F. Artes mozárabe* (Ars Hispaniae, III), Madrid 1951; L. Golvin, *Essai sur l'architecture religieuse musulmane. IV. L'art hispano-musulman*, Paris 1979. On language: P. Sj. van Koningsveld, *The Latin-Arabic Glossary of the Leiden University Library: a contribution to the study of Mozarabic manuscripts and literature* (Asfār, 1), Leiden 1976 (new ed. in preparation); F. Corriente, *A grammatical sketch of the Spanish Arabic dialect bundle*, Madrid 1977 (comprehensive study); C. Rabin, *Hebrew and Arabic in medieval Jewish philosophy*, in *Studies in Jewish religious and intellectual history presented to Alexander Altmann on the occasion of his seventieth birthday*, ed. S. Stein and R. Loewe, Alabama 1978, 235-45; on the *Khardjas*, see the main studies of S.M. Stern, collected in *Hispano-Arabic strophic poetry*, ed. L.P. Harvey, Oxford 1974; and, more generally (though excluding works in Arabic), R. Hitchcock, *The Kharjas, a critical bibliography*, London 1977; reliable editions of the texts are now becoming available: A. Jones, *Romance Kharjas in Andalusian Arabic Muwaššaḥ poetry. A palaeographic analysis* (Oxford Oriental Monographs, 9), Oxford 1988; see also the long series of articles on this subject by Jones and others in *La Corónica*. On poetry in Arabic, see A.R. Nykl, *Hispano-Arabic poetry and its relation with the Old Provençal Troubadours*, Baltimore 1946 (helpful survey); H. Pérès, *La poésie andalouse en arabe classique au onzième siècle²*, Paris 1953 (still basic); most importantly, R.P. Scheindlin, *Form and structure in the poetry of al-Muʿtamid Ibn ʿAbbād* (De Goeje Fund Publications, 24), Leiden 1974; on poetry in Hebrew, H. Schirmann, *Hebrew poetry in Spain and Provence²*, 2 vols., Jerusalem-Tel Aviv 1959 (texts and studies, in Hebrew); D. Pagis, *Secular poetry and poetic theory: Moses Ibn Ezra and his contemporaries*, Jerusalem 1970 (in Hebrew); Ibn Ezra's treatise on poetic theory has now been properly published, *K. al-Muḥāḍara wa 'l-mudhākara*, ed. and Hebr. tr. A.S. Halkin, Jerusalem 1975. There is still no good study on the prose writing of this period. In the area of the sciences, J. Vernet, *La cultura hispanoárabe en oriente y occidente*, Barcelona 1978, is indispensable. A survey of the source materials for the period is given in Wasserstein, *op. cit.*, ch. 1; and the international project, *Onomasticon Arabicum*, housed at the Institut de Recherche et d'Histoire des Textes, section arabe, in Paris, has a heavy concentration on the materials from the Islamic West and is now beginning to publish its results.

(D.J. WASSERSTEIN)

MUMAYYIZ [see BĀLIGH].

MUʾMIN (A.), denotes (i) one of the names of God (Ḳurʾān, LIX, 23); (ii) believer.

Muʾmin is the active participle of form IV of the root *ʾmn*. What a Muslim believer ought to believe, and what "to believe" means, is discussed in the article *īmān* [*q.v.*].

Hebrew and other Semitic languages closely related to Arabic, possess derivations of the same root *ʾmn* to express the concepts of faith and trust. It is a matter of speculation whether Arabic took over the meaning of "belief" from one of its cognate languages (and from which one), or whether in Arabic the meaning of religious belief developed independently.

In Ḳurʾān, LIX, 23, God Himself is called *muʾmin*; logic compels one to conclude that the original Arabic meaning of "someone who protects, gives safety" is here to be preferred. Similarly, *īmān* in Ḳurʾān, LIX, 9, ought to be understood as "giving mutual protection and security".

In other Ḳurʾānic contexts, it is not easy to decide whether *muʾmin* refers exclusively to those contemporaries of Muḥammad who recognised Muḥammad as the Messenger of God or whether other monotheists, e.g., the Jews of Yathrib/Medina, are being included. Also, the context of the "Constitution

of Medina", the famous treaty between Muḥammad and the inhabitants of that town, is obscure on this point.

In *ḥadīth* texts, *mu'min* occasionally refers to other varieties of belief than belief in God. These texts use expressions like *mu'min bi 'l-kawkab* (someone who believes in astrology) and *mu'min bi-siḥr* (someone who believes in magic). In *fiḳh* texts, the term may again include or exclude non-Muslim monotheists. The context, the subject matter and the usage of school of law concerned will have to indicate which of the two is the case.

In contemporary standard Arabic, *mu'min* may, in Muslim usage and especially in political contexts, almost be the opposite of *muslim*. Certainly, the religious opposition in Egypt at the end of the Sādāt era understood the term in this way. This was especially the case where *mu'min* was used in the honorific formula *al-ra'īs al-mu'min* ("the believing President"). The Sādāt régime gave this title to its leader at the very time when the religious opposition dreamed of a "Muslim ruler", a *ḥākim muslim*.

In Arabic texts written by non-Muslims for other non-Muslims, and especially in Christian Arabic, the terms occurs as well, in the meaning of "believer", with the same complexities that are involved in the use of this term in Jewish and Christian writings in other languages than Arabic.

Historians of religion and non-Muslim observers of Islam sometimes discuss the relative importance (to Muslim believers) of "having faith" and "carrying out the prescripts of Islam".

In Islam, orthopraxy is no doubt of greater practical importance than orthodoxy. The question what Islam orders a Muslim believer to believe is of little day-to-day importance when compared to the question what Islam orders a Muslim believer to do. This is reflected by the contents of Muslim religious instruction to children, and by the contents of Muslim religious magazines and journals. It is easily verifiable that the contemporary Muslim religious press devotes more space to the practical consequences of Islam and adherence to its prescripts than to the abstractions of faith and doubt. This difference between Islam and Christianity in no way reflects, as an outsider might assume, a weakness on the side of Islam; on the contrary, it may be regarded as its strength.

Bibliography: A. Jeffery, *The foreign vocabulary of the Qur'an*, Baroda 1938, 70-1; A.J. Wensinck, *Concordance...*, i, 112A-118A; J.J.G. Jansen, *The neglected duty*, New York 1986, 154; W. Montgomery Watt, *Muhammad at Medina*, Oxford 1956, 221-8; W. Cantwell Smith, *Islam in modern history*, Princeton 1957, 19-20. (J.J.G. Jansen)

MU'MIN (Mōmin), Ḥakīm Muḥammad Khān (1215-68/1800-51), Urdu poet, was born into a noble Kāshmīrī family noted for its distinguished physicians. As such, his father Ḥākim Ghulām Nabī was *persona grata* at the Mughal court. The family had been granted a *djāgīr* [*q.v.*] which was subsequently appropriated by the East India Company in exchange for a substantial pension. In due course, the poet had a share of it, and he never needed to work for a living. This background of financial independence and social status should be borne in mind in judging Mu'min as both a man and a poet.

After sowing his wild oats as a young man, he became a disciple of Sayyid Aḥmad of Rāē Brēlī [*q.v.*], whom he praised in a Djihād *mathnawī* (*Kulliyyāt*, Brēlwī, 436-8) as a worthy successor of ʿAlī, Ḥusayn and Ḥasan, saying that "the death of unbelievers is his life". But the poet did not become puritanical, and his religious views did not appear to give any particular colour to his poetry. Unlike Khwādja Mīr Dard [*q.v.*] (1719-85), whose great-granddaughter he married, he is not generally regarded as a mystical poet.

His father saw that he had the broad education befitting a man of his social station—the Islamic sciences, languages (including Persian and Arabic), literature, as well as the family profession, medicine. Mu'min was, by inclination, something of a dilettante, and studied one subject after another, whether scientific or artistic, with no thought of taking up any profession. But when he concentrated on writing, he took pleasure in using the copious specialised vocabulary which he had acquired in such subjects as medicine, mathematics, music, chess and astronomy/astrology, in order to give his poetry a particular flavour of erudition which, when combined with condensation, made some of his verse hard to follow. This has led Muhammad Sadiq (*op. cit.* in *Bibl.*, 174) to compare him with the 17th-century English poet John Donne.

His mentor in poetry was the second-rate poet Shāh Naṣīr, but he was too independent to tolerate tutelage for long. Indeed, he started to declare himself superior to all other poets, past and present—a somewhat questionable claim, seeing that Ghālib and Anīs [*q.vv.*] were his contemporaries. His published works include, in Persian, a *dīwān* and a collection of prose: but his fame rests on his Urdu *dīwān*. He was probably too much of a perfectionist to be prolific; nevertheless, his Urdu *Kulliyyāt* include examples of most forms—*ḳaṣīda*, *mathnawī* and miscellaneous other genres such as chronograms, enigmas, *rubāʿī*, *muthallath* and *mukhammas*. But he is best known for his *ghazal*; and even when he writes in other forms—as, for example, *mathnawī*—there is often a strong *ghazal* flavour.

He did not follow the normal road to fame as a poet, sc. the patronage of princes; nor did his pride endear him to other poets. Nevertheless, he attracted numerous pupils. Kalb ʿAlī Khān Fā'iḳ (*op. cit.*. in *Bibl.*, 125-91) discusses 37 of them. He also mentions a book on prosody (*Djān-i ʿarūḍ*) by him, now lost, if it ever existed. He must have been a good teacher, and he has been called the founder of a "school of poets" (Saksena, *op. cit.* in *Bibl.*, 150). But to Sadiq, 172, he represents "the most sophisticated and artificial stage in the decline of Urdu poetry". Mu'min's fame did not outlive him, despite some lip-service paid to him for his importance. But in recent years, after a century of neglect, determined efforts have been made by a handful of scholars to revive his fame (see *Bibl.*, works of Dānish and Iṣlāḥī, Fā'iḳ, Brēlwī)—with what success, it remains to be seen.

Mu'min's poetry is full of erudition, but restricted in scope, concentrating on love and beauty. His *ghazals* are generally thought to be about earthly love, though not exclusively physical. There is much despair and irony in them. He paints himself as a uniquely gifted man who is badly treated by his beloved, in particular, and by fate in general. Yet his champions see a universality in his poetry. Brēlwī concludes (*Shāʿirī*, 342) that he is purely a poet of feelings, without depth of thought or philosophy. The poet, he says, expresses human emotions to perfection in his *ghazals*, and despite his limitations, he is unique. Yet even critics favourable to him admit his love of complexity (Fā'iḳ, 344), whilst Saksena, 150, appears to attribute this complexity to "Persianisation in construction". Sadiq, 172-4, gives some examples of his condensation and allusiveness which "conceal rather

than reveal thought". Each example consists of a single verse of two hemistiches, which is almost untranslatable, and must be paraphrased and extended to give some idea of the meaning. Dānis̲h̲ and Iṣlāḥī treat this condensation rather leniently, saying (*op. cit.*, 103) "*Maḥd̲h̲ūfāt* go with his style. Some like them, others do not."

Muʾmin, then, is a controversial figure. The reasons for his neglect can be deduced from the above remarks. However, the reasons given by his champions include considerations unconnected with the qualities of his poetry; for example, Muḥammad Ḥusayn Āzād's belated inclusion and lukewarm account of him in his *Āb-i-ḥayāt* (Lahore 1297/1880), the poet's distaste for patronage, scorn for other poets, and excessive boasting. An example of the latter is his placing of his own poetry on a par with the Seven *Muʿallaḳāt* [*q.v.*] of pre-Islamic Arabic literature. It must be admitted that he was not the first Urdu poet to indulge in such boasting, but he is usually considered to have overdone it. Perhaps it might have been more easily tolerated had his own poetry had a more immediate appeal.

Muʾmin spent his whole life in Dihlī and seldom left the city. His death was caused by a fall from the upper storey of his house when the roof was being repaired. He died of his injuries some time later, but not before he had demonstrated his skill in astrology by foretelling the date of his demise in a chronogram.

Bibliography: Muʾmin's Urdu poetical *Kulliyyāt* were first published, ed. Mawlawī Karīm al-Dīn, Dihlī 1262/1846. There were various editions from 1873 onwards, published in Lucknow by the Nawal Kis̲h̲ōr press, but by the second quarter of the 20th century, copies were hard to come by. In 1943, *Dīwān-i-Muʾmin*, ed. Ḍiyā Aḥmad Badāyūnī, was published in Allāhābād. Then came *Kulliyyāt Muʾmin*, ed. ʿIbādat Brēlwī with long introduction, Karachi-Lahore 1955. See also the same editor's study of the poet in his *S̲h̲āʿirī awr s̲h̲aʿirī kī tanḳīd*, Karachi 1965, 301-42. Among favourable studies of the poet, see Iḥsān Dānis̲h̲ and ʿAbd al-Raḥmān Iṣlāḥī, *Ḥayāt-ō-s̲h̲āʿirī-yi-Muʾmin*, Dihlī 1958. A much fuller account is Kalb ʿAlī K̲h̲ān Fāʾiḳ, *Muʾmin, ḥālāt-i-zindagī awr un kē kalām par tanḳīdī naẓar*, Lahore 1961. For shorter accounts, see Ram Babu Saksena, *A history of Urdu literature*, Allahabad 1927, 148-50, and Muhammad Sadiq, *A history of Urdu literature*, London 1964, 172-5. Though unfavourable, Sadiq argues his case well, with useful quotations in Urdu and English translation, and the background of literary history is well given. Muʾmin's *ḳaṣīdas* are referred to in MADĪḤ. 4. In Urdu, at V, 961. For further bibliographical information, see Fāʾiḳ, *op. cit.* Publication details of Muʾmin's Persian works are given on p. 123.

MUʾMINIDS [see AL-MUWAḤḤIDŪN].

MŪMIYĀʾ (thus in Arabic, in Persian *mūmiyāʾī*, from *mūm*, "wax", but perhaps of Greek origin), *Mumia naturalis persica*, bitumen, mineral tar, is a solid, black, shining mineral liquid, which trickles from rock-caves. In ancient medicine, it was mainly used against lesions and fractures. It is to be distinguished from the *Mumia factitia var. humana*, the bituminous substance of the Egyptian mummies. The *Mumia naturalis*, called in Greek πισσάσφαλτος (πιττάσφαλτος), has entered the Arabic translations of Dioscurides and their commentaries as *biṣṣasfalṭus* (and vars.). *Mūmiyāʾ* was found in Persia in the first place, to a lesser extent in Syria and the Yemen, and also in the Islamic West, i.e. near Cordova, on the Atlantic coast and in the regions of the Moroccan Berber tribes. On the method of extraction, there exists a series of different, but remarkably realistic reports, above all in the works of al-Rāzī, al-Bīrūnī, al-Idrīsī, al-Suwaydī and al-Anṭākī (see *Bibl.*). A further variant of these reports, going back in the end to Dioscurides, is found in an anonymous Arabic commentary on Dioscurides, dating from the turn of the 6th/12th century and published recently (see *Bibl.*). According to this text, there were, in the mountains of the Berber Banū Makūd, rock-caves in which many birds of prey were lodging, consuming their prey there. As a result, bits of meat slip out of their grasp, remain lying around, shrink and in the end decay. In due time, the decayed meat sucks up rainwater, which forces its way through the rock-crevices and trickles out as a kind of squeezed juice (*ʿuṣāra*), which gradually solidifies and becomes *mūmiyāʾ*.

Dioscurides reports very little about the healing virtues of the πισσάσφαλτος, unlike however the Arabs, who attribute to it an extraordinary, many-sided effect. According to the sources (for references, see *Bibl.*), *mūmiyāʾ* above all allays pains originating from fractures, sprains, dislocations, lesions and pulled tendons. It is therefore occasionally called *d̲j̲abbār*, "bonesetter" (M. Steinschneider, in *WZKM*, xii [1898], 6). It also helped against headaches, migraine, facial paralysis, ear ache, angina, cough, fluttering of the heart, hiccups (*fuwāḳ*), suffocation, choking and illnesses of the spleen. *Mūmiyāʾ* was considered to be the most efficient remedy against coughing up blood, incontinence, trembling and tetanus, disturbances of the stomach and liver, ulcers of the bladder and the urethra (*iḥlīl*), against epilepsy and dizziness, dropsy, jaundice, phthisis, skin eruptions (*k̲h̲urād̲j̲*), flatulence, pains of nerves and joints, and against poison and scorpion stings. *Mūmiyāʾ* is mentioned in combination with numerous vegetable drugs which are applied in various preparations (pastes, solutions, tinctures, salves, etc.).

When the Arabs, after the conquest of Egypt, opened up the old tombs and came upon the embalmed bodies, they soon became aware that these had been treated with asphalt (*kufr*) and in that way had escaped decay. Before this, when a part of the body became ill, a juice was extracted from the corresponding part of a healthy body and used for curing purposes. This procedure now suggested the idea of cutting up embalmed, and therefore undecayed, mummies, mixing the pieces with grain, wine, balm and other ingredients, putting them in vessels, and preparing a juice from this mixture. Since the juice had been extracted from every part of the body of the mummies, it was considered to be effective as a universal medicine against all diseases (see A. Wiedemann, *Mumie als Heilmittel*, in *Zeitschrift des Vereins für rheinische und westfälische Volkskunde*, iii [1906], 1-38, esp. 2-6).

MUMTĀZ, Barkhwurdār b. Maḥmūd Turkmān Farāhī, a Persian writer, a contemporary of the Ṣafawid Sultan Ḥusayn I (1105-35/1694-1722).

At an early age, he left his native town of Farāh in Afghānistān and went to Marw, where he entered the service of the governor Aṣlān Khān. After two years, however, he left this post and became *munshī* [*q.v.*] with Ḥasan Ḳūlī Khān Shāmlū Ḳūrčī-bashī in Iṣfahān. At a banquet there at his master's house he heard a story which attracted him exceedingly. He wrote it down and it became the foundation of a great collection, the *Maḥfil-ārā*, which contained about 400 stories and consisted of a *muḳaddima*, eight *bābs* and a *khātima*. Soon afterwards he returned to Farāh, spent some time in Harāt and Mashhad and then entered the service of the *amīr* Minūčihr Khān b. Ḳārčīghāy whose duty it was to defend Darūn and Khabūshān against raids by the wild nomad tribes. His stay there was disastrous for Mumtāz, since he lost all his goods and chattels and the valuable manuscript of his *Maḥfil-ārā* during a nomad raid; he did not have another copy of it. He resolved, however, to restore the book and wrote down all the stories that he could remember a second time. Thus arose the second version of the *Maḥfil-ārā*, which consists of a *muḳaddima*, five *bābs* and a *khātima* and has come down to us under the title *Maḥbūb al-ḳulūb*. The book is written in an extravagantly artificial style. The *khātima* is the best part; it contains the celebrated story of Zībā and Raʿnā, which is very common in Persia in a simplified form in many editions from the popular presses.

Bibliography: H. Ethé, *Neupersische Litteratur*, in *GIPh*, ii, 333. A ms. of the *Maḥbūb al-ḳulūb* in Rieu, ii, 767, 1093; lith. Bombay 1852 (Edwards, *Catalogue*, 150). See also Malcolm, *History of Persia*, i, 614. (E. Berthels)

MUMTĀZ MAḤALL, wife of Shāh Djahān, and the lady for whom the Tādj Maḥall [*q.v.* and hind. vii. Architecture] was built. She was the daughter of Abu 'l-Ḥasan Āṣaf Khān, who was Nūr Djahān's brother. Her name was Ardjumand Bānū, the title Mumtāz Maḥall being conferred on her after Shāh Djahān's accession. She was his favourite wife and bore him fourteen children, seven of whom grew up. She was born in 1001/1593, married in 1021/1612, and died, at Burhānpūr in the Deccan, very shortly after the birth of a daughter in 1041/1631. She was reportedly beautiful and amiable, and Shāh Djahān loved her tenderly.

Bibliography: Khʷāfī Khān, *Muntakhab al-lubāb*, i, 459; ʿAbd al-Ḥamīd Lāhawrī, *Bādshāh-nāma*, i, 384; Manucci, *Storia do Mogor*, tr. W. Irvine; Elliot and Dowson, *History of India*, vii, 27; *Indian Magazine* (December 1913), 316. (H. Beveridge)

MUNĀDĪ (a.), active participle of the form III verb *nādā* "to call", hence crier, herald.

In the Ḳurʾān, *munādī* is used (L, 40/41) for the one who will proclaim the Last Day and give the summons to Judgement, in popular Islam usually identified with the angel Isrāfīl [*q.v.*]; in another context where one might expect it, the story of Joseph, we find instead *muʾadhdhin* used for Joseph's herald (XII, 70).

In the towns of the pre-modern Islamic world, the *munādī* or town crier performed a vital function of communication in an age when there were no newspapers or, when these did tentatively appear, they could only be read by the small, literate section of the populace. Thus in Fās, the Muslims of the town (but not the Jews of the *Mallāḥ* [*q.v.*]) had a corps of some 20 town criers under an *amīn* who acted as disseminators of information; they were not however specifically paid by the *Makhzan* [*q.v.*] but exercised other callings, e.g. that of undertakers' mutes, in order to gain their daily sustenance (R. Le Tourneau, *Fès avant le Protectorat*, Casablanca 1949, 258-9). In mediaeval Cairo, up to E.W. Lane's time, there was a *munādī 'l-Nīl* for each quarter, and he went round each day from the rising of the Nile about the time of the summer solstice until it had risen to the level of 16 *dhirāʿs* or cubits on the *Miḳyās* [*q.v.*] or Nilometer (see *The manners and customs of the modern Egyptians*, ch. xxiv "Periodical public festivals, etc."). But the ordinary *munādīs* of Cairo were agents of the *muḥtasib* [see ḥisba] and had the duty of proclaiming through the streets and markets information about price levels, the state of the coinage, etc. (A. Raymond, *Artisans et commerçants au Caire au XVIIIe siècle*, Damascus 1973-4, ii, 590); whilst in late 19th century Damascus, a member of the corporation of *munādīs* might be hired by the government to give out public announcements, or else they could be hired by private individuals to make announcements about lost children, animals, goods, etc., payment being according to results (Muḥammad Saʿīd al-Ḳāsimī, *Ḳāmūs al-ṣināʿāt al-shāmiyya/Dictionnaire des métiers damascains*, Paris-The Hague 1960, ii, 471-2, no. 399). Finally, it should be noted that, from al-Djabartī, it appears that the head of a Cairo trade corporation (*ḥirfa* [see ṣinf]) had his own *munādī* to act as his messenger and agent, the equivalent of the *čāwīsh* in Damascus (Raymond, *op. cit.*, ii, 559).

Bibliography: Given in the article. (C.E. Bosworth)

MUNĀDJĀT (a.), the verbal noun of the form III verb *nādjā* "to whisper to, talk confidentially with someone", which is used in Ḳurʾān, LVIII, 13, in this sense, and in the reciprocal form VI in LVIII, 9, 10, of the murmurs of discontent amongst the Prophet's followers, probably after the Uḥud reverse (see Nöldeke-Schwally, *G des Q*, i, 212-13).

Munādjāt becomes, however, a technical term of Muslim piety and mystical experience in the sense of "extempore prayer", as opposed to the corporate addressing of the deity in the *ṣalāt* (see Hughes, *A dictionary of Islam*, 420), and of the Ṣūfīs' communion with God; the meanings here were perhaps influenced by Ḳurʾān, XIX, 53/52, where Moses engages in confidential talk (*nadjiyyᵃⁿ*) with God on Mount Sinai. In Arabic, the Ṣūfī master al-Djunayd [*q.v.*] is said to have composed a *K. al-Munādjāt*, which has not survived, as did also Shihāb al-Dīn al-Suhrawardī [*q.v.*], whose work is in fact extant (Brockelmann, I², 565); whilst in Persian, the *Munādjāt* of ʿAbd Allāh al-Anṣārī [*q.v.*] have always been considered as an outstanding work of religious experience and of literary attainment (see A.J. Arberry, *Ansari's prayers and counsels. Transl. from the original Persian*, in *IC*, x [1936], 369-89; S. de Laugier de Beaurecueil, *EIr* art. *ʿAbdallāh al-Anṣārī*).

Bibliography (in addition to references given in the article): L. Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*², Paris 1954, 268, 290; Arberry, *The Divine Colloquy in Islam*, in *BJRL*, xxxix/1 (1956), 25. (C.E. Bosworth)

MUNADJDJIM (a.), active participle from *nadjdjama* "to observe the stars and deduce from them the state of the world". The *munadjdjim* claims to know the lot of humans and their destiny from the positions of the stars. He is the astrologer.

For a long time this noun designated both astrologer and astronomer, so close were the functions of the two. Often the court astrologer used to observe the stars scientifically and to interpret their movements for the benefit of his master. This is borne out

by the fact that, according to Djābir b. Ḥayyān, "the astrologer must be a mathematician (*riyāḍī*); he must have mastery of astronomy (*al-hay'a*); this is a part of *ʿilm al-nudjūm* (the science of the stars or astrology). For *ʿilm al-hay'a* (astronomy [*q.v.*]) is the description of the situation of the state of the sky and what it contains (*ṣūrat waḍʿ al-falak wa-mā fīhi*), whereas astrology is the "gift of the planets" (*ʿaṭā' al-kawākib*) (*K. al-Baḥth*, ms. Tandjī, fol. 98a; ms. Cârullâh, fol. 168b; cited in Sezgin, *GAS*, vii, 109).

According to the encyclopaedists, astrology is currently designated by the expression *aḥkām al-nudjūm* (Ṭashköprüzāde, *Miftāḥ al-saʿāda*, Ḥaydarābād, 1328-57/1909-37, i, 307-8) or *ʿilm al-aḥkām* Hādjdjī Khalīfa, *Kashf*, ed. Flügel, Leipzig 1835-58, i, 177 ff.), *aḥkām* being, according to this author, a name given, in the category of methods of reasoning, to the process of deducing unknown states (*al-aḥwāl al-ghaybiyya*) from known data which, in this case, are the stars in their movements, position and time. Hence the adjective *aḥkāmī* given to the astrologer who interprets the astrological signs (on the difference between astrology and astronomy, cf. S. Pinès, *The semantic distinction between the terms astronomy and astrology to al-Bīrūnī*, in *Isis*, lv (1964), 345-7; M. Ullmann, *Die Natur- und Geheimwissenschaften im Islam*, 271-8; C. A. Nallino, *Raccolta*, v, 1944, 1-2).

For astrology, the reader is referred to the art. NUDJŪM (ʿILM AL-). We will limit ourselves here to the mention of the functions of the *munadjdjim* or *aḥkāmī*.

The first is to answer the questions (*masā'il*) which are asked him by his clients concerning their everyday activities and their outcome. The methods in current use are described in the arts. DJAFR, ḤURŪF, KHAṬṬ, MALḤAMA (cf. T. Fahd, *La divination arabe*, 488-97).

The second function is to distinguish the auspicious and inauspicious astrological signs (*aḥkām*), the opportune and inopportune hours to take action, the favourable and unfavourable moment for such conduct, all in terms of the sun's position in the signs of the Zodiac and the moon in the mansions (*manāzil* [*q.v.*]) and the relations which result from them, such as opposition (*muḳābala* [*q.v.*]), lunar quarter (*tarbīʿ*) and sixth (*tasdīs*), etc. As a result of all these observations, the choice is made of the propitious moment for every action to be undertaken [see IKHTIYĀRĀT (ʿILM AL-); and cf. Fahd, *Divination*, 483-8].

The third function is, at the moment of birth, to study the omens to predict the future of the newborn. This part of astrological lore, called "genethlialogy" (cf. Fahd, *Divination*, 480), is the subject of an extensive literature entitled *Taḥwīl sinī 'l-mawālīd*, a title rendered in Latin as *Revolutiones annorum nativitatum*. In short, it is concerned with the art of preparing horoscopes, which, coming from the East, was very successful in the West (cf. F. Carmody, *La fortune de l'astrologie arabe en Europe au XVIe siècle*, in *Actas del V congreso internacional de filosofía medieval*, i, 1979, 607-12).

These three functions of the *munadjdjim* correspond to the three parts which go to make up astrology, i.e. *masā'il* (*interrogationes*), *ikhtiyārāt* (*electiones*) and *mawālīd* (*nativitates*), which will be the subject of the art. NUDJŪM.

The role of the *munadjdjim* in Arab-Islamic society is very similar to that of the astrologer in mediaeval society in Europe. It is known that the Popes themselves used to consult the astrologer of the pontifical court to choose the day of their coronation, the day for the meeting of the consistory and every important action. There was even a chair of astrology in the Sapientia (cf. C. Bezold, in Boll, *Sternglaube und Sterndeutung*, Leipzig 1926, 35-6). It was the same at the ʿAbbāsids' court in Baghdād, where astrologers were appointed who advised and accompanied the caliph (cf. Aḥmad Amīn, *Ḍuḥā 'l-Islām*, 286, citing Ibn al-ʿIbrī and al-Aṣmaʿī). In this they followed an ancestral tradition at the court of the Sāsānids. Yāḳūt, *Buldān*, iv, 645 ff., reports a story concerning Sābūr (A.D. 241-72) son of Ardashīr I who, on being advised by his astrologers of a period of pain and misery that he would have to endure, sought to determine this period and left incognito to enter the service of a village headman. He informed his ministers of his absence, asking them to come to find him at the end of this period, telling them the place and the hour. On the role of the *munadjdjim* among the ʿAbbāsid caliphs, several stories are reported in *La divination arabe*, 482 ff., and on his permanent role in Muslim societies cf. C. A. Nallino, *Raccolta*, v, 38 ff.; Ibrahim Madkour, *Astrologie en terre d'Islam*, in *Arts libéraux et philosophie au Moyen Age. Actes du quatrième congrès international de philosophie médiévale*, Montreal 1967, 1041-7.

Ullmann, *Die Natur- und-Geheimwissenschaften im Islam*, Leiden-Cologne 1972, 271-358 (*Handbuch der Orientalistik*, i, Erg. vi, 2); F. Sezgin, *GAS*, vii, Leiden 1979, 3-199; T. Fahd, *La divination arabe*, Paris 1987 (repr. of the 1966 ed. published in Leiden), 478-97; A. Kovalenko, *Magie et Islam*, diss. Strassbourg 1979, publ. 1981.

(T. FAHD)

MUNADJDJIM, BANU 'L-, name of an extensive family, whose members were active at the ʿAbbāsid court as scholars, literati and courtiers for six or seven generations, from the middle of the 2nd/8th century until the second part of the 4th/10th century.

In the sources, the following persons appear as important members of the family.

(1) ABŪ MANṢŪR ABĀN, about whose dates of life nothing is known. According to one single information (al-Marzubānī, *Muʿdjam al-shuʿarā'*, ed. Krenkow, 286), he traced his lineage back to a minister of the Sāsānid king Ardashīr. Though he remained faithful to his Zoroastrian beliefs, the caliph al-Manṣūr (d. 158/775) summoned him to the court and appointed him as his astrologer (*munadjdjim*).

It seems, however, that the family owes its later name to the ancestor's son, (2) ABŪ ʿALĪ YAḤYĀ, who professed Islam before the caliph al-Ma'mūn (d. 201/817). From that moment onwards, the family belonged to the *mawālī* [see MAWLĀ] of the ʿAbbāsids. Because of the reputation earned by Yaḥyā through his astronomical and astrological studies, made under the guidance of his father and in collaboration with the vizier Faḍl b. Sahl [*q.v.*], al-Ma'mūn assigned to him, in a leading position, tasks which resulted from his own scientific endeavours. Together with others he established in 215-7/830-2 observatories [see MARṢAD] in the Shammāsiyya district in Baghdād and on the Djabal Ḳāsiyūn [*q.v.*] near Damascus for the observation of the stars and, in connection with this, for the improvement of astronomical instruments. Another important aim of the research was the control of the data of the *Almagest* [see BAṬLAMIYŪS]. The results were laid down in the *zīdj al-mumtaḥan*, the "verified astronomical tables" of Ptolemy (facsimile edition of the Escorial ms. 927 by E. Kennedy, Frankfurt 1986), which became of great importance in later times. Another great geodetic achievement was the measurement of a meridian degree executed north of Palmyra.

Yaḥyā apparently occupied a leading position in the *Bayt al-ḥikma* [*q.v.*] created by al-Maʾmūn, where he took the promotion of the interests of the Banū Mūsā b. Shākir [*q.v.*] to heart. He died on Byzantine territory during al-Maʾmūn's last campaign in Asia Minor, 215-7/830-2. According to other sources, he died in Aleppo, where he was buried on the cemetery of the Ḳuraysh.

(3) Abu 'l-Ḥasan ʿAlī (b. 200/815-6) is the first real courtier, a personality with a wideranging education and many interests, of perfect manners, a great spirit, witty, as good at repartee as capable of adapting himself to the changing moods of the ruler of the time (cf. the description in Djaḥẓa's *Amālī*, in Yāḳūt, *Udabāʾ*, v, 486-7). He lived partly in Baghdād, partly in Sāmarrā, where he died and was buried in 275/888-9. Al-Fatḥ b. Khāḳān [*q.v.*], the secretary to al-Mutawakkil (d. 247/861), for whom Abu 'l-Ḥasan had arranged a library, introduced him to the caliph, whose confidence he was able to win and to retain, as is shown by a number of anecdotes (Yāḳūt, *Udabāʾ*, v, 473-4). Under al-Muntaṣir (d. 248/862), he was entrusted with a high office at the caliphal court and with the properties on the western bank of the Tigris that went with it. Apart from a one-year interruption under al-Muhtadī (d. 256/870), he retained it under the next rulers until the reign of al-Muʿtamid (d. 279/892) and the latter's brother al-Muwaffaḳ. ʿAlī's large income permitted him to indulge plentifully in his multifarious interests and tastes. On one of his estates, in Karkar near Baghdād, he had arranged a large library which he called *Khizānat al-ḥikma*, very probably with reference to al-Maʾmūn's establishment which meanwhile had disappeared. He generously put it at the disposition of users from far and near, who were offered free board and lodging. Abū Maʿshar al-Balkhī [*q.v.*] is said to have resolved there to devote himself entirely to astronomy. Just like his father, ʿAlī was greatly interested in science and medicine, as is clear from two works written at his instigation: Ḳusṭā b. Lūḳā's *Kitāb fī 'l-Mudkhal ilā ʿilm al-handasa*, in the questions-and-answers form [see masāʾil wa-adjwiba], and Ḥunayn b. Isḥāḳ's inventory of Galen's writings. However, ʿAlī's special interests apparently were in the fields of music, art and literature. He had previously known Isḥāḳ al-Mawṣilī [*q.v.*] (d. 235/850) and preserved in a work of his the latter's *akhbār*; Thābit b. Ḳurra [*q.v.*] wrote for him a work on questions of theory of music under the title *Kitāb fīmā saʾalahu Abu 'l-Ḥasan ʿAlī b. Yaḥyā al-Munadjdjim min abwāb ʿilm al-mūsīḳī*. ʿAlī's main work is to be considered his *Kitāb al-Shuʿarāʾ al-ḳudamāʾ wa 'l-islāmiyyīn*, related to earlier works of this genre.

Like his father, (4) Abū Aḥmad Yaḥyā (241-300/855-912) was an esteemed and respected companion of al-Muwaffaḳ and the caliphs al-Muʿtaḍid (d. 289/902) and al-Muktafī (d. 295/908). Versed in the "Sciences of the Arabs and the non-Arabs" (*ʿulūm al-ʿarab wa 'l-ʿadjam*), he cultivated intercourse with many learned men of his time. Among his pupils should be mentioned, next to his son Yūsuf and his nephew ʿAlī b. Hārūn, the historian al-Ṣūlī [*q.v.*]. Of his often-praised poetical gifts, only a few fragments give evidence, namely eight verses from an elegy on his friend Thābit b. Ḳurra (Ibn al-Ḳifṭī, *Taʾrīkh al-ḥukamāʾ*, 122). In a *Risāla fī 'l-mūsīḳī* (ms. B.L., Suppl. 823) he dealt with the mathematical theory of music. He also wrote a *Kitāb al-Nagham* (quoted in *Aghānī*³, viii, 374,7). Yaḥyā is the first member of the Munadjdjim family concerning whose theological position we are informed in considerable detail. He belonged to the circle around the Muʿtazilī al-Balkhī and directed personally a *madjlis* in which theological questions were discussed. He is said to have composed some theological works whose titles, however, have not come down to us, except for his reply to a theological-polemic work by Ḳusṭā b. Lūḳā, known under the title *Risāla ilā Ḳusṭā b. Lūḳā wa-Ḥunayn b. Isḥāḳ* (ms. Şehid Ali 2103; cf. Brockelmann, S I, 225). Yaḥyā's most prominent and lasting achievement undoubtedly lies in the field of literary history. In his *Kitāb al-Bāhir fī akhbār shuʿarāʾ mukhaḍramī 'l-dawlatayn*, which remained unfinished and was later completed by his son Aḥmad, he collected information about poets who had lived in the transition period between the Umayyads and the ʿAbbāsids [see mukhaḍram]. Of this work there exists a short table of contents, and Abu 'l-Faradj al-Iṣfahānī has moreover long extracts from it in his *Kitāb al-Aghānī*, which suggests that Yaḥyā in his turn used his father's book on poets mentioned above (see M. Fleischhammer, *Reste zweier Dichterbücher im Kitāb al-Aġānī*, in *Wiss. Zeitschr. Univ. Halle, Gesch.- und Sprachw. Reihe*, xvii [1968], 77-81; *idem, Hinweise auf schriftliche Quellen im Kitāb al-Aġānī*, *loc. cit.* xxviii [1979], 53-62, no. 95).

Though he died at the age of thirty-seven or thirty-eight, Yaḥyā's younger brother (5) Abū ʿAbd Allāh Hārūn (251/865 to 288/901 or to 289/902) was also an esteemed companion at the caliphal court. Of his literary production, which follows the trend taken by the family, two works are worth mentioning. The *Kitāb al-Bāriʿ*, an anthology of poems by "modern" (*muḥdathūn*) and "post-classical" (*muwalladūn*) poets, included, according to his own statements, more than 160 poets and was an extract from an earlier work. The beginning of the Introduction has been preserved, as well as isolated extracts from the work itself, which later enjoyed great favour and is said to have served as an example for authors of similar works, such as al-Thaʿālibī, al-Bākharzī, al-Ḥaẓīrī and ʿImād al-Dīn al-Kātib al-Iṣfahānī (Ibn Khallikān, *Wafayāt*, Cairo 1310, ii, 194 ff.; cf. Ḥādjdjī Khalīfa (Kātib Čelebi), ed. G. Flügel, ii, 5). The *Ikhtiyār al-kabīr*, which is mentioned only once in the sources (*Fihrist*, i, 144, 7 f.) and which did not reach further than the poets Bashshār b. Burd, Abu 'l-ʿAtāhiya and Abū Nuwās [*q.vv.*], originates either from the *Kitāb al-Bāriʿ* or from the original work. Abu 'l-Faradj al-Iṣfahānī seems to have used this work in his *Kitāb al-Aghānī*, where he uses the formula *nasakhtu min kitāb Hārūn b. ʿAlī* in the articles on Bashshār b. Burd and Abu 'l-ʿAtāhiya (cf. Fleischhammer, *Hinweise*, *loc. cit.*, no. 39).

Nothing is known of the dates of life of another brother of Yaḥyā's, (6) Abū ʿĪsā Aḥmad. He was the author of a *Risāla fī nubuwwat Muḥammad*, against which Ḳusṭā b. Lūḳā engaged in a polemic (*Fihrist*, i, 295, 10 f.; cf. J. Fück, *Neue Materialien zum Fihrist*, in *ZDMG*, xc [1936], 307), and of a *Taʾrīkh sinī 'l-ʿālam*, fragments of which are preserved by Abu 'l-Fidā [*q.v.*] and in Ps. Abū Sulaymān al-Manṭiḳī's *Ṣiwān al-ḥikma* (see S.M. Stern, *op. cit.* in *Bibl.*).

To the family's fifth generation belonged (7) Abu 'l-Ḥasan Aḥmad (262-327/875-939). Like his father, he was one of the leading representatives of the Muʿtazila in Baghdād, and frequented the court of the caliphs al-Muktafī and al-Rāḍī (d. 322/934). Of the many theological writings which he is said to have composed, only two are known by title. The *Kitāb al-Tawḥīd wa 'l-radd ʿalā 'l-mushabbiha* deals with one of the central themes of Muʿtazila dogma (cf. Fück, *Neue Materialien*, *loc. cit.*, 307), while the *Kitāb Ithbāt nubuwwat Muḥammad* probably was devoted to the defence of his uncle Abū ʿĪsā Aḥmad's *Risāla*, men-

tioned above, against the attacks of Ḳusṭā b. Lūḳā. In *fiḳh*, Aḥmad was a follower of the school of al-Ṭabarī [*q.v.*] as is shown in two of his writings, the *Kitāb al-Mudkhal ilā madhhab al-Ṭabarī wa-nuṣrat madhhabih* and the *Kitāb al-Idjmāʿ fi 'l-fiḳh ʿalā madhhab al-Ṭabarī*. Whether the above-mentioned supplement to his father's *Kitāb al-Bāhir* (*Fihrist*, i, 143, 29 ff.) was used by Abu 'l-Faradj al-Iṣfahānī at the seven places where he mentions Aḥmad as an informant (*Kitāb al-Aghānī*[3], iii, 307, 3; v, 174, 5; xiii, 241, 7; xiv, 323, 5; 380, 5; xiv, 107, 15; cf. Fleischhammer, *Hinweise*, *loc. cit.*, no. 18), cannot be decided. The glorious past of his family induced him to compose a chronicle, which probably had the title *Akhbār Bani 'l-Munadjdjim wa-nasabuhum fi 'l-Furs*. From the standpoint of literary history, this is worth mentioning because it is one of the first attempts in this field known to us.

(8) Abu 'l-Ḳāsim Yūsuf, Aḥmad's only known brother, contributed to the monthly costs of 600 *dīnārs* of the Bīmāristān al-Sayyida, which Sinān b. Thābit b. Ḳurra [*q.v.*] opened on 1 Muḥarram 306/14 June 918 at the Sūḳ Yaḥyā in Baghdād.

(9) Abu 'l-Ḥasan ʿAlī (277-352/890-963), who had the same *ism* and the same *kunya* [*q.vv.*] as his famous grandfather, was a cousin of the two last-named members of the Banu 'l-Munadjdjim. He frequented the caliphal court and other highly-placed personalities. He entertained friendly relations with the Būyid vizier Ibn ʿAbbād [*q.v.*], who held him in high esteem as a companion (see the extracts from Ibn ʿAbbād's diary (*rūznāmadja*) in Yāḳūt, *Udabāʾ*, v. 440-3), and was acquainted with the author of the *Fihrist* and with Abu 'l-Faradj al-Iṣfahānī. He was engaged in a literary polemic with the latter, who mentions him as an informant in thirteen places of the *Kitāb al-Aghānī* (*Aghānī*[3], v, 282, 11; 356, 4; 359, 4; 364, 16; ix, 282, 18; x, 107, 6; 120, 16; 133, 17; 138, 19; 139, 9; 140,13; 278, 10; [1]xxi, 181, 11). Since most of these are found in the article on Isḥāḳ al-Mawṣilī and in a section on Ibrāhīm b. al-Mahdī, it may be assumed that they were taken from ʿAlī's *Risāla fi 'l-Farḳ bayn Ibrāhīm b. al-Mahdī wa-Isḥāḳ al-Mawṣilī fi 'l-ghināʾ*, in which the author takes up a position in the dispute about "new" and "old" music. It seems quite probable that the *Kitāb Shahr Ramaḍān* on behalf of the caliph al-Rāḍī, the unfinished chronicle of his family on behalf of the Būyid vizier al-Muhallabī [*q.v.*], composed after the one by his elder cousin Hārūn, and the *Kitāb al-Kawāfī* on behalf of the Būyid ʿAḍud al-Dawla [*q.v.*], are occasional works which were aimed at increasing the munificence of the addressed. The *Kitāb al-Radd ʿala 'l-Khalīl fi 'l-ʿarūḍ*, on the other hand, is an important witness for the fact that the metrical system of the Baṣran grammarian al-Khalīl b. Aḥmad [*q.v.*] (d. *ca.* 174/790) was criticised up to the 4th/10th century and was accepted on a large scale only gradually (cf. J. Fück, *Bemerkungen zur altarabischen Metrik*, in *ZDMG*, cxi [1961], 468).

Genealogical tree of the Banu 'l-Munadjdjim[1]

- (1) Abān, Abū Manṣūr
  - (2) Yaḥyā, Abū ʿAlī
    - Muḥammad
    - Aḥmad (?)[2]
    - (3) ʿAlī, Abu 'l-Ḥasan
      - (6) Aḥmad, Abū ʿĪsā
        - Muḥammad(?)[3]
      - (4) Yaḥyā, Abū Aḥmad
        - (8) Yūsuf, Abu 'l-Ḳāsim[4]
          - Muḥammad(?)[5]
            - (11) Hibat Allāh, Abū ʿAbd Allāh
        - (7) Aḥmad, Abu 'l-Ḥasan
          - al-Ḥasan, Abū Muḥammad[6]
      - ʿAbd Allāh, Abu 'l-Ḳāsim
      - (5) Hārūn, Abū ʿAbd Allāh
        - (9) ʿAlī, Abu 'l-Ḥasan
          - (10) Hārūn, Abū ʿAbd Allāh
            - ?
              - Marwān
                - ʿAbd al-Raḥmān[11]
          - Aḥmad, Abu 'l-Fatḥ[7]
          - al-Muḥassin, Abu 'l-Ḳāsim[8]
          - al-Ḥasan, Abū Muḥammad[9]
          - al-Faḍl, Abū Manṣūr[10]
          - ʿAbd Allāh(?)[11]
    - Saʿīd
    - al-Ḥasan

Notes to the genealogical tree

1 Names without a note are found in *Fihrist*, i, 143-4, and in most of the sources mentioned in the Bibliography.
2 Masʿūdī, *Murūdj*, viii, 238, 8 = § 3387; perhaps identical with his brother Muḥammad.
3 Only found in a family *isnād*: *Aghānī*[3], x, 133, 17 f.
4 *Taʾrīkh Baghdād*, xiv, 322, no. 7645; Samʿānī, fol. 543b, 14; Ibn al-Ḳifṭī, *Taʾrīkh al-Ḥukamāʾ*, 194 ult.-195, 4.
5 Only found in the *nasab* of his son Hibat Allāh.
6 Ṣafadī, *Wāfī*, xi, ed. Shukrī Fayṣal, no. 564.
7 *Taʾrīkh Baghdād*, iv, 318, nr. 2122; Samʿānī, fol. 543b, 11 f.; Yāḳūt, *Udabāʾ*, i, 232 f.; verses in Thaʿālibī, *Yatīma*, iii, 209.
8 *Taʾrīkh Baghdād*, xiii, 156, no. 7135; Samʿānī, fol. 543v, 13.
9 *Taʾrīkh Baghdād*, vii, 390, no. 3925; Samʿānī, fol. 543b, 13; verses in Thaʿālibī, *Yatīma*, iii, 209.
10 *Taʾrīkh Baghdād*, xii, 380, no. 6837; Samʿānī, fol. 543b, 13.
11 Cf. G. Gabrieli, *loc. cit.*, 366 f. n. 1.

In the sources, information about the Banu 'l-Munadjdjim dry up with two representatives of following generations.

(10) Abū ʿAbd Allāh Hārūn, with the same *ism* and *kunya* as his grandfather, was versed in astronomy and astrology. He was the author of a much used *zīdj*, of a *Kitāb Mukhtār fī 'l-Aghānī* and was active as a theologian.

(11) Abu 'l-ʿAbbās Hibat Allāh, a grandson (or son?) of Yūsuf, is quoted as informant by al-Tanūkhī (d. 384/994 [*q.v.*]) in his *Nishwār al-muḥāḍara* (ed. Margoliouth, 11 *et passim*). The latter praises Hibat Allāh's many-sidedness and remarks that he was the companion of several viziers, of al-Muhallabī in particular.

Bibliography: A survey of the most important members of the family and of their works is found in *Fihrist*, i, 143-4, see also 275; biographies and notices on individual persons mainly in Thaʿālibī, *Yatīma*; *Taʾrīkh Baghdād*; Samʿānī; Yāḳūt, *Udabāʾ*; Ibn al-Ḳifṭī, *Taʾrīkh al-Ḥukamāʾ*, ed. J. Lippert; Ibn Khallikān; Ṣafadī, *Wāfī*; Brockelmann, S I, 225, for no. (4); F. Sezgin, *GAS*, i, ii, iii, v, vi, vii, viii, see indices; G. Gabrieli, *Nota bibliografica su Qusṭā ibn Lūqā*, in *RCAL*, Serie Quinta, xxi (1912), 341-82, esp. 365-73; M. Fleischhammer, *Die Banū l-Munağğim, eine Bagdader Gelehrtenfamilie aus dem 2.-4. Jahrhundert d. H.*, in *Wiss. Zeitschr. Univ. Halle, Ges.-u. Sprachw. Reihe*, xii (1963), 215-20; S.M. Stern, *Abū ʿĪsā Ibn al-Munajjim's Chronography*, in *Islamic philosophy and the classical tradition, essays presented by his friends and pupils to Richard Walzer on his seventieth birthday*, eds. S.M. Stern, A. Hourani and Vivian Brown, Columbia, South Carolina 1972, 437-56; Yūnus Aḥmad al-Sāmarrāʾī, *ʿAlī b. Yaḥyā al-Munadjdjim* (= no. 3), in *Madjallat al-Madjmaʿ al-ʿIlmī al-ʿIrāḳī*, xxxvi/2 (1405/1985), 201-61; idem, *Hārūn b. ʿAlī al-Munadjdjim* (= no. 5), in *op. cit.*, xxxvii/2 (1406/1986), 238-97.

(M. Fleischhammer)

MUNADJDJIM BĀSHĪ [see MÜNEDJDJIM BASHÎ].

AL-MUNĀFIḲŪN (A.), a term used in the Ḳurʾān. It is the masc. pl. agent of form III of the root *n-f-ḳ*, and is also the name of sūra LXIII. Derivatives of this third stem occur in the Ḳurʾān 37 times, *munāfiḳūn* occurring 27 times and the feminine *munāfiḳāt* 5 times, the *maṣdar nifāḳ* thrice and *nāfaḳū* twice.

1. The word *munāfiḳūn* in the Ḳurʾān. Here it is usually translated into English and French as "hypocrites" and into German as the equivalent "Heuchler" but also "Zweifler" "doubter" or "Wankelmütiger" "waverer". While these connotations are present, the term in the Ḳurʾān is usually stronger and covers a wide semantic range. In LXIII, 3 the *munāfiḳūn* are apostates (cf. *murtadd, zindīḳ* [*q.vv.*]). The same is the case in IX, 73-87 (especially 74), where along with the *kuffār* they will never be forgiven and will be punished by eternal Hell-fire (cf. also IV, 140-5; XLVIII, 6; LVII, 13-15; and LIX, 11-17). *Djihād* [*q.v.*] is to be waged against them (IX, 73; LXVI, 9) and they are to be killed (IV, 89; XXX, 60). In the rest of the sūra named after them, LXIII, they are berated in the strongest terms. They are liars (1), obstructors (2), ignoramuses (3), propped-up timbers, the enemy (4), arrogant (5), unforgivable deviants (6), they dissent over levies (7, i.e. *infāḳ*, cf. also IX, 67, 90-110, especially 99) and as such are held up as an example of how not to contribute to the cause (8 ff., *pace* Nöldeke, *Geschichte*, i, 209 *ult.*). They also dissent from fighting (most of the other occurrences, e.g. III, 167; XXX, 12 ff.; LIX, 11 ff.). They even dissented from the cult and established a rival mosque (IX, 107). The *munāfiḳūn* were clearly dissenters within the *umma*, whether openly or in secret. They were not joining up to fight and they were not contributing to the cause. The threats against them seem to be deliberately unspecific, perhaps to have as general an effect as possible. The severity of them is slightly muted by occasional statements that repentance is possible (IV, 146; IX, 74; XXX, 24).

2. In Muslim thought. There is a tendency to mollify some of the Ḳurʾān's severity by stressing the "hypocrite" connotation. None of the Muslim lexicographers relate the etymology of the word to the sense "payment of money", found in the predominant fourth stem of the root, *infāḳ*, and in the noun *nafaḳa*. They link it to the word *nāfiḳāʾ* "the escape hole of the gerbil" (e.g. Ibn Manẓūr, s.v. *n-f-ḳ*; Ibn Durayd, 198 f.). The gerbil enters the burrow through one hole and then goes out secretly from another. The *munāfiḳ* enters Islam from one side but slips out from another. The similar word *nafaḳ* is used in Ḳurʾān VI, 35, to signify "escape tunnel" (Lane 3036b,c, 1342a), but Ibn Manẓūr says this is not the source of *munāfiḳ*. Al-Rāghib al-Iṣfahānī (524) provides a synonym *nāfidh*, and explains that *nifāḳ* is entering by one door and going out another, like *fisḳ*, deviating from the right way. Al-Ṭabarī's (431) explanation of IX, 98-101, where *nifāḳ* and *infāḳ* occur in close proximity, comes close to making an etymological link — *hāʾulāʾ il-munāfiḳūn ... yunfiḳūn riyāʾan*.

If the Ḳurʾān refers to the *munāfiḳūn* in general terms, then subsequent Muslim literature does the opposite. Space permits only a few examples. The leader of the *munāfiḳūn* was said to be ʿAbd Allāh b. Ubayy [*q.v.*], an ambitious Medinan chief (*Sīra*, 411-13 = 277-9; Watt, 181-7). For instance, he is said to have defended the Jewish Banū Ḳaynuḳāʿ against the Prophet (*Sīra*, 546 f. = 363 f. *ad* Ḳurʾān, V, 51 f.) and defected from Uḥud (*Sīra*, 559 = 372; al-Zamakhsharī, *ad* III, 167). IX, 73 ff. is said to refer to dissenters at the raid on Tabūk (al-Zamakhsharī, ii, 203; Watt, 190), either to ones who held back but were persuaded to change their minds (cf. IX, 74, *faʾin yatūbū* ... ; and for three others, *Sīra*, 907-13 = 610-14; Paret, 208 f.); or else to a group of fifteen who attempted an ambush on the return journey (cf. IX, 74, *wa-kafarū* ...). The Bedouin *munāfiḳūn* of IX, 101, are said to be Djuhayna, Aslam, Ashdjaʿ and Ghifār (al-Zamakhsharī, ii, 211) and perhaps Muzayna (al-Ṭabarsī, iii, 66.12). Long lists of the names of *munāfiḳūn*, Jewish and Anṣārī, are found in the *Sīra* (351-63 = 239-47; see also Buhl), and seventy were said to have been originally named in the Ḳurʾān (Nöldeke, *Geschichte*, i, 255 n. 5, ii, 97 f.). The expulsion of LIX, 12-18, is specified to refer to the Medinan Jewish tribe Ḳurayẓa who had promised to fight alongside the Prophet but when the order came to do so went back on their pledge (al-Tirmidhī, 40).

Imāmī Shīʿī thought on the question is best shown with respect to God's injunction to wage *djihād* against *munāfiḳūn* alongside a general agreement that the Prophet did not fight them (al-Ṭabarsī, iii, 50.25). One interpretation is that the Prophet fought the *kuffār* and ʿAlī fought the *munāfiḳūn* (Kohlberg, 70) especially at Ṣiffīn (Ibn Muzāḥim, 489, 7 ff.). Another, attributed to al-Ḥasan, is that *djihād* is the implementation of God's punishments, *iḳāmat al-ḥudūd* (al-Ṭabarsī, v, 319.5; cf. al-Ṭabarī, 359; al-Zamakhsharī, ii, 202). Others, like some Sunnīs (e.g. al-Zamakhsharī, ii, 202, iv, 130) gloss IX, 73, and LXVI, 9, "fight the *kuffār* [with the sword] and the

munāfiķūn [with argument]". Yet others adduce the Imām's (ʿAlī's?) *ķirāʾa* (some say Djaʿfar al-Ṣādiķ's) *bi ʾl-munāfiķīn* for *wa ʾl-munāfiķīn* (LXVI, 9) i.e. "fight the *kuffār* by means of the *munāfiķūn* (al-Ṭabarsī, iii, 50.25, v, 319-3; Kohlberg, 70 n. 42). Al-Ķummī understood the *munāfiķūn* to be the first three caliphs (Nöldeke, *Geschichte*, ii, 180). Shīʿī doctrine is also famous regarding cases of danger or duress, when they sanction a form of hypocrisy or precautionary dissimulation, *taķiyya* [*q.v.*] (Ķurʾān, XVI, 106; al-Ṭabarsī, iii, 388, 14; Kohlberg, 78).

The Khawāridj discuss *nifāķ* in the context of relations with non-Khawāridj. For example, the Nadjadāt [*q.v.*] are said to have classified quietist Khawāridj, i.e. those who stayed among the non-Khawāridj instead of making a *hidjra* to a Khawāridj camp, as *munāfiķūn* (al-Ashʿarī, 91), and Sālim b. Dhakwān appears to classify non-Khawāridj as *munāfiķūn*; one may intermarry with them and inherit from them because the Muslims in the time of the Prophet did so with the *munāfiķūn* (Hinds, *Xerox*, 159²-160, 189; cf. Cook, 89, 96, 199, n. 71).

Aḥkām al-Ķurʾān authors dwell mostly on the "hypocrite" idea and tend to centre their discussions on sūra II, 8-20, where the word *munāfiķūn* does not actually appear, but where hypocrisy is severely attacked. The two fierce similes (II, 17, 19) are closely linked to *munāfiķūn* by al-Tirmidhī (18 f., 20). For the Shāfiʿī school, al-Kiyā al-Harāsī (i, 7) points out that Muslims have not been commanded to kill *munāfiķūn*, despite the fact that they are worse than *kuffār* since they occupy the lowest Hell (Ķurʾān, IV, 145; cf. also al-Rāghib al-Iṣfahānī, 524; al-Bayhaķī, i, 293 ff.). The Ḥanafī al-Djaṣṣāṣ concurs (29). Similarly, the Mālikī Ibn al-ʿArabī (i, 11 f.) maintains that the Prophet did not kill them although he knew who most of them were. Rather like *al-muʾallafa ķulūbuhum* [*q.v.*], who were given money, they were not killed so that they might be won over.

In the *ḥadīth* literature, there are many traditions to be found about *nifāķ*. Aside from those directly related to the Ķurʾān, perhaps the most widespread one is "The signs of hypocrisy are three" (Wensinck *et alii*, 523-7).

Ṣūfī writers naturally dwell more on the devotional approach to *nifāķ*. *Nifāķ* is the opposite of *wifāķ* "harmony", whose essence is *riḍāʾ* "contentment" (al-Hudjwīrī, 89) not *riyāʾ* "ostentation". Ibn ʿArabī's *tafsīr* of LXIII certainly mentions ʿAbd Allāh b. Ubayy (*ad* verse 8), but dwells more on ideas like "the *munāfiķūn* are those who vacillate. They are attracted by an instinctive openness to the light of *īmān* but then by an openness to *kufr*, acquired by them because of the [deceptive] permanence of natural forms ..." (160 f.).

3. Western discussion of the term. This mainly concerns the etymology of the word and the dating of its various contexts (notably Nöldeke). Whether *sūrat al-munāfiķīn* itself is Medinan or Meccan, for instance, is not decided (Blachère, 1000; Bell, 581; Rahman, 158-61; Nöldeke, *Geschichte*, i, 209 n. 2). The etymology adopted by Nöldeke (*Geschichte*, i, 88, n. 5; *Neue Beiträge*, 48) and most scholars after him (see Jeffery, 272) up to the present day (Rodinson, 184; Paret, 85) is that the word is a borrowing from Ethiopic. The usage of the Ethiopic word "heretic, sceptic, doubter, waverer" (Dillmann, 710 ff., esp. 712) is certainly close to the totality of Ķurʾānic references, but Nöldeke's source is the *Didascalia*, a work translated from the Arabic. There is always the possibility therefore that the borrowing could have been the other way (cf. Leslau, e.g., 167). Serjeant proposes an inner-Arabic etymology from *nafaķa* "a levy". Originally the third stem derivative was a label for those who were paying their levy, but with bad grace (*IQ*, 14) or reluctance (*BSOAS*, 11). It then took on the more religious connotation. This view is connected with Serjeant's analysis of "the constitution of Medina". Watt also proposes an inner-Arabic etymology, partly following the lexicographers, and suggests that "Creepers" or "Moles" might best capture the original meaning (Watt, 184).

4. Conclusion. It may be said that the English word "hypocrite" most closely fits post-Ķurʾān Muslim usage of *munāfiķ*, but the English word that comes nearest to *munāfiķ* in its totality of use in the Ķurʾān is "dissenter". Dissent can be secret or public, and in English also carries the historical connotation of religious schism (*OED*, s.v.). "Dissent" would also concur with the usage of the common Semitic root *n-f-ķ*, principally attested in Aramaic, which has the basic connotation of "issuing, going out" (Jastrow, s.v.). Dissenting, paying money and escaping from holes are all specialised Arabic aspects of this basic meaning.

MUNĀHADA [see MUKHĀRADJA].

AL-**MUNAKHKHAL** AL-**YASHKURĪ**, the name given to a pre-Islamic poet whose personality is hard to define, in so far as his historical existence is

not actually in doubt. His father is called al-Ḥārith, Masʿūd, ʿUbayd and even ʿAmr, and he does not appear in the genealogical table (no. 141) of Ibn al-Kalbī's *Djamhara* concerning the Yashkur; two men with the name of al-Munakhkhal are cited in this work (see *Register*, ii, 428), but neither of them seems to correspond to the poet treated in this present article. Furthermore, one wonders whether the carefulness to explain at any price the allusions to an al-Munakhkhal taken from ancient poetry has not led the philologists to forge a whole romance from the starting-point of a verse of al-Namir b. Tawlab [*q.v.*] and from the expression *ḥattā yaʾūba ʾl-Munakhkhal* "until al-M. returns", i.e. "never", which is found there and which has become a proverbial saying.

According to classical biographers, the poet (whose death Father L. Cheikho placed *ca.* 597 A.D.) is said to have been a boon-companion at Ḥīra of the Lakhmid ʿAmr b. Hind (d. *ca.* 568 A.D. [*q.v.*]), who is said to have put him to death because he had tried, unsuccessfully, to seduce his sister (or daughter) Hind. It is to this woman that one might think that al-Munakhkhal al-Yashkurī's sole known *ḳaṣīda* of any length (32 vv., metre *kāmil madjzūʾ*, rhyme *īlūrī*) is addressed, since in it he calls on a certain Hind for help, in a verse which nevertheless looks as if it might have been added in order to justify the tradition about his execution said to have been pronounced by ʿAmr b. Hind. What remains of this fairly composite poem, of Bedouin type, illustrates the classic themes: personal glorification, horses, wine, love, women, etc. The poet alludes there to a *fatāt* with whom he took shelter one rainy day and who could be the beautiful Mutadjarrida, wife of al-Nuʿmān III b. al-Mundhir (d. 602 A.D. [*q.v.*]), whom he used to meet, it was said, during the king's absences. The latter, having surprised the lovers, punished the guilty man —who had in any case maligned in his presence his rival al-Nābigha al-Dhubyānī [*q.v.*]— but the traditions about his fate are divergent: the king is said to have had him killed by a certain ʿIkabb, drowned, buried alive or yet again imprisoned mysteriously in some unknown location (this last detail was perhaps invented in the first place in order to explain the proverbial saying mentioned above). In order to pad out these romantic episodes, the biographers add that al-Nuʿmān was ugly, whilst the poet was of a remarkable beauty, and that al-Mutadjarrida brought into the world two handsome sons who resembled her lover and could only be his sons. The sources consulted do not speak of the fate reserved for the unfaithful queen, but they do relate that she was a woman of Kalb married to one of the king's fellow-tribesmen and that al-Mundhir b. al-Nuʿmān, carried away by her beauty, had proposed to her husband an exchange with one of his own wives; the transaction had been concluded, but the Lakhmid ruler never claimed his side of the bargain; after the husband's death, his widow was taken in marriage by his son al-Nuʿmān III.

Al-Munakhkhal, in so far as he ever existed, owes his escape from oblivion to his *ḳaṣīda* which gained a lasting success. It was set to music by Ibrāhīm al-Mawṣilī [*q.v.*] and was further taken up by several other famous musicians. The other verses attributed to this poet are very scanty in number, and the most commonly cited are those which he is said to have composed just before his death in order to incite his tribe to vengeance.

(CH. PELLAT)

AL-**MUNAKKAB**, the Arabic name of the small port on the Mediterranean coast of al-Andalus, Almuñecar, which made its entry into the history of Islam on 1 Rabīʿ I 138/14 August 755, when the Umayyad prince ʿAbd al-Raḥmān [*q.v.*] b. Muʿāwiya al-Dākhil trod there "for the first time the soil of his future kingdom" (Lévi-Provençal, *Hist. Esp. Mus.*, i, 101) before setting out to defeat the governor Yūsuf b. ʿAbd al-Raḥmān al-Fihrī.

As it still is today, Almuñecar was part of the province of which the regional capital was Granada [see GHARNĀṬA], 40 miles away; the fate of the town and the port—where fugitives sometimes took refuge before embarking for the Maghrib—was thus linked to that of the province. Among the events which took place at al-Munakkab, it should be noted that it is mentioned in relation to the revolt of ʿUmar b. Ḥafsūn [*q.v.*], one of whose sons, Sulaymān, captured the place in 311/923, slaughtering its men and taking its women into captivity, at least if Ibn al-Khaṭīb is to be believed (*Aʿmāl al-aʿlām*, ed. Lévi-Provençal, Beirut 1956, 33). In the following century it played a fairly significant role under the Zīrids [*q.v.*] of Granada, whose last bastion it was. As early as 416/1025, Zāwī b. Zīrī, attacked by the Idrīsid ʿAlī b. Ḥammūd [see ḤAMMŪDIDS], set sail from there on his way to Ifrīḳiya, and it was there that the king ʿAbd Allāh b. Buluggīn [*q.v.*] suffered a defeat at the hands of the Almoravids [see AL-MURĀBIṬŪN], on whose side he had formerly fought along with his brother Tamīm, on 12 Radjab 479/23 October 1056, in the famous battle of Zallāḳa [*q.v.*]. Despite the fortifications with which the town was equipped, the Zīrids of Granada were forced to surrender and the king ʿAbd Allāh was exiled (483/1090). The chroniclers note that the *ḳāḍī* Ibn Aḍḥā took refuge at al-Munakkab, as did, much later, in 710/1310, the Naṣrid Abū ʿAbd Allāh Muḥammad III al-Makhlūʿ (701-8/1302-9 [see NAṢRIDS]). The town and the port finally fell into the hands of the Catholic Kings in Muḥarram 895/December 1489, a little more than two years before the fall of Granada.

Yāḳūt (*Buldān*, s.v.) devotes two lines to al-Munakkab, the name of which is explained, in his opinion, by reference to an Arabic root (*n-k-b*) and the verb *nakkaba*, which he interprets as meaning "to protect". It is a fact that the anchorage was well sheltered and that the town overlooked the sea, waves breaking at the foot of its ramparts, as is known from the available descriptions. Al-Idrīsī (*Opus geographicum*, v, Naples-Rome 1975, 564), who judges the place as being of average importance, draws attention to its wealth in fruits and in fisheries. Situated in its centre was a kind of tower, broader at the base than at the top and containing two vertical conduits. The water, transported from a mile's distance by an aqueduct, filled a basin, whence it rose on one side to fall on the other, turning a small water-wheel (cf. Ibn Faḍl Allāh al-ʿUmarī, *Masālik al-abṣār*, tr. Fagnan, in *Extraits inédits*, Algiers 1924, 102; Ibn ʿAbd al-Munʿim al-Ḥimyarī, *al-Rawḍ al-miʿṭār*, ed.-tr. Lévi-Provençal, *La peninsule ibérique*, Leiden 1938, no. 179, p. 186 of original text, 225 of translation). The town contained a royal residence, and the port a ship-building yard; the commercial fleet was used principally for the

export of locally-produced sugar (see al-Ḳalḳashandı, *Ṣubḥ*, v, 218), especially to Genoa.

Bibliography: The chronicles relating to Muslim Spain mention al-Munakkab in the context of the historical events in which the town and the port were involved; for further details, these should be consulted. Besides the works cited, the reader is referred to J. Bosch-Vilá, *Los Almorávides*, Tetuan 1956, 291; R. Arié, *L'Espagne musulmane au temps des Naṣrids*, Paris 1973, index, s.v. Almuñecar.

(CH. PELLAT)

MUNĀṢAFA (A.), lit. reciprocal property-sharing by two co-owners, each of them holding the half of a one and undivided object, signifies a special form of co-ownership in Islamic law which, as equivalent to European condominium in Arabic administrative terminology, historically became particularly important in the juridical, fiscal and administrative organisation of border regions between Islamic and Frankish Crusader states in 12th and 13th century Syria.

Munāṣafa as the possibility of co-proprietorship of any kind of possessable object is frequently mentioned in Islamic law compendia and seems to have played an important role especially in agriculture, since the term occurs particularly often in *muzāraʿa* treatises, where its implications as to the manner of harvest-sharing and the right of succession are discussed (e.g. al-Sarakhsī, *K. al-Mabsūṭ*, xxiii, 43 ff.). Being probably of pre-Islamic origin, the sharing of revenues early became a possible way to come to terms with non-Muslim communities and lordships. It already plays a role in the Prophet Muḥammad's treaty with the Jews of Khaybar [*q.v.*]. A second example might be seen in the sharing of the tributes of the island of Cyprus on which Byzantium and the Umayyads agreed in 28/648-9 and 69/688-9.

In the context of Muslim-non-Muslim relations, the expression *munāṣafa* itself, however, does not appear before the 12th century. The first Muslim historian to mention the creation of *munāṣafāt* is the Damascene Ibn al-Ḳalānisī (465-555/1073-1160 [*q.v.*]), the author of the *Dhayl Taʾrīkh Dimashḳ*, who gives an account of the sharing by halves of the taxes of several border regions between Muslims and Franks, e.g. in the Djawlān and Ḥawrān, on several districts in central Syria from 502/1108 onwards, and only a little later also in northern Syria on the frontier between the Norman principality of Antioch and the Saldjūḳ lordship of Aleppo. The specific difference between earlier cases of tax or profit sharing and the Frankish-Muslim *munāṣafāt* is that the latter were not merely restricted to the division of tax receipts and other revenues but also implied that administration and jurisdiction were exercised by both sides together. Although historiography reports some 30 cases, it is only from a few bilateral treaties from the second half of the 13th century (included in Mamlūk historiography and *kuttāb* literature) that details of the administration of a *munāṣafa* are known: revenues of taxes, customs, mills, etc., are divided up equally, both sides are obliged to take care of the common property, the compulsory services of the population could be shared, and jurisdiction and police authority could be exercised by mixed commissions.

The *raison d'être* of a *munāṣafa* was obviously to arrange a compromise on disputed border territories which neither the Frankish nor the Muslim neighbouring states were able to control completely. Although virtually limited by the date of expiration of a peace agreement or *ṣulḥ*, *munāṣafāt* were frequently prolonged. In 587/1191-2 several *munāṣafa* projects helped to bring about terms between the Third Crusade and Ṣalāḥ al-Dīn. In the later 13th century, the establishment of *munāṣafāt* became very frequent in the treaties between the Mamlūks and the last Frankish petty principalities, and was usually only the last step before total annexation by the Muslims.

Although Western sources have no common name for *munāṣafa*, it is not improbable that the form which it took in Syria is due to Frankish influence, for in Europe condominium-like models of Germanic origin (co-seigneurie, pariage) were very frequent at the time. After the end of the Frankish states in Syria in 1291, this type of *munāṣafa* disappeared; it continued to exist only in the law of private property.

Bibliography: Information can be found in nearly every Arabic chronicle, etc., relevant to Syrian history of the 12th and 13th centuries; Latin and Old French historiography give only a very few indications. See e.g. Ḳalḳashandī, *Ṣubḥ al-aʿshā*, xiv, 31-9, 42-51. For detailed analysis, see J. Richard, *Un partage de seigneurie entre Francs et Mamelouks: les «Casaux de Sur»*, in *Syria*, xxx (1953), 71-82; P.M. Holt, *The treatises of the early Mamluk Sultans with the Frankish states*, in *BSOAS*, xliii (1980), 67-76; M.A. Köhler, *Munāṣafāt: Gebietsteilungen...*, in *ZDMG*, Suppl. vi (1985), 155-65; idem, *Allianzen und Verträge zwischen fränkischen und islamischen Herrschern im Vorderen Orient*, Berlin-New York 1991.

(M.A. KÖHLER)

MUNĀSHADA, (A.), derived from *nashada* "to search (especially for a stray camel), designates a set form of oath, at the beginning of a prayer of petition, sometimes involving a threat or coercion, directed at God. A certain Abū Sammāl of Banū Asad set out once in search of his camel; after a long, vain search, he turned to God, entreating him in these words: *aymunuka laʾin lam taruddahā ilayya lā aʿbudka*, "I swear if you do not return it to me, I will not worship you"; and he found it. The man was not a saint, so that his success could be attributed to his merits. However, ʿAbd Allāh b. Maṭar, a contemporary of the Prophet, known by his *kunya* of Abū Rayḥāna, was renowned for his piety; he once lost a needle and begged God to return it to him: "Oh, God, I entreat you (*ʿazamtᵘ ʿalaykᵃ*), return it to me". And it appeared to him.

Before Islam, the role of *nāshid* was assumed by the *kāhin* [*q.v.*]; his voice was compared to the twittering of birds in a hemistich of al-Ḳuṭāmī (ed. Barth, 2,21). Mysterious whispering is a recognised characteristic of soothsayers (Isaiah, viii, 19).

Munāshada survived under Islam; it is expressed in the formula *yā rabbī rudda*... (Ibn al-Athīr, *Usd al-ghāba*, ii, 305, 1.3); a ritual was elaborated with time (Ibn Ḳutayba, *ʿUyūn al-akhbār*, ed. Brockelmann, i, 170). It seems that such appeals were sometimes made in mosques. We read in the *Musnad* of Ibn Ḥanbal (ii, 420): "...Anyone who hears a man seeking the restoration of a camel (*yanshudᵘ*) in the mosque, let him say: "May God return it to me". But mosques were not made for that".

A saying is attributed to the Prophet: "When someone calls upon God (*daʿā*), let him not say 'If you will'; let him ask rather by entreating him (*wa 'l-yaʿzum*) and stressing his need" (al-Tirmidhī, ii, 263; Muslim, v, 290; *Muwaṭṭaʾ*, i, 384). "God loves those who are insistent" (al-Djāḥiẓ, *Bayān*, ii, 13, 1.22). The pious man obtains a reply to his request: *law aḳsama ʿala 'l-Lāh la-abarrah* "if only he would entreat God, his prayer would be answered" (cf. ref. and examples in I. Goldziher, *Zauberelemente*, 307 ff.). Even after death, the saints keep the power to force

God's hand. He is entreated in their name. Abu 'l-Ḥasan al-Shādhilī recommended his disciples to entreat God through his mediation (*fa-aḳsim ʿalayya*, cited by al-Ālūsī, *Djalāʾ al-ʿaynayn*, 42).

Prayers of petition also contain formulae similar to those of *munāshada* [see ISTISḲĀʾ]. The power to bring about rainfall was always attached to a person whose sanctity was supposed to be inherent. The idea that prayer influences celestial powers is an ancient one; in Aristotle's *Theology*, inspired by Plotinus, it is said that prayer acts on the sun and stars to make them move in a certain way, because the parts of the world are from a single whole, like "a single animal" (cited in A. M. Goichon, *Le livre des Directives et remarques*, Paris-Beirut 1951, 60). According to Ibn Sīnā also, prayer plays a role in the mysteries of nature through the influence that it has on the imagination of the souls and celestial bodies that act on our world, particularly in the preparations undergone by matter (*ibid.*, 520).

Munāshada and *istisḳāʾ* sometimes involve a magical aspect [see ISTIḲSĀM and SIḤR].

Bibliography: This article is based largely on I. Goldziher, *Zauberelemente im islamischen Gebet*, in *Orientalische Studien Theodor Nöldeke gewidmet*, Giessen 1906, i, 304-8, which contains numerous references; T. Fahd, *La divination arabe*, Paris 1987, 117, 281. (T. FAHD)

AL-**MUNĀWĪ**, ʿABD AL-RAʾŪF B. TĀDJ AL-ʿĀRIFĪN B. ʿALĪ B. ZAYN AL-ʿĀBIDĪN B. YAḤYĀ B. MUḤAMMAD, called Zayn al-Dīn al-Ḥaddādī al-Munāwī al-Ḳāhirī al-Shāfiʿī, Egyptian religious scholar and mystic.

Al-Munāwī is the *nisba* from the village of Munayt or Munāw, a locality of Egypt where his ancestors settled towards the 7th/12th century, coming from Ḥaddāda, a village in Tunisia, hence his first *nisba* of "al-Ḥaddādī". Al-Munāwī was born in Cairo in 952/1545 and died there in 1031/1621. He came from a family renowned for its knowledge and piety, his paternal grandfather being the *Shaykh al-Islām* Yaḥyā al-Munāwī and his maternal one the *shaykh* ʿAbd al-Raḥīm al-ʿIrāḳī. Under the guidance of his father, at an early age he began to study the Arabic language and to delve deeply into Islamic studies. He grew up into an upright and pious person. The great Egyptian Ṣūfī ʿAbd al-Wahhāb al-Shaʿrānī [*q.v.*] initiated him into Ṣūfism, and after his master's death, ʿAbd al-Raʾūf became an adherent of the Khalwatiyya [*q.v.*] *ṭarīḳa*, at the same time following others also, in paricular, the Bayramiyya, the Shādhiliyya and the Naḳshbandiyya. For some time he held the office of *Nāʾib al-Shāfiʿiyya*, but then retired from the secular world and spent these subsequent years in writing. He began an active life again as a professor at the Ṣāliḥiyya *madrasa*, where the excellent quality of his teaching attracted numerous pupils round him, as well as much jealousy. These jealousies may well have led to the poisoning to which he fell victim; because of his enfeebled state, he had to abandon his teaching, and from then onwards dictated his works to one of his sons, Tādj al-Dīn Muḥammad.

Al-Munāwī's works are numerous, reaching over one hundred, and covering such diverse spheres as *ḥadīth*, *fiḳh*, Ḳurʾān exegesis, Ṣūfism, logic, philosophy, medicine, botany, etc. His works and his commentaries (*shurūḥ*) became widely disseminated and enjoyed a great success in his own time, and are still often cited today. Nevertheless, only a few of his works have been published, and a great number of them remain in manuscript, spread through the libraries and collections of East and West. In the sphere of Ṣūfism, al-Munāwī left a grand biographical dictionary called *al-Kawākib al-durriyya fī tarādjim al-sādāt al-ṣūfiyya*, in which he gives the lives of the great Ṣūfīs from Muḥammad to his own time; this work is also known as the *Ṭabaḳāt al-Munāwī al-kubrā* (ed. Cairo 1938, 1963), and he made a résumé of it which he called *Irghām awliyāʾ al-shayṭān bi-dhikr manāḳib awliyāʾ al-Raḥmān* or the *Ṭabaḳāt al-Munāwī al-ṣughrā*. His book on Ṣūfī technical terminology, *al-Tawḳīf ʿalā muhimmāt al-taʿārīf* or *Tawḳīf al-Munāwī*, is a glossary of these terms arranged alphabetically, and is compiled in imitation of the *Taʿrīfāt* of al-Djurdjānī. He also wrote a commentary on two works by Ibn Sīnā, *Risālat al-Taṣawwuf* and *Ḳaṣīdat al-Nafs* (this commentary ed. Cairo 1318/1900-1), in the sphere of *ḥadīth*, he wrote several works, including *al-Djāmiʿ al-azhar min ḥadīth al-Nabī al-anwar*, which contains more than 30,000 *ḥadīths* (ed. Cairo 1286/1869-70), *Kunūz al-ḥaḳāʾiḳ fī ḥadīth khayr al-khalāʾiḳ* (ed. Cairo 1350/1931-2) and *al-Ithāfāt al-saniyya li 'l-aḥādīth al-ḳudsiyya* (ed. Cairo 1354/1936). There are detailed items of informations on al-Munāwī's works in al-Muḥibbī's *Khulāṣat al-athar*, ii, 193-5, 412-16. Al-Munāwī's other son, Zayn al-ʿĀbidīn, died in 1022/1613 during his father's own lifetime; he also had followed the spiritual way and, as a true Ṣūfī, had devoted his life to prayer and the adoration of God.

ʿAbd al-Raʾūf, his father and his two sons were buried in Cairo at the side of the *zāwiya* known till today as the Zāwiyat al-Munāwī, a building distinguished by its cupola, the third of its kind in Egypt.

MUNĀẒARA (A.) means the scientific, in particular the theological-juridical, dispute on the one hand, the literary genre of the struggle for precedence on the other.

Theological disputes took place between Muslims and adherents of the *Ahl al-Kitāb* [*q.v.*] as well as between representatives of the different Muslim denominations. A few records of such *munāẓarāt* have been preserved. Although these records, as far as the outcome of the disputes is concerned, were adapted to literary standards, or are even simply fictitious, they nevertheless provide an insight in the way the *munāẓarāt* actually took place. The discussions were held before an audience which was not however supposed to interfere with the dispute by way of utterances of approval or discontent. Often the discussion was held in the presence of a caliph or vizier, who eventually could have the function of arbitrator. It was executed in the form of questions and answers [see MASĀʾIL WA-ADJWIBA, where are also given the records of the contests which have been transmitted]. In principle, the more advantageous role of questioner fell to the challenger, but courtesy prescribed that the right of questioning was yielded to the weaker contestant. From the loser, conversion was expected and, when the discussion was held before a highly-placed personality, he could be punished. Often, however, the loser, in order to save himself from the affair, used the argument that in the end the proofs were equivalent (*takāfuʾ al-adilla*). The principle of *takāfuʾ al-adilla* was also adopted in cases in which

conversion or the finding of the truth were no longer at stake, but where it was a case of a rhetorical contest as a means for entertainment.

The *munāẓara* was not only important for oral theological dispute, but it also influenced theological literature. Stylistically, the latter easily adopted the framework of question and answer, in which didactical considerations, notably the instructions for the discussions, may have played a rôle. For this, expressions were used that had already been common among the Church Fathers, such as εἰ δέ φατε ...φαμὲν ὅτι (*wa-in ḳāla ḳā'ilun....ḳulnā*) (cf. J. van Ess, *The logical structure of Islamic theology*, in G.E. von Grunebaum (ed.), *Logic in classical Islamic culture*, Wiesbaden 1970, 21-50, at 22-4). From theology, the framework of question and answer passed to other disciplines (see *Bibl.* to MASĀ'IL WA-ADJWIBA).

Very soon, the importance which the dispute had in actual practice led to the development of a theory. The first to report specific rules for the disputation of the *ḥukamā'* seems to have been Ibn al-Muḳaffaʿ (d. 757) (according to al-Khaṭīb al-Baghdādī, *Kitāb al-Faḳīh wa 'l-mutafaḳḳih*, ed. I. al-Anṣārī, Beirut, 1975, ii, 35, ll. 14 ff.). The *munāẓara* was perhaps also treated in the lost *Kitāb Ādāb al-mutakallimīn* of the Muʿtazilī Ḍirār b. ʿAmr (d. 131/749 [*q.v.* in Suppl.]). Because of the title and its subsequent influence, we are on firm ground with the equally lost *Kitāb Ādāb al-djadal* ("Method of the disputation") of Ibn al-Rāwandī (3rd/9th century [*q.v.*]). The first work with a section on *Adab al-djadal* to survive is the *Kitāb al-Anwār wa 'l-marāḳib* of the Karaite al-Ḳirḳisānī (4th/10th century, cf. G. Vajda, *Études sur Qirqisānī*, in *REJ*, cxxii [1963], 7-74). The *Kitāb al-Djadal* of Ibn ʿAḳīl (d. 513/1119 [*q.v.*]) and other works on *adab al-djadal* depend on him (cf. G. Makdisi, *Dialectic and disputation. The Relation between the texts of Qirqisani and Ibn ʿAqil*, in *Mélanges d'Islamologie. Vol. dédié à la mémoire de A. Abel*, i, Leiden 1974, 201-6). *Adab al-djadal* thus became the technical term for the method of debating, not only in theology, but also, as is evident from Ibn ʿAḳīl's work written for the *fuḳahā'*, in jurisprudence, in which were discussed questions that were controversial between the schools of law [see IKHTILĀF]. Here the aim of the dispute was adapted to juridical needs. It was no more a matter of finding the truth, as in theology, but of convincing the opponent of the greatest possible probability which one believes to have found.

The question to what extent the theory of the *djadal* can be traced back to Greek sources cannot be answered unambiguously. Clues, if any, might mostly be connected with the *Topics* of Aristotle, but it must be remarked that the latter became known to the Arabs only after they had started the practice of holding discussions. Nor do the theoretical works show any direct dependence in formulation or in organisation of the material. Above all, the theoretical works in Arabic lack the reserved attitude towards dialectics, present in Aristotle, which then passed on to the Arab philosophers (e.g. al-Fārābī). Influence on the *djadal* emanated rather from the Hellenistic schools of rhetoric and was transmitted by the Christians.

It was only later that the theory of disputation came under the influence of Aristotelian logic and philosophy. Logic now became the final arbitrator, for the theory of disputation freed itself from the requirements of theology and jurisprudence and could thus be applied to all sciences, including philosophy. This general theory of disputation was called *ādāb al-baḥth*, and formulated for the first time by Shams al-Dīn Muḥammad b. Ashraf al-Samarḳandī (end of the 7th/13th century [*q.v.*]), in his *Risāla al-Samarḳandiyya fī ādāb al-baḥth*. Later treatises on the *ādāb al-baḥth* did not surpass him essentially.

Besides scientific dispute, *munāẓara* (synonyms are *mufākhara* and *muḥāwara*) indicates, in Arabic and other Islamic languages, also a literary genre in which two or more living or inanimate beings appear talking and competing for the honour which of them possesses the best qualities. The result of the competition depends on the discretion of the poet: a participant may declare himself defeated of his own free will, or the rivals may reach an understanding and recognise each other's equivalence. They may, however, also call in an arbitrator, who then awards victory to one participant or declares that both, or eventually all, are of equal standing. Finally, there may also surprisingly appear in the end a new competitor who claims victory. The *munāẓarāt* may be composed in prose, rhymed prose (*sadjʿ*) or verse. Often the poet uses the three forms at the same time.

In Arabic literature, a series of earlier forms preceded the fully developed *munāẓara*. They already show the ability of the Arabs for antithesis and their sense of dialectics, which appeared also in the theological *munāẓarāt*. Already in old Arabic poetry, derision of the opponent (*hidjā'* [*q.v.*]) was often set against self-praise (*mufākhara* [*q.v.*]) in the same poem. Such poems could be followed by a reply of the opponent, which then could again be answered. Thus a whole series of contest-poems (*naḳā'iḍ* [*q.v.*]) came into being, which were performed before the general public, especially in the Umayyad period. Thus we have already to do with a kind of competition for honour, but there are here still two poets who represent their own interests, and not one poet who simulates the competition of more that one representative of different interests. One might conjecture that the fully developed *munāẓarāt* were no more than parodies of the *naḳā'iḍ*, in which the composers were joking about the competing poets by representing insignificant objects as talking instead of the latter persons. Such a conjecture would, however, lead to the conclusion that the *munāẓarāt* took their origin already in the Umayyad period, when the *naḳā'iḍ* were flourishing. This was not the case.

In poetry, a disputation between inanimate beings is found for the first time with the ʿAbbāsid poet al-ʿAbbās b. al-Aḥnaf (d. after 193/808 [*q.v.*]), who makes heart and eye blame one another for the poet's love (ed. ʿA. al-Khazradjī, Cairo 1954, 45 = no. 79). It is true that we have to do here with a dispute, but it is a matter of blame, not of precedence and excellence. Precedence is at stake in Ibn al-Rūmī's (d. 283/896 [*q.v.*]) *Tafḍīl al-nardjis ʿalā 'l-ward* (ed. Ḥ. Naṣṣār, Cairo 1973-81, 643-4 = no. 470). But here too the *munāẓara* is not yet fully developed, because the objects do not speak themselves, and because the poet immediately takes up position on one side. On the other hand, with the shame of the rose, anthropomorphism is introduced. Several poets composed refutations (*muʿāraḍāt*) of Ibn al-Rūmī's *Tafḍīl* (enumerated in Naṣṣār, 643), but this was done in the form of a real *munāẓara* for the first time by al-Ṣanawbarī (d. 334/945 [*q.v.*]) (ed. I. ʿAbbās, Beirut 1970, 498 = App. no. 123). Here the rose talks first in indirect speech, then both the rose and the narcissus in direct speech (cf. G. Schoeler, *Arabische Naturdichtung*, Beirut 1974, 204-15, 313-6). Thus the fully developed *munāẓara* is proved to exist in poetry since the 4th/10th century.

In prose, there had originated already in an earlier period, i.e. in the *ḥadīth* literature, the so-called *faḍā'il*

literature (see FAḌĪLA and E.A. Gruber, *Verdienst und Rang. Die Faḍā'il als literarisches und gesellschaftliches Problem im Islam.* Freiburg i. B. 1975), in which were brought out the good qualities of individuals, groups of persons or cities (see e.g. A. Arazi, *Matériaux pour l'étude du conflit de préséance entre la Mekke et Médine*, in *JSAI*, v [1984], 177-235), often as a means to carry claims through within the Muslim state. In the struggle between the Arab tribes against each other, and later also in the fight between *shuʿūbiyya* [*q.v.*] and anti-*shuʿūbiyya*, i.e. between Arabs and non-Arabs, the *mathālib* [*q.v.*], the blameable qualities of the other party, were opposed to the *faḍā'il* of one's own. The early *adab* literature took up this theme and applied it to new subjects. Al-Djāḥiẓ (d. 255/869 [*q.v.*]) composed a series of treatises either to praise (*fī madḥ*) or to blame (*fī dhamm*) diverse items, such as books, Turks, date-wine, pederasty and secretaries. Occasionally, he set praiseworthy subjects against blameable ones in the same work. He thus treated the superiority of the black-skinned over the white, of talking over silence and of merchants over officials. From such oppositions arose *al-maḥāsin wa 'l-masāwī* [*q.v.*], a literary genre in which, inside the same work, several positively-described subjects were confronted with their negatively-described contrasts, or the positive and negative qualities of one and the same subject. Al-Djāḥiẓ, however, made a further step in the direction of the fully-developed *munāẓara*: subjects, which were not necessarily opponents, were represented by an attorney (*ṣāḥib*) and were thus staged against each other. In the *Kitāb Mufākharat al-djawārī wa 'l-ghilmān* (ed. Ch. Pellat, Beirut 1957), the *ṣāḥib* of the girl and the one of the boy fight for the precedence of love of girls or that of boys. The fight of other pairs, such as rooster and dove, or sheep and goats, equally represented by attorneys, is represented by al-Djāḥiẓ in his *Kitāb al-Ḥayawān* (ed. ʿA.M. Hārūn, Cairo 1938-45, iii, 200-5; v, 523-4). Al-Djāḥiẓ's point was not literary entertainment alone, but the proof of the coexistence of good and bad qualities in created beings and of their being created by one God only (against dualism), a proof which corresponds with his Muʿtazilī attitude. This is shown by his defending the fight between the dog and the rooster (which comprises extensive sections of the first and second volumes of the *Kitāb al-Ḥayawān*) against a fault-finder (*ʿā'ib*) and by his identifying the *ṣāḥib* of the dog with the Ḳadarī Maʿbad [*q.v.*] and the *ṣāḥib* of the rooster with the Muʿtazilī al-Naẓẓām [*q.v.*] (*K. al-Ḥayawān*, i, 3; cf. I. Géries, *Un genre littéraire: al-Maḥâsin wa-l-masâwî*, Paris 1977, 35-58). The ingenious and witty way in which he represented the fight certainly also stimulated the further development of the surely literary genre, free from all philosophical and theological implications. Here there was no task left for the *ṣāḥib*, who with al-Djāḥiẓ still had a function, since he represented not only the subject but also a philosophical-theological opinion. Now the way was free for the fully-developed *munāẓara*, in which the subjects themselves are talking. Such a *munāẓara* is the *Salwat al-ḥarīf bi-munāẓarat al-rabīʿ wa 'l-kharīf*, a contest between spring and autumn, ascribed to al-Djāḥiẓ but probably to be dated around the turn of the millennium (cf. O. Rescher, *Excerpte und Übersetzungen aus den Schriften des Philologen und Dogmatikers Ǵâḥiẓ aus Baçra nebst noch unveröffentlichten Originaltexten*, i, Stuttgart 1931, 498-526). Of earlier *munāẓarāt*, only the titles are known, so it is not clear whether they had reached the fully-developed form. But it does not seem improbable that, as in poetry, the development in prose was concluded in the 4th/10th century.

Next to the *munāẓarāt* between animals, plants and seasons, there were also disputes between cities (the literary continuation of the *faḍā'il* of cities), pen and sword (expressing the conflict of interests between civilians and the military), minerals, scripts, physicians and astrologers, drinks, and, in more recent times, railways and telegraph, donkey and bicycle, as well as tram and bus.

In New Persian literature, the *munāẓara* turns up for the first time in the 5th/11th century with Abū Manṣūr ʿAlī b. Aḥmad Asadī (born *ca.* 1010 [*q.v.*]; in the article ASADĪ there still is a distinction between two authors, but see J. Rypka, *History of Iranian Literature*, Dordrecht 1968, 164). In five of his panegyrical *ḳaṣīdas*, he replaces the *nasīb* [*q.v.*] with a *munāẓara*. The themes treated are day and night, heaven and earth, bow and lance. The connecting motive to the panegyrical part of the *ḳaṣīda* consists in calling in the praised one as arbitrator, in stating that in his presence there should be peace, etc. (cf. Ye. E. Bertels, *Pyatoe munazere Asadi Tusskogo*, in *Učeniye Zapiski Instituta Vostokovedeniya Akad. Nauk SSSR*, xix [1958], 55-88). Already present in the Arabic *maḳāmāt* [*q.v.*] in a preliminary stage, the *Munāẓara* penetrates into the Persian *maḳāmāt* during the 6th/12th century. While the debates in al-Ḥarīrī's *maḳāmāt* had not yet been fully-developed *munāẓarāt*, they became so with the Persian poet Ḥamīd al-Dīn Abū Bakr al-Balkhī (d. 559/1164). In his work, only human beings fight: physician and astrologer, old man and young man, etc. Finally, a *munāẓara* as independent genre is found in the fight between cake and bread of the satirist Busḥāḳ-i Aṭʿimma Fakhr al-Dīn Aḥmad Ḥallādj (d. in the first half of the 9th/15th century). In the Persian context too, the independent *munāẓara* was now open to all themes.

In the eastern Turkish world, we have, from the second half of the 5th/11th century, hence more or less contemporary with Asadī, a fragment of a poetical fight between summer and winter (cf. C. Brockelmann, *Altturkestanische Volkspoesien*, ii, in *Asia Major*, i [1924], 24-44, at 32-4) in Maḥmūd al-Kāshgharī's [*q.v.*] *Dīwān lughāt al-Turk*. The next Turkish *munāẓarāt* are some three-and-a-half centuries younger. They were composed in the first half of the 9th/15th century by three Čaghatāy poets. Yūsuf Amīrī (cf. H.F. Hofman, *Turkish literature. A bio-bibliographical survey*, sect. iii, pt. i, vol. ii, Utrecht 1969, 92-7) made the narcotic *bandj* [*q.v.*] fight with wine. The Persian influence is evident from the introduction, in which he says that he wants to treat the theme in the Persian way but in the Turkish language. His *munāẓara*, in its turn, was a model for Fuḍūlī's [*q.v.*] *mathnawī Bang wa-bāda*. Yaḳīnī (cf. Hofman, *op. laud.* sect. iii, pt. 1, vol. vi, 100-3) deals with the fight between arrow and bow, and Aḥmadī (cf. Hofman, *op. laud.* sect. iii, pt. i, vol. ii, 61-3) with that between stringed instruments. In the same tradition stands Mīr ʿAlī Shīr Nawā'ī's [*q.v.*] *Muḥākamat al-lughatayn*, even if it is not a *munāẓara* in the proper sense but a proof that Čaghatāy is equal to Persian. In Central Asia, the *munāẓara* has remained a favourite literary genre until the present day.

The Ottoman *munāẓara* was apparently influenced by the Central Asian one. This is not only true for Fuḍūlī but also for Lāmiʿī (d. 938/1531-2 [*q.v.*]), who was in close relation with Central Asia (cf. E. Birnbaum, *The Ottomans and Chagatay literature*, in *CAJ*, xx [1976], 157-190, at 166). He treats the theme of spring and winter in epic detail by staging both seasons as kings with armies, which fight not only with words but also with weapons. In the Ottoman

empire, too, the *munāẓara* lived on until very recent times.

Poetry dealing with the struggle for precedence did not only exist in the Islamic world but also in many other literatures. In the Ancient East, it was known to the Sumerians and Egyptians, later to the Greeks (σύγκρισις), to the Romans (*conflictus*) and in the Middle Ages in the West (*altercatio*). The question arises to what extent the Arabic *munāẓara* was influenced by foreign elements on the one hand, and on the other, to what extent it affected literatures outside the Islamic world. Foreign influence upon the *munāẓara* is not necessarily to be assumed, because a continuous series of preliminary stages can be shown inside the Arabic world (see above). Yet foreign participation in the development of the genre is not to be excluded either. Because of the distance in time, there is, supposedly, no direct influence from the Ancient Orient, but Persian and Greek may have affected the *munāẓara*. From Middle Persian we know the fight for precedence between the date palm and the goat (*drakht ī asūrīg*). The text goes back to an oral Parthian original, which was probably transmitted orally, still in a Middle Persian version, until after the Arab conquest (cf. E. Benveniste, *Le texte du Draxt asūrīk et la versification pehlevie*, in *JA* ccxvii [1930], 193-225; M. Boyce, *Middle Persian literature*, in *Handbuch der Orientalistik*, Abt. i, Bd. 4, Abschn. 2, Lfg. 1, Leiden 1968, 31-66, at 55). Because of the imprecise date, the influence of this version on the Arabic *munāẓara* cannot be established with any certainty. As a literary genre, the *munāẓara* has certainly not been influenced directly by the Greek *synkrisis*, but it may well have been that the practice of the Hellenistic rhetorical schools, in which *synkrisis* was a favoured part of the training (cf. F. Focke, *Synkrisis*, in *Hermes*, lviii [1923], 327-68, at 331), may have had its influence on the theological dispute in Islam (see above). Al-Djāḥiẓ wanted the fight between the supporters of the dog and the rooster (see above) to be classified as such a dispute. Still in a Persian *munāẓara*, the third party, settling the fight, blames the dispute as an "illusion of philosophers".

The fight for precedence in the literature of the Western Middle Ages can easily be traced back to the Greek pattern through the Latin one. However, Arabic influence on the origin of the Italian *contrasti* is not to be excluded completely. The first Jew to compose in the Middle Ages a fight for precedence was the Spaniard Abraham ben Ezra, who was also active as a translator from Arabic. He died in Rome in 1168. Some fifty years later, the first *contrasti* appeared, among which was the theme of summer and winter, also treated by Abraham ben Ezra.

(E. WAGNER)

AL-**MUNDHIR IV**, one of the Lakhmid kings of Ḥīra, who reigned *ca.* 575-580, being the third and last son of al-Mundhir III (*ca.* 505-54) to rule Ḥīra after his elder brothers, ʿAmr b. Hind (554-69) and Ḳābūs (569-*ca.* 574). His accession to the throne of Ḥīra [*q.v.*] was not smooth. After the death of his brother Ḳābūs, there was an interregnum during which a Persian, Suhrāb, ruled Ḥīra for a year. There was opposition to his accession on the part of the population of Ḥīra because of his violence and possibly because of his heathenism. Finally, it was Zayd b. Ḥammād, the father of the poet ʿAdī b. Zayd [*q.v.*] who saved the throne for the Lakhmids and convinced the people of the Ḥīra to accept al-Mundhir as their king in *ca.* 575. Not much is known about his reign, but prosopographical data on him are not lacking. Two of his wives are known by name; the first was Salmā bint al-Ṣāʾigh, a Jewish woman from Fadak whom the Kalbī al-Ḥārith b. Ḥiṣn had captured after a raid on Fadak, and the other was a Christian, Māriya bint al-Ḥārith b. Djulhum from the tribe of Taym al-Ribāb. He fathered some twelve or thirteen sons, of whom the most important was al-Nuʿmān, the son of Salmā, and al-Aswad the son of Māriya. It was during his reign that the Ghassānid al-Mundhir captured Ḥīra, set it afire, and freed some Byzantine prisoners. He was succeeded by his son al-Nuʿmān, who reigned as al-Nuʿmān III [*q.v.*] for some twenty years, after ʿAdī b. Zayd secured the throne for him, even as the father Zayd had secured it for al-Mundhir.

(IRFAN SHAHÎD)

AL-**MUNDHIR** B. **MUḤAMMAD**, ABU 'L-ḤAKAM (229-76/844-88), sixth Umayyad *amīr* of Cordova and the son of a slave belonging to Muḥammad I b. ʿAbd al-Raḥmān II (d. 273/876).

During his father's lifetime, he filled military functions on various occasions, somewhat honorific to begin with, since it is mentioned that, as early as 242/856, he had gone to blockade—without great success—Toledo [see ṬULAYṬULA] which had rebelled. Over the next years, he had occasion to command some summer expeditions (*ṣāʾifa*) against the Christians, notably in 251/865. In 263/877 he marched against Merida (see MĀRIDA] in a war against the lord of Badajoz [see BAṬALYAWS], ʿAbd al-Raḥmān b.

Marwān al-Djillīkī. Five years later (268/882), he besieged Saragossa [see SARAḲUSṬA] and seized several places of the Upper March before returning against Ibn Marwān and expelling him from Badajoz. At this time, the famed agitator ʿUmar b. Ḥafṣūn (d. 306/918 [*q.v.*]) had ostensibly submitted to Muḥammad I, but had taken up arms again, and it fell to al-Mundhir to combat him (273/886). The *amīr*'s son invested al-Ḥāma (Alhama) and repelled a sortie by the rebels, but had to forgo proceeding any further when he received the news of his father's death. He thus returned to Cordova, where he was proclaimed ruler on 3 Rabīʿ I 273/9 August 886, in circumstances recounted in a dramatic fashion by Ibn al-Abbār, in the chapter which he devotes to the vizier and commander of Muḥammad I, Hāshim b. ʿAbd al-ʿAzīz, who was only able with difficulty to read the text of the proclamation. Al-Mundhir retained his father's viziers: Tammām b. ʿĀmir al-Thaḳafī and Abū Marwān ʿAbd al-Malik b. Djawhar, and appointed Hāshim as *ḥādjib* [*q.v.*]. But his relations with the latter were no longer good and, at Ibn Djawhar's instigation, he soon had him arrested and executed, confiscating his family's possessions and levying a hefty fine on them.

Al-Mundhir's brief reign was mainly devoted to the war against Ibn Ḥafṣūn, who took advantage of Muḥammad I's death to intensify his actions. The new *amīr* caused him to be harried, and in the spring of 274/888 himself led an expedition aimed at reducing the rebel's headquarters, Bobastro [see BUBASHTRŪ in Suppl.]. First of all he besieged Archidona [see URDJUDHŪNA], where he succeeded in getting hold of Ibn Ḥafṣūn's representative, nailing him alive on a cross, and then captured the rebels and sent them to Cordova to be crucified there. Then he turned towards Bobastro and became involved in deceptive and misleading negotiations with the rebel leader, who made a show of submission and rejoined the *amīr*. The *ḳāḍī* drew up an act of amnesty, and al-Mundhir even sent to Bobastro a hundred and fifty mules in order to load up and bring back all Ibn Ḥafṣūn's possessions, but the latter took flight and seized the convoy. Al-Mundhir, who had decided to attack Bobastro directly, fell ill and summoned his brother ʿAbd Allāh [*q.v.*], in order to entrust to him the command of operations and the siege of the place, before dying on 15 Ṣafar 275/29 June 888. ʿAbd Allāh, who has been accused of poisoning his brother, waited three days to announce the news and then had the corpse carried back to Cordova, at the same time asking Ibn Ḥafṣūn to allow the funeral cortège passage.

Al-Mundhir had a reputation for intelligence and generosity which contradicts in large measure the cruelty which he demonstrated on several occasions, he is also said to have been the friend of religious leaders and of literary men.

Bibliography: E. Lévi-Provençal, *Hist. Esp. mus.*, index, has substantially utilised the Arabic sources, amongst which are notable Ibn al-Ḳūṭiyya, *Iftitāḥ al-Andalus* (tr. E. Fagnan, in *Extraits inédits relatifs au Maghreb*, Algiers 1924, 231, 238, 241-3), Ibn al-Abbār's *al-Ḥulla al-siyarāʾ* (ed. Ḥ. Muʾnis, Cairo 1964, index) and Ibn ʿIdhārī's *Bayān*, ii.

(CH. PELLAT)

(AL-)**MUNDHIR** B. **SAʿĪD** b. ʿABD ALLĀH B. ʿABD AL-RAḤMĀN AL-ḲURṬUBĪ, Abu 'l-Ḥakam, Andalusian theologian and jurist, born in 273/886 into a family of Berber origin settled in the region of Cordova, at Faḥṣ al-Ballūṭ [*q.v.*, Los Pedroches], whence his *nisba* of AL-BALLŪṬĪ.

He studied in the capital of al-Andalus and set out to broaden his knowledge in the East on the occasion of a pilgrimage which he made in 308/921. He stayed in various cities, studied under several teachers and achieved renown in Egypt when he publicly corrected the reading of a verse of Madjnūn Laylā [*q.v.*] by Abū Djaʿfar al-Naḥḥās, who subsequently refused to lend him, for the purpose of copying, the *Kitāb al-ʿAyn* of al-Khalīl b. Aḥmad [*q.v.*]. He succeeded, however, in acquiring a text, and also made a copy of the *Kitāb al-Ishrāf fi 'khtilāf al-ʿulamāʾ* of Muḥammad b. al-Mundhir al-Naysabūrī. On his return to Spain, his renown as a man of letters, poet and *faḳīh* spread, and it was at this stage that he appears to have begun to exercise the duties of a *ḳāḍī*, probably in the eastern frontier region. In Djumādā II/March 942, while his brother Faḍl Allāh (d. 335/947), who had accompanied him in the East, was appointed to the *ḳāḍāʾ* of Faḥṣ al-Ballūṭ, he himself became chief *ḳāḍī* of all the frontier regions, with the right of supervising the activity of all the *ḳāḍīs* and tax officials within the scope of his jurisdiction; he was also charged with the control of travellers arriving from abroad. Ibn Khaldūn (*Muḳaddima* i, 400, tr. Slane, i, 452) is the only author to mention him as an example of a *ḳāḍī* placed in command of the troops who set out every year to do battle with the Christians. The exact date of his transfer to the *ḳāḍāʾ* of Madīnat al-Zahrāʾ [*q.v.*] is not known, but he was probably occupying this post when there occurred, in 338/949, an incident to which his biographers attach the utmost significance. He was present at the court of ʿAbd al-Raḥmān III al-Nāṣir during the reception for an ambassador from Constantine VII Porphyrogenitus, in the course of which Abū ʿAlī al-Ḳālī [*q.v.*], whom the crown-prince al-Ḥakam had brought from Baghdād and who enjoyed his protection, was supposed to make a speech praising the caliph and stressing the prosperity of the country under his rule; when the designated orator was struck speechless by fear, Mundhīr b. Saʿīd improvised an eloquent address, the text of which has been preserved and reproduced by numerous biographers, including Ibn Khāḳān (*Maṭmaḥ*, 241-4) and Yāḳūt (*Udabāʾ*, xix, 176-80). This unexpected intervention earned him the favour of ʿAbd al-Raḥmān III, who now became aware of his existence for the first time and who the following year appointed him *ḳāḍī 'l-djamāʿa*, in other words "most senior delegate of the supreme chief of the Andalusian Muslim community for the administration of justice" (E. Lévi-Provençal, *Hist. Esp. Mus.*, iii, 120). In spite of his repeated offers to resign, he was retained in office by al-Ḥakam II (who reigned from 350 to 366/961-76) until his death, which took place on 18 Dhu 'l-Ḳaʿda 355/15 November 966 (and not on 4 Rabīʿ I 349, at 47 years old, as is stated by al-Suyūṭī, *Bughya*, Cairo 1326, 398, who also makes him the *ḳāḍī 'l-djamāʿa* of Granada!).

The frank speaking of Mundhir b. Saʿīd might well have cost him his position and even more. His biographers draw attention to a stern speech, full of allusions to the culpable behaviour of the monarch who was intent on the construction of the Madīnat al-Zahrāʾ, and in particular to the criticisms addressed to him directly after he had built a pavilion covered with tiles gilded in gold and silver, accusing of allowing himself to be seduced by Satan to the point of acting like an infidel. The *ḳāḍī* was not harassed in any way, because ʿAbd al Raḥmān III was well aware of the value of his support. According to his contemporaries, he showed himself stern but just to those who appeared before him for judgement, treating them all equally with no regard for their social class. His

biographers note however, not without some astonishment, that his stern manner and dignified conduct did not prevent him jesting with his friends, and quote some of his witticisms which gave much pleasure to the people of Cordova.

Lévi-Provençal (*Hist. Esp. Mus.*, iii, 479) considers him the first representative, in al-Andalus, in the 4th/10th century, of Ẓāhirism [see AL-ẒĀHIRIYYA], which he had introduced into Spain after being the pupil, in the East, not only of Dāwūd b. Khalaf (d. 270/884 [*q.v.*]) but also of one of his disciples (cf. Pellat, *Ibn Ḥazm bibliographe...*, in *al-And.* xix/1 [1954], § 35). He was able to permit himself the practice of *idjtihād*, the personal effort of reflection, while scrupulously respecting the Māliki doctrine. The Ḥanbalī Ibn al-ʿImād himself (*Shadharāt*, iii, 17), acknowledges his rectitude, his intelligence and his eloquence, and does not criticise him more than other authors of biographical articles.

However, none of the works which he left behind has survived: *al-Nāsikh wa 'l-mansūkh*, *al-Inbāh ʿalā 'stinbāṭ al-aḥkām min Kitāb Allāh* and *al-Ibāna ʿan ḥaḳāʾiḳ uṣūl al-diyāna*. A few verses are still attributed to him, in particular with regard to *zuhd* [*q.v.*], and there is also mention of an exchange of letters in verse with al-Ḳālī with the object of borrowing a book from him. It may be noted that this literary output did not at first appear to Yāḳūt (*Udabāʾ*, iv, 228-9) sufficient to merit a notice, but he finally decided to devote a lengthy piece to him (xix, 174-85).

Mundhir b. Saʿīd had several sons, of whom al-Ḥakam and two others adopted the ideas of the philosopher Ibn Masarra [*q.v.*]. The fourth, ʿAbd al-Malik, who was *ṣāḥib al-radd*, in other words a *ḳāḍī* appointed to regulate affairs considered too sensitive by other magistrates, was accused of involvement in the plot aimed at deposing Hishām II [*q.v.*], and he was hanged in 368/379 by order of al-Manṣūr Ibn Abī ʿĀmir [*q.v.*]; see in particular Lévi-Provençal, *Hist. Esp. Mus.*, ii, 217, 487).

(CH. PELLAT)

AL-**MUNDHIR** B. **SĀWĀ** (or Sāwī) B. ʿABD ALLĀH B. ZAYD b. ʿAbd Allāh, a chief of the tribal division of Dārim of Tamīm. The tribal branch of the ʿAbd Allah b. Zayd were, according to tradition, called *al-Ispadhiyyūn*. This name, obviously of Persian origin, is said to have referred to this people because they worshipped a horse (*asp*); according to another tradition, they were called so because they came from a place called Ispadh. A third tradition assumed that this name was attached to a group of scattered tribal factions joined together and united (*al-djummāʿ*). Some Western scholars have assumed that the word is derived from the Persian *Ispahbadh* [*q.v.*]; this may indicate that this group served as a force of the Ispahbadh of al-Baḥrayn. There is indeed a report according to which the Ispadhiyyūn were a force stationed in the fortress of al-Mushaḳḳar [*q.v.*] (see *LA*, s.v. *s-b-dh*).

The tribal division Dārim of Tamīm were in close relations with the Persians. Al-Mundhir b. Sāwā is mentioned in the Arabic sources as the "Master of Hadjar" (*ṣāḥib Hadjar*) or as the "King of Hadjar" (*malik Hadjar*). These "kings", says Muḥammad b. Ḥabīb in *al-Muḥabbar*, were appointed by the kings of Persia and controlled the market of Hadjar. One of the traditions says explicitly that al-Mundhir b. Sāwā was appointed by the Persians to control the Arab tribes (*kāna ʿalā l-ʿarabi min ḳibali 'l-fursi*; al-Balādhurī, *Ansāb al-ashrāf*, ms. ʿĀshir Ef. 597-8, fol. 969a; and see idem, *Futūḥ al-buldān*, 106). After his conversion to Islam, the Prophet is said to have appointed him as governor (*ʿāmil*) of al-Baḥrayn.

Reports of the *sīra* compilations mention unanimously that the Prophet sent al-ʿAlāʾ b. al-Ḥaḍramī with a letter to al-Mundhir b. Sāwā summoning him to embrace Islam. They differ, however, as to the date of the event: whether it took place in the year 6 H. or in 8 H. The exact date cannot be established. But it is plausible to assume that the Prophet sent his emissary to al-Mundhir after his conquest of Mecca; the conquest strengthened his position in the Arab peninsula considerably and he could, due to his newly acquired authority, widen his influence in some districts which were remote from Mecca and which, though they formed part of the Persian empire, were entrusted by the Persian kings to Arab leaders. The plan to dispatch the messenger was probably stimulated by the fact that the merchants setting out to Hadjar (literally: to al-Mushaḳḳar) had to cross the territory of Muḍarī tribes and had to get the protection of Ḳuraysh (sc. of the Meccans). Without this protection, the merchants could not reach Hadjar with their merchandise (see Ibn Ḥabīb, *op. cit.*). Al-Mundhir responded by stating that he had embraced Islam, that he had read the letter of the Prophet to the people of Hadjar and that some of them had converted to Islam while others had refused to do it. Some traditions say that the Arabs of al-Baḥrayn embraced Islam. Al-Mundhir asked the Prophet for instructions as to the positions of the Jews and the Magians in Baḥrayn. The Prophet decreed that the *djizya* should be imposed on them if they stuck to their faiths. In another letter of the Prophet, written to the Magians of Hadjar, the Prophet added two stipulations: the believers should not marry Magian women and should not eat meat of animals slaughtered by the Magians. The Prophet is said to have sent to al-ʿAlāʾ a list of the mandatory taxes levied as *ṣadaḳa* from camels, cattle, sheep and fruits. The poll tax was imposed according to the social position of the taxpayer: people who had no landed property had to pay four *dirhams* a year and deliver a striped cloak (*ʿabāʾa*) made of hair or wool; others had to pay a *dīnār*. It is noteworthy that the poll-tax imposed on the people of the garrison of Hadjar (*al-waḍāʾiʿ*) who had been settled there by Kisrā, with whom a separate treaty was concluded by the Muslim authorities, also amounted to one *dīnār*. The Prophet is said to have dispatched special emissaries (mentioned are Abū Hurayra, Abū ʿUbayda b. al-Djarrāḥ and al-ʿAlāʾ b. Djāriya al-Thaḳafī) who would carry out the functions of tax-collectors and instructors in performance of religious duties.

The full authority of the Prophet in the area can be gauged from a particular phrase in the letter of the Prophet to al-Mundhir: "... as long as you act rightly we shall not depose you". Certain cases of deviation

and disloyalty seem to have taken place; this is implied in an utterance of the Prophet saying that "... he had the ability to drive them (i.e. the people of al-Mundhir b. Sāwā) out from Hadjar".

The Prophet enjoined the converts to Islam to obey his messengers and to aid them in carrying out their mission. The Prophet kept direct contacts with the believers of Hadjar; he is said to have received a deputation of the believers of al-Baḥrayn and to have welcomed them. Another tradition mentions that the Prophet met some believers from Hadjar and interceded in favour of al-Mundhir. The messengers of the Prophet in Hadjar passed favourable reports about al-Mundhir to the Prophet. The tradition saying that al-Mundhir b. Sāwā came with a group of believers to visit the Prophet was refuted by a majority of the scholars of the *sīra*. Another tradition says that "the king of Ḥadjar" sent Zuhra b. Ḥawiyya as his envoy to the Prophet; Zuhra embraced Islam and became a faithful believer. Al-Mundhir is said to have died shortly after the death of the Prophet. A rare tradition says that at the Prophet's death the governor of al-Baḥrayn was Abān b. Saʿīd b. al-ʿĀṣī b. Umayya.

The position of al-Mundhir b. Sāwā and his peculiar relation with the Prophet is examined by Ibn Ḥazm in his *Fiṣal*. Al-Mundhir is included in the list of the "Kings of the Arabs" who deliberately and voluntarily embraced Islam, became sincere believers and gave up their authority and prerogatives transferring them to the messengers of the Prophet. Their forces, says Ibn Ḥazm, were much stronger than those of the Prophet and their territory was vaster than that of the Prophet.

The letters of the Prophet to al-Mundhir b. Sāwā in which the Magians of al-Baḥrayn were granted the right to stick to their religion and were obliged to pay the poll tax, *djizya*, are in fact the earliest documents reporting on this decision of the Prophet. This ruling of the Prophet is said to have stirred a wave of discontent and anger among the Hypocrites (*al-Munāfiḳūn* [*q.v.*]) of Medina and is reflected in one of the earliest commentaries of the Ḳurʾān, the *tafsīr* of Muḳātil. The Hypocrites were enraged and argued that the Prophet had violated his own decision to accept the *djizya* only from People of the Book; they complained bitterly that on the basis of that ruling the forces of the Prophet had fought and killed their fathers and brethren. The believers were perturbed by these arguments and informed the Prophet about it. Then the well known verse of sūra II, 256, *lā ikrāha fi 'l-dīn*, explicitly forbidding to compel anyone to change his faith, was revealed. Another verse of the Ḳurʾān, sūra V, 105, *yā ayyuhā 'lladhīna āmanū ʿalaykum anfusakum lā yaḍurrukum man ḍalla idhā 'htadaytum* was also revealed in connection with the claim of the Hypocrites; the very early *tafsīr* of Muḳātil glosses the passage *lā yaḍurrukum man ḍalla* by *min ahli hadjar*, Later scholars tried to present the stipulations of the agreements concerning the position of the non-Muslim population on a broader ideological basis. Ibn Ḥazm states in his *al-Muḥallā* that the *djizya* of Jews, Christians and Zoroastrians may be accepted on the condition that they acknowledge (*aḳarrū*) that Muḥammad is a messenger of God to us (i.e. to the Muslim community) and do not offend him nor the faith of Islam. Mālik formulated this stipulation as follows: "... he who says that Muḥammad was sent as a prophet to us (i.e. to the Muslim community), not to them, is free of punishment. He who claims that Muḥammad was not a prophet should be killed".

The treaties concluded between al-ʿAlāʾ b. al-Ḥaḍramī and the population of Hadjar according to the instructions of the Prophet were, of course, considered valid and the territories of al-Baḥrayn and Hadjar were assessed as *ṣulḥ* territories (Abū ʿUbayd, *al-Amwāl*, 100).

Some scholars attempted to justify the imposition of the *djizya* on the Magians by the fact that the Magians had had a sacred Book, which was concealed by their sinful king; this assumption was however rejected by a great majority of Muslim scholars of tradition and law. Some scholars claimed that the Magians were granted the right to pay the tax of the *djizya* because they had "something like a Book" (*shubhat al-kitāb*) and rules applying to the People of the Book are valid for them as well (Abū Yaʿlā Muḥammad b. al-Ḥusayn al-Farrāʾ, *al-Aḥkām al-sulṭāniyya*, 154 above).

The Prophet's ruling imposing the *djizya* on the people of Hadjar and al-Baḥrayn was not well-known in the Muslim community of Medina. Even ʿUmar was unaware of it, and was informed about it by some Companions of the Prophet. The injunction of the Prophet was supported by his utterance *sunnū bihim sunnata ahli 'l-kitāb* (see Ḥumayd b. Zandjawayh, *Kitāb al-Amwāl*, 136, no. 122), "treat the Magians according to the *sunna* of the Prophet applied to the People of the Book".

The stipulations of the treaties concluded with the People of the Book (Jews and Christians) and the Magians in Baḥrayn were applied in other territories of the Muslim empire. The Magian population in the Muslim empire became an integral part of the community, and the Muslim lawyers took care to provide details of their legal status; this can be seen e.g. in some chapters of the early *Muṣannaf* of ʿAbd al-Razzāḳ.

The revolt against Islam, the *ridda* [*q.v.*], which flared up in al-Baḥrayn after the death of the Prophet and after the death of al-Mundhir b. Sāwā, was quelled by al-ʿAlāʾ b. al-Ḥaḍramī, who headed some of the Muslim forces and succeeded in conquering some adjacent territories.

Thus the Tamīmī al-Mundhir b. Sāwā played an important role in the islamisation of the territories of al-Baḥrayn and in enabling the religious communities of Jews, Christians and Magians in al-Baḥrayn to survive.

(M.J. KISTER)

MÜNEDJDJIM BASHĪ, DERWĪSH AḤMED DEDE b. Luṭf Allāh (?-1113/?-1702), Turkish scholar, Ṣūfī poet and, above all, historian, being the author of a celebrated and important general history in Arabic, the *Djāmiʿ al-duwal*.

His father Luṭf Allāh was a native of Eregli near Ḳonya. He was born in Selānik, in the first half of the 12th/18th century, received a scholarly education and served in his youth for fifteen years in the Mewlewī-khāne of Ḳāsim Pasha under Shaykh Khalīl Dede (*Sidjill-i ʿothmānī*, ii, 287). Afterwards he studied astronomy and astrology and became court astrologer (*münedjdjim bashī*) in 1078/1667-8. In 1086/1675-6 he was admitted to the intimate circle of Sultan Meḥemmed IV [*q.v.*] as *muṣāḥib-i pādishāhī*. He was dismissed in Muḥarram 1099/November1687 and banished to Egypt. From here he went some years later to Mecca, where he became *shaykh* of the Mewlewī-khāne. In 1105/1693-4 he was obliged to move to Medina, where he lived for seven years. Soon after his return to Mecca he died there on 29 Ramaḍān 1113/27 February 1702 and was buried near the tomb of Khadīdja.

Besides writing his historical work, Münedjdjim Bashī displayed a considerable literary activity. Of his works are mentioned a *ḥāshiya* on the Ḳurʾān commentary of al-Bayḍāwī, a commentary on the *ʿAḳāʾid al-ʿAḍudiyya* of al-Īdjī, a *Laṭāʾif-nāme*, a translation of the anecdotes of ʿUbayd-i Zākānī, and a number of treatises on geometry, mysticism and music. His Turkish *dīwān* also gives him a place in the ranks of Turkish mystical poets; his *takhalluṣ* was ʿĀshiḳ.

The general history was written in Arabic under the title *Djāmiʿ al-duwal*, but although several manuscripts of the still unpublished Arabic original exist in the libraries of e.g. Istanbul, Edirne and Kayseri, it was formerly better known in the epitomised Turkish translation made by the poet Aḥmed Nedīm [*q.v.*] in the 12th/18th century under the title *Ṣaḥāʾif al-akhbār* (printed in three volumes, Istanbul 1285). It is a world history, arranged, after the fashion of similar Arabic works, according to dynasties, with a main division into three parts: the first treating of the history of Muḥammad, the second the non-Islamic dynasties and the third the Islamic dynasties. In the introductory chapters the author cites his numerous sources, not a few of which are lost in the original. Therefore the work has a special value for the knowledge of many smaller dynasties and for this reason it was especially used by E. Sachau for *Ein Verzeichnis muhammedanischer Dynastien*, in *SB Pr. Ak. W.* (Berlin 1923) (cf. the introd.). The last dynasty treated is that of the Ottoman sultans; it is proportionately longer and more detailed than the history of the other Islamic dynasties and based on several imperfectly known sources; the last part, which ends in 1089/1678, gives contemporary history. The Turkish translation of Nedīm is very readable and not composed in the high-flown literary style that prevailed in his period. For this reason it was especially praised and represented in Ebuzziyā Tewfīḳ's *Nümūne-i edebiyyāt-i ʿothmāniyye*[6], Istanbul 1330.

Among the now lost sources used by Münedjdjim Bashī, and apparently epitomised by him in the *Djāmiʿ al-duwal*, was a history of Darband, the *Taʾrīkh Bāb al-Abwāb*, valuable for the history of the Muslim dynasties of eastern Transcaucasia, Arrān and Ādharbāydjān. His text here was utilised in a masterly fashion by Minorsky for his *Studies in Caucasian history*

(London 1953) and *A history of Sharvan and Darband* (Cambridge 1958); see also BĀB AL-ABWĀB and AL-ĶABĶ.

Bibliography: Bursalî Meḥmed Ṭāhir, *ᶜOthmānlî müʾellifleri*, iii, 142 ff.; Babinger, *GOW*, no. 295; Brockelmann, II², 637; *İA*, art. *Müneccim-Başı* (M. Tayyib Gökbilgin). (J.H. KRAMERS*)

MUNGĪR, conventional form Monghyr, a town of Bihār in the Indian Union, situated on the south bank of the Ganges in lat. 25° 25' N. and 86° 27' E, and at an important communications point between Bengal and the middle Ganges valley. It is also the administrative centre of a District in the province of Bihār of the same name.

Said to have been founded in Gupta times, Muḥammad Bakhtiyār Khaldjī [*q.v.*] was its first Muslim conqueror when he raided into Bihār in 589/1193. It subsequently became a place of military and administrative importance, with a fortress built in apparently Mughal style [see BIHĀR]. Mīr Ķāsim ᶜAlī (d. 1777 [*q.v.*]), *Nawwāb* of Bengal, moved his capital thither from lower Bengal, away from the British East India Company's presence in Bengal, and founded there an arsenal for the army of his which was being trained by the Armenian Gurgīn (Gregory) Khān, the beginning of the gunmaking industry for which Mungīr became famous.

Mungīr became a municipality in 1864 and is now an important grain mart and manufacturing centre, with a population (1971 census) of 102,462, whilst the District had 3,896,423 inhabitants.

MÜNĪF PASHA, MEḤEMMED ṬĀHIR, prominent Ottoman statesman and educational reformer of the *Tanẓīmāt* [*q.v.*] era.

He was born into an *ᶜulamāʾ* family in ᶜAyinṭāb (Gaziantep, south-eastern Turkey) in 1828-9 (1830, according to İbrahim Alâettin Gövsa), and received a traditional *medrese* education in his home town, in Cairo and in Damascus. Entering the Ottoman civil service as a clerk in the Damascus Provincial Council, Münīf went on to Istanbul in 1852 and was employed as Persian and Arabic translator in the Translation Bureau (*Terdjüme Odasî*) of the Sublime Porte, the nursery of Ottoman reform statesmen. He learned French (and later some English) in Istanbul and then German in Berlin, where he was posted as Second Secretary at the Ottoman Embassy and attended courses at the University. Returning to Istanbul, he became known through his articles in the newspaper *Djerīde-yi Ḥawādith*, and was promoted head of the Translation Bureau in 1862. He made his first contribution to the cause of enlightenment by publishing in 1859 an anthology of translated excerpts from the writings of Voltaire, Fénélon and Fontenelle, under the title *Muḥāwerāt-î Ḥikemiyye* ("Philosophical Discourses"). The following year he founded the *Djemᶜiyyet-i ᶜIlmiyye-yi ᶜOthmāniyye* (Ottoman Scientific Society), and its organ the *Medjmūᶜa-yi Fünūn* ("Journal of [Secular] Sciences"). This published in 1862 his plea for the reform of the Arabic script, which Münīf saw as inferior to the Latin alphabet and a factor in the prevalence of illiteracy. Appointed chairman of the *Medjlis-i Maᶜārif* (Council of Education) in 1869, Münif lamented that he did not succeed in changing the heading on the Council's paper, let alone the education system of the country. However, he had greater opportunities to make an impact, when, after five years as Ottoman Ambassador in Tehran, he embarked in 1877 on the first of his three terms as Minister of Education. His second term (1878-80) coincided with the accession of ᶜAbd al-Ḥamīd II, whom he tutored in political economy. While the new Sultan was energetic in extending modern education through his empire, he repeatedly interrupted the career of his reforming Minister, whose zeal he distrusted. Thus after being promoted to the rank of *wezīr* (which gave him the title of Pasha) Münīf found himself transferred to the *Medjlis-i Ṣiḥḥiyye* (Health Council) before becoming Minister of Education for the third and last time in 1885. He lost his job in 1891, and was kept on the payroll but without an appointment until 1895, when he was sent to Tehran as special emissary to the jubilee of Nāṣir al-Dīn Shāh [*q.v.*], and where he stayed on briefly as Ambassador after the Shāh's assassination. Münīf retired at his own request in 1896, and spent the remaining years of his life, until his death in 1910, in his country house at Erenköy, outside Istanbul, which became a notable meeting place for Ottoman and foreign scholars.

Steeped in Islamic culture, yet an ardent admirer of Western civilisation, Münīf Pasha was deemed a poet, although his only major poetic work, the *Dāsitān-i Āl-Othmān* ("Epos of the House of Osman"), amounted to little more than a 13-page *ķaṣīda*, written in 1881, at a time of enforced idleness to attract the Sultan's favour. Apart from his translations, his only other books were edited versions of his lectures on law and political economy at the Istanbul *Dār al-Fünūn* (University). However, it is not as an author, but as a reforming, westernising statesman and a founding father of Turkey's modern educational system that he is remembered today.

MUNᶜIM KHĀN or MUNᶜIM BEG, KHĀN-I KHĀNĀN (902-83/1497-1575), a leading Tūrānī noble of the Indian Mughal emperors Humāyūn and Akbar, was the son of Mīram Beg Andidjānī. As a foster-brother of Bābur's son ᶜAskarī, he was counted among the important nobles of Humāyūn as early as 940/1534. Humāyūn appointed him governor of Khōst [*q.v.*] in 952/1545, and he accompanied his master on the Balkh campaign of 956/1549. In 960/1553 he was appointed *atalīķ* (principal adviser) of Akbar, and a year later of Akbar's brother Muḥammad Ḥākim [*q.v.* in Suppl.] at Kābul. In 967/1560 Akbar recalled him from there and appointed him *Wakīl* (principal minister) with the title of Khān-i Khānān. In 969/1562 Atka Khān replaced Munᶜim Khān as *Wakīl* but upon the former's murder, Munᶜim Khān was shortly afterwards appointed *Wakīl* for a second time, holding the office till 971/1564.

After the suppression of the Uzbek rebellion, Munᶜim Khān was appointed governor of Djawnpur [*q.v.*], and all the eastern districts were placed under his command. In 981/1573-4 he built the celebrated bridge over the River Gomati at Djawnpur, which is still being used. When in 982/1574-5, Akbar established the *manṣab* [*q.v.*] system, Munᶜim Khān was awarded the then highest rank of 5,000, but soon afterwards died, having been for about forty years one of the leading nobles of the empire under Humayūn and Akbar.

MUNĪR LĀHAWRĪ (1019-54/1610-44), the pen name of Abu 'l-Barakāt, a prominent Indo-Muslim poet of Shāh Djahān's period (1628-58). He was born on 12 Ramaḍān 1019/28 November 1610 at Lāhawr. His father, ᶜAbd al-Djalīl b. Ḥāfiẓ Abū Isḥāḳ, was an expert calligrapher attached to Emperor Akbar's court. Munīr received his education in Lāhawr, and started composing poetry at an early age. In 1045/1635-6 he took up service with Mīrzā Ṣafī Sayf Khān, who was a son-in-law of Āṣaf Khān (d. 1051/1641), father of Shāh Djahān's wife, Mumtāz Maḥall [*q.v.*]. Sayf Khān held important administrative assignments during Shāh Djahān's reign, and when he was appointed governor of Bengal, Munīr accompanied him to that place. After the death of his patron in 1049/1639-40, the poet entered the employment of Shāpūr Mīrzā Iᶜtiḳād Khān (d. 1060/1650-1), governor of Djawnpūr. He spent the last period of his life in Āgra, and died there on 7 Radjab 1054/9 September 1644. His body was taken to Lāhawr, where he is buried.

Munīr left a considerable output in verse and prose. His poetical contribution comprises a number of *mathnawīs*, the best known of which is *Maẓhar-i gul* ("A flower theatre"), a poem composed in 1049/1639-40, during the author's residence in Bengal, and dedicated to Sayf Khān. It describes the natural aspects of Bengal, particularly its flowers and trees. Among Munīr's main prose works are his letters, written by him either for his own self or on behalf of Sayf Khān, and compiled under the title *Inshā-yi Munīr*.

(Munibur Rahman)

MUʾNIS, the pen-name of Shīr Muḥammad Mīrāb b. ᶜAwaḍ Biy Mīrāb al-Khīwaḳī, Khīwan historian, poet and translator, born 1 Rabīᶜ I 1192/19 March 1778, died 1244/1829.

He came from an aristocratic Uzbek family of the tribe of Yüz, whose members had been holding the title of *mīrāb* for five generations before Muʾnis (in the Khānate of Khīwa there were four high officials with the title *mīrāb*, members of the khān's council of 34 ᶜ*amaldārs*). Muʾnis inherited this title and post after the death of his elder brother, who fell in a battle with the army of Bukhārā in 1221/1806. Nothing is known of his formal education, but Muʾnis himself gives the names of his two private tutors and mentions that he had taken a great interest in poetry and history already in his youth. The first version of his *dīwān* entitled *Muʾnis al-ᶜushshāḳ* was compiled in 1219/1804-5. During the reign of Eltüzer Khān (1218-21/1804-6), Muʾnis was in the retinue of the khān's younger brother, Muḥammad Raḥīm. In the middle of 1220/1805 the khān ordered Muʾnis to write the history of his dynasty, the Ḳongrats [see ḳungrat], which Muʾnis entitled *Firdaws al-iḳbāl*. The death of Eltüzer Khān and the disturbances in Khʷārazm that followed it interrupted the work, which could be resumed, by the order of the new khān, Muḥammad Raḥīm, only in the middle of 1222/1807. About 1234/1819 the work was interrupted again, because Muḥammad Raḥīm Khān ordered Muʾnis to translate into Turkic the *Rawḍat al-ṣafāʾ* of Mīr Khʷānd [*q.v.*]. After the death of Muḥammad Raḥīm Khān in 1240/1825, the new khān, Allāh-Ḳuli, ordered Muʾnis to continue his translation. Muʾnis died at the end of 1244/June 1829, during an epidemic of cholera which broke out in the khān's army during his return from a campaign in Khurāsān. Both the *Firdaws al-iḳbāl* and the translation of the *Rawḍat al-ṣafāʾ* were later continued by a nephew and pupil of Muʾnis, Muḥammad Riḍā Āgahī [*q.v.* in Suppl.]

Muʾnis was one of the first writers who belonged to the period of the flourishing of Čaghatāy literature in Khīwa in the 19th century (as most of his contemporaries, he also wrote some poems in Persian). For modern scholarship, the prime importance lies in his original historical work, the *Firdaws al-iḳbāl*. It is divided into a foreword, a *muḳaddima*, and five *bābs*: (1) from Adam to the children of Noah; (2) the Mongol rulers from Yafeth till the branch of Ḳongrat; (3) the Čingizids, mainly the Čingizids of Khʷārazm; (4) the Ḳongrats, sc. the ancestors of Eltüzer Khān; (5) the reigns of Eltüzer Khān and Muḥammad Raḥīm Khān (Muʾnis intended to write also a *khātima*, which, however, was never written). Muʾnis, who himself considered his work as a continuation of the *Shadjara-yi Turk* by Abu 'l-Ghāzī [*q.v.*], brought his account down to the events of Ṣafar 1227/March 1812 (in ch. 5); the remaining part, written by Āgahī, forms about one-fifth of the entire work. The main part of the work is a chronicle of contemporary events based on Muʾnis' own observations and on eyewitness accounts. It is the largest known prose work written in Čaghatāy and one of the most important sources for the history of Central Asia in the 17th-19th centuries.

MUʾNIS DEDE DERWĪSH, Ottoman Ṣūfī poet of Edirne in the early 12th/18th century. His birth date is unknown, but he was a Mewlewī *murīd* at that order's Murādiyya convent in Edirne, where he received his instruction from the famous *shaykh* Enīs Redjeb Dede (d. 1147/1734-5). He himself died of plague in Edirne in 1145/1732-3 and was buried in the convent. His *dīwān* of poetry was praised by early authorities as being good, but has not survived.

Cavid Baysun). (Ed.)

MUʾNIS al-FAḤL or Muʾnis al-Khāzin, commander of the ʿAbbāsids, prominent during the caliphates of al-Muʿtaḍid, al-Muktafī and al-Muḳtadir [*q.vv.*], i.e. the end of the 3rd/9th and the opening of the 4th/10th centuries. He was called "the stallion" (*al-faḥl*) to distinguish him from his more celebrated contemporary Muʾnis al-Khādim ("the eunuch") [see muʾnis al-muẓaffar]. Muʾnis al-Faḥl was *ṣāḥib al-ḥaras* or commander of the guard for al-Muʿtaḍid, and was sent by the caliph on various punitive expeditions against unruly Bedouin and other rebels in central ʿIrāḳ (286/899, 287/900, 289/902) and by al-Muktafī against the Carmathians [see ḳarmaṭī] in the vicinity of Hīt (293/906). In the succession crisis at al-Muktafī's death, when the young al-Muḳtadir was temporarily deposed by the partisans of Ibn al-Muʿtazz [*q.v.*] (296/908), he and Muʾnis al-Khādim acted decisively to reimpose al-Muḳtadir on the throne; as a reward, he subsequently became the *khāzin* or treasurer and also *ṣāḥib al-shurṭa* or police commander to the caliph. He died in 301/914.

(C.E. Bosworth)

MUʾNIS al-MUẒAFFAR, Abu 'l-Ḥasan, leading ʿAbbāsid general from 296 to 321 (908-33), and latterly virtual dictator (the usual attribution to him of the *nisba* al-Kushūrī seems to rest on a passage in Hilāl al-Ṣābiʾs *Kitāb al-Wuzarāʾ*, ed. Amedroz, 347, where Naṣr should be read for Muʾnis), a eunuch (a passage of Miskawayh, ed. Amedroz and Margoliouth, i, 160, shows that *khādim* in this case does not mean merely freedman, as suggested by Massignon, *al-Hallâj*, 205, no. 2), said by al-Dhahabī, *Taʾrīkh al-Islām* (followed by Ibn Taghrībirdī, ed. Juynboll, ii, 255) to have been 90 years old at death (though this age would seem incredibly great for a recently active commander), i.e. for him to have been born in 231/845-6 and to have held the rank of *amīr* for 60 years. The name Muʾnis was frequently found among eunuchs, and the sources therefore distinguish an older contemporary of Muʾnis al-Muẓaffar, Muʾnis the treasurer (*al-khāzin*), d. 301/914, as Muʾnis al-Faḥl ("the stallion") [*q.v.*].

Muʾnis first appears (if the passage of al-Ṭabarī, iii, 1953, refers to him) as a *ghulām* of al-Muʿtaḍid (not yet caliph) in the Zandj [*q.v.*] campaign of 267/880-1; and he is mentioned as Chief of Police in the caliph's camp (*ṣāḥib shurṭat al-ʿaskar*) in 287/900. Al-Dhahabī (also Ibn Taghrībirdī, *loc. cit.*) states, again, that he was banished to Mecca by al-Muʿtaḍid, to be recalled on the accession of al-Muḳtadir [*q.v.*]; and as Muʾnis is nowhere referred to during the intervening reign of al-Muktafī, the statement may be true. (If so, in al-Masʿūdī's description, *Murūdj al-dhahab*, viii = § 3355, of al-Muʿtaḍid's death, for *khādim* read *khāzin*, as in ʿArīb, 29.)

Muʾnis owed his later eminence mainly to his leading the defence, in 296/908, of the Ḥasanī palace at Baghdād for al-Muḳtadir against the partisans of the latter's cousin, the pretender Ibn al-Muʿtazz [*q.v.*]. During the caliph's youth, his gratitude and that of his powerful mother for this service assured Muʾnis's position; and though later al-Muḳtadir's favour turned to enmity, by that time Muʾnis's authority was hardly in need of support, owing chiefly to his almost invariably successful generalship. For though he undertook no very important campaigns, except perhaps the repulse of the Fāṭimid al-Mahdī [*q.v.*] in 307/919-20 (for which he received the *laḳab* of *al-Muẓaffar*), and the defence of Baghdād from the Ḳarāmiṭa [see ḳarmaṭī] in 315/927-8, he was only once defeated, sc. in 306/918.

Muʾnis early fell out with the vizier Ibn al-Furāt [*q.v.*], repeatedly opposing him, till in 312/924, on Ibn al-Furāt's third term of office, Muʾnis played a prominent part in securing his dismissal and execution. He now became all-powerful, being invariably consulted on the appointment of viziers and so controlling the government. Hence the change of al-Muḳtadir's affection to dislike, first signalised (315/927) in an abortive plot of the caliph's to murder him. In 316/928, Muʾnis lent himself to al-Muḳtadir's deposition in favour of his half-brother al-Ḳāhir [*q.v.*]. He almost immediately restored him, however, thereby becoming more absolutely his master than ever. Al-Muḳtadir eventually defied Muʾnis (319/931), who thereupon left Baghdād. Next year, however, having meanwhile collected a strong force, he marched on the capital intending to reimpose his authority. He duly defeated the caliph's army outside the walls, but al-Muḳtadir himself was killed on the field.

Muʾnis now restored al-Ḳāhir. But by resuming his dictatorial ways, he soon so alienated him also that he was obliged in self-defence to keep the new caliph a prisoner in the palace. He even contemplated deposing him. Al-Ḳāhir, however, succeeded in luring Muʾnis, together with his chief supporters, into the palace, where he shortly had them executed in Shaʿbān 321/August 933.

Muʾnis' influence was on the whole exerted for good; but he was neither strong nor intelligent enough to prevent the decline of the caliphate. His example of depriving the caliph of real power was pernicious. It was to be followed all too soon by the series of adventurers who, with the designation of *amīr al-umarāʾ* [*q.v.*], were to dominate al-Ḳāhir's successors.

MUNKAR (a.), a technical term in the science

of *ḥadīth* [*q.v.*] used to describe a certain type of tradition or a transmitter of such traditions. The plural of *munkar* is either *munkarāt* or *manākīr*. The definition of the term hinges on two connotations of the verb *ankara*, which conveys among others the notions "to be ignorant of" as well as "to reject" or "disapprove". Thus the term can be translated by "unknown" as well as "objectionable", and in whatever context it occurs, it potentially constitutes a double entendre. Some Muslim scholars equate the term with *s̲h̲ād̲h̲d̲h̲*, which stands for a tradition supported by a single *isnād* strand not attested elsewhere but in essence acceptable, since the transmitters in its *isnād* are defined as *t̲h̲iḳas*. The majority of *ḥadīth* experts, however, see in *munkar* a negative term, while they hold that a *s̲h̲ād̲h̲d̲h̲* tradition, though often bizarre, conveys something positive which may not be discarded.

Transmitters of *manākīr* are generally (although as will be seen below not always entirely justly) suspected of having had a hand in the invention of (part of) the *matn* of a tradition, while suspicion as to someone's tampering with a tradition's *isnād* has given rise to the qualification of that transmitter as being *ḍaʿīf*, a term also used to denote an *isnād* in which something is amiss. In early days, sc. the last few decades of the first/seventh century, when *isnād*s were hardly in existence yet, misgivings of *ḥadīth* experts concerning certain traditions in circulation were prompted, more than by any other feature, by the *matns*. *Isnād*-technical considerations, which became the major tools of the trade of *ḥadīth* critics in their assessment of traditions, were on the whole formulated later, to wit in the course of the 2nd/8th century. In other words, the identification of traditions as *munkar* hails from a very early stage in Muslim *ḥadīth* evaluation. This definition and its date of origin posited here tally with what the *ḥadīth* expert Abū Bakr al-Bardīd̲j̲ī (d. 301/914, cf. Sezgin, *GAS*, i, 166) once said, as quoted in Ibn Rad̲j̲ab's *S̲h̲arḥ ʿilal al-Tirmid̲h̲ī*, 324 f: "*Munkar* is what is transmitted by someone on the authority of a Companion or a Successor, whereby that tradition, *that is to say the text thereof*, is only known through that one *isnād* strand". The reputations of transmitters accused or suspected of having passed on some *munkar* material would be dented but not totally destroyed. (The concept of lying, in Arabic *kad̲h̲ib* = "mendacity", constitutes a criterion in *ḥadīth* criticism which originated somewhat later and emerges only in the course of the second half of the 2nd/8th century; see Juynboll, *Muslim tradition*, ch. 3.)

One of the earliest transmitters to some of whose traditions several experts applied the term *munkar*, was the *muk̲h̲aḍram* Successor Ḳays b. Abī Ḥāzim (d. 84/703 or 98/716), a *muʿammar* [*q.v.*] who was probably fictitious and was invented, complete with his alleged *munkar* traditions, by his alleged star pupil Ismāʿīl b. Abī K̲h̲ālid (d. 146/763). Another early Successor, some of whose transmitted material was at times dubbed *munkar*, was the controversial S̲h̲ahr b. Ḥaws̲h̲ab (d. between 100/718 and 112/730). He was accused of having brought *munkarāt* into circulation on the authority of *t̲h̲iḳāt*, a formulation which proves once more that it is their *matns* rather than their *isnāds* which define traditions as *munkar* (cf. Ibn Ḥad̲j̲ar, *Tahd̲h̲īb*, iv, 372).

The proliferation of much *munkar* material was achieved by means of so-called family *isnāds* (viz. "on the authority of my father who had it from his father" and so on). One of the earliest examples of such *isnād*s is found among the traditions ascribed to ʿAbd Allāh b. Burayda (d. 115/733), otherwise deemed trustworthy, who was suspected of having brought *munkar* traditions in circulation especially on the authority of his father, from whom, as the sources agree, he allegedly never heard anything. A more notorious example of *munkar* traditions being lent credibility by a much disputed family *isnād* is provided by a *ṣaḥīfa* allegedly passed on by the Companion ʿAbd Allāh b. ʿAmr to his grandson S̲h̲uʿayb b. Muḥammad b. ʿAbd Allāh to the latter's son ʿAmr b. S̲h̲uʿayb (d. 118/736). From this *ṣaḥīfa* some 170 traditions, many of which were found to be *munkar*, made it eventually to the canonical collections (with the exception of al-Buk̲h̲ārī's). These can be studied separately, as they are conveniently grouped together by al-Mizzī [*q.v.*] in his *Tuḥfat al-as̲h̲rāf bi-maʿrifat al-aṭrāf*, vi, nos. 8654-8823. But, as is evident from some recorded remarks of mediaeval tradition critics, for a number of these traditions it is not S̲h̲uʿayb b. ʿAmr but rather one of his alleged pupils (or conceivably one of that pupil's pupils) who is held responsible. Ibn Ḥad̲j̲ar enumerates several of these (cf. *Tahd̲h̲īb*, viii, 54).

In later usage, as from the second half of the 2nd/8th century, *munkar* becomes virtually synonymous with *mawḍūʿ* "fabricated", pertaining to *isnād* as well as *matn*. From the earliest times on, countless *manākīr* transmitters are listed in all *rid̲j̲āl* lexicons, often with quotations from their alleged *munkar* traditions. Those lexicons compiled especially to expose doubtful transmitters, such as Muḥammad b. ʿAmr al-ʿUḳaylī's *K. al-Ḍuʿafāʾ al-kabīr*, ed. ʿAbd al-Muʿṭī Amīn Ḳalʿad̲j̲ī, Beirut 1984, ʿAbd Allāh b. ʿAdī's *al-Kāmil fī ḍuʿafāʾ al-rid̲j̲āl*, ed. Beirut 1985, D̲h̲ahabī's *Mīzān al-iʿtidāl*, ed. ʿAlī Muḥammad al-Bid̲j̲āwī, Cairo 1963 and Ibn Ḥad̲j̲ar's *Lisān al-Mīzān*, Ḥaydarābād 1329, abound in examples of *munkar* traditions.

MUNKAR WA-NAKĪR (the forms with the article are also found), the names of the two angels who examine and if necessary punish the dead in their tombs. To the examination in the tomb the infidels and the faithful—the righteous as well as the sinners—are liable. They are set upright in their tombs and must state their opinion regarding Muḥammad. The righteous faithful will answer that he is the Apostle of Allāh; thereupon they will be left alone till the Day of Resurrection. The sinners and the infidels, on the other hand, will have no satisfactory answer at hand. In consequence of this the angels will beat them severely, as long as it will please Allāh, according to some authorities till the Day of Resurrection, except on Fridays.

In some sources a distinction is made between the punishment and the pressure (*ḍag̲h̲ṭa*) in the tomb, the righteous faithful being exempt from the former, not from the latter, whereas the infidels and the sinners suffer punishment as well as pressure (Abu 'l-Muʿīn Maymūn b. Muḥammad al-Nasafī, as cited in the commentary on the *Waṣiyyat Abī Ḥanīfa*, Ḥaydarābād 1321, 22).

The punishment in the tomb [see ʿAD̲H̲ĀB AL-ḲABR]

is not plainly mentioned in the Ḳurʾān. Allusions to the idea may be found in several passages, e.g. sūra XLVII, 29: "But how when the angels, causing them to die, shall smite them on their faces and backs"; sūra VI, 93: "But couldst thou see, when the ungodly are in the floods of death, and the angels reach forth their hands, saying, Yield up your souls; this day shall ye be recompensed with a humiliating punishment"; sūra VIII, 52: "And if thou wert to see when the angels take the life of the unbelievers; they smite their faces and their backs, and taste ye the torture of burning" (cf. further, sūra IX, 102; XXIII, 21; LII, 47).

The punishment of the tomb is very frequently mentioned in the Tradition (see *Bibl.*), often, however, without the mention of angels. In the latter group of traditions it is simply said that the dead are punished in their tombs, or why this is so, e.g. on account of special sins they have committed, or on account of the wailing of the living.

The names of Munkar and Nakīr do not appear in the Ḳurʾān, and, it seems, once only in canonical Tradition (al-Tirmidhī, *Djanāʾiz*, *bāb* 70). Apparently these names do not belong to the old stock of traditions. Moreover, in some traditions one anonymous angel only is mentioned as the angel who interrogates and punishes the dead (Muslim, *Īmān*, trad. 163; Abū Dāwūd, *Sunna, bāb* 39b; Aḥmad b. Ḥanbal, iii, 233, 346; iv, 150; al-Ṭayālisī, no. 753).

So there seem to be four stages in the traditions regarding this subject: the first without any angel being mentioned, the second mentioning "the" angel, the third two angels, the fourth being acquainted with the names Munkar and Nakīr.

This state of things as reflected in *ḥadīth* finds a similar reflex in the early forms of the creed. In the *Fiḳh Akbar* I, which may date from the middle of the 2nd/8th century, the punishment of the tomb appears as the only eschatological representation (art. 10). In the *Waṣiyyat Abī Ḥanīfa*, which may represent the orthodox views of the middle of the 2nd/8th century, we find, apart from an elaborate eschatology, the two following articles (arts. 18,19): "We confess, that the punishment in the tomb shall without fail take place. We confess, that in view of the traditions on the subject, the interrogation by Munkar and Nakīr is a reality". The term "reality" is apparently intended to oppose the allegorical interpretation of eschatological representations as taught by the Muʿtazilīs.

The *Fiḳh Akbar* II, which may represent the new orthodoxy of the middle of the 3rd/9th century, is still more elaborate on this point (art. 23): "The interrogation of the dead in the tomb by Munkar and Nakīr is a reality and the reunion of the body with the spirit in the tomb is a reality. The pressure and the punishment in the tomb are a reality that will take place in the case of all the infidels, and a reality that may take place in the case of some sinners belonging to the faithful". In the later creeds and works on dogmatics, the punishment and the interrogation in the tomb by Munkar and Nakīr are expressed in similar ways.

The Karrāmiyya [*q.v.*] taught the identity of Munkar and Nakīr with the two guardian angels who accompany man (ʿAbd al-Ḳāhir al-Baghdādī, *Uṣūl al-dīn*, Istanbul 1928, 246). Al-Ghazālī admits the idea that eschatological representations are a reality that takes place in the *malakūt*.

The origin of the names is uncertain; the meaning "disliked" seems doubtful. The idea of the examination and the punishment of the dead in their tombs is found among other peoples also. The details to be found in Jewish sources (*ḥibbūṭ haḳ-ḳeber*) are strikingly parallel to the Muslim ones.

(A.J. WENSINCK)

MUNḲIDH, BANŪ, a clan prominent in Syrian (and to a lesser extent Egyptian) affairs from the middle of the 5th/11th century to the end of the 6th/12th century. Between 474/1081 and 552/1157 their principal possession was Shayzar, a fortified town perched on a crag overlooking the Orontes (al-ʿĀṣī [*q.v.*]) River, some 15 km. northwest of Ḥamāt [*q.v.*]. After Shayzar was destroyed and most of the clan killed in the disastrous earthquake of 552/1157, its remaining members were compelled to pursue careers in the service of the various princes of Syria and Egypt. The Banū Munḳidh were not only soldiers and petty seigneurs; they also produced several poets and men of letters of some repute, among whom the best known was Usāma b. Murshid (488-584/1095-1188).

Like many of those who rose to power in Syria between the mid-4th/10th and the late 5th/11th centuries, the Banū Munḳidh were of Arab and Bedouin origin. They were members of the Kināna [*q.v.*] section of the Kalb, a "Yamanī' tribe, most of whose branches were active in the region around Damascus; the Kināna, however, resided in North Syria, in the districts east of the Orontes. The Banū Munḳidh seem to make their first appearance in 349/960, when a certain ʿAlī b. Munḳidh b. Naṣr al-Kinānī was captured (along with the poet Abū Firās [*q.v.*]) in a disastrous battle against the Byzantines. However, they first emerge as a significant political force in the wake of the seizure of Aleppo by Ṣāliḥ b. Mirdās in 415-16/1024-5. To one of his supporters, Muḳallad b. Naṣr b. Munḳidh, Ṣaliḥ assigned the district of Shayzar as an *iḳṭāʿ*. At this time, however, the town was still in Byzantine hands, and Muḳallad's most important possession was the town of Kafarṭāb. (When this place had been acquired by the Banū Munḳidh we do not know.)

Muḳallad b. Naṣr died in 450/1059 and bequeathed his lands to his son Sadīd al-Mulk ʿAlī, the true founder of the Munḳidhite principality. ʿAlī maintained his father's close (if not always friendly) ties with the Mirdāsids of Aleppo, but he soon ceased to be their client, becoming instead almost the arbiter of the dynasty. Thus in 468/1076 he was able to dictate the succession of the last Mirdāsid prince, Sābiḳ b. Maḥmūd b. Ṣāliḥ, while in 473/1080 he was instrumental in ending this dynasty's rule in Aleppo and turning the city over to the ʿUḳaylid ruler of Mawṣil, Muslim b. Ḳuraysh. In general, ʿAlī used his skills as a political broker in the fragmented world of North Syria to secure a considerable degree of autonomy for himself and his tiny seigneurie. His most lasting achievement, however, was his capture of Shayzar from the bishop of al-Bāra (nominally at least, a representative of Byzantine authority) in

474/1081. This he did by cutting the town off from its hinterland by building a castle (the so-called Kalʿat al-Djisr) which controlled a crucial Orontes bridge. For the next three-quarters of a century, Shayzar was to be the seat of the Banū Munkidh, the one stronghold they would retain in the face of every challenge. ʿAlī's principality at the time of his death in 475/1082, though it included no major cities, was a significant local power; in addition to Shayzar, he held Kafarṭāb, Apamea (Afāmiya), the port of al-Lādhikiyya, and several smaller places.

The Banū Munkidh enjoyed only a moment of prosperity, however, for in the decades following ʿAlī's death they were entangled in the convoluted and unceasing struggles of forces far more powerful than they—the ʿUkaylids of Mawṣil, Saldjūkids and Artukids, the Franks, the Assassins, not to mention various local Arab chiefs. That they were able to retain their autonomy and prestige (though not the bulk of their lands) is a tribute especially to the courage and astuteness of ʿAlī's two sons and successors: Naṣr (reigned 475-92/1082-98) and Abu 'l-ʿAsākir Sulṭān (492-549/1098-1154). The critical challenge of Naṣr b. ʿAlī's reign was the Saldjūkid conquest of Syria. Knowing that no Syrian coalition could resist the Saldjūkids, he followed a policy of accommodation. Thus in 479/1086-7 he felt compelled to cede Kafarṭāb, Apamea and al-Lādhikiyya to the sultan Malik-Shāh [*q.v.*] in exchange for the confirmed possession of Shayzar. In the confusion of the Saldjūkid occupation, Naṣr normally found his interests best served by aligning himself with the ruler of Aleppo. In 485/1091, this policy gained for him the restoration of the three towns mentioned above, though Kafarṭāb and Apamea were lost only five years later to a troublesome and persistent rival, Khalaf b. Mulāʿib. (Khalaf had been ruler of Ḥimṣ until displaced by the Saldjūkid Tutush in 483/1090-1, and was a constant source of turmoil in North Syria until his death at the hands of the Assassins in 499/1106.)

When Naṣr died in 492/1098, he named his brother Murshid as his successor, but upon the latter's refusal, ʿAlī's youngest son Sulṭān was called from al-Lādhikiyya, where he had been governor. Sulṭān's reign was even more troubled than Naṣr's had been, for almost from the outset he had to contend with two new regional forces, the Crusaders and the Assassins. The Turks remained a fact of life, of course. To meet these challenges he relied chiefly on his own kinsmen, for the Banū Munkidh were by this time a very numerous clan. The family had also a certain number of followers from their tribe of Kināna, though there is no evidence that they could call on the whole body of the tribe's warriors in this period. In addition, the townspeople of Shayzar could be a very effective militia, as they demonstrated especially in the siege mounted by the Emperor John Comnenus in 532/1138. Finally, the Banū Munkidh recruited Kurdish mercenaries and Turkish *mamlūks* as far as they were able, though these must always have been a small minority of their forces. It should be noted that these members-by-purchase of the clan were unfailingly loyal to their Arab patrons.

We cannot possibly review even the main events of Sulṭān's crowded reign, but a few facts will illustrate what he was up against. In 507/1114 (following Ibn al-Kalānisī rather than Ibn al-Athīr's date of 502/1109), the Assassins of the district staged a surprise attack on Shayzar while the Banū Munkidh were outside the town observing the Easter celebrations of their Christian subjects; only a bitter struggle, in which even the clan's women participated, succeeded in dislodging the assaillants. Even after this, the Assassins were a constant menace, and in 535/1141 they succeeded in snatching the fortress of Maṣyāf from the Banū Munkidh—a place which henceforth would be one of their chief strongholds. The principal Frankish threat came from the princes of Antioch; during the first three decades of the 6th/12th century Shayzar was subject to almost constant raids from this direction. In 504-5/1110-11, the town was seriously threatened by Tancred of Antioch, who had built a castle across the river at Tall Ibn Maʿshar; and in 509/1115 it was besieged by a Frankish-Muslim coalition (Roger of Antioch, Ṭughtigīn of Damascus, Īl-Ghāzī of Mārdīn) formed to resist a proposed Syrian campaign by the governor of Mawṣil. In the same period, the Turkish governors of Ḥimṣ and Ḥamāt—especially the latter—were always in a position to put pressure on the Banū Munkidh, though they made no sustained efforts to take Shayzar. A degree of security was afforded by the rise of Zangī after 522/1127, and Sulṭān was quick to put himself under the suzerainty of this formidable prince. Even so, he had to sustain a brief siege by Shams al-Mulūk Ismāʿīl of Damascus in 527/1133, and the far more dangerous assault in 532/1138 of John Comnenus, who was engaged in a campaign to reassert Byzantine supremacy in North Syria. But after this last event Shayzar entered into a period of relative peace, secured by the power of Zangī and his son Nūr al-Dīn Maḥmūd.

In 549/1154 Sulṭān b. ʿAlī was succeeded by his son Tādj al-Dawla Muḥammad without incident. In 552/1157, however, everything came to a brutal and utterly unexpected end. In Radjab/August a massive earthquake ravaged north and central Syria; in the citadel of Shayzar most of the Banū Munkidh were gathered for a great banquet when the building collapsed on them. None escaped except the wife of Tādj al-Dawla. To prevent such a strong site from falling into the hands of the Franks or the Assassins, Nūr al-Dīn quickly moved to take possession. Having restored it, he assigned it to his foster brother Madjd al-Dīn b. al-Dāya. The Banu 'l-Dāya, like their unfortunate predecessors, were to have a long career as lords of Shayzar, for they held it until 630/1232-3, when they were dispossessed by the Ayyūbid prince of Aleppo.

In spite of the extent of the disaster, the Banū Munkidh did not fall into complete obscurity. Several members of the clan were not present when the catastrophe occurred, and of these four in particular achieved some prominence: (1) Usāma b. Murshid b. ʿAlī; (2) his first cousin al-Mubārak b. Kāmil b. ʿAlī; (3) the latter's brother Muḥammad b. Kāmil b. ʿAlī, usually called Ḥiṭṭān; (4) a nephew of Usāma's, ʿAbd al-Raḥmān b. Nadjm al-Dawla Muḥammad b. Murshid b. ʿAlī.

(1) Usāma b. Murshid b. ʿAlī. Often called Usāma b. Munkidh after the clan's eponym, he is by far the best-known member of the Banū Munkidh. Esteemed in his own time as a poet and man of letters, we know him chiefly for his picturesque memoirs, the *Kitāb al-Iʿtibār* ("Book of instruction by example"). In the tradition of his family, however, he spent most of his life as a warrior and politician.

His career was a troubled one, and for this his own actions were surely responsible in large part. He was born in Shayzar in 488/1095 and continued to live there until *ca.* 526/1131, when he joined the entourage of Zangī. He returned briefly to his birthplace in 531-2/1137-8, to be present at the death of his father and the siege of John Comnenus. But in the summer of

532/1138 he and his brothers were banished by Sulṭān b. ʿAlī—because, our texts say, Sulṭān was jealous of their military prowess and apprehensive lest they try to reclaim the succession renounced by their father Murs̲h̲id in 492/1098. None of the four brothers would ever return to S̲h̲ayzar, and perhaps the dominant tone in Usāma's writing is his desperate longing for the home of his youth. For some reason, Usāma felt he could not rejoin Zangī's service, and instead went to the Börid court in Damascus. There he became a close associate of the city's strongman, Muʿīn al-Dīn Unur, and in pursuit of the latter's policy of détente with the Franks he made numerous journeys to Jerusalem and other places during these years. (It is these sojourns which underlie his famous observations on the Franks in the *K. al-Iʿtibār*.) By 539/1144, Usāma had become embroiled in the poisonous factionalism of Damascus, and he was ordered to leave by his former protector Muʿīn al-Dīn. Now unable to reside at any court in Syria, he took his family to Egypt and attached himself to the Fāṭimid court, where he eventually became an associate of the *wazīr* al-ʿĀdil b. al-Sallār.

He remained in Egypt for ten years. He was Ibn al-Sallār's envoy to Nūr al-Dīn in 544/1150, with the mission of forming an alliance to relieve Ascalon from the Franks. But by 548/1153 he had become embroiled in a plot to murder his patron, and in the following year he was involved in a conspiracy against the caliph al-Ẓāfir. The tumult consequent on this forced him to flee to Syria in the spring of 549/1154. Fortunately, Nūr al-Dīn had just occupied Damascus, and Usāma found an honourable welcome with him. He remained in Nūr al-Dīn's service for another decade, though he seems to have been increasingly restless. When, after the great victory of Ḥārim in 559/1164, he was invited to join the court of the Artuḳid Ḳara-Arslān of Ḥiṣn Kayfā, he took the opportunity. The years in Ḥiṣn Kayfā were essentially ones of retirement, and though Usāma seems to have resented this, he put his time there to good use. It was now that he began to collect his *dīwān* and to compose a series of works on poetry, rhetoric, *adab*, history, and religion. Most of these are lost, but his *dīwān*, a book on figures of speech (*al-badīʿ*) in poetry, an important anthology of verse on campsites and dwelling-places (*al-manāzil wa 'l-diyār*), and a prose anthology on sticks and rods (*K. al-ʿAṣā*) have come down to us.

In the autumn of 570/1174, Usāma was called to join the entourage of Ṣalāḥ al-Dīn, immediately after the latter's occupation of Damascus. Usāma's oldest son Murhaf, an associate of the *sulṭān* since *ca.* 565/1170, was the person who obtained this invitation. Usāma was at first enthusiastically welcomed at Ṣalāḥ al-Dīn's court, but within two years a certain chill set in between them, and the old man was forced to live out his last years in an honourable but bitterly resented retirement. At the very end of his life he completed (in 579/1183) an admirable anthology, the *Lubāb al-ādāb*, and composed or dictated his *K. al-Iʿtibār*. He died on 23 Ramaḍān 584/16 November 1188.

Usāma's poetry was very highly regarded in his own lifetime: Ibn ʿAsākir quotes extensively from it in his *Taʾrīk̲h̲ Dimas̲h̲ḳ*, and in the *K̲h̲arīdat al-ḳaṣr wa-d̲j̲arīdat al-ʿaṣr*, ʿImād al-Dīn devotes 48 pages (in the printed text) to him. Writers of the 7th/13th century—Ibn al-At̲h̲īr, Abū S̲h̲āma, Ibn K̲h̲allikān—continue to cite him with admiration. Thereafter, his poetry seems to have been neglected; but that is true for most other Arabic poets as well.

In the *K. al-Iʿtibār* we get some glimpses of Usāma's personality, but if one reads this work in conjunction with the *Lubāb al-ādāb*, it becomes clear that his purpose is not to bare his own soul but to depict a human ideal. In the *K. al-Iʿtibār*, he portrays the man he would like to have been: a person of almost reckless courage, whether in hunting or warfare; calm and unmoved in the face of God's decree; devoted to the honour of his family and to the memory of his father; learned in the Arabic language and the religious sciences. He is a true *adīb*, in some sense comparable to men like al-D̲j̲āḥiẓ, al-Tanūk̲h̲ī and al-Tawḥīdī. But whereas their ethos is that of the courtier, his is that of the soldier and petty seigneur; and whereas al-D̲j̲āḥiẓ and al-Tawḥīdī at least are restlessly curious about the thoughts and doings of their fellows, Usāma is only tolerant and amused. But whatever his shortcomings, he is a considerable figure, and his *oeuvre*, both verse and prose, deserves a serious study.

(2) al-Mubārak b. Kāmil b. ʿAlī and (3) Ḥiṭṭān b. Kāmil b. ʿAlī. Al-Mubārak was born in S̲h̲ayzar in 526/1131, but seems not to have remained there very long. After obtaining an education in Mecca and Bag̲h̲dād, he entered the Egyptian administration under Ṣalāḥ al-Dīn and obtained the post of *s̲h̲ādd al-dīwān*. In 569/1174 he was attached to al-Muʿaẓẓam Tūrāns̲h̲āh's expedition to the Yaman, where he served as governor of Zabīd. He returned to Egypt with Tūrāns̲h̲āh in 571/1176, leaving behind his brother Ḥiṭṭān as his successor in Zabīd. In 577/1181-2, shortly after the death of his patron Tūrāns̲h̲āh, al-Mubārak was disgraced by Ṣalāḥ al-Dīn for his alleged tyranny and corruption during his tenure in the Yaman. He was soon restored to favour, however, and retained high administrative office until his death in 589/1193. His brother Ḥiṭṭān was not so lucky. His régime in Zabīd was exceedingly harsh, and he became embroiled in conflicts and conspiracies with the other Ayyūbid lieutenants in the country. When Sayf al-Dīn Ṭug̲h̲tigīn came to restore order in 579/1183-4, Ḥiṭṭān was soon put under arrest, and shortly thereafter was executed in Taʿizz.

Al-Mubārak's son D̲j̲amāl al-Dīn Ismāʿīl (569-626/1174-1229) followed a career line similar to his father's. He was an administrator in the service of the Ayyūbids al-ʿĀdil and al-Kāmil; when the latter occupied Ḥarrān in 626/1229, Ismāʿīl was named *wālī*, in charge both of civil and military affairs, but died very shortly after taking up his appointment.

(4) ʿAbd al-Raḥmān b. Muḥammad b. Murs̲h̲id (523-600/1129-1204). He was Ṣalāḥ al-Dīn's envoy to the Almohad or al-Muwaḥḥid ruler al-Manṣūr Abū Yūsuf Yaʿḳūb in 587/1191, with the aim of obtaining the support of al-Manṣūr's fleet against the Franks then besieging Acre. It was a delicate mission, and ʿAbd al-Raḥmān's standing is indicated by the fact that it was assigned to him. The mission's ultimate failure must certainly be ascribed to objective circumstances and not his own shortcomings.

Bibliography: The oldest extant sources on the Banū Munḳid̲h̲ were composed in the mid- and late-6th/12th century: Ibn al-Ḳalānisī, *D̲h̲ayl Taʾrīk̲h̲ Dimas̲h̲ḳ*, ed. Amedroz, Leiden 1908, 113, 120-1, 133, 149-50, 164-5, 167, 174, 177, 183, 190-1, 239, 255-6, 264, 278, 343-6, 348-50; Ibn ʿAsākir, *al-Taʾrīk̲h̲ al-kabīr*, abridged ed., Badrān, Damascus 1330, ii, 400-4; ʿImād al-Dīn, *K̲h̲arīdat al-ḳaṣr*, Syria, i, ed. S̲h̲ukrī Fayṣal, Damascus 1375/1955, 497-579; Usāma b. Murshid, *K. al-Iʿtibār*, ed. Hitti, Princeton 1930, *passim*.

The 7th/13th-century writers rely chiefly on ʿImād al-Dīn and Usāma, but they add important

additional material; thus Yāḳūt interrogated Usāma's eldest son Murhaf, and Kamāl al-Dīn b. al-ʿAdīm could draw on the rich but now mostly lost historiographic tradition of North Syria. Ibn al-Athīr, *Atabegs*, ed. Ṭulaymāt, Cairo 1963, 110-12 *et passim*; *al-Kāmil*, ed. Tornberg, ix-xi, *passim*; Yāḳūt, *Irshād*, ed. Margoliouth, ii, 173-97; Abū Shāma, *K. al-Rawḍatayn*, ed. M.H.M. Aḥmad, Cairo 1956, i/1, 261-8, 276-85, *et passim*; Kamāl al-Dīn b. al-ʿAdīm, *Zubdat al-ḥalab*, ed. S. al-Dahhān, Damascus 1954, ii, *passim*; Ibn Khallikān, *Wafayāt*, ed. I. ʿAbbās, Beirut 1968: (Usāma b. Murshid), i, 195-9, 417, 461-3, 526; (ʿAlī b. Muḳallad), iii, 409-11; (al-Mubārak b. Kāmil), iv, 144-6; (Muḳallad b. Naṣr), v, 269-73; (ʿAbd al-Raḥmān b. Muḥammad), vii, 12.

The writings of Usāma b. Murshid were extensive, and the list in *GAL*, I, 319-20, SI, 552-3, is very inadequate. The best attempts at a survey are the editors' introductions to *Lubāb al-ādāb*, 25-7, and *K. al-Manāzil wa 'l-diyār*, 50-2. His published works are as follows:

(1) *al-Dīwān*, ed. A.A. Badawī and Ḥ. ʿAbd al-Madjīd, Cairo 1953, based on a unique ms. dated 688 (Dār al-Kutub);

(2) *al-Badīʿ fī naḳd al-shiʿr*, ed. A.A. Badawī, Ḥ. ʿAbd al-Madjīd and I. Muṣṭafā, Cairo 1380/1960;

(3) *K. al-Manāzil wa 'l-diyār*, facs. ed. A. Khalidov, Moscow 1961—autograph ms. dated 568 in Asiatic Museum, Leningrad. Printed ed. M. Ḥidjāzī, Cairo 1387/1968, based on the Khalidov facs. ed.;

(4) *Lubāb al-ādāb*, ed. A.M. Shākir, Cairo 1354/1935, based on an autograph ms. dated 579;

(5) *K. al-ʿAṣā*, partial ed. H. Derenbourg, in *Ousāma ibn Mounḳidh. i. Vie d'Ousāma*, 499-542;

(6) *K. al-Iʿtibār*, ed. H. Derenbourg, Paris 1886, as Part ii of *Ousama ibn Mounkidh*—based on unique Escorial ms., copied from a text certified by Murhaf b. Usāma in 610. Also ed. P.K. Hitti, Princeton 1930, the standard edition. Translations: Derenbourg, *Autobiographie d'Ousāma*, in *Revue de l'Orient Latin*, ii (1894), 327-565, also printed separately, Paris 1895; Hitti, *An Arab-Syrian gentleman and warrior in the period of the Crusades*, New York 1929; G. Rotter, *Usāma ibn Munqidh. Ein Leben im Kampf gegen Kreuzritterheere*, Tübingen and Basel 1978; A. Miquel, *Des enseignements de la vie. Souvenirs d'un gentilhomme syrien du temps des Croisades*, Paris 1983. On the language of the *K. al-Iʿtibār*, see I. Schen, *Usama ibn Munqidh's Memoirs: some further light on Muslim Middle Arabic*, in *JSS*, xvii (1972, 218-36, xviii (1973), 64-97, and G.R. Smith, *A new translation of certain passages of the hunting section of Usāma ibn Munqidh's Iʿtibār*, in *JSS*, xxvi (1981), 235-56.

In addition, there are extensive citations of his poetry in the historical sources cited above; see especially Ibn ʿAsākir, ʿImād al-Dīn, Yāḳūt, Abū Shāma and Ibn Khallikān.

The only full-length study on the Banū Munḳidh is Derenbourg, *Ousama ibn Mounkidh: un émir syrien au premier siècle des Croisades. i. Vie d'Ousama*, Paris 1893. Ch. xii, "Textes arabes inédits, par Ousama et sur Ousama", was also published separately, Paris 1893. Valuable data can also be gleaned from general historical studies on the period; see especially S. Zakkar, *The emirate of Aleppo, 1004-1094*, Beirut n.d. [*ca.* 1971]; idem, *Madkhal ilā taʾrīkh al-ḥurūb al-ṣalībiyya*, Beirut 1972; rev. ed. 1973; N. Elisséeff, *Nūr ad-Dīn*, 3 vols., Damascus 1967. (R. Stephen Humphreys)

MUNSARIḤ [see ʿARŪḌ].

MUNSHĪ (A.), correctly *munshiʾ*, a secretary, an exponent of the high-flown epistolary style general in mediaeval Islamic chanceries from the 2nd/8th century onwards and known as *inshāʾ* [*q.v.*]. In the Persian and Indo-Muslim worlds, the term *munshī* was used for secretaries in the ruler's chancery, e.g. among the Ṣafawids, for the whom the State Scribe, the *munshī al-mamalīk*, was a very important official who apparently shared responsibility for the Shāh's correspondence with the *wāḳiʿa-nuwīs* or Recorder (see *Tadhkirat al-mulūk*, tr. Minorsky , London 1943, § 23, pp. 61-2, 132). Subsequently, in Anglo-Indian usage, Europeans especially applied the term *munshī* to native teachers of the local Indian languages, such as Persian and Urdu, often in the anglicised form *moonshee* (see H. Yule and A.C. Burnell, *Hobson-Jobson, a glossary of Anglo-Indian colloquial words and phrases*, London 1903, 581). (C.E. Bosworth)

MUNṢIF (A.), literally, "one who metes out justice, *inṣāf* [*q.v.*]", a term used in Muslim Indian administration, and then in that of British India, to denote a legal official or judge of subordinate grade. In Mughal times, a chief *munṣif* (*munṣif-i munṣifān*) tried civil cases, especially those involving revenue questions, within a *sarkār* see R.C. Majumdar (ed.), *The history and culture of the Indian people*. vii. *The Mughul empire*, 1974, 79, 84, 86). In British India, from 1793 onwards, it was the title of a native civil judge of the lowest grade (see Yule and Burnell, *Hobson-Jobson, a glossary of Anglo-Indian words and phrases*, London 1886, 581, s.v. *Moonsiff*). (Ed.)

MUNṢIFA, Munṣifāt (Ashʿār —) (A.), the name given by the mediaeval Arabic critics and anthologists to those poems in which a description of the fights between tribes is accompanied by a recognition, with equity (*inṣāf*), of the opponent's valour and the sufferings endured by the poet's own side. This term, whose correct reading has not always been immediately recognised by the Arabic scholars who have come across it, appears in particular in the *Ṭabaḳāt al-shuʿarāʾ* of Ibn Sallām (ed. J. Hell, Leiden 1916, 33, 70; ed. M.M. Shākir, Cairo n.d., 121, 233), in al-Djāḥiẓ's *Bayān* (ed. Hārūn, iv, 23), in the *Dīwān* of the pre-Islamic poet ʿAmr b. Ḳamīʾa (ed. C.J. Lyall, London 1919, p. II, 19) and in some other, later texts. Al-Baghdādī (*Khizāna*, ed. Būlāḳ, iii, 520-1) has enabled us to resolve the problem of the correct reading of *munṣifa* by citing the definition proposed by al-Ṭabarsī: "The *ashʿar munṣifa* come within the category of equity meted out reciprocally (*tanāṣuf*). The ancient Arabs had *ḳaṣīda*s in which their authors rendered justice (*anṣafa*) to their enemies, spoke frankly about the violence of battle which each side had shown and described the circumstances of a sincere brotherhood".

In these poems, which for a certain period enjoyed a remarkable vogue among the *ruwāt* of Baṣra (see al-Djāḥiẓ, *loc. cit.*), the fighting qualities of the opposing tribe are celebrated, and the poet puts them on the same level, in this respect, as those of his own group (... we appeared as like ... as two mills which one puts into motion; Muhalhil b. Rabīʿa, in Ibn Sallām, *Ṭabaḳāt*, ed. Shākir, 33), it being understood that it is always the latter group which is victorious. This equality which is emphasised shows itself in the ardour of the fight, expressed if necessary by a comparison with wild beasts (*We fought together in a hand-to-hand struggle with the opposing heroes, like panthers face-to-face with lions*; Khidāsh b. Zuhayr, in Ibn Sallām, *Ṭabaḳāt*, 121; *Aghānī*, ed. Beirut, xxii, 70-1), in the correspondence of movements, in the condition of the

weapons after the fight (*They came back with broken lances, whilst we had twisted swords*; ᶜAbd al-Shāriḳ al-Djuhanī, in the *Ḥamāsa* of Abū Tammām, Cairo n.d., i, 179), in the seriousness of wounds (*We returned to the fight, both of our sides, with burning wounds*; ᶜAmr b. Ḳamīʾa. *Dīwān*, fragment no. II; Ibn Ḳutayba, *Shiᶜr*, 222) and in the tears of the women from both sides lamenting their dead (*We made their womenfolk weep, whilst they made those of them weep who could no longer choke back their saliva*; al-Mufaḍḍal b. Maᶜshar, in *al-Aṣmaᶜiyyāt*, ed. Shākir and Hārūn, Cairo n.d., 230-5).

One may regard these poems as forming a fairly homogenous category on the level of form and of their basis. With reference to the form, the use of the *wāfir* metre appears with striking frequency. Furthermore, the terrifying numerousness of the enemy warriors is expressed by Muhalhil b. Rabīᶜa (*Ṭabaḳāt*, 33), Khidāsh b. Zuhayr (*op. cit.*, 121), al-Mufaḍḍal b. Maᶜshar (*op. cit.*, 233) and ᶜAbd al-Shāriḳ al-Djuhanī (*Ḥamāsa* of Abū Tammām, i, 177) by means of the same comparison in a hemistich common to all four of these poets:

fa-djāʾū ᶜāriḍan bāridan wa-djiʾnā... "They came [like] a cloud bringing hail, and we came ..."

With reference to their basis, the *ashᶜār munṣifa* constitute "an elegant means of vaunting oneself whilst at the same time recognising the enemy's bravery, above all, without humiliating him, in such a way as to preserve the conditions of sincere brotherhood". In this respect, there are some verses which make one inevitably think of certain passages in the *chansons de geste* which reveal a secret hope of converting the people whom one is combatting. To a certain degree, the *ashᶜār munṣifa* can be linked with the concept of *ḥilm* [*q.v.*], and are basically opposed to that of *hidjāʾ* [*q.v.*], which aims at dishonoring the enemy by making him lose his *ᶜirḍ* [*q.v.*]. Finally, one may note that this type of poetry is no longer attested after the coming of Islam, probably because the Arab tribes had by that time ceased to fight each other in the fashion of the *Djāhiliyya*.

Bibliography: The examples which are extant have been gathered together by the present author in his study *Sur l'expression arabe* ašᶜār m.n.ṣ.fāt, in *Mélanges Marcel Cohen*, Paris [1970], 277-85.

(CH. PELLAT)

MUNTADJAB AL-DĪN, Imāmī Shīᶜī scholar, born in 504/1110-11 and died, apparently, in 575/1179-80, whose complete name is *al-ᶜallāma al-ḥāfiẓ al-shaykh* Abu 'l-Ḥasan ᶜAlī b. ᶜUbayd Allāh b. al-Ḥasan b. al-Ḥusayn b. al-Ḥasan b. al-Ḥusayn b. ᶜAli b. al-Ḥusayn b. Mūsā b. Bābawayh al-Ḳummī al-Rāzī, known by the abbreviated name Ibn Bābawayh and the honorific Muntadjab al-Dīn.

From this onomastic formula, it may be deduced that he was descended from the family of Bābawayh, originally of Ḳumm, well-known in circles of Shīᶜi traditionists (it will suffice to mention his ancestor, the eminent Ibn Bābawayh [*q.v.*]), of which he was to be the last representative to enjoy equivalent renown as a man of learning. From the *tardjama* devoted to him by one of his pupils, the Shāfiᶜī al-Rāfiᶜī in the *K. al-Tadwīn*, and through the information to be found in his *Fihrist* (see below), it is possible to sketch the basic outline of his biography. Born at Rayy, where a branch of the Bābawayh family had established itself, possibly in the time of his aforementioned ancestor, he was guided at a very early age towards study of the sciences of *ḥadīth*, having the opportunity of meeting in Rayy all the masters who passed through this town. His travels for the purpose of study were to follow the academic itinerary of the period (Iṣfahān, Baghdād, al-Ḥilla, Khʷārazm, Ṭabaristān, Ḳazwīn, Kāshān and Nīshāpūr), and he was to assemble a quite respectable list of teachers, giving him an unrivalled education in the field of *ḥadīth*.

The works attributed to him by the sources are four in number: (1) *K. al-Arbaᶜīn ᶜan al-arbaᶜīn min al-arbaᶜīn fī faḍāʾil Amīr al-Muʾminīn*, a collection of forty *ḥadīths* on ᶜAlī b. Abī Ṭālib heard by forty of his teachers, of which the *isnads* are traced back to forty *Ṣaḥāba*; a manuscript copy has been preserved; (2) *Taʾrīkh al-Rayy*, the dubious title of an anecdotal work devoted to the scholars of his city; quotations from it are to be found in the *Lisān al-Mīzān* of Ibn Ḥadjar al-ᶜAsḳalānī [*q.v.*]; (3) *al-ᶜUṣra*, a *risāla* concerning prayers, of which the authorship is however uncertain; and (4) *Fihrist asāmī ᶜulamāʾ al-Shīᶜa wa-muṣannifīhim*, his most interesting work for the information which may be gleaned from it regarding the Imāmī community of the period.

This is a book devoted to *ᶜilm al-ridjāl* [*q.v.*] which refers, through its title, to a seminal work on this subject, the *Fihrist* of Abū Djaᶜfar al-Ṭūsī [*q.v.*], of which the author intends it to be an updated version. It contains brief bio-bibliographical articles arranged in alphabetical order and relating to 544 Imāmī *ᶜulamāʾ*, most of them belonging to a period later than that of al-Ṭūsī. From an onomastic point of view, the *Fihrist* of Muntadjab is the first text of Imāmī *ᶜilm al-ridjāl* which presents the names of individuals according to the formula *shuhra-laḳab-kunya-ism ᶜalam-nasab-nisba*, whereas until his time, and even after, the formula *ism ᶜalam-nasab-nisba-shuhra-laḳab-kunya* was almost a rule. Through the *nisbas* of the individuals and the biographical information, the impression is gained that the majority of them were born or resided in towns of Persia.

Hitherto, use has been made of the copy preserved by Madjlisī in the *Biḥār al-anwār* (lith. Tehran 1315, xxv. 2-13), but henceforward reference will be to the critical edition of ʿAbd al-ᶜAzīz al-Ṭabāṭabāʾī (Ḳumm 1404/1984-5), which is preceded by a well-documented Introduction and enriched by an Appendix containing the quotations borrowed by Ibn Ḥadjar al-ᶜAsḳalānī from the *Taʾrīkh al-Rayy* of Muntadjab al-Dīn.

Bibliography: Rāfiᶜī, *K. al-Tadwīn* (ms. Topkapı Museum, see cat. Karatay, Istanbul 1966, ii, 509, no. 6329 K 1007, fols. 254b-256a); al-Ḥurr al-ᶜĀmilī, *Amal al-āmil fī dhikr ᶜulamāʾ djabal ᶜĀmil*, lith. AL-MUNTAFIḲ, a section of the Arab tribe of the Banū ʿUḳayl, which in turn is a subdivision of the great group of the ʿĀmir b. Ṣaʿṣaʿa [*q.v.*].

1. In Pre-Islamic Arabia and the age of the conquests. Genealogy: al-Muntafiḳ b. ʿĀmir b. ʿUḳayl (Wüstenfeld, *Gen. Tab.*, D. 19). The very scanty information in Wüstenfeld can be supplemented by the notice which Ibn al-Kalbī gives of the Banu 'l-Muntafiḳ (*Djamharat al-nasab* = Caskel and Strenziok, Tabellen, 104, Register 431); but this little clan nowhere appears to play a great part in early history. The territory inhabited by the Banu 'l-Muntafiḳ is the same as that of the other divisions of the Banū ʿUḳayl, in the south-west of Yamāma; some places belonging to them are quoted by al-Bakrī (*Muʿdjam*, ed. Wüstenfeld, 567), Yāḳūt (*Muʿdjam*, ed. Wüstenfeld, i, 793-4; iv, 712, l. 78; we may note that in these two passages al-Muntafik is said to be the surname of Muʿāwiya b. ʿUḳayl, while the usual genealogy makes this Muʿāwiya a son of al-Muntafiḳ) and al-Hamdānī (*Djazīra*, ed. D.H. Müller, 177, ll. 12-15: note the mention of gold mines in their territory). The Banu 'l-Muntafiḳ numbered among their clients the Banū Ṭathr (Wüstenfeld, *Gen. Tab.*, C 13), whose eponym was said to have been made a prisoner by them (*Kitāb al-Aghānī*[1], vii, 110); one of the few episodes of the pre-Islamic period in which this clan is mentioned is the battle of Shiʿb Djabala where Ḳays b. al-Muntafiḳ distinguished himself (*Aghānī*, x, 44; *Naḳāʾiḍ*, ed. Bevan, 671 l. 12-672, l. 14, where Ibn Ṭufayl should be deleted). In the history of the origins of Islam, several of them appear as ambassadors of the Banū ʿUḳayl to the Prophet: such were Anas b. Ḳays b. al-Muntafiḳ and Laḳīṭ b. ʿĀmir b. al-Muntafiḳ (Ibn Saʿd, i/2, 45, etc.; on the latter, the biographical collections have long discussions as to whether he is to be identified with this or that *muḥaddith*: cf. among others Ibn Ḥadjar, *Tahdhīb al-tahdhīb*, viii, 456).

In the period of the conquests, the Banu 'l-Muntafiḳ settled in the marshy region between Kūfa and Baṣra (al-Ḳalḳashandī, *Nihāyat al-arab*, 65-6). All that we know of them after this period is the names of a few individuals who held public offices: a certain ʿAmr b. Muʿāwiya b. al-Muntafiḳ, mentioned by al-Ṭabarī, i, 3284 at end, as fighting at Ṣiffīn, is said by Ibn al-Kalbī to have been governor of Armenia and Ādharbāydjān under Muʿāwiya; according to Ibn al-Kalbī, ʿAbd Allāh b. Muʿāwiya b. Rabīʿa b. ʿĀmir b. al-Muntafiḳ was governor of Marw and Ahwāz, also under Muʿāwiya, and ʿAbīda b. Ḳays b. al-Muntafiḳ of Armenia, under Yazīd I. These men are not mentioned elsewhere: the same is true of the poet Djahm b. ʿAwf b. al-Ḥusayn b. al-Muntafiḳ (Ibn Ḥadjar, *Iṣāba*, ed. Sharafiyya, Cairo 1325, v, 124 follows Ibn al-Kalbī).

2. In recent times.

Together with the Āl Bū Muḥammad, the Banū Lām [*q.v.*], the ʿUbayd and sections of the Shammar, the Muntafiḳ tribe dominated the area from Baghdād to Baṣra between the 17th to 19th centuries; until the late 19th century, Ottoman political and administrative control was tenuous at best, and always dependent on a delicate balance of alliances with different combinations of tribes. The rise of the Muntafiḳ to power in early modern times began in the early 17th century, when a marriage alliance between the shaykhly house of Saʿdūn and the Afrāsiyābs [*q.v.*] of Baṣra resulted in the Muntafiḳ defending Baṣra for the Afrāsiyābs against a Persian attack in 1625. Later in the century, Shaykh Manīʿ al-Saʿdūn captured Baṣra and the city stayed in the hands of the tribe until the Ottomans regained control in 1705 [see AḤMAD III].

Between 1750 and 1831, the year in which direct Ottoman control was, at least in theory, re-established, the *pashalik* of Baghdād was ruled by a succession of Mamlūks, at least part of whose survival in power depended on placating or cooperating with the major tribes (see T. Nieuwenhuis, *Politics and society in early modern Iraq: Mamluk pashas, tribal shaykhs and local rule between 1802 and 1881*, Amsterdam 1982); given the power vacuum in Baghdād, the Muntafiḳ were instrumental in preventing Baṣra from falling to the forces of Karīm Khān Zand [*q.v.*] in 1775. The tribe played an equally important role in checking Wahhābī incursions into southern ʿIrāḳ from central Arabia, and took part in an Ottoman expedition to Hufūf in 1798-9 (M. Freiherr von Oppenheim, *Die Beduinen*, Bd. III, *Die Beduinenstämme in Nord- und Mittelarabien und im Irak*, ed. W. Caskel, Wiesbaden 1952, 415-29).

By the mid-19th century, the confederation had reached the zenith of its territorial power, controlling the area between Samāwa on the Euphrates and the Shaṭṭ al-ʿArab, from Kūt on the Tigris southwards to ʿUzayr and from Kūt eastwards to the Persian border, and members of the shaykhly family held the tax farms for much of southern Iraḳ between 1831 and 1869. However, the increasingly centralising tendency of Ottoman policies meant that the might of the Muntafiḳ was already declining; in 1854 Shaykh Manṣūr al-Saʿdūn was forced to recognise the Ottoman occupation of Samāwa; Sūḳ al-Shuyūkh was occupied in 1856, and by 1861 the tribe had given up the area between Shaṭra and Ḳalʿat Ṣāliḥ to the Ottomans. Some members of the Saʿdūn family, notably Nāṣir Pasha, became incorporated into the Ottoman administration, while others, notably Manṣūr Pasha and his son Saʿdūn, maintained their distance and tried, generally unsuccessfully, to resist the encroachments of the state. Nāṣir was appointed *mutaṣarrif* of the *sandjak* of the Muntafiḳ by Midḥat Pasha [*q.v.*], founded Nāṣiriyya [*q.v.*] as an administrative centre in 1872, and became first *wālī* of Baṣra in 1875, while Saʿdūn b. Manṣūr, who became paramount *shaykh* in 1903, was eventually exiled by the Ottomans to Aleppo, where he died in 1911. In the First World War, the family generally supported the Ottomans until the capture of ʿAmāra by the British in 1915; its best-known member, ʿAbd al-Muḥsin al-Saʿdūn, served several times as a parliamentary deputy and was twice Prime Minister of ʿIrāḳ under the monarchy.

In 1929 (von Oppenheim, *op. cit.*, 448), the Muntafiḳ confederation numbered some 75,000 tribesmen, divided into seven principal sections. It had been ruled at least since the end of the 17th century by members of a single family, the Saʿdūn, *ashrāf* who had migrated to Mesopotamia from the Ḥidjāz, perhaps in the 15th century [see AL-BAṬĪḤA]; the Saʿdūn were Sunnīs, while the rank-and-file tribesmen were Shīʿīs, originally pastoral nomads, but increasingly through the 19th century sedentary cultivators. In their capacities as guardians and protectors of the transit routes between Baghdād and Baṣra and principal suppliers of horses to British India, the Muntafiḳ leaders generally maintained good relations with the East India Company's representatives, who had played an important political role in the area since the end of the 18th century.

By the beginning of the 20th century, the Saʿdūn

family had lost much of its former authority, largely because of the way in which the Muntafiḳ tribal lands had been transferred out of the hands of their traditional occupiers into its hands. Especially among the rice cultivators, the customary form of land tenure had virtually amounted to private property; they could sell, bequeath, inherit or mortgage their land. When the Saʿdūn family acquired *tapu* rights from the Ottomans in the early 1870s (under the terms of the 1858 Land Law), they proceeded to lease their tithe-collecting rights to *sarkal*s or minor *shaykh*s, with the result that they were "increasingly viewed as merely absentee landlords and were resented accordingly" (Albertine Jwaideh, *Aspects of land tenure and social change in late Ottoman times*, in Tarif Khalidi (ed.), *Land tenure and social transformation in the Middle East*, Beirut 1984, 333-56); in consequence, they lost much of the social and political control which they had traditionally exercised over the Muntafiḳ tribesmen. During and especially after the First World War, the Muntafiḳ area was notorious for its lawlessness, and there were serious tribal risings as late as 1936. A Muntafiḳ Land Commission was set up in 1929 to try to resolve long-standing disputes over title, but its efforts were frustrated by powerful landlord interests, which the British mandatory authorities had done much to bolster and support (P. Sluglett, *Britain in Iraq 1914-1932*, London 1976).

(P. Sluglett)

AL-**MUNTAṢIR** bi 'llāh, Abū Djaʿfar Muḥammad b. Djaʿfar, ʿAbbasid caliph, reigned 247-8/861-2, and son of the preceeding caliph al-Mutawakkil by a Greek slave concubine Ḥubshiyya.

Towards the end of al-Mutawakkil's reign, it had been the aim of his vizier ʿUbayd Allāh b. Yaḥyā b. Khāḳān to get the succession changed from the caliph's original choice as *walī al-ʿahd* to another son al-Muʿtazz. Al-Muntaṣir was involved in the conspiracy of the Turkish soldiery which led to the caliph's death [see al-mutawakkil], and himself received the *bayʿa* [*q.v.*] at the palace of al-Djaʿfariyya on Wednesday, 4 Shawwāl 247/11 December 861, when he was 25 years old. His chief executive was the vizier Aḥmad b. al-Khaṣīb, his former secretary, whose policy, in concert with the Turkish commanders Waṣīf and Bughā al-Ṣaghīr, was to get the claims of the next heirs, the brother al-Muʿtazz and al-Muʾayyad, set aside lest, should either of the latter achieve power, he might take vengeance for his father al-Mutawakkil's murder. Aḥmad persuaded al-Muntaṣir to get the succession changed (Ṣafar 248/April 862) and managed to get his rival Waṣīf sent off to lead the summer raid against Byzantium.

During his brief six months' reign, little else is recorded of al-Muntaṣir's activities, although the sources stress his intelligence and fairness, and, in contradistinction to his father's strongly Sunnī and anti-Muʿtazilī attitudes, his consideration for the ʿAlids; he gave back to them the estates at Fadak [*q.v.*] originally claimed by Fāṭima, together with other ʿAlid properties, and allowed pilgrimage once more to their graves and shrines. Al-Muntaṣir fell ill and died at Sāmarrā on Thursday, 25 Rabīʿ I 248/29 May 862 or shortly thereafter; the choice of the Turkish guards and the vizier Aḥmad b. al-Khaṣīb—avoiding the surviving sons of al-Mutawakkil for the reason mentioned above—now fell on a grandson of al-Muʿtaṣim's, Aḥmad b. Muḥammad al-Mustaʿīn [*q.v.*].

MURABBAʿ [see musammaṭ].

MURĀBIṬ [see ribāṭ].

AL-**MURĀBIṬŪN** (a.), known in European usage as the Almoravids, a dynasty of Berber origin which ruled in North Africa and then Spain during the second half of the 5th/11th century and the first half of the 6th/12th century before being replaced by another Berber dynasty, that of the Almohads or al-Muwaḥḥidūn [*q.v.*]. The Almoravids are mentioned in the anonymous 12th century Troubadour song *Chevalier, mult estes guariz:* "Quant Deu a vus fait sa clamur Des Turs e des Amoraviz", "Knights, your salvation is assured since God has appealed to you to take His side against the Turks and Almoravids". This word was once assumed to be derived from a type of "warrior-monk" who inhabited a *ribāṭ* [*q.v.*], a fortified convent on the frontiers of Islam, and this sense is no doubt the correct one in several instances (see E. Doutté, *Les Marabouts*, extr. from *RHR*, xl-xli [1904], 29 ff.). However, as will be seen, the Saharan *Murābiṭūn* may well have regarded their name as metaphorical, a spiritual discipline rather than a literal toponymic or geographical nomenclature attached to a convent or a retreat, and they may have simply regarded themselves as being affiliated initially to the *Dār al-Murābiṭīn* that had been established by the Sūsī divine Wadjādj b. Zalwī al-Lamṭī at Aglū near Tīznīt in southern Morocco (see the arguments of P.F. de Moraes Farias, *The Almoravids*, in *Bull. IFAN*, xxix, ser. B., 3-4 (1967), 821-43, and F. Meier, *Almoraviden und Marabute*, in *WI*, xxi [1939], 80-163).

Under the name *al-Murābiṭūn* is to be understood, more especially, the royal dynasty founded by several branches of the Berber-speaking nomadic Ṣanhādja (Znāga) which, grouped under the authority of a religious leader, invaded and conquered the Maghrib in the first half of the 5th/11th century, afterwards crossing over into Andalusia and conquering that as well.

In the first centuries of Islam, the sub-divisions of the Ṣanhādja of the Western and Central Saharan regions (on these tribes, see T. Lewicki, *Les origines de l'Islam dans les tribus berbères du Sahara Occidental*, in *SI*, xxii [1970], 203-14) who wore a face-muffler, covering the mouth and chin (*lithām* [*q.v.*]) and who were known collectively as the *mulaththamūn* by the Arab

geographers, inhabited that region of the Sahara traversed by the Saharan salt [see AZALAY] and slave caravans and known to the Arab geographers as the Kākudam or Nīsar desert. They lived a nomadic existence there, as do the Ṣaḥrāwīs and the Tuareg down to the present day.

The Muslim writers by no means agree, in matter of details, over the events that first brought about the creation of the movement of the *Murābiṭūn* in these remote areas, though in broad terms they trace its genesis as follows.

1. Origins and history in North Africa.

Two works in particular are our oldest surviving sources for the record of the circumstances that led to the rise of the movement: (a) *Tartīb al-madārik wa-taḳrīb al-masālik li-maʿrifat aʿlām madhhab Mālik* by the *Ḳāḍī* Abu 'l-Faḍl ʿIyāḍ b. Mūsā al-Yaḥṣubī al-Sabtī, 476-544/1083-1149 [*q.v.*] (see H.T. Norris, *New evidence on the life of ʿAbdallāh b. Yāsīn and the origins of the Almoravid movement*, in *Jnal. Afr. Hist.*, xxii [1971], 255-68); and (b) *Kitāb al-Masālik wa 'l-mamālik* by Abū ʿUbayd ʿAbd Allāh b. ʿAbd al-ʿAzīz b. Muḥammad b. Ayyūb al-Bakrī, written in 460/1068. One of the most important Arabic sources that was specifically concerned with the Almoravids is now lost. Its author, Ibn al-Ṣayrafī Abū Bakr Yaḥyā b. Muḥammad b. Yūsuf al-Anṣārī al-Ishbīlī (d. 557/1174) was a secretary of the *amīr* ʿAlī b. Yūsuf b. Tāshufīn, and his work was entitled *al-Anwār al-djaliyya fī akhbār al-dawla al-Murābiṭiyya*. However, Ibn ʿIdhārī and the anonymous author of the *Kitāb al-Ḥulal al-mawshiyya* appear to have drawn upon material from this missing work for their accounts.

In the first half of the 5th/11th century a man of piety, either a tribal chief or a jurist, of the Djaddāla or Gudāla [*q.v.*] (who were then centred in the regions of the Sāḳiya al-Ḥamrā᾿, the Río de Oro and the Trārza of Mauritania), undertook the pilgrimage to Mecca. He was known as al-Djawhar b. Sakkum (this detail is confirmed by the *Ḳāḍī* ʿIyāḍ and by Ibn al-Athīr, likewise by al-Bakrī who, however, suggests that his status with two colleagues, Ayyār and Īntakkū, was only that of a jurist. The majority of the sources furnish the name of the chief as Yaḥyā b. Ibrāhīm al-Gudālī). On his way back to the Western Sahara, he met in Ḳayrawān the teacher of Mālikī law Abū ʿImrān al-Ghafdjūmī al-Fāsī (a detail omitted by the *Ḳāḍī* ʿIyād, though mentioned by al-Bakrī). He in his turn recommended the jurist/chief to visit Wadjādj b. Zalwī al-Lamṭī, whose *Dār al-Murābiṭīn* was situated in the Moroccan Sūs (at Aglū or Malkūs). Touched by al-Djawhar's desire to educate his tribe further in Mālikī orthodoxy, and seeing in him an ally of military potential, Wadjādj sent him southwards into the desert, accompanied by his chief pupil, ʿAbd Allāh b. Yāsīn al-Djazūlī, who had studied for seven years in Cordova.

ʿAbd Allāh b. Yāsīn resided for some time amongst the Djaddāla, though he also seems to have become acquainted with the princely families of the Lamtūna [*q.v*] who were related to the Djaddāla, despite frequent tribal conflicts with them, and who were geographically centred in the more southerly region of the Adrār [*q.v.*] of Mauritania and in Tagānit. ʿAbd Allāh b. Yāsīn was a strict Mālikī. He enforced the *Sharīʿa* penalties to the letter and even issued a *fatwā* that authorised the slaying of al-Djawhar b. Sakkum who had first accompanied him into the desert. Both the *Ḳāḍī* ʿIyāḍ and al-Bakrī describe the severe discipline that was imposed upon those *murābiṭūn* who entered into the *ribāṭ* of Ibn Yāsīn. According to the *Ḳāḍī* ʿIyāḍ (*Madārik*, éd. Bakīr, iv, 781) "All were obedient to him and to the faith he followed in the way he conducted his affairs there. His recorded decisions are well known and remembered, and they memorise his *fatāwā* and his answers [to legal questions]. They do not depart from them. He made all of them observe the congregational prayer and he punished those who did not observe it, ten lashes for every *rakʿa* which one of them missed, since they were in his view those for whom no prayer was proper save if led by an *Imām*. This was due to their ignorance in reciting (the Ḳur᾿ān) and in praying (the statutory prayers)".

These disciplinary measures necessitated the return of ʿAbd Allāh b. Yāsīn to consult his master Wadjādj b. Zalwī, according to al-Bakrī. All the sources, however widely they may differ, are in accord that the movement of the *Murābiṭūn* was inspired by a militant and expansionist ideology conceived by ʿAbd Allāh b. Yāsīn. As far as we can tell from the writings of *Ḳāḍī* ʿIyād, it was not to the fore in the Dār of Wadjādj b. Zalwī which was "built in the Sūs for the purpose of study and for pious purposes".

The later historians centre the activities of the *Murābiṭūn* at this stage in a hermitage base for ʿAbd Allāh b. Yāsīn, for Yaḥyā b. Ibrāhīm (or al-Djawhar b. Sakkum) and for the princes of the Lamtūna who joined the movement, Yaḥyā b. ʿUmar and Abū Bakr b. ʿUmar. Located near the mouth of the Senegal river, or along the coast near Nouakchott, or on Arguin island, it became the rallying point for neophytes who flocked to join the movement. They, the Lamtūna and Massūfa as well as Djaddāla, were organised into a raiding force that subdued the adjacent Ṣanhādja and they may have made common cause with pious Muslim rulers (such as Wardjābī b. Rābīs) and their subjects along the Senegal river in Takrūr.

However, neither the *Ḳāḍī* ʿIyāḍ nor al-Bakrī attach any importance to such a waterside centre. Their total silence suggests that later historians may have invented it or given it an inflated significance in order to explain the meaning of *ribāṭ* by a more graphical and conventional exegesis. Instead, al-Bakrī describes the foundation of a town by ʿAbd Allāh b. Yāsīn as his headquarters, in which all its habitations were of a uniform height and which bore the name of Aratnannā. This Berber word supplies no clear indication of its location, suggesting either a low-lying or hollow place for water (according to the Znāga-speaking Mauritanian scholar al-Mukhtār b. Ḥāmidun), or simply "our thing", *aret nenna*, "la chose que nous avons dite (ordonnée)" (according to the opinion of Salem Chaker) (see M. Brett, *Islam and trade in the* Bilād al-Sūdān, *tenth-eleventh century AD*, in *Jnal. Afr. Hist*, xxiv [1983], 431-40).

Whatever changes may have taken place within the Saharan leadership (and it is clear from all the sources that the Lamtūna Ṣanhādja were rapidly to become the *élite* group, the "Praetorian Guard" of the *Mūrabiṭūn*), ʿAbd Allāh b. Yāsīn was to keep for himself the supreme direction of affairs and the political and financial administration of the brotherhood. He entrusted his faithful disciple Yaḥyā b. ʿUmar al-Lamtūnī (whom on one occasion he had had flogged), with the leadership of the army and named him *Amīr al-Muslimīn*. This army fought to the death with spears, arranged in solid phalanxes, and it was to face the Djaddāla at the battle of T.b.f.r.l.y in the Río de Oro region. This was a pyrrhic victory strategically though an important one politically, since it marked the withdrawal of Djaddāla support from the movement and their adoption of a generally hostile attitude towards its Saharan and Sūdānic

objectives. The conquest of Saharan border towns such as Awdag͟hust [*q.v.*], nominally subject to the ruler of G͟hāna, was undertaken by the Lamtūna who, until almost the very end of the Almoravid dynasty were to hold the reins of power and who were in fact to become synonymous with it.

According to the *Ḳāḍī* ʿIyāḍ, "The whole Sahara passed under the control of the *Murābiṭūn*, likewise that region beyond it in the country of the Maṣmūda, the *ḳibla* and the Sūs after many wars. Then he (sc. ʿAbd Allāh b. Yāsīn) led the people forth to fight the infidel Barg͟hawāṭa and he raided them with Abū Bakr b. ʿUmar as the chief of a mighty company of *Murābiṭūn* and Maṣmūda. It is said that they were 50,000 men on foot or mounted. He occupied their city of Tamāsna. The Barg͟hawāṭa fled before him in their mountains and in their thickets and the army advanced after them. ʿAbd Allāh b. Yāsīn was left alone with a few of his companions. A great host (of Barg͟hawāṭa) met him and he fought them fiercely. He perished as a martyr (actually at Kurīfalalt), may God have mercy upon him. That was in the year 450/1058". The raids that were carried out in the Wādī Darʿa and the Sūs region were vital to the triumph of the Almoravids in Morocco and indeed in the whole of North Africa.

The spiritual successor to ʿAbd Allāh b. Yāsīn was Sulaymān b. ʿAddū, who died in 452/1060. He was a far slighter personality and a jurist and, like his brother, Abu 'l-Ḳāsim b. ʿAddū, who survived him, had been a companion of Wad͟jād͟j b. Zalwī in his *Dār al-Murābiṭīn* at Aglū. Another jurist who is mentioned by the *Ḳāḍī* ʿIyād was Limtād (Limtān?) b. Nafīr al-Lamtūnī who was responsible for the death of Masʿūd b. Wānūdīn al-Zanātī, the ruler of Sid͟jilmāsa [*q.v.*], when the followers of ʿAbd Allāh b. Yāsīn attacked the city in 445/1053-4. He was a puritanical reformist and his rulings were formulated in a *fatwā*, in Arabic or in Berber, which was to become a major statement of legal and spiritual policy amongst the *Murābiṭūn* and was to be held in honour and respect in the Sahara until the following century.

Yaḥyā b. ʿUmar was killed in the battle of T.b.f.r.l.y against the rebellious D͟jaddāla in 447-8/1055-7. He was succeeded by his brother Abū Bakr b. ʿUmar who, as the chief commander of the Almoravids, marched northwards into the heart of Morocco. Following Tārudānt, Ag͟hmāt fell, and Abū Bakr married queen Zaynab, the widow of the king of that city. She was of the Berber Nafzāwa [*q.v.*] and her beauty, her intelligence and her wealth assured her a permanent place amongst the legendary queens of Islam. At this stage, Abū Bakr was the uncontested leader of the Almoravid movement. Coins were struck in his name. By 452/1060 he had subjugated the Barg͟hawāṭa [*q.v.*]. Shortly afterwards, Abū Bakr was informed that Buluggīn, lord of the Ḳalʿa of the Banū Ḥammād, was marching with a large force against the countries of the extreme Mag͟hrib, and at the same time those portions of the Ṣanhād͟ja who had remained in the desert (Lamtūna *Murābiṭūn*, D͟jaddāla opponents and elements of the Gazūla, the tribe of ʿAbd Allāh b. Yāsīn) were engaged in a fratricidal warfare. He left the north, initially as a temporary measure, in order to return to the desert in order to establish peace amongst the Almoravids. Before he left, Abū Bakr gave the command over the troops and the direction of affairs to Yūsuf b. Tās͟hufīn [*q.v.*]. He also divorced Zaynab, who became the wife of Yūsuf b. Tās͟hufīn in 453/1061. Under Yūsuf, the conquests of the Almoravids continued throughout North Africa, beyond Tilimsān and including the central Mag͟hrib. Abū Bakr, after having re-established order in the desert and having received the news of his cousin's success, returned northwards in order to resume the command of the Almoravids. However, following Zaynab's advice, Yūsuf b. Tās͟hufīn loaded him with gifts and made him understand clearly that he was not interested in relinquishing to him supreme authority over the Almoravid movement. Abū Bakr accepted that he had no alternative, and after a stay of some time in Ag͟hmāt he eventually returned to the Western Sahara. He is frequently credited with the conquest and conversion of G͟hāna some time prior to his death in 480/1087. This specific year is far from certain. The *Kitāb al-Istibṣār* dates its unlikely occurrence as early as 462/1069-70 and Ibn ʿIdhārī to 468/1075-6. Equally uncertain is the date of the conversion of G͟hāna to Islam. This is now thought to have occurred peacefully in the early 12th century, by which time the Almoravid movement was in its last death throes in the Mag͟hrib (see H.J. Fisher's review article, *Early Arabic sources and the Almoravid conquest of Ghana*, in *Jnal. of Afr. Hist.*, xxiii [1982], 549-60, and Fisher, *The conquest that never was: Ghana and the Almoravids, 1076. Part 1. The external Arabic sources*, in *History in Africa*, ix [1982], 21-59, and *Part II. The local oral sources*, in *ibid.*, x [1983], 53-78).

The diagram on p. 586 illustrates the relationship of the Ṣanhād͟ja aristocracy as far as it can be obtained from the Arabic sources.

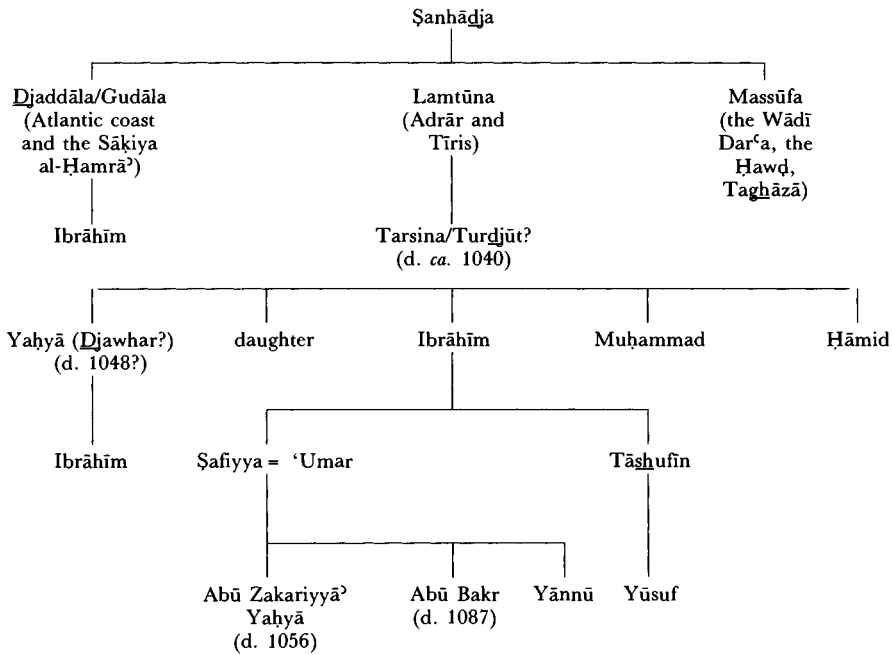
When Yūsuf b. Tās͟hufīn died in 500/1106-7, he bequeathed to his son ʿAlī a vast empire, comprising the countries of the Mag͟hrib, a part of Ifrīḳiya and Muslim Spain (extending to the north as far as Fraga). His fame was a matter of Muslim pride in the Mas͟hriḳ, to the extent that Abū Ḥāmid al-G͟hazālī [*q.v.*] expressed a strong desire to meet him. According to the *Kitāb Mafāk͟hir al-Barbar* [*q.v.*] (composed about 712/1312), "It is sufficient honour and pride for the Mag͟hrib that there was one who spoke with the authority of an *amīr* in it, namely that one who is pleased to be addressed and who deems permissible an epistle directed to him, the *s͟hayk͟h* and *Imām*, the great scholar, *Ḥud͟jd͟jat al-Islām*, the pride of mankind, the example of the *umma*, the supreme *Imām* Abū Ḥāmid al-G͟hazālī —may God be pleased with him— for he wrote to Abū Yaʿqūb Yūsuf b. Tās͟hufīn as follows. 'One with a hundred thousand fighters without their followers, the one whose name is mentioned (in the Friday sermon) from more than two thousand pulpits, whose country extends in distance for five months on the march, verily, its limit (in the north) adjoins the land of the Franks, next to Saragossa, of the land of Aragon, while its other extremity (in the south) adjoins the country of G͟hāna in the land of the Sūdān'. Ironically, al-G͟hazālī's books were burned publicly in Seville during Almoravid rule.

The descendants of Yūsuf b. Tās͟hufīn succeeded each other on the throne of Marrākus͟h [*q.v.*] (founded by Abū Bakr b. ʿUmar in *ca.* 1070 and built by Yūsuf b. Tās͟hufīn) for less than half-a-century, and the dynasty of the Almoravids was to be destroyed in the Mag͟hrib when the Almohads [see AL-MUWAḤḤIDŪN], whose founder Ibn Tūmart [*q.v.*] had dismissed the Almoravids as masked and uncouth shepherds and anthropomorphists (*mud͟jassima*), now led by ʿAbd al-Muʾmin, conquered Marrākus͟h (541/1146-7) and killed the last Almoravid ruler of Yūsuf's house, Isḥāḳ b. ʿAlī b. Yūsuf. Shortly after this, the Almohads conquered Spain with the help of the Andalusian Muslims who had grown weary of the Almoravid occupation (see below). Since 539/1144-5 the armies of the Almohads had crossed over into Spain and,

Ṣanhādja

- Djaddāla/Gudāla (Atlantic coast and the Sāḳiya al-Ḥamrāʾ)
  - Ibrāhīm
- Lamtūna (Adrār and Tīris)
  - Tarsina/Turdjūt? (d. *ca.* 1040)
- Massūfa (the Wādī Darʿa, the Ḥawḍ, Taghāzā)

Children of Ibrāhīm and Tarsina/Turdjūt:

- Yaḥyā (Djawhar?) (d. 1048?)
  - Ibrāhīm
- daughter
- Ibrāhīm
  - Ṣafiyya = ʿUmar
    - Abū Zakariyyāʾ Yaḥyā (d. 1056)
    - Abū Bakr (d. 1087)
    - Yānnū
  - Tāshufīn
    - Yūsuf
- Muḥammad
- Ḥāmid


with the death of the Almoravid governor of Spain Yaḥyā b. Ghāniya al-Massūfī (543/1148-9) the authority of the Almoravids in the peninsula came to an end.

The last stage of decline was rapid, and Nevill Barbour has summarised the reasons for it as follows: "The Empire fell when the Almoravids realised that they could not sustain their struggle on two fronts, against the Christians in al-Andalus and the Maṣmūda in southern Morocco. They were also faced with internal chaos and dissension in al-Andalus. Their fall took place over a brief period of time. It began in 1121 and rapidly worsened after 1141. The struggle with the Maṣmūda lasted from 1125 to 1147. Almoravid rule ended save in the Balearic Islands and Ifrīqiya, where, under the Massūfa Banū Ghāniya, it lasted well into the thirteenth century. Yūsuf had counselled his son, ʿAlī, not to stir up the people of the Atlas mountains and those Maṣmūda who were beyond them. The policy failed completely".

To this may be added a further cause. There was a growing tension between the Lamtūna and Massūfa Ṣanhādja who were *Murābiṭūn*. This was especially true in the eastern Maghrib where commercial routes linked al-Andalus, particularly Almería, to the Niger bend via Wahrān. The eastern trade routes that developed benefited the Massūfa rather than the Lamtūna who controlled the Mauritanian Adrār western route, betwixt Marrākush and the Almoravid capital in the Western Sahara Azūḳī, the *ṭarīḳ Lamtūnī* which was the axis for the Almoravids invasion of the Maghrib when the movement was in its infancy. In this dispute between Saharan tribes on Moroccan and Algerian soil, some leading commanders of the Massūfa sided with the Almohads against the Lamtūna.

Chronological table of the rulers of the Almoravids

1. Yaḥyā b. Ibrāhīm al-Djaddālī
2. Yaḥyā b. ʿUmar (d. 447 or 448/1055-7)
3. Abū Bakr b. ʿUmar (d. 480/1087-8 in the Sūdān)

(Nos. 1–3: Successive chiefs of the Ṣanhādja in the Sahara, recognising the spiritual authority of ʿAbd Allāh b. Yāsīn (d. 451/1059))

4. Yūsuf b. Tāshufīn, *Amīr al-Muslimīn* 453-500/1961-1107
5. ʿAlī b. Yūsuf, „ „ 500-37/1107-43
6. Tāshufīn b. ʿAlī, „ „ 537-9 or 541/1143-5 or 1147)
7. Ibrāhīm b. Tāshufīn, „ „ soon dethroned.
8. Isḥāḳ b. ʿAlī, „ „ killed at the taking of Marrākush by the Almohads (541/1146-7).

2. The legacy of the Almoravids in the Maghrib.

The Almoravids, especially in al-Andalus, were branded for centuries as arrogant and uncouth, unlettered, legalistic and intolerant barbarians. Describing their rule in al-Andalus, S. Lane-Poole in his *The*

Moors in Spain, London 1887, 181, remarked: "The reign of the Puritans had come, and without a Milton to soften its austerity. The poets and men of letters, who had thriven at the numerous little courts, where the most bloodthirsty despot had always a hearty and appreciative welcome for a man of genius, and would generally cap his verses with impromptu lines, were disgusted with the savage Berbers, who could not understand their refinements, and who when they sometimes attempted to form themselves upon the model of the cultivated tyrants who had preceded them, made so poor an imitation that it was impossible to help laughing. The free-thinkers and men of broad views saw nothing very encouraging in the accession to power of the fanatical priests who formed the Almoravides' advisers, and who were not only rapidly opposed to anything that savoured of philosophy, but read their Koran exclusively through the spectacles of a single commentator".

Recent Western writers, N. Barbour amongst them, have adopted a more sympathetic approach. They have sensed an achievement in a number of respects and have pin-pointed several permanent religious and cultural innovations that were introduced within the Maghrib which can confidently be attributed to the Almoravids. These include :

(a) The unification of Morocco.

When the Almoravids entered it they found it split into petty tribal principalities; when they were unseated by the Almohads, Morocco had emerged as a unified country.

(b) In Morocco, and in the Maghrib in general, under the rule of the Almoravids, there was a rapid assimilation of Andalusian civilisation. Use was made of Spanish Muslim architects and engineers. Secretaries, who were Andalusians, rose to a high position. Yūsuf b. Tāshufīn took into his service Ibn al-Ḳaṣīra, the former secretary of al-Muʿtamid of Seville whom he had deposed. ʿAlī b. Yūsuf employed a number of great Andalusian prose writers in his chancellery, for example Ibn ʿAbdūn and Ibn Abi 'l-Khiṣāl. Influences from the peninsula are apparent in Moroccan and Algerian architecture. Much of the Ḳarawiyyīn [*q.v.*] in Fez (Fās) dates from the era of the Almoravids, having been extended by ʿAlī's order. Another important monument of the period is the Ḳubbat al-Bārūdiyyīn in Marrākush. The finest surviving monument of the Almoravids is the great mosque in Tilimsān, where Andalusian influence is very strong. It was completed in 530/1136 and was modelled on the Grand Mosque in Cordova.

(c) In the Maghrib, the authority of the Almoravid state rested upon two foundations. First, the domination of the Ṣanhādja who settled in numbers in the cities and who were the governors at a local level, with a particular influence in regions such as Zammūr (the Banū Amghār). Since the house of Abū Bakr b. ʿUmar and Yūsuf b. Tāshufīn proudly disclaimed Berber blood and in agnates boasted of a Ḥimyaritic pedigree, a number of Arab judges, especially those of Ḳaḥṭānid stock, were appointed to senior positions. The Ṣanhādja *Murābiṭūn* constituted a military and political élite, especially the Lamtūna, Lamṭa and Massūfa. They formed a veritable caste and were distinguished from other Arab-Berber groups by their *lithām*. The Lamtūna led the social aristocracy, and their fighting men constituted the core of the army. They played a leading role in the navy, and they occupied most of the higher administrative posts. ʿAlī b. Tāshufīn made use of Christian cavalry troops alongside his negro units (which were to play a crucial part in the battle of al-Zallāḳa, see below). He was the first ruler in the Maghrib to employ Christian mercenaries (see, in particular, J.F.P. Hopkins, *Medieval Muslim government in Barbary*, 54-5). Their military skill and foreign blood enabled the rulers to dispense with African units that were recruited on a tribal basis. Second, the authority of the *fuḳahā'*. This axiom of Almoravid Islam had a positive contribution to make, though this was to be outweighed by baleful and negative features. The legal manuals of Mālikism were to be cherished, studied in depth, copied and commentated upon, notwithstanding the fact that a number of features of customary habit and law amongst the Saharan Ṣanhādja, for example the exceedingly free life of their womenfolk in male society, was to be tolerated in the Maghrib, arousing the wrath of Ibn Tūmart, amongst others. The Ḳur'ān itself and the Prophetic traditions were relegated to a secondary status, and scholastic theology (*ʿilm al-kalām*) was condemned as a system of thought which undermined the faith. The lofty moral ethic of the early Almoravids, which appears to have survived ʿAbd Allāh b. Yāsīn's own breach of some of its principles, was eventually to succumb to the refined and effete life in Spain and the Maghrib. Despite a certain Ṣūfī flavour in the lifestyle of the Saharan men in their early *ribāṭs*, the Almoravids were to become opposed to Ṣūfism, which in some regions, such as the Almoravid Sahara, was to make an appearance at a relatively recent date. The thoughts of al-Ghazālī, however, made a mark in Almoravid Fez through ʿAlī b. Ḥirzihim (d. 541/1146). *Ribāṭs* of a Ṣūfī character were to be built in the Maghrib at the beginning of the 6th/12th century, notwithstanding the narrow dogmatic vision of the Almoravid state.

3. The legacy of the Almoravids in the Sahara and the Western Sūdān. This legacy was to survive until the present day in Mauritania [see MŪRĪTĀNIYĀ], in Mali [*q.v.*], in the Niger Republic [*q.v.*] and in parts of Northern Nigeria. It may be summarised as follows:

(a) The foundation of the town of Azūgi (vars. Azuggī, Azuḳḳī, Azukkī) as the southern capital of the Almoravids. It lies 10 km NW of Atar. According to al-Bakrī, it was a fortress, surrounded by 20,000 palms, and it had been founded by Yānnū b. ʿUmar al-Ḥādjdj, a brother of Yaḥyā b. ʿUmar. It seems likely that Azūgi became the seat of the *Ḳāḍī* Muḥammad b. al-Ḥasan al-Murādī al-Ḥaḍramī (to cite both the *Ḳāḍī* ʿIyāḍ and Ibn Bashkuwāl), who died there in 489/1095-6 (assuming Azūgi to be Azkid or Azkd). The town was for long regarded as the "capital of the Almoravids", well after the fall of the dynasty in Spain and even after its fall in the Balearic Islands. It receives a mention by al-Idrīsī, al-Zuhrī and other Arab geographers. It may also have been known in mediaeval Europe, appearing in the romance of *Willehalm* (see the tr. by Marion E. Gibbs and M. Johnson of *Wolfram von Eschenbach*, Penguin Classics, Harmondsworth 1894, 174) as Azagouc ("the blacks from Azagouc are a stone wall against attacks"). On the archaeology and history of Azūgi, see A.W. Ould Cheikh and B. Saison, *Vie(s) et mort(s) de Al-Imām al-Ḥaḍramī. Autour de la postérité saharienne du mouvement almoravide (11e-17e s.)*, in *Arabica*, xxxiv/1 (1987), 48-79.

(b) The tradition of *Murābiṭ* ancestry, ultimately going back to the *Tubbaʿ*s of Ḥimyar, amongst several Mauritanian and Tuareg groups (for example the Lamtuna, Īdaw ʿĪsh, Igdalen, Kel Es-Sūḳ). This has had a literary importance, as likewise a lineal one.

(c) Linked to the above, a *geste* that is widely known

in Mauritania, in Senegal and the Western Sahara, about the exploits of Abū Bakr b. ʿUmar and his martyred spiritual counsellor, the *Imām* al-Ḥaḍramī. Associated with this theme is the story of the martyrdom of Abū Bakr in wars against the dog-owning pagan negroes of Bāfūr of G̲h̲āna and the "Mountain of Gold" (*D̲j̲abal al-D̲h̲ahab*). It is significant that these folk-legends and romances appear to have survived for centuries and to take preference over other Hilālī and non-Hilālī type *gestes* that have penetrated and moulded the legends of other Arabic-speaking communities in North Africa. The longevity of Abū Bakr as a heroic figure is vividly illustrated by the Catalan Map of Charles V (1375), and other such mediaeval maps, where King Abū (Bū)Bakr, mounted and veiled on a camel and carrying a *Murābiṭ* whip, is depicted next to Mansa Mūsā [*q.v.*], King of Mali (for representative examples, see H.T. Norris, *Saharan myth and saga*, 126-59, and more especially the *Ḳaṣīda* of *S̲h̲ayk̲h̲* Muḥammad Mubārak al-Lamtūnī (in *ibid.*, v, 110-16), who claimed *Murābiṭ* descent, and who attempted (unconvincingly), to bridge the gap in historical records between the fall of the Almoravids in the Mag̲h̲rib and al-Andalus in the 6th/12th century, and the growth of self-conscious "neo-*Murābiṭ*" movements (such as that of Nāṣir al-Dīn) in Mauritania in the 11th/17th century; see also Ould Cheikh and Saison in *Arabica*, *loc. cit.*).

(d) The persistence of an Almoravid tradition in the *Zwāya* and *Ineslemen* classes in some tribal groups in Mauritania, Mali, the Western Sahara and amongst some of the Tuareg (especially the Kel Es-Sūḳ) and also possibly much further (via *Imrabdan* in 7th/13th century Algeria) to the east amongst the *Marābṭīn* in Barka and the Western Desert of Egypt (see E.E. Evans-Pritchard, *The Sanusi of Cyrenaica*, Oxford 1949, 66-8. On the Western Saharan, Sahelian and Sūdānic *Zwāya*, see Norris, *Muslim Ṣanhāja scholars of Mauritania*, in *Studies in West African Islamic history*, i. *The cultivators of Islam*, ed. J.R. Willis, London 1979, 147-59).

That the 6th/12th century "*Murābiṭūn*" in the Sahara journeyed as far as the Western Desert of Egypt, along little-known routes, via Mali and the Fezzān, and that they were also *mulat̲h̲t̲h̲amūn* is confirmed by al-Idrīsī (see R. Dozy and M.J. de Goeje, *Description de l'Afrique et de l'Espagne*, Leiden 1866, 193-5, Arabic text 162-3; *Studi Magrebini*, xvi, Naples 1984, 51-2): "As for the route from Miṣr to Aswān and the Upper Ṣaʿīd, we have already mentioned it. We have also given the itinerary from Miṣr to al-Bahnasā and from there to the town of Sid̲j̲ilmāsa stage by stage. This is the route the Almoravids followed in the year 530 (sc. 1135-6): You go from Miṣr to al-Bahnasā in seven days. From al-Bahnasā to D̲j̲ubb Manād, one day's journey. From there to Faydala, a day's journey. Then a day's journey without water, then another day's journey without water. From there to ʿAyn Ḳays, a day's journey. Then to G̲h̲iyāt, one day's journey; to the mountain of Amṭalās, one day; to Nasnāt, one day's journey; to Wādī (the valley of) Ḳasṭara, one day; to the mountain of Sarwāy, one day; to the desert of Tīdīt, three days without water; to the pool of S̲h̲nāwa, the water of which is potable, one day; to the mountain of Tātī, one day; to Sāmlā, one day; to Sīrū in the mountain, one day. From there you go to the desert of Matālāwit; this is 6 days' journey without water. From there to Nḳaw, one day; then to Salūbān — a mountain, one day; then to mountain of Wad̲j̲ād, one day; ten to Nadrama to the mountain of Ḳazūl, one day; from there to Mount Aydamar, three days' march in a waterless desert: to Sulkāya, two days; then to Tāmmamt, one day and from there to Sid̲j̲ilmāsa, one day's journey. This route is rarely trodden, *al-mulat̲h̲t̲h̲amūn* (= the veiled people) followed it with the help of a guide.

(e) Almoravid architectural and decorative features in urban architecture in the Mauritanian Ḥawḍ, in the region of the Niger bend and in parts of the Algerian Sahara (see Dj. Jacques Meunié, *Cités anciennes de Mauritanie*, Paris 1961, 20-3, 35, 58, 72, 90, 104, 106, 109-10, 132-3).

(f) The Gao epitaphs which were of Andalusian Almoravid workmanship (see J. Cuoq, *Recueil des sources arabes*, 111-14; J.O. Hunwick, *Gao and the Almoravids: a hypothesis*, in B. Swartz and R. Dumett (eds.), *West African culture dynamics: archaeological and historical perspectives*, The Hague 1979, 413-30; de Moraes Farias, *Du nouveau sur les stèles de Gao: les épitaphes du prince Yama Kuri et du roi F. n.da (XIIIᵉ siècle)*, in *Bull. IFAN*, xxxvi [1974], 511-26).

(g) Cultural and tribal dissemination of Almoravid religious doctrines into the Central Sahara and as far east as the Libyan desert. This is especially true of the region of Tādamakkat (Es-Sūḳ), where a number of Lamtūna later settled and whence their influence was extended into Aïr (Ăyār) and adjoining regions. According to al-Zuhrī (*ca.* 532-49/*ca.* 1137-54) in his *Kitāb al-D̲j̲ug̲h̲rāfiya*, "Near to G̲h̲āna at a distance of fifteen days' travelling there are two towns, of which one is called NSLĀ and the second Tadimakka (*sic*). Between these two towns is a distance of nine day's travelling. The people of these two towns turned Muslim seven years after the people of G̲h̲āna turned Muslim. There had been much warfare between them. The people of G̲h̲āna sought the help of the Almoravids"; see Hopkins and Levtzion, *Corpus of early Arabic sources for West African history*, 98-9.

(h) The dominance of Mālikism in *fiḳh* throughout the whole of West African Islam and the persistence of cultural and literary tastes that may be traced directly to the Almoravids. According to A.D.H. Bivar and M. Hiskett, *The Arabic literature of Nigeria to 1804: a provisional account*, in *BSOAS* (1962), 105-6, "It is a hypothesis of substantial weight that literacy in the Arabic script and the custom of authorship in the Arabic language were introduced to West Africa during the period of the Murābiṭ (Almoravid) dynasty; that is to say, after the conquest of Old Ghana, and the penetration of the Niger region by Abū Bakr b. ʿUmar al-Murābiṭ between 471/1078 and 475/1082. The inscriptions of Gao are cogent evidence of ready communication between Andalusia and the Niger region around the year 1100, and of the coherence of the Murābiṭ state, which then included the former, and at least adjoined the latter. With such antecedents it is to be expected that West African writers of Arabic concentrate their chief interest on the subject of *fiqh*. Like the great majority of West African Muslims, these authors were adherents of the Mālikī school. They based their systems on a chain of legal authorities which stretch back to the Mag̲h̲rib of the Murābiṭ period and preceding epoch of the Spanish Umayyads. This emphasis on the rulings of authorities, characteristic of an orthodox Mālikism substantially free from innovating tendencies, is typical of the West African Arabic literature; and similar doctrines are largely preserved to the present day amongst the Muslims of Nigeria and the adjoining territories".

Bibliography: 1. Arabic sources that make reference to the Almoravids are chronologically listed in N. Levtzion's article, *ʿAbd Allāh b. Yāsīn*

and the Almoravids, in *Studies in West African Islamic history*. i. *The cultivators of Islam*, ed. with an introd. by J.R. Willis, London 1979, 78-112. They include: Ibn ʿAbd al-Ḥakam, *K. Futūḥ Miṣr wa 'l-Maghrib wa-akhbārihā*, ed. C.C. Torrey, *The history of the conquest of Egypt, North Africa and Spain*, New Haven 1922; Balādhurī, *Futūḥ al-buldān*; Yaʿḳūbī, *Buldān*, tr. G. Wiet, *Les pays*, Cairo 1937; Ibn Ḥawḳal, *Ṣūrat al-arḍ*, tr. J.H. Kramers and Wiet, *Configuration de la terre*, Beirut-Paris 1964; Bakrī, *al-Masālik wa 'l-mamālik*, ed. 4. The Almoravids in Spain. The evolution of Almoravid politics would very quickly be conditioned by those of Muslim Spain. And it is no small paradox that an African movement became much more Andalusian than Maghribī, and was to devote the best part of its time and efforts to redressing the situation of a peripheral country.

Already between 470/1077 (the occupation of Tangiers) and 476/1083 (the Castilian expedition against Seville, Medina Sidonia and Tarifa was in 1082), Yūsuf b. Tāshufīn had received several requests for intervention in the affairs of the *mulūk al-ṭawāʾif* and the Christians. But the point of no return was to be 1085, the date of the fall of Toledo to Alphonso VI of Castile. This key event was to reveal brutally the precariousness of the units set up by the Andalusian princes, quite incapable of containing the growing pressure of the Christian kingdoms, bolstered by the Western awakening, the power of a warrior class and the Crusader ideology. The Almoravids were thus called upon, by various sections of opinion, to put an end to a situation that was untenable from a military, ideological and fiscal point-of-view. For a moment, all the Andalusians recognised the necessity of a recovery, even if they differed as to the priority of such-and-such an aspect and as to the solutions to adopt, and did not perceive clearly all the internal contradictions that this implied.

In the 5th/11th century, this "programme" was symbolised by the Almoravid movement, in as much as its continuing expansion from 454/1062 had become recognised and had been permitted. Their help would be requested —after the fall of Toledo—by

the princes of Seville, Granada and Badajoz, putting Yūsuf under an obligation to defend them from Christian pressure, instead of combating other Muslims. But the emissaries, *ḳāḍīs* of their respective capitals, also nourished their own afterthoughts: a re-Islamisation and internal moralisation and a lightening of taxation. Hence the popular demand from 483/1090, for the application of these two latter measures and the overthrow of the *mulūk al-ṭawāʾif* (except for that of the Upper March). But the hegemony of the *mulaththamūn* transformed their "electoral promises" into a programme which would require of them its immediate and complete accomplishment, and its non-realisation would lead to a discontent, directly proportional to the scale of the disappointed hopes.

The Almoravid history of al-Andalūs is thus divided into three phases: (1) the Andalusian crisis; (2) reform and (3) progressive failure and opposition.

(1) *The conditions of the appeal.* The disappearance of the ʿĀmirids [*q.v.*] in 399/1009 was to allow the Hispanic Christian kingdoms to carry out an infiltration in the form of assistance (individual mercenaries or coherent groups) —a feature which already constituted a disguised form of domination—, a strong military thrust (Castilian campaigns, loss of Toledo, conquests of the Cid [see AL-SĪD], fall of Huesca, Saragossa, Lerida and Tortosa), doubling of a pressure that was ideological (attemps at proselytism by the "Monk of France", first Crusades), economic (mercenaries' salaries, exaction of the "pariahs" booty), political (imposition of protectorates — vassalages, zones of influence).

These various factors created a situation where Andalusian public opinion urgently demanded effective control of the Christians beyond the borders, the re-establishment of an internal Islamic order, the reduction of taxes and a certain return to caliphal unity. In fact, it was a case of simple consequences, all caused by one and the same problem. This implied that the military crisis (the tip of the iceberg) could not be remedied in a lasting fashion without simultaneously providing a solution to the socio-economic and politico-ideological aspects which were connected with it. The option represented by recourse to the *Murābiṭūn* was either to win this bet or to face up to the dissatisfaction provoked by the non-achievement of the programme.

(2) *Reform.* Moved by initial enthusiasm on having finally found a solution to their problems, the Andalusians began by seeing nothing but Almoravid successes.

On the military level, the simple announcement of Yūsuf's crossing forced Alphonso VI to lift the siege of Saragossa, and the victory of Zallāḳ [*q.v.*] was to mark the interruption of the great Castilian interventions. Checks at Cuarte and Bairen in the face of the Cid did not prevent in any way the successes of Consuegra (491/1098), the recovery of Valencia (495/1102), or the great victory of Uclès (501/1108), followed by the capture of Huete, Ocaña, Cuenca and Talavera. But arms would not avail them in the eastern region: the rout of the Congost de Martorell (508/1114), loss of Saragossa (512/1118) and rout of Cutanda (514/1120). Even the victory of Fraga (528/1134) would not manage to check the collapse of the Upper March and definitive loss of Tortosa, Lerida and Fraga (544/1149).

Re-Islamisation was to be translated as the suppression of stretching the *Sharīʿa*. "He never drank wine, listened to a singing-girl, did not amuse himself in hunting or with other pastimes... and he acquired a reputation for rectitude and respect for everything prescribed by the Law". There would also be a legalistic obsession which would drive Yūsuf b. Tāshufīn and his son ʿAlī never to take a decision without being from the outset covered by one or more *fatwas*, in good and due form. Official legalism explained —and provoked— the rise of the *fuḳahāʾ*, greedy for power and riches. Re-Islamisation was also translated, at first, into the lightening of taxation, which was to be reduced to canonical taxes only; it was the *ḳaṭʿ al-maghārim* which always produced a strong impression.

There was a short period of complete consensus between al-Andalus and the Almoravids, between Yūsuf and the *mulūk al-ṭawāʾif*, when "the news of the embarkation of the *amīr al-muslimīn* drove the Zīrid prince ʿAbd Allāh to order the beating of drums and decree official celebrations... During the campaign [of Zallāḳa] it was wonderful, the purity of our intentions and sincerity; to the point that you would have thought that our hearts were united in one and the same objective.... We were all impatient to take part in the *djihād*, without sparing our efforts..."

(3) *Failure.* All these successes were real, but they were ephemeral. To preserve its Andalusian legitimacy, the Almoravid régime was forced to show itself always irreproachable, strong and effective, and, without ever flagging, to persist in containing Christian pressure which, moreover, was growing. Not being able—for demographic reasons of Maghribī recruitment and for ideological reasons of lack of Andalusian collaboration—to deploy sufficient troops so as to have an offensive strategy, it had to confine itself to building up a defensive system (and using Christian mercenaries in the Maghrib). But to restore or build fortresses, maintain them, provision them, balance the garrisons' accounts and pay mercenaries, assumed increased and growing costs. Hence the necessity of heavy taxation, far in excess of the possible return from canonical taxes only. Finally, many *fuḳahāʾ* and *ʿulamāʾ* who had endorsed and participated in the decisions taken by the state lost their independence, their intellectual and moral prestige, and thus their old capacity as spokesmen for the aspirations of the *ʿāmma*.

Very soon we hear speak of Almoravid rapacity (*ḥubbuhum fi 'l-māl*), and all kinds of *maʿāwin*, *waẓāʾif*, *lawāzim*, *ḳaṭīʿ*, *fiṭra*, *taʿtīb* and *maghram al-sulṭān* were to flourish once more. We know that some correspond to "contributions to sustain the war effort", some to "charges for restoring walls" but, however necessary they may have been, they were resented no less as being so much more intolerable than those that were suppressed.

Generalised corruption and abuses of power became clichés, as the verses of Ibn al-Bannī or the *caveats* of Ibn ʿAbdūn show, and all means are seen as good in order to enrich oneself (Abū ʿUmar Ināluh), to favour friends, carry out a number of fraudulent operations, etc. But, what was far worse, incompetence and cowardice became the attributes of generals, incapable of organising their troops and of exploiting a victory, easily put to rout by an enemy much inferior in numbers, etc. Al-Marrākushī speaks of the "deliquescence of the state, the appearance of highway bandits, thieves and rogues, drunkards and libertines,...sheltered by the great ladies of the Lamtūna and Massūfa,...while the *amīr al-muslimīn*, steeped in piety and ascetism, was completely neglecting the affairs of his subjects..."

There was also an oppressive intellectual atmosphere. "The *amīr* did not value the Mālikī

experts in *ʿilm al-furūʿ* [*q.v.*]. The people were terrorised by there being accused of infidelity all those who were concerned with dogmatic theology (*ʿulūm al-kalām* [*q.v.*])... During the reign of ʿAlī b. Yūsuf circulars were sent out throughout the country to reinforce the prohibition of being involved in *kalām* and to threaten those who were found to be in possession of one of these books. When the works of Abū Ḥāmid al-G̲h̲azālī [*q.v.*] penetrated to the West, the *amīr al-muslimīn* ordered them to be burnt, adding threats of death and confiscation of goods for those who withheld them".

The reaction in the beginning would be far more socio-intellectual than political. Two hotbeds of opposition (Ibn Tūmart in the Mag̲h̲rib and the ascetics of the south of Andalusia) arose independently of each other. While we should certainly not speak of formal, organised coordination, there existed a kind of indirect "collaboration of aims". According to the *Ḥulal*, "the circumstance which was of most help to the Almohads [see AL-MUWAḤḤIDŪN] against the Almoravids was the uprising of the Andalusians, which forced them to strip the land of its defenders and arms". If they had not had to face the Almohads, the *Murābiṭūn* would not have had great difficulty in eliminating the various small hotbeds of agitation which erupted in the east and west of al-Andalūs, and it is very doubtful whether the *Muwaḥḥidūn* would have been able to succeed in supplanting the Almoravids, if the latter had not been enmeshed in the Andalusian imbroglio. It is debatable whether the strict Mālikī legalism adopted by the Ṣanhād̲j̲a would have been displaced by the conjunction of the two currents which they had ignored and fought against, sc. theology and Ṣūfism. It is this which allowed the synthesis of Ibn Tūmart to be imposed, whereas the ascetic current was unable to "organise" itself.

To return to the facts: there was around 534/1140, a certain mystical atmosphere diffused in Almeria (Ibn al-ʿArīf [*q.v.*]), Seville (Ibn Barrad̲j̲ān) and Granada (Abū Bakr Muḥammad al-Mayurḳī). All were executed or disappeared in 531/1142 and ʿAlī b. Yūsuf died in 532/1143. A year later, there erupted the movement of the *murīdīn* founded by Abu 'l-Ḳāsim Aḥmad Ibn Ḳasī [*q.v.*] in Silves. The *ḳāḍī* Ibn Ḥamdīn rebelled in Cordova, Sayf al-Dawla Ibn Hūd in Jaén and Granada, Ibn Wazīr in Evora, Béja and Badajoz, Abu 'l-Ḳamr Ibn ʿAzzūz in Jerez, Arcos and Ronda, Ibn Abī D̲j̲aʿfar in Murcia and Ibn ʿAbd al-ʿAzīz in Valencia. It was a second outbreak of *mulūk al-ṭawāʾif*, where everyone sought to carve out an autonomous principality for himself; whether alone, or by having recourse to Alphonso VII (Ibn Ḥamdīn) or to the Almohads (ʿAlī b. Maymūn in Cadiz). The brief, partial re-establishment of the situation, in 540/1145, by Yaḥyā b. G̲h̲āniya (Cordova, Carmona and Jaen) was without a future and, in 542/1147, Alphonso VII of Castile occupied Almeria for several months.

Ibn Ḳasī even crossed to the Mag̲h̲rib to solicit help from ʿAbd al-Muʾmin and to call on him to invade al-Andalūs. In fact, the Almohads on the first occasion (540-1/1146-7) limited themselves to occupying and leaving garrisons in the localities where they were able to count on a group of partisans. Only Maymūn b. D̲j̲addār maintained himself in Granada until 549/1155, while the Banū G̲h̲āniya [*q.v.*] created a neo-Almoravid state which, in 580/1184, carried the struggle against the *Muwaḥḥidūn* into the Tunisian D̲j̲arīd.

(P. CHALMETA)

MURĀD, the name of an Arab tribe belonging to the great southern group of the Mad̲h̲ḥid̲j̲ [*q.v.*]; genealogical tradition (Ibn al-Kalbī, *D̲j̲amharat al-ansāb*, Escurial ms, fols. 114b-117b and see now Ibn al-Kalbī-Caskel, which is followed by Ibn Durayd, *Kitāb al-Is̲h̲tiḳāḳ*, ed. Wüstenfeld, 238, 4; cf. also *LA*, iv, 409) regards Murād as a nickname, for this tribe was said to have been the first to rebel (*tamarrada*) in the Yaman; an etymology wich is not convincing. Murād's own name is said to have been Yuḥābir b. Mad̲h̲ḥid̲j̲ and he was therefore a brother of the ʿAns and the Saʿd al-ʿAs̲h̲īra (Wüstenfeld, *Geneal. Tabellen*, 7, 11); Ibn Ḥazm, however, regards Murād b. Mālik b. Udad as the brother of Yuḥābir (*D̲j̲amharat ansāb al-ʿArab*, ed. E. Lévi-Provençal, Cairo 1948, 382-3). Although they were neighbours of the South Arabian civilisation, the Murād have always retained a typically Bedouin character, their country (usually called al-D̲j̲awf and placed to the east of Nad̲j̲rān and Maʾrib) is bare and sterile (cf. the picturesque description given of it by the *Ag̲h̲ānī*, xviii, 135, and "the mountains of the Murād" mentioned by Yāḳūt, *Muʿd̲j̲am*, ii, 78) and its inhabitants are notorious as brigands (*fatk Murād*; cf. *Ag̲h̲ānī*, x, 147). The land inhabited by the Murād and by their neighbours, the Hamdān [*q.v.*], had once belonged to the Ṭayyiʾ (Yāḳūt, i, 129), who had left it to settle in the north of the Arabian peninsula; it is probable that it was from the old masters of the country that the Murād and the Hamdān inherited the cult of the god Yag̲h̲ūt̲h̲ (cf. below).

The Murād are attested in several Sabaic inscriptions, beginning with one of 522 A.D. (Ryckmans 508), in which the *Mrdm* figure as allies of Yūsuf (D̲h̲ū Nuwās [*q.v.*]) against the city of Nad̲j̲rān [*q.v.*]. They now appear further in connection with an episode, not however at all clear, of the last days of the dynasty of the Lak̲h̲mids of al-Ḥīra; as the king ʿAmr b. al-Mund̲h̲ir (III) b. Māʾ al-Samāʾ had excluded his half-brother ʿAmr, a son of Usāma, sister of Hind mother of the first-named ʿAmr, from a share in the kingdom, the latter sought refuge with the Murād, who recognised him as their chief but when he began to rule tyrannically, they killed him, which gave ʿAmr b. Hind a pretext for invading the land of the Murād and putting to death the murderer of ʿAmr b. Usāma (al-Mufaḍḍal al-Ḍabbī, *Amt̲h̲āl al-ʿArab*, Constantinople 1300, 68-9, who gives a more satisfactory account than that contained in the passages quoted by G. Rothstein, *Die Dyn. der Laḥmiden*, 99, in which Yāḳūt, vi, 130, should be read for i, 130). ʿAmr is said to have been killed by a certain Ibn al-D̲j̲uʿayd (the same story is given by Ibn al-Kalbī, *D̲j̲amhara*); according to Yāḳūt, on the other hand, by Hubayra b. ʿAbd

Yag̲h̲ūt̲h̲, surnamed al-Maks̲h̲ūḥ; the latter's son Ḳays seems to have been one of the most powerful chiefs of the Murād at the time of the rise of Islam.

The Murād had just then suffered a disastrous defeat, which had considerably weakened them, at the hands of the Hamdān, as the result of a quarrel which had arisen in connection with the control of the worship of the god Yag̲h̲ūt̲h̲ (cf. Wellhausen, *Reste arab. Heidentums*², 19-22, and the sources mentioned by him). It is probably this defeat (*Yawm al-Razm*), which tradition places in the same year as the battle of Badr, which made a section of the Murād think it advisable to seek an alliance with Muḥammad; but Ḳays b. al-Maks̲h̲ūḥ refused to join in this. It was therefore another Murādī chief, Farwa b. Musayk, who went to Medina in the year 10 A.H., and concluded a treaty there with the Prophet (cf. Caetani, *Annali dell' Islām*, ii, 332). To what extent tradition is right in saying that Farwa was given authority to levy *zakāt* on all the tribes of the Yaman, is very difficult to ascertain. In any case, the policy of the Murād was not oriented towards Muḥammad under the leadership of Ḳays b. al-Maks̲h̲ūḥ. In the great rising led by al-Aswad al-ʿAnsī against Persian hegemony in the Yaman, the Murād were against him. But if, as tradition has it, Muḥammad used his connections with some chiefs of the Yaman to prevent al-Aswad's success, after the death of the Prophet these same chiefs refused obedience to Abū Bakr and resolutely threw themselves into the struggle against Islam. It is again Ḳays b. al-Maks̲h̲ūḥ who plays the chief part in these events. Taken prisoner, Abū Bakr granted him his life and henceforth the chief of the Murād and his tribe played their part bravely in the conquests. We find them sometimes in Syria, sometimes in ʿIrāḳ, and Ḳays himself everywhere distinguishing himself by his exploits. He lost an eye at the battle of Yarmūk (cf. Caetani, *Annali*, i-v, index s.v. Qays b. Hubayrah). But the account of his death in the civil war between ʿAlī and Muʿāwiya at the battle of Ṣiffīn is based on confusion with another man of the same name of the tribe of Bad̲j̲īla (this fact, which is clearly indicated by Ibn al-Kalbī, *D̲j̲amhara*, and al-Ṭabarī, i, 3301-2, has already been noted by Ibn Had̲j̲ar, *Iṣāba*, v, 281; hence *Annali*, ix, 638, should be corrected). We also find the Murād in the conquest of Egypt (*Annali*, iv, 573, 21 A.H., § 191 *b* [29]. But it was at Kūfa that they settled in the largest numbers. It was there that one of them, ʿAbd al-Raḥmān b. Muld̲j̲am [see IBN MULD̲J̲AM], assassinated the caliph ʿAlī; it was there also that in 60/679 Hāniʾ b. ʿUrwa al-Murādī was executed by orders of the governor ʿUbayd Allāh b. Ziyād after being found guilty of conspiring with Muslim b. ʿAḳīl in favour of al-Ḥusayn (al-Ṭabarī, ii, 227). He was a descendant of the poet ʿAmr b. Ḳiʿās (*RSO*, xiii, 58, 327¹), one of the very few poets of this tribe, which does not seem to have produced many individuals of note either during the D̲j̲āhiliyya or under Islam. We may however mention Uways al-Ḳaranī (of the Banū Ḳaran b. Radmān b. Nād̲j̲iya b. Murād; Wüstenfeld, *Geneal. Tab.*, 7, 25), one of the prototypes of Muslim ascetism. At the beginning of the 4th/10th century, the remnants of Murād were settled in the Sarw Mad̲h̲ḥid̲j̲, according to al-Hamdānī, *Ṣifa*, 92, 94, 102.

(G. LEVI DELLA VIDA*)

MURĀD (correctly S̲h̲āh Murād), nicknamed Pahari, second son of the Mug̲h̲al Emperor Akbar [*q.v.*], born on 3 Muḥarram 978/8 June 1570, died 1007/1599. Fayḍī was appointed to educate the prince. In 988/1580 Father Monserrate, and later Aquaviva, was asked to teach him Portuguese and the principles of Christianity. He seems to have impressed his Jesuit tutors. His first rank (*manṣab* [*q.v.*]), of 7,000 was granted in 985/1577, followed by a promotion in 982/1584 to the rank of 9,000/—. His important assignment came in 999/1590 when he was appointed governor of Malwā; in 1001/1592 he was entrusted with the governorship of Gud̲j̲arāt. In 1002/1593 he led the Mug̲h̲al army into the Deccan, where in 1004/1596 the ruler of Aḥmadnagar [*q.v.*] was forced to accept the cession of Berār [*q.v.*] to the Mug̲h̲als. Murād stayed in the Deccan as governor, but the military operations in the Deccan met with little success, partly because of Murād's lack of interest in the undertaking. He died in S̲h̲awwāl 1007/May 1599.

(M. ATHAR ALI)

MURĀD I (761-91/1360-89), according to the common tradition the third ruler of the Ottoman state, was a son of Ork̲h̲ān and the Byzantine lady Nīlūfer. Although some Ottoman sources profess to know the year of his birth (*Sid̲j̲ill-i ʿot̲h̲mānī*, i, 74, gives the year 726/1326), this date, like all dates given by Turkish sources relating to this period, is far from certain. The name Murād (Greek sources such as Phrantzes have Ἀμουράτης, from which later Latin sources make Amurath, while contemporary Latin sources from Italy have Moratibei) must have originated in mystical circles and hardly occurs in earlier times. An Abdāl Murād lived in Ork̲h̲ān's time (cf. *Sid̲j̲ill-i ʿot̲h̲mānī*, iv, 354; ʿĀs̲h̲ïḳ Pas̲h̲a-zāde, ed. Giese, 200; photographs of his tomb in R. Hartmann, *Im neuen Anatolien*, Leipzig 1928, plates 9 and 10). The ancient Turkish chronicles often call Murād G̲h̲āzī K̲h̲unkʸār, later Turkish historians K̲h̲udāwendigār [*q.v.*].

During his father's lifetime, Murād had already been entrusted with the governorship of In Öñü and later of Bursa. His brother Süleymān Pas̲h̲a had held the more important *sand̲j̲aḳ*s and was destined to become Ork̲h̲ān's successor. Süleymān's untimely death, shortly before that of Ork̲h̲ān himself, placed Murād unexpectedly at the head of the Ottoman principality. This happened about 761/1360; the date of Ork̲h̲ān's death is uncertain.

Murād I became the first great Ottoman conqueror on European soil. In this he followed the footsteps of his brother Süleymān Pas̲h̲a and of other Turkish *amīr*s before him.

It is not yet possible to gain a clear idea of the series of the military acievements by which the Ottomans succeeded in establishing themselves firmly in the Balkan Peninsula. Even the outstanding victories are confounded with each other in the Ottoman and Western sources, and the exact dating of even important events is subject to great difficulties. The Byzantine sources, the most reliable of all, are mainly concerned with the tortuous policy of the Byzantine rulers. On the other hand, many tales of a legendary

character have entered the historical accounts of later times. The impression on the whole is, that the Ottoman successes were mainly due to the mutual rivalry between the then existing Balkan states, Byzantium, and the Bulgarian and Serbian kingdoms, complicated by the struggle of Venice and Genoa for an advantageous position in the Levant, and the zeal of the Popes for bringing the Greek church back to Rome. This secured the Ottomans at all times allies in the Christian camp itself. Nor is it possible to ascertain which Ottoman expeditions were really planned by Murād and his counsellors and which were merely successful raids by Turkish bands. All this makes it extremely difficult to form an adequate judgment of Murād's personality as a warrior and as a statesman.

Provisionally, three periods can be distinguished. The first begins shortly after Murād's accession with the conquest of Western Thrace, in which were taken Čorlu, Demotika (Dimetoḳa [*q.v.*]) (if this town had not already been taken under Orkhān), Gümüldjine, Adrianople (about 763/1362; see EDIRNE) and Philippopolis, mainly through the activity of the *beglerbeg* Lala Shāhīn and Ewrenos Beg [*q.v.*]. These conquests provoked a coalition of Serbians, Bosnians and Hungarians, who were beaten on the river Maritza [see MERIČ] by Ḥādjdjī Ilbeki. The western part of Bulgaria was raided up to the Balkan Mountains, and the Byzantine Emperor John Palaeologus made his first submission as vassal to Murād. Murād himself had been on a campaign in Anatolia, which brought him as far as Toḳat [*q.v.*], during which he consolidated the Ottoman hold on Angora (Anḳara [*q.v.*]) (already taken by Süleymān Pasha in 755/1354; cf. Wittek, in *Festschrift Georg Jacob*, Leipzig 1932, 347, 351 ff.). He then came to Rūm-ili and took up his residence in Demotika, to exchange this town in 767/1366 for Adrianople, from this time on the European capital ot the Ottomans. The story about a treaty between Ragusa and Murād concluded in 1365 has a legendary character (cf. Giese, in *Festschrift Jacob*, 42, after Jireček). In the meantime, the hostility between Byzantines and Bulgarians gave Murād the opportunity of taking Ishtebol (Sozopolis) near Burgas, and the same hostility led to the failure, about 1366, of a crusade undertaken at the instigation of Pope Urban V by Count Amadeo of Savoy to come to the rescue of the Byzantine Emperor; the expedition only drove the Turks from Gallipoli for a short time.

A second period of Murād's reign may be said to begin with the crushing of a Serbian advance on the Maritza [see MERIČ], near Čirmen, probably in 1371. This Serbian defeat is known to the Turkish sources as *sïrf ṣïndïghï* and gave the Turks during the following years the important Macedonian towns of Serres, Drama and Ḳawalla, and at the same time the possibility of advancing west of the Vardar. These conquests were made by Ewrenos and Djandarlï Khalīl Pasha [see DJANDARLÏ], while Lala Shāhīn obtained about the same time successes in eastern Bulgaria (battle of Samakow). Then followed again some years of comparative tranquility, in which the newly-won regions were partly colonised by the Ottomans; the still unsubdued northern part of Serbia and Bulgaria were governed by the local rulers as vassals of Murād. The latter had more than once to interfere with the dynastic affairs of the Palaeologi. After John Palaeologus had sold in 1375 the island of Tenedos to Venice, this led to an action of Genoa in combination with the Turks, in the course of which John lost his throne and was imprisoned, until, by the favour of Murād, he became Emperor again in 1379; his dependency went so far as to help the Turks, together with his son Manuel, in the conquest of Philadelphia (Ala Shehir), the only remaining Greek fortress in Asia Minor. The end of this second period is marked by an increased activity in Anatolia. A part of the territory of the Germiyān-Oghlu [*q.v.*] was acquired as a wedding gift to prince Bāyezīd when he married the daughter of that ruler (probably in 1381); this territorial accession was followed by the sale of the greater part of the lands of the Ḥamīd-Oghlu [*q.v.*] to Murād and by the conquest of a part of the principality of Tekke.

About 787/1385 there followed new conquests in Europe. Turkish troops intervened in Epirus and Albania (under Khalīl Pasha), but decisive for the establishment of Ottoman power in the Balkans was the taking of Sofia (1385?) and Nish (1386?). About the same time, the Italian republics, Genoa and Venice, obtained by treaties with Murād, concluded respectively in 787/1385 and 790/1388, commercial privileges in Turkish territory. Immediately after the successes in Serbia, probably also in 788/1386, Murād went to war with the Ḳaramān-Oghlu ʿAlāʾ al-Dīn, his son-in-law; this conflict had long been threatening [see ḲARAMĀN-OGHULLARÏ]; now the Ottoman power had grown so far as to destroy the political equilibrium in Anatolia. Murād was victorious in the battle of Ḳonya, but left ʿAlāʾ al-Dīn in his possessions and set the example, henceforward traditional, of leniency in dealing with the Anatolian population. This caused a lively discontent amongst the Serbian troops who had taken part in the battle of Ḳonya. These Serbians are said to have contributed to the anti-Turkish feeling among the Serbians in general, who, under the leadership of Lazar Gresljanović, and with the Bosnian king Twrtko as a powerful ally, were preparing a last effort to free themselves from Turkish sovereignty. They succeeded in defeating an Ottoman army at Pločnik (790/1388). The results were meagre, however, for at the same time the Turks made new conquests in Bulgaria (Shumla and Tirnovo) and even raided Morea. In 791/1389 Murād himself marched against the Serbians and their allies and fought the famous battle of Kossowo Polje (Turkish: Ḳoṣowa [*q.v.*]), where he himself lost his life, although the Serbians, partly owing to treachery in their own ranks, were defeated. The most probable date is 20 June 1389 (Gibbons, cf. also Giese, in *Ephemerides Orientales*, no. 34 [April 1928], 2-3). The way in which Murād was killed, during or after the battle, is not clear from the early sources; the later Serbian epic tradition has the well-known tale that Murād was murdered by Miloš Obranović, Lazar's son-in-law, who, claiming to be a deserter, had obtained an audience with Murād after the battle, was admitted to his presence and killed him with a dagger. Murād's body was transported to Bursa and buried in a *türbe* near the mosque which he had built in Čekirge in Bursa (cf. Aḥmed Tewḥīd, in *TOEM*, iii).

Murād I was the first ruler under whom the state founded by ʿOthmān rose to be more than one of the then existing Turkoman principalities in Asia Minor. This development is symbolised in the successive change of titles given to him in different building inscriptions dated in his reign (cf. Taeschner, in *Isl.*, xx, 131 ff.). While the oldest inscription calls him simply Bey, like his father Orkhān, and gives him a *laḳab* (Shihāb al-Dunyā wa 'l-Dīn) after the Saldjūḳ fashion, he is already called Sulṭān [*q.v.*] in 785/1383, while in the inscription from 790/1388 on the *ʿimāret* built by him in Iznīḳ, we find the style which afterwards became a tradition with the Ottoman sultans

(*al-malik al-muʿaẓẓam al-khākān al-mukarram al-sulṭān ibn al-sulṭān*). It was a time when the old Saldjūḳ traditional institutions no longer held, and new forms of government and administration came into being, to which the example of Byzantine institutions, and also those of Mamlūk Egypt, may have contributed. Even if it is not true that Djandarlî Khayr al-Dīn Khalīl Pasha —who was appointed Murād's vizier at the beginning of his reign and died about 789/1387— was the first Ottoman grand vizier, it cannot be denied that the activity of this man —who by his origin belonged to a higher culture than the Ottoman— as Murād's councillor as well as his military deputy and administrator in Macedonia, makes him a true prototype of the grand viziers of a later age (cf. Taeschner and Wittek, in *Isl.*, xviii, 66 ff.). His son ʿAlī Pasha began also to play an important military part during the later years of Murād's reign. It is also with Khalīl Pasha that the old Turkish sources connect the institution of the Janissaries [see YEÑI ČERI] as troops formed from converted Christian prisoners of war. In the administration of the *timārs* [*q.v.*] a *ḳānūn* of Murād I is said to have brought improvements. Some of these measures were closely connected with the problem of acquiring a quiet and loyal population in the newly-conquered Christian territories; this was not possible by Turkish colonisation only but succeeded mainly through a humane treatment of the original inhabitants, after the region had once been conquered.

The more important buildings of Murād I are all in Asia Minor. The best known are the Khudāwendigār Djāmiʿi in Čekirge, near Bursa, where Murād himself is buried, and the Ulu Djāmiʿ in Bursa; further, a mosque in Biledjik, the Nīlūfer ʿImāreti in Iznīḳ (described by Taeschner, in *Isl.*, xx, 127 ff.). There is also a mosque of Murād in Serres. The old Ottoman chronicles enumerate his foundations; see also on them, G. Goodwin, *A history of Ottoman architecture*, London 1971, 40-6. On Murād I's coins cf. ʿĀlī, in *TTEM*, xiv, 224.

Bibliography: The information given by the old Turkish chronicles (ʿĀshîḳ-Pasha-Zāde, Anonymus, ed. Giese, Urūdj, the translations of Leunclavius, also *Düstūr-nāme-i Enwerī*, ed. Mükrimīn Khalīl, Istanbul 1928, and this editor's *Medhal*, Istanbul 1930) is sometimes supplemented by the later historiographers (Saʿd al-Dīn, ʿĀlī, Münedjdjim-Bashî). The Byzantine historians (Phrantzes, Ducas, Chalcocondyles), however, give a far clearer survey of this period in so far as it came under their attention, while documents from Venice, Genoa and Rome throw light on the diplomatic activities provoked by the advance of the Turks in Europe. Ibn Ḥadjar al-ʿAsḳalānī, *Inbāʾ al-ghumr fī anbāʾ al-ʿumr*, contains also a biography of Murād I. See further the historical works of von Hammer, Zinkeisen and Jorga, and H.A. Gibbons, *The foundation of the Ottoman Empire*, Oxford 1916, 110 ff.; C. Jireček, *Geschichte der Serben*, Gotha 1918; F. Taeschner, *War Murād I. (J.H. KRAMERS)

MURĀD II (824-48, 850-5/1421-44, 1446-51), sixth ruler of the Ottoman Empire, was born in 806 (1403-4) and ascended the throne in Djumādā I 824/May 1421, when he arrived in Edirne some days after his father Meḥemmed I's death; his decease had been kept secret on the advice of the vizier ʿIwaḍ Pasha until the new sultan's arrival.

As crown prince he had resided at Maghnisa, and he had taken part in the suppression of the revolt of Simawna-Oghlu Bedr al-Dīn [*q.v.*]. Immediately after his accession he had to face the pretender known in Turkish history as Düzme Muṣṭafā [*q.v.*] and his ally Djunayd [*q.v.*]. Both were supported by the Byzantine emperor Manuel and at first were successful in the European part of the empire. Bāyezīd Pasha, sent from Bursa, was defeated and killed in the battle of Sāzlî Dere (between Serres and Edirne) and the allied Greek forces took Gallipoli. Then Murād himself had to face them in Asia; he succeeded in sowing discord between Muṣṭafā and Djunayd and defeated the first in the battle of the bridge of Ulubād. Then Murād went over, with the help of ships from the Genoese colony of New Phocea (Yeñi Foča), recovered Gallipoli, after which he entered Edirne and killed the pretender. In 825/1422 he began a siege of Constantinople; this siege was raised, either by the effect of Byzantine gold (through the intermediary of the graecophile vizier Ibrāhīm Pasha) or as a result of the rise of a new pretender in Iznīḳ in the person of Murād's younger brother Muṣṭafā. The latter was at last betrayed by his former supporter Ilyās Pasha and killed. Then followed a struggle with Djunayd, who had established himself again at Aydîn, but surrendered at last in 828/1425, after which he was killed. Murād was now at peace with all his European neighbours and vassals; the Emperor Manuel had died in 1424 and was followed by John Palæologus, with whom peace was concluded. Several towns had been taken in the meantime in Morea, and Wallachia paid tribute. In Anatolia there had been a conflict in 826/1423 with Isfendiyār of Sīnūb [see ISFENDIYĀR OGHLU], ending with the acquisition of a part of his territory by Murād; after 828/1425 the Ottoman power was confirmed in Tekke and Menteshe [*q.vv.*] and the Ḳaramān-Oghlu Ibrāhīm [see ḲARAMĀN-OGHULLARÎ], who tried to take the already Ottoman Adalya, had to retire and made peace. In eastern Anatolia, Yürkedj Pasha subdued the Turkomans round Toḳat and Amasya and of the region of Djanîk. In 831/1428 there began difficulties on the Hungarian frontier. The most noteworthy exploit of this period was however the capture of Salonica (Selānik [*q.v.*]) in Djumādā II 833/March 1430, after the Greeks had sold this town to Venice in 1427; Murād had never given up the plan of avenging that transaction. Peace with Venice soon followed.

Meanwhile, the Turks had taken several fortresses in Epirus and Albania, but their interest began more and more to concentrate on the northwestern regions, where George Branković ruled as vassal over Serbia. With the latter, peace was renewed in 835/1432 and his daughter Mara was given in marriage to Murād, but the Turkish raids continued in Serbia as well as far into Hungarian territory. In 842/1438 the Turks made, together with Serbians and Wallachians, incursions in Hungary (capture of Semendra); in 1440 they besieged Belgrade in vain and in 1442 Turkish troops under Yezīd Bey laid siege to Hermannstadt. Here they suffered a heavy defeat by John Hunyadi, who in the coming years was to act as champion of Hungary and Christian Europe. He was the leader, in 847/1443, of a large crusading army including Ser-

bians, Poles and Germans; the Turks were thrown back at Nish, after which Sofia was taken. The campaign ended with a heavy defeat of the Turks at Jalowaz, between Sofia and Philippopolis. In the same year, Murād had to oppose again the Ḳaramān-Oghlu, who supported the Christian allies. But the peace with Hungary, concluded in Rabīʿ I 848/July 1444 at Szeged, though advantageous to Hungary, maintained the former frontiers of the zone of Ottoman political influence; only Wallachia (Eflāḳ [*q.v.*]) became tributary to Hungary.

After this peace, which was to last ten years and seemed to Murād a guarantee for the future, he abdicated in favour of his son Meḥemmed, leaving with him Khalīl Pasha, son of Ibrāhīm Pasha (who had died of the plague in 832/1429) and Khosrew Molla [*q.v.*] as counsellors. He retired himself to Maghnisa, but had to come back when, in Dhu 'l-Ḥidjdja/September of the same year, the Hungarians, flouting the peace treaty, were preparing a new crusade. They marched south of the Danube to Varna; here the army of Murād inflicted on them a crushing defeat, in which King Ladislas of Hungary was killed. Again Murād II went back to Maghnisa, but in the following year a Janissary revolt broke out in Adrianople, and it was the vizier Khalīl who invited Murād to return a second time, as the young Meḥemmed did not seem to be able to face the situation.

During the last six years of his reign Murād led again several campaigns in the Balkan peninsula. In 850/1446 an action was undertaken against the Palæologi in the Morea (destruction of the Hexamilion, capture of Corinth and Patras); in 851/1447 against Albania, where the activity of Iskender Beg [*q.v.*] had begun in 847/1443; in 852/1448 he faced again a Hungarian invading army, which was beaten on the plain of Ḳoṣowa [*q.v.*] or Kosovo; and in 854/1450 he was again in Albania (siege of Croja). In that year Constantine Palæologus became, by the grace of Murād II, the last Byzantine Emperor, after the death of John. Shortly afterwards, in the first days of Muḥarram 855/February 1451, Murād died at Edirne. He was buried in Bursa at the side of his mosque (cf. Aḥmed Tewḥīd, in *TOEM*, iii, 1856).

His reign was of extraordinary importance for the future political and cultural development of the Ottoman Empire. After the first critical years, he continued his father's work of consolidation. His aim was mainly to live on peaceful terms with the vassal princes, of whom the ruler of Sīnūb and the despot of Serbia gave their daughters to Murād. This peaceful policy was in concordance with his character; the Byzantine historians and other Christian sources decribe him as a truthful, mild and humane ruler. His most influential viziers were not yet the renegades of later times; they belonged to the old families that had supported the cause of Murād's forefathers and were becoming a kind of hereditary nobility: Ibrāhīm Pasha and Khalīl Pasha of the Djandarlî-Oghullarî (F. Taeschner and P. Wittek, in *Isl.*, xviii, 92 ff.), Ḥādjdjī ʿIwaḍ Pasha (Taeschner, in *Isl.*, xx, 154 ff.), the sons of Timurtash, of Ewrenos and others. The mystical tradition was strong in his surroundings, as is proved by the great influence of a man like the Shaykh Amīr Bukhārī; other *shaykhs* came to his court from Persia and ʿIrāḳ. This determined also the direction which classical Ottoman literature was to take in following centuries. Murād II was the first Ottoman prince whose court became a brilliant centre of poets, literary men and Muslim scholars. But also to non-Islamic envoys and visitors, Murād's court seemed a centre of culture (cf. Jorga, i, 464 ff., which description applies principally to Murād II). Amongst the sultan's buildings a mosque in Bursa (cf. H. Wilde, *Brusa*, 51) and one in Adrianople (the Üč Sherefeli Djāmiʿ), are notable (see G. Goodwin, *A history of Ottoman architecture*, London 1971, 66 ff., 70-1, 93-100) and some large bridges. His army organisation is well-known from a full description by Chalcocondyles.

Bibliography: The older Turkish sources: Neshrī (Haniwaldanus), ʿĀshīḳ-Pasha-Zāde, Orudj, Rūḥī, Anonymus Giese, are completed by the Byzantine historians Phrantzes (who himself played a part in the diplomatic history of the time), Ducas and Chalcocondyles, and also by the later Ottoman authors Saʿd al-Dīn, ʿĀlī and Münedjdjim Bashî. A curious contemporary description is that of an unknown captive from Mühlenbach in Transylvania (captured in 1438) in his *Tractatus de moribus conditionibus et nequitia Turcorum* (cf. K. Foy, in *MSOS*, iv, v.).

General later descriptions of Murād II's reign in the works of von Hammer, *GOR*, i; Zinkeisen, i, and Jorga, i. See also F. Babinger, *Von Amurath zu Amurath. Vor- und Nachspiel der Schlacht bei Varna (1444)*, in *Oriens*, iii (1950), 229-65, iv (1951), 80; A.D. (J.H. Kramers)

MURĀD III, twelfth Ottoman Sultan (ruled 982-1003/1574-95). He was born on 5 Djumāda I 953/4 July 1546 in the princely summer camp at Bozdağ Yayla near Manisa [*q.v.*] where his father, the later Sultan Selīm II [*q.v.*], resided as *sandjaḳ-begi*. His mother was the Venetian-born *khāṣṣekī* Nūr Bānū [*q.v.*].

His ceremonial circumcision took place at Manisa in April 1557. At the time, prince Selīm was appointed *sandjaḳ-begi* of Ḳaramān [*q.v.*] in 1558 and Sultan Süleymān I [*q.v.*] made his grandson *sandjaḳ-begi* of Aḳshehir. In 1561 Murād stayed with his grandfather in Istanbul, and in 1562, when his father fought the battle with his brother Prince Bāyezīd on the plain of Konya, Murād was in command at Konya castle. Afterwards he was made *sandjaḳ-begi* of Sarukhān, residing at Manisa like his father. Here he lived till his accession to the throne (1 Ramaḍān 982/15 December 1574). In this provincial town he was given a suitable court and household. He took the Albanian-born Ṣāfiye as his first consort. She was given to him by his cousin, the Princess Humā Shāh, in 1563, when she was probably thirteen years old. Early in Dhu 'l-Ḳaʿda 973/20-29 May 1566, she gave him his first son, his later successor, Meḥemmed III [*q.v.*], born likewise in the summer camp on Boz Dağ. Till he became sultan, Ṣāfiye, who also gave him two daughters, ʿĀʾishe (d. 1013/1605) and Fāṭima Sultān, probably remained Murād's only wife. In 1574 the influence of his mother, now at his side as *Wālide Sulṭān* [*q.v.*], became supreme. She and Murād's sister Esmākhān, married to the Grand Vizier Ṣoḳollu Meḥmed Pasha [*q.v.*], prevailed upon him to diversify his erotic attentions. He only had one son alive then. Like his father and his son, Murad III was to remain subject to the *ḳadînlar salṭanatî* ('rule of women') all his ruling days.

During the years at Manisa, Murād formed lifelong

bonds of trust and companionship with members of his household, *e.g.* his tutor Khodja Saᶜd al-Dīn Efendi [*q.v.*], his finance director (*defterdār*) Ḳara Üweys Čelebi, and Rāḍiye "Kalfa", the controller of his harem, appointed by his mother. It was this latter woman who introduced the Khalwatī dervish, Sheykh Shüdjāᶜ, who had the reputation of being an excellent interpreter of dreams. In spite of this man's illiterate, ecstatic brand of mysticism and his morally corrupt character, he remained spiritual adviser to the prince all his life.

Ṣoḳollu Meḥmed Pasha and Nūr Bānū informed Murād of his father's death in secret in order to ensure a smooth succession. Immediately setting off for Istanbul and embarking at Mudanya in the first available vessel, the small open boat of the *Nishāndjī* Ferīdūn Beg [*q.v.*], he managed to reach the capital in five days, in spite of the raging winter gales. The day after his arrival, 21 December 1574, the death of the old sultan and the accession of the new one were publicly announced. The principal officers of state paid their homage (*bayᶜat resmi*) to their new ruler. The ceremonial burial of Selīm II and his five other sons, who had been strangled inside the saray that day, took place afterwards. Then the *Wālide Sulṭān* was ceremoniously established in the palace. On 11 Ramaḍān 982/25 December 1574, Murād III held his first council; eleven days later, he proceeded to the mosque of Eyyüb to be girded with the sword by the *sheykh ül-islām*, the *naḳīb ül-eshrāf* and the *silāhdār aghasī*. On the way back, the new sultan visited the tombs of his illustrious predecessors.

The accession of the new monarch led to the formation of a new palace faction which was set on countering the dominant position of the Grand Vizier, Ṣoḳollu Meḥmed Pasha. Its prominent members were the courtier Isfendiyār-oghlu Shemsī Aḥmed Pasha (Ḳīzīl Aḥmedlü) (d. 1580), who had already served Sultans Selīm I, Süleymān and Selīm II, and the Chief White Agha of the palace (*Bābüsseᶜādet Aghasī*, *Khāṣṣodabashī* Ghazanfer Agha, the Hungarian renegade who already had been a trusted companion of Murad's father (exec. 1603). Important females of this group were the *Kahyā Ḳadīn* ("Mistress of the Harem") Djanfedā Khātūn, a creature of Nūr Bānū, and the latter's "*kira*" ("Jewish Agent"), Esperanza Malchi. The members of the inner circle at Manisa joined this faction. In 1577 Lala Muṣṭafā Pasha (d. 1580 [*q.v.*]) joined as well.

It was their influence that led to the war with Ṣafawid Persia (1578-90). The sultan was persuaded not to leave his capital but to appoint a Commander in-chief (*serdār-i ekrem*) in his stead. The imperial tent (*oṭagh-i hümayūn*) was, however, sent afield.

The conduct of foreign policy likewise was left in the hands of the viziers and the harem clique since the death of Soḳollu Meḥmed Pasha in 1579. The involvement of Nūr Bānū and her *kira* in the diplomatic relations with Venice and France is evident from extant letters. Ṣāfiye and her *kira* wrote letters to Queen Elizabeth I of England in 1593.

Till her death on 7 December 1583, the *Wālide Sulṭān* reigned supreme over the palace of her son. Ṣāfiye succeeded to this power immediately, and retained her influence on affairs till her death in 1014/1605 [see MEḤEMMED III].

The hidjra year 1000 (A.D. 1591-2) with its messianic expectations of impending doom, actually did come to pass in a period of interior troubles in Ṭarābulus Gharb [*q.v.*], Yemen, Lebanon and the Danubian states, whilst widespread social unrest was caused by the change in the position of the empire in the world economy.

The Sultan occasionally interfered in the government of his realm. Dismissals of viziers and appointments were mostly effected at the instigation of the palace clique. The careers of Khodja Sinān Pasha [*q.v.*], three times his Grand Vizier, Siyāwush Pasha [*q.v.*] also three times vizier, Özdemir-oghlu ᶜOthmān Pasha [*q.v.*] and Ferhād Pasha [*q.v.*], are in evidence. Revolts of the Janissary Corps and Sipahis of the Porte were especially awe-inspiring. The so-called "Beglerbegi Incident" of 16 Djumādā I 997/2 April 1589, made a direct impact on Murād III's private life. He had to sacrifice the life of one of his most trusted *muṣāḥibs* or boon-companions, Doghandjī Meḥmed Pasha, *beglerbegi* of Rumeli (by origin an Armenian *dewshirme* boy from Zeytun, see KHALĪL PASHA, KAYṢARIYYELI). Together with the *defterdār* Maḥmūd Efendi, who also was executed, he had operated a depreciation of the silver *aḳča*, debasing its content by half. The consequent rise of prices caused the troops to revolt, to refuse pay and to demand the heads of those whom they held responsible for their plight.

Murād's limited interferences seems to have occurred as result of conflicts of rival parties in the palace which were deeply involved in petty politics and the systematic sale of offices. The promptings of the war party led by Sinān Pasha are a case in point: they wanted war against the Habsburg empire. The vizier Ferhād Pasha, his rival, supported by *inter alios* Khodja Saᶜd al-Dīn Efendi, opposed war. Murād III convened an extraordinary council to debate the question (according to an eyewitness account reported by Pečewī, *Taʾrīkh*, ii, 132-3). Sinān Pasha's side gained the upper hand and the "Long War" between Sultan and Emperor began on 4 Shawwāl 1001/4 June 1593.

Murād III died on 6 Djumādā I, 1003/16 January 1595, 49 years old, in his palace, probably because of a stomach illness. His death had been presaged by dreams of his astrologer and announced by bad omens, according to contemporary historians (Selānikī, *Taʾrikh*, new ed. i, 425-8; ᶜAlī, quoted in Fleischer, 151-2). His death was kept secret. The new *Wālide Sulṭān* Ṣāfiye wished her son Meḥemmed to succeed to the throne in an indisputable manner, and thus to continue her "Woman's Sultanate".

Murād III is buried in his beautiful *türbe* situated next to the Aya Sofya, which contains 54 coffins of his wives and children. Next to it stands a small *türbe*, where his 19 sons who were executed at the accession of their brother Meḥemmed III [*q.v.*], lie.

Murād III was a keen swordsman, archer and horseman. His particular craft was the making of arrows. He seems to have had a generous and kind hearted personality. He was not cruel; he never had dismissed viziers executed; and he argued at length against having his younger brothers killed at the time of his accession. Nor was he addicted to drink. He rather liked to spend a great deal of his time in the harem. Next to his lifelong principal favourite Ṣāfiye, he probably took forty *khāṣṣekīs* into his bed. At the time of his death, 49 of his children were alive, and seven of his women were pregnant. He filled his palace with clowns, dwarfs and mutes. All kinds of festivities were arranged in the saray, as well as in other palaces and pavilions along the Bosphorus. Murād also liked to enjoy the civilised company of his *muṣāḥibs* who, as a rule, remained with him for life. The most noteworthy of celebrations organised for him was the series of ceremonies surrounding the circumcision of his son Meḥemmed (*sur*) which lasted for two months till 1 Radjab 990/22 July 1582.

Women played an important part in his life. Next to his mother and his principal *khāṣṣeki*, his sisters

Esmākhān (1545-85) the wife first of Ṣokollu Meḥmed Pasha and then of Ḳalaylîḳoz ʿAlī Pasha (d. 1587); Fāṭima (d. 1580), married to Siyāwush Pasha; Djewher-i Mülük, married to the admiral Piyāle Pasha [*q.v.*] (d. 1578) and later to Meḥmed Pasha; and Shāh (d. 1580), wife to Čaḳîrdjî Bashî Ḥasan Pasha (d. 1574) and to Zal Maḥmūd Pasha (d. 1580); all played their roles in palace politics. Some of his daughters rose to prominence, especially those born of Ṣāfiye: ʿĀʾishe Sulṭān (d. 1013/1605), wife to Ibrāhīm Pasha (d. 1601) and then to Yemîshčî Ḥasan Pasha (d. 1012/1602), Fakhriyye (d. 1051/1641) and Fātima, happily married to the admiral Khalīl Pasha the Elder (d. 1012/1603) and then to Djaʿfer Pasha (d. 1018/1609).

Murād III led an active spiritual life. He was deeply involved in the esoteric forms of popular mysticism as well as astrology, cosmology and numerology. Hence a book on Naḳshbandī hagiography of 1420 was translated for him from the original Persian by Muṣṭafā ʿĀlī, who likewise wrote a commentary on five mystical verses of the sultan. Murād III's principal mystic affiliation was with the Khalwetī order of dervishes [see KHALWATIYYA].

Under the *makhlaṣ* Murādī, he was a minor Ottoman poet of mystic verse. He also wrote probably a theological treatise *Futūḥāt al-ṣiyām* ("The revelations of fasting") (? contained in a *medjmūʿa* ms., Türk ve Islam Eserleri Müzesi Ktp. 1901, dated 993 A.H.). His *dīwān* contains Arabic and Persian as well as Turkish verses. He was an active man of letters and favoured a number of writers, poets, historians, theologians and scientists, i.a. the poets Bāḳī (1526-1600 [*q.v.*]), Newʿī (1533-90 [*q.v.*]), who was a tutor to his younger sons, and the historians his Khodja Saʿd al-Dīn and ʿĀlī, who in 1569 at Manisa already was ordered to write a sex handbook (*bāhnāme*) for the education of Prince Meḥemmed, then two years old. The rhymed chronicles of the *shehnāmedjis* Seyyid Loḳmān and Taʿlīḳīzāde, written by order, derive their lasting importance from their splendid miniature painting illustrations Loḳmān's *Shehinshehnāme* and *Zübdet üt-tewārīkh* are wholly or partly devoted to the history of Murad III. Loḳmān and ʿĀlī wrote *inter alia* a *surnāme*, being descriptions of the circumcision festivities of 1582 and in fact a new literary genre. Magnificently illustrated copies exist.

Murād III was also a patron of architecture. The last mosque complex designed by Sinān [*q.v.*] is the Murādiyye at Manisa, built between 1583 and 1593. Splendidly decorated building took place inside Topkapî Sarayî, in Murad's private apartments, e.g. the Alay Köshkü was added to the palace by his command, as well as the Sinān Pasha Köshkü at the seaside facing Ghalaṭa [*q.v.* in Suppl.]. The patriarchal church of St. Mary Pammacaristos was turned into the Fetḥiyye Djāmiʿi in 1586 to celebrate the recent conquests in Georgia and Adharbāydjān. Restoration and extension works were done at Mecca and Medina, e.g. to the walls of the Kaʿba in 983/1573.

(A.H. DE GROOT)

MURĀD IV, seventeenth Ottoman sultan (1021-49/1612-40, reigned 1032-49/1623-40).

Born in Istanbul in a palace on the Bosphorus on 28 Djumādā I 1021/27 July 1612, son of the reigning sultan Aḥmed I [*q.v.*] and his principal consort, *khaṣṣekī*, Kösem [*q.v.*] Māhpeyker, a woman of Greek origin (Anastasia, 1585-1651). He grew up in the palace together with his brother İbrāhīm, confined in the *ḳafes* apartments, since he was five years old. The princes Süleymān, Ḳāsîm and İbrāhīm were his full brothers, and he had two full sisters ʿĀʾishe Sulṭān and Fāṭima Sulṭān. In 1032/1623 the Grand Vizier Kemānkesh ʿAlī Pasha (1623-4) in agreement with the *Sheykh ül-Islām* Zakariyyā-zāde Yaḥyā Efendi and his already very influential mother, decided to depose Sultan Muṣṭafā again and to put young Murād in the place of his uncle. This being the fourth accession in six years, the *djülūs bakhshīshi* was dispensed with for once. The day after the accession (16 Dhu 'l-Ḳaʿda 1032/11 September 1623), Murād IV was girded with the sword at Eyyūb by the venerated mystic of Üsküdār, Sheykh (ʿAzīz Maḥmūd) Hüdāʾī (d. 1038/1628 [*q.v.*]), with the *Sheykh ül-Islām*, the *naḳīb ül-ashrāf* and the *silāḥdār agha* also attending. Being too young to rule, the Wālide Sulṭān exercised power as the virtual head of state. To the great joy of the members of the household, the 16-year old Murād IV for the first time slept with a woman, a 13-year old slave girl, presented to him by his sister ʿĀʾishe (wife to the Grand Vizier Ḥāfiẓ Aḥmed Pasha) on *ca.* 4 April 1626 (cf. the Dutch ambassador Haga's despatch of 4 April 1626, SG 6898 ARA-General Record Office The Hague). On 25 August 1628 Murād IV took a former consort of his brother and predecessor ʿOthmān II [*q.v.*], called Ḳalender, as his principal bedfellow (cf. Haga's despatch of 16 September 1628, SG 6899 ARA).

In Shawwāl 1041/May 1632, Murād's personal

rule began. Till then he had merely followed events and reacted upon them privately, e.g. the famous exchange in verse between him and the Grand Vizier Ḥāfiẓ Aḥmed Pasha, in trouble at the siege of Baghdād (1626). (cf. Gibb, *HOP*, iii, 207-8, 248-51). Aware of a series of rebellions and troubles in the capital, he became restive. Together with the *ḳizlar aghasi* Ḥādjdjī Muṣṭafā Agha he began to make tours through the city in disguise to become acquainted with the true state of affairs.

An army mutiny broke out in Radjab 1041/February 1632. Probably instigated by the *ḳāʾim-maḳām* Redjeb Pasha, the soldiers marched to the palace and demanded the heads of the Grand Vizier, the *Sheykh ül-Islām*, the Janissary Agha and the Sultan's companion (*muṣāḥıb*) Mūsā Čelebi, etc. Murād had to make concessions, including sacrifice of the Grand Vizier Ḥāfiẓ Aḥmed Pasha. The revolt lasted till May. At one point, most ominously, the insurgents demanded to see the princes Bāyezīd, Süleymān, Ḳāsim and Ibrāhīm, and heads of other prominent courtiers were demanded. But the rebels could not agree about the deposition of the sultan, and the new Agha of Janissaries, Köse Meḥmed, remained however loyal. At the meeting of the *dīwān* on 18 Shawwāl 1041/18 May 1632, the sultan moved quickly. He invited Topal Redjeb Pasha, now Grand Vizier, into the private apartments and had him strangled. The corpse was brought outside the palace for the insurgents to see. The new Grand Vizier, Tabanī yassī Meḥmed Pasha [*q.v.*], a protégé of the *ḳizlar aghasi* Ḥādjdjī Muṣṭafā Agha, assisted the sultan in the suppression of the revolt. An extraordinary *dīwān* meeting was held in a *köshk* outside the palace. All loyal elements made an act of obedience which was recorded in a special *ḥükm-i hümāyūn* (Naʿīmā, *Taʾrīkh*, iii, 119-25), and law and order were restored.

Murād continued to feel extremely suspicious and afraid of treason in his immediate surroundings, so that his intimates thus often fell victim to his distrust. Thus his counsellor Ḳoči Beg [*q.v.*] was dismissed and condemned to be publicly hanged in 1633, but was pardoned at the last moment and his sentence commuted to exile in Cyprus (cf. Haga's despatch, 2 July 1633, publ. in *Kronijk Historisch Genootschap Utrecht* [1867], 434). Not so lucky were the poet Nefʿī [*q.v.*], summarily executed on 8 Shaʿbān 1044/1635, and Ābāza Meḥmed Pasha [*q.v.*] on 29 Ṣafar 1044/1634. The harsh régime of the young sultan was supported by a radical section of Muslim society led by Ḳāḍīzāde Meḥmed Efendi (d. 1635), a preacher of the Aya Sofya mosque. The closure of all coffeehouses and the renewed prohibition of tobacco smoking were a result. Opposition by more liberal-minded *ʿulamāʾ* led to draconic measures against the *ʿilmiyye* [*q.v.*] in general and to the execution of the *Sheykh ül-Islām* Akhīzāde Ḥüseyin Efendi on Radjab 1043/10 January 1634.

Having established his personal authority, Murād decided to reassert Ottoman power in relation to the neighbouring states. On 4 Ramaḍān 1044/21 February 1635, the imperial tent was set up in Üsküdār, and a month later (9 Shawwāl/28 March) the army left for Eriwan [see REWĀN] under command of the sultan. On 10 Ṣafar 1045/29 July 1635 the army arrived before the Safawid fortress at Eriwan. After the first attack, the sultan took great personal care of the well-being of his wounded soldiers. The Janissaries received medical treatment under his supervision and an extra payment (*merhem-bahā*) was distributed. After eight days, the fortress surrendered. Its commander Emirgūne-oghlu Ṭahmāsb-ḳulī Khān was received with all honours and the sultan recruited him into his service and gave him the appointment of *beglerbegi* of Ṭarābulus-Shām. Soon afterwards, the new Emirgüne-oghlu Yūsuf Pasha came to live at Istanbul, where Murād IV presented him with a palace and a pleasure garden on the Bosphorus (Emirgān).

While still on campaign, the sultan ordered the killing of his brothers Bāyezīd and Süleymān at the time, when the news from Eriwan reached the capital. In Rabīʿ II 1045/October 1635 he fell ill and retreated to Wan and via Bitlis to Diyār Bakr. Emirgüne-oghlu Yūsuf was awaiting him at İzmid, and upon his return to the capital, the victory celebrations lasted seven days and nights.

Next year, Murād ordered a counter offensive, since Eriwan in the meantime had fallen into Persian hands again. A peace offer by Shāh Ṣafī I (1038-52/1629-42 [*q.v.*]) was turned down, with the counterdemand of the surrender of Baghdād.

Having put to death his brother Ḳāsim (23 Dhu 'l-Ḳaʿda 1047/8 April 1638), the sultan, accompanied by *Sheykh ül-Islām* Zakariyyā-zāde Yaḥyā Efendi and the *Ḳapudān-pasha*, left for Baghdad. Murād's progress was a long bloody dispensation of rough justice on local oppressors, and he acquired among the common people the fame of a *mahdī* in the Arab provinces.

On 8 Radjab 1048/15 November 1638 Murād IV came before Baghdad. Forty days after the siege began, the Persian commander surrendered with all honours. The restoration of the town and fortifications was begun immediately. A sick man, the sultan left for home on 12 Ramaḍān 1048/17 January 1639. Half-paralysed from the middle downwards for a time, he had to rest at Diyār Bakr, where he had left behind his *khaṣṣeki*. Rumours of his death began to spread, but somewhat recuperated, he marched again. A quarrel between his *khaṣṣeki sulṭān* and the wife of the famous local mystic (Rūmī) Urmiyā Sheykhi Maḥmūd led to the latter's execution (Pečewī, *Taʾrīkh*, ii, 461 ff.).

Travelling overland till Izmid and then by galley, Murād landed at the seraglio on 8 Ṣafar 1049/10 June 1639, and insisted on a triumphal entry into his capital two days later.

In the meantime, peace was concluded between the Ottomans and the Ṣafawids, and the treaty of Ḳaṣr Shīrīn of 14 Muḥarram 1049/17 May 1639 meant a lasting peace. The sultan reacted violently upon the Venetian attack destroying the Algero-Tunisian squadron in the harbour of Awlonya [*q.v.*]. Diplomacy, however, prevailed and new capitulations given to Venice ensured peace in the West two months later.

Murād regained his health to the extent that he dared to go out hunting again, but was advised to stop his heavy drinking and other dissipations.

He could still receive congratulations on 1 Shawwāl 1049 in the Sinan Köshk. He watched horse races in the hippodrome and again took to drinking in the company of his intimates, Silāḥdār Mūsā Pasha and Emirgüne-oghlu Yūsuf Pasha. But he fell seriously ill next day, lost consciousness and died on 16 Shawwāl 1049/Thursday 8 February 1640, being buried in his father's *türbe* in the complex of the Blue Mosque.

According to contemporary sources (Ottoman and Venetian), Murād IV was a man of tall stature, broad shouldered, of majestic and beautiful appearance. He had a light black beard, hazel eyes and possessed an extraordinary bodily strength. He was an accomplished horseman, swordsman, archer, pikeman and *djerīd*-thrower.

He had at least sixteen children, among whom were

five sons who all died before their father. His daughter Kaya Ismikhān married the Grand Vizier Melek Aḥmed Pasha; Rukiyye married Sheytān (Melek) Ibrāhīm Pasha; and Ḥāfiẓe married Ḥüseyin Pasha. According to contemporary Western sources (e.g. Rycaut), the Wālide Sulṭān Kösem Māhpeyker prevented him from having his sole surviving brother Ibrāhīm [*q.v.*], who now succeeded him, executed.

During his reign he spent little attention on pious foundations, but the Rewān and Baghdād kiosks in the seraglio are monuments to his good taste, and he further built garden palaces at Kandilli and Üsküdār (Istawroz).

Murād possessed some literary talent and was actively interested in artistic debate. His *salon* was a meeting place for leading men of letters such as the *Sheykh ul-Islām* Yaḥyā; Nefʿī [*q.v.*] wrote numerous *kaṣīdes* to the sultan and his horses. Ṭiflī Čelebi was the *shehnāmedji*. His most famous favourite is, of course, Ewliyāʾ Čelebi [*q.v.*]. A number of *naṣīḥat* works, including those by Ḳoči Beg [*q.v.*] are evidence for his political and moral interests. He was a talented calligrapher. According to Ewliyāʾ Čelebi (*Seyāḥat-nāme*, i, 257) he used to discuss theological subjects on Friday evenings and to listen to *ilāhīs*, *sāz*-players and singers on Saturday nights.

(A.H. de Groot)

MURĀD V, thirty-third Ottoman Sultan, who ruled for ninety-three days, from 31 May until 7 September 1876.

He was born on 21 September 1840, as the eldest son of Sultan ʿAbd al-Madjīd [*q.v.*]. According to the Ottoman system of succession, he was crown prince during the rule of his uncle, Sultan ʿAbd al-ʿAzīz (1861-76 [*q.v.*]). The latter, however, intended to change the line of succession in favour of his own offspring. Therefore, he deprived Murād of all influence in public affairs. Partly as a result of the way he was treated by his uncle, Murād, who had had a comparatively enlightened education, established contact with the liberal-democratic opposition movement of the Young Ottomans from the founding of that movement in 1865 onwards. He was especially close to Nāmiḳ Kemāl [*q.v.*]. The Young Ottoman leaders Nāmiḳ Kemal and Ḍiyā Pasha acted as intermediaries between Prince Murād and Midḥat Pasha [*q.v.*], the leading Ottoman reformer. When Midḥat Pasha, together with Ḥusayn ʿAwnī and Meḥmed Rüshdī Pasha decided to carry out a coup d'état against the reactionary régime of ʿAbd al-ʿAzīz and to depose him, Murād was informed beforehand. After the coup, on 30 May 1876, Murād was raised to the throne as Sultan Murād V.

Before his accession, Murād had promised to promulgate a constitution as soon as possible, and it seemed as if the Young Ottoman programme (constitution and parliament) would now be implemented in full. Nāmiḳ Kemāl and Ḍiyā Pasha were appointed as palace secretaries. Once on the throne, however, Murād listened rather to Rüshdī Pasha, who urged caution and instead of a concrete promise of a constitution, as advocated by Midḥat Pasha and the Young Ottomans, only a vague statement on reforms was included in the *Khaṭṭ-i Hümāyūn* after the accession.

On 5 June 1876, the former sultan ʿAbd al-ʿAzīz committed suicide. Then, on the 15th, a Circassian army captain called Ḥasan, motivated by personal grievances, shot and killed Ḥusayn ʿAwnī Pasha, the Minister of Foreign Affairs Rāshīd Pasha and several others during a cabinet meeting. This changed the balance of power in favour of the more radical reformers. On 15 July the first meeting of the new Grand Council decided to proclaim a constitution, but this could not be carried through because of the rapidly deteriorating mental state of Sultan Murād.

Murād, who had already become an alcoholic by this time, had shown signs of extreme nervousness when he was taken from the palace on the night of 30 April-1 May in order to receive the oath of allegiance from the high dignitaries of state at the Porte (he was convinced that he was being taken to his execution). The suicide of his uncle and the murder of several members of his cabinet seem to have led to a severe nervous breakdown. After having the Sultan's health examined by Ottoman and foreign medical experts, the cabinet had to conclude that he was unfit to rule. It first tried to get the Sultan's younger brother, Ḥamīd Efendi, to act as regent, but on his refusal had no choice but to depose Murād and replace him with his brother, who ascended the throne as ʿAbd al-Hamīd II on 1 September 1876. Murād was taken to the Čirāghān palace on the Bosphorus, where he continued to live in captivity for nearly thirty years. On 20 May 1878, after ʿAbd al-Hamīd had prorogued parliament, a group led by the Young Ottoman activist ʿAlī Suʿāwī made an unsuccessful attempt to execute a coup d'état and liberate Murād. After that, the prince was kept under even closer guard, and any mention of Murād or any reference to his condition was prohibited by the Ḥamīdian censorship. Murād died on 29 August 1904.

(E.J. Zürcher)

MURĀD BAKHSH, Muḥammad, fourth and

youngest son of the Mug̲h̲al Emperor S̲h̲āh D̲j̲ahān [*q.v.*], born on 25 D̲h̲u 'l-Ḥid̲j̲d̲j̲a 1033/28 September 1624 and died 1072/1661. He was given a *manṣab* of 10,000/4,000 in 1048/1639, and after a year, of 10,000/7,000, being promoted in 1051/1641 to 12,000/8,000 (2,000 × 2-3h). His first important assignment came in 1052/1642 when he was appointed *ṣūbadār* of Multān [*q.v.*]. In 1055/1645 he received the rank of 12,000/10,000 (2,000 × 2-3h). He led the Mug̲h̲al army to Balk̲h̲ and Badak̲h̲s̲h̲ān in D̲j̲umādā I 1056/June 1646, but after a successful campaign abandoned his command without permission and returned to India in Rad̲j̲ab 1056/August 1646. He was deprived of his rank and dismissed from the governorship of Multān, but the same year was pardoned and restored to his rank. In 1057/1647 he was appointed as *ṣūbadār* of Kas̲h̲mīr and in 1058/1648 as *ṣūbadār* of the Deccan. His term there was short, and in 1060/1650 he was appointed *ṣūbadār* of Kābul and in 1061/1651 of Mālwa. In 1064/1654 he received appointment to Gud̲j̲arāt and was promoted to the rank of 12,000/10,000 (5,000 × 2-3h). S̲h̲āh D̲j̲ahān fell ill in D̲h̲u 'l-Ḥid̲j̲d̲j̲a 1067/September 1657, and Murād Bak̲h̲s̲h̲ crowned himself Emperor in Ṣafar 1068/November 1657 at Aḥmadābād. In 1068/1658 Awrangzīb and Murād Bak̲h̲s̲h̲ entered into an agreement in which Awrangzīb promised his brother the Pand̲j̲āb, Multān, Thaffa, Kas̲h̲mīr and Kābul in the event of success. In Rad̲j̲ab 1068/April 1658, their joint armies united to inflict a defeat on the Imperial force at Dharmat. This was followed by Dārā S̲h̲ukūh's [*q.v.*] defeat at Sāmūgaṛh. The two brothers occupied Āgrā, the capital, but Murād Bak̲h̲s̲h̲ was treacherously seized by Awrangzīb at Mathurā [*q.v.*] and sent as captive to Salīmgaṛh fort (Dihlī) then in 1069/1659 to Gwāliyār [*q.v.*]. In 1072/1661 he was executed on the charge of having murdered his *dīwān* ʿAlī Naḳī in 1067/1657. Murād Bak̲h̲s̲h̲ was reputed for his dash and bravery, but was apparently a poor administrator.

MURĀD ḤĀD̲J̲D̲J̲Ī [see s̲h̲āmil].

MURĀD PAS̲H̲A, ḲUYUD̲J̲U, Ḳod̲j̲a, (*ca.* 928-1020/*ca.* 1520-1611), Ottoman Grand Vizier under Sultan Aḥmed I.

A *dews̲h̲irme* [*q.v.*] boy of Croat origin, he received his education in the imperial palace. His career began under patronage of Maḥmūd Pas̲h̲a, the *beglerbegi* of Yemen and Egypt. Between 1560 and 1565 he was the latter's *ketk̲h̲udā*. In Egypt, Murād also held the office of *amīr al-ḥad̲j̲d̲j̲*, which opened the way to public high office. In 983/1576 Murād (Pasha) became *beglerbegi* of Yemen himself for about four years. Dismissed in 988/1580 because of corruption, he was summoned to the capital and landed in Yedi Kule prison for a short time. Afterwards, he was appointed *beglerbegi* of Ṭarābulus-S̲h̲ām. In 993/1585 he joined the Tabrīz campaign, being *beglerbegi* of Ḳaramān and second-in-command to the *serdār-i ekrem* Özdemir-og̲h̲lu ʿOt̲h̲mān Pas̲h̲a [*q.v.*]. In a battle with the troops of the Persian commander Ḥamza Mīrzā, he was taken prisoner. He was set free at the conclusion of peace in 998/1590 and was made governor-general of Cyprus (999/1590), of Tarābulus-S̲h̲ām (1000/1592), of Damascus (S̲h̲ām) in 1001/1593 and of Diyār Bakr in 1003/1595 (Selānīkī gives 1005/1597). In this capacity, he took part in the Eğri campaign of 1596. He distinguished himself in the Battle of Mező-Keresztes [*q.v.*] in Hungary (1005/1596). He remained at the front and on 21 Rabīʿ I 1008/11 October 1599 was a member of the Ottoman delegation holding peace talks with the Imperial envoys, together with the *ṣadāret ketk̲h̲udasi̊* Meḥmed Ag̲h̲a and a representative of the K̲h̲ān of the Crimea at Vácz (Waitzen) and at Parkanzy (Čiğerdelen).

After the accession of Sultan Aḥmed I (17 Rad̲j̲ab 1012/21 December 1603 [*q.v.*]), Murād Pas̲h̲a was appointed *beglerbegi* of Rumeli and given the function of military governor of Buda (T. Budīn [*q.v.*]). On 28 D̲j̲umādā II 1014/12 October 1605 he became as Fourth Vizier a member of the imperial *dīwān*. When the Grand Vizier and *serdār* of the Western Front Lala Meḥmed Pas̲h̲a [*q.v.*] died (15 Muḥarram 1015/23 May 1606), Murād Pas̲h̲a, by now one of the most experienced commanders in the field, was made Commander-in-Chief in Hungary (*Engürüs Serdārī*). In this capacity he began to work towards peace. As a result, a treaty of peace was negotiated at Zsitvatorok on 17 D̲j̲umādā II-10 Rad̲j̲ab 1015/20 October-11 November 1606. Peace in the West made it possible for the Ottoman government to direct its forces to the East, where Anatolia was ravaged by the so-called D̲j̲elālī revolts [*q.v.* in Suppl.] and where the Ṣafawid S̲h̲āh ʿAbbās I (996-1038/1588-1629) had started a war in 1603. A month after concluding the peace in Hungary, Murād Pas̲h̲a received his appointment as Grand Vizier (10 S̲h̲aʿbān 1015/11 December 1606). The advice of the *s̲h̲eyk̲h̲ ül-islām* Ṣunʿullāh Efendi seems to have been decisive in the matter. "Old" (*Ḳod̲j̲a*) Murād Pas̲h̲a immediately left his headquarters at Belgrade and arrived at Istanbul on 15 S̲h̲awwāl 1015/13 February 1607: "this man hath continued ever since to the greate good of that estate raised from death to life by his wisdome and good fortune being indeede wise and a ancient souldier", was the commentary of the English ambassador Henry Lello.

Appointed *serdār* in the East, the new Grand Vizier left Üsküdār on 6 Rabīʿ I 1016/2 July 1607 for his campaign against the rebels in Anatolia and Syria; Ḳalenderog̲h̲lu Meḥmed Pas̲h̲a [*q.v.*] near Ankara, Muslu Čāwus̲h̲ at Silifke and the main target, the insurgent D̲j̲anbulāṭog̲h̲lu ʿAlī Pas̲h̲a, who dominated an area from Aleppo to Adana. Having put out of action D̲j̲anbulāṭ's follower D̲j̲ems̲h̲īd near Adana, Murād Pas̲h̲a met the chief rebel pas̲h̲a himself in battle in the Oruč Owasi̊ near Baylān in the region of Anṭākya (2 Rad̲j̲ab 1016/23 October 1607). The united forces of D̲j̲anbulāṭ ʿAlī Pas̲h̲a and the other renowned rebel Fak̲h̲r al-Dīn Maʿn [*q.v.*] were defeated and for the greater part massacred. ʿAlī Pas̲h̲a managed to escape, at first to Aleppo and then to Istanbul, where he received a pardon from the Sultan and was made *beglerbegi* of Temes̲h̲wār (Temesvár), but Murād Pas̲h̲a had him executed soon after at Belgrade. One prominent prisoner, D̲j̲anbulāṭ ʿAlī Pas̲h̲a's treasurer, the young Ābāza Meḥmed [*q.v.*], was spared upon the intercession of the Janissary *Ag̲h̲a*, K̲h̲alīl Pas̲h̲a Ḳaysariyyeli [*q.v.*], who took him into his personal service.

Murād Pas̲h̲a re-established government control in

the province of Aleppo. Next season he left to march against Ḳalenderoghlu Meḥmed, and reached Alačayir in the Göksün Yayla, where the rebel forces had concentrated with 20,000 men and 20 pieces of artillery (*shāhī ḍarbzan*). The aged Grand Vizier took personally part in the fighting (July or 5 August 1608 acc. to various sources). Ḳalenderoghlu was defeated, but escaped into Ṣafawid territory. On 21 Djumādā I 1017/2 September 1608 the remaining Djelālī leader Ṭawīl-oghlu Muṣṭafā ("Birāder-i ṭawīl", alias "Maymūn") was caught in battle at the pass of Ḳara Ḥasan near Ḳara Ḥiṣār-i Sharḳī [see SHĀBĪN ḲARAḤIṢĀR]. Mass executions followed all over Anatolia.

Having been far away from the capital a long time, the Grand Vizier decided to return thither in spite of the Sultan's order to remain in winter quarters in eastern Asia Minor, and entered Istanbul on 10 (or 21?) Ramaḍān 1017/ 18 (or 29) December 1608. The next season, Murād Pasha marched against the remaining Djelālī rebels in the regions of Aydïn [*q.v.*], Ṣarūkhān [*q.v.*] and Silifke (İčel [*q.v.*]). Both Yūsuf Pasha and Muslu Čāwush were taken prisoner and executed.

The following year, on 1 Rabīᶜ I 1019/24 May 1610, he set out to meet Shāh ᶜAbbās in battle and to reconquer the territories lost in Transcaucasia. In Erzurūm [*q.v.*] on 27 Djumādā II 1010/16 September 1610 he received Shams al-Dīn Aḳa, ambassador of Shāh ᶜAbbās, who carried his master's proposals for peace on basis of the Treaty of Amasya (962/1555). The Ottoman demand was restitution of all territory formerly conquered by Sultan Murād III [*q.v.*]. Murād Pasha marched on to Kars, but did not break off negotiations. Avoiding a military confrontation, he marched on via Čāldirān [*q.v.*] Khōy and Salmās to Tabrīz, which city was evacuated by the Shāh. North of Tabrīz at Adjï Čay the two armies came face-to-face. (11 November 1610). Negotiations were resumed, but no agreement reached. Shāh ᶜAbbās's playing for time placed Murād Pasha in a difficult position. He could no longer remain in the field at such a distance from his base. He withdrew with the army to Diyār Bakr (29 Shaᶜbān 1019/16 November 1610). A Ṣafawid embassy was permitted to go to the Porte.

Next spring, Murād Pasha established his head-quarters at Čulek, where he died suddenly on 25 Djumādā I 1020/5 August 1611.

His surname Ḳuyudju is explained either by the pit (*ḳuyu*) in which he was found when taken prisoner of war in 1585 or by the pits which he had dug all over Anatolia to bury the dead rebels. (e.g. Naᶜīmā, confirming Pečewī)

He was buried in Istanbul in the *türbe* attached to the *medrese* which he had founded together with a *sabīl* in the Weznedjiler quarter near Shehzāde Bashï (nowadays housing the Department of Art History of Istanbul University).

A daughter of his is known to have married a *beglerbegi* of Buda, Ḳāḍīzāde ᶜAlī Pasha.

Murād Pasha was a devout Muslim and member of the Naḳshbandiyya [*q.v.*] order of derwishes. He supported convents of the Khalwatiyya [*q.v.*] and Shaᶜbāniyya as well. The young Abāza Meḥmed became his spiritual son and was buried after his execution in Murād Pasha's türbe.

MURĀD SU(YU) [see AL-FURĀT].

MURĀDĀBĀD, a district in the Rohilkhand division in the north-west of Uttar Pradesh in the Indian Union (formerly the United Provinces of British India), with an area of 2,290 sq. miles/5,930 km² and a population (1961 census) of 1,973,530 of whom 62% were at that time Hindu and 37% Muslim, the latter being stronger in the rural areas than the urban centres; the concentration of Muslims, almost wholly Sunnīs, is one of the thickest in the whole of Uttar Pradesh. Almost all the population is either Hindi- or Urdu-speaking. Nothing is known of the early history of the district. In the Islamic period it was successively ruled by the Sultans of Dihlī, from whom it was occasionally taken by the Sultans of Djawnpūr, the Mughals, the Rohillas and the Nawwābs of Oudh (Awadh [*q.v.*]) until it was ceded to the British in 1801.

Murādābād is also the name of one of the six component subdistricts (*taḥṣīls*) of the district and that of the principal town of the district, lying 95 miles/120 km east of Dihlī in lat. 28°50′N. and long. 78°45′ E. on the Dihlī-Bareilly road and on the main line of the Oudh-Rohilkhand railway. The town is a Mughal foundation of the second quarter of the 17th century. Its founder was Rustam Khān who also built the Djāmiᶜ Masdjid, as an inscription testifies, in 1041/1632. The town takes its name from Murād Bakhsh [*q.v.*], the ill-fated son of Shāh Djahān. It rapidly ousted Sambhal from its place as the chief town of the district. Its industries are flourishing (chiefly textiles and brasswork). It was a mint of the Mughal Emperors and also of Aḥmad Shāh Durrānī [*q.v.*] during his invasion of India in 1760. During the Indian Mutiny of 1857-8, Murādābād was held by native troops who had rebelled on hearing of the outbreak in adjacent Meerut (Mīrāṭ [*q.v.*]), and the Muslim population of the whole district espoused the rebel cause enthusiastically. British authority was not fully restored till the end of April 1858. Thereafter, a regiment of the British Army was stationed there till 1897, when the cantonment was abandoned. In 1961, the town had a total population of 180,000, approximately one-third being Muslim.

Sambhal is a very ancient site but has lost much of the importance it possessed in mediaeval times. It has an old mosque, an interesting example of Indo-Muslim architecture which has even been claimed as a converted Hindu temple. It is said to have been built by Bābur but it is undoubtedly earlier. Amrōhā was formerly the great Muslim centre of the district, the majority of its population being Shaykhs and Sayyids. The chief saint of the Sayyids is Sharaf al-Dīn Shāh Wilāyat, an alleged descendant of the tenth Imām, who came here about 699/1300. His tomb is still

shown here. The Djāmiᶜ Masdjid is a Hindu temple converted into a mosque in the reign of the Dihlī Sultan Muᶜizz al-Dīn Kaykubād. It is much visited by pilgrims, mainly Hindus who seek relief from mental diseases through the power of Ṣadr al-Dīn, a former *muʾadhdhin* of the mosque, whose virtues are still believed to be efficacious. There are over a hundred other mosques in the town.

(J. ALLAN-[C.E. BOSWORTH])

MURĀDĪ [see MURĀD III and MURĀD IV].

AL-**MURĀDĪ**, the name of a family of sayyids and scholars established at Damascus in the 11th-12th/17-18th centuries.

1. The founder of the family, MURĀD B. ᶜALĪ AL-ḤUSAYNĪ AL-BUKHĀRĪ, born 1050/1640, was the son of the *nakīb al-ashrāf* of Samarkand. He travelled in his youth to India, where he was initiated into the Nakshbandī *ṭarīka* by Shaykh Muḥammad Maᶜṣūm al-Fārūkī, and after extensive journeys through Persia, the Arab lands and Egypt settled in Damascus about 1081/1670. He subsequently made several visits to Mecca and Istanbul, where he acquired considerable influence, and died in the latter city in 1132/1720. He was an ardent missionary of the Nakshbandī order, and was instrumental in spreading it in the lands of the Ottoman empire, himself founding two *madrasas* for the purpose in Damascus. His literary works consisted mainly of treatises relating to the *ṭarīka*, and included a work on Kurʾānic exegesis, entitled *al-Mufrada al-Kurʾāniyya.*

2. MUḤAMMAD AL-MURĀDĪ, born at Istanbul in 1094/1683, son of Sayyid Murād, continued with marked success his father's missionary work in Syria and Turkey, and stood in high favour at the Ottoman court. He died at Damascus in 1169/1755. See Ṣ. al-Munadjdjid, *Muᶜdjam al-muʾarrikhīn al-dimashkiyyīn*, Beirut 1398/1973, 356.

3. ᶜALĪ AL-MURĀDĪ (1132-84/1720-71), and 4. ḤUSAYN AL-MURĀDĪ (1138-88/1725-74), sons of Sayyid Muḥammad, held in succession the offices of Ḥanafī Muftī and *raʾīs* of Damascus.

5. ABU 'L-MAWADDA MUḤAMMAD KHALĪL AL-MURADĪ, son of Sayyid ᶜAlī, succeeded his uncle as Ḥanafī *muftī* and *raʾīs* of Damascus and was appointed also to the office of *nakīb al-ashrāf* there. He devoted himself to the collection of biographical notices of his contemporaries and their predecessors, and on the basis of the personal information and written works available to him composed in Arabic a biographical dictionary of the notable men and scholars of the 12th century of the Hidjra, entitled *Silk al-durar fī aᶜyān al-karn al-thānī ᶜashar* (printed at Cairo in 4 volumes, 1291-1301). The work contains about 1,000 notices; in comparison with the work of his predecessor al-Muḥibbī [*q.v.*], it is more limited in range and somewhat more literary in style. A lengthier biography of his father and other relatives (*Maṭmaḥ al-wādjid fī tardjamat al-wālid al-mādjid*) is still extant in ms. B.L. Suppl. 659. Sayyid Muḥammad Khalīl deserves the credit also for encouraging al-Djabartī [*q.v.*] to undertake the composition of his history of Egypt (the statement in Brockelmann (see *Bibl.* below) that al-Djabartī translated al-Murādī's *Silk al-durar* into Arabic is apparently due to a misunderstanding of the colophon to vol. ii of the printed text). He died in Aleppo in 1206/1791. See al-Munadjdjid, *op. cit.*, 373-5.

6. ᶜABD AL-RAḤMĀN AL-MURĀDĪ, son or cousin of the preceding, succeeded to the office of Ḥanafī *muftī* of Damascus, and was put to death in 1218/1803 on secret instructions from Djazzār Pasha [*q.v.*].

Bibliography: Murādī, *Silk al-durar*, i, 3-4, ii, 70-2, iii, 219-28, iv, 114-16, 129-30; Djabartī, *ᶜAdjāʾib al-āthār*, ii, 233-6; Mikhāʾīl al-Dimashkī, *Taʾrīkh Ḥawādith al-Shām wa-Lubnān*, ed. Maᶜlūf, Beirut 1912, 12-13; Brockelmann, II², 379, S II, 404.

(H.A.R. GIBB)

MURĀKABA [see MUḤĀSABA. 1.].

MURAKKAᶜ (A.), lit. "that which is put together from several pieces", sc. an album. Unlike their European counterparts, who hung or attached their pictures on walls, Muslim connoisseurs and collectors mounted theirs in albums. In the classic *murakkaᶜ*, paintings and drawings alternate with specimens of calligraphy, the whole being generally provided with a handsome binding and sometimes with an illuminated frontespiece. These albums were usually large, the stiff pages having wide and often decorated margins. But considerable variety, both in size and quality, is encountered, from the large and lavish, such as the Clive Album in the Victoria and Albert Museum, to comparatively small and modest volumes put together by less wealthy collectors. Over the years the great majority of these albums have been broken up and their contents widely scattered.

It is difficult to say when this practice arose; no actual examples earlier than the 16th century have survived. But we find references in the literature to a *djung* (or *čung*, a term originally applied to the prophet Mānī's album of paintings) made for Sultan Aḥmad Djalāyir at the end of the 14th century, and to another for Bāysunghur (*ca.* 1430); while the historian Khʷāndamīr [*q.v.*] preserves the preface to an album collected by the painter Bihzād [*q.v.*] at the end of the 15th century. So it would appear that the period of the *murakkaᶜ* (at least of those containing paintings as well as calligraphy) is coterminous with that of classical Persian painting.

The largest and finest range of complete albums is in the Topkapı Museum Library, Istanbul, and among them the best-known and most remarkable are those numbered H. 2152 and H. 2160. With these must be bracketed the Diez albums in the Berlin Library, which form part of the same series. This group of albums remains controversial, but it seems likely that they are the result of the Ottoman capture of Tabrīz in 1514, the contents of the royal *kitāb-khāna*, mostly inherited from the 15th century Turkmen rulers, but including a quantity of material from the Mongol period and earlier, being transported to the Turkish capital and hurriedly mounted in these albums. But they are far from typical. No order or system is observed: Turkmen, Djalāyirid and Mongol miniatures, drawings, rough sketches and fragments, European and Chinese drawings, specimens of calligraphy and pages of poetry jostle one another higgledy-piggledy, sometimes mounted sideways or even upside down, in these huge albums, and little or no margin is allowed. But most of the other Topkapı albums date from the later 16th century onwards, and are of the normal "classic" form. They include the celebrated album of Bahrām Mīrzā, in which he commissioned the court painter Dūst Muḥammad to mount a series of pictures to illustrate the history of painting. Dūst Muḥammad prefaced the album with an essay on the subject which remains our most important and reliable source. In making up such albums as this, especially at the behest of royal patrons, the compilers did not hesitate to plunder manuscripts in the royal library. Thus Bahrām

Mīrzā's album contains a miniature cut from the celebrated Khwādjū Kirmānī manuscript of 1396 (now British Library Add. 18113) which was then in the Ṣafawid library.

By about 1530 it was not uncommon for separate paintings and drawings to be produced expressly for mounting in albums. Much of the work of such painters as Muḥammadī, Shaykh Muḥammad and Ṣādiḳī is of this nature, and in the 17th century the best work of artists like Riḍā, Muḥammad Ḳāsim and Muʿīn is no longer to be found in manuscript illustrations but in album pictures. A number of magnificent albums were made for the Mughal emperors at the same period, and these sometimes contained one or two European prints in addition to Persian and Mughal paintings, drawings and calligraphy.

A splendid album from the end of the Ṣafawid period is preserved in Leningrad containing, in addition to much Indian (Mughal) work which was greatly admired at the time, elaborate figure compositions and meticulous flower paintings by Muḥammad Zamān and his contemporaries at the Ṣafawid court. The Topkapı Library possesses albums made up in the 18th and 19th centuries for the Ottoman sultans with works by Lewnī and other Turkish artists as well as examples of "thumb-nail" calligraphy, cut-out work, and other vagaries.

The practice of album compilation continued throughout the 19th century. Thus there is a splendid album of royal portraits put together for Fatḥ ʿAlī Shāh and perhaps painted by Mihr ʿAlī; and another made for Nāṣir al-Dīn of miscellaneous (largely Ṣafawid) content appeared on the market not long ago.

Bibliography: The only publication that gives a good idea of a complete album is A.A. Ivanov, T.V. Grek and O.F. Akimushkin, *Albom indiiskikh i persidskikh miniatyur XVI-XVIII vv.*, ed. L.T. Gyuzalian, Moscow 1962 (with English summary of the text). The Istanbul and Berlin albums have been the subject of several publications, e.g. (Istanbul) M.S. Ipşiroğlu, *Painting and culture of the Mongols*, London 1965, and (Berlin) idem, *Saray-Alben*: *Diez'sche Kleberbände aus den Berliner Sammlungen* (Verzeichnis der Orientalischen Handschriften in Deutschland, Band VIII), Wiesbaden 1964, but these are concerned with the contents, and not the albums themselves.

(B.W. Robinson)

MURAḲḲISH, cognomen by which two pre-Islamic Arab poets are known, belonging to a family of which several members have made their mark in the history of poetry in the Arabic language.

1. The Elder, al-Akbar, was called either Rabīʿa, or ʿAwf, or even ʿAmr, the uncertainty deriving from the fact that his father, Saʿd b. Mālik b. Ḍubayʿa, had eleven sons (see Ibn al-Kalbī-Caskel, Tab. 155) whom the historians and biographers may have confused; ʿAmr b. Saʿd seems however to be the form that should be retained. The Arab authors of the Middle Ages state that Muraḳḳish (and not al-Muraḳḳish, which is inadmissible) is a cognomen drawn, as is not uncommon (see Ibn Ḥabīb, *Alḳāb al-shuʿarāʾ*, 320; al-Djāḥiẓ, *Bayān*, i, 374; Barbier de Meynard, *Surnoms et sobriquets*, etc.), from one of the poet's verses, which would be the following: "The abode is deserted, and the relics resemble the fine marks that a pen has traced (*raḳḳasha*) on the back of a skin" (metre *basīṭ*, rhyme - *am*), but the question remains, whether this is in fact a genuine name or, at a pinch, a pseudonym, *Marḳus = Mark, which would not be at all surprising in the vicinity of the Christians of al-Ḥīra and in an individual who had blue eyes (al-Djāḥiẓ, *Ḥayawān*, v, 331) and who is moreover believed to have served as the secretary of a Ghassānid.

Muraḳḳish al-Akbar was a brave and resourceful soldier who took part, under his father's command, in the famous war of al-Basūs [*q.v.*] and in other conflicts between the Bakr and the Taghlib. Father L. Cheikho arbitrarily dates his death around the year 552 A.D.

He owes his reputation less to his poetical works than to the fact that he is reckoned one of the famous lovers (*ʿushshāḳ al-ʿArab*) and that he became, probably in the 2nd/8th century, the hero of an anonymous romance the text of which was still in circulation in the 4th/10th century, in the time of Ibn al-Nadīm (*Fihrist*, ed. Cairo, 525, *Kitāb M.r.ḳ.s wa-Asmāʾ*). This romance, of which the *Aghānī* supplies a fairly detailed version, may be summarised as follows: ʿAmr b. Saʿd wishes to marry his cousin Asmāʾ bint ʿAwf, who is also a childhood friend. The girl's father demands, as a condition of giving him her hand, that ʿAmr proves his worth but, during the absence of the latter, he finds a way of improving his situation, giving Asmāʾ in marriage to a wealthy Murādī. ʿAmr's brothers hide the truth from him on his return, declaring to him that his loved one is dead; to convince him, they show him her apparent tomb, which in fact contains the carcase of a goat which they have slaughtered for this purpose. Children playing in the vicinity betray the secret, and ʿAmr sets out in pursuit of the Murādī with a couple of slaves belonging to his household, but he falls ill during the journey, and his two companions abandon him in a cave. He has time to write on a saddle verses in which he describes his condition and, when the companions return to the family of Muraḳḳish, his brother Ḥarmala who, like him, has learned to write under the tutelage of a Christian of al-Ḥīra, deciphers the message and forces the two slaves, before killing them, to reveal to him the place where they have left their master. By a fortunate chance, the shepherd of the husband of Asmāʾ finds Muraḳḳish, who entrusts his ring to him, charging him to have it delivered to his loved one. The latter finds it in a jug of milk, recognises it, and sets out at once with her husband to succour the sick man; they take him back to their home, but he dies immediately after.

Anthologists have preserved about a dozen compositions comprising a total of 140 verses which evoke Asmāʾ and other women, military campaigns, the death of a cousin, the aggression of a Ghassānid against the Ḍubayʿa. Ibn Ḳutayba attributes to Muraḳḳish al-Akbar the invention of certain original themes and, in a verse quoted by al-Djāḥiẓ (*Bayān*, ii, 215), the purity of his language appears to be somehow proverbial. He is moreover considered by Ibn Abī Isḥāḳ (*apud* Ibn Sallām, 44) the best poet of the Djāhiliyya, a view contested by Ibn Rashīḳ (*ʿUmda*, i, 80). However, the work attributed to him is not easily separated from that attributed to his nephew, especially since both led the same nomadic and warlike existence and benefited from the popularity of the romantic tales which were current in ʿIrāḳī society from the 2nd/8th century onward.

2. The Younger, AL-AṢGHAR, called Rabīʿa b. Sufyān (also known as ʿAmr b. Ḥarmala) was the nephew (and not the brother, as in the *Djamhara* of Ibn al-Kalbī, Tab. 155) of the foregoing and the uncle of Ṭarafa b. al-ʿAbd [*q.v.*]. His cognomen is not explained, and the automatic assumption is that it was given to him later as an honour of some sort, but it could indeed reinforce the hypothesis according to which it is simply a variant of the name *Markus. Like his uncle, he was a Bedouin warrior who lived a nomadic existence in the region of al-Ḥīra. L. Cheikho dates his death to *ca.* 570 A.D. Also reckoned one of the famous lovers, he is the hero of a romance composed in the 2nd/8th century and comprising the following episodes: the princess Fāṭima bint al-Mundhir b. al-Nuʿmān notices him and a slave of the latter, Hind bint ʿAdjlān, is charged with the task of bringing him to her in secret; she fulfils her mission, even carrying the young Bedouin on her back, and Fāṭima takes him as her lover. ʿAmr b. Djanāb pleads with Murakkish, who is his cousin and trusts him implicitly, for permission to take his place for one night with his paramour, but she discovers the deceit, expels the usurper and refuses to have anything more to do with the one whom she chose. Murakkish regrets having acceded to his cousins's request and finds himself dishonoured. This romance possibly draws its origin from a verse composition in *ṭawīl* metre and *-āʾimā* rhyme in which the poet expresses his regret at having lent himself to this substitution, but in any case, this is not an uncommon theme.

Among the half-dozen verse compositions attributed to him, a *ḥāʾiyya* forms part of the *Mudjamharāt*; in two of them, he sheds tears over the encampment abandoned by Hind bint ʿAdjlān (!); several comprise only very brief fragments, and there is one of them, of Bacchic theme, which is also attributed to ʿAmr b. Ḳamīʾa [*q.v.*].

MURCIA [see MURSIYA].

MURDĀDH [see TAʾRĪKH].

AL-**MURDĀR**, ABŪ MŪSĀ ʿĪSĀ B. ṢUBAYḤ, a Muʿtazilī theologian from Baghdād who died in 226/840-1. He was a pupil of Bishr b. al-Muʿtamir [*q.v.*], the founder of the Muʿtazilī school of Baghdād, and had discussions with fellow-Muʿtazilīs, among them Abu 'l-Hudhayl al-ʿAllāf [*q.v.*]. According to the *Fihrist*, he wrote 35 treatises, mostly on Muʿtazilī themes: on the oneness of God (*tawḥīd*), on justice, knowledge, the createdness of the Ḳurʾān and theodicy; they include criticisms of his fellow-Muʿtazilīs al-Nadjdjār, Thumāma b. Ashras, al-Shaḥḥām and al-Naẓẓām. A few books are dedicated to the refutation of the Djahmiyya or predestinarians of the Christians, especially Theodore Abū Ḳurra, of the Jews (*al-aḥbār*) and the Magians; single treatises deal with juridical questions and with the arts of dialectic theology (*kalām*). Three titles, the *Book on Repentance* (*al-tawba*), the *Book on the Middle* (*Right*) *Way* (*K. al-Iḳtiṣād*) and the *Book of the Guided* (*al-mustarshidīn*) apparently deal with mystical themes and confirm the classification of al-Murdār as "monk of the Muʿtazilīs" in later heresiographical literature since al-Khayyāṭ. His ascetism became exemplary for his pupils Djaʿfar b. Ḥarb [*q.v.*] and Djaʿfar b. Mubashshir [*q.v.*].

His theology can only partially be reconstructed from fragments and reports in the heresiographical literature. His Muʿtazilī doctrine of God's "oneness" (*tawḥīd*) forms the starting-point for his denial of perception of God "in whatever manner"—by explicitly excluding the *balkafa* by his contemporary Aḥmad b. Ḥanbal. This accentuation of God's transcendence, however, has not induced him to keep to Muʿammar b. ʿAbbād's [*q.v.*] doctrine of an endless chain of determinating causes (*maʿānī*) which are inserted between God and his creation; against Abu 'l-Hudhayl, he did not simply classify the cause of created things as "creative act" (*khalḳ* [*q.v.*]), as God's "will" or ordering "word" (cf. Ḳurʾān, XVI, 40/42). As cause of creation appears the final purpose of every "creative act", the created things (cf. Daiber, 230-2). Thus God remains remote from the created world in a much stricter sense than can be found in the doctrines of his fellow-Muʿtazilīs.

This remoteness of God may have been the background of al-Murdār in his refutation of the Djahmiyya and generally the determinists (*al-Mudjbira*); God has neither created the Ḳurʾān nor the acts of man: al-Murdār denied the "creation" (*khalḳ*) of man's acts by God; man has not "acquired" (*kasaba/iktasaba*) his acts. These polemics against the *khalḳ-kasb* theory were apparently directed against his fellow-Muʿtazilīs al-Nadjdjār and al-Shaḥḥām and against al-Naẓẓām's doctrine of "generation by God's acting", who provided things created by God with their casual "nature" (Daiber, 400). Al-Murdār kept to the *tawlīd/tawallud* theory as taught by his teacher Bishr b. al-Muʿtamir; according to it, things are caused by man's action which "generates" them. Consequently, al-Murdār could postulate two kinds of acting causes: (1) those induced by man's acting and (2) those inducing, "generating" causal effects. Against Bishr b. al-Muʿtamir, the "generated" effects do not include "colour, taste, smell and perception" (ʿAbd al-Ḳāhir al-Baghdādī, *al-Farḳ*, 166,18). Al-Murdār's doctrine of "generation" presupposes man's independence from any determination by God. This enables al-Murdār to give an answer on the problem of theodicy by offering a combination of the thesis of God's almightiness with that of man's sovereignty; "God wills man's sins in the sense that he gives him a free hand in them (*khallā*)" (al-Ashʿarī, 190, 9 f. = 512, 11 f.; cf. 228, 14); "God has the power over injustice and deceit; however, He shall not do that" (al-Ashʿarī, 555, 9 f.; cf. 201, 1 ff., and Daiber 261⁴). This power of God suggests that He is all-powerful and also that He wills men's sins. According to al-Murdār and his teacher Bishr b. al-Muʿtamir, God's endless power is not real power; it will not be realised (contrary to al-Naẓẓām and ʿAlī al-Uswārī, but in conformity with Abu 'l-Hudhayl, Djaʿfar b. Ḥarb al-Ashadjdj and al-Iskāfī, cf. al-Baghdādī, *al-Farḳ*, 198, 15-200, 17; idem, *al-Milal*, 136, 11-138,3; Daiber, 261 ff.). However, al-Murdār criticises Abu 'l-Hudhayl for his doctrine of the "vanishing of God's abilities" (*fanāʾ al-maḳdūrāt*: al-Baghdādī, *al-Farḳ*, 166,17; cf. Daiber 247) which in his eyes led to a restriction of God's almightiness.

The described separation between man's acting and God's power forms the starting-point of al-Murdār's doctrine of the Ḳurʾān: in conformity with the Muʿtazilī thesis of the createdness of the Ḳurʾān and as a result of his theory of *tawlīd/tawallud*, al-Murdār could maintain that "man is able to (produce) something like the Ḳurʾān as regards the purity of his language, his arrangement and eloquence" (al-Shahrastānī, i, 67, ult.; cf. al-Baghdādī, *al-Farḳ*, 165, 4 f.).

Little is known about al-Murdār's doctrine of *Imāma* [*q.v.*]. According to al-Nāshiʾ (cf. van Ess, 44 ff.; Watt, *Formative period*, 227 ff., German version, 231 ff.), al-Murdār, like his teacher Bishr b. al-Muʿtamir and generally the "school" of Baghdād, held the view that after the death of the Prophet Muḥammad, an Imām may be chosen who is inferior; al-Nāshiʾ speaks of *imāmat al-mafḍūl* in contrast to *imāmat al-fāḍil*. We do not know whether al-Murdār, like his teacher, classified ʿAlī as *afḍal*; for various reasons, it may be doubted. If we can believe the report of al-Khayyāṭ (74-8), al-Murdār, like his pupil Djaʿfar b. Mubashshir, followed the Muʿtazilī principle of neutrality (*wuḳūf*) and restraint from any condemnation of ʿUthmān. According to the heresiographers (al-Baghdādī, *al-Farḳ*, 165,9 f.; idem, *al-Milal*, 109,9; al-Shahrastānī, i, 68, 2 f.) "someone who is concerned with the reign of his time (or: who joins the ruler of his time) is an infidel"; "He can neither inherit (power) nor can he bequeath (it)". This utterance sounds like criticism of al-Maʾmūn's decision to designate ʿAlī al-Riḍā [*q.v.*] as heir to the caliphate; ʿAlī al-Riḍā was designated in 817 in the presence of Bishr b. al-Muʿtamir and Thumāma as witnesses (Watt, *Formative period*, 176 ff., German version, 180 f.).

(H. Daiber)

MURDJIʾA, "upholders of *irdjāʾ*", is the name of a politico-religious movement in early Islam and, in later times, refers to all those who identified faith (*īmān* [*q.v.*]) with belief, or confession of belief, to the exclusion of acts. The names Murdjiʾa and *irdjāʾ* are derived from Ḳurʾānic usage of the verb *ardjā* (in non-Ḳurʾānic usage *ardjaʾa*) in the meaning of "to defer judgment", especially in sūra IX, 106. The related meaning of "to give hope" (*radjāʾ*), although often imputed by opponents to the Murdjiʾa from an early date, was not implied.

The early politico-religious movement. It is now generally accepted that the movement arose in the aftermath of the Kūfan Shīʿī revolt under al-Mukhtār [*q.v.*] in favour of Muḥammad b. al-Ḥanafiyya [*q.v.*]. Ibn Saʿd and other sources describe Muḥammad b. al-Ḥanafiyya's son al-Ḥasan as the author of the doctrine of *irdjāʾ*, which he first defended in a circle of scholars debating the conflict between ʿUthmān, ʿAlī, Ṭalḥa and al-Zubayr. Al-Ḥasan argued that the judgment about the right and wrong in this conflict should be deferred to God, and Muslims should abstain from declaring either solidarity with them or dissociation from them. He then composed an open letter on his doctrine of *irdjāʾ* and had it read in public. Although some doubt has been cast on the role of al-Ḥasan and the authenticity of the *Kitāb al-Irdjāʾ* attributed to him (M. Cook), there are no cogent reasons to reject them. Other early sources name either Ḳays b. Abī Muslim al-Māṣir or Dharr b. ʿAbd Allāh, both Kūfans, as the first propagator of *irdjāʾ*. These reports, if not understood as a denial of al-Ḥasan's role, certainly reflect the importance of Kūfa as the main centre of the early Murdjiʾa. The movement had also adherents in Baṣra and in Mecca. From ʿIrāḳ it spread to Khurāsān at an early date.

The earliest Murdjiʾite doctrine, as reflected in particular in the *Kitāb al-Irdjāʾ* attributed to al-Ḥasan and in the Ibāḍī anti-Murdjiʾite polemics of the *Sīrat Sālim*, affirmed unconditional solidarity with Abū Bakr and ʿUmar and suspension of judgment with respect to ʿUthmān and ʿAlī. This was justified by the unanimous backing which the former two caliphs had enjoyed among contemporary Muslims, in contrast to the division of opinion under the latter two. Suspension of judgment was obligatory in regard to the past which could no longer be witnessed. It was not proper for the present, and the early Murdjiʾa upheld the principle of justice (*ʿadl*) against contemporary rulers. They held that Muslims would not lose their status of believers by any actions, but they were prepared to condemn wrongdoers as aberrant believers (*muʾminūn ḍullāl*) who might ultimately be punished or forgiven by God. The identification of faith with true belief to the exclusion of acts, which later became the essential trait of *irdjāʾ*, was clearly implied, though not central, in the earliest Murdjiʾite teaching.

Politically, the early Murdjiʾa were primarily concerned to restore the concord in the Muslim community by opposing radical religious groups. In Kūfa this pitted them primarily against the Sabaʾiyya, the radical Shīʿī movement which had recently emerged under al-Mukhtār and which repudiated the caliphate of Abū Bakr and ʿUmar. In the *Kitāb al-Irdjāʾ* of al-Ḥasan, the Sabaʾiyya are accused of taking a single family (*ahl bayt*) of Arabs as the Imām and of judging people's religion by their attitude to them, of claiming that most of the Ḳurʾān had been suppressed, of sowing discord and hoping for their reign through the return of the dead before the Resurrection. The Murdjiʾa evidently also distanced themselves from the

Khāridjite condemnation of both ʿUthmān and ʿAlī as infidels. In some early sources and older orientalist studies, they have been described both as loyalist supporters of the Umayyads and as political quietists. This is clearly mistaken. Their suspension of judgment concerning ʿAlī clashed with the official Umayyad condemnation of him, and their insistence on their right to criticise the injustice of the rulers quickly led to conflict. Many of them, including Ḳays al-Māṣir and Dharr b. ʿAbd Allāh, joined the broadly-based rebellion of Ibn al-Ashʿath [*q.v.*], fought in the battle of Dayr al-Djamādjim (82/701), and were subsequently persecuted by the Umayyad governor al-Ḥadjdjādj. The sharply anti-Umayyad attitude which the *Sīrat Sālim* ascribes to them probably reflects the situation at this time. The Murdjiʾa backed the caliphate of ʿUmar II and maintained friendly relations with him. Under Yazīd II, the Baṣran Murdjiʾite Abū Ruʾba actively supported the revolt of Yazīd b. al-Muhallab [see MUHALLABIDS]. In general, however, the Murdjiʾa held that Muslims must not draw the sword against fellow-Muslims except in self-defence.

Around the turn of the 1st/7th century, the Murdjiʾa took on a new political role, associating themselves with the struggle for equality of the new non-Arab converts to Islam, especially in eastern Khurāsān and Transoxania, and for their exemption as Muslims from the *djizya* which the Umayyad authorities continued to impose on them. Doctrinally, this effort was based on the older Murdjiʾite thesis that the status of faith depended on the mere confession of faith to the exclusion of all acts such as the performance of the ritual and legal obligations of Islam. The converts thus could not be denied their full status of Muslims by the government on the pretext that they still ignored, or failed to fulfill, some of their most basic duties under Islam.

In 100/718-19, a Murdjiʾite *mawlā*, Abu 'l-Ṣaydāʾ Ṣāliḥ b. Ṭarīf or Saʿīd al-Naḥwī, complained to ʿUmar II about the fact that some 20,000 clients in Khurāsān were serving in the army without stipend and a similar number of new converts were being forced to pay *djizya*. ʿUmar ordered the governor to lift the *djizya* from all those praying in the direction of the Kaʿba and, when the governor responded with a subterfuge, dismissed him. In 110/728-9 the governor of Khurāsān commissioned Abu 'l-Ṣaydāʾ with the propagation of Islam in Transoxania, pledging that the converts would be exempted from *djizya*. When the pledge was broken and the Soghdian converts put up resistance, Abu 'l-Ṣaydāʾ and several associates sided with them against the authorities. He and Thābit Ḳuṭna, a prominent fighter of the faith and propagator of *irdjāʾ*, were imprisoned. In 116/734 the great revolt of the radical Murdjiʾa under al-Ḥārith b. Suraydj [*q.v.*], who was closely associated with several companions of Abu 'l-Ṣaydāʾ, broke out. His religious spokesman in the later stages of the revolt, Djahm b. Ṣafwān [*q.v.*], is commonly associated with the extreme Murdjiʾite thesis that faith consists of mere knowledge in the heart. Although Ibn Suraydj's call for reform on the basis of the Ḳurʾān and the Sunna of the Prophet, for the overthrow of the Umayyad régime, went well beyond the common political programme of *irdjāʾ*, his movement sprang out of the Murdjiʾite struggle for the equality of the non-Arab converts to Islam.

Ibn Suraydj's armed rebellion against the caliphate and his alliance with its infidel enemies led to a break with the moderate Murdjiʾa who had backed the more peaceful struggle of Abu 'l-Ṣaydāʾ. The schism, however, was not complete, as is revealed by the fact that Abū Ḥanīfa, the leading representative of *irdjāʾ* in ʿIrāḳ at the time, personally facilitated Ibn Suraydj's pardon by the caliph Yazīd III in 126/744. Abū Ḥanīfa was fundamentally opposed to armed revolt, yet he unconditionally backed the claim of the converts to equal treatment by affirming that a Muslim convert in the territory of polytheism who confessed Islam without any knowledge of the Ḳurʾān or any of the religious obligations of Islam is a true believer (*muʾmin*).

Abū Ḥanīfa's strong engagement in the struggle for equality of the non-Arab converts to Islam paved the way for the spread of his teaching, including *irdjāʾ*, throughout eastern Iran, Transoxania and among the Turks adopting Islam. Initially Balkh became the eastern stronghold of his school. The town was nicknamed Murdjiʾābād on account of the devotion of its scholars and inhabitants to Abū Ḥanīfa and his doctrine. Murdjiʾite tenets were propagated in the east by Abū Ḥanīfa's disciples Abū Muṭīʿ al-Balkhī in his *al-Fiḳh al-absaṭ* containing Abū Ḥanīfa's answers to theological questions and Abū Muḳātil al-Samarḳandī in his *Kitāb al-ʿĀlim wa 'l-mutaʿallim*, an exposition of *irdjāʾ* attributed to the master. These works formed the basis of all later Ḥanafī Murdjiʾite theology, including Māturīdism. Murdjiʾite doctrine was also espoused in the so-called *al-Sawād al-aʿẓam*, the official creed under the Sāmānids. Through its ties with the school of Abū Ḥanīfa, Murdjiʾite doctrine on faith has maintained its place within Sunnism to the present, despite the vigorous opposition of traditionalist Sunnīs to it.

In his *Risāla ilā ʿUthmān al-Battī*, Abū Ḥanīfa rejected the name Murdjiʾa for himself, asserting that it had been given by the innovators (*ahl al-bidaʿ*) to those who were in fact the People of Justice (*ʿadl*) and the Sunna. The term *ʿadl* must be understood here as implying political justice and reform and not the Muʿtazilī doctrine of free will. Abū Ḥanīfa was, like the early Murdjiʾa in general, a strict predestinarian. The name Murdjiʾa, however, had become a *nomen odiosum* used only by opponents. As recognition of ʿAlī as the fourth rightly-guided caliph gradually became in ʿAbbāsid times universal Sunnī doctrine, the primary demand of the early Murdjiʾa, sc. suspension of judgment in the conflict between ʿUthmān and ʿAlī, lost its significance. The meaning of Murdjiʾa and *irdjāʾ* was henceforth focussed on the definition of faith as excluding acts, a theological doctrine strongly opposed by both Sunnī traditionalists and the Muʿtazila.

The theological Murdjiʾa. The new theological definition of *irdjāʾ* facilitated the heresiographers' classification as Murdjiʾa of various groups and theological schools who were not connected with the early movement. Thus they counted among the Murdjiʾa the Ḳadarī Ghaylāniyya [see GHAYLĀN B. MUSLIM and ḲADARIYYA] and Muʿtazilī theologians like Abu 'l-Ḥusayn al-Ṣāliḥī, Abū Shamir, Muḥammad b. Shabīb and sometimes Ibn al-Rāwandī, who deviated from Muʿtazilī school doctrine in the question of God's unconditional threat (*waʿīd*)) to the unrepentant sinner and the intermediate state of the grave sinner (*fāsiḳ*) between the faithful and the infidel (*kāfir*). Other groups classified as Murdjiʾa, like the Nadjdjāriyya [*q.v.*], the school of Bishr al-Marīsī [*q.v.*] and the Karrāmiyya [*q.v.*] arose out of the school of Abū Ḥanīfa.

The theological teaching of the Murdjiʾa, in the broad definition of the heresiographers, primarily involved the following questions: Faith (*īmān*) was

mostly defined as both knowledge (*ma'rifa*) and public affirmation (*iḳrār*) of God, of His prophets and their message in general. Knowledge of God was moreover often defined as including submission (*khuḍū'*) to Him and love (*maḥabba*) of Him. The position of the Djahmiyya that faith consisted only of knowledge in the heart to the exclusion of affirmation with the tongue, submission and love, was generally condemned as extremist. Some heresiographers accused the Karrāmiyya [*q.v.*] of the opposite extreme in teaching that faith consisted only of affirmation by the tongue to the exclusion of knowledge and belief (*taṣdīḳ*) in the heart, thus holding that the Hypocrites (*munāfiḳūn* [*q.v.*]) in the time of the Prophet had been true believers. As al-Shahrastānī correctly explained, this doctrine of the Karrāmiyya referred merely to the legal status in this world. The *munāfiḳ* verbally professing Islam while concealing unbelief was in their view truly a believer in this world but deserved eternal punishment in the hereafter. Their position thus agreed in substance with the doctrine of Abū Ḥanīfa.

Faith was generally described as an indivisible (*lā yataba''aḍ*) whole of beliefs and affirmation. Partial belief thus could not constitute it. On this basis, the earlier Murdji'a, including Abū Ḥanīfa, generally held that faith can neither decrease nor increase. Under the pressure of Ḳur'ānic passages expressly mentioning an increase of faith among Muslim believers, the later Murdji'a of the school of Abū Ḥanīfa, the Nadjdjāriyya, Māturīdiyya and others, mostly affirmed that faith can increase but not decrease. This increase was variously explained as an additional knowledge of details of the *sharī'a* beyond the indispensable minimum, as an increase of conviction (*yaḳīn*), or more broadly, of the subjective traits (*ṣifāt*) of the believers in relation to the unchangeable essence (*dhāt*) of faith.

The Murdji'a prohibited *istithnā'*, i.e. the addition of the formula "if God wills (*in shā' Allāh*, [*q.v.*])" to the affirmation "I am a believer (*anā mu'min*)" as implying doubt in one's own faith. They called their opponents in this question doubters (*shukkāk*), a nickname deeply resented by these last.

The Murdji'a generally did not distinguish between Islam and *īmān* and considered all Muslims as *mu'minūn* except for those excluded by Muslim consensus. Muslims falsely interpreting (*muta'awwilūn*) aspects of the message of Islam were mostly recognised as believers. Those committing forbidden acts were called sinful believers (*mu'minūn fussāḳ*). While the Murdji'a rejected the Khāridjite and Mu'tazilī doctrine of *wa'īd*, the unconditional punishment of the unrepentant sinner in the hereafter, they generally admitted that God might either punish or forgive Muslim offenders. While some held that this punishment of Muslims could be eternal, others affirmed that it would be temporal and that all would eventually enter paradise through the intercession (*shafā'a*) of Muḥammad. The latter view agrees with predominant Sunnī traditionalist doctrine. Only the eccentric theologian Muḳātil b. Sulaymān is described as a Murdji'ite who taught that true faith inevitably outweighs any offence before God and that He would not punish any Muslim affirming His unity. Any description of the Murdji'a as either laxists or as raising excessive hope for divine forgiveness, even though suggested by some early anti-Murdji'ite polemics, is basically mistaken.

The most fanatical opposition to Murdji'ite doctrine in early Sunnism came from traditionalist circles in Kūfa and Baṣra associated with al-A'mash, Sufyān al-Thawrī, Wakī' b. al-Djarrāḥ and Ayyūb al-Sakhtiyānī. These circles affirmed the absolute requirement of *istithnā'* and tried to exclude the Murdji'a from the Muslim community. This extremist rejection was also adopted and espoused by Aḥmad b. Ḥanbal, who in one of his creeds counted the Murdji'a together with the Ḳadariyya, the Rāfiḍa and the Djahmiyya, among the innovators whom the Prophet had excluded from Islam and for whom Muslims must not perform funeral prayers. Later non-Murdji'ite Sunnism was mostly more tolerant and often tended to minimise differences, especially with Ḥanafī Māturīdī *irdjā'*. A major factor in this change of attitude was the fact that a large section of the school of al-Ash'arī came to define *īmān* basically as belief (*taṣdīḳ*) in God, while assigning acts to a secondary rank, a doctrine not far removed from *irdjā'*.

(W. MADELUNG)

AL-**MURDJIBĪ**, ḤĀMID B. MUḤAMMAD (*ca.* 1837-1905), a personality in the history of East Africa and the Congo during the 19th century.

Ḥāmid b. Muḥammad al-Murdjibī, alias Tippu Tip, was born of Afro-Arab parentage in Zanzibar *ca.* 1837. His great-grandfather, Radjab b. Muḥammad b. Sa'īd al-Murdjibī from Muscat [see MASḲAṬ], had established himself on the coast opposite Zanzibar where he had married an Afro-Arab wife, the daughter of a member of the famous Nabhānī clan, Djuma' b. Muḥammad al-Nabhānī. Ḥāmid b. Muḥammad's grandfather, Djuma' b. Radjab al-Murdjibī, was among the earliest Arabs to lead caravans into the interior, where he supported Mirambo, ruler of Unyamwezi. His son Muḥammad b. Djuma' b. Radjab al-Murdjibī continued to expand his father's business interests in the interior, ensuring it by marrying one of the daughters of Fundikura, chief of the Nyamwezi. At his death in 1881 (cf. J. Becker, *La vie en Afrique*, Brussels 1887, ii, 45-8, 139) he owned large plantations at Ituru near Tabora. At the age of twenty, Ḥāmid was leading expeditions on behalf of his father to the area around Lake Tanganyika. During these expeditions he encountered David Livingstone (*The last journals of David Livingstone in Central Africa from 1865 to his death*, repr. London 1974, i, 222, 228, 230). (An Editor's footnote explains the name Tippu Tip as one which he gave himself after conquering Nsama. As he stood

over the spoil he gathered it closer together and said "Now I am Tippu Tip", that is, "the gatherer together of wealth" (230). An onomatopoeic interpretation is offered in the autobiography, section 30. For other interpretations, see F. Bontinck, *L'Autobiographie de Hamed ben Mohammed el-Murjebi Tippo Tip (ca. 1840-1905)*, 200, n. 95; V.L. Cameron, *Across Africa*, London 1885, 292 ff., 300; H.M. Stanley, *In Darkest Africa, or Quest, rescue, and retreat of Emin, Governor of Equatoria*, New York 1890, i, 53, 63 ff. *et passim*, and others.)

Cameron describes him as "...a good looking man, and the greatest dandy I had seen among the traders. And, notwithstanding his being perfectly black, he was a thorough Arab, for curiously enough the admixture of negro blood had not rendered him less of an Arab in his ideas and manners" (293). Stanley, who met him in 1876, described him as "a tall, blackbearded man ... His *tout-ensemble* was that of an Arab gentleman in very comfortable circumstances" (*Through the Dark Continent*, London 1878, ii, 95-6), and T.H. Parke noted an Arab "with bright intelligent black eyes, displaying manners of imperial dignity and courtesy" (*My personal experiences in Equatorial Africa*, London 1891, 18).

Ḥāmid acquired great popularity among the Arabs and the indigenous people of Manyema (Eastern Zaire). By the mid-1870s he possessed authority to appoint or confirm Arab and indigenous leaders in lands stretching between the Lomami and Lualaba rivers. By the end of the 1870s, the Congo region as far as Stanley Falls [see CONGO] was a vital component of the Zanzibar sphere of influence. He was always courteous and obliging to Europeans. Everyone who came in contact with him found a conciliatory spirit. Being more realistic than many of his co-religionists, he understood that in order to safeguard his interests in the interior it was necessary to adopt a comprehensive conduct of goodwill *vis-à-vis* the Europeans. This brought him into conflict with some of the other Arabs, in particular Saʿīd b. Abīb, who in 1884 had been sent by Sultan Barghash of Zanzibar to Manyema to secure his interests in the ivory trade, although the sultan had previously requested Ḥāmid to secure the area for him.

He was appointed governor of the Stanley Falls District of the Congo Free State in 1887 by King Leopold on the advice of Stanley. He returned to Zanzibar in 1891, where he remained until his death on 14 June 1905 a highly-respected person whose advice on matters pertaining to the interior was sought by all those with an interest in that part of the continent. He was succeeded as governor of Stanley Falls by his nephew Rashīd. His son Sefu was left in charge of his extensive holdings at Kasongo on the left side of the Congo River as far as Isangi and at the confluence of the Lomami and the Congo. Two years later, the conflict between the Belgians and the Arabs in Manyema destroyed all his interests there. At Ujiji, his associate Muḥammad b. Ghalfān, alias Rumaliza, was responsible for his interests.

(S. VON SICARD)

MURGHĀB, a river of Inner Asia, and like many rivers in that region, one without outlet to the sea or to any more extensive river system. It rises in the Kūh-i Ḥiṣār mountains in north-central Afghānistān, flows westwards and receives tributaries from the Band-i Turkistān and Paropamisus mountains in north-western Afghānistān. Some 250 miles from its source, it reaches the town of Bālā-Murghāb in the modern Bādghīs province of Afghānistan, and then enters the Turkmen SSR and flows for another 250 miles northwards towards the Ḳara Ḳum desert [*q.v.*] to New Marw (Russ. Mary), and then peters out. Its only major tributary is the Kushk, flowing northwards to join the Murghāb at Tashkopri.

In mediaeval Islamic times, the upper course of the Murghāb (usually called by the geographers "the river of Marw") flowed from the regions of Darmashān and Revshārān through Gharčistān [see GHARDJISTĀN], and then had on its lower course the towns of Marw al-Rūdh [*q.v.*] and Marw [see MARW AL-SHĀHIDJĀN]. At this period, a complex irrigation system utilised the Murghāb's waters at Marw; at the present time, there are dams to control irrigation waters at Tashkopri and Iolotan. On this lower course of the river, some 30 miles on the Russian side of the modern frontier, lies the Pandjdih oasis [*q.v.*], occupied by the advancing Russians in 1885 and the scene of a battle between the Russians and Afghāns and then the focus of diplomatic tension between Russia and Britain [see PANDJDIH].

(C.E. BOSWORTH)

MURĪD (A.), literally "he who seeks", in Ṣūfī mystical parlance, the novice or postulant or seeker after spiritual enlightenment by means of traversing (*sulūk*) the Ṣūfī path in obedience to a spiritual director (*murshid*, *pīr*, *shaykh* [*q.vv.*]). The equivalent Persian term is *shāgird*, literally "pupil, apprentice".

The stages of the novice's spiritual initiation are detailed in numerous Ṣūfī manuals and works touching on Ṣūfism, such as al-Ghazālī's *Iḥyāʾ*, and the term *murīd* figures in numerous titles of such works. One of the earliest manuals was the *Ādāb al-murīdīn* of Ḍiyāʾ al-Dīn Abu 'l-Nadjīb ʿAbd al-Ḳāhir b. ʿAbd Allāh al-Suhrawardī (d. 563/1168; see Brockelmann, I², 563, S I, 780), who was the uncle of the author of an even more famous manual, the *ʿAwārif al-maʿārif*, Shihāb al-Dīn Abū Ḥafṣ ʿUmar b. ʿAbd Allāh al-Suhrawardī (d. 632/1234 [*q.v.*]). The *murīd*'s embarkation on the path might be marked by various attestations of his *murshid*'s guidance and teaching, such as the giving of a rosary (*subḥa*), a handclasp (*muṣāfaḥa*) and the donning of the patched dervish cloak (*khirḳa murakkaʿa* [see KHIRḲA]). For further details, see ṬARĪḲA and TAṢAWWUF.

Murīds was also the name given to the adherents of the Naḳshbandī [see NAḲSHBANDIYYA] *shaykh* Shāmil, leader of Muslim resistance in Dāghistān [*q.v.*] in the Caucasus to Russian penetration there in the mid-19th century; see on his movement, SHĀMIL.

For the Murīds of West Africa, see MURĪDIYYA.

Bibliography: In addition to the older references in the *EI*[1] art., see J.S. Trimingham, *The Sufi orders in Islam*, Oxford 1971, index. (Ed.)

MURĪDIYYA, Murīdism, a West African religious brotherhood which was originally nothing more than a ramification of the Ḳādiriyya [*q.v.*]. Around the figure of Amadu Bamba, its founder, a distinct *ṭarīḳa* gradually came into being, quite specific to the milieu of Senegal, on the history of which it was to leave a lasting impression.

Aḥmad b. Muḥammad b. Ḥabīb Allāh, known by the name of Amadu Bamba, was born in the Wolof country, around 1850, into a religious family. His father, Momar Anta Sali, was a scholar associated with the Ḳādiriyya and a regular visitor to the courts of local princes. At the time of the extension of French colonisation, Amadu Bamba, convinced of the futility of any armed resistance, became known as the advocate of pacific policies. On the ruins of the Wolof state of Kajoor (the defeat of Dekkile, 1886), Amadu Bamba gathered together in the South of the country, in Baol, a party of followers from all strata of society, including former dignitaries and warriors, alleged "pagans", and former adversaries of the "marabouts". Thus he offered to the demoralised Wolof peoples an alternative structure for living, a refuge: such was the principal social function of the Murīd brotherhood in the history of contemporary Senegal.

His personal charisma worried the French authorities; suspected of subversion, Amadu Bamba was arrested in 1895. Thus began a long period of hardships which—supplemented by miraculous tales—definitively established his status as a saint in the popular imagination: exile to Gabon (1895-1902), followed by house-arrest in Mauritania until 1907 and then in the village of Cheyen, in the north of the country, until 1912. Having given numerous pledges of his peaceable intentions—in particular a *fatwā* of 1910 calling upon his supporters to obey the authorities—Amadu Bamba was permitted to return to Baol in 1912. The *shaykh* then lived quietly at Diourbel until his death, devoting himself to study and to pious observance. He died on 19 July 1927 and was buried immediately at Touba, in the heartland of Bambian mysticism. The brotherhood then had a membership of about a hundred thousand.

The social and political role of Amadu Bamba has tended to obscure his own vocation, which was that of a mystic. Around 1889, he had been initiated into the Ḳādiriyya by its Mauritanian master, Shaykh Sidiyya Bābā, who later conferred on him the title of *muḳaddam*. In 1891 or thereabouts, Amadu Bamba had a vision of the Prophet, in a place which Murīd tradition identifies with the site of Touba. It does not seem that he intended to create a distinct *ṭarīḳa*: he never used this term in speaking of his doctrine and of his followers. The phenomenon, which proceeded gradually, probably dates from the Mauritanian exile (1907) or, at the latest, from 1912.

The written work of Amadu Bamba consists essentially of *ḳaṣīdas* in Arabic. Forty-one printed collections, part of a broader corpus, have been edited and studied (F. Dumont, 1975). Examination of these texts shows that, in common with other brotherhoods of the period, Amadu Bamba, who adopted the title of *khādim Rasūl Allāh* (servant of the Messenger of God), stressed the need for imitation of the *sīra* of the Prophet. Although his teaching was impeccably orthodox, some of his loyal disciples felt at liberty to develop a form of religious exclusivism in which Amadu Bamba tended to occupy the place of the Prophet, and the monumental mosque of Touba replaced that of Mecca. But such a trend, by no means peculiar to Murīdism, was the product of popular piety and not the teaching of the founder.

The first and the second sons of the founder, Mamadu Mustafa Mbacke (1927-45) and Falilu Mbacke (1945-68) succeeded their father, bearing the title of "Caliph-general of the Murīds", but contests between candidates never ceased absolutely, since no rule or consensus had been established for succession in the leadership of the brotherhood. Such contests led to the elimination, with the active participation of the colonial power, of a brother of the founder, Shaykh Anta and, later, of the elder son of Mamadu Mustafa, Shaykh Mbacke.

The "Caliph-general" stands at the apex of a complex pyramidal structure consisting, in descending order, of "caliphs" (chieftains of religious lineages), local *shaykhs* and simple "talibés". Unconditional obedience of the disciple to his *shaykh*, who is himself the dispenser of the *baraka* of the founder, is the corner-stone of a brotherhood renowned for its discipline and the power of its hierarchy.

The major movement towards development of the new territories of the Baol, which began at the end of the 1920s, conferred on this hierarchy considerable land-owning, economic and financial power, earning its members the well-known nickname of "marabouts of the ground-nut". The Murīd system which thus came into being was centred upon local *shaykhs* and their *daras* (from the Arabic *dār*), kinds of units of production to which young men would come to place themselves at the service of the *shaykh*.

Under the distant control of the colonial authorities, who saw their interests served by this form of indirect administration, the Murīd zones constituted virtually autonomous enclaves. In these zones—and this was one of the advantages of the system from the point of view of the local people—the colonial influence was absent from daily life. Negotiations with the French power over matters such as taxation and labour were conducted directly, at the top of the hierarchy. Henceforward, both before and after independence, the Murīd brotherhood was to constitute a kind of state within a state, exerting considerable influence in the life of the country (for example supporting Leopold Senghor, although a Catholic, against Mamadou Dia in 1962). This political role, more that of a demanding client than of a challenger in power, has constituted to this day one of the dominant features of Senegalese politics.

The contemporary brotherhood — image and reality.

Although limited to the Senegalese sphere, where furthermore it stands in second place, after the Tidjāniyya, in terms of membership, the Murīd brotherhood has enjoyed a celebrity which far exceeds its real influence in Africa. The particular interest shown in it by the French administration and its economic role account for this renown. After the period of repression, colonial observers chose to see it as a model of an ethnicised Islam, contaminated by local practices and, as such, deprived of any subversive potential, a prototype of what was then called "Black Islam". It is Paul Marty (1913) who is to be credited with the invention of hyperbolic formulas, subsequently to enjoy wide circulation, such as "new religion born of Islam" and "Islamic vagabondage". In fact, Murīdism is seen today as a major component of Sunnī Islam in Senegal, and its fundamental orthodoxy is undisputed.

Since its inception, the brotherhood has above all

demonstrated its remarkable capacity for adaptation, in economic as well as in political areas: first as an instrument of passive resistance to colonisation, then as a structure of compromise and cooperation with it, it has presented itself since independence as the major national brotherhood. The crisis in ground-nut cultivation could have been fatal for it; it then transformed its structures and investments, setting up powerful commercial networks and extensive real estate holdings in the towns, also undertaking, in the south of the country (Sine-Saloum and Casamance), the development of new territories. It thus constitutes, in contemporary Senegal, as well as in its expatriate communities in Europe and America, a social reality with renewed dynamism and propagandist skills, which is not really threatened by the new concurrence of reformist and Islamist associations.

(J.L. Triaud)

MŪRISṬUS or Mūrṭus, a Greek author (?) of works on musical instruments that have only been preserved in Arabic. He appears to be identical with the Mīrisṭus mentioned by al-Djāḥiẓ (d. 255/868-9), and these works must therefore have been known in Arabic at least as early as the 3rd/9th century. According to the *Fihrist* (completed in 377/987-8). Mūrisṭus wrote two books on organ construction: 1. *Kitāb fī 'l-Ālāt al-muṣawwita al-musammāt bi 'l-urghanun al-būķī wa 'l-urghanun al-zamrī*; 2. *Kitāb Āla muṣawwita tusmaʿu ʿalā sittīn mīlan*. On the other hand, Ibn al-Ķifṭī (d. 646/1248) speaks of one book dealing with both instruments mentioned in the *Fihrist*, viz. a *Kitāb al-Ālat al-muṣawwita al-musammāt bi 'l-urghanun al-būķī wa 'l-urghanun al-zamrī yusmāʿu ʿalā sittīn mīlan*. Abu 'l-Fidāʾ (d. 1331) refers to a book that only deals with the second instrument mentioned in the *Fihrist*, viz. a *Kitāb fī 'l-Ālat al-musammāt bi 'l-urghanun wa-hiya āla tusmaʿu ʿalā sittīn mīlan*. The above description of the works of Mūrisṭus does not tally with the three actual works attributed to him that have come down to us. These, in the British Museum and Istanbul mss., carry the titles: 1. *Risāla li-Mūrisṭus fī ṣanʿat al-urghīn [urghanun] al-būķī* ("Treatise by Mūrisṭus on the construction of the flue-pipe organ [i.e. the *hydraulis*]"); 2. *Risāla... li-Mūrisṭus fī ṣanʿat al-urghīn [urghanun] al-zamrī* ("Treatise... by Mūrisṭus on the construction of the reed-pipe organ [i.e. the pneumatic organ]"); 3. *Risāla... li-Mūrisṭus fī ṣanʿat al-djuldjul* ("Treatise... by Mūrisṭus on the construction of the chime[s]"). Copies of these works preserved at Beirut have different titles as follows: 1. *ʿAmal al-ālat allatī ittakhadhahā Mūrisṭus yadhhabu ṣawtuhā sittīn mīlan* ("Construction of the instrument which Mūrisṭus invented, the sound of which travels sixty miles"); 2. *Ṣanʿat al-urghan[un] al-djāmiʿ li-djamīʿ al-aṣwāt* ("Construction of the comprehensive organ for all the sounds"); 3. *Ṣanʿat al-djuldjul* ("Construction of the chime[s]"). This last-named work mentions that the constructor of these chimes was a certain Sāʿāṭus or Sāṭus, who is mentioned in the *Fihrist* as the author of a *Kitāb al-Djuldjul al-ṣiyyāḥ* [or *ṣayyāḥ*] ("Book of the octave [or clamorous] chime[s]"). The Arabic texts of these three works were printed in *Mashriķ*, ix, under the editorship of L. Cheikho, but a new text is needed. Carra de Vaux gave a part-translation into French of one text, in the *Revue des études grecques*, xxi. E. Wiedemann and F. Hauser gave a German translation of all the Mūrisṭus treatises in the *Archiv für die Geschichte der Naturwissenschaften und der Technik*, viii, collating the Istanbul with the *Mashriķ* text. H.G. Farmer, using the British Library ms., which he collated with the *Mashriķ* and Istanbul texts, produced translations into English of the two works on the *hydraulis* and the pneumatic organ in his *The organ of the Ancients: from eastern sources*.

Who was this Mūrisṭus, Mūrṭus or Mīrisṭus? As the author of such works as the above, he is unknown in Greek literature. D.S. Margoliouth suggested that he is Ameristos (*ca.* 630-550 B.C.), the ancient Greek mathematician whom we know through Proclus or Euclid (i, 65, 11-15), and seeing that we have such forms of this name as Mamerinos, Mamerkus, Mamertios (or Marmetios) in Suidas (*sub* "Stesichoros"), Freidlein's edition of Proclus, and Heiberg's edition of Hero's *Definitions*, there would appear to be some ground for this suggestion. Ameristos might very well have been the author of the work on the pneumatic organ but not that on the *hydraulis*. Carra de Vaux argued that the works have been wrongly ascribed to Mūrisṭus owing to the fact that the Arabic scribes mistook the Arabic particle *li* to be the genitive instead of the dative, and that "by Mūrisṭus" should be read "to Mūrisṭus". He bases his argument on a passage in the Arabic version of Philo's *Pneumatics* (*Kitāb fī 'l-Ḥiyal al-rūḥāniyya*) where the dedicatee is a certain Risṭūn or Arisṭūn. In the Latin translations of this work this individual is called Marzotom, whilst in the same author's *Treatise on the Clepsydra*, attributed to Archimedes, this dedicatee is also mentioned. This led Carra de Vaux to argue that Mūrisṭus, Risṭūn, Arisṭūn, etc. are all scribal malformations of Philo's friend Ariston or Aristos. Yet whilst it is possible that Philo may have been the author of the treatise on the *hydraulis*, he could scarcely have penned the treatise that deals with such a primitive pneumatic organ as that described. On the other hand, as the present writer pointed out (*JRAS* [1926], 503), is not Mūrisṭus a scribal error for Ktēsibios? In the Pseudo-Aristotelian *Kitāb al-Siyāsa*, translated into Arabic by Yūḥannā b. al-Biṭrīķ (d. 815), the inventor of the *hydraulis* is given as Yāyasṭayūs, Thāsṭiyūs, Thāsīṭūs or Tāsīṭūs in the various mss., and the orthographical morphogony of Ķatāsibiyūs (as Ktēsibos would be written in Arabic) through the *Kitāb al-Siyāsa* forms to Mūrisṭus and Mūrisṭus is certainly an intriguing suggestion. Even if we accept this suggestion, it is clear that only the treatise on the *hydraulis* can be ascribed to Ktēsibios. That on the pneumatic organ deals with such a primitive instrument that it must belong to a writer who lived several centuries earlier.

(H.G. Farmer)

MŪRĪTĀNIYĀ, Mauritania (now officially named the Islamic Republic of Mauritania, *al-Djumhūriyya al-Islāmiyya al-Mūrītāniyya*), an extensive region of the Western Sahara and the western section of the Sahel. It is the homeland of the Arab-Berber people who speak the Ḥassāniyya dialect of the Arabic language. In times past, and to some degree today, these people were called "the Moors" [*q.v.*], although this term was also used for other North Africans and, hence, gave Mauritanians no special identity. The "Moors" of the former Spanish Sahara call themselves Ṣaḥrāwīs. In the Muslim East, however, they were for long regarded as an individual Muslim people and were named *Shanāḳiṭa*/*Shanādjita* after the small town of scholars in the Mauritanian Ādrār known as Shinḳīṭ/Shindjīt. Their country was also named Shinḳīṭ/Shindjīṭ. Geographers, jurists and men of religion were uncertain whether their territory formed a part of the Maghrib or the Sūdān. In Morocco, not only was it deemed to be part of the Djazīrat al-Maghrib but it was also specifically regarded as a part of the domain of the Sultans of Morocco during different periods of North African history.

The Moors, themselves, the bulk of whom are Mauritanian citizens, together with their negro fellow citizens, are today conscious and proud of their Mauritanian citizenship and nationalism. Nevertheless, the Moors amongst them also feel part of a wider community of Ḥassāniyya speakers, who refer to themselves as *bīḍān* (sing *bīḍānī*), "whites" to distinguish themselves from the negroes who live to the south of them. The "land of the *bīḍān*" is more extensive than the existing boundaries of the Islamic Republic of Mauritania. The *Turāb al-bīḍān* includes all of the former Spanish Sahara, likewise desert regions in Mali. In the north, it reaches the Wādī Darʿa in Morocco and up to a line which joins Tinfouchy (Tin-Fūshi) to Hassi Bou Bernous (Ḥāsī Bū Burnūs), these last two in Algeria. In the west, their territory is bounded by the Atlantic. In the east, the border follows the northern bank of the Senegal River and then the length of the frontier of Mali to the city of Timbuctoo. In the east, a line in the desert north of Timbuctoo as far as Djebel Timétrine (Djabal Timatrīn) to the west of the Ādrār-n-Īfōghās, then due north to Hassi Bou Bernous, effectively completes the boundaries of the *Turāb al-bīḍān*. The whole of the Azawād region of Mali is thus included. Ḥassāniyya is a *lingua franca* throughout. There are also speakers of this dialect in the Azawāgh region of the Niger Republic, although they are not included within the *Turāb al-bīḍān*. With the exception of the former Spanish Sahara (especially western Tīris, which was annexed for a time) the Islamic Republic of Mauritania has never claimed the whole of the *Turab al-bīḍān* as its "historical borders".

1. *Geography*.

Mauritania is bounded by Morocco and the former Spanish Sahara to the north; the Atlantic to the west; the Republic of Senegal to the south; and to the east, Algeria in the far north, where Tiris Zemmour adjoins the Département de Saoura, and further south, the Republic of Mali. It extends over 1,685,000 km² from the 5th to the 17th degree west longitude and from the 16th to the 26th degree north latitude.

Mauritania can be divided into two great natural regions:

(a) In the south, a Sahelian zone, which stretches from the Senegal River valley up to a line which passes approximately through the towns of Nouakchott, Moudjéria, Tamchakett, Aioun el Atrouss and Néma. This region is formed by fixed dunes (also called "dead dunes") and flat plains, and in the south-west is known as the *gebla*. Characteristic of it are the annual falls of rain which exceed 100 mm., though in recent years the prevailing drought conditions have changed this rainfall pattern. On the left bank of the Senegal river, the valley is covered with river deposits, which, in good years, are watered by the river flood and the rain which falls between July and October. This region is called Chemama (*Shamāma*) where the population is predominantly negro sedentaries. Principal markets and administrative centres on the river are Rosso, Boghé and Kaédi. Typical of the Sahelian zone are the numerous forests of gum trees and the herbaceous plants which have fixed the dunes and which furnish a good pasturage for herds of oxen and sheep.

(b) In the north, a Saharan zone, which is an arid expanse of "live dunes", pebbly plains and, further north still, mountainous plateaux. Rainfall is below an average of 100 mm. per year. Trees are small and grow sparsely, the grass is burnt by the sun and water points are rare. Mauritanian writers like to compare it with the Ḥidjāz. Herds consist of camels, sheep and goats. The coast is inhospitable and difficult of access due to sand banks. A single bay, Lévrier Bay, affords safe shelter, where Port Étienne (Anwādhībū) has been built. The central-north of Mauritania contains the plateaux of the Ādrār [*q.v.*] (500 m.) and Tagānit (300 m.), with steep cliffs, and the high land is elongated eastwards by the lesser plateaux of the Assaba and Affolé. There is more water here than in the rest of the Saharan zone, so that such streams as are drained by torrents and by the wādīs water large palm groves, some of them ancient. Here are sited several of the most ancient towns of Mauritania, the *ḳṣūr* of Chinguetti (Shinḳīṭ), Ouadan (Wādān), Atar (Aṭār), the former Almoravid capital at Azouggui (Azzugī), Tidjikdja (Tīdjidjka), and, further to the east in the lower-lying region of the Ẓhar Tichit (Tīshīt) and the Hodh (*al-Ḥawḍ*), "the basin", such historic caravan towns as Oualata (Walāta) and the ancient cities of Ghāna and Awdaghust.

Mauritania is a very arid country. The climate is extremely hot, though dry and healthy, except in the southern parts of the country near the river. Port Étienne and Nouakchott benefit from sea winds.

2. *Population*.

The population of Mauritania totals approximately 1,750,000 inhabitants; sedentarisation has increased by 45% since 1977, thereby doubling the population of the towns and exerting a strong demographic

pressure on the irrigable regions of the country.

Certain cantons in the Senegal valley have a density of population which now exceeds 35 inhabitants per km² and, in general, the inhabitants are relatively numerous and concentrated in the Sahelian zone to the north of the river where the negro sedentaries mostly live. The Saharan zone, which is predominantly Moor, becomes increasingly depopulated the further north one travels. In the Ādrār, the figure had been estimated at 50,000 inhabitants for 489,000 km². Some desert areas such as al-Mirayya, al-Djawf and Ārg Shāsh are all but destitute of humanity, even of the desert traveller.

In general, two races inhabit Mauritania. The Moors form a majority amounting to some four-fifths of the total. Some of them are descended from the ancient Ṣanhādja Berbers who, with some intermarriage with the negroes and non-negro peoples (the so-called Bāfūr) who preceded their arrival, were masters of the desert zone until the 9th/15th century, after which time small groups of the Banū Maʿḳil [*q.v.*] Arabs, who later called themselves Awlād Ḥassān, entered Mauritania. The Moors today are the descendants of earlier intermarriage between these two peoples. Other small groups, Zanāta Berber Ibāḍīs, Jews (who are also identified with the Bāfūr), and people of mixed race in the coastal regions, have long been absorbed. The negroes consist of Toucouleur (75,000), Sarakollé or Soninké (30,000), Wolof (10,000-15,000), Bambara, Peul and certain other groups. These figures are only approximate totals. Intermarriage between Moors and negroes has taken place, but to a lesser extent than that between Tuareg and negroes in the Sahelian lands to the east of Mauritania.

3. *History*.

(a) Prehistory. Mauritania has produced a rich harvest of artefacts and archaeological sites which show that the Western Sahara was not only inhabited since Palaeolithic times but that towards the close of the Neolithic age, between 2,000 and 1,000 BC, the Ẓhar of Tīshīt was very densly populated. It contained at least 250 villages, superbly planned and built, the inhabitants of which were negroid in race, and were perhaps the ancestors of the *ḥrāṭīn* [see ḤARṬĀNĪ] of today. Many of them lived in the upland areas of the Ādrār, Tagānit and the Ḥawḍ. These people were skilled in the making of weapons used in the hunt, in the fabrication of pottery, and far later, around Akjoujt, during the Chalcolithic period, the exploitation of copper, which still exists in abundant deposits. The climate was at that time more humid and wet. Rock engravings in the Sahara depict Sahelian fauna, antelopes, gazelles and warthogs, and scenes of herding, tending and riding cattle. These prehistoric cultures were also found in fishing communities on the Atlantic coast. They bear resemblances to prehistoric cultures in the Maghrib and also to others to the south of the Sahara. There is nothing to suggest that Mauritania was in any way influenced by those leading cultures which attained a high peak in the early civilisation of the Mediterranean region.

Mauritania has suffered from, and its very existence is increasingly threatened by, desiccation. Archaeological discoveries suggest that it was one such period of brutal desiccation that resulted in a southward migration of these pre-historic peoples. In their place came Berber-speaking invaders who made use of copper and iron. They hunted ostriches and gazelles, they rode on horseback and in chariots, and it was they who introduced the camel a little before the Christian era into this part of the Sahara. Related to the Berber Getules of classical times, they have left traces of their nomadic settlement in scattered tombs, in tumuli and in rock engravings of all kinds, depicting them mounted upon horses and armed with spears and shields. It is during this period that the first Libyco-Berber inscriptions were engraved [see LĪBIYĀ. 2]. Every suitable stone face, cave wall or eroded *inselberg*, for example Glayb al-Nimish in the Ḥawḍ, manifests this southward displacement of the sedentary population. This historical process, enforced by climatic change, and made unavoidable by desiccation, is the key to an understanding of the history of Mauritania from earliest times. All the folk tales in Mauritania tell of this happening, the subordination of the negroes of the Bāfūr and of ancient Judaised peoples, by the Berber and the Arabs. However, this very long period has been telescoped in such tales. The kingdom of Ghāna was located in south-eastern Mauritania, Awkār. The world renown which it attained may, in fact, be the apogee of that African culture which had its origins in the Neolithic herders of Tīshīt millennia before.

(b) Ghāna, Takrūr, and the pre-Almoravid Berber Ṣanhādja kingdoms. In the early mediaeval period, Mauritania contained (i) one major pagan kingdom, Ghāna [*q.v.*]; (ii) part of an increasingly Islamised society amongst the Toucouleur (al-Takrūr), along both banks of the Senegal river; and (iii) a series of Ṣanhādja Berber kingships, the most important of which was centred in the town of Awdaghust [see AWDAGHOST], later to fall under the influence of Ghāna. The kingdom of Ghāna was centred in Awkār (the eastern Ḥawḍ), and especially near to Kūmbī Ṣāliḥ [see KUNBI ṢĀLIḤ], to the south of Tinbadgha (Timbédra). Ghāna remained a rich, gold exporting pagan kingdom throughout this period, although it contained a Muslim quarter and was much frequented by Muslim merchants. The most comprehensive account of life in Ghāna is to be found in al-Bakrī, who described it at the beginning of the Almoravid movement (see N. Levtzion and J.H.C. Hopkins, *Corpus of early sources for West African history*, London 1981, 79 ff., and Levtzion, *Ancient Ghana and Mali*, London 1973, 183-7). The first Muslim king of Takrūr (most of whose realms lay south of Mauritania, although the kingdom had footholds in and launched raids deep into Mauritania) was Wār-Dyabe (or War-Ndyay) who died in 432/1040-1 (cf. al-Bakrī, in Levtzion and Hopkins, *op. cit.*, 77). Islam had entered the river region prior to this date. The saint Abū Muḥammad b. ʿAbd Allāh al-Takrūrī lived during the reign of the Fāṭimid caliph al-ʿAzīz b. al-Muʿizz (365-86/975-96), and died and was buried in Cairo (see al-Maḳrīzī, cited in Levtzion and Hopkins, *op. cit.*, 352, 428). His father ʿAbd Allāh was buried in the Fāṭimid town of al-Bahnasā in Middle Egypt, which was later, if not then, linked by desert routes, known to the *Murābiṭūn*, to the Western Sahara region. His *ḳubba* is a central building in its *djabbāna*.

This chronology is important since it gives credence to the tradition that the Ṣanhādja *Mulaththamūn* [see LITHĀM], in the north and east of Mauritania, were converted to Islam at an early date. They were called the "confederation" of the "muffled Anbiya" and they comprised the Gudāla/Djudāla [see GUDĀLA], who were principally centred in the Río de Oro and in south-west Mauritania, the Massūfa who lived between the Drā (Darʿa) in southern Morocco, the Ḥawḍ and the salt mine at Taghāzā, and the Lamtūna [*q.v.*], who occupied the Kākudam desert from the Ādrār northwards towards the Sāḳiya al-Ḥamrāʾ.

They seem to have also ruled parts of Tagānit and, for a time, the town of Awdaghust (Ghaṣt). Lewicki (*Les origines de l'Islam dans les tribus berbères du Sahara occidental*, in *SI*, xxxii [1970], 203-14) argues that this islamisation and part-Arabisation was principally the achievement of the Arab governor ʿUbayd Allāh b. al-Ḥabḥāb and his son Ismāʿīl, between 735-6 and 739-40 A.D. Strategic wells were dug, Arab-organised expeditions launched as far south as the Senegal river and regular commerce with Awdaghust and Ghāna was established, especially from Ṣufrī Sidjilmāsa [*q.v.*]. The Berber or Arab-Berber kingdoms of Tīlūtān (Tayalūthān, d. 222/837) and his successors of Tin Yarūtān (Ḳays b. Yarwātiḳ, etc., *ca.* 350/961) of Awdaghust, and, even more so, of Tārashni (d. *ca.* 414/1023), father-in-law of Yaḥyā b. Ibrāhīm, one of the alleged founders of the Almoravid movement, were all nominally Muslim, the last of them militantly so. The Arab accounts describe these chiefs as enjoying greater pomp than they were probably ever entitled to, adjacent to regal Ghāna. Nevertheless, they probably were the most noteworthy and richest of the chiefs of early mediaeval Mauritania (see Norris, *Saharan myth and saga*, Oxford 1968, 56-66).

(c) The Almoravid movement and post-Almoravid Mauritania. The movement of the "men of the *ribāṭ*", the Almoravids [see AL-MURĀBIṬŪN], became established in the Río de Oro and in parts of Mauritania by missionaries who were adepts of the saint Wadjādj b. Zalw, who had previously established a *ribāṭ* at Aglū in the Sūs of Morocco, not far from present-day Tīznīt and Ifnī (see F. Meier, *Almoraviden und Marabute*, in *WI*, xxi, 80-163). However, the raids of the Saharans who joined the movement were primarily launched from within against Morocco itself, so that Mauritania never became its major centre. Only Azuggī, the capital of the southern wing, under Abū Bakr b. ʿUmar and his successors, was considered worthy of mention by such geographers as al-Idrīsī and Ibn Saʿīd al-Maghribī. The Almoravids are important in Mauritanian history for the following reasons: (i) the legacy left by ʿAbd Allāh b. Yāsīn, founder of the Mauritanian *daʿwa*, and his followers, the deep-rootedness of Mālikī *fiḳh* and the tradition of al-Ḳayrawān, Ibn Yāsīn's *fatāwā* which laid down rules for the administration of Ṣanhadja society and the first establishment of urban communities, Aratnannā (see Norris, *New evidence on the life of ʿAbdullāh. b. Yāsīn and the origins of the Almoravid movement*, in *Jnal. of African History*, xii [1971], 255-68), and M. Brett, *Islam and trade in the Bilād al-Sūdān, tenth-eleventh century AD*, in *ibid.*, xxiv [1983], 437-440). (ii) The authority and tribal cohesion which was established by the Lamtūna [*q.v.*], which became the leading tribe in the Western Sahara for several centuries. Under Yaḥyā b. ʿUmar, Abū Bakr b. ʿUmar and, above all, Yūsuf b. Tāshufīn, Mauritanians, for once in their history, produced leaders of international renown who changed world history. The most important of these for the future of Mauritania was Abū Bakr b. ʿUmar, who until 480/1087 and after his split with Yūsuf, ruled Mauritania from Azuggī. He reputedly died in Tagānit fighting negro infidels. Latest research suggests that accounts of the conquest of Ghāna by him, or by one of the Almoravid leaders, in 1076, cannot be substantiated from the evidence (see H.J. Fisher, *Early Arabic sources and the Almoravid conquest of Ghana*, in *JAH*, xxiii [1982], 549-60). (iii) The appointment of the *Imām* Abū Bakr Muḥammad b. al-Ḥasan al-Murādī al-Ḥadramī as the *ḳāḍī* of Azzugī. He is mentioned by al-Tādīlī, Ibn Bashkuwāl and al-Maḳḳarī (see P.F. de Moraes Farias, *The Almoravids: some questions concerning the character of the movement during its period of closest contact with the Western Sudan*, in *BIFAN*, xxix, ser. B, nos. 3-4 [1967], 851-7). According to al-Maḳḳarī (*Azhār al-riyāḍ fī akhbār ʿIyāḍ*, Cairo 1942, iii, 161), "This al-Murādī was the first to introduce the dogma and the doctrines of the faith to the furthest Maghrib. He resided at Aghmāt. When Abū Bakr betook himself to the Sahara, he brought him with him and he appointed him to administer the *sharīʿa* law. He died in Arkār (Azzugī) in the desert of the Maghrib in 489/1096". Some Mauritanians claim descent from him. (iv) Other Almoravid legacies amongst the Moors include the *geste* of Abū Bakr b. ʿĀmir (ʿUmar); the décor and the domestic architecture of Walāta and Tīshīt; commerce with the Maghrib and al-Andalus; and a lineal claim to the ancient Yemenites among the Mauritanian Zwāya.

(d) The entry of the Banū Maʿḳil [*q.v.*] into the Western Sahara and their domination of Mauritania. The decline of the Almoravids in the Saharan regions which they had ruled and the geographical extent of the rule of the kingdom of Mali beyond Walāta is undocumented. The *ḳaṣīda* of Shaykh Muḥammad Mbārak al-Lamtūnī states that the tribe became divided into four groups which appear to denote its existing principal divisions, the Īd ag Bāmbara, the Īdačfagha, the Īd Abyān and the Itmaddak, who include the Ahl Imbāy and the Ahl Āritnīn (who may have once been associated with the settlement of Ibn Yāsīn called Aratnannā). All these clans claim descent from Abū Bakr b. ʿUmar and Yūsuf b. Tāshufīn. Elements of the Lamtūna resided at Tadamakkat in Mali and are reported as far east as Agadez in Niger. In the north of Mauritania, the Lamtūna formed part of the Ibdūkalen confederation of Ṣanhādja tribes at the time of the first Maʿḳil incursions, whilst the Massūfa were desert guides (*takshīfs*). They controlled the salt mine at Taghāza and were a literate element in Walāta and elsewhere in the Ādrār. Other groups entered Mauritania from Berber districts of southern Morocco. These included the ancestors of the Tashumsha Zwāya, for example, Muḥunḍ Amghar (see Norris, *Znāga Islam during the seventeenth and eighteenth centuries*, in *BSOAS*, xxxii [1969], 496-8). These Berber groups seem to have absorbed the last remnants of the Almoravids, including the "maverick" Gudāla. Other tribes, for example the Kunta [*q.v.*], who were later to dominate large areas of the Algerian and Malian Sahara, seem to have arisen out of the Tādjākant in the 9th/15th century (see T. Whitcomb, *New evidence on the origins of the Kunta. I and II*, in *BSOAS*, xxxvii [1975], 103-23, 404-17). The Arab Maʿḳil, of Yemenite stock, left Egypt and reached southern Morocco in the first half of the 7th/13th century. They entered the service of the Marīnīds [*q.v.*], who used them as tax collectors in the areas they claimed beyond the Atlas. Driven by drought, by punitive measures taken against them on account of insubordination, by the prospect of plunder from Saharan commerce, or as mercenaries, they moved south into the Sahara. They called themselves Awlād (Dhawī) Ḥassān, which is the name still employed by all branches which descend from them. In the 9th/15th century, the Awlād Nāṣir reduced to vassalage (allegedly aided by the Kunta) the Ṣanhādja of Zammūr and Idjdjil (Djabal Ḥassān); other Ḥassānis of the area of Wādān and Tagānit in the 10th/16th century, and the *gebla* in the Ḥawḍ were conquered in the 11th/17th century. The prominent tribes which took part in this movement, which drew to it numbers of originally Berber client tribes,

included the Awlād Rizg, the Awlād Mubārak, the Brākna, the Trārza and the Awlād Yaḥya b. ʿUthmān. Other tribes of importance which occupied areas beyond Mauritania's existing frontiers in the Western Sahara included the Awlād Dalīm, the Barābīsh and the Raḥāmina (see Norris, *The Arab conquest of the Western Sahara*, London 1986, 17-35; J.C. Baroja, *Estudios Saharianos*, Madrid 1953, 425-38; idem, *El Grupo de Cabilas "Hasania" des Sahara occidental*, in *Estudios Magrebíes, Instituto de Estudios Africanos*, Madrid 1957, 111-21; Johannes Leo, *A Geographical Historie of Africa*, London 1600, repr. Amsterdam and New York 1969, 16-17).

(e) The War of Shurbubba and the amīrates of the Awlad Ḥassān. Until recently, it was believed that the so-called "War of Shurbubba" (named after a Zanāga war cry, though the form *wakʿat Ashrābība* is found in the text of the Walāta chronicle), which allegedly lasted from 1055/1645 to 1085/1675, was the important watershed in Mauritanian history. The class divisions which became a marked feature throughout Western Saharan society, it is said, came into being following the triumph of the Arab "Ḥassān" in this war. Since such classes characterise Saharan and Sahelian societies far beyond Mauritania's borders, it is clear that such was not the case. One reason for the notoriety of this "war", or rather, series of tribal engagements, was the fact that two of Mauritania's leading historians of the 12th/18th century, Muḥammad al-Yadālī and his pupil Wālid b. Khālunā, had familial reasons for giving a particular emphasis to the war, and it featured prominently in their literary works. Outside the *gebla* its importance was given far less prominence.

A number of factors led to this war taking place in the *gebla*: (i) the expansion of the negroes, more especially the Peul to the north of the Senegal river, and the impact which this had on the Tashumsha and Ḥassānī commercial and trading posts on the banks of the river; (ii) the growing tribal rivalries between the Awlād Ḥassān and Zenāga-speaking groups; (iii) the ill-treatment of the latter by the former; (iv) and Islamic revival amongst Zenāga speakers and in the commercial towns of the Ādrār. This revival was encouraged through a greater number of religious texts, of all kinds, in Arabic, entering Mauritania from Morocco or from the Middle East. Outside stimulus and European hostility combined and brought about an Islamic movement which reflected Ṣūfism and the growth of the *ṭuruḳ*, Mahdism and a "neo-Almoravid" patriotism, exemplified by the cult of the Imām al-Ḥaḍramī amongst the Shamāsīd in the Ādrār. This led to rifts locally between tribal groups and individual scholars (cf. Abdel Wedoud Ould Cheikh and B. Saison, *Vie(s) et mort(s) de Al-Imam Al-Hadrami. Autour de la prosperité saharienne du mouvement almoravide (11e-17e siècles)*, in *Nouvelles études mauritaniennes*, i/2 [1984], 55-104); and (v) especially in the *gebla*, the charismatic personality of Awbik b. Ačfagha Abḥanḍ b. Yaʿḳūb b. Awbik al-Daymānī al-Lamtūnī, known as Nāṣir al-Dīn.

During his brief life, and the lives of his successors, a *djihād* was launched in order to subdue the nominally Muslim rulers of the negro states to the north and to the south of the Senegal river and to curb the power and to impose Muslim observances on the Awlād Ḥassān. After the defeat and death of Nāṣir al-Dīn at Tin-Yifḍāḍ in 1674, this movement lost its momentum and the *gebla* was reduced to vassalage to the Awlād Ḥassān. Only in Tagānit did the Ṣanhadja Īdaw ʿĪsh, led by their chief, Muḥammad Shayn, attain a total independence from the continuing encroachments of the Awlad Ḥassān towards the end of the 18th century. In the 19th century, the Īdaw ʿĪsh expanded into the Ādrār and they maintained their independence until the French occupation. They claimed a direct descent from the Almoravids; nevertheless, they forsook the Zenāga language and they assumed all the princely titles, the Arab status and the courtly bardic traditions of the Ḥassānī *amīrs*. The "War of Shurbubba" was only an important episode amongst many in the continuous process of Arabisation of Mauritanian society. As part of this social and linguistic process, the social and political situation of the tribes became stabilised. Small chiefly states were formed. The dynasty of the Awlād Aḥmad b. Dāmān ruled amongst the Trārza with noteworthy kings, such as ʿAlī Shanẓūra (1703-27). Aided militarily by the Moroccan sultan Mawlāy Ismāʿīl, he delivered his tribe from the rule of the Brākna. Muḥammad al-Ḥabīb (1827-60) shouldered the burden of Moorish resistance when it was first threatened by permanent European penetration and domination. Amongst the Brākna, the *amīrs* of the Awlād ʿAbd Allāh played a predominant role during the age following the "War of Shurbubba" and their authority, at times, extended from Tagānit to the Atlantic. Their power declined in the 19th century, excluding the noteworthy reign of Ahmaddu I (1818-41). They were reduced into submission and to a subordinate status by the French. In the Ādrār, the Awlād Yaḥyā b. ʿUthmān produced several famous princes: the strong-minded Aḥmad b. Muḥammad (1871-91), who sought to revive trans-Saharan commerce, and Aḥmad b. Sīdī Aḥmad (1891-9). Nevertheless, the greatest Mauritanian princely ruler of the 19th century was Bakkār b. Swayd Aḥmad of the Īdaw ʿĪsh of Tagānit, who was a descendant of Muḥammad Shayn. In view of the threats to the authority of these Ḥassānī princes within their tribal society and from without, whether from negro rulers to the south or from European encroachment along the coast or from the river, or from the officialdom of the sultans of Morocco, it was their achievement to have preserved a Mauritanian identity during two to three centuries and to have been the protectors and patrons of Mauritania's most famous scholars and men of letters.

(f) European rivalries on the coast of Mauritania. During the first half of the 15th century, the Portuguese explored the Mauritanian coast and made their first landings there. In 1434 Gil Eanes reached Cape Bojador; and between 1442 and 1445, at the instigation of Henry the Navigator, expeditions commanded by Gonzalvez and Lanzarote discovered Naar, Tīdra and Arguin. The town of Wādān in the Ādrār was a focus of attention on account of its trading connections with Tīshīt and with the Sūdān interior. It received special mention in the descriptions of Ca da Mosto (1455-7) and, yet more so, in the writings of Valentim Fernandes in the 16th century, who for the fist time reports the salt mine at Idjdjil in the north of the Ādrār. In 1448 the Portuguese established a permanent settlement on Arguin island. This lay in a key geographical situation for their African activities (cf. Th. Monod, *L'Ile d'Arguin (Mauritanie), essai historique*, Instituto de Investigacaô Cientifica Tropical, Centro de Estudos do Cartografia Antiga, Lisbon 1983). It was from Arguin that the Portuguese endeavoured to extend their power into the interior, and especially into the Ādrār, with the final aim of commanding, or cutting, the major caravan routes between the Sūdān and Morocco. Their factories were principally, though not exclusively, sited on the coast,

and the trade which took place between them and the merchants of the Awlād Ḥassān entailed the exchange of woven cotton garments, silver, coral and cornelian for slaves, gold, oryx skins, gum arabic, civet and ostrich eggs.

The Portuguese enjoyed the profit of the Arguin trade for two centuries; then it passed to the Spaniards. From Arguin, European activity spread to Portendick in the *gebla* (Marsā D̲j̲arīda). In 1626 the French established themselves at the mouth of the Senegal River. In 1638 the Dutch, as a prize in their war with Spain, took Arguin. Twenty-seven years later they lost it to the English. For a century Arguin and Portendick remained a bone of contention between the three powers. In the meantime, France consolidated her commercial position at the mouth of the Senegal river. The Treaty of Versailles (3 September 1783) recognised French sovereignty over the Atlantic coast between the river and Cap Blanc, which was regarded by the Sultan of Morocco as the southernmost limit of his domain at that time, (cf. the letter sent by Muḥammad I b. ʿAbd Allāh to the Governor of Gibraltar in 1178/1765, in J.F.P. Hopkins, *Letters from Barbary 1576-1774*, Oxford 1982, 87, 88).

For a time during the 19th century, the British challenged French control and influence. However, in 1817, three years after treaty of Paris, France took formal possession of the territory, by which time both Arguin and Portendick had lost their importance, although the British retained the right to trade in the latter until 1857. European rivalries enabled the princes of the Trārza to prolong their independence.

(g) The French occupation. In 1854, with the appointment of Louis Faidherbe as governor of Senegal and the establishment at St. Louis of a "Bureau des affaires extérieures", a more vigorous French policy was pursued towards the *gebla*. After four years, Walo, on the Senegalese bank of the river, was subdued and the Moors who were established there were driven out. The *amīrs* of the Trārza and the Brākna were made to sign a treaty which acknowledged that France had a right of suzerainty over the peoples near the river and that the right to trade in freedom was guaranteed. However, as C.C. Stewart has remarked, "The actual implementation of French policy in Mauritania in the early nineteenth century was misdirected, owing to the assumption that Brakna and Trarza constituted amirates, each led by a powerful and absolute ruler. In fact, ... the so-called 'amirs' had neither authority nor power inherent to their positions. Their influence, rather, depended upon their personality, patronage, social position, and the composition of the *jamāʿa* within the dominant Hassani tribe or tribes in the region" (*Islam and social order in Mauritania*, Oxford 1973, 93). For nearly fifty years these treaties were respected, and this allowed the French to make commercial agreements as far as Tagānit and the Ādrār. By the end of the century, however, the situation in the *gebla* had gravely deteriorated, to the point that commerce was seriously threatened on both banks of the Senegal river. A conquest of Mauritania, despite the formidable logistic problems this entailed, became imperative. Attempts to use the influence of the marabouts was only partially successful. M. Coppolani, Commissaire-Général of the government since 1902, backed by military force, achieved the occupation of the Trārza in 1903, the Brākna in 1904 and Tagānit in 1905. The pacification of the north of Mauritania was to follow in 1913, though only after Coppolani himself had been assassinated in 1905 and S̲h̲ayk̲h̲ Māʾ al-ʿAynayn [*q.v.*] had been defeated.

(h) The Islamic Republic of Mauritania. The French protectorate over the territory of the Moors of French West Africa was created in 1903. On 17 October 1904 it was transformed by decree into a civil territory, placed under control of a Commissaire of the Gouvernement-Général de A.O.F. The decree of 4 December 1920 transformed Mauritania (Mūrītāniyā) into a French colony. Up to the eve of the World War II, Mauritania was regarded as a territory principally administered through "chefs de grande tente". The prime task of the French administrators was to ensure that government at the level of these chiefs was carried out peacefully and at minimum cost.

Following reforms which were introduced immediately after the war, Mauritania was made a part of the French Republic in the same manner and with the same status as the seven other territories which formed part of the Fédération de l'Afrique Occidentale Française. Ten years later, the Islamic Republic of Mauritania was proclaimed on 28 November 1958. It became a member state of the Communauté, endowed with internal independence. There was to be a progressive transfer of the services which then existed at Saint-Louis, Senegal, to the new capital, Nouakchott (Anwāks̲h̲ūṭ). A National Assembly was elected on 17 February 1959 through direct and secret single voting universal suffrage. On 23 June 1959 the National Assembly unanimously agreed to the investiture of Moktar Ould Daddah (al-Muk̲h̲tār wuld Dāddāh) as Prime Minister. After the signature in Paris on 19 October 1960 of the agreement dealing with the transfer of jurisdictions, the independence of Mauritania was proclaimed on 28 November 1960. On 20 May 1961 the National Assembly adopted a new constitution of the presidential type. In June of the following year, agreements signed in Paris defined the future of French and Mauritanian co-operation. On 20 August 1961, Moktar Ould Daddah, sole National Union candidate, was elected by universal suffrage to be the first President of the Islamic Republic of Mauritania.

It was the aim of Moktar Ould Daddah to see his country as the bridge between the Arab world and Afrique Noire or as a *trait d'union* between the Mag̲h̲rib and the *bilād al-Sūdān*. Ironically, it was the partition of another *trait d'union*, the former Spanish Sahara, which was to lead to the fall of his Presidency and, together with the disastrous consequences of the Sahelian droughts, to question the viability of the original goals of the state and even the viability of the state itself.

On 7 August 1966, Moktar Ould Daddah was elected President of the Republic for a further five years. In September 1969 he attended the Islamic Summit in Rabat and met King Ḥasan II. This marked a change in Moroccan policy towards his country, the independence of which had never been acknowledged. The resumption of diplomatic relations took place in June 1970. The following year, Moktar Ould Daddah was re-elected as President of the Republic. On 4 December 1973 Mauritania became a member of the Arab League. Between 1975 and 1978, the occupation by Mauritania of the southern part of the partitioned Spanish Sahara (Río de Oro) had as its consequence a skilfully planned and effected series of raids and frightening attacks by the Polisario Front, which sought self-determination for the territories formerly Spanish. These disrupted Mauritania's export of iron ore and even reached the outskirts of the capital. On 10th July 1978 a military *coup d'état* took place. The government of President Moktar Ould Daddah was replaced by a Comité

Militaire de Redressement National directed by Colonel Ould Salek. Mauritania subsequently withdrew from the Western Sahara conflict.

4. *Ethnography and social groups.*

The people of Mauritania are divided into Arab-Berber *Bīḍān* or Moors, and the *Sūdān*, the negro minorities. The country takes a pride in being a *hamzat al-waṣl*, a cultural bridge link so to speak between the Maghrib countries and the peoples of former Takrūr and, far later, French West Africa, fulfilling a role in the west of Africa comparable to that of the Sūdān Republic in the east. But Mauritania differs markedly from the Sūdān in one important respect, namely that its entire population, of whatever ethnic origins, is Muslim by religion. There is no religious minority group. The people were once subdivided into clear-out cut social classes, some of which may have originated for ethnic or historical reasons. In this respect of class, the Moors have similarities to the Tuareg and, to some extent, to the Tubu. In broadest terms the Moors may be categorised into three descending social tiers: "warrior", "cleric"; and "tributary" or "plebeian". By tradition, it was believed that this has come about due to one traumatic historical event, the "War of Shurbubba". However, this is to oversimplify and to telescope a complex and evolving historical process. Nor, as Captain A.C. De Laiglesia has shown, does the above accepted and simplified class structure furnish an accurate or meaningful description of a people whose social overlap is within the unit of the tribe (*ḳabīla*), its subdivisions (*fakhdh*) and protected clients (*tiyyāb*, *laḥma*, etc.).

Supreme amongst the "free" (*aḥrār*) are the *ʿArab*. This term denotes the aristocracy of the Awlād Ḥassān, and it also indicates the chiefs of the Īdaw ʿĪsh, who are allegedly descended from the Lamtūna "veiled Arabs", ʿArab al-Niḳāb. This claim to Arabhood by the Īdaw ʿĪsh is acknowledged in the opening verses of the *rasm* of the *īggīw* poet Saddūm, composed in the mid-18th century:

"The prince of the Arabs of Tinzilāṭ, Gīr, Irāṭ, Inyizrig and Tashmāṭ, and of great renown.

Chief of the Anbāṭ (sc. Ṣanhādja), of the chiefs of the Īdaw ʿĪsh, the leader in whom inherited, deeply rooted, noble chieftainship lies!"

In another sense, all who claim to be Ḥassān are ʿArab, likewise those who speak Ḥassāniyya. It is this wider sense of "Arab" that had inspired the Mauritanian poet Muḥammad Fāl wuld ʿAynīna to compose his often-cited couplet:

"We are the Banū Ḥasan (Ḥassān), the purity and eloquence of our tongue proves that we are descended from the ancient Arabs (*al-ʿArab al-ʿarbāʾ*).

If no self-evident signs clearly prove that we are Arabs, then in our tongue there is a clear and unequivocal proof that we are so".

In former times, the camp (*maḥṣar*) of an ʿArab *amīr* became a veritable village with fifty tents or more, and indeed assumed the status or reached the size of a town if the camp was a *ḥalla* of a chief. Within it were located tents and quarters for scholars, artisans, minstrels, *ḥrāṭīn* and slaves (see P. Dubié, *La vie matérielle des Maures*, in Méms. IFAN, no. 33 [Dakar 1953], 110-252).

The Ḥassān, Banū/Awlād Ḥassān, were principally warriors, fighting men who were subject to an ʿArab *amīr*. However, their title lacks the latter's status and honour; furthermore the name had, at times, a certain pejorative sense. Occasionally it denoted "irreligious", "unruly" and "collectors of protection money (*ghafara* or *ḥurma*)" from the conquered. Marriage is always within the clan, and usually within the joint family. All Ḥassān claim descent from Ḥassān b. Maʿḳil in the line of descent given on p. 617.

The second major division in Mauritanian society is that of the maraboutic class, the Zwāya, whose eponyms are frequently Berber and occasionally merge with Moroccan or with Almoravid tribes or saints. They enjoyed, and enjoy, a wide reputation for knowledge of Classical Arabic, Islamic studies, the ability to perform religious duties and to teach, more especially the Ḳurʾān. In some localities the Zwāya established peripatetic "universities" (*maḥāḍir*) where the students whom they taught (*talāmīdh*) continued their herding and their studies (see *al-Wasīṭ*, 478, 517-21). The term Zwāya comes from Arabic *zawāyā*, pl. of *zāwiya*, indicating a fixed centre for Ṣūfī teaching and practice. In Mauritania, it may ultimately hark back to the notion of the Almoravid *ribāṭ*, although devoid of the militant sense of the latter. The Zwāya are divided into two broad categories, *Zwāyat al-Shams* (Zwāya "of the sun") were independent religious groups of a high religious reputation, e.g. the Lamtūna of the *gebla*. They were self-reliant and were sufficiently powerful to need no protection and had no need to pay protection money. It is out of such groups, e.g. the Awlād Abiyāri, that modern Mauritania has been supplied with leading political figures, outstanding scholars, men of law and teachers, not only from the nomadic groups but also from the Zwāya who were settled in the country's caravan towns and whose non-academic activities were principally commercial. *Zwāyat al-Ẓill* (Zwāya "of the shade"), indicated tribes which were in need of defence and protection, although they were not of the status of tributaries (the Awlād Daymān were in this category, needing Ḥassānī protection, prior to the movement of Nāṣir al-Dīn and the "War of Shurbubba"). Linked to the Zwāya were the *Tiyyāb*, warrior Ḥassānīs, who had "repented" and, having foresaken their arms, had taken to study and to a religious life as their divine calling. Considered separate from the bulk of the Zwāya, although fulfilling much of their role in religion, in study and in trade, are those tribes which claimed to be *Shorfa* (*Shurafāʾ*). They allege descent from the family of the Prophet. Some of them founded the Adrār towns and also controlled Tīshīt and Walāta. Others are from the family of Shaykh Māʾ al-ʿAynayn or are related by marriage to the *Shurafāʾ* of Morocco.

The tributaries, the Znāga or Laḥma, were tribute-paying members of tribes that were either Ḥassān or Zwāya. None of them could claim any blood kinship to the eponym of the tribe. Their activities involved herding and menial tasks in the camp, and occasionally, agriculture. They were and are predominantly *bīḍān*, and their name indicates that their ancestors were of Ṣanhādja Berber stock. There are a number of categories of Znāga, some of lower status than others. A few, like the Idayshilli, once carried weapons and paid no tribute. Others, like the Tayzigga of the Ādrār, cultivated dates and may once have been makers of the Lamṭī shields. Znāga have intermarried with negroes.

The coloured tributaries, the *ḥrāṭīn*, are, legally, manumitted slaves and their descendants. They are sedentary and live in separate tribal groups and unprotected by their former master. They are usually landless negroid folk who work as share croppers in the plantations of landlords who furnish the land and the water and who receive half of the crop which is produced. The status of the *ḥrāṭīn*, though "free", is so low that little distinction could be made between them and those legally slaves, *ʿabīd*, some of whom

(Based on the lineage *<u>Sh</u>a<u>dj</u>ara ʿāmma li-<u>dh</u>urriyyat Ḥassān*, in *Kitāb al-Takmila* by Muḥammad Fāl b. Bābah al-ʿAlawī (1265-1349/1849-1930), edited by Professor Aḥmad wuld al-Ḥasan, published by al-Muʾassasa al-Waṭaniyya li 'l-Tar<u>dj</u>ama wa 'l-Taḥḳīḳ wa 'l-Dirāsāt, Bayt al-Ḥikma, Tunis 1986).

were better treated amongst the Zwāya than the former by the Awlād Ḥassān, who paid little heed to the *<u>sh</u>arʿ*. Slaves were the frequent cause for raiding in past centuries, together with other riches of the African peoples to the south of Mauritania, especially Walo, Futa and Gajaga. Le Brasseur indicated in 1778 that in Gajaga, Moorish commerce with the Sarakollé and the Malinké supplied more than 3,000 slaves per year. The Moors exchanged horses for slaves at the rate of ten to eighteen slaves per horse.

The lack of any meaningful distinction between *ḥarṭānī* and *ʿabd* in terms of personal freedom or in social status, has led to the establishment of a social "liberation" movement throughout Mauritania amongst the *ḥrāṭīn* called *al-ḥurr*. They have been aided by anti-slavery movements from abroad, pressure from within the Mauritania government itself and made more necessary by the destitute state of the drought refugees amongst all classes of Mauritania society. All of these have brought attention to bear on the injustices and inequalities, almost beyond belief, which traditional Moorish society was prepared to tolerate, even though such abuses very frequently flouted or disregarded Muslim law, and, indeed, were not infrequently attacked by enlightened members of the Zwāya.

There were other despised and degraded clases in Mauritanian society. However, their well-being was frequently ensured by their own efforts or by their indispensable services in society. Among such were the artisans, the *mʿallamīn* or *ṣunnāʿ*, who as makers of weapons, tools and implements received fixed payments for the objects they made or repaired, in the form of meat, live animals or cereals. The smiths were held to be descended from Jews (especially from King David) or negroes.

The author of *al-Wasīṭ* (359-60) makes the observation that the tribe of the Liḥrākāt, noted for their skill in Ḥassāniyya verse, claimed to be descended from smiths (*mʿallamīn*) and were regarded as men of low status on account of this. He points out that such a view was peculiar to the people in the Western Sahara. He found it bizarre, illogical and reprehensible. His suggestion that it arose in Zwāya circles due to a lampoon by <u>Dj</u>arīr on al-Farazdaḳ [*q.vv.*] wherein the former accused the latter of being the grandson of a blacksmith, cannot be accepted as likely in view of the low status of smiths in almost all Saharan societies.

The Nmādi hunters in the Ḥawḍ, aided by their dogs, still survive in very small numbers. More numerous are the fisherfolk, the *Imwragen*, on the Atlantic coast, extending northwards into the Río de Oro, a primitive people who seem to be descendants of very ancient races of the Western Saharan littoral. Very different are the often decried, yet individually admired and feared, *Iggāwen*, the bards, men and women, whose verse and song, praise and satire, were an indispensible adjunct to the country life of the princes of the Awlād Ḥassān. They play an important part in the Mauritanian media and many of them have become extremely wealthy and influential. Hated in particular by the puritanical Zwāya, in far earlier days, like their negro counterparts to the south, they once sustained in battle the ardour of the warriors with their heroic and rigorous airs played on the *tīdīnīt* guitar in the warlike mode of *fāghū*.

5. *Economic activity.*

Traditional Mauritanian economic activity over past centuries, and up to quite recent times, was centred around trans-Saharan caravan commerce in salt, slaves, and dates, in gum-arabic trafficking, pastoral nomadism, cattle-breeding and the sale of skins. Millet and rice cultivation, in plots and small farms, is especially characteristic of the region along the northern bank of the Senegal river, whereas date tree cultivation and date harvesting takes place in the large Ādrār and Tagānit palm groves. There is some fishing along the Atlantic seaboard. Hunting of gazelles, guinea fowl and bustards also once played a part in desert life. In the days of the Almoravids and in the remoter areas of the desert after them, the famous Lamṭī (oryx) shields were fabricated [see LAMṬ]. They were dearly prized and fetched a high price in al-Andalus and the Middle East.

Endemic drought conditions, tribal and social upheavals and the impact of the modern age have now totally altered most of these past activities. Prospecting for copper, for oil, iron ore, gypsum, phosphates and uranium, and the exploration of fishing resources, are now the essential economic activities of Mauritania, in as far as foreign revenue is concerned, the mining sector alone accounting for 50% of all receipts and 80% of return payments. Even so, the dominance of this sector has been subject to variation, reflecting world demand. The copper mines at Akjoujt, which were closed in May 1978, following the collapse in the world price of copper, have now been reopened and are currently exploited by SAMIN (La Société Arabe des Mines de l'Inchiri).

The iron-ore deposits at Zouerate still face an uncertain future. Started by MIFERMA in 1952, they were seen as the great white hope for the new state. Times and circumstances changed. The war in the Western Sahara directly threatened the railway line, 670 km. in length, which brought the ore to the port of Nwadhibou (Anwādhībū). Today, the dwindling deposits are now worked by SNIM, a mixed society in which a number of states are associated, including Mauritania, France, the Islamic Bank of Iraq, Morocco and Kuwait. The deposits are all but exhausted. The new project of "Guelbs El Rhein" envisages the development of new deposits, some 25 km. from Zouerate, and this will take place when the Zouerate mines close at the end of the 1980s. To finance the new exploration and exploitation, the 500 million dollars needed have been supplied by Arab states (Saudi Arabia, Kuwait, Abu Dhabi and Iraq), and by Japan, France and the World Bank. When fully exploited, the "Guelbs project" will enable the costly railway line to stay open and it will help to maintain jobs for 6000 employees.

Fishing is the growing major economic activity, second only to mining and seeming to overtake it. Mauritania has some 800 km. of coastline and has one of the richest fishing grounds in the world, with an annual catch of 600,000 tons, one of a great variety of fish. But the operation of making the industry successful and competitive has yet to be achieved, more especially as these coasts have been exposed to pirate fishing vessels. Mixed national and foreign commercial societies have been formed to exploit the catch, but the full potential of fishing for Mauritania's economy is still a matter for the future until such time as the country has a patrol boat fleet with the capability to control, ameliorate and supervise its sea catch. Very few Mauritanians are engaged in fishing activities.

The Sahel droughts have hit Mauritania badly. Rainless years have destroyed its livestock and ruined much of its agriculture. The survival of the state depends on the success of the regional plan, which involves Mali and Senegal as well, to develop and to make the maximum of the Senegal river. On the 10th December, 1979, the then President of Mauritania, Colonel Ḥaydallāh, visited Saint-Louis, at the mouth of the river, and there he laid the first stone of the Diama barrage, in the presence of Presidents Senghor of Senegal and Moussa Traore of Mali. Work has now begun and already some irrigated land has been cultivated and crops planted. When completed, there will be two barrages. The Diama barrage will hold back 500 million cubic metres of water; the second barrage will be at Manartali, 1000 km. further up the river. The plan envisages two large river ports, Saint-Louis and Kayes, ten landing stages and around 500,000 hectares of irrigated land, although only a part of this will be in Mauritania itself.

This grand design is to prevent saline water returning upstream during the drop in water level in the dry season and, in general, to maintain the water level at one that is most desirable and most productive for cultivation. The regulation and the control of the water will take place at Manartali. It will allow Mauritania to double the amount of her rice cultivation and to allow the creation of artificial lakes in the Aftout es Sahel, extending to the south of Nouakchott. The development of fish is also being considered. The aim of the Mauritanian government is that, by 1988, it will cover 40% of its cereal demand, 20% of vegetables, 50% of its milk products and its meat. The ports of Nouakchott and Nwadhibou in 1983 handled 398,000 and 385,000 tons of goods respectively. Exports have doubled in the last five years and now attain the figure of 294 million dollars.

The Mauritanian government plans to attract foreign capital on a co-operative basis. At present the OMVS (L'Organisation de mise en valeur du fleuve Sénégal) is subject to foreign financing. Here again, the Arab states are playing a major role, Saudi Arabia with 150 million dollars, Kuwait with 70 million, Iraq with 40 million, and, from Europe, the European Development Fund with 100 million dollars, the German Federal Republic with 100 million, France with 70 million, Italy with 35 million and the United States, the Agency of which for international development, USAID, brings 85 million dollars. Its purpose is economic research. Other projects which are planned include the promotion of light industries, and iron and steel complex at Nwadhibou, a dairy at Nouakchott and a textile factory at Rosso.

The life of pure nomadism is already at an end. Sedentarisation is the future faced by most Mauritanians, although the influx into the capital has to be curbed. In towns of 5,000 inhabitants or more, seden-

tarisation in 1960 was only 3.5% of the population; in 1977 it rose to 23%; and today has surpassed 40%. Nouakchott in 1960 had 5,000 inhabitants. By 1985 this figure had risen to 500,000 and it is estimated that the total will reach a million by the end of the century.

Agricultural and cattle breeding in the south will almost certainly mean further desertification in the north, apart from the mining regions and the few oases in Ādrār, though these are now in decline. A better future also demands more and improved communications. Mauritania has 7,534 km. of road, two international airports and ten secondary airports. Better water resources are needed. Only 15% of the Mauritanian population has proper drinking water and 30% of the villages have no water at all. Above all, it is the education of the younger generation in Mauritania which will decide its future. Here there is great promise and there is a strong national sentiment. In 1960 some 5% of the population received a school education. By 1984 this figure had risen to 30.6%. The teaching of Arabic to everyone has also made rapid strides.

6. *Languages.*

The predominant language, both written and spoken, in Mauritania is Arabic, both Classical Arabic and Colloquial. The latter is the very individual Bedouin dialect of Ḥassāniyya. It is also the *lingua franca* of the Moors of south-western Morocco, the former Spanish Sahara, much of northern Mali and parts of the Niger Republic. Ḥassāniyya has created its own verse and prosody which is influenced by Classical Arabic, both in form and theme. Such verse was composed as early as the 15th century, since reference is made to this activity by the voyager Marmol and by others. The poetry is of two kinds: (a) popular *zad̲j̲al* and *g̲h̲azal*, consisting of a *gāf* of two rhyming verses (*a,b,a,b*) and *ṭalʿa*, three verses which rhyme in the pattern *c,c,c,b*. A *ṭalʿa* must be crowned, or tailed, by a *gāf*. (b) *leg̲h̲na*, sung poetry, which is accompanied by the minstrels and the popular ballad singers (the *Iggāwen*) on the Mauritania guitar (*tīdīnīt*) played by the men, or, by women, on a kind of harp (*ardīn*). *Leg̲h̲na* is often performed as part of a recital of the art of *azawān*, that is, an ensemble of airs and improvised moods selected for such verses. The *séances* are well attended, and this art form blends negro music and Senegalese and Malian names of modes with other airs classified by colours in Ḥassāniyya and with poetic metres derived from those of Classical Arabic, *k̲h̲afīf*, *wāfir* and *basīṭ*, though the prevailing metre is a truncated form of *basīṭ*. Ḥassāniyya prosody is based on the aggregate number of open and closed syllables in each verse. In earlier times, even down to the late 18th century, a number of these sung poems were martial odes and panegyrics, occasionally of epic dimensions, known as *kerza*, *rasm*, *t̲h̲aydina*, *Bū ʿUmrān*, etc. One of the most famous of *rasms* was composed by the singer Saddūm wuld Nd̲j̲artu in praise of *amīr* Aḥmad, the uncle of Wuld Bakkār wuld Aʿmar (d. 1761; cf. Norris, *Shinqīṭī folk literature and song*, 79-81), Ḥassāniyya is commonly used in local broadcasting and, in the past, was occasionally used in verse and prose by the lettered. S̲h̲ayk̲h̲ Muḥammad al-Māmī was especially famous for his written compositions in Ḥassāniyya.

Zenaga Berber (*aznāg*) is the second language of less than 7,000 speakers in the *gebla*, especially in the Trārza to the south of Nouakchott. It is close to Moroccan Chleuh and it incorporates the pre-Ḥassānī language of the Almoravid Sahara (where the Libyco-Berber alphabet, akin to Tuareg *tifinag̲h̲*, was engraved on rocks and epitaphs, for example in the cemeteries at Tinīgī) and extensive borrowings from Ḥassāniyya. Many toponyms and names of plants are Zenaga. A little verse has survived.

Azayr or Azer, once spoken in Wādān and Tīs̲h̲īt, was a form of Soninké, and was a language of Old G̲h̲āna. It is now all but extinct (see Ch. Monteil, *La langue Azer*, Publications du Comité d'Études historiques et scientifiques de l'Afrique Occidentale Française, série B, no. 5, 1939, 213-41). The negro population along the Senegal river speak Pulaar Sarakollé and Wolof; some opposition to Arabic is still expressed by these people. (For an overall assessment, see C. Cheikh, *Aperçus sur la situation socio-linguistique en Mauritanie*, in *Introduction à la Mauritanie*, Paris 1979, 167-73.)

7. *Religious and Intellectual Life.*

(a) The *ṭuruḳ* in Mauritanian Islam.

The Islamisation of Mauritania is sometimes held to be a direct result of the Almoravid movement. However, there is little evidence to suggest that either an early penetration of Ibāḍism from Sid̲j̲ilmāsa or from within Awdag̲h̲ust, or even the Almoravid movement itself, other than its strict Mālikism (see Stewart, *Islam and social order in Mauritania*, 67-77, and Mourad Teffaḥi, *Traité de successions musulmanes d'après le rite malékite*, Études Mauritaniennes, no. 1, Centre IFAN, St.-Louis 1948) has left any particularly permanent and deep mark on the Mauritanians as a whole. The Awlād Ḥassān arrived in the country long after the Almoravid movement, nor is it certain that those Zwāya tribes, such as the Lamtūna and the Tas̲h̲ums̲h̲a, who, without a doubt, have some blood relationship and spiritual kinship with the historical Almoravids, maintained their sacred and perennial tradition intact from the 5th/11th century, a tradition and a way of life which had not been radically changed during subsequent centuries. The Tuareg *Ineslemen* are remarkably similar to the Zwāya, yet (if one excludes the Kel Ntassar) they do not seem to have been involved, as a class, in the Almoravid movement of history; furthermore, some adoption of Islamic practice before the Almoravids was recorded amongst the Western Ṣanhād̲j̲a nomads. The Zwāya "Almoravid tradition" is in part a creation of the colonial age, an attempt by the French to woo the Zwāya lettered classes and to promote them at the expense of the troublesome Awlād Ḥassān of the *bilād al-sība*, conveniently ignoring the fact that the warrior Īdaw ʿĪs̲h̲ of Tagānit openly and unashamedly alleged their blood descent from the fighting aristocracy of Abū Bakr b. ʿUmar al-Lamtūnī and his progeny yet were otherwise barely distinguishable from the other amīrates of the Banū Maʿḳil which had eventually occupied every corner of the *Turāb al-bīḍān*.

The Ṣūfī orders were the principal channel whereby Islam affected and moulded every aspect of Mauritanian life: in the open desert, in the caravan towns, in the villages, of the river bank and within the new towns which were built by the French and, after independence, by the Mauritanians themselves. Only the lowest social classes, where such survive, the Nmādi hunters, the *Imwragen* fisher folk and the ex-slave and servile population, lived, or live, a life where animistic beliefs were dominant or survive in their beliefs, though this does not mean that numerous elements of animism and magic have not markedly influenced the practice of Saharan Islam itself in the past, even amongst the Zwāya, whose charms, medical prescriptions, magic formulae and prophylactics once had many of the characteristics of the Muslim "mixers" amongst all the populations which have lived as neighbours of the negro peoples along

the historical borders between *dār al-Islām* and *dār al-ḥarb* in Africa.

Every Moor was, in theory, affiliated to one or other *ṭarīḳa*, although many of them were barely aware of all the obligations which this imposed upon them. The principal *ṭuruḳ* were and are the following:

1. The Ḳādiriyya (from which are derived the Bakkā'iyya, Fāḍiliyya/Faḍliyya, ʿAyniyya, etc.). It owes its establishment to the Kunta and the leadership of Shaykh Sīdiyya al-Kabīr and his successors.

2. The Tidjāniyya, which entered Mauritania at a later date and to which belong the Īdaw Aʿli and Aghlāl of Tagānit region and the great majority of the negroes of the river region, especially in Fuuta Tooro.

3. The Ḥamawiyya, a recent off-shoot of the Tidjāniyya which spread vigorously amongst the Aghlāl of the Ḥawḍ and amongst certain fractions of the Awlād Billa and the negro population in the region of Nioro (now in Mali).

Two *ṭuruḳ*, regarded by many as heretical to both the Ḳādiriyya and the Shādhiliyya, are:

4. The Ghuẓfiyya which survive principally in Tagānit. The majority come from the Īdaybusāt; they are headed by the descendants of Shaykh al-Ghazwānī and are centred at Bū-Mdeid. The *Ikhwān* are divided between the *Ahl al-Msīd* (Muslim of the mosque) and the *Khshīm* (the provisioners).

5. The Ahl al-Gazra. This is a recent and very little-known sect linked to the first, which has the bulk of its followers in the Ādrār and in Tagānit and its main centre at Awdjaft (Oujeft).

(b) The history of the ṭuruḳ.

The Mauritanian historian Mukhtār b. Ḥāmidun has summarised the history of the rise of these orders in an article which was published in Nouakchott in the newspaper *Mūrītāniyā* in 1380/1960-1: "As for Ṣūfism amongst them, it is upon the path of al-Djunayd, and as for their [doctrinal] prop and their syllabus within it, that is found in the books of al-Ghazālī and al-Suhrawardī and al-Shaʿrānī (d. 1565) and al-Zarrūḳ (1442-93; Brockelmann, II, 253) and their likes. Such books are read but are not studied in the *madrasas*. There the *tilmīdh* only studies the Ṣūfism of Ibn ʿĀshir (d. 1631), from his poem called *Guide to the essentials of religious knowledge* (*al-Murshid al-muʿīn*). They also have locally-written compositions on Ṣūfism which are in common use and of wide benefit and which circulate amongst the common people. These include the works of Shaykh Muḥammad al-Yadālī, Shaykh Sīdī al-Mukhtār al-Kuntī and his son Shaykh Sayyid Muḥammad, Shaykh Sīdiyya al-Kabīr, Aḥmad b. Muḥammad al-Ḥādjdjī, Shaykh Ibn Muttāliyya al-Tandaghī, Muḥammad Mawlūd b. Aḥmad Fāl al-Yaʿḳūbī and Shaykh Māʾ al-ʿAynayn al-Ḳalḳamī, and works by others.

"The bulk of Mauritanians understand Ṣūfism as al-Suyūṭī defined it; the laying bare of the heart before God and the fear of Him, by performing the divine precepts and in forsaking those things which are interdicted. Next, it entails the doing of that which is recommended, forsaking that which is reprehensible, and fulfillment of the purposes of the faith as far as one is able, with endeavour to subdue the self (*djihād al-nafs*), making use of prayers recited in private worship (*awrād*). This is either by taking them from the content of books, such as the prayers (*adhkār*) of Muḥyī 'l-Dīn Yaḥyā al-Nawawī (631-76/1233-77) and *al-Ḥiṣn al-ḥaṣīn* by al-Djazarī (d. 739/1338) or, else, by initiation of one of the *shaykhs* of the *ṭuruḳ*.

"The Shādhiliyya was the most widespread *ṭarīḳa* in the country until Shaykh Sīdī al-Mukhtār al-Kuntī appeared and many famous men came into prominence by his help, amongst them Shaykh Sīdiyya al-Kabīr and Shaykh al-Ḳāḍī Īdyadjbī and others, and the Ḳādiriyya *ṭarīḳa* spread. Then the Tidjāniyya appeared at the beginning of the 19th century, and many people were drawn to it. The Ḳādiriyya formed two branches, the first being the Kuntiyya ascribed to Shaykh Sīdī al-Mukhtar al-Kuntī. The history of it, and its chain of initiation (*silsila*), has been commentated upon and exposed by his son Shaykh Sīdī Muḥammad. The second, the Fāḍiliyya, was ascribed to Shaykh Muḥammad Fāḍil al-Ḳalḳamī. The history of it has been commented upon and exposed by his son Shaykh Māʾ al-ʿAynayn and by others.

"As for the Tidjāniyya, it formed two branches, the Ḥāfiẓiyya, ascribed to Shaykh Muḥammad al-Ḥāfiẓ al-ʿAlawī, and its history has been commented upon and exposed by al-Tidjānī b. Bāba al-ʿAlawī, and by others; and the Ḥamawiyya, ascribed to Shaykh Ḥamallāh (Ḥamahu'llāhu), the *Sharīf* (1883 or 1886-1943).

"As for the Shādhiliyya, it formed two branches, the Ghuẓfiyya and the non-Ghuẓfiyya. The Ghuẓfiyya is ascribed to Shaykh Muḥammad al-Aghẓaf al-Dāwūdī (d. *ca.* 1860) and ultimately to al-Djaʿfarī. A considerable number of people remain unbound by any specific *ṭarīḳa*, and they also sometimes criticise some of the Ṣūfīs."

It will be observed from the above comments of Mukhtār b. Ḥamīdun that he does not deem the Ghuẓfiyya to be a heretical *ṭarīḳa*.

(c) The fight of the *ṭuruḳ* against the French.

The Mauritanian *ṭuruḳ* took an important part both in resisting and in coming to a *modus vivendi* with French colonial policy. The most active Ṣūfī-inspired resistance movements were the Ḥamawiyya and the Mayābiyya (a small *ṭarīḳa* founded by Muḥammad al-Ḳādir wuld Mayāba, who favoured *hidjra* from Mauritania if a *djihād* proved to be impossible), and the resistance of Shaykh Māʾ al-ʿAynayn al-Ḳalḳamī [*q.v.*], who was principally based at Ṣmāra in the Sāḳiya al-Ḥamrāʾ but whose forward bases were in the Mauritanian Ādrār. The hostility to the French, as to other Christians, was of long standing; it arose partly out of fear of European penetration and suppression of Muslim belief and partly out of a positive and aggressive belief in the total infidelity of their European foes. By the turn of the century, the French were convinced that the gum traffic on the Senegal river was threatened and that the Moors also threatened the French territories to the south of that river. Xavier Coppolani saw that some peaceful progress of France's interests might be possible through Shaykh Sīdiyya Bāba in Boutilimit, who was himself convinced that the French would gain the upper hand and that through cooperating with them the Ḳādiriyya might gain and increase its following and influence at the expense of its competitors. Coppolani's occupation of the Trārza and Brākna owed much to Shaykh Sīdiyya's support and cooperation. However, the most significant threat to further expansion came from Shaykh Māʾ al-ʿAynayn and Sīdī wuld Mawlāy Zayn, who laid siege to the fort at Tidjikdja (Tijikja) in 1905. During this and other attacks planned by Shaykh Māʾ al-ʿAynayn, Coppolani was assassinated on 12 May by a *muḳaddam* of the Ghuẓfiyya. The northern resistance in the Ādrār became a veritable *djihād*, with active support coming from the Sultan of Morocco. However, this did not prevent the French from advancing and in 1909 the Ādrār was pacified. Only in the extreme north did Shaykh Māʾ al-ʿAynayn continue his resistance until his death in 1910.

The attitude of the French to Islam in Mauritania fluctuated between a general sympathy and a limited backing for certain marabouts amongst the alleged "Berber" Zwāya (a view discernable in the writing of Paul Marty and in some of those who were interpreters and aides of the French administration, for example Ismaël Hamet in his *Chroniques de la Mauritanie Sénégalaise* and other writings), and in an obsession with the threat of a pan-Germanic and pan-Islamic alliance, in which that Machiavellian *éminence grise*, Shaykh Māʾ al-ʿAynayn, had a particularly important rôle to play. Over a period, some foreign Arabic papers were banned from internal circulation, the *Zwāya* were closely watched, mail was sometimes censured and Arabic higher education undoubtedly suffered. Differences between the Ḳādiriyya and the Tidjāniyya were exploited wherever possible. In the view of D.C. O'Brien, Islam became "a traditional subject of French paranoia" (*Towards an "Islamic Policy" in French West Africa (1854-1914)*, in *JAH*, viii [1967], 309). Where the French allowed and at times encouraged *madrasas* to be built, it was principally to facilitate tribal control by them and to simplify their constant observation. The encouragement of certain marabouts to visit their flocks in adjacent Afrique Noire was in part shrewd policy, in part cosmetic. It was aimed at impressing a far wider Muslim public. Some of the men of the *ṭuruḳ* vigorously rejected the French, amongst them, Shaykh Ḥamallāh wuld Muḥammad wuld Sayyidnā ʿUmar of Tīshit (see C. Hames, *Cheikh Hamallah, ou qu'est-ce qu'une confrérie islamique (ṭarīqa)?*, in *Archives de Sciences Sociales des Religions*, no. 55/1 [1983], 67-83). Repeatedly deported or under surveillance, he died in obscure circumstances in January 1943 and a number of his followers, as well as two of his sons, were executed.

In those years which followed the World War I, the death of Shaykh Māʾ al-ʿAynayn and the desecration of his *zāwiya* at Ṣmāra did not mean that his sons retired from the struggle nor that the northerly Moorish tribes of the *bilād al-sība*, the Rgaybāt in particular, refrained from raiding both French and Spaniard alike. Harking back to the Gazūla and to the Lamṭa in the days of the Almoravids (cf. Levtzion and Hopkins, *Corpus*, 67) and anticipating the current raids of the Polisario against the sixth Moroccan "wall" in the Western Sahara, the Rgaybāt raided the Ādrār on 26 March 1924. Port Etienne was attacked and Shinḳīṭ threatened. Descendants of Shaykh Māʾ al-ʿAynayn, and more especially his son, Shaykh Murabbīh Rabbuh (1886-1942), were the spiritual supporters and indeed sometimes the master-planners and part-executors of these attacks. However, after 1932, in the course of which the French were fiercely attacked in the Trārza near Nouakchott by the Awlād Dalīm, the religious leaders who supported these movements failed to sustain the momentum of the struggle or to maintain any kind of coherent spirit. The sole exception of this was the Ḥamawiyya. New *madrasas* were built by the French, four of them major, at Boutilimit (founded in 1914), Timbedra, Atar and Kiffa. By World War II, the teaching of Arabic and of Ḳurʾānic studies were generally in a decline. This was in Mauritania itself; outside it, the *shaykhs* of the Mauritanian *ṭuruḳ* had thriving communities and *talāmīdh* in adjacent parts of French West Africa.

With the establishment of the Islamic Republic of Mauritania in November 1960, Islam was given new encouragement and a fresh spur. The constitution (adopted in 1961) stipulates that the religion of Islam is the religion of the Mauritanian people, whatever their ethnic origin may be. However, the Republic guarantees everyone liberty of conscience and the right to practise his or her religion under the conditions laid down by morality or public order. Article 10 of the constitution specifically affirms that the President of the Republic and Chief of State must be a Muslim. With Islamic law reinstated, many new mosques built, and strong support afforded for fulfilling the duty of the *ḥadjdj*, the Islamic character of the nation has decisively influenced its foreign policies. On the other hand, while Islam is a force for great national strength and unity, the religion faces grave problems which are in part the outcome of the political problems in the Third World. These include (i) the perennial drought conditions which have disastrously afflicted almost all classes in Mauritanian society; (ii) the demand of the nominally ex-slaves and lower classes for social equality in all respects and a total freedom from the degrading occupations which they have been condemned to practise for centuries; (iii) the appeal of fundamentalism; (iv) the conflict of national interest and Islamic loyalties, and especially Mauritanian and Ṣaḥrāwī nationalism; and (v) the promotion of Arabic outside religious studies, and the competition with French. All these, and many others, are the problems which the Zwāya, and the former Zwāya in particular, are being called upon to face as they enter the country's unknown future.

(d) The place of the Ḳurʾān in Mauritanian Islam.

The Ḳurʾān, its study, its memorising and the observance of its teaching, has always been at the heart of Mauritanian Islam. Yaḥyā b. Ibrāhīm al-Gudālī is alleged to have said to Abū ʿImrān al-Fāsī [*q.v.* in Suppl.] in Ḳayrawān, when he appealed for a qualified teacher to be sent to instruct them, "If you were desirous of divine recompense by teaching them what is good, you would send one of your disciples or students with me to teach them the Koran and instruct them in religion" (*apud* Ibn Abī Zarʿ, *Kitāb al-Anīs al-muṭrib*, in Levtzion and Hopkins, *Corpus*, 240). Ibn Baṭṭūṭa, when he stayed in Walāta, whatever reservations he may have harboured about some of the ethics of its Massūfa people, was prepared to concede that "these are Muslims who observe the prayer and memorise the Koran" (*ibid.*, 285).

Mukhtār b. Ḥāmidun, *op. cit.*, has outlined the history of Ḳurʾānic recitation and study in more recent times:

"As for the rendition of the Ḳurʾān amongst them, it is by the manner of the reading (*ḥarf*) of Nāfiʿ. The *riwāya* of Warsh is more widespread amongst them than the *riwāya* of Ḳālūn, save amongst the *mudjawwidūn* amongst them, where both the *riwāyas* are on a par. If it be said that the proportion of those who know the Ḳurʾān in the Zwāya social class attains 70%, this would not seem far-fetched on account of the intensity of their concern for the Ḳurʾān, likewise the proportion of the *mudjawwidūn* amongst the reciters. A company of them, beyond reckoning, from the *imāms* amongst the reciters, have attained a renown in the recitation of Nāfiʿ, or in the seven or the ten readings, men who were skilled in Ḳurʾānic *tadjwīd*, in mastering it and in writing it down and in its transmission by a continuous chain of *idjāza*. Amongst such men were al-Fagha ʿAbd Allāh al-Daymānī, Sayyid ʿAbd Allāh al-Tanwādjīwī, Aḥmad b. Muḥammad al-Ḥādjdjī, al-Ṭālib ʿAbd Allāh al-Djakanī, Sayyid al-Mukhtār Idabhumī, Lamrābiṭ ʿAbd al-Fattāḥ al-Turkuzī, and others.

Beginning at the time he can talk properly and speak clearly, a boy begins to memorise the Ḳurʾān.

Then he writes it and the recites it correctly according to the rules laid down. The most renowed of the texts which they use is the poem *al-Durar al-lawāmiʿ* by ʿAlī b. Muḥammad b. Barrī (d. 730/1339; see Brockelmann, II, 248), the ode of al-Shawshāwī, the *Muḳaddima* of Ibn al-Djazarī and the ode of al-Shāṭibī (d. 590/1194 [see *EI*¹ s.v.]). All of these have been commented upon by a number of people and have been imitated by others, in works in verse or in prose, lengthy or concise, in Arabic or in Ḥassāniyya. Every Ḳurʾānic *idjāza* in Mauritania is traced back to ʿAbd al-Raḥmān b. al-Ḳāḍī. However, they disagree over the pronunciation of some of the letters, such as the softened *hamza*. Amonst them are some who pronounce it as a pure *hāʾ*. As for the *djīm*, there are some who pronounce it hard, approaching the sound of the *dāl*, whilst others pronounce the *djīm* in an open and free manner approaching the sound of the *zāy*. In ancient times they used to pronounce it in the latter manner, and they did so until the beginning to the 12th/18th century. The first of them who recited with the hardened *djīm* was Sayyid ʿAbd Allāh al-Tanwādjīwī (d. 1145/1732-3). He adopted it from Sayyid Aḥmad al-Ḥabīb, the 'pole' (*ḳuṭb*) of Sidjilmāsa. On account of that, the people used to call it 'the *djīm* of Tanwādjīw', and the other one 'the *djīm* of Massūma', because the *ʿulamāʾ* of the Massūma and the Tadjakānt supported it. Ibn Sayyid al-Amīn al-Djakanī put pen to paper amongst them in his refutation of Sayyid ʿAbd Allāh. Amongst those who also supported the free and openly-pronounced *djīm* at that time was the *faḳīh* Min Naḥna al-Daymānī. In regard to this he said, amongst his verses:

> A tribe, whose habitation was the Ḥidjāz, have corrupted the *djīm*.
> They are a rabble from amongst the negroes.

The openly-pronounced *djīm* was favoured by Muḥammad al-Yadālī al-Daymānī and by others. Then those who recited with the hardened *djīm* increased in number during the last two centuries. One of them said, in regard to it:

> We recited the Book of God with the *djīm* first of all, but the substitution of one *djīm* for another is preferable to continuous dissension and debate between us.

Wars with the pen have continued up to the present day. All the participants agree that the '*djīm* of Tanwādjīw' is hard and that 'the *djīm* of Massūma' is both open and depressed, and that both *djīm*s are voiced. The dispute is now only about the degree of hardness of 'the *djīm* of Tanwādjiw' and the openness and the depression of 'the *djīm* of Massūma'. In a similar way, they differ in regard to the pronunciation of the *ẓāʾ* and the *ḥāʾ*."

(e) Arabic and Islamic scholarship in Mauritania.

(i) *In the* gebla. The dune and gum forest country of south-west Mauritania, the *gebla* (Trārza and Brākna and, by extension, parts of Gorgol), throughout Mauritania's history has been an important tribal meeting point, attracting the influx of groups from the Saharan regions to the north, drawn towards the coast by trade, to the river Senegal and its fertile pastures and to the salt mines in the region of Awlīl. The Arabic and Islamic studies of the Moorish and non-Moorish scholars of the *gebla* have been influenced by the following factors: the survival of the Zenaga language and the use of it in religious works by Zwāya scholars, contact with Europeans at an early date in Arguin island and at trading points along the Senegal river, intercourse between scholars along a different axis from that in the north, between the Ādrār and Timbuctoo, via Tagānit and al-Ḥawḍ, and the growth of Ḥassāniyya in the art form of *azawān* amongst the Ḥassānī princes of the *gebla* at the same time as this was taking place in Tagānit region.

Scholarship was very strong amongst such tribes as the Awlād Daymān and the Tandagha. Four scholars and poets from the former tribe, where Zenaga is still spoken and written in Arabic script, have been especially studied and selected. They are: Shaykh Muḥammad Saʿīd b. al-Mukhtār al-Yadālī (1096-1166/1684-1752), the author of a number of important historical works about the history and life of the southern Zwāya, prior to, and following the "War of Shurbubba", of works of *tafsīr* and *sīra*, and of Arabic grammar (al-Yadālī was nicknamed al-Naḥwī and, according to Mukhtār b. Ḥāmidun, "Muḥammad Sāʿīd al-Yadālī was the first who brought Arabic grammar to the *gebla*"), and he practised the extensive use and even abuse of *badīʿ* in his verse. He was the leading figure amongst a group of such poets, including Bū Fumwayn, Alumma al-ʿArbī and al-Dīb al-Ḥasanī. Al-Yadālī's pupil Wālid b. Khālunā (Wālid b. ʿAbd al-Raḥmān, d. between 1212/1798 and 1214/1799-1800), was also important for a commentary on Khalīl and for his studies of the Zwāya Imāmate of Nāṣir al-Dīn, though especially of the hagiographical archives of the Awlād Daymān and their genealogies. His two great religious poems in Zenaga and Arabic, *al-Makzūz* and *al-Mazrūfa*, are his most original compositions and are probably unique survivors in all Mauritanian literature (on both al-Yadālī and Wālid, see Norris, *Shinqīṭī folk literature*, Oxford 1968, 123-54; idem, *Znāga Islam during the seventeenth and eighteenth centuries*, in *BSOAS*, xxxii [1969], 496-526; and idem, *The Arab conquest of the Western Sahara*, London 1986, 61-3). The Arabic works studied in the *gebla* and catalogued in *al-Makzūz* are listed in Appendix 1 of Norris, *Ṣanhāja scholars of Mauritania*, in Willis, ed., *Studies in West African Islamic history*, i, London 1979, 158-9. The life and poetry of al-Yadālī may be read in *al-Wasīṭ*, 223-36. Another outstanding scholar of Khalīl and grammarian of the Awlād Daymān was Maḥanḍ Bāba b. ʿUbayd (1185-1277/1771-1860), (see *al-Wasīṭ*, 236-8, and M.M. Ould Bah, *La littérature juridique et l'évolution du mālikisme en Mauritanie*, Tunis 1982, 47).

The fourth scholar, Muḥammad wuld Ahmad Yūra, whose book of Zenaga toponyms of the Trārza, *Kitāb Ikhbār al-akhbār*, was published and translated by René Basset in his *Mission au Sénégal*, i, Paris 1909, 561-91, was born in 1260/1844-5 and died in 1340/1921-2. It is, however, as a poet that he is best remembered, since no Mauritanian poet is more spontaneous or closer to the heart of the people. In his poems, sometimes quatrains or short love verses, he expressed the emotions of the people of the *gebla* or described their nomadic existence, their tea ceremonies, their riddles and their sandy habitat. An individual poet who often broke free from classical restraints, he was equally at home in classical form and in popular verse which owed much to Ḥassāniyya *leghna*. According to Mohamd El Moktār Ould Bah, "in his classical work, he was the poet who was the closest to the environment in which he lived. His poems are short, strewn with Ḥassāniyya and Aznāga (Zenaga) words, and they are embellished with adages and proverbs. The tone of these poems is sometimes sad and touching, sometimes cheerful and witty. His style is easily recognisable" (*Arabica*, xviii [1971], 45). An equally marked individuality may be observed in the writings of Awfā b. Abū Bakr al-Īdadjfaghī (1217-1300/1802-83), who was a student of the scholar

Muḥammad Fāl b. Muttāliyya al-Tandag̲h̲ī, (*al-Wasīṭ*, 343-5). Awfā was skilled in Mauritanian medicine and surgery. He wrote in Ḥassāniyya, and also wrote lengthy works in Classical Arabic on the science of medicine, *Ummahāt al-ṭibb*, *Ḳawāʿid al-ṭibb*, *al-Mad̲j̲mūʿa* (on the treatment of bones), a treatise on the reciprocal rights of doctor and patient in medical treatment, and his *urd̲j̲ūza* of 1,182 verses on medicine called *al-ʿUmda* (Norris, *Mauritanian medicine*, in *The Maghreb Review*, ix/5-6 [1989], 119-27, and *al-Wasīṭ*, 575-8).

It was at Būtīlīmīt (Boutilimit) that Mauritanian scholarship in the *gebla* attained one of its glories in the shape of the example, the life and teaching of S̲h̲ayk̲h̲ Sīdiyya al-Kabīr and his successors, and through the foundation of its *al-Maʿhad al-Islāmī*, which was to become one of the most famous Islamic centres of learning in the whole of West Africa, drawing students from Senegal, Mali, Niger and beyond, as well as from within Mauritania itself. It is interesting that the Awlād Abiyāri (from which came not only S̲h̲ayk̲h̲ Sīdiyya al-Kabīr, and his grandson S̲h̲ayk̲h̲ Sīdiyya Bābā, but also ex-President al-Moktar ould Daddah) were originally a tribe of the ʿArab, "warrior", caste but became Zwāya "of the sun" (*Zwāyat al-S̲h̲ams*). Of special importance were the studies which S̲h̲ayk̲h̲ Sīdiyya al-Kabīr (1190-1284/1773-1868) made in Ḳādiriyya Ṣūfism with S̲h̲ayk̲h̲ Sīdī 'l-Muk̲h̲tār al-Kuntī (1142-1226/1729-30 to 1811) in Azawād, thus linking the scholarship of the *gebla* with that of the eastern marches of Mauritania (Stewart, *op. cit.*, 34-53). But Ṣūfism and *fiḳh* apart, the family of S̲h̲ayk̲h̲ Sīdiyya were also noteworthy poets. They are given an honoured place in *al-Wasīṭ* (240-77). Despite the conservatism of his verse, Mohamd El Moktâr ould Bah (*loc. cit.*, 47), dubs Sīdī Muḥammad b. al-S̲h̲ayk̲h̲ Sīdiyya (1247-86/1832-69) an "independent", and he deems his verse to have been "original in its accent". Likewise a mystic, his poetry was noteworthy even during the lifetime of his father (Stewart, 148-50).

It should be mentioned that there is little influence of the *Sīra Hilāliyya* in folk tales of the Banū Maʿḳil in Mauritania other than a few fragments recorded amongst the Awlād Dalīm. Adventures that are akin to the exploits of Abū Zayd al-Hilālī are not however attributed to him. The Hilālīs are locally described as heathens with supernatural powers. The raids and miracles of ʿUḳba b. Nāfiʿ characterise the Kunta of Mali, who claim descent from him. In Mauritania, amongst the Kunta as well as amongst the S̲h̲amāsīd and other Zwāya groups, the personality who approaches nearest to that of the hero of a *geste* is Abū Bakr b. ʿUmar al-Lamtūnī, who, accompanied by his Yemenites and by his eventually martyred *ḳāḍī* counsellor the *Imām* al-Ḥaḍramī, breaks the power of the negroes and the infidel monsters of the Ādrār and Tagānit and their armies of ferocious dogs. In the content of the narrative there is much borrowing of stories in the tales of the *Ayyām al-ʿArab* [*q.v.*] and from the early Islamic Yemenite cycles of ʿUbayd b. S̲h̲arya al-D̲j̲urhumī and Wahb b. Munabbih (Norris, *Saharan myth and saga*, 126-59).

The Lamtūna survive as an entity in parts of the *gebla*, more especially amongst the Brākna and in Gorgol. Ḳurʾānic studies are attributed to the *Imām* Ibn Makkī al-Lamtūnī. An unusual poet from amongst them was S̲h̲ayk̲h̲ Muḥammad Mbārak al-Lamtūnī, a prolific author and a friend of S̲h̲ayk̲h̲ Sīdiyya al-Kabīr. He claimed to be a descendant of the Almoravid Yūsuf b. Tās̲h̲ufīn (Norris, *op. cit.*, 110-6). His *ḳaṣīda* of some 115 verses, though much indebted to the *ḳaṣīda al-Ḥimyariyya* by Nas̲h̲wān b. Saʿīd al-Ḥimyarī, and principally composed as a riposte to the Kunta who, by tradition, claimed to have subdued the Lamtūna in alliance with the Awlād Ḥassan, nevertheless also contains wisps of folk epic otherwise lost. It is of local interest in view of the statements it makes about relations between the Lamtūna and the Toucouleur of the Senegal basin. It is the latter, in fact, at the battle of Tisrilābāw (Dasrilabā?), under their chief (Lāmṭu?) Bū Suya who ultimately defeated the Lamtūna. They were, it is claimed, betrayed by a Berber client who was in league with the Kunta. The name of the king of Takrūr in the poem, G̲h̲ayūr, would appear to refer to the province of Kajoor, where the founders of the Imamate of Fuuta Tooro received their Islamic schooling, derived from the movement of Nāṣir al-Dīn, principally at Pir Sanakuur, in the 18th century.

(ii) *In Wādān and S̲h̲inḳīṭ*. Wādān was allegedly founded in 535/1141 according to Mauritanian popular traditions. However, certain of them furnish the later date of 730/1329. The original nucleus of villages at this important point of the Ādrār included Kawlān, Tāmgūna and Tiftil. The indigenous population was in part Ṣanhād̲j̲a, either Lamtūna or Massūfa, in part non-Ṣanhād̲j̲a speakers of Azayr, who were possibly descended from an earlier stratum of population, the Bāfūr, and who had historical and cultural links with Tīs̲h̲īt and Māstina (Ke-Macina) in Mali. Local legend states that when the town was founded it was administered by two scholars, al-Ḥād̲j̲d̲j̲ ʿUt̲h̲mān, the eponym of the Īdaw al-Ḥād̲j̲d̲j̲, and Ḥād̲j̲d̲j̲ Yaʿḳūb. They claimed descent from the Ḳurays̲h̲ and Anṣār respectively. The former came with the S̲h̲arīf ʿAbd al-Muʾmin, the founder of Tīs̲h̲īt, from Ag̲h̲māt, and like him, it is said, studied with Ḳāḍī ʿIyāḍ. These scholars were welcomed by the Massūfa Tiftil and Tāmgūna and they built *ḳaṣr* Wādān. At a later date they were joined by al-Ḥād̲j̲d̲j̲ ʿAbd al-Raḥmān al-Ṣāʾim (the ancestor of the Ṣayyām), although these latter now form a branch of the widely-spread Īdaw al-Ḥād̲j̲d̲j̲ Zwāya. From Morocco came Yaḥyā al-Ag̲h̲mātī b. Mūsā and al-Ḥād̲j̲d̲j̲ ʿAlī. The latter claimed descent from Yaḥyā b. ʿUmar al-Lamtūnī. The Īdaw al-Ḥād̲j̲d̲j̲ of Assaba and the Western Ḥawḍ (especially the Īdawabad̲j̲ and the Lūtaydāt) claim descent from Abad̲j̲ and Ūtayd, the sons of al-Ḥād̲j̲d̲j̲ ʿAlī, who had married the daughter of al-Ḥād̲j̲d̲j̲ ʿUt̲h̲mān. What is certain is that the Īdaw al-Ḥād̲j̲d̲j̲ were to become the leading family of scholars in Wādān, in all their branches, and that it is principally from them that the Īdaw al-Ḥād̲j̲d̲j̲ scholars of Timbuctoo, and Mali—there forming the Aḳīts—established a major line of scholars and stemmata. Their families were for a while the source of learning in the whole of the eastern part of the Sahara and along the Niger buckle (Norris, *Ṣanhājah scholars of Timbuctoo*, in *BSOAS*, xxx [1967], esp. 638). Very close ties were established between Wadān, Tīs̲h̲īt, Timbuctoo, the salt deposit at Id̲j̲d̲j̲il and Portuguese Arguin in the late mediaeval period. Scholars from S̲h̲inḳīṭ came to Wādān to study, and its jurists gained a high reputation for the close examination of and commentary upon the *Muk̲h̲taṣar* of al-K̲h̲alīl.

A sub-fraction of the Ṣayyām, the Ahl Ṭwayr al-D̲j̲anna, takes its name from a noted Wādānī pilgrim al-Ṭālib Aḥmad b. Muṣṭafā b. Ṭuwayr al-D̲j̲anna (Ajjanna), the author of *Riḥlat al-munā wa 'l-minna*, wherein he described his journey on pilgrimage to Mecca and his academically fruitful stay as guest of the Sultan of Morocco, and who benefited through his meetings with scholars in Tunis and Egypt. Al-Ṭālib

Aḥmad left Wādān in 1245/1829 and returned to it in 1250/1834. He completed his *Riḥla* in 1253/1838. He landed in Algiers after its capture by the French and he was received in Gibraltar as "tributary king of Chinguetti" by its then governor, General Sir William Houston, on Monday, 12 January 1833. He had brought with him four hundred volumes from the Holy Places (Norris, *The Pilgrimage of Aḥmad*, and Oswald, in *ibid.*, 212-13).

The town of Shinḳīṭ or Chinguetti is the most famous in the Ādrār, probably the most famous ancient town of Mauritania and, by repute, the seventh holiest city in all Islam. The two principal tribes who stem from it, the Īdaw Aᶜli and the Aghlāl, descended from ᶜAlī b. Abī Ṭālib and the first caliph Abū Bakr respectively, have produced an outstanding number of scholars who were honoured in the Middle East as pilgrims and teachers and who also rose to high estate in the courts of the Sultans of Morocco. Yet Shinkīṭ (if we exclude its half-mythical predecessor, Abbwayr) is not a specially ancient town. It was founded in the 8th/14th century at the earliest. In the *Tārīkh al-Sūdān* by al-Saᶜdī (tr. O. Houdas, Paris 1900, French text, 38, Arabic text, 22), during the reign of the Tuareg sultan Akil, Tinbuctoo was governed by Muḥammad Naḍḍa, a Ṣanhādjī from Shindjīṭ. He had held this post prior to 836/1433, the year which marked the fall of the dynasty of Mali. He died in the middle of the 9th/15th century.

The only history of the town written in Mauritania is the brief *Ṣaḥīḥat al-naḳl fī ᶜAlawiyyat Īdaw Aᶜli wa-Bakriyyat Muḥammad Ghull*, penned by the outstanding Shinḳīṭī scholar Sīdī ᶜAbd Allāh b. al-Ḥādjdj Ibrāhīm (d. 1233/1878), whose life and works are comprehensively covered by the author of *al-Wasīṭ*, himself from Shinḳīṭ, Aḥmad b. al-Amīn (d. 1331/1913), pp. 37-41. The *Ṣaḥīḥat al-naḳl* furnished the core of the historical information about the town of Shinḳīṭ (424-77).

Shinḳīṭī scholars travelled and taught and settled widely in Mauritania. Mohamd El Moktar ould Bah has remarked (*Arabica*, xvii [1971], 22) that the Īdaw Aᶜli transplanted the cultural tradition of Shinḳīṭ, thanks to the arrival in the Trārza of a reputed *ᶜālim*, the *ḳāḍī* ᶜAbd Allāh, who died in 1112/1691-2. His grandson Wuld Rāzga was both an *ᶜālim* and a poet. The family tradition has been continued by Ḥurma wuld ᶜAbd al-Djalīl (1150-1243/1737-1828), a brilliant disciple of the famous grammarian (of the Tadjakānt), "the crown of the *ᶜulamā*ʾ", Mukhtar wuld Būna. One knows that it was in the *maḥḍara* of Ḥurma that Shaykh Sīdiyya al-Kabir (al-Intishayti, see Stewart, *op. cit.*, 10-53) first began his studies.

One of the earliest jurists of Mauritania, the first to compose *nawāzil* [see NĀZILA] on legal and other matters and a vigorous opponent of the *Imām* Nāṣir al-Dīn and his allies who supported the *Imām* al-Majdhūb al-Shamsadī in the Ādrār, wishing to resuscitate the cult of the *Imām* al-Ḥaḍramī, was al-Ṭalīb Abū ᶜAbd Allāh Muḥammad b. al-Mukhtār b. al-Aᶜmash al-ᶜAlawī al-Shinkīṭī (known as Bilaᶜmash) (1036/1626-7 to 1102/1690-1 or 1107/1695-6). These *nawāzil* were a landmark in Mauritanian literature, and the author was a pioneer figure. He earned the praise of the author of *al-Wasīṭ*, who remarks (578) *fa-innahu awwalu man adjāda min ahl tilka 'l-bilād fī taṣnīf al-nawāzil wa-kullu man allafa fīhā yankulu ᶜanhu*. These *nawāzil* were later versified by others. Ibn al-Aᶜmash also composed a noted ode on mathematics.

Probably the greatest Arabic poet who was born in Shinkīṭ was Sīdī ᶜAbd Allāh b. Muḥammad b. al-Ḳāḍī, known, after his mother, as Ibn Rāzga (d. 1143/1730-1). He was a master of *ᶜilm al-badīᶜ*. El Moktar ould Bah ranks him first amongst *rhétoriqueurs* and remarks that before him and his generation there were no "poets" in Mauritania but only simply versifiers. He also leads the poets in *al-Wasīṭ* (1-24). He was praised for his verses by Muḥammad al-ᶜĀlim, the son of Sultan Mawlāy Ismāᶜīl. He began his studies in Shinḳīṭ and Wādān, continued them in the *gebla*, and became the principal pupil of the *faḳīh* Min Naḥna Ibn Mawdi Mālik and of his grandfather al-Ḳāḍī. He journeyed far, and on several occasions visited the court of Mawlāy Ismāᶜīl and lauded the latter. Muḥammad al-ᶜAlīm gave him a library, and supported both him and his companion, the *amīr* of Trārza ᶜAlī Shanẓūra b. Haddi, with a contingent of troops (*maḥalla* [*q.v.*]) to ensure the régime of this notable Ḥassānī *amīr* (1139-70/1727-57). Despite his high rank, only a fraction of the works of Ibn Rāzga are well-known. To him are attributed a treatise on logic, an epistle on the application of the *sharīᶜa* amongst the Bedouin which foreshadows the later masterpiece by Shaykh Muḥammad al-Māmī on this theme, another treatise on the *uṣūl al-fiḳh* and a work on rhetoric entitled *Nuzhat al-maᶜānī fi 'l-bayān*. Because of his weaker verses, Ibn Rāzga had many opponents as well as admirers. His lengthy stay in Morocco opened Mauritania to literary and cultural influences from that quarter and did much to stimulate the interest of Mauritanian scholars in ᶜAbbāsid and Andalusian verse. The *Dīwān* of Ibn Rāzga has been edited by Muḥammad Saᶜīd b. Muḥammad Maḥmūd (*Dar al-Muᶜallimīn al-ᶜUlyā*, Nouakchott 1980). Ibn Rāzga made a noteworthy address to the *ᶜulamā*ʾ of Fez.

Shaykh Sīdī Aḥmad b. Ibrāhīm b. Sīdī Aḥmad b. Hāmanni was a scholar, author and teacher and a *ḳāḍī* of the Aghlāl in Shinḳīṭ, who died at the age of eighty in *ca.* 1900. Another noted scholar of the Aghlāl was Aḥmad b. Ṣīdī Muḥammad b. Ḥabbut, who was likewise a *ḳāḍī*. He died in 1892-3 and was also described as an important grammarian. His father wrote a history of the Almoravids in Mauritania called *Kitāb Ansāb al-Maḥalla*.

Most curious of all the town's scholars was the almost legendary Shāṭirī youth, who in the 11th/17th century allegedly appeared in a blaze of light in a Shinḳīṭ date grove. He passed on knowledge and initiated Shinḳīṭī scholars, such as Muḥammad b. al-Aᶜmash and the grandfather of Ibn Rāzga, in many branches of learning. This youth allegedly vanished into the Atlantic on a skin rug, having claimed to be a *Sharīf* from Fez. This tale was repeated by the lettered (see *al-Wasīṭ*, 578-9). It would seem to suggest that no knowledge had survived in the town about scholarship prior to the 11th/17th century and that the sources of learning there owed much to the *Shurafā*ʾ of Fez who had settled there as they had done elsewhere in the Sahara (e.g. the Adrār-n-Īfōghās in Mali) in the earlier mediaeval period.

(iii) *In Tīshīt and Wālāta.* Tīshīt (Tichit), the most famous and among the most ancient of caravan centres of eastern Tagānit (Tagant), lay on the route joining the Ādrār, the salt mine of Idjdjil and Wādān with Walāta and Mali. Trans-Saharan routes to the north linked it with the Maghrib. Its population consists of indigenous former Azayr-speakers who have kinsmen in Māsina (Ke-Macina) and who are of negroid blood, though of free status; Ṣanhādja *Shurafā*ʾ who ultimately claim descent from ᶜAlī b. Ṭālib; and Awlād Billa of the Awlād Ḥassān, who exerted a domination of the town, unique in its stone architecture and cultural self-sufficiency, from the end of the 12th/18th century.

A Tīshīt tradition maintains that the founder of the

town was the Sharīf ᶜAbd al-Muʾmin b. Ṣāliḥ, who came from Aghmāt in Morocco and who, like the reputed founder of Wādān al-Ḥādjdj ᶜUthmān, was a pupil of the Ḳāḍī Abu 'l-Faḍl ᶜIyāḍ b. Mūsā al-Sabtī (476-544/1083-1149). The date of foundation given in the so-called Tīshīt chronicles, 548/1153-4, cannot be corroborated from any mediaeval Arab geographer. A much later date in the 8th/14th century, currently cited in Mauritania, casts doubts on the foundation of the town in the early middle ages. The Sharīf ᶜAbd al-Muʾmin lies buried in the precincts of the principal mosque (see Oswald, *Die Handelsstädte der Westsahara*, 414-59), and according to de Laiglesia (*Brevo Estudio*, 63-4) those who claim descent from him may have come as late as the 12th/18th century.

Tīshīt has always been noted for its scholars and for its family archives, and it receives mention in the writings of the Mauritanian historian Mukhtār b. Ḥāmidun, more especially for contributions made to *fiḳh* and to the study of Arabic grammar. Two scholars contributed some forty additional disputed issues (*masāʾil*), Abū ᶜAbd Allāh Muḥammad Abūbuddi al-Zaydī al-Tīshītī (1065-1123/1654-1711) and the Sharīf Ḥamallāh "Mbala" (Anbāla) b. Muḥammad al-Muslimī (see Oswald, *op. cit.*, 453-5), who lived early in the 11th/17th century.

Three grammarians are mentioned: *al-faḳīh* Sīdī Muḥammad b. Mūsā b. Ayyadjil al-Zaydī al-Tīshītī (d. 1117/1705-6, see Oswald, 492, (62)) and his son Sīdī Aḥmad (1110-71/1698 to 1757-8) (see *ibid.*, 497 (110)), and Abū Bakr al-Ṭufayl al-Muslimī, who died in 1116/1704-5 (see *ibid.*, 516-17).

Walāta (Berber Īwalātan, French Oualata), formerly Birū, is the most easterly of Mauritanian towns within the eastern Ḥawḍ (Hodh). It was one of the greatest of Saharan caravan towns, competing with Timbuctoo over the border and with Agades and Ghadāmis. Local tradition dates its first cultural *essor* after the empire of Ghāna fell to the Soussous. Shaykh Ismāᶜīl founded the town, the population of which was predominantly Soninké, and it absorbed elements from the earlier city of Awdaghust. Over a period, the Ṣanhādja Massūfa branch of the Almoravids assumed the role of scholars and merchants, as they were to do in the Saharan towns of Takaddā and Agades further east. When Ibn Baṭṭūṭa visited the town in 753/1352, coming from Sidjilmāsa, he was well-received by the Massūfa scholars there. The *ḳāḍī* of Walāta was Muḥammad b. ᶜAbd b. Yanūmar al-Massūfī, whose brother Yaḥyā was a *faḳīh*. The culture, the architecture and the *décor* of its merchants' houses display Islamic influences from as far away as al-Andalus, Fez, Tilimsān, Ghadāmis and Cairo. When Sunnī ᶜAlī occupied Timbuctoo in 1469 and began his harassment of Ṣanhādja scholars. the forebears of Aḥmad Bābā (866-929/1462-1523) and al-Mukhtar al-Naḥawī b. And-Agh-Muhammad, together with ᶜUmar Aḳīt and his sons, fled to Walāta which gained from this influx, despite a threat to its independence from Sunnī ᶜAlī. The main asylum for these scholars may have been the township of Tāzakht, today a ruined suburb of Walāta. This town gave its name and *nisba* to some noted scholars, amongst them Muḥammad b. Aḥmad b. Abī Muḥammad, known as Ayda Aḥmad al-Tāzakhtī who studied with Muḥammad b. ᶜAbd al-Karīm al-Tilimsānī in Takaddā. Later he became *ḳāḍī* of Katsina in Hausaland and died there in 936/1529-30. The cemetery at Tāzakht contains the tomb, with an epitaph, of the *walī* and *imām* ᶜAbd Allāh b. ᶜUmar b. Muḥammad Aḳīt (Oswald, *op. cit.*, 485 (7)). Other scholars of the Massūfa were buried there and the cemetery has been frequently visited by the devout, despite the destruction of the township of Tāzakht by the Ḥassānī Awlād Yūnis.

In more recent centuries, Walāta became the nucleus of disparate Zwāya and Ḥassānī groups, the early Kunta, including Sīdī Aḥmad al-Bakkāʾī (d. *ca.* 921/1515) who is buried there but whose historicity is not confirmed outside Kunta records, the Maḥādjīb (Lemhadjba) *Shurafāʾ* from Baghdād, other *Shurafāʾ* of Walāta who claim to have come from Tuwāt, Aghlāl from Tagānit (who may be related to the Aghlāl of Shinḳīṭ), of Timbuctoo, and possibly the Kel Aghlāl *Ineslemen* of the Kel Denneg Tuareg of Niger, the Īdyilba from the Wād Nūn in Morocco and the Tadjakānt. The chronicle of Walāta does not trace the town's history further back than the 10th/16th century.

Walāta was famous for its scholars, many of whom received a mention in the noteworthy biographical dictionary written by Muḥammad ᶜAbd Allāh b. Abī Bakr al-Ṣiddīḳ b. ᶜAbd Allāh b. Muḥammad b. al-Ṭālib ᶜAlī al-Bannānī al-Bartīlī al-Walātī, known as al-Ṭālib Muḥammad b. Abī Bakr al-Ṣiddīḳ, who died on 22 Dhu 'l-Ḥidjdja 1219/24 March 1805. His book *Fatḥ al-shakūr fī maᶜrifat aᶜyān ᶜulamāʾ al-Takrūr*, written in 1214/1799-1800, has been edited and published by Muḥammad Ibrāhīm al-Kattānī and Muḥammad Ḥadjdjī (Beirut 1981). The chief scholars of Walāta must include Ṭālib ᶜUmar al-Walī b. al-Shaykh Muḥammad ᶜAbd Allāh al-Mahdjūbī (1004-70/1595-1659) (Oswald, *op. cit.*, 489 (24)), Muḥammad b. Abī Bakr b. al-Hāshim(i) al-Ghallāwī (d. 1098/1687) *ibid.*, 490 (49)) and the grammarian Anbaway ᶜUmar b. al-Imām Muḥammad ᶜAbd Allāh who lived in the early 8th/14th century.

(iv) *In Western Tīris* (*Tīris al-Gharbiyya*). This bleak desert region which, in the past, once knew more fertile periods of climate, is located along the southern and eastern border of the former Spanish Sahara and Mauritania. Until Mauritania withdrew from the Western Saharan conflict it formed the greater part of its territory which was allocated to it by the partition. This region enjoyed a reputation for Islamic scholarship and for the presence of small desert "universities" (*maḥāḍir*). Its leading poets and men of letters are highly esteemed as Mauritanians, although for the Ṣaḥrāwīs these outstanding men, together with Shaykh Māʾ al-ᶜAynayn and his successors, represent the national scholarly legacy of the Ṣaḥrāwī people. Both Saharan peoples take a joint pride in their achievement. The Ahl Bārikalla, to whom many of them belonged, were the most powerful subtribe of the Īdayḳub in Tīris. They dug the bulk of its wells and they formed part of that group of Zwāya tribes, many of which were centred in the Mauritanian *gebla*, which were deemed to be branches of the Tashumsha Zwāya. Pastoral activities, more especially camel-breeding, enabled scholars to devote their time to study and to writing.

Representative of this scholarship were:

The Ahl Muḥammad Sālim, who were noted for their expertise in *fiḳh* and whose members acted as judges and jurists in all parts of the Western Sahara. Some of this family claim descent from Ibrāhīm al-Umawī, *ḳāḍī* of the army of the Almoravid Abū Bakr b. ᶜUmar.

The neo-Djāhilī poets of the late 12th/18th and early 13th/19th centuries who were expert in the *Muᶜallaḳāt*, the verse of Dhu 'l-Rumma and the *dīwāns* of the six pre-Islamic poets. Several of these came from the Īdaykūbī tribe. The most famous of them was probably Muḥammad wuld Ṭulba al-Yaᶜḳūbī (*al-*

Wasīṭ, 94-190), the so-called "al-Nābigha of Shinkīṭ", who was praised by Wuld Haddār as the "pole of the Zwāya of Tīris and its *Imām*" (*kuṭb Zawāyā Tīris wa-Imāmuhu*). Muḥammad wuld Ṭulba lived from 1188/1774 to 1272/1856, and his verse embraced eulogy, elegy, love, poetry and tribal boasting (*fakhr*); he even modelled his own life on that of the traditional *nasīb* and *kaṣīda* of the pre-Islamic poets, claiming to equal the exploits and achievements of Ḥumayd b. Thawr al-Hilālī, Aᶜshā Bakr b. Wāʾil and al-Shammākh b. Ḍirār al-Ghaṭafānī. Yet he deeply loved his native Tīris and he filled his verses, otherwise hardly distinguishable from Djāhilī models, with its toponyms and allusions to tribal history and species of Saharan flora and fauna.

Shaykh Muḥammad al-Māmī b. al-Bukhārī b. Ḥabīb Allāh b. Bārikalla b. Bā Zayd (d. *ca.* 1282/1865), buried at Ayg in Tīris, was one of the greatest of polymaths of Mauritania, and indeed of the entire Western Sahara (Norris, *Shinqīṭī folk literature and song*, 92-101). He was also noted for his hospitality to his guests, who visited him both in winter and in summer. To him are attributed numerous *dīwāns* of verse on Islamic topics ranging from Ḳurʾānic studies, *fiḳh*, mathematics, the *Mukhtaṣar* of al-Khalīl b. Aḥmad [*q.v.*], theology, logic, grammar and elocution. Much of this poetry is in Ḥassāniyya. In his verse, especially in prayers for rain and praise of the Prophet, this dialect was elevated to the level of a literary and a national language and his versatility in it has never been equalled since. However, many hold his masterpiece to be his *Kitāb al-Bādiya*, the "Book of the Bedouin and their customary law and lore". This comprises some 100 folios and also bears the title of "Dogs' wool" (*Ṣūf al-kilāb*), following the saying "he who shears a dog is in need of its wool". It is also called *Kitāb al-Talmiyāt* in view of the innumerable times the conjunction *lammā* (since) appears in the text. Shaykh Muḥammad al-Māmī was one of the first to seek for guidance outside the standard Mālikī texts in Mauritania in order to resolve pressing legal problems which needed a solution. Although paying hommage to the *Imām al-Ḥaramayn* Abu 'l-Maᶜālī ᶜAbd al-Malik al-Djuwaynī [*q.v.*] in this work, his catholic taste and enquiring mind reveal the wide distribution of Middle Eastern manuals and books in the Western Sahara by the middle of the last century. Much of his book is taken up with a discussion of the function of the mosque amongst the nomads in the *bilād al-sība*, the nature of the call to prayer and the duty of *ṣalāt al-djumᶜa*. He also deals with *ḥubus* and the need for some forms of usury, loans of animals, especially camels, the legality or otherwise of types of *zakāt* (*zakāt al-ḥubus*, *zakāt māl Aznāga*, etc.), the apportioning of shares, the legality of the non-inheritance of daughters, the practice of discreet mediation and the flattering of the Awlād Ḥassān by the Zwāya *shaykhs* (*al-mudārāt*) and its permissibility, citing as one of the authorities Ibn al-Aᶜmash that it was the *sabīl Allāh*, the propriety of ear piercing as practised by the Saharan women, the harmlessness of certain games of chance, smoking and the use of tobacco, the property called *mustaghriḳ al-dhimma*, illegal measures of weight and reprehensible relationship between the sexes, together with the non-wearing of the *ḥidjāb* by Moorish women. In Mauritania, this book is regarded by some as controversial, but it would have to be included amongst the most significant works of law Moorish society has ever produced.

Mention might also be made of Limdjaydrī b. Ḥabīb Allāh al-Yaᶜḳūbī (*al-Wasīṭ*, 214-16) who is regarded by some as one of the four who were unsurpassed in their erudition, sc. Ibn Rāzga, Ibn al-Ḥādjdj Ibrāhīm, Muḥammad al-Yadālī and himself, although the author of *al-Wasīṭ* is of the opinion that al-Mukhtār b. Būna al-Djakānī was a worthier candidate. Limdjaydarī was deeply attached to Tīris and longed for it when he visited the East, including Egypt. Amongst his pupils was the Ṣūfī Sayyid Aḥmad b. Idrīs al-Fāsī.

(v) *The learning and scholarship of Moorish women.* Mauritanian women, like their Tuareg sisters, have played an important rôle in Saharan society, though in their own case their literacy in Arabic and their profound grasp of Islamic belief, including Ṣūfism, have made them teachers, governesses and administrators and so enabled them to play a significant part in the shaping of Mauritanian history. In the 5th/11th and the 6th/12th centuries the Ṣanhādja, more especially the Lamtūna, women took an active part in Almoravid politics. They also fought as equals beside their menfolk. When the Almohads attacked Marrakech in 541/1147, they fought fiercely until noon on the day when it was captured and the attackers only secured its citadel after Fānnū, the daughter of the Almoravid ᶜUmar b. Yīntān, had been overcome. She had fought, clad as a man, and the Almohads marvelled at the ferocity of her fighting up to the moment of her death.

When Ibn Baṭṭūṭa visited Walāta he was shocked to observe what he regarded as the lack of modesty of the unveiled Ṣanhādja women. He upbraided his friend Abū Muḥammad Yandakān al-Massūfī when he saw the latter's wife entertaining a "companion" in the courtyard of his house. Abū Muḥammad replied, "The association of women with men is agreeable to us and a part of good conduct, to which no suspicion attaches. They are not like the women of your country" (Levtzion and Hopkins, *Corpus*, 285-6).

Mauritanian traditions recount that at Tīnīgi in the Ādrār, an important settlement around the 8th/14th century of the Lamtūna Tadjakānt, the *Muwaṭṭaʾ* of Mālik b. Anas [*q.v.*] was taught in the *maḥḍar* to pupils who included 300 girls, and that amongst the Midlish (a Zwāya tribe, the name of which is an abbreviated form of *madjlis al-ᶜilm*), the *Mudawwana* of Saḥnun [*q.v.*] was likewise studied. The Zwāya tradition of girls' education would seem to date back to a period prior to the settlement of the Awlād Ḥassān, amongst whom concern for female education was by no means unknown. Moorish girls were taught from a syllabus which included the Ḳurʾān, the *Sīra* of the Prophet, selected passages of *fiḳh* and Classical Arabic poetry and grammar. The girls began their studies towards the end of the Ḳurʾān with the shorter Meccan *sūras* and especially those in the last *ḥizb*. As studies progressed, so the early *sūras* were memorised, a process called *silka*. The full recitation of the Ḳurʾān in chapter sequence is termed *ᶜalla*. The study of *Sīra* was based upon the following works: *Ḳurrat al-abṣār*, attributed to a scholar named al-Lamṭī; *al-Ghazawāt*; and poems and commentaries attributed to Aḥmad al-Badawī al-Madjlisī (*al-Wasīṭ*, 350-1). In *fiḳh*, the syllabus included the commentary by ᶜAlī al-Sidjilmāsī (d. 1057/1647) on *al-Mukhtaṣar fī 'l-ᶜibādāt* by Abū Zayd ᶜAbd al-Raḥmān b. Sayyidī al-Akhḍarī [*q.v.*] and on the writings of Ibn ᶜĀshir and on the *Risāla* by Ibn Abī Zayd. Arabic poetry was less often studied by young women, and the poets were carefully selected. Girls were normally taught by a woman teacher who maintained attention and discipline with the help of a long and flexible stick of *titārek* (*leptadenia spartum*) or *mrekba* (*panicum turgidum*). The education of

women amongst the Zwāya was aimed at the maintaining of high ethical standards amongst the marabout class, and at the same time to supply teachers for the tents of the Awlād Ḥassān. Aḥmad wuld ʿAyda (d. 1932) the last *amīr* of the Ādrār, was taught the Ḳurʾān by Fāṭima bint ʿAbd al-Wadūd of the Ahl Ḥādjdj. The following women scholars are amongst the most noted in Mauritania: Taslām bint ʿAmr al-Īdyaydjbiyya, who lived during the 12th/18th century and who was the wife of the scholar Muttāliyya b. Sīdī al-Fāl (*al-Wasīṭ*, 343), and Khadīdja bint Muḥammad al-ʿĀḳil al-Īdabhumiyya, an authoress and commentator on the *Ṣughrā* of al-Sanūsī called *Umm al-barāhīn* and on works of logic. Her noted pupils included her younger brother Aḥmad al-Daymārī (d. 1234/1826-7), to whom she taught the esoteric sciences, the scholar Mukhtār b. Būna (*al-Wasīṭ*, 277-8), al-Māmi ʿAbd al-Ḳādir, the first al-Māmi of Fuuta Tooro (1141-1221/1728-9 to 1806); Maryam bint al-Amīn, a noted poet of the Īdashughra branch of the Īdablaḥsan, who composed an ode in honour of Shaykh Sīdiyya al-Kabīr (1773-1868); ʿĀʾisha bint Sayyid al-Mukhtār b. Sayyid al-Amīn, the wife of Shaykh Sīdī al-Mukhtār al-Kuntī, to whom were attributed miracles, pious deeds, frequent recitation of Ṣūfī prayers and constant support of her husband's many activities. The Shaykh's son Sīdī Muḥammad, the author of the biography of his father *Kitāb al-Ṭarāʾif wa 'l-talāʾid* [see KUNTA], had originally planned a short biography of her, hence his allusion to the miracles of both *shaykhs* in his full title (*karāmāt al-Shaykhayn*). This was never completed. Those few references to her many virtues early in his book, where he outlines his plan, form a fitting tribute to his ideal of Mauritanian Muslim womanhood.

Bibliography: A complete bibliography of Mauritania may be obtained from the following publications: (a) *Actes du VIIème Congrès de l'Institut des Hautes Études Marocaines = Hespéris*, xi, Paris 1930; (b) D.T.B. Blaudin, *Essai de bibliographie du Sahara et des régions avoisinantes*, Arts et métiers graphiques, Paris 1960; (c) Ch. Toupet, *Orientation bibliographique sur la Mauritanie*, in *BIFAN*, xxiv/3-4 (1962), 594-619; Mohamed Ben-Madani, *Selected Bibliography on Mauritania*, in *The Maghreb Review*, ix/5-6 (1984), 135-41. A comprehensive list of archival collections and Arabic manuscripts may be found in C.C. and E.K. Stewart, *Islam and social order in Mauritania*, Oxford 1973, 167-95, and on Arabic sources, in particular, in A. Heymowski, *Mauritanie, Organisation de la bibliothèque nationale de Mauritanie*, UNESCO, Paris 1965, and Abdel Wedoud Ould Cheikh, in Ulrich Rebstock, *Rohkatalog der Arabischen Handschriften in Mauretanien (catalogue provisoire des manuscripts arabes en Mauritanie)*, Tübingen 1985, nos. 6584, 6585; and in *Islam et sociétés au sud du Sahara*, Paris 1987, no. 1, 109-13. Mauritania and the Western Sahara question are extensively covered in Lynn F. Sipe, *Western Sahara, a comprehensive bibliography*, New York and London 1984. In many respects the most informative book about Mauritanian culture, history and geography is *Introduction à la Mauritanie*, (including a comprehensive chronology of the country's history since pre-historic times), published by the CNRS, Paris 1979.

Books by Mauritanians: Aḥmad b. al-Amīn al-Shinḳītī, *al-Wasīṭ fī tarādjim udabāʾ Shinḳīṭ*, Cairo 1329/1911, 1378/1958 and Maktabat al-Waḥda al-ʿArabiyya, Casablanca 1380/1961; Mokhtar ould Hamidoun, *Précis sur la Mauritanie*, in *Études Mauritaniennes*, no. 4, Centre IFAN Mauritanie, St.-Louis du Sénégal 1952; Ahmed Miské, *Al-Wasît. Tableau de la Mauritanie au début du XXe siècle*, Paris 1970; Mohamed Mahmoud ould Jiddou, *Chinguiti (Mauritanie): bilan critique des recherches historiques*, Mémoire, Université de Paris I, 1978; Muḥammad Fāl b. Bābah al-ʿAlawī, ed. Aḥmad wuld al-Ḥassan, *Kitāb al-Takmila fī tārīkh imārat al-Barākina wa 'l-Tarāriza*, Tunis 1986. Other Mauritanian publications are listed in *Mauritania, ciudades y manuscritos*, Instituto Hispano-Arabe de Cultura, Madrid 1981, and C. de Laiglesia, *Breve estudio sobre las tribus Moras de Mauritania*, *ibid.*, 1985. However, by far the most comprehensive list of works on Mauritania, together with manuscript numbers is R. Oswald, *Die Handelsstädte der Westsahara*, Marburger Studien zur Afrika- und Asienkunde, Serie A: Afrika, Band 39, Berlin 1986, esp. 479-542. For a Mauritanian account of the pilgrimage to Mecca, see H.T. Norris, *The Pilgrimage of Aḥmad, son of the Little Bird of Paradise*, Warminster 1977.

Studies on Mauritanian history and the tribes of the Western Sahara: R. Basset, *Mission au Sénégal*. i. *Étude sur le dialecte Zenaga*, *Notes sur le Hassania*, *Recherches historiques sur les Maures*, Paris 1909; I. Hamet, *Chroniques de la Mauritanie sénégalaise*, Paris 1911; the following works of P. Marty: *Études sur l'Islam et les tribus du Soudan*, Paris 1918-19; *Les tribus maures du Sahel et du Hodh*, Paris 1921; *Études sur l'Islam et les tribus maures, les Brakna*, Paris 1916; *L'Émirat des Trarzas*, Paris 1916 (several of these works being reprints of articles which appeared in *RMM* between 1915 and 1921); F. de la Chapelle, *Esquisse d'une histoire du Sahara occidental*, in *Hespéris*, xi (1930), 35-95; Norris, *Saharan myth and saga*, Oxford 1972; idem, *The Arab conquest of the Western Sahara*, London 1986; and more specifically on the "War of Shurbubba"; idem, *Znāga Islam during the seventeenth and eighteenth centuries*, in *BSOAS*, xxxii (1969), 496-526. The early Islamic penetration of the region is discussed by T. Lewicki, *Les origines de l'Islam dans les tribus berbères du Sahara Occidental: Mūsā ibn Nuṣayr et ʿUbayd Allāh ibn al-Ḥabḥāb*, in *SI*, xxxii (1970), 203-14. Islam in a broad perspective is surveyed by A. Traore, *L'Islam en Mauritanie*, in *Introduction à la Mauritanie*, Paris 1979, 155-67 and, specifically, in his *Cheikh Hamahoullah, homme de foi et résistant*, Paris 1983. For Islam in a tribal context, the Almoravids, the 16th and 17th centuries, and the role of the Kunta, see in J.R. Willis, ed., *Studies in West African Islamic History*, i, *The cultivators of Islam*, London 1979, N. Levtzion, *ʿAbd Allāh b. Yāsīn and the Almoravids*, at 78-112; A.A. Batran, *The Kunta, Sīdī al-Mukhtār al-Kuntī and the office of "Shaykh al-Ṭarīqa 'l-Qādiriyya"*, at 114-46, and Norris, *Muslim Ṣanhāja scholars of Mauritania*, at 147-59. For Islam in the *gebla* in the 19th century, see C.C. and E.K. Stewart, *Islam and social order in Mauritania*, and, for the more recent history of Mauritania, the article and bibl. of Geneviève Désiré-Vuillemin, *Aperçu historique de la Mauritanie du XIXe siècle à l'indépendance*, in *Introduction à la Mauritanie*, 67-100. For the history of Islam in the river region, see Moustapha Kane and D. Robinson, *The Islamic regime of Fuuta Tooro*, African Studies Center, Michigan State University 1984, and Oumar Kane, *Les Maures et le Futa-Toro au XVIIIe siècle*, in *Cahiers d'Études Africaines* (1974), 237-52.

Art, languages, literature and music: D. Jacques-Meunié, *Cités anciennes de Mauritanie*, Paris 1961; D. Cohen, *Le dialecte arabe Ḥassānīya de*

Mauritanie, Paris 1963; Catherine Taine Cheikh, *Bibliographie sur le ḥassāniyya*, in *Inventaire des études linguistiques sur les pays d'Afrique Noire d'expression française et sur Madagascar*, 263-78, CILF, Paris 1978; Mohamd El Moktâr ould Bah, *Introduction à la poésie mauritanienne (1650-1900)*, in *Arabica*, xviii (1971), 1-48; Norris, *Shinqīṭī folk literature and song*, Oxford 1968; M. Guignard, *Mauritania*, in *The New Grove dictionary of music and musicians*, ed. S. Sadie, ii, 844-6; Oswald, *op. cit.*

Mediaeval cities and archaeological sites: R. Mauny, *Tableau géographique de l'Ouest Africain au Moyen Age*, Méms. IFAN, no. 61, Dakar 1961 (by far the most comprehensive publication, covering the early and mediaeval sites in Mauritania, including Koumbi Saleh (Ghāna?), Tegdaoust (Awdaghust) and Azougui (Azuggī, Azukkī, etc., the Lamtūna "capital"). More recent excavations undertaken at Tegdaoust have appeared in J. Devisse, *Tegdaoust. 1. Recherches sur Audaghost*, Paris 1970. On the relation between Azougui, the Almoravid town, and the *Imām* al-Ḥaḍramī in Mauritanian history and legend, Portuguese commerce in the Ādrār and the "War of Shurbubba", see Abdel Wedoud Ould Cheikh and B. Saison, *Vie(s) et mort(s) de Al-Imam al-Hadrami. Autor de la postérité Saharienne du mouvement almoravide (II^e-17^e siècle)*, in *Nouv. éd. Maurit.*, i/2 (1984), 55-104, 7 plates. To the former the author of the present article is grateful for much of the information which appears in this article, parts of which are also in the original article by F. de la Chapelle in *EI*[1] art. MOORS. (H.T. NORRIS)

AL-**MŪRIYĀNĪ**, ABŪ AYYŪB SULAYMĀN B. MAKHLAD (the *nisba* stemming from Mūriyān in Ahwāz, see Yāḳūt, *Muʿdjam*, ed. Beirut, v, 221), secretary of the second ʿAbbāsid caliph al-Manṣūr [*q.v.*].

Various stories are given in the sources about how he came to enjoy al-Manṣūr's confidence: that in the time of the last Umayyad caliph Marwān b. Muḥammad he had saved the ʿAbbāsid Abū Djaʿfar from a flogging for embezzling state funds (al-Yaʿḳūbī, al-Djahshiyārī); that he was a freed slave of al-Saffāḥ's, taken into his successor's service (Ibn al-Ṭiḳṭaḳā); and that he had been a secretary in ʿIrāḳ under Hishām's governor Yūsuf b. ʿUmar who later sought the favour of the ʿAbbāsids (al-Balādhurī). The second of these at least seems improbable.

At all events, Abū Ayyūb secured an influence under al-Manṣūr over the finances of the empire, displaying considerable unscrupulousness and placing members of his own family in lucrative positions where possible, being involved in the condemnations of Abū Muslim and Ibn al-Muḳaffaʿ [*q.vv.*] and acting as the caliph's private secretary for some 15 years until al-Manṣūr became aware of his peculations and lost confidence in him. He imprisoned him in 153/770, confiscated his wealth and executed his relatives; Abū Ayyūb himself died in jail the following year.

It is unclear whether Abū Ayyūb was ever designated officially as *wazīr*, as al-Djahshiyārī and later sources name him; the earliest sources simply describe him as a *kātib*; he may have been known informally as vizier without ever being granted the title officially.

Bibliography: Yaʿḳūbī, *Taʾrīkh*, ii, 468; Ṭabarī, iii, 370, 372; Djahshiyārī, *al-Wuzarāʾ wa 'l-kuttāb*, Baghdād 1357/1938, 65-70, 74, 76-88; Masʿūdī, *Murūdj*, vi, 165-6 = § 2378; Ibn al-Athīr, v, 466 ff.; Ibn Khallikān, ed. I. ʿAbbās, ii, 410-14, tr. de Slane, i, 595-6; Ibn al-Ṭiḳṭaḳā, *Fakhrī*, ed. Derenbourg, 236-9; Sourdel, *Vizirat ʿabbāside*, i, 78-87; H. Kennedy, *The early Abbasid caliphate*, London 1981, 103, 203. (C.E. BOSWORTH)

MURRA, BANŪ, an Arab tribal term.

The Arab genealogical works record the name Murra in the genealogies of many tribes, but apparently the name does not always denote functioning tribal groups. In the Ḳuraysh, e.g., Murra is merely a link in the genealogical chain, and not the name of a clan (see Ibn Ḥazm, *Djamharat ansāb al-ʿArab*, Cairo 1962, 14 ff.). It is also difficult to determine whether a given (ancient) Murra was a tribe, a clan or a lineage. As effective tribal groups may be considered the following (among others): (1) the B. Murra b. ʿUbayd, of the Tamīm confederacy. In the 2nd/8th century, they lived in Kūfa (Ibn Ḥazm, 217; Ibn Kathīr, *al-Bidāya wa 'l-nihāya*, Cairo 1932, v, 517). (2) The B. Murra b. Ṣaʿṣaʿa, clan of the poet ʿAbd Allāh b. Hammām [*q.v.*] (al-Wazīr al-Maghribī, *Adab al-khawāṣṣ*, Riyāḍ 1980, 135; al-Ḳalḳashandī, *Ḳalāʾid al-djumān*, Cairo 1963, 115). There seems to be a confusion regarding the genealogy of this poet (see *Madjallat al-ʿArab*, i (1966-7), 37, 48, 1154); however, these B. Murra were better known by their mother's name, Salūl (Ibn Ḥazm, 281, 482; Ibn al-Kalbī, *Djamharat al-nasab*, Beirut 1986, 379-80). Today in Arabia there is a clan called Murra b. Salūl b. Ṣaʿṣaʿa, which forms a part of the great confederacy of ʿUtayba (M.S.Ḥ. Kamāl, in *Madjallat al-ʿArab*, iii (1968-9), 819). (3) The B. Murra of the tribe of Djudhām, who lived in Palestine in al-Ḳalḳashandī's days (8th-9th/14th-15th centuries) (al-Ḳalḳashandī, *Ḳalāʾid*, 68, and see also 57; al-Ḳuṭb, *Ansāb al-ʿArab*, Beirut 1969, 175). (4) The B. Murra of the tribe of Djuhayna, who lived in the Ḥidjāz (al-Hamdānī, *Ṣifat djazīrat al-ʿarab*, Leiden 1884, 180). (5) The B. Murra of Kinda, who had a *masdjid* to themselves in Kūfa (al-Ḳuṭb, 177). (6) The B. Murra of the tribe of Aws; they seem to have been a lineage, since they are said to have occupied one of Medina's "fortresses" (*āṭām*) (al-Ḳalḳashandī, *Nihāyat al-arab*, Cairo 1959, 418; al-Nuwayrī, *Nihāyat al-arab*, Cairo 1955, ii, 330; Yāḳūt, *Muʿdjam al-buldān*, ii, 728). (7) The B. Murra of the tribe of ʿAbd al-Ḳays. One of the families of this group, the ʿUyūnids, ruled al-Aḥsāʾ (Baḥrayn) from the 5th/11th to the 7th/13th centuries (Abū ʿAbd al-Raḥmān b. ʿUḳayl, in *Madjallat al-ʿarab*, xvii [1982-3], 501; art. BAḤRAYN). (8) Several groups called Murra were included in the Shaybān, a branch of the Bakr b. Wāʾil confederacy, whose homeland was basically in ʿIrāḳ. The most important of these groups seems to have been the B. Murra b. Hammām. Some of them held important positions as governors and generals during the late Umayyad and early ʿAbbāsid periods, whereas others joined the Khāridjī opposition. They are usually mentioned, however, as "Shaybānī" rather than as "Murrī" (Ibn Ḥazm, 324-7; Ibn al-Kalbī, 497-519; W. Caskel, *Ǧamharat an-nasab, Das genealogische Werk des Hišām ibn Muḥammad al-Kalbī*, Leiden 1966, ii, 23-4; al-Wazīr al-Maghribī, 120; al-Nuwayrī, *Nihāya*, ii, 348; al-Ṭabarī, ii, 147, 975, 1633-4).

By far the most important Murra groups are the ancient B. Murra b. ʿAwf, and the contemporary Āl Murra of Saʿūdī Arabia.

The B. Murra b. ʿAwf was a North Arabian tribe or clan, part of the larger tribal groups (from the narrower to the broader) Dhubyān, Ghaṭafān, Ḳays ʿAylān, Muḍar. In pre-Islamic times their territories lay to the north and east of Medina (Ḥamad al-Djāsir, in *Madjallat al-ʿarab*, iv [1969-70], 126, 610; al-

Mawṣilī, *al-Isʿāf fī sharḥ shawāhid al-ḳāḍī al-Bayḍāwī wa 'l-Kashshāf*, Edin. Univ. Lib. Or. 2, fol. 149b). They were politically allied to other Ghaṭafānī tribes, in particular the Fazāra, on whose side they fought against several other tribes (al-Mawṣilī, *Isʿāf*, Or. 3, fols. 478a-479b; Ibn al-Athīr, *Usd*, ii, 118 ult.; al-Iṣfahānī, *Aghānī*, ed. al-Shinḳīṭī, Cairo, ix, 141, xiii, 134; al-Baghdādī, *Khizānat al-adab*, Būlaḳ 1299, iv, 217; Ibn al-Athīr, *al-Kāmil*, Beirut 1965, i, 642; al-Nuwayrī, *Nihāya*, xv, 364). The most famous conflict in which they were involved in pre-Islamic times was the war of Dāḥis wa 'l-Ghabrāʾ [*q.v.* in Suppl.], fought between the Dhubyān (including the B. Murra) and the ʿAbs. In connection with this war, the Murrī leaders, notably Harim b. Sinān and al-Ḥārith b. ʿAwf, were praised not for their valour but for their efforts to restore peace. The poet Zuhayr b. Abī Sulmā [*q.v.*] composed his famous *muʿallaḳa* in their honour (M.A. Djād al-Mawlā Bek, A.M. al-Bidjāwī, and M.A. Ibrāhīm, *Ayyām al-ʿArab fī 'l-Djāhiliyya*, Cairo n.d., 246-77; Zuhayr b. Abī Sulmā, *Dīwān*, Beirut 1964, 58 ff., 73 ff.). One of the most famous Murrī heroes in the *Djāhiliyya* was the fearless al-Ḥārith b. Ẓālim, whose actions brought him and his kin into conflict even with the king of Ḥīra. The B. Murra were also raided by forces of the Ghassānid kingdom, apparently as a punishment for trespassing (al-Iṣfahānī, *Aghānī*, x, 20, al-Baghdādī, *Khizāna*, iv, 180-3; al-Mawṣilī, *Isʿāf*, Or. 2, fols. 123b-125a; al-Nābigha, *Dīwān*, Cairo 1293, 42 ff., 63).

At some point in pre-Islamic times, the B. Murra (or a part of them) participated in a Ghaṭafānī attempt to establish a centre competitive with the Kaʿba in Mecca. This attempt failed, and the B. Murra were incorporated into the Meccan religio-economic system. In addition, they had a military alliance with the Jews of Khaybar (Muḥammad b. Ḥabīb, *K. al-Muḥabbar*, Beirut n.d., 267, 315; Yaḳut, iv, 169; Ibn al-Athīr, *Kāmil*, i, 503; Ibn Kathīr, *Bidāya*, ii, 204; al-Iṣfahānī, *Aghānī*, xii, 121, xxi, 63; al-Ṭabarī, i, 1098; al-Wāḳidī, *K. al-Maghāzī*, London 1966, ii, 637; M.J. Kister, *Mecca and Tamīm*, in *JESHO*, iii [1965], 134, 136). These commitments may account for the B. Murra's hostile attitude towards the Prophet Muḥammad. They participated in the siege of Medina organised by Ḳuraysh and the Jews in the year A.H. 5 (al-Khandaḳ), and were raided by Muslim forces on several occasions in subsequent years (al-Wāḳidī, ii, 443-4, 478-80, 723-5, cf. ii, 566, 639, 642; Ibn Hishām, *al-Sīra al-Nabawiyya*, Cairo 1936, iii, 226, iv, 271; Ibn Saʿd, ii/1, 47; al-Ṭabarī, i, 1465, 1473-4, 1592, 1759, 1762-3; al-Balādhurī, *Ansāb al-ashrāf*, Cairo 1959, i, 343, 378-9; al-Zurḳānī, *Sharḥ ʿalā al-Mawāhib al-laduniyya li 'l-Ḳasṭallānī*, Cairo 1325, ii, 250, 266). The Murrī leader al-Ḥārith b. ʿAwf did not give Muḥammad's enemies his wholehearted support, fearing that the Prophet would eventually win. When he tried to come to terms with Muḥammad, however, the B. Murra did not follow him, and killed Muḥammad's messenger to them. After the Muslim conquest of Mecca in the year 8/630, a delegation of the B. Murra arrived in Medina and apparently accepted Islam. Their leader al-Ḥārith was appointed tax-collector, and was asked by Muḥammad to give him his daughter in marriage. This request al-Ḥārith refused, however (al-Wāḳidī, ii, 443, 479-80, 652; al-Ṭabarī, i, 1593; Ibn al-Ḳayyim, *Zād al-maʿād fī hady khayr al-ʿibād*, Cairo 1326, iv, 217-8, 249-50, v, 212; Ibn al-Athīr, *Usd*, i, 343; Ibn Ḥazm, *Djamhara*, 252; Ibn Saʿd, i/2, 42-3; al-Nuwayrī, *Nihāya*, xviii, 42-3; Khalīfa b. Khayyāṭ al-ʿUṣfurī, *Taʾrīkh*, Nadjaf 1967, 63; Ibn Ḳutayba, *K. al-Maʿārif*, Beirut 1970, 61).

After the Prophet's death in 11/632, the B. Murra participated in the so-called apostasy wars (*ridda* [*q.v.*]). Having been defeated by the Muslim forces, they rejoined Islam. In this, as in the previous political vicissitudes, they were closely related to the other Ghaṭafānī groups (al-Ṭabarī, i, 1873-80).

The B. Murra's close relation with the Fazāra (of the Ghaṭafān) did not prevent the occurrence of conflicts between segments of the two groups. The poet al-Rammāḥ b. Mayyāda [see IBN MAYYĀDA] (late Umayyad-early ʿAbbāsid period) recorded a quarrel over property between Fazārīs and Murrīs. A political issue, i.e. the alliance with groups from the tribe of Asad, formed a point of conflict between the Djāhilī Murrī poet al-Nābigha al-Dhubyānī [*q.v.*] and leaders from the Fazāra. The same issue apparently caused division among the B. Murra themselves. For this or other reasons, al-Nābigha's clan aroused the hostility of other Murrī clans, who went as far as to contract an alliance against it. There were other internal conflicts as well, such as the one between the two poets Shabīb b. al-Barṣāʾ and ʿAḳīl b. ʿUllafa in the Umayyad period (Caskel, ii, 19-20; al-Nābigha, *Dīwān*, 69; al-Mawṣilī, *al-Isʿāf*, Or. 2 fols. 79b, 149b, 616a).

During the Umayyad and early ʿAbbāsid periods, several Murrīs attained high positions. Al-Djunayd b. ʿAbd al-Raḥmān served as governor of Khurāsān under the caliph Hishām, and when he died he appointed as his successor one of his fellow-tribesmen, ʿUmāra b. Khuraym. ʿUthmān, son of this ʿUmāra, served as governor of Armenia, Ādharbāydjān and Sidjistān under the caliphs al-Mahdī and Hārūn. ʿUthmān b. Ḥayyān was governor of Medina for al-Walīd b. ʿAbd al-Malik, and his son Riyāḥ held the same position under al-Manṣūr. Muslim b. ʿUḳba and ʿĀmir b. Ḍubāra were important generals. Al-ʿAbbās b. Saʿīd (or Saʿd), related to the Murra although not one of them, was in charge of the *shurṭa* [*q.v.*] under the ʿIrāḳī governor Yūsuf b. ʿUmar (120-6/738-44). Ḥabīb b. Murra was a commander in the army of Marwān II, and after the latter had been killed he continued the fight against the ʿAbbāsids, until eventually he came to terms with ʿAbd Allāh b. ʿAlī. In addition, several Marwānids were married to daughters of the Murrī notable and poet ʿAḳīl b. ʿUllafa (Ibn Ḥazm, 253-4; Ibn al-Kalbī, 415, 418, 420, 424; Ibn al-Athīr, *Kāmil*, v, 513, 520; Ibn Kathīr, *Bidāya*, ix, 303, 312; al-Mawṣilī, *Isʿāf*, Or. 2, fol. 616a, Or. 3, fol. 359a; al-Ṭabarī, ii, 1282, 1564, iii, 56). It was perhaps these close relations with the ruling élite which gave rise to the claim that the B. Murra indeed originated in the Ḳuraysh. As tradition would have it, however, the claim preceded the Umayyad period. Verses of poetry are attributed to the Djāhilī warrior al-Ḥārith b. Ẓālim, in which he claimed Ḳurashī descent after he had been ousted by his own clan, on account of the incessant troubles which he was giving them. Stories were told about Murra's grandmother, or about his father, explaining how they came to leave the Ḳuraysh and settle with the Ghaṭafān, thereby causing a shift in the genealogy of their offspring Murra. When the delegation of the B. Murra came to Muḥammad, they sought to curry favour with him by mentioning that they belonged to his own tribe, the Ḳuraysh. This claim, however, although accepted by some genealogists, was not universally recognised. According to some reports, ʿUmar decreed that they did not belong to the Ḳuraysh (ʿUmar was an expert on *ḳiyāfa* [*q.v.*], the art of identifying genealogical relations). According to another story, it was ʿUmar who suggested that they

should resume their (allegedly) ancient genealogy, but they preferred to remain Ghaṭafānīs on account of their high rank among the Ghaṭafān (Abū al-Baḳā' Hibat Allāh al-Ḥillī, *al-Manāḳib al-mazyadiyya*, ʿAmmān 1984, 460; al-Mawṣilī, *Isʿāf*, Or. 3, fol. 123b; al-Suhaylī, *al-Rawḍ al-unuf*, Cairo 1967, i, 410-16; Ibn Saʿīd al-Andalusī, *Nashwat al-ṭarab*, ʿAmmān 1982, ii, 561; al-Balādhurī, *Ansāb*, i, 42-3; Ibn Kathīr, *Bidāya*, ii, 204; Ibn Ḥazm, 13; Ibn Ḥadjar al-ʿAskalānī, *al-Iṣāba*, Cairo 1328, iii, 616, s.v. Hāshim b. Ḥarmala; M.J. Kister and M. Plessner, *Notes on Caskel's Ǧamharat an-nasab*, in *Oriens*, xxv-xxvi, n. 26).

The B. Murra seem not to have been a large and complex group, yet they dispersed during the Arab conquests, and probably later on as well. Groups of them were found in the various provinces, from Khurāsān in the east, through Syria and Egypt, to Elvira and Seville in Spain. Some of these may have been just splinter groups (Ibn Ḥazm, 252-5; al-Ṭabarī, ii, 425, iii, 625). A part of them remained in the ancient territories in Arabia, where they continued to follow the patterns of their pre-Islamic nomadic life. Together with other Bedouin tribes, they pestered the Ḥidjāzī town-dwellers, so that the caliph al-Wāthiḳ sent punitive expeditions against them in the years 231/846 and 232/847 (*ibid.*, iii, 1339, 1342, 1362; Ibn al-Athīr, *Kāmil*, vii, 19, 29).

The traces of the B. Murra b. ʿAwf are apparently lost. The genealogists of the later Middle Ages do not know anything about them, except that which they found in the earlier books. The dispersed groups of the B. Murra were either assimilated by other tribal groups, or assumed new names, or both.

The modern Āl Murra is a powerful tribe of nomadic pastoralists, which belongs to the élite of the pure, ancient Bedouin tribes in contemporary Saʿūdī Arabia. Their dialect, unintelligible to many, is considered to be the purest Arabic, and they master ancient Bedouin skills such as hunting and tracking down animals and people. With the progress of life in Saʿūdī Arabia, however, hunting became curtailed, and the Āl Murra's services in tracking down criminals became redundant (D.P. Cole, *Nomads of the nomads*, Chicago 1975, 43, 55).

The original home of the Āl Murra was in Nadjrān, from which they started to expand around the middle of the 18th century. Today, their territory extends from Nadjrān northeastward across the Empty Quarter, and in the eastern part they reach northward to the oasis of al-Ḥasā. Occasionally, they exceed their own territory and wander as far north as Kuwayt and southern ʿIrāḳ.

The Āl Murra claim a pre-Islamic origin and a descent from Yām, a branch of the ancient southern tribe of Hamdān. The classical genealogical works, however, do not record a "Murra b. Yām", nor do the Murra themselves know the details of their genealogical chain up to their eponym. They consist of seven or eight clans, whose total number was estimated by Cole (in the late 1960s) at about 15,000 (*op. cit.*, 33-4). The whole tribe never unites except, perhaps, in times of war, yet it has a paramount chief, whose headquarters are located near the town of Abḳā'iḳ. His authority, however, is far from absolute, and his duties are mainly to advise, to solve internal conflicts, and to act as intermediary between the tribe and the state. In general, the Āl Murra are strongly egalitarian, so that their leaders are not singled out in any special way.

Being nomadic pastoralists, the Āl Murra follow a regular pattern of migration. In the summer, the lineages (which include about 50 households each) gather around their own wells. As the weather cools in September, they disperse in small groups of two to four households to seek pasture farther away from their wells. During the months of December or January, after the first rains, they migrate northward, again in small uncoordinated groups. In late March or April, they start to drift back to their wells where they congregate in the larger summer camps. Unlike many other Bedouin tribes, the Āl Murra do not have a base in the form of a permanently settled section. They do have four small oases in the northern part of their territory, the largest of which is Yabrīn, but they do not inhabit them. Only about a third of the tribe frequents these oases twice a year, once in order to pollinate the dates, the other in order to harvest them (Cole, 30; K.S. Twitchell, *Saudi Arabia*, Princeton 1958, 35, 75). These oases in fact represent an abortive attempt on the part of the Saʿūdī government to sedentarise the Āl Murra. In the beginning of the 20th century, King ʿAbd al-ʿAzīz created the organisation of the Ikhwān [*q.v.*], whose purpose was to spread the Wahhābī doctrine and to bring the Bedouins back to the original and true form of Islam. Within this project, settlements were established for the Bedouins [see AL-HIDJAR], but the Āl Murra found it impossible to abandon their nomadic way of life. However, the royal attempt at sedentarising them does not reflect a conflict between the Āl Murra and the ruling house. On the contrary, the tribe is allied with the Āl Saʿūd, and has given it its ardent support. Although in the past there were confrontations between Murrīs and the Āl Saʿūd, the founder of the modern state of Saʿūdī Arabia, ʿAbd al-ʿAzīz b. Saʿūd, found among the Āl Murra refuge in times of trouble, and aid in times of struggle. The alliance is cemented by the marital ties which exist between the royal house and noble families of the tribe.

The Āl Murra were not unaffected by both the changes which occurred in Arabia with the founding of the modern state, and the discovery of oil. Many of them became incorporated in the national guard, so that they receive salaries from the state. Many others engage in wage-labour, which involves settlement, albeit on an individual basis. On the other hand, traditional means of subsistence beside camel raising, such as hunting and raiding, became unlawful. Yet on the whole, the Āl Murra are still a tribe of nomadic pastoralists. Their social structure and their way of life, at least until the late sixties, remained unchanged.

Bibliography: The indices of the works cited in the text should be consulted, in addition to the specific references. In addition, see Ibn ʿAbd Rabbihi, *al-ʿIḳd al-farīd*, Cairo 1321, indices prepared by M. Shafīʿ, Calcutta 1935, s.vv. Murra, Ghaṭafān, al-Ḥārith b. Ẓālim (the indices of the later Cairo edition are less adequate); Ibn Rasūl, *Ṭurfat al-aṣḥāb fī maʿrifat al-ansāb*, Damascus 1949, 32, 49, 58, 59, 62, 68, 71, 126; Ibn Ḥabīb, *Mukhtalif al-ḳabā'il wa-mu'talifuhā*, Wiesbaden 1964, 65; Mubarrad, *Nasab ʿAdnān wa-Ḳaḥṭān*, ed. (Ella Landau-Tasseron)

MURSAL (a.), a technical term in the science of *ḥadīt͟h* [*q.v.*]. The oldest definition of this term, when applied to an *isnād* [*q.v.*], was that a link was missing. This definition was soon abandoned for a more specific one: *mursal* is an *isnād* in which between the Successor and the Prophet the name of the Companion is lacking. In the course of time, the older definition gave rise to the technical term *munḳaṭiʿ* (lit. "cut up"; its opposite is *muttaṣil*). Mediaeval Muslim *ḥadīt͟h* experts got rid of the confusion by concluding that not every *munḳaṭiʿ* is *mursal*, but every *mursal* is *munḳaṭiʿ*. (A closely related technical term for an *isnād* which stops at the Companion, thus without mention of the Prophet, is called *mawḳūf*; another term for an *isnād* which is "cut off" at the level of the Successor, thus without mention of either the Prophet or a Companion, is called *maḳṭūʿ*; finally, although it has the appearance of a contradiction in terms, with a tradition qualified as *mursal al-ṣaḥābī* is meant that a Companion describes some event involving the Prophet at which he/she could not possibly have been present, such as ʿĀʾis͟ha's account of the first revelation Muḥammad allegedly received, cf. Nawawī's commentary on Muslim's *Ṣaḥīḥ*, ed. Cairo 1349, 30.)

A text in which *mursal* has still its original meaning (later reserved for *munḳaṭiʿ*) is the introduction which Muslim b. al-Ḥad̲j̲d̲j̲ād̲j̲ (d. 261/875 [*q.v.*]) added to his *Ṣaḥīḥ* (ed. M.F. ʿAbd al-Bāḳī, i, 30, tr. G.H.A. Juynboll in *JSAI*, v [1984], 296). In the *Risāla* of al-S͟hāfiʿī (d. 204/820 [*q.v.*]) there is a passage (461-71) in which both terms are still used indiscriminately, although *mursal* gradually seems to be acquiring its own (later) definition.

At first there was still difference of opinion on whether or not certain *mursalāt* or *marāsīl* traditions of certain major Successors constituted an argument (*ḥud̲j̲d̲j̲a*) in a legal argument. It was finally al-S͟hāfiʿī who settled the matter: they do not, unless substantiated by a Prophetic tradition of more or less the same purport supported by an uninterrupted (*muttaṣil*) and sound *isnād*. The most extensive account of this dispute is given in Ibn al-Ṣalāḥ, *Muḳaddima* [sc. *fī ʿulūm al-ḥadīt͟h*], edited together with the *Maḥāsin al-iṣṭilāḥ* of ʿUmar b. Raslān al-Bulḳīnī by ʿĀ. ʿAbd al-Raḥmān, Cairo 1974, 130-43, and al-Suyūṭī, *Tadrīb al-rāwī*, ed. ʿA. ʿAbd al-Laṭīf, i, 195-207.

The historical origins of *mursal* traditions may be reconstructed as follows: During the 1st/7th century, a number of legal experts in the different centres of Islamic learning gave their opinions on legal issues about which the public had sought their advice and these opinions acquired a certain fame. Thus we find in Medina Saʿīd b. al-Musayyab (d. 94/713 [see fuḳahāʾ al-madīna, in Suppl.]), in Mecca ʿAṭāʾ b. Abī Rabāḥ (d. 114/732), in Damascus Makḥūl (d. 112-8/730-6), in Baṣra Ḥasan al-Baṣrī (d. 110/728 [*q.v.*]) and in Kūfa al-S͟haʿbī (d. 103-10/721-8), to name only one for each main centre. (For a survey of other early *fuḳahāʾ*, see fiḳh.) In the course of the 2nd/8th century, these legal opinions were partly "raised to the level" (Arabic: *rafʿ*) of Prophetic traditions by the addition of a name of a Companion who was reported to have heard the Prophet decide thus in the matter, and partly entirely reworded and provided with fictitious *isnāds* (Arabic *waḍʿ*) also going back to the Prophet, this in order to meet the growing demand for precedents which might 'establish' the antiquity, or even the "Prophetic provenance", of a legal decision. In this way a large number of these *marāsīl*, thus doctored to look like what later became known as genuine Prophetic *ḥadīt͟h*, found its way into collections which were later canonised, and from the point of view of Muslim scholarship became authenticated as Prophetic *sunna*. Western students of *ḥadīt͟h*, on the other hand, are inclined to see these *marāsīl* as the oldest relics of 1st/7th-century legal thinking in Islam, a phenomenon of basically post-Prophetic origin, in the formation of which Muḥammad's example or inspiration may at most have played a role transmitted through living memory. However, because of the wholesale *rafʿ* and *waḍʿ* mentioned above, a standardisation which effectively obliterated the traces of their true origins, the route taken by each of these *marāsīl* individually must be considered as no longer traceable, except perhaps in the case of a few isolated instances.

MURS͟HID (a.), literally, "one who gives right guidance, *rus͟hd*, *irs͟hād*, in Ṣūfī mystical parlance, the spiritual director and initiator into the order (*ṭarīḳa*) of the novice or *murīd* [*q.v.*] who is following the Ṣūfī path; synonyms are *baba*, *pīr* and *s͟hayk͟h* [*q.vv.*]. As part of the guidance for the postulant, the *murs͟hid* bestows various tokens of spiritual grace and attainment upon the seeker [see murīd for details].

A special use of the term within the Persian world, in the compound form *murshid-i kāmil* "perfect spiritual director", occurred amongst the Ṣafawids [*q.v.*] who ruled during the 10th-early 12th/16th-early 18th centuries in Persia. From our first knowledge of the Ṣafawiyya Ṣūfī order in 8th/14th century Ādharbāydjān, it seems that its *shaykhs*, from their base at the Ardabīl [*q.v.*] shrine of the founder, assumed this title of *murshid-i kāmil*, demanding complete obedience from all their adherents. This requirement continued to be exacted by the Ṣafawid Shāhs when they had also become temporal monarchs, *pādishāhs* [*q.v.*], in Persia as a whole, with resultant stresses within the state and tensions amongst the loyalties of their servants. See ḲIZIL-BĀSH and also R.M. Savory, *The emergence of the modern Persian state under the Ṣafavids*, in *Iran-Shinasi, Jnal. of Iranian Studies, Tehran University*, ii/2 (1971), 21-4, repr. in *Studies on the history of Ṣafawid Iran*, Variorum Reprints, London 1987, no. VIII; idem, *Iran under the Safavids*, Cambridge 1980, index.

Bibliography: See also that for MURĪD. (ED.)

MURSHID ḲULĪ KHĀN, commander and official of Mughal India (d. 1068/1658). He was a Turk by birth and first in the employment of ʿAlī Mardān Khān, the Persian governor of Ḳandahār. He came to India along with ʿAlī Mardān Khān when the latter surrendered Ḳandahār to the Mughals (1047/1638). He was appointed *dīwān* of the Pandjab in 1049/1639 and of Multān in 1051/1641. His later offices were: *Mīr ātish* (1052/1645), *Fawdjdār* of the foot-hills of Kangra (1055/1645) and *Akhta begi* (1058/1648). When Awrangzīb was appointed Viceroy of the Deccan in 1062/1652, he was appointed *Dīwān* of Balaghat and was promoted to the rank of 1500/500. In 1066/1656 he was given the additional charge of Painghat, thus holding the charge of the revenues of the whole of Mughal Deccan with the rank of 1500/1000.

Murshid Ḳulī Khān made significant changes in the revenue administration of the Deccan. He appointed new village headmen (*muḳaddams*). He established the system of "differential" crop-sharing and took half of the produce from the dry lands, one-third from the land irrigated by wells and one-fourth from those under superior crops. The old system of assessing the revenue on the basis of plough-counts was still retained in certain areas, but over the larger area the system of measurement was introduced. For this purpose, Murshid Ḳulī Khān determined the *rai* (standard output per unit of area) for each crop, and having in view the prices fixed the *dastūr* or cash rate (later to be known as the *dhara* of Murshid Ḳulī Khān). He also advanced loans (*taḳāwī*) to the cultivators for the purchase of seed and cattle.

When Awrangzīb marched northwards to contest the throne with Dārā Shukūh [*q.v.*], Murshid Ḳulī Khān accompanied him as his *Mīr ātish*, but was killed at the battle of Dharmat in 1068/1658.

(M. ATHAR ALI)

MURSHIDĀBĀD, a district of India, in the Presidency Division of the State of West Bengal, area 24,641 km² (1971), population 2,940,204 (1971), of whom 1,503,427 were males and 1,436,777 were females. Of the total population, 56.34% were Muslims and 43.6% Hindus. Murshidābād is one of the few districts in India where Muslims form a majority of the population, the only others being Malappuram District of Kerala State and six districts of the State of Jammu and Kashmir. In the decade 1961-71, the Muslim population grew by 28.5%, and the Hindu population by 26.6%. In the rural areas of the district, Muslims form 59.3% of the total rural population, but in urban areas only 24.2% of the total urban population, a reversal of the more usual pattern in India, where the overall figures (1971) give Muslims as 16.2% of the urban population, and only 10% of the rural. At the partition of India in 1947, Murshidābād was initially allocated to East Pakistan on account of its Muslim majority population, but when the details of the Radcliffe Award were published it was re-allocated to India. Apart from a small community of Shīʿīs in Lalbagh sub-division, the Muslims of the rest of the district are Sunnī. Of these "Shaykh" has become the common designation for all who cannot claim to be Sayyids, Paṭhāns, or Mughals.

The history of Murshidābād is part of the general history of Bengal [see BANGĀLA] until the early 18th century, when it came to prominence in connection with the establishment of a new administration by Murshid Ḳulī Khān (to be distinguished from the Murshid Ḳulī Khān of the previous article). Until this time, the town of Murshidābād had been known as Makhṣūṣābād, and had not attracted many Muslim settlers, even in the period of Mughal rule, partly because it was regarded as unhealthy on account of its low-lying position in the Bengal delta. From the beginning of the 17th century, however, it began to be important as a centre of commerce, particularly in silk, and attracted the attention of English, French and Dutch trading agents. Murshid Ḳulī Khān, a Brahman by birth, had been sold as a boy to Ḥādjdjī Shafīʿ Iṣfahānī, who brought him up as his son, under the name of Muḥammad Hādī. Educated in Persia, he was subsequently given high office by the Mughal emperor Awrangzīb, and became *dīwān* of Bengal, and in 1702 was given the title of Murshid Ḳulī Khān. The revenue of the province until then had been insufficient even to pay the salaries of the military and civil establishment, and he therefore set up a new and more efficient system of revenue, choosing as his contractors new men of the official and trading class and thus creating a new (and eventually landed) aristocracy in Bengal. The change of name of his capital from Makhṣūṣābād to Murshidābād appears to have been made in 1705. The English East India Company set up a factory in the district, at Cossimbazar, in 1659. In his dealings with foreign trading companies is to be seen a large part of Murshid Ḳulī Khān's success in increasing the revenue; he was also in personal life a man of puritan character, sleeping little, observing the stated times of prayer, and engaging himself "in copying the Ḳurʾān and administering justice" (Karim, 238). Himself a Shīʿī, he was the first of a succession of Shīʿī *ṣūbadārs* of Bengal, including those who were nominal only, after the Battle of Plassey in 1757. From Murshidābād, the Shīʿīs migrated and formed colonies in other parts of Bengal

(Karim, 247). Finally, it should be noted that Murshidābād was a mint city, becoming a standard one for the East India Company, called on the earliest issues Makhṣūṣābād.

District Handbook*: *Murshidabad*; Abdul Karim, *Murshid Qūlī Khān and his times*, Asiatic Society of Pakistan Publications, no. 12, Dacca 1963. Murshidābād has a number of important Islamic monuments; see for these, Catherine B. Asher, in G. Michell (ed.), *The Islamic heritage of Bengal*, UNESCO, Protection of the cultural heritage, 1, Paris 1984, 87-100, 206-12. (T.O. Ling)

MURSIYA, Murcia, a town in the south-east of Spain, 43 m/140 feet above sea level in the centre of the famous *huerta de Murcia* ("gardens of Murcia") watered by the river Segura (Ar. *Wādī Shakūra* [*q.v.*] or *Wādi 'l-Abyaḍ*, "the white river") . Murcia has a large population, 265,000 people (1980), and is the capital of the province of the same name and the see of a bishop; it has also a university; this province has over a million inhabitants, with an area of 11,317 km². Its port, 40 miles to the south on the Mediterranean coast, is Cartagena, the *Karṭādjanna* [*q.v.*] or *Karṭādjannat al-Khulafā'* of the Arabs.

The situation of Murcia in the centre of very fertile gardens, forming an island of vegetation in a bare country poorly endowed by nature, had been noticed already by the Arab geographers who give more or less long accounts of it. Abu 'l-Fidā', for example, says that, it was like Seville for the number of its groves and parks (*muntazahāt*), among which he mentions the famous al-Rushāka.

Murcia in the Umayyad period was the capital of a province or *kūra* which bore the name of Tudmīr [*q.v.*]. This name which is connected with the name of Theodemir, a Visigothic chief of the region at the time of the Muslim conquest, was also applied to the town of Murcia itself, from the time when it supplanted Orihuela [see uryūla] as the chief town of the region. Indeed, almost all the Arab authors who speak of Murcia agree in saying that it was a comparatively recent foundation; it was built by order of the Umayyad *amīr* ʿAbd al-Raḥmān II al-Ḥakam about the year 210/825, but according to *al-Rawḍ al-miʿṭār*, in 216/831 by the governor Djābir b. Mālik b. Labīd.

The land of Tudmīr and with it, of course, Murcia was much involved in the civil wars provoked by the rivalry of the Yamanīs and the Muḍarīs of Spain in the period of the independent *amīrs* of Cordova. In the reign of ʿAbd Allāh (275-300/888-912), a rebel, the renegade Daysam b. Isḥāḳ, rose there with the connivance of the famous agitator Ibn Ḥafṣūn [*q.v.*]. He ruled independently all the province of Tudmīr until the *amīr* of Cordova sent to suppress him in 283/896 an army led by his uncle Hishām b. ʿAbd al-Raḥmān b. al-Ḥakam and the general Aḥmad b. Muḥammad Ibn Abī ʿAbda. Daysam was defeated between Aledo and Lorca and the latter town besieged. The country was only definitely pacified and restored to the central power in Cordova in the reign of the caliph ʿAbd al-Raḥmān III and his successor al-Ḥakam II.

During the events which ended in the breakup of Umayyad Spain, Murcia became, like the majority of the great towns of the Peninsula, the capital of a little independent state (*ṭā'ifa*) [see mulūk al-ṭawā'if. 2.]. At first in the hands of the "Slavs" [see ṣaḳāliba] Khayrān and Zuhayr (403-29/1012-38) along with Alméria and Jaen, the principality of Murcia was then for some time attached to the kingdom of Valencia, in the region of ʿAbd al-ʿAzīz al-Manṣūr Ibn Abī ʿĀmir and his son ʿAbd al-Malik al-Muẓaffar. The governor who then ruled Murcia was Abū Bakr Aḥmad b. Isḥāḳ Ibn Ṭāhir; when he died in 455/1063, after amassing a considerable fortune, he was succeeded by his son Abū ʿAbd al-Raḥmān Muḥammad, who soon proclaimed himself independent and repudiated the authority of the Valencian dynasty.

The principality of Ibn Ṭāhir soon aroused the covetousness of Ibn ʿAmmār [*q.v.*], minister of al-Muʿtamid Ibn ʿAbbād [*q.v.*], king of Seville 471/1078 and an expedition was sent against Murcia with the help of an independent lord of the district, Ibn Rashīḳ. Ibn Ṭāhir was taken prisoner and shut up in Monteagudo, but escaping, he reached Valencia where after acting as adviser to al-Ḳādir Ibn Dhi 'l-Nūn [*q.v.*] and having almost succeeded him, he finally died in 508/1119. The conquest of the kingdom of Murcia by Ibn ʿAmmār in the name of the ʿAbbādids was only nominal, and it was Ibn Rashīḳ who exercised the real power instead of Ibn Ṭāhir.

The kingdom of Murcia was one of the first districts of the Peninsula to be conquered by the Almoravids [see al-murābiṭūn. 4.]. Murcia was taken for Yūsuf b. Tāshfīn [*q.v.*] in Shawwāl 484/November-December 1091 by the Lamtūna general Ibn ʿĀ'isha, who next took Denia and Játiva. Ibn ʿĀ'isha remained governor of Murcia; he was replaced later by Abū Bakr b. Ibrāhīm Ibn Tīfilwīt, then by a brother of the sultan ʿAlī b. Yūsuf, Abū Isḥāḳ Ibrāhīm.

A general rising against the Almoravids took place in Spain in the beginning of the 6th/12th century and gave rise to the formation of a new series of kingdoms or "taifas". Murcia was therefore between 540-3/1145-7 in the hands of two rival leaders, ʿAbd Allāh b. Iyāḍ and ʿAbd Allāh b. Faradj, until the Valencian ruler Ibn Mardanīsh [*q.v.*] seized it and took up his residence there. This individual, who was of Spanish origin, soon became the powerful ruler of all south-eastern Spain, between Valencia and Almeria, and instituted a series of fruitful alliances with the Christian rulers of Catalonia, Aragon and Castile. He was for long able to resist the attacks of the first Almohads ʿAbd al-Mu'min [*q.v.*] and Yūsuf [*q.v.*], and it was only after his death in 567/1172, during the siege of his capital Murcia, that his kingdom passed finally to the Almohad sovereigns.

From the fall of the Almohad empire in Spain until its conquest by the Christians, Murcia had a very troubled existence. It was in turn the residence (from the beginning of the 7th/13th century) of princes of the family of the Banū Hūd of Saragossa: Muḥammad b. Yūsuf al-Mutawakkil, the latter's uncle, Muḥammad, Abū Bakr Muḥammad al-Wāthiḳ, then it passed to the Naṣrids of Granada, to ʿAbd Allāh b. ʿAlī Ibn Ashkīlūla. For details of the obscure history of this period, see the monograph by Gaspar Remiro quoted below. According to Ibn al-Abbār (cf. M. Bencheneb, *Notes chronologiques sur la conquête de l'Espagne*, in *Mélanges René Basset*, Paris 1923, ii, 73), Murcia was surrendered to the Christians by Aḥmad b. Muḥammad b. Hūd, son of the governor, on Thursday 10 Shawwāl 640/2 April 1243. But if we may believe the Christian chronicles, it was in February 1266 that Don Jaime of Aragon took definite possession of Murcia.

AL-SHARĪF AL-**MURTAḌĀ**, ABU 'L-ḲĀSIM ʿALĪ B. AL-ḤUSAYN b. Mūsā... b. al-Ḥusayn b. ʿAlī b. Abī Ṭālib, Imāmī theologian, grammarian, writer and poet, in short, an Arab *adīb*, born and died in Baghdād (355-436/967-1044). A direct descendant of ʿAlī, he was, in the city of his birth, *naḳīb* [*q.v.*] of the Ṭālibīs, and his predominance in Imāmī circles furthermore earned him the titles of Dhu 'l-Madjdayn and ʿAlam al-Hudā. Little is known of his life, other than the following facts: he had a friend and pupil in Abū Djaʿfar al-Ṭūsī (385-460/995-1067 [*q.v.*]), he was an associate of Hilāl al-Ṣābiʾ [*q.v.*], and he defended al-Mutanabbī when Ibn Djinnī (d. 392/1002 [*q.v.*]) criticised him. It should also be noted that he performed the duties of director of the *Dār al-ʿilm* [*q.v.*] and, according to an anecdote relayed by the son of Hilāl al-Ṣābiʾ, he received an income of 24,000 *dīnārs* per year.

Although abundant, his work survives only in part, and is furthermore not easily distinguished from that of his brother, al-Sharīf al-Raḍī [*q.v.*]. From the list of his works, as compiled primarily by al-Ṭūsī and Yāḳūt, the following deserve mention: (1.) the principal work, *Ghurar al-fawāʾid wa-durar al-ḳalāʾid bi 'l-muḥāḍarāt*, known more briefly as *al-Ghurar wa 'l-durar* and, erroneously, as *al-Amālī*, was completed on 22 Djumādā I 413/14 August 1022; this amounts to a genuine book of *adab* divided into 80 *madjālis*, in which the main theme, the interpretation in a somewhat Muʿtazilī manner of verses of the Ḳurʾān and of *ḥadīths*, is supplemented by philological and lexicographical commentaries illustrated by a large number of poetic quotations. It was lithographed in Tehran in 1272, published, under the title *al-Amālī*, in Cairo in 1325/1907, then again in Cairo in 1373/1954, through the efforts of Muḥammad Abu 'l-Faḍl Ibrāhīm. (2.) the *Kitāb al-Shāfī fi 'l-imāma* is a defence of the imāmate of the Twelve Imāms against the *Mughnī* of the *ḳāḍī* ʿAbd al-Djabbār (d. 415/1025 [*q.v.*]); a summary, written in 432/1040 by al-Ṭūsī, under the title *Talkhīṣ al-Shāfī*, was included in a collection published in Tehran in 1301. (3.) the *Irshād al-ʿawāmm* was also printed in a collection published in Tehran in 1304 (cf. E.G. Browne, *A year among the Persians*, 554). (4.) *al-Dharīʿa ilā uṣūl al-sharīʿa*, ed. Abu 'l-Ḳāsim Gurdjī, Tehran 1967-9. (5.) *al-Masāʾil al-nāṣiriyya*, which features in the collection entitled *al-Djawāmiʿ al-fiḳhiyya* (Tehran 1276), is composed of about a hundred *masāʾil* on the most diverse subjects, partially preserved, in particular in Mashhad. (6.) *al-Intiṣār*, on the differences between the Shīʿīs and the other *madhāhib*, was lithographed in Bombay in 1315 and printed in the *Djawāmiʿ fiḳhiyya* (see I. Goldziher, *Vorlesungen über den Islam*, 271). (7.) *al-Shihāb fi 'l-shayb wa 'l-shabāb*, Istanbul (*Djawāʾib* edition) 1302 and previously in a collection published in Tehran in 1272 (see Goldziher, *Abhandlungen zur arab. Philologie*, ii, pp. xvi, lvi). (8.) *Sharḥ al-ḳaṣīda al-mudhahhaba fī madḥ Amīr al-Muʾminīn ʿAlī b. Abī Ṭālib* of al-Sayyid al-Ḥimyarī [*q.v.*], ed. Muḥammad al-Khaṭīb, Beirut 1970. (9.) *Dīwān*, ed. R. al-Ṣaffār, Cairo 1958. (10.) *Tanzīh al-anbiyāʾ*, Tabrīz 1290, 1303, Nadjaf 1332. (11.) *Risāla fī radd (naḳd) iʿtibār al-ʿadad fi 'l-shuhūr* exists in Persian translation. Other works recently published include (12.) *Djumal al-ʿilm wa 'l-ʿamal*, ed. R. al-Ṣaffār, Nadjaf 1967, and ed. Aḥmad al-Ḥusaynī, Nadjaf 1967. (13.) *Rasāʾil al-Sharīf al-Murtaḍā*, ed. Aḥmad al-Ḥusaynī, Kāẓimiyya 1966.

Some critics also reckon al-Sharīf al-Murtaḍā to be the compiler of the *Nahdj al-balāgha* [*q.v.*], a collection of speeches and sayings supposedly by ʿAlī b. Abī Ṭālib, which others attribute to his brother al-Raḍī (thus in the Yemen, according to the Ambrosiana mss., see *RSO*, iii, 5 ff.). Thus the authenticity of the contents of the *Nahdj al-balāgha* remains controversial, as does the authorship of two works which have been variously attributed to al-Murtaḍā and to al-Raḍī. The anthology *Ṭayāf al-khayāl* is definitely to be attributed to al-Murtaḍā, *pace* Derenbourg (*cat. Esc.*², no. 348), since he quotes in the preface his own work *al-Shihāb* (no. 7 above); it has now been edited by Ḥasan Kāmil al-Ṣayrafī, Cairo 1381/1962. But the recent editors of *Talkhīṣ al-bayān fī madjāzāt al-Ḳurʾān* (ed. Muḥ. ʿAbd al-Ghanī Ḥasan, Cairo 1955) and *al-Madjāzāt al-nabawiyya* (ed. Ṭāhā Muḥ. al-Zaynī, Kuwait 1967) have opted for al-Raḍī as author of these (in the first case, following Ḥādjdjī Khalīfa, no. 11377). Also mentioned in the same place by Ḥādjdjī Khalīfa is a *Kitāb Maʿānī al-Ḳurʾān*, which the Turkish commentary on the *Dīwān* of al-Murtaḍā published under the name of ʿAlī attributes also to al-Murtaḍā.

(AL-)**MURTAḌĀ** B. AL-ʿ**AFĪF** (= ʿAfīf al-Dīn?) b. Ḥātim b. Muslim al-Maḳdisī al-Shāfiʿī, the author of a work in Arabic on ancient Egypt of which the Bibliothèque Mazarine in Paris once possessed a ms. of the 10th/16th century, now lost, but of which there exists a French translation by the translator of al-Makīn [*q.v.*], Pierre Vattier (d. 1667), and published at Paris in 1666 under the title *L'Égypte de Murtadi fils du Gaphiphe, où il est traité des Pyramides, du débordement du Nil et des autres merveilles de cette Province, selon les opinions et traditions des Arabes.* This version, in its turn translated into English as early as 1672, has been profitably utilised by the literary orientalism of recent centuries. If it is true that the author's main aim is to describe the marvels of ancient Egypt, he nevertheless devotes a part of it to the beginnings of the Islamic

history of the country, in particular, to ʿAmr b. al-ʿĀṣ [*q.v.*] and the foundation of his mosque.

Since Vattier's work deserves rescue from oblivion, it was made the subject of a facsimile edition accompanied by a copious and instructive commentary at the hands of G. Wiet (Paris 1953). An interested reader can find in the introduction some information on the author (who lived, at the earliest, in the 7th/13th century), his possible sources and the connections which should be made with other works of the same type. (ED.)

MURTAḌĀ NIẒĀM SHĀH [see NIẒĀM SHĀHĪS].

MURTADD (A.), "one who turns back", especially from Islam, an apostate. Apostasy is called *irtidād* or *ridda*; it may be committed verbally by denying a principle of belief or by an action, for example treating a copy of the Ḳurʾān with disrespect.

1. In the Ḳurʾān, the apostate is threatened with punishment in the next world only; the "wrath of God" will fall upon him according to a sūra of the latest Meccan period (XVI, 108-9) and severe punishment (*ʿadhāb*) "except he did it under compulsion and his heart is steadfast in belief". Similarly, it is written in the Medinan sūra III, 80 ff., "... This is the punishment for them, that the curse of Allāh, the Angels and of men is upon them for all time (82); the punishment shall not be lightened for them and they shall not be granted alleviation, (83) except for those who later repent and make good their fault, for Allah is forgiving and merciful. (84) Those who disbelieve after believing and increase in unbelief, shall not have their repentance accepted; they are the erring ones. (85) Those who are unbelievers and die as unbelievers, from none of them shall be accepted the earth-full of gold, even if he should wish to ransom himself with it; this is a painful punishment for them and there will be no helpers for them" (cf. also IV, 136; V, 59; IX, 67). Sūra II, 214, is to be interpreted in the same way, although it is adduced by al-Shāfiʿī as the main evidence for the death penalty, "... He among you who falls away from his belief and dies an unbeliever—these, their works are fruitless in this world and the next, and they are the companions of the fire for ever".

2. There is little echo of these punishments in the next world in the Traditions (cf. Ibn Mādja, *Ḥudūd*, *bāb* 2; Ibn Ḥanbal, i, 409, 430, 464-5; v, 4, 5). Instead, we have in many traditions a new element, the death penalty. Thus Ibn ʿAbbās transmits an utterance of the Prophet, "Slay him, who changes his religion" or "behead him" (Ibn Mādja, *Ḥudūd*, *bāb* 2; al-Nasāʾī, *Taḥrīm al-dam*, *bāb* 14; al-Ṭayālisī, no. 2689; Mālik, *Aḳḍiya*, tr. 15; cf. also al-Bukhārī, *Istitābat al-murtaddīn*, *bāb* 2; al-Tirmidhī, *Ḥudūd*, *bāb* 25; Abū Dāwūd, *Ḥudūd*, *bāb* 1; Ibn Ḥanbal, i, 217, 282, 322). According to another tradition of Ibn ʿAbbās and ʿĀʾisha, the Prophet is said to have permitted the blood to be shed of him "who abandons his religion and separates himself from the community (*djamāʿa*)" (al-Bukhārī, *Diyāt*, *bāb* 6; Muslim, *Ḳasāma*, tr. 25, 26; al-Nasāʾī, *Taḥrīm al-dam*, *bāb* 5, 14; *Ḳasāma*, *bāb* 6; Ibn Mādja, *Ḥudūd*, *bāb* 1; Abū Dāwūd, *Ḥudūd*, *bāb* 1; al-Tirmidhī, *Diyāt*, *bāb* 10; *Fitan*, *bāb* 1; Ibn Ḥanbal, i, 382, 444). But there was no agreement from the first on the nature of the death penalty; thus ʿIkrima (d. 106/724) and Anas b. Mālik (d. 91/710) criticise ʿAlī for having burned apostates (al-Bukhārī, *Istitābat al-murtaddīn*, *bāb* 2; al-Tirmidhī, *Ḥudūd*, *bāb* 25; Abū Dāwūd, *Ḥudūd*, *bāb* 1; Ibn Ḥanbal, i, 217; according to a variant the reference is to Zindīḳs or Zuṭṭ, who served idols; al-Nasāʾī, *Taḥrīm al-dam*, *bāb* 14; Ibn Ḥanbal, i, 282, 322). According to a tradition of ʿĀʾisha's, apostates are to be slain, crucified or banished (al-Nasāʾī, *Taḥrīm al-dam*, *bāb* 11; *Ḳasāma*, *bāb* 13; Abū Dāwūd, *Ḥudūd*, *bāb* 1).

On the question whether the apostate should be given an opportunity to repent, traditions differ. According to one tradition of Abū Burda (d. 104/722), Muʿādh b. Djabal refused to sit down until an apostate brought before him had been slain "in accordance with the decision of God and of his apostle" (al-Bukhārī, *Maghāzī*, *bāb* 60; *Istitābat al-murtaddīn*, *bāb* 2; *Aḥkām*, *bāb* 12; Muslim, *Imāra*, tr. 15; Abū Dāwūd, *Ḥudūd*, *bāb* 1; Ibn Ḥanbal, v, 231). In the same tradition in Abū Dāwūd, however, it is added that they had tried in vain for 20 nights to convert the apostate. The caliph ʿUmar is also represented as disapproving of this proceeding with the words: "Did you then not shut him up for three days and give him a round loaf (*raghīf*) daily and try to induce him to repent. Perhaps he would have repented and returned to obedience to God. O God! I was not there, I did not order it and I do not approve; see, it was thus reported to me" (Mālik, *Aḳḍiya*, tr. 15). There are also traditions according to which God does not accept the repentance of an apostate (Ibn Ḥanbal, v, 2) and others according to which even the Prophet forgave apostates (al-Nasāʾī, *Taḥrīm al-dam*, *bābs* 14, 15; Abū Dāwūd, *Ḥudūd*, *bāb* 1; Ibn Ḥanbal, i, 247; al-Ṭabarī, *Tafsīr*, iii, 223).

3. *a*. In *Fiḳh*, there is unanimity that the male apostate must be put to death, but only if he is grown up (*bāligh*) and *compos mentis* (*ʿāḳil*) and has not acted under compulsion (*mukhtār*). A woman, on the other hand, is imprisoned, according to Ḥanafī and Shīʿī teaching, until she again adopts Islam, while according to al-Awzāʿī, Ibn Ḥanbal (al-Tirmidhī, *Ḥudūd*, *bāb* 25), the Mālikīs and Shāfiʿīs (cf. *Umm*, i, 131, where al-Shāfiʿī vigorously attacks Abū Yūsuf who is not mentioned by name) she also is put to death. Although this punishment is not properly *ḥadd* (cf. thereon, al-Shāfiʿī, *Umm*, vii, 330, ll. 20-2) it is regarded as such by some jurists, as it is a question of a *ḥaḳḳ Allāh* (cf. e.g. al-Sarakhsī, *Siyar*, iv, 162); therefore the execution of the punishment lies with the *imām*; in the case of a slave, however, the *mawlā* can carry it out, as with any other *ḥadd* punishment. Execution should be by the sword. According to the above traditions, apostates must sometimes have been tortured to death. The caliph ʿUmar II had them tied to a post and a lance thrust into their hearts (Abū Yūsuf, *Kharādj*, 112). Al-Bādjūrī expressly forbids any form of torture, like burning, drowning, strangling, impaling or flaying; according to him, Sultan Baybars II (708-9/1308-9) was the first to introduce torture (Snouck Hurgronje, *Verspr. Geschriften*, ii, 198). Lane (*Manners and customs*, ch. iii, near the end) records the case of a woman who had apostatised and was led through the streets of Cairo on an ass, then strangled in a boat in the middle of the Nile and thrown into the river. (The throwing of a corpse into the Nile was already usual in Cairo in the Fāṭimid period; cf. Mez, *Renaissance des Islâms*, 29.) In quite recent times, followers of the Ḳādiyānī or Aḥmadiyya [*q.v.*] sect in Afghānistān were stoned to death (*OM*, v [1925], 138). In the former Turkish territory and Egypt, as well as in Muslim lands under European rule, since the middle of the 19th century, under European influence, the execution of an apostate on a *ḳāḍī*'s sentence has been abolished, but we still have imprisonment and deportation (cf. Isabel Burton, *The inner Life of Syria*, London 1875, i, 180 ff.); but nevertheless, renegades are not sure of their lives, as their Muslim relatives endeavour secretly to dispose of them by

poison or otherwise. Occasionally modern Islamic writers (such as those of the Aḥmadiyya movement) endeavour to prove that Islam knows of no death penalty for apostasy; the Indian apologist Muḥammad ʿAlī lays great stress on the fact there is not once an indication of the death penalty in the Ḳurʾān (Zwemer, *The law of apostasy in Islam*, 17, 37-8, London 1924; *OM*, v [1925], 262).

One should here call attention to an agreement which is probably not accidental. Since in Islam, in addition to apostasy, unchastity and unnatural vice are punished by death, even by stoning, according to both Shāfiʿīs and Mālikīs, as well as blaspheming God or a prophet, and magic, we find in Islam all crimes punished by death which in the Mishna (*Sanhedrīn*, vii, 4) are threatened with stoning.

b. Whether attempts at conversion must be made is a question of *ikhtilāf*. A number of jurists of the 1st-2nd/7th-8th centuries deny this (as do the Ẓāhirīs) or like ʿAṭāʾ (d. 115/733) make a distinction between the apostate born in Islam and one converted to Islam; the former is to be put to death at once (so also the Shīʿīs). Others insist on three attempts at conversion (relying on sūra IV, 136; cf. al-Ṭabarī, *Tafsīr*, v, 193-4) or have him in the first place imprisoned for three days (cf. above, 2). According to others again, one should await the cycle of the five times of prayer and ask him to perform the *ṣalāt* at each; only when he has refused at each is the death punishment to be enforced. If, however, he repents and professes Islam once more, he is released (cf. thereon, al-Shāfiʿī, *Umm*, i, 228; Abū Yūsuf, *Kharādj*, 109). In later times, *istitāba* was always applied.

c. Apart from the fact that apostasy deprives the *murtadd* of burial with Muslim rites, it has certain civil consequences. The property of the *murtadd* is *fayʾ* according to al-Shāfiʿī and the Mālikīs; if the fugitive *murtadd* returns penitent, he is given back what remains (cf. *Umm*, i, 231, where al-Shāfiʿī opposes the contrary Ḥanafī view). Others, especially later Shāfiʿīs, regard the rights of ownership of the apostate as suspended (*mawḳūf*) and regard him as one who is under guardianship (*maḥdjūr*); only if the fugitive apostate dies in the *dār al-ḥarb* does his property become *fayʾ* (al-Shīrāzī, *Muhadhdhab*, Cairo 1343, ii, 240; cf. al-Shāfiʿī, *Umm*, vii, 355). Among the Ḥanafīs and Shāfiʿīs, the estate is allotted by the *ḳāḍī* to the legal heirs (cf. also the traditions in al-Dārimī, *Farāʾiḍ*, *bāb* 40), the *mudabbar* and *umm walad* are set free, even when the apostate escapes into the *dār al-ḥarb*, for this is equivalent to his death. If he comes back penitent, however, he receives of his property what still exists; the heirs however are not liable for compensation.—The marriage of the *murtadd* is void (*bāṭil*). Of his legal undertakings, the *istīlād* is effective (*nāfidh*), i.e. the *umm walad* becomes free; the *kitāba* also continues. Other legal activities, like manumission, endowment, testament and sale are suspended (*mawḳūf*), according to Abū Ḥanīfa; according to Abū Yūsuf, they are effective as in the case of a person in good health; according to Muḥammad al-Shaybānī, however, only as in the case of an invalid, i.e. they cannot deal with more than one-third of the estate. In the case of the female apostate, however, they are always effective. If the apostate makes such legal arrangements after his flight into the *dār al-ḥarb*, they are invalid (al-Sarakhsī, *Siyar*, iv, 152; cf. also Abū Yūsuf, *Kharādj*, 111). But since according to Shāfiʿī and Mālik, his whole estate becomes *fayʾ*, such legal arrangements are invalid; only the manumission of a slave remains suspended until his possible return penitent; in the case of his death also this slave becomes *fayʾ* (cf. above, however, the view of later Shāfiʿīs).

He is punished for crimes committed before apostasy, if he returns penitent; for crimes committed during *ridda*, no notice is taken of the *ḥuḳūḳ Allāh* (i.e. no *ḥadd*) but only of the *ḥuḳūḳ al-ʿibād*, and he must for example pay the *diya* (al-Sarakhsī, *Siyar*, iv, 163, 208-9; cf. al-Shāfiʿī, *Umm*, i, 231).

MURTADI FILS DU GAPHIPHE [see (AL-) MURTAḌĀ B. AL-ʿAFĪF].

MURŪʾA (A.), MURUWWA, a term used especially in pre-Islamic and early Islamic usage. In the Arabic language there are a number of terms the meaning of which is imprecise (cf. Ibn Fāris, *al-Ṣāḥibī*, Cairo 1910, 34-8). The word *murūʾa* is one of these. Indeed, we are assailed on all sides by a host of differing post-Islamic definitions and contradictory pronouncements (*aḳwāl*) regarding it. These definitions and pronouncements will be found in the various dictionaries and in Abū Manṣūr al-Thaʿālibī, *Mirʾāt al-murūʾāt*, Cairo 1898, 32 pp.; al-Djāḥiẓ, *al-Bayān wa 'l-tabyīn*, Cairo 1311, i, 212; Ibn Ḳutayba, *ʿUyūn al-akhbār*, Cairo 1925, i, 225, 296 ff.; al-Mubarrad, *al-Kāmil*, Cairo 1339, i, 35; Ibn ʿAbd Rabbihi, *al-ʿIḳd al-farīd*, Cairo 1293, i, 221; Muḥammad b. Isḥāḳ al-Washshāʾ, *al-Muwashshā*, ed. Brünnow, Leiden 1886, 30 ff.; Abū Ḥātim al-Bustī, *Rawḍat al-ʿuḳalāʾ*, Cairo 1328, 205-6; al-Maydānī, *Amthāl*, Cairo 1342, i, 52; al-Iṣbahānī, *Muḥāḍarāt al-udabāʾ*, Cairo 1326, i, 145; al-Ḥuṣrī, *Zahr al-ādāb*, 2nd ed. Zakī Mubārak, i, 89; al-Māwardī, *Adab al-dunyā wa 'l-dīn*, Cairo 1921, 254-5; al-Ghazālī, *Iḥyāʾ*, Cairo 1348, iii, 213; al-Zurḳānī, *Sharḥ al-Muwaṭṭaʾ*, Cairo 1893, ii, 317-18; al-Muttaḳī, *Kanz al-ʿummāl*, Ḥaydarābād 1312, i, 84, 162-3.

One might be tempted to quote derivatives (especially the present participle) of the Aramaic root *m-r-ʾ* which indicate especially pre-eminence, the power and dignity of a chief (cf. the dictionaries of Payne-Smith, Margoliouth, Brun and Brockelmann; cf. also al-Ḳardāḥī, *al-Lubāb*, Beirut 1891, ii, 78; Yūsuf Dāwūd, *al-Lumʿa al-shahiyya...*, Mawṣil 1896, i, 361; cf. Bauer, in *ZDMG* [1913], 342-4) in order to claim that the Arabic *marʾ* means *sayyid* and that *murūʾa* therefore means *siyāda*. One can support this conjecture by the fact that Ibn Ḳutayba (*op. cit.*) places the chapter *murūʾa* under the rubric *al-siyāda*. Now Ibn Ḳutayba only gives a single saying in which *murūʾa* means *siyāda* and this is not pre-Islamic. On the other hand, the term *marʾ* (or *imruʾ*, on the latter orthography, see Fischer, *Imraʾalqais*, in *Islamica* [1925], 1-41, 365-90] with *murayʾ* as a diminutive: Ibn Durayd, *Ishtiḳāḳ*, Göttingen 1854, 229) in Arabic only means man in general (*al-insān*: *Tādj al-ʿarūs*, i, 117, below; cf. the German *Mensch*). Proof of this is given in the Ḳurʾān (e.g. sūra II, 96; XIX, 29; XXIV, 11; LII, 21; LXXVIII, 41; LXXX, 34) as well as in pre-Islamic literature (e.g. *Djamhara*, ed. Būlāḳ, 51, 91, 104, 118, 136; *Ḥamāsat al-Buḥturī*, Cairo 1927, 147, 148, 155, 178, 252, 281, 336, 342, 358; *Mufaḍḍaliyyāt*,

Cairo 1926, 105, 107). In its turn, *imraʾa*, fem. of *imruʾ* (*TA*, i, 117) means woman in general (cf. sūra IV, 5; XXVIII, 23; XXXIII, 49) or even wife (XIX, 59; LXVI, 10, 11).

There is then reason to believe that *murūʾa* was not originally applied to pre-eminence (*siyāda*) in order to imply, by borrowing or extension, superior qualities (those of a *sayyid*), but rather it describes the sum of the physical qualities of man (*marʾ*) and then by a process of spiritualisation and abstraction his moral qualities (cf. the similar word *radjul*: *TA*, i, 11-12). Indeed, in the definitions and pronouncements already mentioned we may distinguish a conjunction of two contrary elements: one concrete (e.g. wealth and management of property), the other abstract and predominating. In the latter case, *murūʾa* would be identical with good manners; in the former it would take into consideration the material conditions of life. In our view, the first meaning originates in the Djāhiliyya, whilst the second is Islamic. The opposition between these two *murūʾas* is clearly brought out in a characteristic story in *Aghānī*, xix, 143-4: A satirical poet of the period of the Rightly-guided Caliphs asks the governor of a city to help him to meet the demands of his *murūʾa* (*djiʾtuka li-tuʿīnanī ʿalā murūʾatī*, i.e. to appease my hunger to prevent me coveting the food of others; cf. for the interpretation of this phrase, *al-Muwashshā*, 32); the governor replies to him: "What can be the *murūʾa* of one who disobeys God and devotes himself to calumny...?" (it should be remembered here that Islam took a stand against poets for their diatribes; see HIDJĀʾ).

It is in any case misleading to claim that *murūʾa* in pre-Islamic usage was based only on the material. In this period *imraʾa* already meant in effect perfect woman (al-Zamakhsharī, *Kitāb al-Fāʾiḳ*, Ḥaydarābād 1324, ii, 243; Ibn al-Athīr, *Nihāya*, Cairo 1311, iv, 87). We even find these lines *idha ʾl-marʾu aʿyat-hu ʾl-murūʾatu yāfiʿan* * *fa-maṭlabuhā kahlan ʿalayhi shadīdū* (*Ḥamāsa*, ed. Freytag, 511; al-Baghdādī, *Khizānat al-adab*, Cairo 1349, iii, 198, cf. a verse of Ḥassān b. Thābit, *Dīwān*, Cairo 1927, 371). The meaning of the word *murūʾa* in this verse is obscure, although it certainly has a moral significance (it is the same later, e.g. Abū Tammām, *Dīwān*, Cairo 1292, 146; al-Buḥturī, *Dīwān*, Beirut 1911, 750; al-Mutanabbī, *Dīwān*, Berlin 1861, 56). Besides, if the meaning of the word *murūʾa* had been precise in the pre-Islamic period, the definitions and post-Islamic statements relating to it would have borne some trace of their origin and have gravitated round the same centre. Still oscillating between the concrete and abstract, *murūʾa* can only have been a vague term in the period of the Djāhiliyya.

It appears that it was with Islam that *murūʾa* definitely became a term to define an abstraction. We are inclined to believe that the Muslims only identified *murūʾa* with eminent virtues (*makārim al-akhlāḳ*; see al-Thaʿālibī, *Mirʾāt*, 2; esp. al-Zurḳānī, *op. cit.*) by relying on the following *aḥādīth* (not canonical, according to Wensinck; we may add that al-Thaʿālibī, in *Mirʿāt*, esp. 6-7, does not give a single *ḥadīth* relating to *murūʾa*): (a) *wa-ʾin kāna laka khuluḳun fa-laka murūʾa* (*ʿUyūn al-akhbār*, i, 295; *al-Muwashshā*, 31); (b) *lā dīna illā bi-murūʾa* (*ʿIḳd*, *loc. cit.*, attributed to al-Ḥasan in *ʿUyūn al-akhbār*, *loc. cit.*); (c) *Murūʾat* [*al-muʾmin*] *ʿaḳluhū* (Ibn Abi ʾl-Dunya, *Kitāb Makārim al-akhlāḳ*, ms. Ar. Berlin, no. 5388, p. 16, ed. J.A. Bellamy, Wiesbaden 1973, cf. *Rawḍat al-ʿuḳalāʾ*, 205. This same saying is credited to the caliph ʿUmar, with the variant *khuluḳuhū*; al-Zurḳanī, *op. cit.*; cf. *Kanz al-ʿummāl*, 163).

After Islam, *murūʾa* extended its meaning thanks to the now pre-dominating moral focus. Broadly speaking, with the Rightly-guided Caliphs it means chastity, good nature and observance of Ḳurʾānic laws. With the Umayyads, it implies politics, diplomacy, work, dignity and compassion (on the last meaning, cf. the *Dīwān* of Bashshār b. Burd, Cairo n.d., 70). With the early ʿAbbāsids it implies merit (*al-faḍl*: *Kalīla wa-Dimna*, Beirut 1899, 266) and is contrasted with abjectness (according to al-Aṣmaʿī; cf. *al-Adab al-kabīr*, Cairo 1331, 70), while with the moralists it is identified with *al-adab* in the meaning of good conduct. Ṣāliḥ b. Djanāḥ (cf. *al-Muḳtabas* [1930], 649) wrote a work on ethics entitled *al-Adab wa ʾl-murūʾa*, published in *Rasāʾil al-bulaghāʾ*, ed. Kurd ʿAlī, Cairo 1913 (these two words are already associated in ʿAbd al-Ḥāmid al-Kātib, quoted in the *Muḳaddima* of Ibn Khaldūn, Beirut 1900, 248, l. 10; cf. also *Mirʾāt*, 12, ll. 12-13; 25, ll. 4-6 below); but what is upsetting is that Ṣāliḥ b. Djanaḥ said that "*murūʾa* in its origin means firm resolve (*al-ḥazm*); success (*al-ẓafar*) is its fruit" (*MMIA*, iv/1, 32). In time, among the lexicographers, *murūʾa* means urbanity (*al-insāniyya*: al-Djawharī, d. 398/1007-8, *op. cit.*), distinction (*al-sarw*: Ibn Sīda, d. 458/1066, *Mukhaṣṣaṣ*, iii, 17; meaning borrowed from Abū Zayd [al-Anṣārī]) and ideal manhood (*kamāl al-rudjūliyya*: Ṣāghānī, d. 650/1252, quoted in *TA*, i, 117, 13). On the other hand, with the moralists, *murūʾa* was to find a place in Muslim ethics (al-Bustī, d. 354/965, *op. cit.*, 208), to be raised to an ethical notion covering a number of qualities, especially those of kings and lords (al-Thaʿālibī, d. 429/1038, *Mirʾāt*, 2) and in proportion as Muslim speculation developed, it was to occupy a place in the first rank in the theory of morals, including definite qualities and conditions which were elaborated in the abstract (al-Māwardī, d. 450/1058, *op. cit.*). Continuing in this way in the path of ethical significance and becoming more and more abstract, *murūʾa* finally came to mean virtue in the lexicographers (al-Fayyūmī, d. 770/1368-9, *al-Miṣbāḥ al-munīr*, Cairo 1912, 878) and the moralists (al-Djurdjānī, d. 816/1413-14, *Taʿrīfāt*, Leipzig 1845, 223). On the other hand, in the legists it indicates the fact of abstaining from any act capable of offending religion although not constituting an illicit act (Fagnan, *Additions*, Algiers 1923, 163). In Muslim Spain, assuming the forms *muruwwa* and *marāwa* (with the adjective *marawī* = variant of the classical *marʾī*: *Ḳāmūs*, Bombay 1298, 18), it meant politeness and civility (Schiaperelli, *Vocabulista*, Florence 1871, 184, 328, 424-5; cf. Dozy, *Suppl.*, ii, 578). As to *murūʾa* in the spoken language of to-day, it means in Egypt nobility of soul and liberality (classical meanings); whence the Turkish adjectival form used in Egyptian Arabic *murūʾatlī* (obliging). It becomes *miriwwa* (*mⁱriwwa*) in Egypt and *muruwwa* (*m^uruwwa*) in Syria, and means in effect energy, as in the expression "so-and-so has not the *m.* to accomplish such a thing" (cf. in the classical language, al-Thaʿālibī, *Aḥāsin kalim al-nabī... Syntagma dictorum*, ed. Valeton, Leiden 1844, 28).

Murūʾa has further been developed in Ṣūfism. It was regarded as one of the "branches" of *futuwwa* (al-Ḳushayrī, *Risāla*, Cairo 1330, 103, ll. 2, 3 below). In any case, there is no doubt that its meaning here is on the moral plane (we find bracketed together *murūʾa* and *futuwwa*: *Mirʾāt*, 15, ll. 1, 2 below; 23, l. 4; 24, l. 6; 25, l. 2; 26, l. 12; *al-Muwashshā*, 30, l. 13; Fleischer, *Ali's Hundert Sprüche*, Leipzig 1837, 7, l. 1, 8; 15, l. 11; 25, l. 13; 29, l. 1; Ahlwardt, *Berlin catalogue*, v, 30-1, nos. 17, 32; al-Iṣbahānī, *op. cit.*, juxtaposes them). However, *murūʾa* is fundamentally distinguished from

futuwwa, and it has gone a long way outside Ṣūfism, both as a word and as an ethical idea (cf. against this, Taeschner, *Die islamischen Futuwwabünde*, in *ZDMG* [1933], 11, 27).

This being the case, it seems difficult to agree with Goldziher (*Muh. Stud.*, i, 1-40, esp. 13) who connects the idea of *murūʾa* with that of *virtus* (cf. before him, de Goeje, *Dīwān poëtae... al-Anṣārī*, Leiden 1875, p. lxviii, referring to a very doubtful text) among the pre-Islamic Arabs. In his view *murūʾa* (opposed to the *dīn* of Islam) is their moral principle, from the fact that it presupposes certain obligations, viz. liberality, the protection of the *djār*, observance of the law of the vendetta and fidelity to one's plighted word. This thesis presents two disputable points. The first is philological: if we survey the semantic evolution of the word *murūʾa*, it must be granted that on the one hand the word is only identified with virtue at a late date, and on the other, in the pre-Islamic period it was not yet an absolutely abstract term capable of being taken as a symbol. The second point is connected with the method; if one starts from an idea one has formed about virtue, one cannot see all the aspects of a moral system, the essence of which we do not understand because it is quite foreign to us. It is therefore better not to isolate a moral phenomenon from the atmosphere of ideas and facts in which it has developed. In grouping these facts and ideas and observing them, one is led to substitute the term *ʿirḍ* [*q.v.*] for *murūʾa* when seeking for a moral principle of the pre-Islamic Arabs (cf. B. Farès, *L'honneur chez les Arabes avant l'Islam*, Paris 1932, 32-3). (B. Farès)

Pellat, *Ḥawla mafhūm «al-murūʾa» ʿinda ḳudamāʾ al-ʿArab*, in *al-Karmil*, iv (1983), 1-17, who debates the opinions of Goldziher and B. Farès and shows how the notion of *murūʾa* was complex in the Djahiliyya as well as in Islam.

(Ed.)

MURZUḲ, a town in the urban district (*baladiyya*) of the same name in southern Libya and in the province of Fezzān or Fazzān [*q.v.*]. The town is situated in lat. 25° 55′ 55″ N. and long. 14° 7′ 5″ E. The district includes the sub-districts of Agar ʿAtaba, al-Ghatrūn, Murzuḳ, Trāghan, Umm al-Arānib and Zuwayla.

In antiquity, Murzuḳ was within the territory of the Garamantes, whose centre Garama was 60 miles/100 km northeast of Murzuḳ (see C.M. Daniels, *The Garamantes of southern Libya*, Stoughton, Wisc. 1970). It has always been on the important trans-Saharan caravan route linking Bornū and Kānem [*q.vv.*] with the Mediterranean coast. In recent times, Murzuḳ was under the control, in fact very nominal, of the Ḳaramānlī [*q.v.*] *amīrs* of Tripoli until *ca.* 1830 (see J. Wright, *Libya, a modern history*, London 1983, 16). It was the capital of the Fazzān region and headquarters of the Ottoman Turkish forces in southwestern Libya until the Italian invasion of 1912, but insecurity prevailed and trans-Saharan trade declined. In the early years of Italian occupation, the population of Murzuḳ was estimated at 800 (Touring Club Italiano, *Guida d'Italia. Possedimenti e colonie*, Milan 1929, 384) though British estimates in 1920 set the total at approximately 3,500 to 7,000 (Admiralty, *Handbook of Libya*, London 1920, 205). The foundation of the original town is thought to date to the work of Sīdī al-Muntaṣir al-Muḥammad in 710/1310, at which time the stone and mud fort, casbah and town wall were built. Water supply was available for the town and the palm gardens from shallow aquifers fed by the Wādī Ḥufra. The Turkish fort, barracks and a mosque were located in the north west corner of the walled town. The *sūḳ* with a daily market, and main mosque with a notable truncated conical minaret, were set on the main thoroughfare of the town on a south-east to north-west axis between Bāb al-Kabīr, the principal of three town gates, and the fort. Among European travellers to visit Murzuḳ were Heinrich Barth in 1851, Vice-Consul Warrington in 1855, Gerard Rohlfs in 1865 and Gustav Nachtigal in 1869. In the Italian period and after Libyan independence in 1951, Murzuḳ grew steadily as a small regional settlement. Murzuḳ was given *baladiyya* status in the 1970s, acting as administrative, security and educational centre for much of southern Libya as far as the Chad and Niger borders. The town population was reported at 6,290 in 1981, by which time the residential area, which included 1007 houses, had spread considerably beyond the walled town. The population of the urban district was 42,294 at the census of 1984. Modern farms were established on newly-reclaimed land to the east of palmeries and irrigated gardens. Finds of oil were reported in 1980 for the Murzuḳ region, but the extent of the field is not known.

(K.S. McLachlan)

MŪSĀ, the name in Arabic for the Biblical prophet Moses.

1. In the Ḳurʾān. Here, Mūsā is considered as the precursor of, the model for, and the annunciator of Muḥammad (VII, 156). The two prophets share the same belief (XLIII, 11). Mūsā is also conceived in Muḥammad's image. Charges are brought against him similar to those made against Muḥammad and he is said to want to pervert people from the faith of their fathers (X, 79); he practises magic (XXVIII, 18). Mūsā and Hārūn seem rather to be sent to the stubborn Pharaoh [see firʿawn] than to the believing Israelites. Revelation is granted him: *tawrāt, kitāb, furḳān, ṣuḥuf* (II, 50; XXI, 49; LIII, 37; LXXXVII, 19), illumination, instruction and guidance. The picture of him is made up of Biblical, Haggadic and new elements. Mūsā is exposed, watched by his sister, refuses the milk of other nurses and is suckled by his own mother. Coming to the assistance of a hard-pressed Israelite, he kills an Egyptian but repents of his crime to which Satan had tempted him. He is pursued and escapes to Madyan [see madyan shuʿayb]. At a well there he waters the flocks of the two daughters of a *shaykh*. One of them invites him home modestly. He receives her as his wife at the price of 8-10 years service. This preliminary history is told in sūra XXIII, 1 - 28; the mission itself is often mentioned.

Mūsā receives from the burning bush in the holy valley of Ṭuwan (XX, 12; LXXIX, 16) a message, a voice which orders him to take off his shoes, the message to Pharaoh, the signs of his mission, the rod, the snake and the hand that becomes white. His speech is difficult to understand (XLIII, 52); Hārūn accompanies him as *wazīr* (XX, 30; XXV, 37). Pharaoh reproaches Mūsā with ingratitude, saying he had been brought up by them (XXVI, 17). Pharaoh assembles his magicians but their rods are devoured

by Mūsā's. The magicians profess their belief in God and are mutiliated in punishment (VII, 106-123; XX, 59-78; XXVI, 36-51). Pharaoh wishes prayers to be offered to him as God and orders Hāmān [*q.v.*] to build him a tower so that he can reach the God of Mūsā (XXVIII, 38; XL, 38). Mūsā performs nine miracles (XVII, 103; XX, 59-78; XXVII, 12). These are: 1. the rod and snake; 2. white hand; 3. deluge; 4. locusts; 5. lice; 6. frogs; 7. blood; 8. darkness; 9. separation of the waters of the sea (cf. e.g. al-Ṭabarī, i, 485).

Mūsā spends 30 and 10 nights with God (VII, 138). He brings instruction and admonition on the tablets. In his absence, al-Sāmirī makes the lowing golden calf (VII, 146; XX, 79-98). Mūsā breaks the tablets. He desires to see God. God crumbles the hill to dust (VII, 139). Israel fears war and has to wander 40 years in the wilderness (V, 24-9). Mūsā's enemies, Ḳārūn [*q.v.*] (Korah), Pharaoh and Hāmān, perish (XXIX, 38).

Some details differ from the Biblical story. Instead of Pharaoh's daughter, it is his wife who rescues the infant; instead of seven shepherdesses Mūsā assists two. Instead of ten plagues, the Ḳurʾān speaks of nine miracles. Mūsā strikes twelve springs out of the rock, one for each tribe (II, 57, a memory of the twelve springs of Elim, Exodus xv. 27). The divergence is greater when Hāmān is made minister to Pharaoh. Then there are new features: Mūsā repents of having slain the Egyptians. Mūsā sees the burning bush at night and desires to take a brand from its fire for his house (XX, 10; XXVIII, 29). Pharaoh's magicians die for their belief in God.

The following seems to originate in Haggada: God forbids the infant to be suckled by an Egyptian mother (XXVIII, 11). In the Haggada Moses is offered to all Egyptian suckling mothers; but the mouth that is to speak with God cannot imbibe anything impure (*Sōṭa*, 12b). That God tilts the mountain over Israel (II, 60, 87; VII, 170) is explained from the Haggada: Israel hesitated to accept the Pentateuch and God tilted Sinai over them: Torah or death (*Sabbath*, 80a; *ʿAboda Zara*, 2b). The turning of the sabbath breakers into apes (II, 61; IV, 50; V, 65; VII, 166) recalls the Haggada in which the builders of the tower of Babel become apes (*Sanhedrin*, 109a). Ḳārūn is represented as an exceedingly rich man, the keys of whose treasure can hardly be carried by many strong men (XVIII, 76, 79); the Haggada says that Korah found a hidden Egyptian treasure; 300 mules carried the keys of his treasury (*Pessachim*, 119a; *Sanhedrin*, 110a; Pal. *Sanh.*, x, 27d; Ginzberg, *Legends*, vi, 99, 560). The Ḳurʾānic story of a believer at the court of Pharaoh who wants to save Mūsā is not quite clear (XL, 29). Ought we to compare Jethro in the Haggada who advises clemency at Pharaoh's court (*Sōṭa*, 11a; *Sanhedrin*, 106a; Ginzberg, v, 392, 21, v, 412, 101)?

The story of Mūsā accompanying a wise man on a journey seems without parallel (XVIII, 59-81). The attempt is often made to distinguish this Mūsā of al-Khaḍir [*q.v.*] as Mūsā b. Manasse from Mūsā b. ʿImrān.

2. Mūsā in post-Ḳurʾānic legend. The histories of the prophet (especially al-Thaʿlabī's) supplement the Ḳurʾānic story with much from the Bible, Haggada and folklore.

Much is added from the Haggada. Pharaoh's sick daughters are cured as soon as they touch Moses's cradle. *Exodus Rabba*, i, 23, makes Pharaoh's daughter be cured of leprosy. The infant Mūsā scratches Pharaoh's chin. Pharaoh wants to slay him. On the intercession of Āsiya [*q.v.*] he tests him by putting gold and jewels on one side and burning coals on the other. Mūsā reaches for the gold but Gabriel directs his hand to the burning coal. Mūsā puts his burned hand on his tongue and therefore becomes a stammerer (Ginzberg, v, 402, 65; Hamilton, in *Zeitschr. f. romanische Philologie*, xxxvi, 125-59).

Elements of other legends are woven into the legends of Mūsā. The Abraham-Nimrod legend supplies the following features: Pharaoh frightened by dreams persecutes the infants; Mūsā is hidden from the assassins in the burning oven but the fire becomes cool and does him no harm. Pharaoh orders prayers to be offered for himself as to a god, has a tower built and shoots an arrow against heaven; the arrow comes back blood-stained and Pharaoh boasts he has slain God (al-Ṭabarī, i, 469). From the story of Jacob and Laban come the following: Mūsā serves 8-10 years for his wife (XXVIII, 27). His father-in-law offers him the spotted lambs born in his flock and the ewes for the watering troughs bear spotted lambs (al-Thaʿlabī, 112). There are frequent references to a pious Egyptian woman who is martyred by Pharaoh with her seven children, the youngest of whom is still at its mother's breast (in al-Thaʿlabī, 118, 139); this is of course modelled on the martyr mother of the Maccabees.

There are many fanciful embellishments, e.g. the miracle of the snakes, the plagues and the scenes on the Red Sea; Moses's rod in particular plays a great part. It came from Paradise; Ādam, Hābil, Shīth, Idrīs, Nūḥ, Hūd, Ṣāliḥ, Ibrāhīm, Ismāʿīl, Isḥāḳ and Yaʿḳūb had previously used it (al-Kisāʾī, 208). In al-Ṭabarī (i, 460-1), an angel brought the rod. Mūsā obtained it from his wife; his father-in-law quarrels with him about its ownership and an angel decides in favour of Musā. It is a miraculous rod and Thaʿlabī (111-16) in particular relates the wonders it performs. It shines in the darkness; it gives water in a drought, and placed in the ground it becomes a tree bearing fruit; it produces milk and honey and fragrant scent; against an enemy it becomes a double dragon. It pierces mountains and rocks; it leads over rivers and sea; it is also a shepherd's staff and keeps beasts of prey from the herds of Moses. When Mūsā was asleep on one occasion the rod slew a dragon, on another occasion seven of Pharaoh's assassins.

The varied Biblical, Haggadic, legendary and fairy tale features in the Islamic legend of Mūsā are thus blended into a very full picture and in al-Thaʿlabī form a regular romance.

3. In Islamic tradition, Moses bears a special honorific title, that of *Kalīm Allāh*, whose exact meaning merits discussion. In effect, *kalīm* can be interpreted as meaning "a person who speaks to someone" or "a person whom one addresses". The first meaning is given by al-Bayḍāwī (ed. Fleischer, i, 445, 583, 595), who makes the equation *kalīm* = *mukālim*, and adopted by Ibn Manẓūr (*LA*, xv, 428), who nevertheless adds that al-Azharī in his *Tahdhīb* opts for the

second meaning. Several Ḳur'ān passages speak of a direct conversation between Allāh and Moses, notably IV, 162: *wa-kallama llāhu Mūsā taklīm*[an], where the use of the cognate infinite, *li 'l-ta'kīd*, shows that this "conversation" should be taken literally and not as a metaphor (*LA*, xv, 429; al-Ashʿarī, *Ibāna*, Ḥaydarābād 1321, 27). These passages always emphasise God's speech to Moses, and that may be the reason for al-Azharī's interpretation. The Form III *kālama* is not found in the official text of the Ḳur'ān, but sūra II, 254, contains a variant, *kālama Allāh*[a], which could be, according to al-Bayḍāwī, i, 130, the origin of the official title; but, in this passage, there is no question of Moses. See also the epithet *nadjī* applied to Moses (Ḳur'ān, XIX, 53) and assimilated by al-Bayḍāwī, i, 583, to *munādjī*.

MŪSĀ, BANŪ, three brothers (in order of seniority) Muḥammad, Aḥmad and al-Ḥasan, who were among the most important figures in the intellectual life of Baghdād in the 3rd/9th century. We do not know their dates of birth, but Muḥammad died in 259/873 and could hardly then have been less than 70 years old because the youngest brother al-Ḥasan was already a brilliant geometrician in the reign of al-Ma'mūn (198-218/813-33 [*q.v.*]). Their father, Mūsā b. Shākir, was said to have been in his youth a resourceful highwayman who made the roads in Khurāsān unsafe. By all accounts, however, he became a noted astronomer and a close companion of al-Ma'mūn when the latter was residing at Marw in Khurāsān before he became caliph. When Mūsā died, al-Ma'mūn became the guardian of his sons, who were given a good education in Baghdād, becoming skilled in geometry, mechanics, music, mathematics and astronomy.

Under the successors of al-Ma'mūn, the brothers became rich and influential. They devoted much of their wealth and energy to the quest for the works of their predecessors, especially in Greek and Syriac, and sent missions to the lands of the Byzantine Empire to seek out manuscripts and bring them to Baghdād. Muḥammad is said to have made a journey to Byzantium in person. The brothers acted as sponsors to a group of scientists and translators, to whom they used to pay about 500 *dīnārs* a month. The most outstanding of these scholars were Thābit b. Ḳurra and Ḥunayn b. Isḥāḳ [*q.vv.*], who rendered numerous works, many of which would otherwise have been lost, from Greek and Syriac into Arabic. Muḥammad was on friendly terms with this group of scholars, particularly with Ḥunayn, who translated and composed books at the request of his patron. The brothers therefore played a leading rôle in the transmission of Greek works into Arabic, and in the foundation of the long and important contribution of the Islamic world to the sciences.

The Banū Mūsā, particularly Muḥammad, were employed by the caliphs on various undertakings, and became involved in the turbulent political life of Baghdād. Muḥammad and Aḥmad, for example, were among a group of twenty men responsible for the construction of the new town of al-Djaʿfariyya for the caliph al-Mutawakkil [*q.v.*] and are mentioned as having directed the excavation of canals. It seems, however, that they subcontracted the actual constructional work to others. They appear to have been of an envious and somewhat malicious nature. For example, they became enemies of the famous philosopher Abū Yūsuf al-Kindī [*q.v.*] and caused him to lose the favour of al-Mutawakkil, who ordered him to be beaten and allowed the brothers to confiscate his library. In his last years, Muḥammad was deeply involved in palace politics, in the period during which Turkish commanders were assuming effective control of the state. After the death of the caliph al-Muntaṣir [*q.v.*], Muḥammad successfully campaigned for the nomination of al-Mustaʿīn [*q.v.*] in preference to Aḥmad b. al-Muʿtaṣim because the latter was a friend of al-Kindī. When Baghdād was besieged by the army of the caliph's brother Abū Aḥmad, Muḥammad was sent by al-Mustaʿīn's commander, Muḥammad b. ʿAbd Allāh b. Ṭāhir, to estimate the strength of the enemy forces, and he was one of a delegation sent by the Ṭāhirid to Abū Aḥmad's army to ascertain the terms for al-Mustaʿīn's abdication.

These reports are interesting for the information which they give us about Muḥammad's standing in the courtly circles, but his political activities were not of the first importance, since it was of little moment who occupied the caliphal throne when the real power lay elsewhere. In any case, the rôle of the brothers as patrons of scholars, and their own scientific achievements, are of much greater significance than their entrepreneurial or political activities. A list of their works, taken from Arabic sources, will be found in *The book of ingenious devices*, an annotated translation of the Banū Mūsa's *Kitāb al-Ḥiyal* by D.R. Hill, Dordrecht 1979, 5-6. Twenty works are known to us by name, including books on mathematics, astronomy and mechanics, but only three of these are known to have survived. The Latin text of a translation by Gerard of Cremona of a mathematical work was published by M. Curtze (*Nova Acta der Kaiserl. Leo. Carol. Deutschen Akad. der Naturf.*, xlix [1883]). A work on a musical automaton was published in *Machriq* (1906), 444-58 and in German translation by E. Wiedemann, in *Centenario... Amari*, Palermo 1909, 169-80; the attribution of this work to the Banū Mūsā is, however, doubtful.

The best known and most important of the brothers' books, which was largely the work of Aḥmad, is their *Kitāb al-Ḥiyal* (see Eng. tr. given above, Arabic text ed. Ahmad Y. Al-Hassan, Aleppo 1981). The work comprises descriptions of some 100 small machines, including alternating fountains, self-filling and self-trimming lamps and a clamshell grab. About 80 of the devices, however, are trick vessels of various kinds that exhibit an astonishing mastery of automatic controls. The inspiration for Aḥmad's work is undoubtedly to be found in the machine treatises of the Hellenistic writers, particularly the *Pneumatics* of Philo of Byzantium (mid-3rd century BC) and the *Pneumatics* of Hero of Alexandria (*fl. ca.* 60 AD). *The Kitāb al-Ḥiyal*, although some of the devices in it come directly from Philo or Hero, in general goes well beyond its Greek predecessors, particularly in the use of small pressure variations and conical valves and other components in automatic controls. Indeed, the work of the Banū Mūsā in the variety and ingenuity of their control systems was unsurpassed until quite recent times. There may have been some didactic intention in their writing, but most of their constructions are quite trivial to our eyes. Nevertheless, many of the ideas, techniques and components that they used were to be of considerable importance in the development of machine technology. In the present state of research, we cannot establish how their ideas were transmitted to Europe. Diffusion may not have occurred at all, but given the popularity of the book throughout the Middle Ages in the Islamic world, including al-Andalus, it seems probable that some at

least of the Banū Mūsā's ideas entered northern Europe.

Bibliography (in addition to the works mentioned in the text): Biographical material on the Banū Mūsā will be found in Ibn al-Nadīm, *Fihrist*, Cairo 1348, 378-9; Ibn al-Ḳifṭī, *Taʾrīkh al-ḥukamāʾ*, Cairo 1326, 208; Ibn Abī Uṣaybiᶜa, *ᶜUyūn al-anbāʾ*, 2 vols., Cairo-Königsberg 1882-4, i, 207, 215, 219. For details of Muḥammad's political activities, see Ṭabarī, iii, 1438, 1502, 1557, 1634, 1641, 1747. An appraisal of their work in relation to their Greek predecessors and Islamic successors is given in Hill, *The book of ingenious devices*, 19-24. (D.R. Hill)

MŪSĀ b. ABI 'l-ᶜĀFIYA, a chieftain of the Miknāsa [see al-butr], a prominent Berber tribe of the Zanāta confederation. His claim to fame rests on his role in the troubled history of the Idrīsids [*q.v.*] of Fās (Fez) and the politics of the western Maghrib in the 4th/10th century. To an understanding of that role some account of the background against which it was played is essential.

In the last years of the 3rd/early years of the 4th century, Fās was politically as well as physically divided between the Ḳayrawānī and Andalusian banks of the city and plagued with civil war. It was in this context that in 292/905 the Idrīsid Yaḥyā b. al-Ḳāsim, dubbed al-Miḳdām (Yaḥyā III of the dynasty), was succeeded by his rival and kinsman Yaḥyā (IV) b. Idrīs b. ᶜUmar, at whose general's hands he had met his death. Far from ending Fās's troubles, the advent of Yaḥyā IV marked the start of a reign that was to be marred and then ended by foes from an unexpected quarter. In Ifrīḳiya, at the other end of the Maghrib, the Syrian Fāṭimid ᶜUbayd Allāh had dislodged the Aghlabids [*q.v.*] and, styling himself al-Mahdī [see al-mahdī ᶜubayd allāh], assumed the office of caliph (297/910). Only a year or two thereafter he had, as the first step in an eastern policy designed to secure for him universal recognition as caliph, attempted to conquer Egypt—a venture ending in defeat and a hasty return to Ifrīḳiya. Doubtless seeing consolidation of his position in the West as a precondition of success in his eastern policy, he then focused attention on the western Maghrib and set in train a western military offensive under the command of his *ḳāʾid* Maṣāla b. Ḥabūs al-Miknāsī. On the chronology and details of operations the Arabic sources are at variance, and the inconsistencies they contain are to some extent reflected in the most readily accessible European-language accounts of events. The version that follows therefore should not be regarded as definitive.

In 305/917-18 Maṣāla's military target was Fās. In the approaches to the city, Yaḥyā (IV), who had gone out to do battle with him, was worsted and took refuge behind the city walls. A siege followed that ended only after he had come to terms with Maṣāla and agreed to recognise, in a written declaration, the sovereignty of al-Mahdī. In return for vassalage he was to be allowed to retain his authority over Fās and its immediate territories. Everything beyond, however, was to be subject to Maṣāla's cousin, Mūsā b. Abi 'l-ᶜĀfiya, lord of Tasūl (Tsoul) and Tāzā (Taza) and chieftain of the Miknāsa, tribal masters of the Malwiyya (Moulouya) valley.

Mūsā, realising the incompatibility of Yaḥyā's continuing presence in Fās with his own plans for total control of the western Maghrib, resolved to have him removed. Accordingly, when Maṣāla b. Ḥabūs next appeared on the scene in 307/919-20, Mūsā contrived to convince his cousin of the need to be rid of the Idrīsid. Taking the road to Fās, Maṣāla succeeded in seizing and deposing Yaḥyā, who was then banished by Mūsā to Aẓayla (Arzila). Thereafter, Fās remained under Fāṭimid control until 313/925, when the courageous and enterprising Idrīsid al-Ḥasan b. Muḥammad b. al-Ḳāsim, known as al-Ḥadjdjām, rose in rebellion and, rallying forces to his standard, marched on Fās. Having managed to dislodge the Fāṭimid governor of the city, one Rayḥān, he moved to meet the challenge of the rapidly advancing Mūsā b. Abi 'l-ᶜĀfiya and successfully engaged his forces in a hard-fought battle on the Wādī 'l-Maṭāḥin between Fās and Tāzā.

Though al-Ḥadjdjām had regained Fās for the Idrīsids and thereafter rapidly gained extensive control of the territories around his capital, the days of his reign were numbered; in 315/927 an act of treachery from within his own circle paved the way for his imprisonment and death at the hands of Mūsā b. Abi 'l-ᶜĀfiya.

Once more in power as undisputed master of the western Maghrib, Mūsā set out to annihilate al-Ḥadjdjām's Idrīsids, tracking them down wherever they took refuge, whether, as in the case of the Banū Muḥammad in 317/929, it was their mountain retreat at Ḥadjar al-Nasr [*q.v.*] or, as in the case of the Banū ᶜUmar, scattered among the Ghumāra [*q.v.*] in far north-western territories almost as far as Sabta (Ceuta) and Ṭandja (Tangier). But for the Berbers of northern Morocco, who called for moderation out of respect for the Prophet's descendants, Mūsā's policy of extermination would almost certainly have been pursued to the bitter end.

While preoccupied with the Idrīsids, Mūsā b. Abi 'l-ᶜĀfiya seems either not to have fully appreciated or to have ignored the mounting concern with which the ruler of Umayyad Spain, ᶜAbd al-Raḥmān III, was viewing the growing power and prestige of the Fāṭimids in an area dangerously close to al-Andalus. In 314/927 ᶜAbd al-Raḥmān had taken his first step in a policy of defensive expansion by occupying Malīla (Melilla) and, by 316/928-9, he had opened negotiations with the Idrīsids. By way of retaliation Mūsā had attacked and utterly crushed the Umayyad's Rīfan vassal, al-Muʾayyad, the Ṣāliḥid ruler of Nakūr [*q.v.*], a small principality situated between Tiṭwān (Tetuan) and Malīla. In 319/931 ᶜAbd al-Raḥmān III, now an impressive potentate who had, at the end of 316/early 929, proclaimed himself *amīr al-muʾminīn* [*q.v.*], took possession of Sabta and transformed it into a North African bulwark against any possible Fāṭimid invasion of Spain. With the Umayyad seizure and fortification of Sabta came Mūsā's realisation—possibly prompted by a visit from Umayyad emissaries—that ᶜAbd al-Raḥmān was now in a commanding position and well able to bring him to heel, should he feel so inclined. Mūsā therefore suddenly abandoned his allegiance to the Fāṭimids and with it his position as the official representative of their authority in the West. His allegiance he forthwith transferred to Cordova.

When the news of Mūsā's defection eventually reached ᶜUbayd Allāh al-Mahdī in Ifrīḳiya, he duly arranged for Ḥumayd (some sources: Ḥamīd) b. Yaṣāl, nephew and successor of Maṣāla b. Ḥabūs, who had died in battle in 313/924, to launch an offensive against Mūsā (320/933). Worsted in the plain of Masūn (Msoun), a little to the east of Tāzā, Mūsā fled, abandoning Fās to the Fāṭimid general. Once Fāṭimid forces had left the region, Mūsā again affirmed his recognition of the Umayyad Caliph's suzerainty in the western Maghrib.

In 322/934 ᶜUbayd Allāh died and was succeeded

by al-Ḳāʾim bi-amr Allāh [*q.v.*]. Encouraged by the news of the former's death, Mūsā b. Abi 'l-ʿĀfiya enlisted the aid of one Aḥmad al-Djudhamī and succeeded in regaining Fās (325/935). His triumph was short-lived: within a few months, al-Ḳāʾim's forces were beneath the walls of Fās, led by a *fatā* named Maysūr, and Mūsā was obliged to flee as the Fāsīs themselves came to terms with the enemy and agreed to recognise al-Ḳāʾim. The victory of the latter's troops marked the end of Mūsā's political career. The precise date, place, and manner of his death are matters which our sources make hard to determine. One account (in *Rawḍ al-ḳirṭās*) has it that, as soon as Maysūr had finished with Fās, he pursued the fleeing Mūsā, who fought a series of losing battles, in which the Idrīsids—now re-established in the Rīf and north-western Morocco with new loyalties—played a prominent part; that after a life of wandering through the desert and such territories as remained under his control from Adjarsīf, i.e. Garsīf [*q.v.*] (Guercif) to Nakūr, he met his end somewhere in the Malwiyya region; that the date of his death was either 328/939-40 or 341/952-3; that, as ruler, he was succeeded by his son Ibrāhīm (d. 350/961), who was in turn succeeded by his son ʿAbd Allāh (d. 360/971), the "dynasty" disappearing with the death of the latter's son Muḥammad in 363/973-4 or, according to one chronicler, the death of al-Ḳāsim, Muḥammad's son, in 445/1055. However, for the date of Mūsā's death and the name of his immediate successor, if not for a number of other matters, by far the most reliable source is Ibn Ḥayyān's *Muḳtabis V*—available to us only since 1979. From it we can, with a high degree of certainty, take it that Mūsā's death occurred in Shawwāl 326/August 938 and that he was succeeded by his son Madyan, one of just three sons—the other two bearing the names Abū Munḳidh and Muḥammad.

(J.D. LATHAM)

MŪSĀ B. ʿAZRA, Abū Hārūn Mōshē ben Yaʿḳōb b. ʿEzra, Judaeo-Arabic literary theorist and Hebrew poet in Muslim Spain. He probably lived from *ca.* 1055 to *ca.* 1135-40. He was born in Granada and was a pupil of Yisḥaḳ b. Ghayyāth (Ghiyāth) in Lucena. His education must have comprised all kinds of learning including Hebrew and Arabic literature. His Classical Arabic was of a high standard. He apparently had an important administrative function in Granada because he bore the title *ṣāḥib al-shurṭa* ("head of the police" or "captain of the guard"); this title, however, is to be considered perhaps as purely honorific. Among his pupils during his time in Granada we find Yehudah al-Lewi (d. 1141), whom he encouraged in composing poetry.

In 1090 Granada fell into the hands of the Almoravids [see AL-MURĀBIṬŪN. 4.], who were intransigent towards the Jews; their arrival meant the destruction of the Jewish community. Most of the members of the Ibn Ezra family left the city. Moses ibn Ezra, however seems to have remained in Granada for a while; perhaps he did not have the necessary funds to flee. Finally, he succeeded in escaping to Christian Spain (Castile). He did not return to his native city and considered himself in exile for the rest of his life, although his family and friends invited him to return there. We know little about the conflicts which he had with his family; he had some disagreements, it seems, with his brother Yosef and with his own children.

He wandered around, dependent on the gifts of munificent patrons. Some of his patrons are mentioned in the Arabic dedications of his poetry, like Ibn Mudjāhir (Abraham b. Meʾir, who served at the court of the ʿAbbādid king al-Muʿtamid [*q.v.*]), to whom his *Sefer ha-ʿAnaḳ* ("The Book of the Necklace") is devoted. This *Sefer*, entitled in Arabic *Kitāb Zahr al-riyāḍ* ("Book of the flowers of the meadows"), contains a collection of Hebrew poems, each rhyming on *tadjnīs tāmm*, i.e. words identical in sound, but different in meaning. Moses Ibn Ezra's other poetry bears witness to his many letters to colleagues in Muslim Spain, which compensated for the loneliness of the poet in Northern Spain. He lived in towns like Saragossa, of whose inhabitants' low intellectual status other contemporaries also complained, such as the Arabic poet Ibn ʿAmmār [*q.v.*] and the Hebrew poet and philosopher Solomon ibn Gabirol (d. 1058 or 1070).

Moses ibn Ezra's two important Judaeo-Arabic works are the *Kitāb al-Muḥāḍara wa 'l-mudhākara* ("Book of Discussing and Memorising") and the *Maḳāla bi 'l-Ḥadīḳa fī maʿnā al-madjāz wa 'l-ḥaḳīḳa* ("The Book of the Garden on Figurative and Literal language"). The *Muḥāḍara* is a treatise on rhetoric, dealing mainly with the question of how contemporary Hebrew Andalusian poets should compose their poems according to the laws of the poetics of the Arabs. This book must have been written in old age, when he was in exile; a possible suggested date is *ca.* 1135. The book is divided into eight chapters, being apparently answers to a friend who posed him eight questions about the nature of the poetry of the Hebrews and the Arabs. The book is unique in the sense that it is the only Judaeo-Arabic treatise about poetics. The book is mainly of interest from two points of view: it contains a chapter (no. 5) with a historical survey of contemporary Hebrew Andalusian literature, and chapter no. 8 (covering about half of the book) deals, amongst other subjects, with twenty-three traditional Arabic figures of speech, quoting examples from the Ḳurʾān, Arabic poetry, Hebrew Scripture and contemporary Hebrew Andalusian poetry. In his presentation of the figures of speech, Moses ibn Ezra was above all influenced by al-Ḥātimī's [*q.v.* in Suppl.] *Ḥilyat al-muḥāḍara*, and to a lesser extent, by Ibn Rashīḳ's [*q.v.*] *Kitāb al-ʿUmda*.

The *Ḥadīḳa* deals, amongst other subjects (such as the position of man in the universe, the unknowability of God, and the intellect, following a Neoplatonic

orientation), with the metaphorical interpretation of the anthropomorphic passages about God in the Hebrew Scriptures, perhaps considering God in somewhat the same way as the Muʿtazila [*q.v.*] did earlier ("It follows from the absolute unity of God that the Divine Essence cannot be comprehended by the human mind, but only described by metaphor"). The book contains some references to Arabic poetry. It is perhaps of interest in the light of recent research on the *ḥaḳīḳa* and *madjāz* terminology in early works on Ḳurʾānic *tafsīr*. The *Ḥadīḳa* has not yet been edited. Being part of the Sassoon collection, it came into the possession of the Israel National Library in 1976.

Moses ibn Ezra also composed some fifteen Hebrew *muwashshaḥāt* [*q.v.*] in which he imitated Arabic examples, and adopted Arabic and Romance *kharadjāt*.

Bibliography: 1. Textual editions: the *K. al-Muḥāḍara wa 'l-mudhākara*, partly ed. (the first four chapters) by P. Kokovzov on the basis of the Petersburg ms. in *Vostočniya Zamyetki* (1895), tr. integrally Ben Zion Halper under the title *Shirat Yisraʾel*, Leipzig 1924 (repr. Jerusalem 5727/1967); also ed. A.S. Halkin, *Sefer ha-ʿIyyunim we-ha-Diyyunim. Liber Discussionis et Commemorationis (Poetica Hebraica)*, Jerusalem 1975/5735 (contains also a new tr. into Hebrew); also ed. Montserrat Abumalham Mas, Madrid (Consejo Superior de Investigaciones Científicas) 1985 (i: edición), 1986 (ii: traducción).

MŪSĀ B. **MAYMŪN**, MAIMONIDES [see IBN MAYMŪN].

MŪSĀ B. **NUṢAYR** B. ʿABD AL-RAḤMĀN B. ZAYD AL-LAKHMĪ (or AL-BAKRĪ) ABŪ ʿABD AL-RAḤMĀN, conqueror of the western Maghrib and of Spain. He was born in 19/640; his father had been in the immediate entourage of Muʿāwiya [*q.v.*]. Mūsā was at first appointed by the caliph ʿAbd al-Malik to collect the *kharādj* at al-Baṣra, but having been suspected of embezzlement, he fled and took refuge with the caliph's brother, the governor of Egypt ʿAbd al-ʿAzīz b. Marwān; the latter took Mūsā to Syria to the caliph, who fined him 100,000 *dīnārs*. ʿAbd al-ʿAzīz provided half of this sum for Mūsā and brought him to Egypt, where he gave him the governorship of Ifrīḳiya which had been previously held by Ḥassān b. al-Nuʿmān. The various chroniclers are not agreed as to the date of his appointment to the office, but it possibly took place in 79/698 or the following year.

Mūsā and his troops thereupon entered on a career of successful conquest which ended in the consolidation of Muslim power in Ifrīḳiya and in the conquest of the rest of North Africa and of Spain. Here we give only the most essential details. Assisted by his sons ʿAbd Allāh and Marwān he sent successful expeditions against Zaghwān and Sadjūma (?) and reduced the Hawwāra, the Zanāta and the Kutāma [*q.vv.*]. The Berbers taking refuge in the west of the Maghrib, Mūsā decided to bring them to subjection; confirmed in his office by ʿAbd al-Malik's successor al-Walīd, he continued his advance to Tangier and the Sūs [*q.v.*] and returned to Ifrīḳiya, leaving as his deputy in the Maghrib his freedman Ṭāriḳ [*q.v.*]. The latter in 92/710-11 invaded Spain, and Mūsā, anxious about and at the same time jealous of the progress made by his lieutenant, himself crossed in the following year, leaving his son ʿAbd Allāh as governor of Ifrīḳiya. Landing at Algeciras in Ramaḍān 93/June-July 712 with his other son ʿAbd al-ʿAzīz, he refused to take the same route as Ṭāriḳ and taking the towns of Sidona (Shadhūna [*q.v.*]), Carmona, Seville and Merida, he was on his way to Toledo when Ṭāriḳ came to meet him and was bitterly reproached by his master. Mūsā b. Nuṣayr then continued his march and completely subjugated the north of Spain from Saragossa to Navarre. In 95/713-14 he left Spain with immense booty, leaving his son ʿAbd al-ʿAzīz as governor; he reached Ḳayrawān at the end of the year and continued by land to Syria in a triumphal procession of Arab chiefs and Berber and Spanish prisoners. The caliph al-Walīd, then near his end, urged him to hurry while his brother and heir-presumptive Sulaymān, eager to appropriate the vast wealth brought by Mūsā, tried to delay him. He arrived in Damascus shortly before the death of al-Walīd, and when Sulaymān assumed power in 96/715, he at once displayed his hatred of the conqueror. Regarding Mūsā b. Nuṣayr's stay in Syria before his death in 98/716-17, the Arab historians give a number of details which are obviously of quite a legendary character.

Bibliography: All the Muslim chroniclers who have described the conquest of North Africa and Spain in their works have dealt with Mūsā b. Nuṣayr at fair length, but with details of a more legendary than historical nature. Moreover, these historians have copied each other, and in this connection one should consult the study made by A. Gateau on the relationships between the various chronicles, in *RT*, xxix (1937), xxxiii-xxxiv (1938), xxxviii-xl (1939) and lii (1942). Amongst the principal historians whose works are accessible, one may cite: Ibn ʿAbd al-Ḥakam, *Futūḥ Miṣr*, ed. Torrey, New Haven 1922, ed.- partial tr. Gateau, Algiers, 2nd ed. 1948 (cf. R. Brunschvig, *ʿIbn ʿAbdalhakam et la conquête de l'Afrique du Nord*, in *AIEO Alger*, vi [1942-7]); Ibn al-Ḳūṭiyya, *Iftitāḥ al-Andalus*, ed. Ribera, Madrid 1926; *Akhbār madjmūʿa*, ed.- tr. Lafuente y Alcántara, Madrid 1867; Ibn ʿIdjārī, *al-Bayān al-mughrib*, i-ii, ed. G.S. Colin and E. Lévi-Provençal, Leiden 1948-51; Ibn al-Athīr, *Kāmil*; Lévi-Provençal, *Naṣṣ djadīd ʿan fatḥ al-ʿArab li 'l-Maghrib*, in *Ṣaḥīfat al-Maʿhad al-Miṣrī*, ii (1373/1954), 223-4. There are biographical notices devoted to Mūsā b. Nuṣayr in Ibn Khallikān, *Wafayāt*, ed. I. ʿAbbās, v, 318-29, no. 748; Ibn al-Faraḍī, *Taʾrīkh ʿulamāʾ al-Andalus*, no. 1454; Ḍabbī, *Bughyat al-multamis*, no. 1334; Ibn al-Abbār, *al-Ḥulla al-siyarāʾ*, ed. Muʾnis, Cairo 1964. See also, in addition to the general histories of North Africa and Muslim Spain, Fournel, *Les Berbers*, Paris 1857-75;

Saavedra, *Estudio sobre la invasión de los árabes en España*, Madrid 1892; Ḥ. Muʾnis, *Fadjr al-Andalus*, Cairo 1959. (E. Lévi-Provençal)

MŪSĀ b. ʿUKBA al-Asadī (after 55-141/675-758), early Medinan scholar and historian, especially interested in the Prophet's expeditions or *maghāzī* [*q.v.*]. A *mawlā* of al-Zubayr b. al-ʿAwwām's and a pupil of al-Zuhrī [*q.vv.*], he taught in the Prophet's mosque in Medina, showing in his work the characteristic, increasing emphasis of the Medinan school on *isnāds* and also displaying a concern in giving dates for the events which he describes. His *Kitāb al-Maghāzī*, transmitted by his nephew Ismāʿīl b. Ibrāhīm b. ʿUkba, has not survived as a complete work, although one fragment survives and it was cited by later writers such as Ibn Isḥāḳ, al-Wāḳidī and al-Ṭabarī.

Bibliography: E. Sachau, *Das Berliner Fragment des Mûsâ Ibn ʿUkba...*, in *Sb. Pr. Ak. Wiss.*, xi (1904), 445-70; J. Schacht, *On Mūsā ibn ʿUqba's Kitāb al-Maghāzī*, in *AO*, xxi (1953), 288-300; Ziriklī, *Aʿlām*, viii, 276; A.A. Duri, *The rise of historical writing among the Arabs*, Princeton 1983, 32-3; Brockelmann, I², 140-1, S I, 205; Sezgin, *GAS*, i, 286-7. (Ed.)

MŪSĀ ČELEBI (?-1413); Ottoman prince, son —probably the youngest— of Bāyezīd I [*q.v.*]. At the battle of Ankara in 1402, he fought in the rear of the contingent commanded by his father (Niẓām al-Dīn Shāmī, *Ẓafar-nāme*, ed. F. Tauer, Prague 1937, 255) and seems to have fallen into Tīmūr's captivity at the same time as Bāyezīd (cf. the *Relazione* of Gerardo Sagredo, dated 12 October 1402, in M.M. Alexandresca-Derscu, *La Campagne de Timur en Anatolie*, repr. London 1977, 130). Niẓām al-Dīn Shāmī (*op. cit.*, 60) asserts that Tīmūr's men found him and brought him into Tīmūr's presence after the battle. He appears to have remained in Tīmūr's custody until his father's death in 1403, when Tīmūr released him and sent him with his father's coffin to Yaʿḳūb, the lord of Germiyān [*q.v.*]. Yaʿḳūb released him into the custody of his brother Meḥemmed (I) [*q.v.*] in Bursa, but only after Meḥemmed had defeated and expelled their third brother, ʿĪsā (*Anonymous chronicle*, Bodleian Library, Oxford, ms. Marsh 313; quoted *verbatim* by Neshrī, ed. F.R. Unat and M.A. Köymen, *Kitâb-i Cihânnümâ*, i, Ankara 1949, 419; ii, Ankara 1957, 423-31). Despite several conflicting traditions to the contrary (e.g., Enwerī, *Düstūrnāme*, ed. M.H. Yınanç, Istanbul 1928, 91; Oruč b. ʿĀdil, *Tewārikh-i Āl-ʿOthmān*, ed. F. Babinger, Hanover, 37, 105) it is probable that between 1403 and 1409, Mūsā remained in the custody of his brother Meḥemmed. In this year, Meḥemmed released him, evidently as a political instrument in his war against his brother Süleymān Čelebi [*q.v.*].

In 1409, Süleymān Čelebi ruled in Rumelia and in Ottoman Anatolia as far east as Ankara (see E.A. Zachariadou, *Süleyman Çelebi in Rumili and the Ottoman chronicles*, in *Isl.*, lx [1983], 268-90). As presented in the *Anonymous chronicle* (Bodleian, Marsh 313, *verbatim* in Neshrī, ii, 473-9), Mūsā requested Meḥemmed to release him, so that he could seize Rumelia from Süleyman Čelebi and rule there as Meḥemmed's vassal. Before his departure, he visited Meḥemmed, the lord of Ḳaramān [*q.v.*], and Isfendiyār-oghlī Mübāriz al-Dīn, the lord of Sinop, presumably to seek their co-operation in an alliance against Süleymān Čelebi. From Sinop, he travelled to Wallachia. Here he concluded a marriage alliance with the *voyvoda* Mircea —also an enemy of Süleymān Čelebi— and, with the assistance of Wallachian troops, invaded Süleymān's territory (Neshrī, *loc. cit.*). His success was immediate. At this time, Süleymān Čelebi was in Anatolia. The fortresses in Rumelia acknowledged Mūsā's overlordship; he occupied Edirne [*q.v.*] (P. Schreiner, *Die Byzantinischen Kleinchroniken*, i, Vienna 1975, Chronicle no. 96, p. 636) and, by May 1410, Gallipoli (Gelibolu [*q.v.*]). With this fortress in his possession, he was able to prevent Süleymān's crossing the Straits (St. Stanojević, *Die Biographie Stefan Lazarević's von Konstantin dem Philosophen als Geschichtsquelle*, in *Archiv für Slavische Philologie*, xviii [1876], 442). However, with assistance from the Byzantine Emperor Manuel Palaeologus he was able to cross the Bosphorus and, on 15 June 1410, to defeat Mūsā at Kosmidion (Hasköy) (Schreiner, *loc. cit.*). Mūsā fled to his temporary ally Stephen Lazarević, the Despot of Serbia (M. Braun, ed., *Lebensbeschreibung des Despoten Stefan Lazarević's von Konstantin dem Philosophen*, Wiesbaden 1956, 33). Mūsā soon returned to Rumelia, and the civil war continued into the autumn of 1410. A Ragusan report of August 1410 comments that Süleymān Čelebi was the most successful of the warring princes (Stanojević, *op. cit.*, 444-5). Nevertheless, Mūsā emerged victorious. In February 1411, he advanced from Yambol to Edirne and, according to both Greek and Turkish traditions, attacked Süleymān when he was drunk. As his own troops began to desert him for Mūsā, Süleymān Čelebi fled. On 17 February 1411, Mūsā's agents captured and killed him (Schreiner, *loc. cit.*; Neshrī, ii, 484-7).

The death of his brother left Mūsā as sole ruler in Rumelia. However, immediately on his accession, Stephen Lazarević allowed his men to pillage Mūsā's territory, and the Byzantine emperor sought to prolong the Ottoman civil war by releasing from custody Süleymān Čelebi's son Orkhan (Stanojević, *op. cit.*, 447). It was this act of provocation that led Mūsā, in the autumn of 1411, to lay siege to Constantinople. This operation was unsuccessful, not so much, it would appear, as a result of a Greek victory over his naval force (Laonicus Chalcocondyles, *Historiarum libri decem*, ed. I. Bekker, Bonn 1843, 176-7), as through the desertion of several lords of Rumelia. Mūsā's vassal, George Branković, the nephew of Stephen Lazarević, fled to the Byzantine emperor, Manuel; the Ottoman lords Mīkhāloghlī [*q.v.*] Meḥemmed and Djandarlī [*q.v.*] Ibrāhīm fled to Mūsā's brother in Anatolia (Braun, *op. cit.*, 44-5). The *Anonymous chronicle* (*verbatim* in Neshrī, *op. cit.*, ii, 488-9) reports that Djandarlī Ibrāhīm informed Meḥemmed that the lords of Rumelia wished to overthrow Mūsā, who had aroused their hatred by killing some of their number and confiscating their property. These desertions seem to have emboldened Meḥemmed to attack his brother. In the spring of 1412, he crossed the Bosphorus with the help of Manuel, and attacked Mūsā at Inceğiz (Neshrī, ii, 490-5). Mūsā was victorious, but after the battle, two more of his lords, Pasha Yigit and Mīkhāloghlī Yūsuf, deserted him, fled to Stephen Lazarević, and plundered Mūsā's realms with Serbian troops. In the autumn of 1412, Meḥemmed again crossed the Bosphorus with Manuel's help to attack Mūsā, but again turned back, as bad weather and swollen rivers blocked his passage (Braun, *op. cit.*, 46-8).

On Meḥemmed's withdrawal to Anatolia, Mūsā attacked his ally, Stephen Lazarević. He set out from Sofia at the beginning of January 1413, seized Vranja in the Morava valley and laid siege to Novo Brdo (*ibid.*, 49-50). A Ragusan report of 8 March 1413, describes this failed siege, but notes Mūsā's successes elsewhere (St. Stanojević, *op. cit.*, 448). In Serbia, he

apparently conquered Sokolac, Lipovac, Bolvac, Svrjlig, Stalać and Koprian (Braun, *op. cit.*, 50). The probable reason for Mūsā's ending this successful campaign was the news that Orkhan, the son of Süleymān Čelebi, had landed in Thessaloniki, presumably released again by the Byzantine emperor. Mūsā departed from Serbia to Albania (*ibid.*, 50), and it was probably at this time that he formed an alliance, by marriage to his daughter, with the despot of Ioannina, Carlo Tocco (G. Schirò, *Cronaca dei Tocco di Cefalonia di Anonimo*, Rome 1975, 360). From Albania he marched to Thessaloniki, destroying the fortified monastery of Chortiates on the Kassandra peninsula (Braun, *op. cit.*, 50). From here he returned to Edirne.

In the meantime, Stephen Lazarević had sent an envoy to Meḥemmed, urging him to attack Mūsā from the east, while he attacked from the west with Serbian, Hungarian and Bosnian troops (*ibid.*, 50). Meḥemmed evidently agreed and announced a campaign against Mūsā, presumably in the spring or early summer of 1413. With an army which included troops from his father-in-law, the lord of Dulghadir [*q.v.*], he crossed the sea of Marmara in ships provided by Manuel. At Vize he received word from Ewrenos [*q.v.*] that his son Barak, Pasha Yigit, and Sinān Bey of Trikkala would desert Mūsā and join him at Pirot. From Vize he marched to Pirot and on to the Morava valley (Neshrī, ii, 502-11), where he concluded a treaty with Stephen Lazarević (Braun, *op. cit.*, 53), and received soldiers from Ewrenos and John VII Palaeologus, the governor of Thessaloniki. Near Kosovo he received a further Serbian contingent, and troops under the command of Mūsā's erstwhile ally, Ḥamza Bey, the brother of Djüneyd of Aydin [*q.v.*]. Despite desertions, when Mūsā encountered Meḥemmed's army on 5 July 1413 beneath Mt. Vitosha near Sofia, he was at first victorious. Eventually, however, he fled the field, and Meḥemmed's men caught and killed him (Neshrī, ii, 513-17; Braun, *op. cit.*, 53-4).

Three years after Mūsā's death, Shaykh Badr al-Dīn [*q.v.*], whom he had appointed as *ḳāḍīʿasker* [*q.v.*], led a rebellion against Meḥemmed I in Rumelia, apparently hoping to win support from Mūsā's former office-holders, whom Meḥemmed had dispossessed following the defeat of his brother.

Bibliography: The most reliable narrative sources for Mūsā Čelebi appear to be the account of the Ottoman civil war in the Turkish *Anonymous chronicle*, copied *verbatim* by Neshrī; Constantine the Philosopher's Serbian *Life* of Stephen Lazarević; and the Greek *Short chronicle* listing events of the Ottoman civil war (references given in article). All these appear to be the work of contemporaries or near-contemporaries. Coins and documents from the time of Mūsā are extremely scarce. For coins, see A.C. Schaendlinger, *Osmanische Numismatik*, Brunswick 1973, 89, 156. For documents, see P. Wittek, *Zu einigen frühosmanischen Urkunden (II), (III)*, repr. in Wittek, *La formation de l'Empire ottoman*, ed. V.L. Ménage, London 1982; E.A. Zachariadou, *Early Ottoman documents of the Prodoromos Monastery (Serres)*, in *Südostforschungen*, xxiii (1969), 3. Modern studies of Mūsā Čelebi are N. Filipović, *Princ Musa i šeyh Bedreddin*, Sarajevo 1971, and the relevant chapters in E. Werner, *Die Geburt einer Grossmacht — Die Osmanen*, Weimar 1985. Modern studies strongly reflect the theory that Mūsā Čelebi and his *ḳāḍīʿasker* Badr al-Dīn were social and religious egalitarians. For a narrative of Mūsā Čelebi's reign, see C. Imber, *The Ottoman Empire, 1300-1481*, Istanbul 1990, 67-73.

(C. IMBER)

MŪSĀ AL-HĀDĪ [see AL-HĀDĪ].

MŪSĀ AL-KĀẒIM ("he who restrains himself" or "who keeps silent"), the seventh Imām of the Twelver Shīʿīs. He is known as Abu 'l-Ḥasan al-Awwal (or al-Māḍī), Abū Ibrāhīm, Abū ʿAlī, and al-ʿAbd al-Ṣāliḥ. He was born at al-Abwāʾ (between Mecca and Medina) or in Medina on 7 Ṣafar 128/8 Nov. 745. Other dates given are Dhu 'l-Ḥidjdja 127/Sept. 745 and 129/746-7. His mother Ḥamīda (or Ḥumayda) bint Ṣāʿid al-Barbariyya (or al-Andalusiyya) was an *umm walad* bought from a Berber slave-dealer; she is often referred to as al-Muṣaffāt, "the purified".

Little is known of al-Kāẓim's early life; in a work of the Zaydī al-Nāṣir al-Uṭrūsh (d. 304/917) he is said to have taken part in the revolt of Muḥammad b. ʿAbd Allāh against the ʿAbbāsids in 145/762 (cf. W. Madelung, *Der Imam al-Qāsim ibn Ibrāhīm*, Berlin 1965, 160; see also Abu 'l-Faradj al-Iṣfahānī, *Maḳātil al-ṭālibiyyīn*, 277). He first came into prominence at the death in 148/765 of his father Djaʿfar al-Ṣādiḳ [*q.v.*]. This event led to splits in the Shīʿī community over the succession. Al-Ṣādiḳ's son and designated successor Ismāʿīl predeceased his father, while a second son, ʿAbd Allāh, died shortly after his father, leaving no male offspring. These two sons nevertheless both had their followers: the proto-Ismāʿīliyya and the Faṭḥiyya respectively. There also arose a group called the Sumayṭiyya (variants: Samṭiyya, Shumayṭiyya), who argued that the imāmate should go to another son, Muḥammad, and a further group, the Nāwūsiyya, who affirmed that Djaʿfar had not died and would reappear as the Mahdī. According to Twelver belief, in contrast, al-Kāẓim had already as a boy been designated by his father as the future Imām. Al-Ḳāẓim's imāmate was supported by some leading Shīʿīs, including Hishām b. al-Ḥakam [*q.v.*]; others withheld their recognition for a time.

When the ʿAbbāsid caliph Abū Djaʿfar al-Manṣūr (ruled 136-58/754-75 [*q.v.*]) received news of al-Ṣādiḳ's death, he reportedly sent spies to Medina to discover the identity of the appointed legatee and have him killed. Al-Ṣādiḳ is said to have anticipated this move, and to have let it be known shortly before his death that he had appointed five legatees, including al-Manṣūr (in first place) and Mūsā al-Kāẓim; thus the caliph's plan was foiled.

Al-Kāẓim adhered to a quietist policy. He devoted himself to prayer and contemplation and, like his father before him, spread the Shīʿī doctrine among his disciples. Yet this did not spare him from harassment by the ʿAbbāsids. Al-Manṣūr's son and successor al-Mahdī (ruled 158-69/775-85) brought al-Kāẓim to Baghdād as a prisoner. There the Imām is said to have been placed in charge of the prefect of police, al-Musayyab b. Zuhayr al-Ḍabbī (d. 175/791-2 or 176/792-3), who became a follower of his. If this report is true, then al-Kāẓim's arrest could not have taken place during al-Musayyab's governorship of Khurāsān, which lasted between 163/779-80 and 166/782-3 (cf. al-Ṭabarī, iii, 500-1, 517. According to a less reliable account, 166/782-3 is the date of al-Musayyab's appointment as governor; see al-Khaṭīb al-Baghdādī, xiii, 137). Al-Kāẓim's detention seems to have been brief; his release reportedly followed a dream in which ʿAlī b. Abī Ṭālib appeared before al-Mahdī and berated him for arresting al-Kāẓim. Al-Mahdī made al-Kāẓim promise that he would not rebel against him or any of his children; he then gave the Imām 3,000 *dīnārs* and sent him back to Medina (cf. al-Ṭabarī, iii, 533).

According to some reports, al-Kāẓim was again in danger after the collapse in 169/786 of the revolt of al-

Ḥusayn b. ᶜAlī Ṣāḥib Fakhkh [*q.v.*]. Although al-Kāẓim had refused to support this revolt and had warned al-Ḥusayn that he would be killed, the caliph al-Hādī (ruled 169-70/785-6 [*q.v.*]) accused him of instigating the uprising and planned to have him killed. He was, however, dissuaded from this intention by the *ḳāḍī* Abū Yūsuf Yaᶜḳūb b. Ibrāhīm [*q.v.*] and died soon after. Al-Kāẓim is said to have composed the prayer known as al-Djawshan ("coat of mail") in gratitude for his deliverance (see Ibn Ṭāwūs, *Muhadj al-daᶜawāt*, Tehran 1322, 217 ff.).

Al-Kāẓim remained in Medina until the accession of Hārūn al-Rashīd (ruled 170-93/786-809 [*q.v.*]). Nine years into his reign, the caliph had al-Kāẓim arrested. Various accounts are given of the background to this event. One report has it that al-Rashīd took an interest in the views of Hishām b. al-Ḥakam and, finding them dangerous, ordered the arrest of the Imām. According to another report, al-Kāẓim was the victim of intrigues at the ᶜAbbāsid court: when al-Rashīd placed his son Muḥammad (the future caliph al-Amīn) in the care of Djaᶜfar b. Muḥammad b. al-Ashᶜath (who headed the *dīwān al-khātam* between 170/786-7 and 171/787-8 and was later governor of Khurāsān until 173/790), the *wazīr* Yaḥyā b. Khālid b. Barmak feared that if his son were to become caliph, Djaᶜfar b. Muḥammad would rise to prominence, thus endangering the privileged position of the Barmakids [see BARĀMIKA]. Yaḥyā therefore planned to disgrace Djaᶜfar by revealing his ᶜAlid connections. To this end he enlisted the help of al-Kāẓim's nephew and confidante Muḥammad (or ᶜAlī) b. Ismāᶜīl b. Djaᶜfar, who supplied him with information about the financial network of the ᶜAlids. Yaḥyā then told al-Rashīd that Djaᶜfar b. Muḥammad belonged to the *shīᶜa* of al-Kāẓim and was sending him money (the *khums*); that al-Kāẓim was receiving donations from all corners of the earth; and that he had bought an estate (*ḍayᶜa*) called al-Yasīr (variants: al-Busriyya, al-Bishriyya, al-Yasīra, al-Yasīriyya) for 30,000 *dīnārs*. In other accounts, the caliph is said to have been told that people believed in al-Kāẓim's imāmate and that al-Kāẓim planned to rebel against al-Rashīd. The persons who denounced the Imām are on occasion identified as his brother Muḥammad or the Zaydī Abū ᶜAbd Allāh Yaᶜḳūb b. Dāwūd [*q.v.*]. The latter possibility is unlikely: by the time in question, Yaᶜḳūb was a broken, blind man; furthermore, he is known to have helped ᶜAlids escape from the authorities, and it would have been out of character for him to betray al-Kāẓim.

Al-Rashīd used the opportunity of a pilgrimage to Mecca and Medina to have al-Kāẓim seized. The pilgrimage is said to have been either an *ᶜumra* (in Radjab 179/Sept.-Oct. 795 or Ramaḍān 179/Nov.-Dec. 795) or a *ḥadjdj* (in Dhu 'l-Ḥidjdja 179/Feb.-March 796). According to some sources, al-Kāẓim was sent directly to Baghdād; other, apparently more reliable reports indicate that he was first taken to Baṣra and held prisoner for a year by the governor ᶜĪsā b. Djaᶜfar b. al-Manṣūr. Al-Rashīd then ordered him to be killed, but ᶜĪsā, who had been impressed with al-Kāẓim's piety, managed to avoid this, and instead had him brought to Baghdād. He was handed over to al-Faḍl b. al-Rabīᶜ (who had been appointed *ḥādjib* in 179/795) and placed under house arrest. Al-Rashīd is said to have released him at some point in consequence of a dream he had, only to have him re-arrested. Later, al-Kāẓim was entrusted to al-Faḍl b. Yaḥyā al-Barmakī, who also kept him under house arrest, but treated him with respect.

Al-Kāẓim was able to communicate with his followers, who now also included local Shīᶜīs; one of them, ᶜAlī b. Yaḳṭīn (d. 182/798), was asked by al-Kāẓim to use his influence with the authorities to help the Shīᶜīs. This was consistent with al-Kāẓim's view that working for an illegitimate government (in this case, the ᶜAbbāsids) is permissible if it is done to further the Shīᶜī cause. ᶜAlī b. Yaḳṭīn also acted as financial agent of al-Kāẓim and sent him precious gifts (cf. W. Madelung, *A treatise of the Sharīf al-Murtaḍā on the legality of working for the government*, in *BSOAS*, xliii [1980], 17-19).

When news of al-Kāẓim's relatively comfortable situation was communicated to al-Rashīd (who was at al-Raḳḳa at the time), the angry caliph sent al-Faḍl a written order to kill al-Kāẓim. One account has it that al-Faḍl refused and was given one hundred lashes, while al-Kāẓim was transferred to the prefect of police al-Sindī b. Shāhak (grandfather of the poet Kushādjim [*q.v.*]). Al-Faḍl's father Yaḥyā b. Khālid hastened to al-Raḳḳa and, in an attempt to placate al-Rashīd, promised that he would do whatever the caliph wished. Al-Rashīd repeated his order to have al-Kāẓim killed; Yaḥyā returned to Baghdād and conveyed the message to al-Sindī, who brought about al-Kāẓim's death by serving him poisoned fresh dates (*ruṭab*). In another account it is al-Faḍl who is depicted as having al-Kāẓim poisoned. According to a third report, al-Kāẓim was wrapped in a carpet and crushed to death. Finally, it should be noted that al-Ṭabarī, iii, 649, mentions al-Kāẓim's death without comment, thus implying that he died of natural causes. This is indeed the view of most Sunnī authors, and it is also favoured by some modern scholars (e.g. F. Omar, art. HĀRŪN AL-RASHĪD; A. Clot, *Haroun al-Rachid et le temps de Mille et Une Nuits*, Paris 1986, 91). The dates most commonly given for the Imām's death are 6, 24 or 25 Radjab 183/13, 31 Aug. or 1 Sept. 799; other dates are 181/797-8, Radjab 182/Aug.-Sept. 798, Radjab 184/July-Aug. 800, 186/802 and 188/804. He died at a prison (or mosque) near the Kūfa gate known as al-Musayyab (after al-Musayyab b. Zuhayr).

The manner of al-Kāẓim's death as described in Twelver sources presented Twelver theologians with a problem: for if the Imām, who is supposedly omniscient, knew in advance the time and manner of his death and did nothing to prevent it, did he not thereby assist in bringing about his own demise (*muᶜīn ᶜalā nafsihi*)? One answer, ascribed to al-Kāẓim's son, the eighth Imām ᶜAlī al-Riḍā [*q.v.*], is that al-Kāẓim indeed knew of his impending death and made all the necessary provisions, but that at the crucial moment God made him forget this information (lit. "threw forgetfulness over his heart", *alḳā ᶜalā ḳalbihi 'l-nisyān*). According to another tradition, al-Faḍl b. Yaḥyā al-Barmakī brought al-Kāẓim poisoned fruit on three successive days, but the Imām would not touch it. When the food was brought in on the fourth day, the Imām called out, "My Lord, you know that if I had eaten it before today I would have assisted in my own destruction". He then ate the fruit and became sick. The next day a physician was sent to examine him; al-Kāẓim first ignored him, but at the physician's insistence he finally showed him the palm of his hand, which had turned green from the effects of the poison. The physician then told the ᶜAbbāsids that al-Kāẓim was well aware that he had been poisoned; al-Kāẓim died shortly thereafter (Ibn Bābawayh, *ᶜUyūn*, i, 86-8; idem *Amālī*, 130-1). The implication is that the Imām knew the exact date of his death and took the poison in accordance with that knowledge. In a similar story, a respected Sunnī scholar from Baghdād describes how, shortly before al-Kāẓim's death, al-Sindī

assembled eighty leaders of the community and brought them to al-Kāẓim in order, as he said, to give the lie to rumours that the Imām had been maltreated. Al-Kāẓim acknowledged that he had been accorded comfortable living conditions, but then added: "I have been given poison in seven (or nine) dates; tomorrow I shall turn green (from the effects of the poison) and the day after tomorrow I shall die". "At that", the Sunnī scholar reports, "I saw al-Sindī b. Shāhak, shake and tremble like a palm-leaf" (al-Kulīnī, *al-Kāfī*, i, 258-9; Ibn Bābawayh, *ᶜUyūn*, i, 79). A different version has it that the Imām was not at liberty to do as he pleased, and was forced to eat the poisoned dates (Ibn Bābawayh, *ᶜUyūn*, i, 70-2).

According to some Shīᶜī accounts, al-Kāẓim's death was a direct result of the sinful behaviour of his community: as al-Kāẓim explains, God was angry with the Shīᶜa and told the Imām to choose between sacrificing himself to save his followers and having the Shīᶜīs killed; he chose to protect the Shīᶜa at the price of his own life (al-Kulīnī, *al-Kāfī*, i, 260). Al-Madjlisī [*q.v.*] (*Mirʾāt al-ᶜuḳūl*, Tehran 1404/1984 ff., iii, 126-7) explains God's anger with the Shīᶜa as stemming from their lack of loyalty and obedience to the Imām, coupled with their abandonment of *taḳiyya* [*q.v.*] (self-protection through dissimulation). This abandonment of *taḳiyya* caused the identity of the Imām to become generally known, which in turn led to his arrest.

After al-Kāẓim's death, al-Sindī (or al-Rashīd) assembled representatives of the Hāshimīs, Ṭālibīs and other notables of Baghdād, uncovered the Imām's face and had them acknowledge that there was no sign of foul play; then al-Kāẓim was washed, enshrouded and buried. According to another account, al-Kāẓim's body was placed on a bridge in Baghdād to counter the belief among some Shīᶜīs that he was the Ḳāʾim, that he had either not died or had been resurrected, and that he was in hiding pending his reappearance. He was buried in the cemetery of the Arab aristocracy in north-west Baghdād (*maḳābir al-Shūnīzī* or *maḳābir Ḳuraysh*) at the Bāb al-Tibn ("The straw gate"), in the area which became known as al-Kāẓimiyya (cf. Le Strange, *Baghdād*, 160-5). At first, a visit to his tomb was not devoid of risk: al-Riḍā is quoted as saying that when it is too dangerous to enter the grounds, the visit should take place from behind a curtain (*ḥidjāb*) or a wall (*djidār*). In time, however, his shrine, together with that of his grandson, the ninth Imām Muḥammad al-Djawād [*q.v.*], became one of the most important centres of pilgrimage in ᶜIrāḳ [see KĀẒIMAYN].

The number of al-Kāẓim's offspring as given in the sources varies between 33 and 60. Some accounts refer to 18 (or 19) sons and 23 daughters. According to one report, al-Kāẓim (for unexplained reasons) forbade his daughters to marry; none did so except Umm Salama, who was married in Egypt to al-Ḳāsim b. Muḥammad b. Djaᶜfar b. Muḥammad (al-Yaᶜḳūbī, ii, 415).

Al-Kāẓim was renowned for his piety. The ascetic Shaḳīḳ b. Ibrāhīm al-Balkhī (d. 194/809-10), who saw him in 149/766-7 in al-Ḳādisiyya, believed him to be a holy man (*walī allāh/min al-abdāl*) (al-Ṭabarī, *Dalāʾil al-imāma*, 155; al-Nabhānī, *Djāmiᶜ karāmāt al-awliyāʾ*, Cairo 1329, ii, 269-70, and the Ṣūfīs Maᶜrūf al-Karkhī (d. 200/815-6 [*q.v.*]) and Bishr al-Ḥāfī (d. 227/841-2 [*q.v.*]) are likewise associated with him (H. Algar, *Imām Mūsā al-Kāẓim and Ṣūfī Tradition*, in *Islamic Culture*, lxiv [1990], 1-14). Al-Kāẓim was also a competent polemicist; as a youth he reduced Abū Ḥanīfa [*q.v.*] to silence; and Christians who came to him to discuss religious issues were won over to Islam.

Various miracles are attributed to him. Al-Riḍā reports that he already spoke in his cradle. Indeed, it was from the cradle that he told the Kūfan Shīᶜī Yaᶜḳūb al-Sarrādj to alter the name he had given his newborn daughter, since that name (al-Ḥumayrāʾ, a nickname of ᶜĀʾisha) was hated by God. (It is noteworthy, however, that according to some Shīᶜī sources, including al-Mufīd's *Irshād*, one of al-Kāẓim's daughters was herself called ᶜĀʾisha.) He could speak all languages, and conversed with birds and animals (including a lion). When he touched a truncated tree, it became green and bore fruit.

Al-Kāẓim's death led to the creation of a particular Shīᶜī branch. Those Shīᶜīs who denied that he had died, claiming that he had gone into concealment and would return as Mahdī, were called by their opponents *al-wāḳifa*, "those who stop", because they ended the line of Imāms with him and disputed the transfer of the imāmate to his son. They were also known pejoratively as *al-mamṭūra* (short for *kilāb mamṭūra*, "rain-drenched dogs", referring either to their lowly state or to their smell which, like that of wet dogs, was supposedly more offensive than that of a cadaver). Many Wāḳifīs, mostly Kūfans, defended the occultation (*ghayba*) of the seventh Imām in special works, of which only the titles (and some excerpts) survive; the youngest of these authors, al-Ḥasan b. Muḥammad b. Samāᶜa al-Ṣayrafī al-Kūfī, died in 263/876-7. The Wāḳifiyya, the oldest example of a "Sevener" Shīᶜī group, appear to have fused towards the end of the 3rd/9th century with the Twelvers, who adopted the Wāḳifī model of the occultation of the last Imām (see Halm, *Schia*, 38-9). In contrast, the Twelver doctrine of the "lesser" and "greater" occultations does not appear to be of Wāḳifī origin. Instead, it is adumbrated by traditions such as the one in which Djaᶜfar al-Ṣādiḳ (referring perhaps to the two occasions on which al-Kāẓim was to be taken away from Medina) predicts that his son will disappear twice (*inna li-Abi 'l-Ḥasan ghaybatayn*), so that some men will claim that he has died (al-Ṭūsī, *K. al-Ghayba*, 38; cf. E. Kohlberg, *From Imāmiyya to Ithnāᶜashariyya*, in *BSOAS*, xxxix [1976], 531-2).

The Wāḳifī split may have been occasioned by financial, and not just religious, considerations. Al-Kāẓim had agents (*ḳuwwām* or *wukalāʾ*) in various places, and after his death some of them are said to have refused to hand over to al-Riḍā the monies entrusted to them, arguing that Mūsā was the last Imām. One of them was the Kūfan Manṣūr b. Yūnus Buzurg; others were ᶜAlī b. Abī Ḥamza al-Baṭāʾinī, who is said to have been entrusted with 30,000 *dīnārs*, Ziyād b. Marwān al-Ḳandī, who kept 70,000 *dīnārs*, and al-Kāẓim's agent in Egypt, ᶜUthmān b. ᶜĪsā al-ᶜĀmirī al-Ruʾāsī (Ruwāsī), who in addition to a great deal of money also had five (or six) female slaves (*djawārī*), bought with the Imām's money. According to some reports, ᶜUthmān later repented, freed the slaves and returned the money; other accounts indicate that he refused to hand back the money, but freed the slaves and married them off (al-Kishshī, *Ridjāl*, 499-500; Ibn Bābawayh, *ᶜUyūn*, i, 92; al-Nadjāshī, *Ridjāl*, Ḳumm 1407, 300, no. 817).

Al-Kāẓim played a significant role among some Shīᶜī *ghulāt*. The Khaṭṭābī al-Mufaḍḍal b. ᶜUmar al-Djuᶜfī is said to have visited him in his Baghdād prison and to have looked after him; al-Kāẓim referred to him as his "second father". The Kūfan gnostic Muḥammad b. Bashīr (or Bushayr), the eponymous founder of the Bashariyya, believed in al-Kāẓim's divinity and claimed that al-Kāẓim had not died but had merely gone into concealment and would

return as Mahdī; Bas̲h̲īr is said to have claimed that he himself was Imām (or prophet) pending al-Kāẓim's return (see Halm, *Gnosis*, 215, 235-9).

Sunnī authors generally regard al-Kāẓim as a trustworthy traditionist who, however, transmitted only a few traditions. A *Musnad Mūsā al-Kāẓim* of Abū Bakr Muḥammad b. ʿAbd Allāh al-S̲h̲āfiʿī al-Bazzāz (d. 354/965) is extant (*GAS*, i, 191). Among Twelver S̲h̲īʿīs, al-Kāẓim is credited with numerous supplications, with answers to legal queries (including questions addressed to him by his brother ʿAlī b. D̲j̲aʿfar, cf. *GAS*, i, 535, no. 21), and with a *Waṣiyya fi 'l-ʿaḳl*, addressed to His̲h̲ām b. al-Ḥakam. The *Waṣiyya* is preserved in a shorter and a longer version (al-Kulīnī, *al-Kāfī*, i, 13-20, Ibn S̲h̲uʿba, *Tuḥaf al-ʿuḳūl*, 283-97 respectively).

Al-Kāẓim's descendants, known as Mūsawīs, are said to account for some 70% of all *sayyids* in present-day Persia (Amīr Ṭāhirī, *The spirit of Allāh*, London 1985, 26-7).

MŪSĀ S̲H̲AHAWĀTin, Abū Muḥammad, a poet of Medina considerably less known than his brother Ismāʿīl b. Yasār [*q.v.*], with the result that Yāḳūt, who devotes an article to him, calls him Mūsā b. Bas̲h̲s̲h̲ār; he gives him the *nisba* of al-Ḳuras̲h̲ī, as the person in question was in fact a *mawlā* of Ḳurays̲h̲, variously associated with the Banū Taym b. Murra, with the Banū Sahm or even with Sulaymān b. Abī K̲h̲ayt̲h̲ama al-ʿAdawī (of the ʿAdī b. Kaʿb b. Luʾayy). Since the reason for his cognomen has been forgotten, numerous explanations have been suggested: he was a beggar who made a pretence of weeping to influence the owner of an item which he coveted; when ʿAbd Allāh b. D̲j̲aʿfar b. Abī Ṭālib [*q.v.*] wanted something, he readily purchased the article in question, deducting a small commission for the service; he imported sugar and other appetising confections to Medina; finally, he used the word *S̲h̲ahawāt* in one of his verses; it is probable that none of these explanations is valid.

Although resident in Medina, Mūsā S̲h̲ahāwāt often visited Damascus, being highly esteemed by the Umayyad caliphs; however, from a politico-religious point of view, although he sided with the Zubayrids and praised Muṣʿab b. al-Zubayr and Ḥamza b. ʿAbd al-Raḥmān b. al-Zubayr, he does not seem to have had any particularly decisive opinions. In any case, his surviving epigrans show no evidence that his foreign origin inspired S̲h̲uʿūbī sentiments in him. He took the opportunity to address laudatory verses to Fāṭima bint al-Ḥusayn, while the fact that he had dealings with Saʿīd b. K̲h̲ālid b. ʿAbd Allāh al-ʿUt̲h̲mānī—of whom he was rather critical—and of Saʿīd b. K̲h̲ālid b. ʿAbd Allāh... b. Asīd—who helped him in purchasing a slave—have produced conflicting opinions among those writers who have discussed his work. It is probable that his output was not particularly abundant; all that remain are a few fragments of compositions written to meet specific circumstances —eulogies and epigrams—and this poet owes his escape from obscurity to the use of his verses by such eminent musicians as Maʿbad [*q.v.*].

MUṢʿAB B. ʿABD ALLĀH b. Muṣʿab b. Thābit b. ʿAbd Allāh b. al-Zubayr b. al-ʿAwwām AL-ZUBAYRĪ, Abū ʿAbd Allāh, genealogist who owes his fame to two works, the *Kitāb al-Nasab al-kabīr*, considered to be lost, and the *Kitāb Nasab Ḳuraysh*, edited by E. Lévi-Provençal, Cairo 1953.

This Ḳurayshite was born in Medina, probably in 156/773, a descendant of the Companion al-Zubayr b. al-ʿAwwām [*q.v.*]. He followed the teaching of various masters, including Mālik b. Anas [*q.v.*], before settling at Baghdād where he died, at the age of 80, on 2 Shawwāl 236/8 April 851 (the *Fihrist*, however, makes him die in 233, at the age of 93). In the capital, he transmitted not only his own information on genealogical matters, but also traditions of a historical character (especially on the *ayyām al-ʿArab* [*q.v.*] and *ḥadīth*s which he had from Mālik and other *muḥaddith*s who were less famous; among his pupils, Abū Khaythama and his son [see IBN ABĪ KHAYTHAMA] are the best known. He was also something of a poet, and the author of the *Aghānī* has preserved (v, 130-1) the funeral eulogy which he composed on Isḥāḳ al-Mawṣilī [*q.v.*] and some verses written in praise of other personalities (i, 53, ii, 130, viii, 23, 25, xii, 111, xv, 159, 160, xx, 182). Whilst Ibn al-Nadīm accuses Muṣʿab's father ʿAbd Allāh of being the worst of men and reproaches him for being hostile to the ʿAlids, Abu 'l-Faradj does not seem to share this opinion at all, since he says (*Maḳātil al-Ṭālibiyyīn*, 285) that he took part in the revolt of Muḥammad b. ʿAbd Allāh b. al-Ḥasan al-Muthannā [*q.v.*] and cites verses of his in which he deplores the fate reserved by al-Manṣūr for al-Ḥasan b. Muʿāwiya ... b. Djaʿfar b. Abī Ṭālib, who had also followed the rebel (*op. cit.*, 300 ff.); he relates also his involvement with Yaḥyā b. ʿAbd Allāh b. al-Ḥasan (*op. cit.*, 463 ff.) without open hostility (see also, on this point, al-Ṭabarī, iii, 620-4). One might perhaps be tempted to attribute to ʿAbd Allāh b. Muṣʿab's alleged reputation the comparative obscurity into which his son's work fell (though it was however utilised by al-Balādhurī, al-Ṭabarī and other historians, especially those of al-Andalus), but it seems rather that Muṣʿab was to some extent eclipsed by his nephew al-Zubayr b. Bakkār (d. 256/870 [*q.v.*]), who nevertheless used extensively for his *Kitāb Nasab Ḳuraysh wa-akhbārihim* the documentation collected together by his uncle. It is furthermore from this latter that subsequent biographers took their flattering judgement of Muṣʿab, stressing his dignity, knowledge, nobility, eloquence, etc. It is nevertheless noteworthy that Ibn al-Kalbī, in his Djamhara (Tab. 19 concerning Ḳuraysh) cites only one son of ʿAbd Allāh, Bakkār, and completely ignores the latter's brother Muṣʿab.

The *K. Nasab Ḳuraysh* is artificially divided into 12 *djuz*ʾs, in each case preceded by the list of transmitters, always the same ones: Ibn Abī Khaythama of Baghdād, Ibn Djamīl and Muḥammad b. Muʿāwiya al-Marwānī of al-Andalus. In Lévi-Provençal's judgement, it is a "document of outstanding importance for the history of the beginnings of Islam, and in particular, for that of the first four caliphs". One might add that it provides items of information of a sociological nature, in particular, on polygamy and on the remarriage of widows and divorced women, and that the writer of the present article based himself exclusively on the *Nasab Ḳuraysh* in his attempt to give an answer to the question, Can one find out the birth rate in the time of the Prophet? and to propose a method which can be utilised for matters concerning historical demography (in *JESHO*, xiv/2 [1971], 107-35).

Bibliography: There is a notice on Muṣʿab, by Lévi-Provençal and in French and Arabic, in the introductions to his edition of the *K. Nasab Ḳuraysh*; the biographies of him in the *Fihrist* (ed. Cairo, 160) and in al-Khaṭīb al-Baghdādī's *Taʾrīkh Baghdād* (Cairo 1349/1931, xiii, 112-14, no. 7097) are reproduced in the Arabic introduction. See also, in addition to the references given in the article, Bukhārī, *Taʾrīkh*, iv/1, 354; Ibn Saʿd, *Ṭabaḳāt*, v, 325, vii/2, 84; Dhahabī, *Mīzān al-iʿtidāl*, iii, 173; Samʿānī, *Ansāb*, 271; Ibn Ḥadjar, *Tahdhīb al-Tahdhīb*, x, 162-4; Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-balāgha*, iv, 482; Ibn al-ʿImād, *Shadharāt*, ii, 86; Brockelmann, S I, 212; Sezgin, *GAS*, i, 271-2. (CH. PELLAT)

MUṢʿAB B. **ʿUMAYR**, Companion of the Prophet Muḥammad of the Ḳuraysh clan of ʿAbd al-Dār. The son of rich parents, this handsome young man had already attracted attention by his elegant appearance when Muḥammad's preaching made so deep an impression upon him that he abandoned the advantages of his social position to join the dispersed adherents of the Prophet. Tradition dilates on the contrast between his former luxurious life and later poverty but these, like such stories in general, are somewhat suspicious.

When his parents endeavoured to prevent him taking part in the worship of the believers, he went with several of the faithful to Abyssinia from which he returned, however, before the *Hidjra* of 622. The Prophet thought highly of him and sent him after the first meeting at ʿAḳaba as a missionary to Medina where he won a number of followers for Islam. According to some traditions, he on this occasion, following the practice of the Jews, introduced the corporate Friday *ṣalāt*, which, however, as was noted as early as by Mūsā b. ʿUḳba [*q.v.*], others ascribe to the Medinan Asʿad b. Zurāra, while others in an effort at harmonising say that Asʿad conducted the corporate *ṣalāt* during the absence of Muṣʿab.

At Badr and at Uḥud, he carried the Prophet's banner in memory of the old privilege of the ʿAbd al-Dār; he met his death in the latter battle, i.e. in 3/625. With what ardour he adopted the new teaching is seen from his attitude to his mother, who is depicted as a most lovable character, and particularly from his words at the capture of his brother in the battle of Badr. His wife was Ḥanna bint Djaḥsh of Asad of Ḳuraysh.

Watt, *Muhammad at Mecca*, Oxford 1953, 145, 178. (F. BUHL)

MUṢʿAB B. AL-**ZUBAYR**, ABŪ ʿABD ALLĀH or Abū ʿĪsā, son of the famous Companion of the Prophet al-Zubayr b. al-ʿAwwām [*q.v.*] and brother of the anti-caliph ʿAbd Allāh b. al-Zubayr [*q.v.*]. Handsome, chivalrous, generous to the utmost

degree of prodigality, he resembled his older brother and the Zubayrid family only in his courage and outbursts of severity in repression.

He began his military career at the outset of the caliphate of Marwān b. al-Ḥakam, with an ill-conceived expedition in Palestine. His name has gone down in history chiefly owing to his campaign, in his capacity as governor of ʿIrāḳ, against al-Mukhtār b. Abī ʿUbayd [*q.v.*], who was occupying Kūfa and constraining him to exercise his authority only in the region of Baṣra. It was in fact to put an end to the disturbance created by this Shīʿī rebel that his brother ʿAbd Allāh had in 67/686 entrusted him with responsibility for the ʿIrāḳ province. On his arrival in Baṣra, he pronounced a threatening *khuṭba* which led to the expectation of an energetic action; alluding to the surnames given to his predecessors, Babba and Ḳubāʿ, he stated that he claimed for himself that of "butcher" (*djazzār*). Nevertheless, he was soon to display his concern for those under his administration by ordering the construction, in order to limit the spreading of the Baṭīḥa [*q.v.*], of a dike to which he gave his name, while he appropriated for himself the lands thus gained from the marshes (ʿAbd al-Malik was later to concede them to his followers).

It was shortly after his arrival in Baṣra that he began his struggle against al-Mukhtār, whose supporters he defeated at al-Madhār [see MAYSĀN] then at Ḥarūrāʾ [*q.v.*] before going to besiege him in Kūfa. at the invitation, moreover, of the town's inhabitants, worn down by the yoke that he was imposing on them. After a siege of four months, al-Mukhtār was killed in an attempt at a sortie, on 14 Ramaḍān 67/3 April 687, and Muṣʿab executed a considerable number of his supporters, which earned him as many enemies as his victims had relatives.

However, it was not long before these successes upset his brother, who recalled him, but had to give way to pressure from the ʿIrāḳī population who demanded his return. The revolt of al-Mukhtār being suppressed, he was forced to concern himself with the threat presented to ʿIrāḳ by the Umayyad caliph ʿAbd al-Malik b. Marwān. With difficulty he blocked the way of ʿUbayd Allāh b. al-Ḥurr, sent to provoke a counter-revolution, but an analogous attempt on Baṣra by the Umayyad Khālid b. ʿAbd Allāh b. Khālid b. Asīd (see the Arabic index of the *Murūdj al-dhahab*, ed. Pellat) failed. By dealing severely with the Baṣrans favourable to the latter, Muṣʿab alienated the most influential personalities in the town who entered into negotiations with the Marwānids, before declaring themselves openly in their favour. In 70/689-90 the Zubayrid governor had, in addition, to put an end to the depredations carried out by the Zandj [*q.v.*] in the region of Baṣra. The following year, a Syrian army commanded by the same Khālid came to camp at Djufrat Nāfiʿ/Djufrat Khālid, hence the name Djufriyya given to these troops; Muṣʿab raised an army with difficulty and gained only a semi-victory over his adversary. Furthermore, he could not for long resist the population, who were showing themselves more and more hostile, while the Umayyad pressure increased. Nevertheless, the troops massed at Badjumayra avoided engaging in hostilities, and it was only when Muṣʿab moved towards Dayr al-Djāthalīḳ [*q.v.*] that events came to a head. Besides, his position was critical, the Baṣrans having refused to follow him. The best troops of the province were far away with al-Muhallab, engaged in an interminable campaign against the Khāridjīs. The troops around the Zubayrid displayed only moderate enthusiasm. His officers, tired of his iron hand, were prepared to betray him and entered into negotiations with ʿAbd al-Malik. The Marwānid was not stingy in his promises. He also tried to negotiate with Muṣʿab, who, learning of the perfidy of his followers, rejected all offers and decided to die like a brave man. Among his followers Ibrāhīm b. al-Ashtar [*q.v.*] alone fought vigorously in the battle; the others folded their arms during the fighting or went over to the Syrian ranks. ʿAbd al-Malik offered Muṣʿab his life for the last time with the government of ʿIrāḳ, but in vain. Thrown from his horse, the Zubayrid received the coup-de-grâce from an avenging Bakrī, ʿUbayd Allāh b. Ẓabyān. This took place about the middle of Djumādā I 72/October 691. ʿAbd al-Malik mourned him and ordered his poets to commemorate his heroic end. Muṣʿab's great generosity earned him numerous eulogies from poets. He is also famous in particular for the fact that he had in his harem the two most independent and haughtiest women of the time, belonging to the most undoubted aristocracy of Islam, ʿĀʾisha bint Ṭalḥa [*q.v.*], and Sukayna bt. al-Ḥusayn b. ʿAlī [*q.v.*].

This privilege did not prevent his brother ʿAbd Allāh from receiving the news of his death with the utmost indifference and even of his reproaching him for being too fond of women, by way of a funerary oration. He was also able to reproach him for rudeness and being inclined to insults which he uttered against his adversaries, whose weak points and more or less falsified genealogies he made efforts to acquaint himself with in order the better to combat them.

(H. LAMMENS-[CH. PELLAT])

MUSĀBAḲA [see MAYDĀN].

AL-**MUSABBIḤĀT** (A.) "those which give praise", the name given to the group of Ḳurʾānic sūras from the middle Medinan peirod, LVII, LIX, LXI, LXII, LXIV, so-called because they begin with the phrase *sabbaḥa* or *yusabbiḥu li ʾllāh*. The designation seems to be old; cf. Muslim, *Zakāt*, trad. 119. See further, Nöldeke-Schwally, *G des Q*, i, 186, 245, ii, 45; and ḲURʾĀN, 7, towards the end. (ED.)

AL-**MUSABBIḤĪ**, Fāṭimid historian (366-420/977-1030).

Al-Amīr al-Mukhtār ʿIzz al-Mulk Abū ʿAbd Allāh or Abū ʿUbayd Allāh Muḥammad b. Abi ʾl-Ḳāsim ʿUbayd Allāh b. Aḥmad b. Ismāʿīl b. ʿAbd al-Azīz al-Ḥarrānī al-Musabbiḥī al-Kātib, of a family originally from Ḥarrān in the Djazīra, was born at Fusṭāṭ Miṣr on Sunday, 10 Radjab 366/4 March 977 and died in the same town in Rabīʿ II 420/April-May 1030. Contrary to the conventions of the Fāṭimid period, a time when professional soldiers were Berbers, Turks, negroes, Slavs, Sicilians, Persians, Daylamīs, or Arabs descended from a great tribal family, al-Musabbiḥī, although a Sunnī citizen of Fusṭāṭ, entered military service, *wa-kāna ʿalā ziyy al-adjnād*. The post of governor of Ḳays and of Bahnasā which he held at the outset and the military title of *amīr* given to him by his biographers seem to confirm the fact. Later, he was appointed head of the *dīwān al-tartīb* (or *al-ratīb*, which should not be confused with the *dīwān al-rātib* which was concerned with military pay),

equivalent to the post of general secretary of the central administration. However, he lived until his death in Fusṭāṭ Miṣr, a short distance from the Nile and the Mosque of ʿAmr. Returning from his daily work in the city of Cairo, every evening he encountered in this venerable mosque the friends of his father (who died at Miṣr Fusṭāṭ in 400/1009-10), and his own friends, men of traditional Islamic culture, often of Syrian origin. A devout Sunnī, he nevertheless loyally served the Fāṭimid régime and was particularly attached to the personality and subsequently to the memory of the Imām al-Ḥākim, who had been the only member of this dynasty to mingle on familiar terms, at the outset of his reign, with the inhabitants of Fusṭāṭ.

Al-Musabbiḥī is known as a prolific and versatile writer who addressed, in the tradition of al-Djāḥiẓ, the most diverse of subjects: practical psychology, sexology, cookery, grammar and law. Ibn Khallikān and Ibn Saʿīd al-Andalusī provide a detailed list of his works and specify the number of pages, exceeding a thousand in some cases, thirteen thousand for the history of Egypt, approximately forty thousand in total. Almost all of these works disappeared at a very early stage, and the authors who mention them know only their titles and length. Apart from a few brief quotations from his history dispersed among later compilations, the only specimen of his writing which has survived into the present is a single manuscript preserved in the Escorial in Spain, an ancient but not autographical manuscript, the fortieth chapter of his history of Egypt, recording events of a few months of the year 414/1023-4 and the greater part of the year 415/1024-5. This manuscript also contains poems and letters by various authors with whom al-Musabbiḥī was acquainted. This section provides an insight into the contemporary literary composition, in elegant prose and poetry, of Egypt and ʿIrāḳ at the beginning of the 5th/11th century. The dedications and commentaries on authors also contain details of interest to the historian, particularly with regard to the conversion to Islam of the Jacobite bishop of Takrīt, Abū Musallam Musharraf b. ʿUbayd Allāh, in 407/1016-17, a bishop who conducted a correspondence with al-Wazīr al-Maghribī [*q.v.*]. This Musharraf may be compared with Marḳūs in Mārī Sulaymān, *Akhbār faṭārika kursī al-mashriḳ*, ed. Gismondi, Rome 1899, 115-6. Elsewhere, in ʿIrāḳī Christian circles, it was claimed that the Shīʿī al-Wazīr al-Maghribī [see AL-MAGHRIBĪ, BANŪ, 4.] was for his part converted to Christianity. Finally, to correct Milward, 158-63, who has omitted to point out a major error in the manuscript, al-Maʿarri for al-Maghribī, see Naṣṣār, 106-7.

The first page of this manuscript contains a note written by al-Maḳrīzī declaring that he has read it and has found it useful. It may be noted that the two aforementioned years are dealt with in greater detail in the latter's *Ittiʿāẓ al-ḥunafāʾ* than the earlier years, which appear in skeletal fashion. Although a number of the pages consulted by al-Maḳrīzī have disappeared since the 9th/15th century, it is possible to follow the latter's method of working by comparing the text which he utilised with the history that he wrote.

The complete version of al-Musabbiḥī's chronicle of Egypt seems to have disappeared at a very early stage, since the passages quoted by later historians are concentrated within relatively short periods of time. Egyptian sources regarding the last years of the imāmate of al-Ḥākim, the regency exercised by his sister, and the first years of the imāmate of al-Ẓāhir are particularly sparse. In view of the general atmosphere of suspicion and the re-assertion of authority over the Sunnī population of Fusṭāṭ Miṣr by the apparatus of the Fāṭimid state, after a period in which al-Ḥākim had seemed willing to listen to public opinion, it is possible that ideological control was imposed on official historiography and that a certain number of texts, including the writings of al-Musabbiḥī, were spontaneously destroyed. For traces of al-Musabbiḥī (the years 345/956-7 and 368-415/978-1025) in later Egyptian historiography, see Cl. Cahen, *Quelques chroniques anciennes relatives aux derniers Fatimides*, in *BIFAO*, xxxvii (1937). According to Ayman Fuad Sayyid, *Lumières nouvelles sur quelques sources de l'histoire fatimide*, in *Annales Islamologiques*, xiii (1977), al-Maḳrīzī possessed the 34th chapter which is said to have dealt with the year 395/1004-5. See also Th. Bianquis, *Damas et la Syrie sous la domination fatimide*, Damascus 1989, ii, 393-4.

The complete title which he gave to the history of Egypt, *Akhbār Miṣr wa-faḍāʾiluhā wa-ʿadjāʾibuhā wa-ṭawāʾifuha wa-gharāʾibuhā wa-mā bihā min al-biḳāʿ wa 'l-āthār wa-siyar man ḥallahā wa-ḥalla ghayrahā min al-wulāt wa 'l-ḳuḍāt wa 'l-aʾimma wa 'l-khulafāʾ*, shows that he was passionately attached to this land, a passion shared by an earlier historian, Ibn Zūlāḳ, author of the *Faḍāʾil Miṣr*, and later to be demonstrated by al-Maḳrīzī with his *Khiṭaṭ*.

Al-Musabbiḥī writes the history of the present. He records events day-by-day and then, at the end of the year, puts together the obituaries of people whom he considers important and who have died during the preceding twelve months. The same death is thus sometimes reported twice; in the second version, time having alleviated the shock caused by the news of the death, judgment of the deceased person may have been modified. He records the various aspects of life in Fusṭāṭ: road accidents, thefts, misdemeanours and crimes, public punishments, hippopotami wallowing in the Nile. He is regularly obliged to consult record of the low-level police authorities in Fusṭāṭ and those of the higher police authorities based at al-Ḳaṭāʾiʿ.

He is also aware of proceedings in the administrative centre of Cairo, where he is present every morning. He records all the political gossip of an age in which the struggle for power is extremely violent. Military commanders and civil administrators resort to all sorts of weapons, including the use of informers and the dissemination of forged documents, in order to discredit their opponents in the eyes of the Imām al-Ẓāhir, a credulous youth mainly preoccupied with recreation. Al-Musabbiḥī describes in detail the spectacular ceremonies of homage to the Imām which took place at the Palace. Curiously, he describes with equal attention to detail both those at which he is present and those which he misses on account of illness. Al-Musabbiḥī regards with considerable suspicion the entourage of Sitt al-Mulk and, after the death of the latter, the cabal of courtiers which gathered around the young al-Ẓāhir. He seems to regret the passing of the time of the caliph al-Ḥākim.

He is particularly interested in news brought back from Syria by the postal service. This province, prosperous at the beginning of 414, was in 415 subjected to a very violent Bedouin invasion, and al-Musabbiḥī suggests that the mistrust of the central authorities towards the commander-in-chief, al-Duzbarī, was partially to blame for this. Al-Maḳrizī did not properly understand the text which he had before him, and he invented out of nothing a continuation of preceding events, a continuation which he introduced under the year 415 in the *Ittiʿāẓ* and which contains errors and contradictions.

A consummate historian, al-Musabbiḥī gives precise accounts of economic affairs. With the aid of his chronicle, it has been possible to sketch an analysis of the differential evolution of wholesale and retail prices at the time of a famine suffered at Fusṭāṭ (Th. Bianquis, *Une crise frumentaire dans l'Égypte fatimide*, in *JESHO* xxiii [1978], 67-101). Similarly, the precision of his description of state financial institutions facilitates a better understanding of the budget, expenses and receipts, of the Fāṭimid state (idem, *Le fonctionnement financier des diwans centraux dans l'Égypte fatimide*, contribution to the Symposium marking the year 1400 of the hijra, Damascus 1980).

Bibliography: Editions in chronological order:

I. Historical aspects: A. partial edition, C.H. Becker, *Beiträge zur Geschichte Ägyptens unter dem Islam*, Strassburg 1902. B. complete edition, Ayman Fuad Sayyid and Th. Bianquis, *al-Djuzʾ al-arbaʿūn min akhbār Miṣr* (first historical section, *al-ḳism al-taʾrīkhī*), IFAO, Cairo 1978; amend p. 105, l. 5, Abū Hāshim b. Shuʿayb, in place of Abū Hāshim b. Saʿīd, and p. 108, l. 10, al-Djārūdī, in place of al-Ḥārūdī.

II. Historical and literary aspects: C. Comprehensive edition of both sections, W.J. Milward, *Akhbār Miṣr fī sanatayn 414-415*, GEBO, Cairo 1980.

III. Literary aspects alone:

D. Ḥusayn Naṣṣār, *al-Djuzʾ al-arbaʿūn min akhbār Miṣr* (second literary section, *al-ḳism al-adabī*), IFAO, Cairo 1984.

For a very thorough but repetitive Arabic bibliography relating to the author, see Brockelmann, I², 408, S I, 572; introductions and bibliographies of the editions mentioned above; Ibn Saʿīd al-Andalusī, *al-Mughrib fī ḥulā al-maghrib*, ed. Zakī Muḥammad Hasan, Cairo 1953, i, 264-7; Ibn Khallikān, *Wafayāt al-aʿyān*, ed. Iḥsān ʿAbbās, iv, 377-80, notes; al-Dhahabī, *Tarikh al-Islām*, photogr. ms. at Dār al-Kutub, ii, 205, obituary of year 420 A.H.; F.A. Sayyid, *Lumières....* in *AI*, xiii, notes, pp. 9-11; Th. Bianquis, *Damas et la Syrie...*, index; Aḥmad ʿAbd al-Madjid Ḥarīdī, *Index des Ḫiṭaṭ*, IFAO, 1983, i, 260, under ʿAbd al-Malik (*sic*) b. ʿUbayd Allāh b. Aḥmad b. Ismāʿīl b. ʿAbd al-ʿAzīz al-Musabbiḥī al-Amīr al-Mukhtār; some fifty quotations refer to him as a source under the *nisba* al-Masīḥī in the Būlāḳ edition of the *Khiṭaṭ*, and a single quotation in Ibn Duḳmāk.

(TH. BIANQUIS)

AL-**MUṢʿABĪ**, ABU 'L-ṬAYYIB MUḤAMMAD B. ḤĀTIM, official and poet in both Arabic and Persian in Bukhārā under the Sāmānids, *flor.* early 4th/10th century. Better-known in his time as a statesman than as a poet, he was a boon-companion, then chief-secretary (*ʿamīd-i dīwān-i risālat*) and finally vizier in the reign of Amīr Naṣr b. Aḥmad (301-31/914-43); but he fell from power, and opposing the appointment of the new vizier Abū ʿAlī al-Djayhānī [see AL-DJAYHĀNĪ in Suppl.] in *ca.* 326/938, was executed (Bayhaḳī, *Taʾrīkh-i Bayhaḳī*, ed. Ghanī and Fayyāḍ, 107; Gardīzī, *Zayn al-akhbār*, ed. Nazim, 32; Barthold, *Turkestan*³, 245).

Al-Thaʿālibī (*Yatīma*, iv, 15-16, ed. Cairo, iv, 97-8, tr. Barbier de Meynard, in *JA*, ser. 5, vol. i [1853], 196-7) gives specimens of his Arabic verses, whilst G. Lazard gives what survives of his Persian ones (*Les premiers poètes persans (IXᵉ-Xᵉ siècles)*, Tehran-Paris 1342/1964, i, 23, 74-5, ii, 48-9); according to Lazard, the fact that Abū Ḥātim al-Rāzī (read thus for Lazard's "al-Sidjistānī") [*q.v.*] appears to have dedicated to him a work on the Ḳarāmiṭa [*q.v.*] may indicate that al-Muṣʿabī had Ismāʿīlī sympathies, such trends of thought being known to have existed in Transoxania during Naṣr b. Aḥmad's reign (cf. Barthold, *op. cit.*, 242-4).

Bibliography: Given in the article, but for further references, see Lazard, *op. cit.*, i, 23.

(C.E. BOSWORTH)

MUṢĀDARA (A.).

1. In mathematics, *muṣādarāt* are premisses or postulates (Grk. αἰτήματα). See al-Khʷārazmī, *Mafātīḥ al-ʿulūm*, ed. van Vloten, 203; E. Wiedemann, *Beitrag XIV*, in *SBPMS Erl.*, xl (1908), 4 and n. 2 = *Aufsätze zur arabischen Wissenschaftsgeschichte*, Hildesheim 1970, i, 403.

2. In the administrative terminology of the mediaeval Islamic caliphate, *muṣādara* is firstly "an agreement with someone over the payment of taxation due", according to al-Khʷārazmī, *op. cit.*, 62 (the synonym of *mufāraḳa*); cf. C.E. Bosworth, *Abū ʿAbdallāh al-Khwārazmī on the technical terms of the secretary's art*, in *JESHO*, xii (1969), 138.

The most-frequently found meaning for this term is, however, "the mulcting of an official of his (usually) ill-gotten gains or spoils of office". The meaning here seems to stem from that above, via the idea of compelling an official to account for his financial gains, and then to forcible confiscation, often with violence and torture; or it may be, as Fleischer suggested (*Kleinere Schriften*, ii, 593), that we have here a denominative verb from *ṣadr* "breast", sc. "to place one's breast directly up against someone, to confront someone". See the discussion by A. Fischer in *ZDMG*, lxiv (1910), 481-4.

Whatever the etymology, the usage is clear in texts which deal with administrative affairs from the 3rd/9th century onwards (al-Ṭabarī, al-Masʿūdī, al-Tanūkhī, Miskawayh, Hilāl al-Ṣābiʾ, etc.), in which we find not only *muṣādara* but also the terms *muṭālaba* and *munāẓara* with the same connotation of "seeking out, requiring an accounting, exacting, extorting money". The practice of requiring officials to disgorge at least part of the spoils from their official duties dates back to Umayyad times, and was practised e.g. by al-Ḥadjdjādj b. Yūsuf [*q.v.*] (Løkkegaard, 162). The origins of a special organ of the administration for this purpose, given in the 3rd-4th/9th-10th centuries the name of *dīwān al-muṣādarāt* or *dīwān al-muṣādarīn* [see DĪWĀN. i] are ʿAbbāsid, and may lie in the special treasury the *bayt māl al-maẓālim*, which al-Manṣūr set up for keeping the illegally-obtained monies recovered from dismissed financial agents, monies which were eventually restored to their original owners by al-Mahdī (al-Ṭabarī, iii, 415-16, Eng. tr. H. Kennedy, Albany 1990, 119; Levy, *Social structure*, 307). From the end of al-Maʾmūn's caliphate, the *dīwān al-muṣādara* takes definite shape, and the process of extracting money from dismissed officials becomes general under al-Wāthiḳ; Sourdel has suggested that the caliphate's financial position worsened at this time through the expenses of the move to Sāmarrā and increased interference in the running of the administration by the Turkish military (*Vizirat*, i, 264). Al-Wāthiḳ's vizier Muḥammad b. ʿAbd al-Malik b. al-Zayyāt distinguished himself by his relentless harrying of secretaries and officials, but was hoist with his own petard when the new caliph al-Mutawakkil subjected him to torture and death in Ibn al-Zayyāt's own *tannūr*, an iron cylinder with spikes inside it (cf. the Iron Maiden of Nuremburg) which he had used for the *muṣādara* of his victims (see al-Masʿūdī, *Murūdj*, vii, 194-5 = § 2878; Sourdel, i, 261-4, 268-9; art. IBN AL-ZAYYĀT). Under al-

Mutawakkil also, we hear of Nadjāḥ b. Salama, the secretary in charge of the *dīwān al-tawḳīʿ* but also charged with the inspecting and hunting down of tax officials suspected of misappropriation (*al-tatabbuʿ ʿalā 'l-ʿummāl*; al-Ṭabarī, iii, 1440, Eng. tr. J.L. Kraemer, Albany, 1989, 157, and Sourdel, i, 280-1). Enormous sums were extracted by these means; thus Aḥmad b. al-Khaṣīb al-Djardjarāʾī, formerly secretary to the Turkish general Ashnās and later vizier to al-Muntaṣir, was made to disgorge a million *dīnārs* by Ibn al-Zayyāt towards the end of al-Wāthiḳ's reign (Sourdel, i, 261-4).

As the finances of the caliphate became in the 4th/10th century under al-Muḳtadir and his successors more and more parlous, the process of *muṣādara*, almost always accompanied by torture and beatings, became the norm to which financial officials relinquishing their posts were subjected. In the time of al-Muḳtadir's vizier Muḥammad b. ʿUbayd Allāh al-Khāḳānī, the director of the *dīwān al-muṣādarīn* Aḥmad b. Yaḥyā b. Abi 'l-Baghl and then Ibn Thawāba were given the task of extracting money from the previous vizier Ibn al-Furāt [*q.v.*] and his partisans and of dealing with their confiscated lands and property (Sourdel, ii, 395-6). At the end of Ibn al-Furāt's third and last vizierate 311-12/923-4), 2 million *dīnārs* were extracted from Ibn al-Furāt and 3 million from his son al-Muḥassin (Sourdel, ii, 432-4, cf. 416-18, 646-7); it will be noted that, since the process of *muṣādara* was now largely automatic, having been thus mulcted was not an obstacle to an official being taken back into service again.

The practice was taken over by some at least of the succession states to the ʿAbbāsid caliphate, e.g. by the Ghaznawids [*q.v.*] in the East. At the fall in 416/1025 of Mahmūd of Ghazna's vizier Aḥmad b. Ḥasan Maymandī [*q.v.*], one of the latter's enemies was brought specially from Khurāsān to act as *mustakhridj* [*q.v.*] "extractor of information, ferreter out of hidden wealth", and other high officials were roughly handled after dismissal. That suffered by Maḥmūd's former treasurer Aḥmad Inaltigin is said to have been a contributory cause of his later rebellion as governor in India in 424/1033 (Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran*, 71-2, 77).

Levy, *The social structure of Islam*, Cambridge 1957, 307-8; D. Sourdel, *Le vizirat ʿabbāside*, index, s.v. *amendes*.

(C.E. BOSWORTH)

3. In the Ottoman empire. This term alluded to the confiscation to the Ottoman treasury of the property of deceased and/or dismissed officials and other persons. It is for the seizure of an official's property in his lifetime that the term *muṣādara* is strictly appropriate; yet such a practice occurred only when the officials acquired the riches in question by improper means or were otherwise deserving of punishment. Often, the confiscation differentiated between the types of property left; the Ottoman treasury seized any coin, valuables, and military equipment such as weapons, animals and tents, leaving to the heirs land and houses or, if there were no such effects, providing them with pensions from the state. For example, in the 1792 confiscation case of the late ʿAbbās Agha, the tax-collector of Kütahya (Başbakanlık Arşivi, Cevdet Maliye collection, document no. 2034), his cash and valuables were sent to the Ottoman treasury and his livestock, cereals, farms and property were auctioned locally, and the cash amount accruing from it was then relayed to the treasury as well.

The Ottoman practice of confiscation derived initially from the Islamic law that the master of a slave is his sole heir [see ʿABD]; by analogy, the Ottoman sultan was considered the exclusive inheritor of his slaves. The emergence of this practice can be traced to the 9th/15th century, when the Ottoman treasury started regularly to seize certain types of property left behind, upon death, by eminent officials [see MUKHALLEFĀT]. The scope of the practice expanded as the state started to consider all those who died while serving the state to be the sultan's slaves; it nevertheless often excluded the *ʿulemāʾ*. Later, in the 11th/17th and 12th/18th centuries, any person who had prospered through a financial transaction with the Ottoman state came under the threat of confiscation. Confiscations and their release in cash increased especially during campaigns when a revenue crisis developed around the payment of soldier's salaries. The confiscation of the inheritances of the merchants or officials who were known to have cash stocks particularly escalated during these periods; to escape such confiscations, many invested their vast properties in *awḳāf*, religious endowments. As confiscations disrupted Ottoman economic transactions, imperial decrees at the end of the 18th and the beginning of the 19th centuries frequently assured that "the inheritance of those who did not have any accounts with the state would not be confiscated" (*Buyruldu* 1-2/12 in 1808). The practice of *muṣādara* was abolished in the early 19th century by sultan Maḥmūd II [*q.v.*].

(F. MÜGE GÖÇEK)

MUSADDAS [see MUSAMMAṬ].

MUṢADDIK, MUḤAMMAD (MOSADDECH), Persian nationalist politician and Prime Minister in the period 1951 to 1953. Born in Tehran during 1882 (the precise date is uncertain), he died there on 5 March 1967. His father came from a prominent land-owning family, the Āshtiyānīs, and held various senior posts in the financial administration of the country. Muṣaddiḳ's mother was a great-granddaughter of Fatḥ ʿAlī Shāh, and one of her sisters was a wife of Muẓaffar al-Dīn Shāh. On his father's death in (?) 1894 the boy received the title Muṣaddiḳ al-Salṭana, from which he later derived his family name when these became mandatory. After a traditional private education, he received his first administrative post at the age of 16 in the province of Khurāsān. Four years afterwards he married a granddaughter of Nāṣir al-Dīn Shāh, by whom he later had two sons and three daughters.

Muṣaddiḳ's first entry into national politics was controversial. After the creation of the National Assembly in 1906, he stood for election to it as one of the candidates from Iṣfahān and was successful. When he attempted to take his seat, however, another representative noted that Muṣaddiḳ was less than 30, the minimum legal age for election as a Deputy, and he was therefore disbarred. In 1909-10 he visited

Paris, where he studied for a short while before his already poor health forced him to return home. In 1911 he enrolled at the University of Neuchâtel and in 1914 he was awarded a doctorate for a thesis on Islamic law. On returning to Tehran that year, he taught at the School of Political Sciences, and wrote on several economic and legal issues including the sensitive one of foreign Capitulations. In 1916 he became a deputy Minister of Finance. By the end of the following year, he was again living in Switzerland, largely because of his poor health and the chaotic state of Persia at that time.

Like many of his fellow countrymen, both at home and abroad, Muṣaddiḳ was strongly opposed to the terms of Britain's proposed new treaty with Persia in 1919; and he shared the view that it was an ill-disguised attempt to strengthen and perpetuate British influence in Tehran. In 1920 he accepted the offer of the post of Minister of Justice and returned by sea from Europe. It is an indication of the disorganisation then prevalent throughout Persia that, on reaching Shīrāz from Būshahr, some of the city's notables prevailed upon him to accept the vacant post of Governor of Fārs, which he then held from the late autumn of 1920 to the early spring of 1921. When Sayyid Ḍiyāʾ al-Dīn became Prime Minister in March 1921 he ordered the detention of Muṣaddiḳ, who for some weeks took refuge among the Bakhtiyārī.

Shortly after the fall of Sayyid Ḍiyāʾ, Muṣaddiḳ became Minister of Finance, but his tenure of office was brief and in February 1922 he was appointed Governor of Ādharbāydjān. That post he held for less than five months. In June 1923 he became Minister of Foreign Affairs, but his relations with Riḍā Khān were now far from harmonious and he resigned from the government in the following October. In February 1924 Muṣaddiḳ entered Parliament for the first time, as a member for Tehran; and he appears to have preferred the relative freedom of debate which then prevailed to the restrictions and burdens of administrative office. Given his family background, it is perhaps not surprising that he opposed Riḍā Khān's rise to power and on several later occasions he compared the rule of the new Shāh unfavourably with that of the Ḳādjārs. By 1930 the monarch could no longer tolerate Muṣaddiḳ's criticisms and he was banished to his lands at Aḥmadābād some 75 miles west of Tehran. After some years, the restrictions on him were relaxed and he visited Berlin for medical treatment. In 1940 he was again detained and sent into exile at Bīrdjand but was later permitted to return to Aḥmadābād. Following the Anglo-Soviet invasion of August 1941, Riḍā Shāh was forced to abdicate, and his son then declared an amnesty for political prisoners; Muṣaddiḳ was one of its beneficiaries.

Muṣaddiḳ's former opposition to the Pahlawī dynasty now stood him in good stead, and in the elections for the fourteenth Madjlis in 1943 he won the greatest number of votes cast for any of the capital city's 30 Deputies. The allied occupation of Persia caused quite serious economic problems concerning inflation and the distribution of food. These, in turn, fuelled popular resentment against foreign powers. When, in 1943 and 1944, two international oil companies, followed by the Soviet government, made requests for the granting of new oil concessions in Iran there was widespread opposition inside and outside Parliament. Muṣaddiḳ introduced a private member's bill in November 1944 which sought to forbid any negotiations on new occasions until the end of the war, when all foreign troops were supposed to leave Iran. It also sought to prohibit government ministers from discussing matters relating to foreign concessions without explicit parliamentary approval. On 2 December Muṣaddiḳ's bill was passed by the Madjlis.

Muṣaddiḳ was re-elected to the fifteenth Madjlis which opened in July 1947, and the government later sought its approval for a new oil agreement which had been negotiated with the USSR. The opposition to this was overwhelming, and the agreement was rejected. With Soviet participation in the oil industry now excluded, it was likely that attention would turn to British involvement. During the allied occupation, Muṣaddiḳ had begun to formulate the principle of "negative equilibrium". This called for Iran to establish its future independence on the basis of strict neutrality, and all foreign influence and concessions were to be rejected. It was the view of many urban Iranians that, as the British government held the majority of shares in the Anglo-Iranian Oil Company (A.I.O.C.), the Company was in effect an agent of British influence in Iran. Relations between the Iranian government and A.I.O.C. were not therefore just a matter of economics; for Muṣaddiḳ, as for many other Iranians, the political relationship was paramount.

Since 1947 the Company and the Persian government had been negotiating a new arrangement concerning royalty payments, and an agreement was initialled by the two parties in July 1949. It was debated, and rejected, by the Oil Committee of the sixteenth Madjlis in December 1950. Muṣaddiḳ, who was Chairman of that parliamentary committee, had by now begun to establish the National Front (*Djabha-yi Millī*), a very loose association of many diverse political groups. It spoke out against the new agreement, as did the much more disciplined communist *Tūda* party. The most important source of support for the growing call for the nationalisation of A.I.O.C. came, however, from an influential religious figure, Āyatullāh Abu 'l-Ḳāsim Kāshānī [*q.v.*]. As anti-British sentiment rose, the Shāh had appointed a senior officer, General ʿAlī Razmārā, as Prime Minister in June 1950, but he was assassinated by a supporter of Kāshānī on 7 March 1951. During the following month, the Madjlis passed legislation for the nationalisation of the oil industry and 29 April the Shāh appointed Muṣaddiḳ as Prime Minister.

Muṣaddiḳ, who had little personal knowledge of the oil industry, and who seems never to have visited Ābādān, believed that the A.I.O.C. would rapidly capitulate. But the Company was by no means exclusively dependent on petroleum supplies from Persia. When the government in Tehran tried to put pressure on A.I.O.C., e.g. by revoking residence permits for its staff, the Company evacuated them in October 1951; but oil production was already at a virtual standstill. The Company's offer to submit the dispute to arbitration under the terms of the existing 1933 agreement was rejected by Muṣaddiḳ. Repeated efforts by various British and American officials to reach a negotiated settlement also failed, as did an attempt by representatives of the International Bank, and in October 1952 the Iranian government severed diplomatic relations with Britain.

Muṣaddiḳ's hopes that the United States government would put pressure on Britain to settle the dispute also proved ill-founded. In January 1952 US military aid for Persia was suspended for three months and in June 1953, after the failure of another joint US-British diplomatic approach, President Eisenhower announced that no further US aid of any kind would be provided for Persia unless the oil dispute with London was settled by negotiation or submitted to an international neutral body.

Meanwhile, domestic political and economic condi-

tions had begun to deteriorate. During 1952 Muṣaddiḳ started to take extraordinary measures to preserve his weakening political position. In February 1952, the term of the sixteenth Madjlis came to its appointed end, and elections were held. When it was clear that support for Muṣaddiḳ was waning, voting in many constituencies was halted and a truncated parliament convened with Muṣaddiḳ remaining as Prime Minister. On 17 July, when the Shāh refused his request to take over the Ministry of War too, Muṣaddiḳ resigned and was replaced by Aḥmad Ḳawām. Supporters of the National Front and the *Tūda* then fomented riots in several towns and cities, and on 22 July Muṣaddiḳ was re-appointed as Prime Minister. A cowed and manipulated Madjlis voted on 3 August 1952 to give Muṣaddiḳ full powers over economic, judicial, administrative and military matters for six months. (Those powers were renewed by the Madjlis in January 1953.) Army officers and legal officials known to be opposed to Muṣaddiḳ were dismissed and sent into internal exile. In October 1952, the Senate was dissolved as it too was proving to be a source of political opposition. Muṣaddiḳ, with the support of the *Tūda* party, then tried to restrict the political powers of the Shāh, and many of the Prime Minister's former political allies—including influential figures such as Kāshānī, Ḥusayn Makkī and Muẓaffar Baḳāʾī—expressed public doubts about Muṣaddiḳ's avowed commitment to the principle of constitutional rule.

This pattern of events had been watched with growing alarm in Washington, where the United States government feared that Muṣaddiḳ was now bent on establishing a dictatorship which might then seek closer relations with the USSR. By the summer of 1953, Muṣaddiḳ knew that his domestic political base was much weaker and in July a highly dubious referendum was organised. It was then claimed that this showed massive popular support for Muṣaddiḳ and for his dissolution of what remained of the seventeenth Madjlis.

Events came to a head on 16 August when the Shāh attempted to replace Muṣaddiḳ as Prime Minister. Muṣaddiḳ refused to yield and the Shāh, in a panic, fled abroad. Widespread rioting occurred between pro- and anti-royalist groups; the former were by now receiving active American support. On 20 August, the army, under General Faḍl Allāh Zāhidī, succeeded in arresting Muṣaddiḳ and the Shāh returned to Tehran. Muṣaddiḳ was then placed on trial before a military court and charged with high treason. On 21 December he was found guilty and sentenced to three years' solitary confinement. After that sentence had been served, he spent the rest of his life quietly at Aḥmadābād.

Bibliography: The book by Farhad Diba cited below includes, in appendix IV, a list of books and articles by Muṣaddiḳ, including his doctoral dissertation. Much of the literature about him, in European languages as well as in Persian, remains partisan and some is hagiographical. An objective biography has still to be written. Farhad Diba's *Mossadegh: a political biography*, London 1986, is an admiring, but not always accurate portrayal. A volume of conference papers, *Musaddiq, Iranian nationalism and oil*, edited by J.A. Bill and W.R. Louis, London 1988, contains a wide range of material and views. Its bibliography of works in Persian and English is comprehensive, and rather than repeat the list of major works here, the reader is referred to pp. 341-8 of that book. While it was in the press, a few additional details of the 1953 coup appeared in a work by one of those associated with planning it, D.N. Wilber, *Adventures in the Middle East: excursions and incursions*, Princeton 1986. R.W. Ferrier's *History of the British Petroleum Company*, vol. ii, Cambridge, forthcoming, will contain much detailed information on the negotiations between the A.I.O.C. and successive Iranian governments. E. Abrahamian, *Iran between two revolutions*, Princeton 1982, provides a detailed survey of the modern political history of Iran.

(R.M. Burrell)

MUSĀFIRIDS (Kangarids or Sallārids), a dynasty of Daylamī origin which came from Ṭārum [*q.v.*] and reigned in the 4th-5th/10th-11th centuries of the Hidjra in Ādharbāydjān, Arrān and Armenia.

Its coming to power was one of the manifestations of the great movement of Iranian liberation which formed a kind of interlude between the end of Arab domination and the first Turkish invasions. While in Khurāsān and Transoxania this movement culminated in the rule of the Sāmānids [*q.v.*], in western Persia and Mesopotamia its standard-bearers were the Daylamīs and to a smaller extent the Kurds (cf. V. Minorsky, *La domination des Dailamites*, Paris 1932).

The Musāfirids and the Djustānids. According to a genuine document quoted in Yāḳūt (iii, 148-50), the Kangarī family only comes into history after seizing the famous stronghold of Shamīrān in the district of Ṭārum which was under Ḳazwīn. The Kangarīs have therefore to be distinguished from the ruling family of Daylam, i.e. the Djustānids of Rūdbār, of whom seven are known from between 189 and 316/805-928, while members of the family can be traced till 434/1042. We know that Muḥammad, son of Musāfir, the eponym of the dynasty (whose real Iranian name must have been Aswār; cf. al-Masʿūdī, *Murūdj*, ix, 16 = § 3587), had married Kharāsūya, daughter of the Djustānid Djustān III (from 250 until after 300). From such alliances, the names peculiar to the ruling family of Daylam (Djustān, Wahsūdān, Marzubān) became popular among the Musāfirids. In 307/919 Muḥammad killed his wife's uncle ʿAlī b. Wahsūdān to avenge the death of his father-in-law Djustān b. Wahsūdān. Henceforth there was a breach between the two families. The last Djustānid took refuge with the Daylamī chief Asfār (lord of Rayy and Ḳazwīn), who sent the Ziyārid Mardāwīdj against Muḥammad; but instead of fighting they joined forces, and Mardāwīdj slew Asfār. Muḥammad was an important ruler and Abū Dulaf Misʿar b. Muhalhil speaks with praise of his buildings at Shamīrān (1,850 houses) on which 5,000 workmen were employed (the ruins of Shamīrān have been described in Brugsch, *Reise d. preuss. Gesandtschaft*, 1862, ii, 471-2), but he was a difficult character and did not agree even with the members of his own family.

The two branches of Musāfirids. In 330/941 his sons Marzubān and Wahsūdān, by arrangement with Kharāsūya, seized Shamīrān and shut their father up in a fortress, after which the dynasty broke up into two branches: Wahsūdān remained in the hereditary fief of Ṭārum, while Marzubān extended his power over Ādharbāydjān, eastern Transcaucasia and some districts of Armenia.

The fourth generation of the Musāfirids consisted of the sons of Marzubān: Djustān, Ibrāhīm, Nāṣir and Kay Khusraw, and of the sons of Wahsūdān (330-55/942-66): Ismāʿīl, Nūḥ and Ḥaydar (?)

Marzubān. This ruler (330-46/941-57) is the most important figure in the dynasty. After the death in

314/926 of the Sādjid [*q.v.*] Yūsuf, Ādharbāydjān became the scene of the struggle between the Khāridjī Kurd Daysam b. Ibrāhīm and Lashkarī b. Mardī, a native of Gīlān, whom the Ziyārid Wushmagīr supported alternately. Lashkarī died in Armenia, and Daysam was betrayed by his vizier Abu 'l-Ḳāsim ʿAlī b. Djaʿfar who had come to an arrangement with Marzubān, for both were Bāṭinīs, i.e. Ismāʿīlīs (Miskawayh, ii, 32). Marzubān occupied Ardabīl and Tabrīz, and finally Daysam surrendered to Marzubān and received from him a castle in Ṭārum. Marzubān extended his territory northwards as far as Darband. In 332/943-4 the Scandinavian adventurers (Rūs [*q.v.*]) came by the Caspian and the river Kur and took the capital of Arrān [*q.v.*]. Bardaʿa [*q.v.*], in spite of the resistance of the subjects of Marzubān. At the same time, the Ḥamdānids of Mawṣil had conceived designs on Ādharbāydjān, and Marzubān had to deal with a force under Abū ʿAbd Allāh Ḥusayn b. Saʿīd b. Ḥamdān and the Hadhbānī Kurd Djaʿfar b. Shakūya, which had reached Salmās [*q.v.*] but was soon recalled to Mawṣil by Nāṣir al-Dawla. On the other hand, the Rūs, decimated by disease and harassed by the Muslims, beat a retreat (cf. the sources on the Rūs invasion, including the Armenian historian of the 10th century, Moses Kałankatvatzi, in Dorn, *Caspia*, St. Petersburg 1876; the text of Miskawayh, ii, 62-7, was translated with commentary by Yakubovski in the *Vizant. Vremennik*, xxiv [Leningrad 1926], 63-92, and utilised by D.S. Margoliouth in *The Russian seizure of Bardhaʿah in 943 A.D.*, in *BSOS*, i [1918], 82-95).

A new danger arose in the south-east of the lands of Marzubān when in 335/946 the Būyid Rukn al-Dawla occupied Rayy (disputed by the Sāmānids and Ziyārids). Marzubān, filled with wrath at the Būyids, decided to attack them in 336/947-8. But Rukn al-Dawla had time to get reinforcements from his brothers. In 338/949 Marzubān, defeated near Ḳazwīn, was besieged in the castle of Sumīrum (in Fārs).

The fugitives from his army gathered round his father Muḥammad and occupied Ardabīl, while Wahsūdān remained in Ṭārum. Muḥammad soon gave dissatisfaction to his captains and was shut up by Wahsūdān in his castle at Shīsagān (?). Rukn al-Dawla sent to Ādharbāydjān Muḥammad b. ʿAbd al-Razzāḳ, the former governor of Ṭūs [*q.v.*], who had deserted the Sāmānids. Wahsūdān released Daysam in the hope that he would be able to organise resistance. Daysam, who had time to take Ardabīl, was defeated by Ibn ʿAbd al-Razzāḳ, but the latter, disgusted by the intrigues around him, returned to Rayy in 338/949. Daysam reoccupied Ardabīl, but the advance of ʿAlī b. Mīshkī, a supporter of Marzubān, forced him to seek shelter with the Artsrunids of Waspurakan [see WĀN].

In the meanwhile, by an ingeniously planned coup, Marzubān escaped from Sumīrum and recovered all his strongholds and treasures (342/953). After a long series of adventures which brought him to Mawṣil, Baghdād and Aleppo, Daysam in 344/955 collected a force and read the *khuṭba* at Salmās in the name of the Ḥamdānid of Aleppo, Sayf al-Dawla. Marzubān quickly put down a rising in Darband and later drove Daysam back, who once again sought refuge with the Artsrunids, who handed him over to Marzubān under threats from the latter.

In an important passage, Ibn Ḥawḳal, ed. Kramers, 354-5, tr. Kramers and Wiet, 347-8, gives the list of the tributaries of Marzubān compiled by his minister Abu 'l-Ḳāsim (in 344/955). The names include those of the lords of Shīrwān, Abkhāz (? uncertain name of a district north of Shīrwān; cf. Marquart, *Streifzüge*, 174: *Abkhān), of Shakkī [*q.v.*], of زو, of Djurzān wa-Saghiyān (Gurziwān and Saghiyān to the west of Shīrwān), of Vayots-dzor (district of Siunie), of Ahar and Warzaḳan (north-east of Tabrīz), of Khīzān (north of Bākū?), as well as the Artsrunids, Bagratids and the princes of Khačen (west of Bardaʿa).

Wahsūdān and his nephews. Marzubān died in Ramaḍān 346/Dec. 957, and while bequeathing the power to his brother Wahsūdān, forgot to cancel his first will by which his sons Djustān, Ibrāhīm and Nāṣir were to succeed him in succession.

The commanders of the fortresses would not surrender them to Wahsūdān, who returned to Ṭārum in disgust. Djustān b. Marzubān was recognised by his brothers, but was only interested in his harem. Marzubān's old general Djustān b. Sharmazan set up in Urmiya [*q.v.*] and won to his side Ibrāhīm, with whom he occupied Marāgha.

In 349/960 the grandson of the caliph al-Muktafī, Isḥāḳ b. ʿĪsā, rebelled in Gīlān and took the name of al-Mustadjīr bi 'llāh. Djustān and Ibrāhīm became reconciled and defeated the rebels at Mūḳān [*q.v.*].

Wahsūdān began intriguing among his nephews and detached Nāṣir from Djustān, but the quarrel was of short duration. Under assurances from Wahsūdān, Djustān with his mother and Nāṣir came to Ṭārum, but were thrown into prison. Wahsūdān sent his son Ismāʿīl to Ādharbāydjān. Ibrāhīm, who was ruling Armenia (Dwin), made a move in 349/960 or 350/961 which gave Wahsūdān an excuse to massacre his prisoners. Ismāʿīl soon afterwards died at Ardabīl, after which Ibrāhīm reoccupied Ādharbāydjān and laid Ṭārum waste while Wahsūdān sought refuge in Daylam. Meanwhile, Wahsūdān's general Sharmazan b. Mīshkī, however, succeeded in defeating Ibrāhīm and the latter, abandoned by all his soldiers, sought refuge with his brother-in-law Rukn al-Dawla, who had married a daughter of Marzubān (355/966).

Rukn al-Dawla with his usual chivalry heaped favours on Ibrāhīm, and sent to Ādharbāydjān his famous minister Ibn al-ʿAmīd [*q.v.*] who reinstated Ibrāhīm and subjected the Kurds and Djustān b. Sharmazan to him. Ibn al-ʿAmīd, who was much impressed by the wealth of Ādharbāydjān, proposed to Rukn al-Dawla to annex this province, but his master recalled him to Rayy, saying that he did not wish to be accused of coveting the inheritance of one who had sought his protection. After the return of Ibn al-ʿAmīd, matters went badly and from the allusions in Miskawayh we know only that Ibrāhīm was deposed and imprisoned (probably about 369/979, the year in which the *Tadjārib al-umam* stops).

The end of the Musāfirids. In the Muslim sources, the situation in Ādharbāydjān till 420/1029 is obscure, but the statements of the Armenian historian Stephen Asołik, *Hist. universelle*, part ii, book iii, tr. Macler, Paris 1917, chs. 11, 12, 18, 19, 29, 38 and 41, enable us to fill the gaps. According to Kasrawī, in 369/979, Ibrāhīm b. Marzubān was dispossessed of his lands in Ādharbāydjān by the Rawwādī family (on which see the articles MARĀGHA, MARAND, TABRĪZ, and Kasrawī, *Shahriyārān*, ii). The son of Ibrāhīm Abu 'l-Haydjā (the "Ablhadj Delmastani" of Asołik) retained Dwin [*q.v.*], and on the invitation of king Mushel of Ḳars in 982-3 made an expedition into Armenia, where he desecrated the churches. This Ablhadj later lost all his lands to his neighbour Abutlupʿ of Gołtʿn (i.e. Abū Dulaf Shaybānī, lord of Ordūbād [*q.v.*]). He later wandered in Georgia and

Armenia, and even visited the Byzantine emperor Basil II; he was killed by his servants at Uk͟htʿikʿ (Olti). Finally, another Ablhad͟j, son of Rovd, *amīr* of Atrapakan (Abu 'l-Hayd͟jā b. Rawwād of Ād͟harbāyd͟jān), took from Abū Dulaf "the towns of Salar and after sacking Gołtʿn marched on Dwin, seized this town and demanded from the Armenians the arrears of tribute" (Asołik, ch. xviii). King Smbat II hastened to accede to the demand. The Rawwādids thus gained possession of the remainder of the possessions of the Musāfirids, of whom they claimed to be the successors. There is no reason to connect the Arab-Kurd Rawwādids with the Musāfirids, who were of Daylamī origin, although there may have been intermarriage between the two families.

The Ṭārum branch. After the disappearance of the descendants of Marzubān, Ṭārum, the original fief of the dynasty, alone remained in their hands. Wahsūdān had extended his power over the adjacent districts of Zand͟jān, Abhar and Suhraward (the latter name is usually mutilated in the sources). A *ḳaṣīda* of al-Mutanabbī (Kasrawī, *op. cit.*, i, 45) dated probably to 354/965 suggests that Rukn al-Dawla drove Wahsūdān from Ṭārum for a time, but his family had remained there, for from Yāḳūt, iii, 148-50, we learn that in 379/989, the Būyid Fak͟hr al-Dawla took S͟hamīrān from the young son of Nūḥ b. Wahsūdān, whose mother he married (the child's name was probably D͟justān; cf. Yāḳūt, *Irs͟had*, ii, 308).

In 387/997, after the death of Fak͟hr al-Dawla, Ibrāhīm b. Marzubān b. Ismāʿīl b. Wahsūdān seized the fortress of Sard͟jihān and Ṭārum. In 411/1020 even Ḳazwīn was in his hands (cf. Ḥamd Allāh Mustawfī, *Nuzhat al-ḳulūb*, 58). When Maḥmūd of G͟hazna had taken Rayy, he sent against him the Daylamī K͟harāmil. After the return of Maḥmūd to K͟hurāsān (420/1029), his son Masʿūd attacked Ibrāhīm but only captured him by a strategem. Sard͟jihān, however, remained in the hands of Ibrāhīm's son. In 427/1037, we find the "*salār* of Ṭārum" in his fief again.

Nāṣir-i K͟husraw, who was in this region in 437/1045, speaks in high terms of the lord of S͟hamīrān D͟justān (b.) Ibrāhīm whose title was "Marzubān al-Daylam D͟jīl-i D͟jīlān Abū Ṣāliḥ, Mawlā Amīr al-Muʾminīn".

Under 454/1062, Ibn al-At͟hīr records the visit of the Sald͟jūḳ Tog͟hrïl Beg to Ṭārum, where he imposed a tribute of 100,000 *dīnārs* on Musāfir, who is the last Musāfirid known. From Yāḳūt's words, we may conclude that the Ismāʿīlīs of Alamūt put an end to the rule of the family when they dismantled S͟hamīrān.

Bibliography: Cf. the articles DAYLAM, MARĀG͟HA, MARAND, ṬĀRUM, TABRĪZ, URMIYA. The principal source is Miskawayh, ed. Amedroz and Margoliouth (abridged in Ibn al-At͟hīr, viii-ix). The *Taʾrīk͟h Ād͟harbāyd͟jān* of Ibn Abi 'l-Hayd͟jā al-Rawwādī (cf. Ṣafadī, in *JA* [1912], xix, 249, and Ḥād͟jd͟jī K͟halīfa, ii, 107) has not yet been found. MUSĀHAMA [see MUK͟HĀRAD͟JA].

MUṢĀḤIB (A.), in Swahili *musahibu*, a term of East African Muslim court life.

In Swahili morphology, the *mu-/m*-prefix can be placed before all words denoting persons and also trees, e.g. *mtini* "fig tree" (A. *tīn*) or *mzeituni* "olive tree" (A. *zaytūn*). It is therefore possible that the literary word *musahibu* is simply *ṣāḥib* with the *mu*-prefix. Now in some of the Swahili chronicles and the older epics, *musahibu* occurs in a special meaning, that of the close companion of the sultan, e.g. the sultan of Pate [*q.v.*]. He is usually a half-brother or cousin. He has to accompany the ruler wherever he goes, especially when hunting, and to protect the royal person against treason, by "always looking behind him". When the ruler is invited to visit a foreign ruler, the *musahibu* is sometimes sent in his place when the possibility of foul play is to be suspected; and if the visit should result in the *musahibu*'s imprisonment, the ruler remains free whilst the *musahibu* suffers for his ruler and his country.

MUṢĀḤIB-ZĀDE D͟JELĀL (MUSAHIP-ZADE CELAL), Turkish classical playwright (1868-1959). He was born in Istanbul on 19 August 1868. His grandfather Bestekār Muṣāḥib S͟hākir Ag͟ha was a composer. After high school, D͟jelāl attended the law school while he started work in the Translation Bureaux of the Sublime Porte. After that, he worked as a civil servant in different government offices. During his childhood, Muṣāḥib-zāde showed a deep interest in Karagöz [*q.v.*], the Turkish shadow play and the old Turkish open-air theatrical representations called Orta oyunu [*q.v.*]. He was also influenced by Aḥmad Wefiḳ Pas͟ha's Molière translations. During the second Constitutional Era of the Ottoman Empire (1908-20), at a stage when the Turkish national theatre had newly been founded, and adaptations and translations of the European plays were serving as models, Muṣāḥib-zāde's musical plays, which reflected the colour of the local culture and also contained modern elements, soon became popular and attracted a great audience. His first play, called *Köprülüler*, a historical drama, was staged in 1912 in the Manukyan Theatre. In 1923 Muṣāḥib-zāde D͟jelāl retired from office and took a post at the library of the Istanbul City Theatre. In 1952 his fortieth jubilee year was celebrated. He died in 1959.

Although Muṣāḥib-zāde D͟jelāl wrote most of his musical plays after the Declaration of the Turkish Republic in 1923, the themes of these plays were mainly taken from the daily lives of the Ottoman

people in the 17th and 18th centuries. Their tunes contain motives of the Turkish classical music. In these plays the weak sides of the population and the ruling institution, which led to the decay of the Ottoman Empire, were shown and the comic element, usually consisting of overstatements and irony, was always in the foregound. Turkish traditions and conventions, life in the *ḥarem* and *selāmlīk*, superstition, fanaticism, bribery, indulgence in sex, ignorance, inefficiency and laziness of the ruling body of the time, unequal treatment of women, oppression, inadequacy of the educators, and a blind admiration shown for western culture, were the popular themes of his plays, which he skilfully handled with a sense of humour. He avoided direct judgements, but gave his message through implication. He was in favour of a simple life, based on fairness, love, tolerance and honesty, and showed a great sympathy towards the humble characters of moderate social standing, in whom he found a purity, as opposed in the ruling figures in the Palace, religious leaders and scholars, whom he found remote from the realities and the people of the country. He believed that those people had lost their sense of judgement and had thus become degenerate. This social touch is common to almost all Muṣāḥib-zāde Djelāl's plays. His characters speak different dialects indicating their origin and social status, and the way in which he makes them speak reflects his close observation. He also made great use of folkloric elements. Typical Ottoman settings, like coffee-houses, gardens, house-interiors, streets, market-places and a great variety of local types with their original costumes, musical instruments and a lot of other accessories make his plays colourful and full of details but at the same time quite difficult for staging.

Muṣāḥib-zāde Djelāl wrote eighteen comedies, most of them with music composed by different composers, like Ismail Hakkı Beg and Doktor Subhi Beg. Among these musical plays, *Istanbul Efendisi*, *Aynaroz kadısı* and *Mum söndü* seem to be the most popular ones. They were collected and published in 1936. The names of his plays are listed below along with their performance dates: *Istanbul Efendisi*, 1913; *Yedekči*, 1919; *Kashīkčīlar* 1920; *Atlī ases*, 1921; *Lāle devri*, *Madjūn ḥokkasī*, *Demirbash Sharl*, all first staged before 1923. The following ones increased Muṣāḥib-zāde's popularity: *Fermanlı deli hazretleri*, 1928; *Aynaroz kadısı*, 1929; *Kafes arkasında*, 1929; *Bir kavuk devrildi*, 1930; *Mum söndü*, 1931; *Pazartesi-perşembe*, 1932; *Balabanağa*, 1932; *Gülsüm*, 1932; *Gül ve gönül*, 1933; *Selma*, 1961; *Genç Osman* (with Mehmet Şükrü Erden), 1955; *Karacaoğlan* (with Kemal Samancı), 1955.

Some literary historians and critics, among them Mustafa Nihat Özön (1896-1980), found Muṣāḥib-zāde Djelāl's plays mediocre from the literary point of view and inadequate in terms of stage techniques, whereas modern theatre critics and scholars, like Sevda Şener, Metin And and Özdemir Nutku, praise his mastery of using visual and verbal elements on the stage. They also claim that his plays, with their historical elements and social criticism, reflecting the value judgements of a special era in Turkish literary history, have gained a special significance today and thus should be restudied from that perspective.

Bibliography: An evaluation of the Turkish theatre from 1908 to 40 was made by Mustafa Nihat Özön in *Son asır türk edebiyatı tarihi*, Istanbul 1941; a critical interpretation of Muṣāḥib-zāde Djelāl's works by Sevda Şener in *Musahib-zade ve tiyatrosu*, Ankara 1963; a critical essay by Özdemir Nutku, *Musahib-zade Celal'e yeniden bakmalıyız*, in *Türk Dili* (January 1969); an evaluation of Muṣāḥib-zāde and his play *Kaşıkçılar* was made by Enver Naci Gökşen, *Musahib-zade ve Kaşıkçıları*, in *Türk Dili* (October 1971); a new edition of his plays *Musahib-zade Celal, bütün oyunları*, Istanbul 1970. A biography, an interview with Muṣāḥib-zāde Djelāl and excerpts from his plays, were published by Seyit Kemal Karaalioğlu in his *Türk edebiyatı tarihi*, iii, Istanbul 1980, 197 ff.; a detailed evaluation of the Turkish national theatre by Metin And in *Cumhuriyet dönemi türk tiyatrosu*, Ankara 1983; a short biography of Muṣāḥib-zāde Djelāl and excerpts from *Istanbul Efendisi* were published by Şükran Kurdakul, *Çağdaş türk edebiyatı meşrutiyet dönemi*, vi, Istanbul 1986; see also *Musahib-zade Celal*, in *Ana Britannica* xvi, Istanbul 1989, 315, and MASRAḤ. 3. In Turkey.

(NEDRET PINAR)

MUSĀḲĀT, a legal term denoting a lease of a plantation for one crop period, with profit-sharing. The contract for such a lease is between the owner of the plantation and a husbandman (*ʿāmil*), who undertakes to tend the trees or vines of the plantation for one season, at the end of which the proceeds of the crop are divided in agreed portions between the two contracting parties. The landowner's portion constitutes his rent (*udjra*). The contract of *musāḳāt* is similar in its general features to that of *muzāraʿa* [*q.v.*], but differs from the latter in four respects: (1) it is binding on both sides by the mere conclusion of the contract (whereas a contract of *muzāraʿa* may be cancelled by the provider of the seeds for the crop up to the time they are actually sown); (2) if the term of the *musāḳāt* falls before the fruit has ripened, the husbandman has to cultivate the trees or vines without wage until the fruit ripens; (3) if ownership of the plantation is successfully claimed by a third party, and the trees are in fruit, the husbandman may claim a wage for the time he has been working from the other party to the contract; and (4) declaration of the period of the contract is not a necessary condition for the validity of *musāḳāt* (since the ripening period of any particular fruit is known in advance, and there is little variation between any two crops).

In contracts of *musāḳāt* the term "trees" (*shadjar*) includes anything planted with the intention of leaving it in the ground for a year or more, i.e. any plant which has no definite term for being cut down, whether flowering or non-flowering. "Non-flowering" refers to plants which produce palm-branches, firewood, etc.

As in other contracts of *idjāra*, cancellation (*faskh*) may occur through either (1) the death of one of the parties (but if the trees already have immature fruit, the husbandman or his heirs are obliged to continue to tend the trees until the fruit is mature without consideration); or (2) by legitimate excuse (*ʿudhr*).

(M.J.L. YOUNG)

MUṢALLĀ (A.), the noun of place from *ṣallā* "to perform the Muslim worship, *ṣalāt* [*q.v.*]", hence the place where the *ṣalāt* is performed on certain occasions.

1. Historical and legal aspects.

When Muḥammad had fixed his abode in Medina, he performed the ordinary *ṣalāts* in his *dār*, which was also his *masdjid* (not in the sense of temple). The extraordinary *ṣalāts*, however, were performed on a place situated southwest of the city in the territory of the Banū Salima, outside the wall, northeast of the bridge on the *wādī*, where at present the street from the suburb of al-ʿAnbariyya reaches the market-place Barr al-Munākha (cf. Burton, *Personal narrative*, plan opp. i, 256; picture of the *muṣallā* as well as of the mosque of ʿUmar situated on the place, opp. i, 329; al-Batanūnī, *al-Riḥla al-Ḥidjāziyya*, 2nd ed., plan of Medina opp. 252; part of the Barr al-Munākha, *ibid.*, opp. 264; Caetani, *Annali*, ii/1, opp. 72).

On this spot, the *ṣalāt* was performed on 1 Shawwāl and on 10 Dhu 'l-Ḥidjdja (al-Ṭabarī, i, 1281, 1362). On the latter day, the *ṣalāt* was combined with the slaughtering of two spotted rams (al-Bukhārī, *Aḍāḥī*, *bāb* 6). On the two days of festival, Muḥammad and his followers on their way to the *muṣallā* were preceded by Bilāl who bore the spear (*ʿanaza* [*q.v.*]).

It is also said that the *ṣalāt* for rain was held on the *muṣallā* (copious data in Tradition, cf. Wensinck, *Handbook*, s.v. Rain; and idem, *Mohammed en de Joden*, 141). Further, it is related that the service for the dead was performed on this spot (al-Bukhārī, *Djanāʾiz*, *bāb* 4, 61; Wensinck, *Mohammed en de Joden*, 140). Finally, the *muṣallā* is mentioned as the place where executions took place (al-Bukhārī, *Ṭalāḳ*, *bāb* 11; al-Ṭabarī, i, 1903). The sacred character of the place appears in the fact that menstruating women were taught to avoid it (al-Bukhārī, *Ḥayḍ*, *bāb* 23). According to Caetani (A.H. 1, § 55, n. 3; cf. A.H. 2, § 24, n. 1), the *muṣallā* was used more frequently.

It was not only in Medina but in a large number of other places that the rites mentioned, or some of them, were performed on a *muṣallā*. According to al-Nawawī (commentary on Muslim's *Ṣaḥīḥ*, Cairo 1283, ii, 296), this was the practice of most of the capitals. The custom prevails up to the present day. According to Doutté, the North-African *muṣallā* is used for the rites of 10 Dhu 'l-Ḥidjdja. It is a large threshing-floor, with a wall provided with a *miḥrāb*; there is also an elevated place for the *khaṭīb*. This is the form of the *muṣallā* in many towns of Morocco.

To the legal scholars, it was questionable whether the festival ceremonies should be performed on the *muṣallā* or in the mosque. There was divergency of opinion on this point, even within the *madhhabs* (Abū Isḥāḳ al-Shīrāzī, *Tanbīh*, ed. Juynboll, 41, where "the field" (*al-ṣaḥrāʾ*) is mentioned side-by-side with the mosque; al-Zurḳānī, comm. on the *Muwaṭṭaʾ*, i, 328; Khalīl b. Isḥāḳ, *Mukhtaṣar*, Paris 1318, 33-4; al-Nawawī, *op. cit.*, ii, 296).

Wensinck has conjectured that, even in pre-Islamic times, rites of several kinds were performed on an open area, threshing-floor, *muṣallā* or the like. The connection between all those rites and the special place is sought by him therein, that they had a special connection with the fertile earth, of which the threshing-floor and the like were symbols.

2. Architectural aspects in the central Islamic lands.

Although *muṣallā* (like *mughaṭṭā*) can denote the sanctuary or covered area in a mosque, its principal meaning is the open space—usually outside a settlement—used during the two *ʿīds* (*ʿīd al-kabīr* and *ʿīd al-fiṭr*) by the entire Muslim community (see 1. above). The *muṣallā* of Mashhad provides epigraphic confirmation of this classless quality, for its chronogram states *īn bināʾ madjmūʿ-i khāṣṣ u ʿāmm*. The *muṣallā* is thus an extraordinary monument built for two extraordinary occasions, though exceptionally it was used for other purposes (see 1. above). An anecdote recounted by Saʿdī (*Gulistān*, no. xxviii) indicates that the *muṣallā* of Shīrāz was used for recreation—in this case, archery practice. Merchants also plied their trade in *muṣallās* on occasion. In the Iranian and Indian worlds the *muṣallā* is known as *namāzgāh* and/or *ʿīdgāh* (see 3. below). A location conveniently close to a city gate was standard practice (*e.g.*, at Mashhad and at Iṣfahān, where some pillars, vaults and ornament of the old *muṣallā* were still visible in 1913). A security risk was perceived in the entire community foregathering in an undefended place at one time, and it was therefore permitted for worshippers to bring their weapons, and if necessary to disperse in scattered groups using different routes. The periodic occurrence of massacres in *muṣallās* justified these precautions.

Since *muṣallā* denotes simply "a place for prayer", it is not surprising that in many parts of the Islamic world the term does not imply a building at all; indeed, some *muṣallās* are temporary and fall into the category of mobile architecture. This extreme simplicity helps to explain why so very few of the *muṣallās* mentioned in literary sources have survived. Nevertheless, there are occasional reports of royal patronage in the erection of these buildings, which suggests that these were not flimsy constructions. Hilāl al-Ṣābī recounts how the caliph, his *wazīrs* and other officials celebrated the beginning of the *ʿīd* by assembling at dawn and then forming a splendidly attired and colourful procession *en route* to the *muṣallā* (*apud* M.M. Ahsan, *Social life under the ʿAbbasids, 170-289 A.H./786-902 A.D.*, London, New York and Beirut 1979, 277). Al-Māfarrūkhī, *Maḥāsin Iṣfahān* (Persian tr., ed. Iḳbāl, 75), tells a similar tale. Such processions had the sanction of the Prophet's own example. Al-Maḳrīzī notes (*Khiṭaṭ*, i, 451) that in 380/990 the Fāṭimid caliph al-ʿAzīz renovated the *muṣallā* outside the Bāb al-Naṣr constructed by Djawhar in 358/968-9. Nor was he the first; al-Muʿizz had built one at al-Manṣūriyya in 441/1049-50, and the same caliph officiated as *imām* when the great *ʿīds* were celebrated at the *muṣallā* of Raḳḳāda. The indirect evidence pointing to the existence of *muṣallās* of some architectural distinction is backed up by several scraps of physical evidence. The Marīnid *muṣallā* at al-Manṣūra was decorated with panels of elaborate geometric brickwork, while that of Mashhad, 1087/1676-7, dated by an inscription, has fine tile mosaic. That of Harāt had an *īwān* erected in 863/1458-9 by Sultan Abū Saʿīd.

In its simplest form the *muṣallā* comprises merely a directional indicator—a *miḥrāb* [*q.v.*]—either entirely

isolated in a huge open space, or set in a long wall. The development of the *ḳibla* [*q.v.*] might involve a projection of the *miḥrāb* beyond the *ḳibla* wall itself. Usually a *minbar* is also provided, which can be a large permanent structure, complete with steps and a dome (as at Aswān). In more developed form (*e.g.*, at Āgra), the *muṣallā* would consist of a gigantic empty square enclosure provided with multiple entrances and with an unbroken *ḳibla* wall (*e.g.*, Nasā, which has one, two and five entrances respectively per side, or the 8th/14th-century example at al-Manṣūra, with two entrances per side). In the eastern Islamic world, a more complex two-tier structure with a central *īwān* (*e.g.*, at Turbat-i Djām and al-Bukhārā, 515/1121-2) would mark the emplacement of the *miḥrāb* and the area immediately adjoining it. This area may be raised above the courtyard on a platform, as at Bukhārā. Such a formula corresponds quite closely to a typical form of Friday Mosque in the Indian subcontinent. It must be seen not as a self-contained unit (though many examples in Transoxiana, such as the 10th/16th-century examples at Ḳarshi and Āstāna Ata, and some in Persia, encourage that perception) but in the context of a huge open space immediately adjoining it. In other parts of the Muslim world the entire *ḳibla* wall was fully articulated with *īwāns*, clusters of domes or vaults of varying sizes; once again, the influence of the standard local congregational mosque can be felt in such cases. Such solutions include an *īwān* preceding a domed chamber (Ṭuruk), and an *īwān* flanked by domed chambers (Mashhad). At al-Manāma [*q.v.*], the capital of al-Baḥrain, Diez recorded *muṣallās* comprising "*līwāns* of several naves built of rows of pillars with pointed arches which run parallel with the *ḳibla* wall. A jutting roof on octagonal brick pillars protects from the sun. The roofs consist of a layer of clay on wood. The *ḳibla* wall has no prayer niche. There are no court or side-*līwāns*." Further articulation could be provided by small square chambers defining the corners of the enclosure (Aswān). Sometimes trees or pools broke up the open surface of the *muṣallā*. These variations show clearly enough that there was no set form for this building type. The vast scale of the typical *muṣallā* (that of Abū Zakāriyyā᾽ in Tunis, of the 7th/13th century, was described as "like a little town") posed special problems of communication. Hence relays of *mukabbirs* raised above the level of the worshippers by multiple *dikkas* are often required to orchestrate the movements of prayer for such huge congregations. This human chain could be extended far beyond the *muṣallā*; in 380/990 in Cairo, al-ʿAzīz set up *maṣṭabas* for muezzins and *fuḳahā᾽* along the route linking his palace with the *muṣallā* "so that the *takbīr* would be simultaneous from the *muṣallā* to the palace" (al-Maḳrīzī, *Khiṭaṭ*, i, 451).

The modern expansion of many mediaeval cities has resulted in the loss of their *muṣallās* (*e.g.*, the 8-hectare *muṣallā* of Samarḳand). The Ḳonya muṣallā of 948/1541 is a rare exception. Often the names of city gates or quarters contain a reminder of such vanished *muṣallās*. Although exceptionally *muṣallās* might be sited deliberately within a city (that of Algiers adjoined the Friday Mosque, and that of Bukhārā was on the Rīgistān below the *arg* until 369/971, when a new *muṣallā* was built outside the city), most of the examples thus located have been incorporated into the urban fabric as a result of later expansion. Some of the larger modern cities have acquired more than one *muṣallā*; Karachi, for example, has no less than nine.

(R. Hillenbrand)

3. In Muslim India [see namāzgāh].

MUSAMMAṬ (a.), [*shiʿr*] *musammaṭ* or [*ḳaṣīda*] *musammaṭa*, also *ḳaṣīda simṭiyya*), name of an originally Arabic (then also Hebrew, Persian, Turkish) stanzaic form of poetry. The name is derived from the Arabic *simṭ* "a thread, or string, having upon it beads or pearls; a thong, or strap. that is suspended from the horse's saddle" (cf. Lane, s.v.); the original meaning of *musammaṭ* is probably "that which is arranged in strings (rows, lines)" (I. ʿAbbās, *Ta᾽rīkh*, 221; cf., however, the etymological remarks of Ibn Rashīḳ, *al-ʿUmda*, i, 180, and in *TA*, s.v. *simṭ*).

1. In the Arabic and Judaeo-Arabic traditions, in early Persian and in Turkish.

Formal structure, metres, themes. The single stanzas, normally all of the same structure, consist of two elements: first a fixed number of lines that rhyme with each other, the rhyme, however, changing from one stanza to the next (separate rhymes), followed by a stanza-closing line that rhymes with the end lines in all other stanzas of the poem. This rhyme that runs through the whole poem (common rhyme) is called *ʿamūd al-ḳaṣīda* by the Arab authorities. The lines of the *musammaṭ* correspond to the hemistichs in normal *shiʿr*. The rhyme scheme of a simple *musammaṭ* is thus, e.g.: *bbb a, ccc a, ddd a*, etc. In the first stanza the end line often rhymes with the preceding lines, thus *aaa a, bbb a, ccc a*, etc. The number of lines with separate rhyme can be two (rare), three, four, five, six, and more. The four-line *musammaṭ* (three lines with separate rhyme + one line with common rhyme) is called *murabbaʿ*, the five-liner *mukhammas*, the six-liner *musaddas*, etc. There are said to exist also *musammaṭs* with stanzas displaying a varying number of lines (cf. Freytag, 405). In a particular variety of the *musammaṭ* the first stanza is preceded by two introductory lines with common rhyme (*aa bbb a, ccc a, ddd a*). The number of stanzas in a *musammaṭ* is not fixed. One encounters the same metres (particularly *ṭawīl, basīṭ, wāfir, ramal*, etc.) and themes (*nasīb*, praise, wine description, etc.) in the *musammaṭ* that are also found in normal *shiʿr*.

The oldest specimens. The indigenous tradition attests to the existence of *musammaṭs* already in the 2nd/8th century: al-Layth b. al-Muẓaffar (d. *ca.* 187/803) gives an exact definition of a *musammaṭ murabbaʿ* (*apud* al-Azharī, *Tahdhīb al-lugha*, xii, 348, s.v. *simṭ*). The oldest *musammaṭ* known to date is ascribed to Abū Nuwās (d. 200/815 [*q.v.*]) (rhyme scheme: *aaa a, bbb a*, etc., metre: *basīṭ*; topic: wine and drinking party; 14 stanzas). Although this ascription is not quite certain —Abū Bakr al-Ṣūlī, redactor of Abū Nuwās' *dīwān*, considers the poem to be spurious (cf. E. Wagner, *Abū Nuwās*, Wiesbaden 1964, 228)— it must date from the 3rd/9th century, since it is already quoted by Abū Hiffān (d. 255/869) in his *Akhbār Abī Nuwās* (ed. ʿA.A. Farrādj, Cairo 1953, 57 f.). The poem in question, instead of being read as a *musammaṭ*, can, however, also be viewed as a *ḳaṣīda* with regularly applied internal rhyme (*...a...a...a...a, ...b...b...b...a*, etc.). The same is true for a poem

(metre: *mutaḳārib*; theme: *nasīb*; three stanzas) that Abu 'l-Faradj al-Iṣfahānī (d. 356/967) ascribes to Ḥammād al-Rāwiya (d. *ca.* 155/771) (*Aghānī*[1] v, 27 f.). Written out as a *musammaṭ*, it shows the rhyme scheme *aa bbb a, ccc a*, etc., thus being a *musammaṭ murabbaᶜ* with introductory lines; written out as a *ḳaṣīda* it looks as follows: ......*a*......*a*, ..*b*..*b*..*b*..*a*, ..*c*..*c*..*c*..*a*, etc. In contradistinction to these examples, the *musammaṭ* wrongly ascribed to Imruʾ al-Ḳays [*q.v.*], quoted by Ibn Rashīḳ (d. 463/1070), *al-ᶜUmda*, i, 179; cf. 182, cannot be read as a *ḳaṣīda*, because all lines of the poem have equal length. It shows the rhyme scheme *aa bbbb a* which means that it is a *musammaṭ mukhammas* with introductory lines. The critic Isḥāḳ b. Ibrāhīm b. Wahb al-Kātib (4th/10th century) describes a *musammaṭ musaddas* without introductory lines (*bbbbb a, ccccc a*, etc.) (*al-Burhān fī wudjūh al-bayān*, ed. A. Maṭlūb, Baghdād 1967, 161). A *musammaṭ mukhammas* (rhyme scheme: *bbbb a, cccc a*; metre: *wāfir*, theme: *nasīb* + eulogy; 31 stanzas) is included in the *Dīwān* of the Egyptian poet Tamīm (d. *ca.* 375/985) (ed. M.Ḥ al-Aᶜẓamī *et alii*, Cairo 1957, 368-74). Two *mukhammas* poems (both in the metre *ṭawīl*; theme: *ghazal* (*ḥanīn*), considerably mixed with nature description; 10 and 20 stanzas respectively) were composed by the Andalusian poet Ibn Zaydūn (d. 463/1070 [*q.v.*]) (*Dīwān*, ed. ᶜA. ᶜAbd al-ᶜAẓīm, Cairo 1957, 128-38). Al-Ḥarīrī (d. 516/1122) uses the *musammaṭ murabbaᶜ* (*aaa a, bbb a*) in his 11th, 12th, and 50th *maḳāma* (ed. Beirut 1958, 89 ff., 101 ff., 420 ff.).

Diffusion. The *musammaṭ*, and particularly its *murabbaᶜ* type, must have been used much more frequently than is suggested by the not exactly numerous pieces encountered in the *dīwāns* of the poets (cf. the remarks by Ibn Rashīḳ, *al-ᶜUmda*, i, 182, 2). It seems to have been particularly widespread in the 4th/10th century. Evidence for this is *inter alia* the fact that the Hebrew poets who, in that century, adopted the Arabic metres and genres of poetry favoured the *musammaṭ murabbaᶜ* during their first steps into the new poetic art (cf. M. Hartmann, 113; S.M. Stern, 51). Some specimens can already be found with Eastern Hebrew poets (cf. Fleischer, 840 ff.); but it is especially the Andalusian Hebrew poets who use this stanzaic form, called *merubaᶜ* in Hebrew. A number of *merubaᶜs* (*bbb a, ccc a*) by Dūnash b. Labrāṭ have been preserved. Subsequently, the *merubaᶜ* acquires an important place in the canon of Hebrew poetry, liturgical as well as secular. A wider diffusion of the Arabic *musammaṭ murabbaᶜ* in non-courtly, more popular poetry is suggested by the fact that later Bedouin poetry also knows the *musammaṭ murabbaᶜ* alongside the *ḳaṣīda*. This is attested for the 8th/14th century by Ibn Khaldūn (*Muḳaddima*, iii, 361) and for the 13th/19th century by A. Socin's collection *Diwan aus Centralarabien* (ed. H. Stumme, Teil I-III, Leipzig 1900-1, i, nos. 50 and 64; cf. iii, 53). Lastly, one finds *murabbaᶜs* in the folk epic of the Banū Hilāl (cf. S. Pantuček, *Das Epos über den Westzug der Banū Hilāl*, Prague 1970, 123).

Takhmīs. In later times, a special function has devolved upon the *mukhammas* type. It is frequently used to expand, to "gloss", an existing poem (cf. the Spanish poetic form "gloss"). The result is more often called a *takhmīs* rather than a *mukhammas*. Numerous examples can be found in the *Dīwān* of Ṣafī al-Dīn al-Ḥillī (d. *ca.* 752/1351 [*q.v.*]) (ed. K. al-Bustānī, Beirut n.d., 26 f., 36 ff., 63 ff., and elsewhere), who also composed normal *mukhammasāt* (*ibid.*, 110 ff., 228 ff., 245 ff.). In this way, al-Ḥillī has "glossed", e.g., the famous *nūniyya* of Ibn Zaydūn (*ibid.*, 359 ff.). The first verse of the original poem, consisting of two rhyming hemistichs (now becoming lines), is preceded by three newly-composed lines with the same rhyme, length, and metre (+ *a* + *a* + *a aa*); the remaining verses, each consisting of two non-rhyming hemistichs (now lines), are likewise preceded by three newly-composed lines which follow the first hemistich with regard to rhyme etc. (+ *b* + *b* + *b ba*, + *c* + *c* + *c ca*, etc.). Such *takhmīs* poems can be found in the *dīwāns* of numerous later poets.

Relationship with other stanzaic genres of poetry. The Andalusian *zadjal* [*q.v.*] (most frequent rhyme scheme: *aa bbb a, ccc a*) adopts the rhyme scheme of a *musammaṭ* with introductory lines; the Andalusian *muwashshaḥ* [*q.v.*], according to the opinion held by many scholars, has evolved from the *musammaṭ*. Not to be confused with the *musammaṭ mukhammas* (*musaddas*, etc.) is another type of *mukhammas* (*musaddas*, etc.), in which blocks of five (six, etc.) lines rhyme: *aaaaa bbbbb* (or *aaaaaa bbbbbb*, etc.) (cf. M. Ullmann, *Untersuchungen zur Rağazpoesie*, Wiesbaden 1966, 46 ff.).

Imitations in non-Arabic literatures. The Hebrew imitations of the *musammaṭ murabbaᶜ* (Hebr. *merubaᶜ*) have already been mentioned in another context above. The attempt to assume a genuinely Hebrew development of the *merubaᶜ* in the older liturgical poetry (*piyyūṭīm*) (Fleischer, 837 ff.) is doomed to failure by the fact that none of the Hebrew *merubaᶜs* composed before the contacts of Jewish poets with Arabic poetry shows a true common rhyme; they all have a fixed recurrent word in its stead (*aaa w, bbb w*). It is only after the contact with the Arabs, and doubtlessly under their influence, that the Jews have composed true *musammaṭs*. At the most, one might assume that the existence of a similar type of stanza in the genuine Hebrew tradition facilitated the adoption of the Arabic *musammaṭ*.

In the 5th/11th century, the Persian poet Manūčihrī (d. *ca.* 432/1041 [*q.v.*]) introduced the *musammaṭ* into the canon of Persian poetry. His *Dīwān* (ed. A. de Biberstein Kazimirski, Paris 1886, 151 ff.) contains 10 (not 11!) specimens, all belonging to the *musaddas* type (*bbbbb a, ccccc a*) (most common theme: description of nature as a prologue + eulogy of the ruler). In the *Dīwān* of Sanāʾī (d. 526/1131 or later [*q.v.*]) there are two *musammaṭs* of the *murabbaᶜ* type (ed. M. Raḍawī, Tehran 1354 sh., 785 ff.). Various types of *musammaṭ* occur also in other Persian *dīwāns* (cf. Rückert-Pertsch, 85 f.; Browne, ii, 41 f.). The Turks (Ottoman as well as Čaghatay) adopted the *musammaṭ* from the Persians (cf. Gibb, *HOP*, i, 91 ff.).

Around 1100 A.D. an exact equivalent of the Arabic *musammaṭ* appears also in Provençal poetry (specimens in the collections of the oldest Troubadours, William of Aquitaine (d. 1127), Marcabrun and Cercamon). This fact, combined with the lack of a Latin, or other Romance, model for this form of Provençal stanzaic poetry, is one of the strongest arguments of the proponents of the so-called "Arabic theory" who want to explain the genesis of Provençal poetry, at least in part, through influence from the Arabic.

The revival of *musammaṭs* and other mediaeval Arabic stanzaic forms played an important role at the beginning of modern Arabic literature in the 19th century. The old stanzaic forms were used not only in own poetic efforts but also in the translation of Western poetry (cf. S. Moreh, *Modern Arabic poetry 1800-1970*, Leiden 1976, 11 ff.).

Rückert, *Grammatik, Poetik und Rhetorik der Perser*, ed. W. Pertsch, Gotha 1874, 85-6. (G. SCHOELER)

2. In later Persian and Indo-Muslim literature.

After the Ghaznawid and Ghūrid periods, sporadic examples of the *musammaṭ* are also present in the works of subsequent poets, such as Khwādjū of Kirmān (d. 753/1352 or 762/1361) and Djāmī (d. 898/1492). The *musammaṭ* found special impetus from certain poets of the 18th and 19th centuries, notably from Ḳāʾānī (d. 1270/1854), who used the medium for some of his finest poems. In all of Ḳāʾānī's *musammaṭs* the lines of the first stanza rhyme together, and this rhyme continues in the last lines of the other stanzas. In the literary output following the establishment of the Constitution in 1906, the *musammaṭ* gained increasing visibility, and was exploited effectively by Amīrī (1860-1917), Bahār (1886-1950) and, more particularly, by ʿIshḳī (1894-1924), whose long poem in this form, entitled *Īdiʾāl* ("Ideal"), constitutes a valuable contribution to the poetical literature of modern Persia.

The type of *musaddas* in which the first four lines rhyme with one another, whilst the remaining two lines rhyme amongst themselves (*aaaa bb, cccc dd, eeee ff*, etc.), often called a *tarkīb-band* because of its broad affinity with the latter, has also been popular. It has been employed widely in Urdu poetry, one of the best-known examples being Alṭāf Ḥusayn Ḥālī's (1837-1914 [*q.v.*]) long poem, *Madd u djazr-i Islām*, also popularly known as *Musaddas-i Ḥālī* (*Kulliyyāt-i naẓm-i Ḥālī*, ii, ed. Iftikhār Aḥmad Ṣiddīḳī, Lahore 1970).

(MUNIBUR RAHMAN)

MUṢANNAF (A., pl. *muṣannafāt*), an early technical term in Arabic literature applied to a collection of religious learning organised upon an abstract, structured subdivision in chapters, hence the opposite of *musnad* [*q.v.*], i.e. a collection arranged according to the first/oldest transmitter. *Muṣannaf* is the past participle of a denominative verb meaning originally "to assort", "to distinguish", sc. the one *ṣinf* (= "sort" or "species") from another. Allegedly the first in the Islamic world to compose a structured collection of ancient traditions, which, however, may not have come down to us, was the Meccan *ḥadīth* expert ʿAbd al-Malik b. ʿAbd al-ʿAzīz (d. 150/767), mostly called after his grandfather Ibn Djuraydj (cf. Ibn Ḥadjar, *Tahdhīb*, vi, 403 ult., for an *awāʾil* report ascribed to Ibn Ḥanbal). But he is also credited with the saying *mā dawwana al-ʿilma tadwīnī aḥadun*, i.e. nobody collected/registered (religious) learning in the same fashion as I have done (cf. Ibn Ḥadjar, *ibid.*, 404 (3); the verbs *dawwana* and *ṣannafa* are not synonymous, the latter connoting a more sophisticated stage in tradition-collecting, cf. *GAS*, i, 55). Other authors of early, allegedly structured, collections, which as such have not come down to us, are Sufyān al-Thawrī (d. 161/778 [*q.v.*]), the Kūfan jurist, to whom a *djāmiʿ* is attributed (cf. Rāmahurmuzī, *al-Muḥaddith al-fāṣil bayna 'l-rāwī wa 'l-wāʿī*, ed. M. ʿAdjdjādj al-Khaṭīb, Beirut 1971, 612; Ibn Ḥadjar, *Hady al-sārī, muḳaddimat Fatḥ al-bārī*, ed. Muḥibb al-Dīn al-Khaṭīb, Cairo n.d., 10(25)), and Ḥammād b. Salama (d. 167/783), the Baṣran *muftī*, who is credited with *aṣnāf*, a term glossed as *muṣannafāt*, but perhaps rendered best as "legal categories" or "chapters" (*ibid.*, also Ibn Ḥadjar, *Tahdhīb*, iii, 12 (17), 15 (12), iv, 65, in margin). Others mentioned in this respect (cf. Rāmahurmuzī, 611 f.) are al-Rabīʿ b. Ṣabīḥ (d. 160/777) from Baṣra, Saʿīd b. Abī ʿArūba (d. 156/773) from Baṣra, Khālid al-ʿAbd from Baṣra, who is said to have stolen traditions from others (cf. Ibn Ḥadjar, *Lisān al-mīzān*, ii, 393), Maʿmar b. Rāshid (d. 153/770) from Yemen, Sufyān b. ʿUyayna (d. 198/814) from Mecca, al-Walīd b. Muslim (d. 194/810) from Damascus, Djarīr b. ʿAbd al-Ḥamīd (d. 188/804) from Rayy, ʿAbd Allāh b. al-Mubārak (d. 181/797) from Marw and Hushaym b. Bashīr (d. 183/799) from Wāsiṭ. The oldest *muṣannaf*-type works extant are the *Sīra* by Muḥammad b. Isḥāḳ (d. 151/768 [*q.v.*]), the *Muwaṭṭaʾ* of Mālik b. Anas (d. 179/795 [*q.v.*]), and works by Abū Yūsuf Yaʿḳūb b. Ibrāhīm (d. 182/798 [*q.v.*]), chief *ḳāḍī* of Baghdad, and Muḥammad b. al-Ḥasan al-Shaybānī (d. 189/805 [*q.v.*]), cf. *GAS*, i, s.n.

In Shīʿī literature, allegedly the oldest structured collection of legal traditions is the *Madjmūʿ al-fiḳh* ascribed to Zayd b. ʿAlī b. al-Ḥusayn (d. 122/740); its authorship, however, remains to be established definitively, cf. W. Madelung, *Der Imam al-Qāsim ibn Ibrāhīm und die Glaubenslehre der Zaiditen*, 54-7, and the literature referred to there.

The pre-canonical collections of Prophetic and/or

other *ḥadīth* extant today, not all called *muṣannafāt* but arranged as such, are that of the Ibāḍī al-Rabīʿ b. Ḥabīb (d. *ca.* 175/791), whose *musnad* [*q.v.*] may in actual fact have been initially organised as such and only later received a *muṣannaf*-type arrangement at the hand of a later scholar, (cf. the incomplete edition of ʿAbd Allāh b. Ḥumayd al-Sālimī, *Ḥāshiyat al-djāmiʿ al-ṣaḥīḥ musnad ... al-Rabīʿ b. Ḥabīb*, Cairo 1326; cf. also J.C. Wilkinson, in *Studies on the first century of Islamic society*, ed. G.H.A. Juynboll, Carbondale-Edwardsville 1982, 135 ff., 245); the *Muṣannaf* of ʿAbd al-Razzāḳ b. Hammām al-Ṣanʿānī (d. 211/827), edited in 11 volumes by Ḥabīb al-Raḥmān al-Aʿẓamī, Beirut 1970-2; a work entitled *Sunan* by Saʿīd b. Manṣūr (d. 227/842), edition al-Dār al-Salafiyya, Bombay 1982; the *Muṣannaf*, also called *Musnad* although it is arranged according to subject-matter, of Abū Bakr b. Abī Shayba (d. 235/849), edited by Mukhtār Aḥmad al-Nadwī *et alii*, Bombay 1386-1403, in 15 volumes; and a collection called *Sunan* or *Musnad* by ʿAbd Allāh b. ʿAbd al-Raḥmān al-Dārimī (d. 255/869), edited by Fawwāz Aḥmad Zamarlī and Khālid al-Sabʿ al-ʿAlamī, Beirut-Cairo 1987.

(For methods simplifying the tracing of traditions in early *muṣannafs*, see MUSNAD.)

(G.H.A. JUYNBOLL)

MUṢANNIFAK, ʿALĀʾ AL-DĪN ʿALĪ B. MADJD AL-DĪN Muḥammad al-Bisṭāmī (or al-Harawī), Persian scholar and theologian, was born in 803/1400-1 at Shāhrūd near Bisṭām as a descendant of the famous theologian Fakhr al-Dīn al-Rāzī [*q.v.*]. The nickname *muṣannifak* ("the little writer") was probably given to him "in allusion to his youthful productivity as a writer" (Storey). He studied at Harāt and continued to live in Eastern Persia until 848/1444 when he travelled to Anatolia. While he was teaching at Ḳonya, his hearing deteriorated so much that he had to give up this occupation. He went to live in Istanbul on a pension granted by Sultan Meḥemmed II. In 867/1463 he accompanied the sultan during the Ottoman invasion of Bosnia. A *fatwā* drawn up by Muṣannifak authorised the killing of Stjepan Tomašević, the last Bosnian king. Among the dates given for his death the most likely is 875/1470-1.

Most of Muṣannifak's works are commentaries and supercommentaries on Arabic texts. His interests included rhetoric and logic as well as the theological disciplines. Among the works to which he appended Arabic glosses are al-Būṣīrī's *al-Burda* [*q.v.*], al-Taftazānī's [*q.v.*] *al-Sharḥ al-Muṭawwal* and the *Sharḥ al-Miftāḥ* by ʿAlī b. Muḥammad al-Djurdjānī [*q.v.*]. In 863/1459 he wrote a Persian commentary on *al-Risāla al-shamsiyya*, a famous textbook on logic by Nadjm al-Dīn ʿUmar al-Kātibī [*q.v.*]. Other works in Persian are *al-Muḥammadiyya* or *Tafsīr-i Muṣannifak*, an unfinished commentary on the Ḳurʾān begun in 863/1459 at the request of Sultan Meḥemmed II, and *at-Tuḥfat al-Maḥmūdiyya*, dedicated to the *wazīr* Maḥmūd Pasha [*q.v.*].

(J.T.P. DE BRUIJN)

MUSĀWĀT (A.) "equality", the *maṣdar* of form III of the verb *sawiya* "to be equal to, be worth", with the same sense as form I; in modern times, it has been used for the political concept of human equality (Ottoman Turkish *müsāwāt*, modern Turkish *müsavat*, Persian *musāwāt*, *barābarī*).

The root is found frequently in the Ḳurʾān, though only once in form III (XVIII, 95/96), in the sense "to make level, even up". In the literary and cultural controversies of the ʿAbbāsid period, those of the Shuʿūbiyya [*q.v.*], the non-Arabs seeking social equality with the ruling class of Arabs were sometimes known as the *ahl al-taswiya* "proponents of equalisation" (using here form II) (see Goldziher, *Muh. Studien*, i, 165, Eng. tr. i, 153).

In recent Middle Eastern political vocabularies, the concept of human equality made its first tentative appearance when the ideas of the French Revolution reached the region. Thus in a memorandum of 1798 on French Revolutionary activities, the Ottoman Chief Secretary ʿĀṭif Efendi translated "equality and liberty" as *müsāwāt we serbestiyyet* [see ḤURRIYYA. ii, at III, 590], and Bonaparte's proclamation at the time of the French landing in Egypt during this same year announced that all men were equal in the sight of God (*mutasāwiyīn* [sic] *ʿind Allāh*), and the new principles are explained by al-Djabartī as *tawsiya* and *ḥurriyya* (*Al-Jabartī's chronicle of the first seven months of the French occupation of Egypt*, ed. and tr. S. Moreh, Leiden 1975, Ar. text 8, 11, tr. 40, 42).

During the course of the 19th century, of the three principles of the French Revolution, it was Freedom and Fraternity (the latter in the form of Pan-Arab and Pan-Turkish feeling; see ḲAWMIYYA. i-ii, iv) which were dominant in the minds of westernising Muslims, insofar as these concepts affected their thinking. The division by Islamic religion of mankind into the saved, the Muslims, and the damned, the non-Muslims, and the division by Islamic law of mankind into a male sex with superior legal and social status over women [see MARʾA], together with the survival until well into the 19th century of personal slavery [see ʿABD] in those Islamic countries not under Western colonial domination, left little scope for developing the concept of the equality of mankind in any sphere, whether theological, legal, social or political. This concept did not appear until the early 20th century, when the ideas of European socialism [see ISHTIRĀKIYYA] and Marxist communism [see MĀRK(I)SIYYA] began to have a vogue amongst certain sections of westernised intelligentsia; hence *Musāwāt* was the title of the social democrat workers' party active from 1911 to 1920 in Russian Ādharbaydjān [see ḤIZB. iv]. On the whole, however, Middle Eastern peoples have viewed the idea of human equality as a chimera, to which lip service is paid by political leaders in political manifestos but which is rarely taken into account in practice.

(C.E. BOSWORTH)

MUSĀWĪ [see MAKKA. 2. ii].

MUSĀWIR B. SAWWĀR AL-**WARRĀḲ**, a minor poet and minor *muḥaddith* from Kūfa, who lived in the middle of the 2nd/8th century. He belonged to Ḳays b. ʿAylān b. Muḍar. He is also called a *mawlā* of ʿAdwān, a tribe of Djadīlat Ḳays; but his name and that of his father seem to indicate his Arab origin. Short notices and fragments of his poetry are found in biographies of *muḥaddithūn* (e.g. Ibn Ḥadjar, *al-Tahdhīb*, Ḥaydarābād 1325-27, x, 103) and several works of *adab*, notably *al-Aghānī* ed. Dār al-Kutub, xviii, 148-53). Ibn al-Nadīm (*al-Fihrist*, Leipzig 1871-2, 162) mentions his verse as filling fifty folios; some eighty lines are preserved, some of which are of dubious attribution. All his extant poetry is epigrammatic. One of his epigrams angered Abū Ḥanīfa and

his followers, another placated them, notwithstanding its ironic tone (*Aghānī*, xviii, 151-2 and several other sources). His longest (33 lines) and most remarkable poem offers the earliest known example of a sub-genre of descriptive poetry which may be called "banquet poetry"; it combines static description of various dishes with more dynamic elements picturing the progress of the meal (Ibn ʿAbd Rabbih, *al-ʿIḳd al-farīd*, Cairo 1948-53, vi, 295-7).

Bibliography: G.J. van Gelder, *Musāwir al-Warrāq and the beginnings of Arabic gastronomic poetry*, in *JSS*, xxxvi/2 (1991), gives all the known references to Musāwir and his poetry, with a translation and a study of his banquet poem. See also Sezgin, *GAS*, ii, 469. (G.J.H. VAN GELDER)

MUSAWWIDA (A.), literally "the wearers, or bearers, of black", the name given to the partisans of the ʿAbbāsids at the time of the *daʿwas* of Abū Muslim al-Khurāsānī and Abū Salama al-Khallāl [*q.vv.*], apparently from the black banners which these rebels against the Umayyads bore, so that they are described in some sources as the *aṣḥāb al-rāyāt al-sawdāʾ*.

The origins of this use of black are obscure and have been much discussed. In the first place, the use of black may have been simply a mark of rebellion, for the anti-Umayyad rebel in Khurāsān and Transoxania, al-Ḥārith b. Suraydj [*q.v.*], active from 116/734 onwards, also had black banners. But the ʿAbbāsids now gave the use of black a messianic significance; the Prophet Muḥammad himself, according to pro-ʿAbbāsid traditions, had a black banner during his campaigns (see M. Sharon, *Black banners from the East. ii. Revolt, the social and military aspects of the ʿAbbāsid Revolution*, Jerusalem 1992, 78-85). This may have been in accord with popular eschatological beliefs, in which the coming of the Mahdī [*q.v.*] was associated with the colour black [see ʿABBĀSIDS], perhaps because of the idea of veiling from sight, concealment and the awaiting of a new birth or the launching of a new movement with millennarian overtones.

Black became the official colour of the ʿAbbāsids once they were in power, as opposed to the white colour of their enemies the Spanish Umayyads, and was accordingly used for garments worn at their court (*ziyy al-khilāfa*) (except for the brief period when al-Maʾmūn [*q.v.*] adopted the ʿAlid colour of green) and for the *khilaʿ* or robes of honour [see KHILʿA] presented by the ruler, with the caliph himself normally wearing a black high cap or *ḳalansuwa* and jacket (*ḳabāʾ*) (see A. Mez, *Die Renaissance des Islâms*, 130-1, Eng. tr. 132; E. Tyan, *Institutions de droit public musulman. i. Le califat*, Paris 1954, 501-12; D. Sourdel, *Questions de cérémonial ʿabbāside*, in *REI*, xxviii [1960], 132-3; and LIBĀS. i).

The symbolism of colours in Islam (for which see, in general, LAWN) was powerfully felt. White became the colour par excellence of the ʿAlids as well as of the Umayyads (see above), but various heterodox religio-social protest groups, especially in the eastern Iranian world, adopted different colours as their symbols, e.g. the green of Bihāfarīd [*q.v.*]; the red of the Khurramiyya [*q.v.*], who were thus also known as *muḥammira* or *surkh-djāmagān* "wearers of red"; and the white of the followers of al-Muḳannaʿ [*q.v.*], hence alternatively known as *mubayyiḍa* or *sapīd-djāmagān*. In some sources describing these episodes, Islam is characterised as the "black religion", in contrast to the "white religion", *al-dīn al-abyaḍ*, apparently the ancient religion of Persia which was to be restored (cf. al-Ṭabarī, iii, 1311, regarding the trial of al-Afshīn Ḥaydar, accused of pro-Persian, anti-Arab sympathies). See further on colour symbolism in relation to religious movements and ideas, B. Scarcia Amoretti, in *Camb. hist. of Iran*, iv, 513-14.

(C.E. BOSWORTH)

MUSAYLIMA B. ḤABĪB, ABŪ THUMĀMA, a man of Banū Ḥanīfa who lived in al-Yamāma and led a large section of his tribe in revolt during the wars of the *ridda* [*q.v.*].

The suggestion of some European scholars (as in the article in *EI*[1]) that Musaylima is a contemptuous diminutive of Maslama appears to be mistaken. Because he claimed to be a prophet he is often called al-Kadhdhāb, the liar or false prophet. He is also said to have been called al-Raḥmān (al-Balādhurī, 105; al-Wāḳidī, 82); but this seems unlikely since al-Raḥmān was a name of God. Musaylima believed that he received messages from al-Raḥmān, and so might have called himself ʿAbd al-Raḥmān; and there could then have been some confusion over this name because of the allegation (Ibn Hishām, 200) that sūra XIII, 30, was revealed when some Meccan pagans said that Muḥammad was being taught by a man in al-Yamāma called al-Raḥmān. This allegation about a human teacher is not convincing as the occasion for the revelation of XIII, 30, and is not mentioned in the commentaries of al-Ṭabarī and al-Bayḍāwī. If there is some truth in it, the most likely explanation is that the name al-Raḥmān, which was frequently used in the sūras of the middle Meccan period, was understood by the pagans as the name of a human being, otherwise unknown. It is virtually impossible that Musaylima could have claimed prophethood at this date. He does not seem to have become a person of importance until after the death in 630 of Hawdha b. ʿAlī, the king or ruler of the Banū Ḥanīfa, to whom Muḥammad is said to have sent letters summoning him to Islam (al-Ṭabarī, i, 1560; cf. Ibn Hishām, 971). Hawdha was possibly the strongest man in Central Arabia at this time, since he was in alliance with the Persian empire and guaranteed the security of its caravans for a large part of the route from the Yemen to ʿIrāḳ. This implies that he controlled at least the nomadic part of Banū Ḥanīfa; there was also a large settled agricultural section of the tribe. He is said to have responded favourably to Muḥammad's envoy, but to have demanded a share in the political control of Arabia. He did not become a Muslim. He probably realised that the Persian empire was disintegrating and that he could not expect further support from it. After his death, the nomadic section of the tribe probably recognised Thumāma b. Uthāl as leader, and for this reason Muḥammad sent a messenger to him (Ibn Hishām, 998, but not Ibn Isḥāḳ according to al-Ṭabarī). While Muḥammad was negotiating with these two kings, a deputation went to Medina from the tribe, probably representing the agricultural section, and this deputation accepted Islam. Musaylima is said to have gone with the deputation, but to have remained with the baggage while the others spoke to Muḥammad. This account may be no more than an attempt to claim that something Muḥammad said about him was an acknowledgement of his prophethood.

It was presumably after the death of Hawdha that Musaylima made a bid for leadership in the tribe, possibly in rivalry to Thumāma, and basing it on his claim to prophethood. He had strong support from al-Raḥḥāl (or Nahār al-Radjdjāl) b. ʿUnfuwa, who had been one of the deputation and may have encouraged him to establish a political system centred on a prophet on the model of Medina. Previous to this, Musaylima may have been proclaiming a religious message, but it is clear that he had attracted no extensive following. Now, however, his aim seems to have been to set up a strong principality in the Yamāma

independent of Persia, Byzantium and Medina, especially in view of the decline of Persia and the likelihood that trade between the Yemen and ʿIrāḳ would decrease.

While the movement led by Musaylima thus dealt with political and economic realities, it had a genuine religious basis, which is not entirely concealed by hostile Muslim propaganda. Many of the Banū Ḥanīfa were Christians, and Musaylima had clearly been influenced by Christian ideas. He spoke of the kingdom of heaven, and taught belief in resurrection and the Judgement of the Last Day when people were judged according to their deeds. For his followers he prescribed formal prayers three times a day, fasting, and abstinence from wine; the contrary statement about wine (Ibn Hishām, 946) is to be rejected as Muslim propaganda. He also made use of *sadjʿ*, rhythmic assonanced prose, as in the early sūras of the Ḳurʾān, and some examples of this have ostensibly been preserved.

About the end of the year 10 (beginning of 632) Musaylima is said to have written a letter to Muḥammad suggesting some division of spheres of authority, but the suggestion was rebuffed by Muḥammad. His following among Banū Ḥanīfa increased greatly after Muḥammad's death, and he was felt to be a serious threat to the nascent Islamic state. Abū Bakr therefore sent a large army against him under Khālid b. al-Walīd. A fierce battle took place at al-ʿAḳrabāʾ [*q.v.*] with its centre in a walled garden or orchard (*ḥadīḳa*), which came to be known as "the garden of death" because of the numbers on both sides killed there. The Muslims were victorious, but lost many *ḳurrāʾ* or Ḳurʾān-reciters. Responsibility for the death of Musaylima was claimed by various men, including Waḥshī, the Abyssinian slave who had killed Ḥamza. Shortly before this battle Musaylima is said to have married Sadjāḥ [*q.v.*], the prophetess of the tribe of Tamīm. W.G. Palgrave, travelling in Nadjd in 1862, found Musaylima regarded as a prophet, and people quoted what Palgrave calls "burlesque imitations" of the Ḳurʾān, though he does not reproduce any.

MÜSELLEM (a.), an Ottoman military term alluding to provincial landed cavalrymen who later became transformed into auxiliary forces no longer employed in actual fighting but in discharging duties such as dragging guns, levelling roads, digging trenches, carrying provisions and casting cannon balls. Then, as the Ottoman state required them to pay taxes rather than serve in the army, they lost their privileged status and dissolved into the tax-paying populace.

The *müsellems* were established in the 8th/14th century during the time of Orkhan Ghāzī [*q.v.*]. They were each initially granted, in return for their service, a small parcel of land [see čiftlik], on which they were excused from any dues or taxes, hence the name *müsellem* "exempt." What differentiated them from other Ottoman cavalrymen, the *sipahīs* [*q.v.*], was that the *müsellems* worked their own land and did not receive funds from the collection of taxes as the *sipahīs* did. This special condition necessitated that they support one another when called up for military service; the *müsellems* were therefore organised into groups of thirty men each called a "hearth" [see odjaḳ]. They took turns in serving in the army; when five served, the other twenty-five in the hearth became "auxiliaries" [see yamaḳ], providing a sum of money for the expenses and sustenance of the five during the campaign. The amount they gave ranged from 50 to 60 *aḳčes* for the rich auxiliaries to 10 to 20 *aḳčes* for the poor ones. The *müsellems* were under the command of troop leaders called *čeribashīs* who were under the authority of the provincial governors. There were *müsellem* holdings in both Rumelia and Anatolia, and these were recorded in registers called *müsellem defteri*.

After the Janissary corps expanded in the 9th/15th century and started their own units, the *müsellems* were relegated from fighting to accompanying the armies on campaigns as auxiliary labour teams. They discharged such duties as trench-digging and the hauling of cannon, often moving ahead of the main body of the Ottoman army with their spades and axes. Groups such as the gypsies of Rumelia were also organised into *müsellem* hearths during this century, their status being reduced to paying taxes as they ceased to perform military duties. Towards the end of the 10th/16th century, some *müsellems* were employed in Ottoman naval service but proved to be unsatisfactory, since their interests lay not in the sea but in their parcels of land. Because of this inadequacy, rather than serving in person, each *müsellem* hearth was then asked to make a yearly contribution to the navy; this relegated them from being in the service of the state to giving taxes to the state as ordinary peasants. A factor which contributed to this transformation was the *müsellems*' practice of farming lands adjacent to their parcels which they then gave taxes on, or of leasing out their parcels to others to be farmed. Even though the *müsellems* thus disintegrated as a provincial organisation in the early 11th/17th century, their name kept being used at a much later date for certain infantry charged with the upkeep of roads and military works, mostly in the garrisons of frontier fortresses.

(F. Müge Göçek)

MŪSH, modern Turkish Muş, a town and a province of eastern Anatolia lying to the west of Lake Van and Akhlāṭ [*q.v.*] or Khilāṭ (modern Ahlat). The town lies in lat. 38° 44′N. and long. 41° 30′E. at an altitude of 1290 m/4,200 feet in the foothills of the valley which carries the Murad Su river—a fertile plain on which wheat, tobacco and vines have long been grown—and which in recent years has borne the railway branch from Elâzığ [see maʿmūrat al-ʿazīz] eastwards to Tatvan on the shores of Lake Van.

In the pre-Islamic period, it was the principal town of the Armenian district of Taraun (Hübschmann,

Idg. Forsch., xvi, 326; J. Saint-Martin, *Mémoires historiques et géographiques sur l'Arménie*, i, Paris 1818, 102). In Islamic times the name Ṭarūn (as spelled by Yāḳūt, iv, 534) is sometimes used for the town itself, as in al-Ṭabarī, iii, 1408 (cf. J. Markwart, *Süd-Armenien und die Tigrisquellen*, Vienna 1930, 354). The tradition of the Armenian historians connects the foundation of Mūsh with Mushel Mamikonean, the ancestor of the powerful, originally non-Armenian family of the Mamikoneans, who lived in the 4th century A.D. To him is ascribed the construction of a castle, the ruins of which are still visible on one of the hills that dominate Mūsh. This town itself is situated at the mouth of a mountain gorge, and before it extends, as far as the river, a large fertile plain, the "plain of Mūsh". During the first centuries after the Islamic conquest [see ARMĪNIYA, II, 2], Mūsh remained a centre of Armenian national life; from 825-51 it was the residence of the Bagratid Bagrat. After the abduction of this prince to Baghdād in 851, the inhabitants revolted and killed the Muslim governor Yūsuf b. Abī Saʿīd al-Marwanī (al-Ṭabarī, iii, 1408-9). Later on, it was part of the vassal kingdom of the Bagratids. Occasionally, it was occupied by Muslim adventurers, as in the days of Sayf al-Dawla (Ibn al-Athīr, viii, 408) in 353/964. About this time, the name Mūsh appears for the first time in Islamic geographical literature (al-Muḳaddasī, 150). In Saldjūḳ times, the influence of Islam became stronger; the atabegs of the Armanshāh dynasty disputed the territory of Khilāṭ and Mūsh with the Artuḳids and even the Ayyūbid Nadjm al-Dīn laid siege to Mūsh in 604/1207 (Ibn al-Athīr, xii, 169, 180), and in 625/1228 Djalāl al-Dīn Khwārazmshāh was master of the country; in that year, a battle was fought by him and lost on the plain of Mūsh against the Saldjūḳ ruler of Erzurūm (Ibn al-Athīr, xii, 314; Djuwaynī, *Taʾrīkh-i Djihān-gushā*, ii, 181). This accounts for the ruined state of the town in the middle of the 8th/14th century (Ḥamd Allāh Mustawfī). After the Mongol period, Mūsh was raided by Tīmūr in 788/1386, when he invaded the possessions of the Ḳara Ḳoyunlu (Sharaf al-Dīn, ii, 419). In 878/1473 the power of the Aḳ Ḳoyunlu ruler Uzun Ḥasan was definitely broken in Armenia, and from that time on Mūsh belonged to the Ottoman Empire. At that time, the population of its surroundings was already strongly mixed with Kurds and Turcomans. The direct authority was exercised by Kurdish local chieftains, who, in the ruling system of the Empire, were subordinated, as *sandjaḳ begs*, either to the *pasha* of Bitlīs or to that of Van. At the beginning of the 19th century, there ruled the Kurdish *mīrmīrān* Emīn Pasha, who was deposed in 1828-9 (Ritter, x, 676, and Meḥmed Thüreyyā, *Sidjill-i ʿothmānī*, i, 426).

In the administrative changes introduced in the Ottoman empire after the Treaty of Berlin (1878), Mūsh town became the centre of a *sandjaḳ* of that name in the new *wilāyet* of Bitlīs carved out of the formerly very extensive *wilāyet* of Erzurum. At this time, Mūsh, with some 5,000 inhabitants, was half-Armenian Christian and half-Kurdish Muslim. There were bishops of the Armenian Gregorian and Catholic Churches and a Protestant community with schools directed by the American Mission. According to its inscription, one of the Armenian churches had been converted into a mosque in 979/1571 (Ritter). The surrounding countryside also had a mixed Muslim-Christian population, in which ancient Christian sanctuaries had long continued to exist, such as the monastery of Surb Karapet, called by the Turks Čanlî Kilise and described by Ewliyā Čelebi.

Towards the end of the century, revolutionary activity in the Mūsh region was begun by the Armenian nationalist Dashnak guerillas, starting *ca.* 1894. In the subsequent years, till 1904, bands under the Armenian leader Andranik were active, bringing savage reprisals from the Turkish authorities, culminating in the 1915 massacres in the Mūsh, Bitlīs and Sasun districts by Turkish troops and Kurdish irregulars. In the summer of 1916, the Imperial Russian Army overran northeastern Anatolia, including Mūsh, but this last was recaptured in 1917 by Muṣṭafā Kemāl's [see ATATÜRK] Turkish Second Army, and Russian troops withdrew from the whole area in accordance with the Treaty of Brest-Litovsk (March 1918). With the establishment of the ephemeral Armenian Republic in Transcaucasia 1918-20, Mūsh and Bitlīs came theoretically within the boundaries as laid down, when the infant state was in fact already succumbing to Turkish and Bolshevik pressure, by the Treaty of Sèvres (1920).

Under the Turkish republic, Muş has become a largely Kurdish town, the chef-lieu of the *il* or province of Muş, with a population of 44,000 in the town and 234,000 in the province (1970 census).

(J.H. KRAMERS-[C.E. BOSWORTH])

MUSHĀʿ (A.) is a technical term denoting common and repartitional ownership by the entire village community of all agricultural lands of the village.

1. In the Near East. In villages in the Middle East where *mushāʿ* prevailed, the peasant community would convene once every year or two to divide the available land by lot to individual peasants. The history of the institution is extremely obscure. In the technical sense mentioned above, the word *mushāʿ* does not appear in classical Arabic dictionaries, which may suggest that the institution did not exist in classical Islam, despite the fact that it looks ancient. It is often associated with Bedouin concepts of landownership, but this association is far from certain. Thus Bedouin customary law of the Beer Sheba region in Mandatory Palestine was specifically said to lack any trace of *mushāʿ* (see ʿĀrif al-ʿĀrif, *Kitāb al-Ḳaḍāʾ bayn al-badw*, Jerusalem 1933, 236). Nor is the *mushāʿ* so much as mentioned in the 10th/16th century Ottoman agrarian *ḳānūns* and land surveys, where pieces of land are registered individually (all references to *mushāʿ* in Barkan's collection of 16th-century *ḳānūns* are to the literal sense of the word). Did the registration officials record the situation in a given moment, or was the *mushāʿ* as yet non-existent? This question must for the present go unanswered. Another important and difficult question is exactly where, geographically, did the *mushāʿ* institution exist? In the past it was usually held that practically the entire Middle East was governed by it. As research increases, the area of *mushāʿ* tends to diminish. Thus documents from the Judaean mountains in the early 20th century indicate that *mushāʿ* did

not exist there for a long time, if ever at all. In fact, the technicalities of the system raises some doubts whether *mus͟hāʿ* had ever been very widespread in mountainous areas (periodical division necessitated blocks of flat land, while hilly agriculture in the traditional Middle East was mainly terrace-based). We are better informed on the disappearance of the *mus͟hāʿ* system. This took place in association with the 19th-century Ottoman reform, starting mainly with the 1858 Ottoman land law. This law made it obligatory to register land in a registration bureau, while making it impossible to register *mus͟hāʿ* property. Despite bureaucratic inefficiency, the *mus͟hāʿ* was doomed through this law and by the mid-20th century it was clearly on the wane, though still vigorous in some areas (e.g. Tell Toqaan in northern Syria).

(H. Gerber)

2. In the Mag͟hrib.

The collective ownership of lands, which was originally the normal system in the regions where nomadism prevailed, has been preserved in the Mag͟hrib, where stretches of uncultivated lands and those used for pastoralism still belong to nomadic or sedentarised tribes, though not without being the subject of legal suits caused by the rather rudimentary delimination of lands. A right of grazing, belonging to all members of the tribe, is even recognised, in certain conditions, to passing strangers [see marʿā]. However, as a state of security has become established and as more and more numerous groups have been sedentarised, the area of collective lands has been reduced in favour of a development proceeding at the same time as private property, at first in the family, then in the individual, has increased. In the Berber areas, this property remains substantially undivided, as tradition recommends, at least for landed property.

In effect, although the principle by which "no-one is compelled to remain within the undivided property" is respected, current usage is that, under the authority and administration of the oldest member of the menfolk, family communities comprising the descendants of this person, to which are added, at least among certain tribes in Morocco, the *amazzal* [see ʿār in Suppl.] and freedmen, are set up. All the members bring to their community the goods which they possess or which come to them by gift or inheritance during the period of the familial society. Among the Zemmour, the usufruct of these goods is personal, whilst in Kabylia, they remain the property of the person concerned, and the enjoyment of them is acquired by the family. Each person has to dedicate his work for the community and to hand over to his chief his earnings and gains. The chief must show perfect impartiality and, if he is unable to justify himself when his honesty is doubted, his authority can be revoked and can be replaced.

The women, who are not part of the familial society, only own the clothes and jewelry which they received at marriage or which they have subsequently acquired; more luxurious garments and the jewelry worn on feast days belong to the community. However, the mother of the family may take over the succession to her deceased husband. The society has an obligation to feed the daughters and granddaughters of a deceased member. When meals are not partaken of in common, the dry goods and oil necessary for each hearth are impartially distributed. A strict equality is also respected in the division by lot of the meat of an animal slaughtered in special circumstances.

The fertile lands are the indivisible property of the familial group. In Kabylia, they are divided out every two years among the chiefs of each of the hearths possessing a pair of oxen. In Morocco, the sovereign who, in his role of manager of the lands, has a right over those lands which are within the authority of the *mak͟hzan* [*q.v.*], may recognise to a family a right of ownership over a stretch of useful land; this last, measured by a rope, corresponds to the area which can be worked in one season by a pair of oxen.

The death of a member of the familial community does not entail its dissolution; the social components are in effect handed down to the heirs who, if they do not wish to remain within the indivisible unit, receive the share due to them. Thus the community may last through several generations. When, at the request of one of the heirs, it is broken up, both the movable and immovable property brought into it by the members are given back to them and those acquired during the period of its existence are shared out pro rata with the hereditary rights of each person. The landed property is defined by surface measurement (by a rope), and goods left outside all the division are allotted, with rights balanced out, to those members who offer the highest bid for them.

(Ch. Pellat)

MUS͟HĀʿARA (a.), "poetical contest", in Urdu usually pronounced *mus͟hāʿira*, has come to be applied in its wider aspect to denote an assembly where Urdu poets come together to recite their compositions.

Its origin in the Indo-Muslim cultural tradition can only be guessed. According to a statement by S͟hiblī Nuʿmānī, one may assume that the institution of the *mus͟hāʿara* must have appeared on the Persian literary scene in India by the beginning of the 10th/16th century. S͟hiblī points out that from the time of the poet Fig͟hānī [*q.v.*], who died in 925/1519, there grew up the custom of holding *mus͟hāʿaras* in which poets competed with one another, thus promoting the cause of poetry by their activities (*S͟hiʿr al-ʿAd͟jam*, iii, repr. Aʿẓamgaṙh 1945, 17). It is likely that a similar situation might have existed since an early period in Urdu poetry, which shared with Persian a common cultural

environment. Whatever the case may be, it is certain that by the early 12th/18th century, when Urdu was adopted as a medium of literary expression by the poets and writers of Dihlī, the *mushāʿara* was a familiar event in the capital, providing not only a venue for poetry recitation but also a forum of discussion for some leading poets of the day who were concerned with the improvement of the language.

The *mushāʿara* was the product of a princely age, reflecting the sophisticated taste of its time. The etiquette connected with it was well-mannered, and involved fixed ceremonies. One of these was the use of a lighted candle which, placed before a poet, signalled that it was his turn to recite. Much importance was attached to the correct order in which the poets were introduced. The first to recite were lesser poets; then came the masters in the ascending order, until the poet considered most important recited at the end. Both singing and declamation were employed for the rendering of the poems.

In the social milieu of the period, the *mushāʿara* enjoyed a popular appeal, and played an important functional role in the oral propagation of Urdu poetry. Persons interested in literature were drawn to the *mushāʿara* because it was the most common form of intellectual entertainment available in the prevalent urban setting. Further, the *mushāʿaras* compensated for the lack of magazines, and supplied the poet with a suitable literary platform to disseminate his work.

The tradition of the *mushāʿara* was linked with the *ghazal* [*q.v.*] and the two contributed to each other's appeal. The *ghazals* recited in the *mushāʿara* were based upon a *miṣrāʿ-i ṭaraḥ*, or half-line, providing a specimen of the metre and rhyme in which each poet had to compose his poem. This practice was intended to satisfy the competitive requirement of the *mushāʿara*, as it allowed the audience to compare the individual performance of each participant who had to work within the same technical limitations. Indeed, competition dominated the spirit of the *mushāʿara*, and not infrequently did it manifest itself in ugly scenes when poets would overstep the limits of decency in demonstrating their feelings towards each other. An extreme example of this behaviour is provided by the rivalry between Ghulām Hamadānī Muṣḥafī (1750-1824 [*q.v.*]) and his one-time pupil Inshāʾ Allāh Khān Inshāʾ (1766-1818 [*q.v.*]), whose jealous encounters were responsible for vitiating the literary atmosphere of Lucknow while these poets were alive.

With the desire for reform in Urdu poetry during the later part of the 19th century, an attempt was made to initiate a different kind of *mushāʿara*. The stimulus for this came from Colonel W.R.M. Holroyd, an Englishman who was then Director of Public Instruction, Punjab. He, in cooperation with Muḥammad Ḥusayn Āzād (1829-1910) and Alṭāf Ḥusayn Ḥālī (1837-1914 [*q.v.*]), laid the foundation of a *mushāʿara* which was devoted to poems written upon a specific theme instead of *ghazals* based upon a *miṣrāʿ-i ṭaraḥ*. This *mushāʿara*, which had its first meeting in May 1874, lasted only for a few months. Though it was short-lived, and had little effect in influencing the current trend of the *mushāʿaras*, it will nevertheless be remembered as the first poetical gathering of its kind which was to herald the modern period of Urdu poetry.

The meetings in Urdu held today for poetry recitation are known as *mushāʿaras*, despite differences in their form and content which separate them from their earlier counterparts. A radical departure is the discarding of the *miṣrāʿ-i ṭaraḥ* as a pre-condition for the poems, and the freedom in the *mushāʿara* to recite any kind of poem, including *ghazals*. The practice of passing around the candle from poet to poet has disappeared together with the entire ceremonial character of the *mushāʿara*. The appeal of the latter, however, remains undiminished, and has been even furthered by the introduction of radio and television.

MUSHABBIHA [see TASHBĪH].

MUṢḤAF (A.), the name given to a complete text of the Ḳurʾān considered as a physical object. That the word is a borrowing is suggested both by the Muslim claim that it is in fact one and by the uncertainty as to how to vowel the prefix. The commonest of the pronunciations, *muṣḥaf*, is said by Abū ʿUbayd to be the usage of Ḳays, while Tamīm, from an alleged reluctance to combine *u* with *m* are said to prefer *miṣḥaf*. Only two pronunciations are mentioned by Abū ʿUbayd, although *maṣḥaf*, reported as from al-Kisāʾī, seems not to have been attributed to any particular tribal usage. The form *muṣḥaf*, regarded by al-Farrāʾ as original (*al-aṣl*), is treated as the passive participle of Form IV of the stem and defined, for example, by al-Azharī as that "which has been caused to contain written sheets between two end-covers". Ibn Manṣūr, however, cites this in a manner which perhaps exposes his view that, in thus linking the term to a verbal root, the definition is hypothetical. Probably the term is best viewed as either a noun of place or a primitive noun.

Despite the tendency in the reports on the collection of the Ḳurʾān texts to distinguish the first collection, said to have been undertaken in the time of Abū Bakr, from that said to have been completed in the time of ʿUthmān, by applying to the product of the earlier initiative the term *ṣuḥuf*, while reserving the term *muṣḥaf* for the result of the later, the usage of the authors is by no means consistent, since for many of them, the reports were in actual competition. Abū Bakr is frequently credited with having "collected between two endboards (*lawḥānⁱ*, *daffatānⁱ*)", whilst the word *muṣḥaf* is applied to the Abū Bakr, or the ʿUmar, or the ʿAlī collection, although the commentators prefer to excise the phrase from the last of these reports. One likewise finds reports to the effect that, on the completion of the collection commissioned by Abū Bakr, the Muslims discussed the name which they should give it, finally deciding in favour of the suggestion by ʿAbd Allāh b. Masʿūd [see IBN MASʿŪD] who claimed to have seen in Ethiopia a similar compilation known as *muṣḥaf*. Characteristically, an alternative report attributes these words to another emigrant. This does not accord with Nöldeke's remark that the proper name of the first collection, *ṣuḥuf*, indicates that it consisted of loose sections, not yet arranged in the strict order of the later *muṣḥaf*, as is, indeed, the general distinction the Muslims sought to make between the various initiatives of which they spoke.

Nöldeke also reports the root *ṣ-ḥ-f* as occurring only in Arabic and Ethiopic where it has the meanings "dig", "bury", "engrave", hence, "write" with, in the latter language, *maṣḥaf* meaning "book". Ibn

Durayd spoke of the verb as Yemenite and cited the word *maṣḥafa* meaning "spade". Nöldeke therefore concluded that the Arabs had borrowed these words from the Ḥimyarites or (as above) from the Ethiopians. Similarly, Schwally regarded the sing. of *ṣuḥuf*, sc. *ṣaḥīfa*, as an Arabic coining derived from the above Ethiopic or South Arabian root. Both scholars cite sources suggesting that the borrowing pre-dates Islam, although, since the form here discussed, *muṣḥaf*, does not occur in the Ḳurʾān, its use to refer to the Ḳurʾān text is equally an Islamic neologism.

Probably by extension of widespread references to the variant readings attributed to certain prominent Companions, there developed references to "the *muṣḥaf*" of ʿAbd Allāh b. Masʿūd, of Ubayy b. Kaʿb, of ʿĀʾisha, etc., in which the readings were conceived to have been recorded. All of these Companion codices, are next thought to have been suppressed when ʿUthmān provided a single text of the revelations to serve all the Muslims and ordered all other existing documents, whether fragments or complete codices, to be destroyed. That, however, did not prevent continued citation of these readings in the exegetical works of the 2nd/8th century, to which they furnished glosses, synonyms and brief extensions of the texts of the *muṣḥaf* useful for the clarification of the syntax or the elucidation of the meanings of rare words. Similar appeal was made to the Companions in legal discussions where, however, the readings attributed to the codices exhibit either differences in vowelling or additions relative to the text in general use in the ritual prayer and universally regarded as the *muṣḥaf* or *imām* provided by ʿUthmān. As both these latter types of reading are critical to issues debated among the scholars, they are probably best viewed in association with the relevant *ḥadīth* reports adduced to the same end and from the same individuals in the same discussions and like which, indeed, they share an occasional dual, or even multiple attribution. For example, one encounters expressions such as "in one of the two *muṣḥafs*—that of ʿAbd Allāh or that of Ubayy".

Of a qualitatively different kind are differences listed by 2nd-3rd/8th-9th century writers of works on the *maṣāḥif* as instances of disagreement between the *muṣḥafs* of the ʿIrāḳīs and those of the Ḥidjāzī-Syrian tradition or between those of the Kūfan and the Baṣran communities. Such lists are brief and concern only very minor matters, such as the occasional presence or absence of a conjunctive *wāw* or preference for the conjunctive *fāʾ* as opposed to the conjunctive *wāw* and the like. These insubstantial differences visibly stem merely from ancient differences in the resolution of primitive written versions of one and the same text, and study of the lists confirms the underlying presence of a single Ḳurʾān text universally shared by the Muslims of all regions since a remote date and symbolised in the common belief that copies of the Ḳurʾān text had been disseminated throughout the newly-conquered territories from a single centre.

(J. BURTON)

MUṢḤAFĪ, SHAYKH GHULĀM HAMDĀNĪ (1164-1240/1750-1824), a leading Urdu poet, was born at Amrōha *ca.* 60 miles east of Dihlī, the son of a highly respected man of modest means.

He grew up proud, independent and honest, and quickly acquired a fluent command of Urdu and Persian, both poetry and prose. His ambition to become an Urdu poet took him to Dihlī in order to complete his studies: but he failed to find a patron and was driven by poverty, it is said, to eke out a living in commerce. After trying his fortunes elsewhere, he returned to Dihlī (1190/1776), remaining there for about twelve years. His expertise was soon recognised; poets flocked to the *mushāʿaras* [*q.v.*] (poetical assemblies) which he held in his house, and he became a much sought-after teacher. Like most Dihlī poets at the time, he concentrated on the *ghazal*; but he was prolific, and attempted other forms, such as the *ḳaṣīda* (*madīḥ*), *mathnawī* and quatrains. He became highly esteemed for technical mastery, but not for originality, and could not compete with Sawdāʾ and Mīr Taḳī Mir [*q.vv.*], especially in the *ghazal*. His move to Lucknow (Lakhnaw), however (1202/1787), was probably due less to personal disappointment than to the general state of instability in Dihlī, and he was merely part of the general exodus of poets which had already included Mīr Ḥasan [*q.v.*], Sawdā and Mīr.

In Lucknow, he found a suitable patron in Mirzā Sulaymān Shikōh, a son of the Emperor Shāh ʿĀlam. With a regular salary, Muṣḥafī's career seemed to enter a happier phase, and his copious output included *ḳaṣīdas* in praise of Shikōh and the Nawwāb Āṣaf al-Dawla. Unfortunately one of his pupils Inshāʾ [*q.v.* and see MADĪḤ. 4. In Urdu], who had followed him from Dihlī, became his rival, and supplanted him in Shikōh's favour, Muṣḥafī's salary being drastically reduced. A war of words ensued, the two poets vying in the virulence of their satires of each other. Each had his supporters, and the two parties almost came to blows. In the end, Inshāʾ overreached himself, and Āṣaf al-Dawla expelled him from Lucknow. But the affair left its mark on Muṣḥafī, and helped—together with an unhappy third marriage and poverty—to cloud his later years. Poverty, it is said, led him to sell poems to others which they might pass off as their own. At the time of his death, he was still regarded only as a great teacher and technician and as lacking in originality.

This less than enthusiastic assessment of his stature as a poet is clear from the *tadhkira* writers, and is echoed by modern literary critics, beginning with Āzād (*op. cit.* in *Bibl.*, 309-38). Among the reasons adduced for his failure to achieve a personal note is his vast output, which includes, in Urdu, eight *dīwāns* containing thousands of *ghazals*, ten *mathnawīs* and three volumes containing 84 ḳaṣīdas. In Persian, he wrote four *dīwāns* of poetry and three prose *tadhkiras*, one of Persian and two of Urdu poets. But prolificness is not, of itself, a guarantee of mediocrity, and few of his detractors can have read much of his output. Only selections had been published until 1968, when the first volume of a projected complete edition appeared in Dihlī (*Kulliyyāt Muṣḥafī*, ed. Nithār Aḥmad Fārūḳī). In the *ghazal*, he did not fit into the Dihlī "subjective" or the Lucknow "objective" schools, we are told, lacking the passion of the former and the brilliance of the latter. When he left Dihlī, unlike Mīr, he had not established himself in the first rank of *ghazal-gū*; then, on reaching Lucknow, he tried to rival the younger poets there, and ended by being a "fish out of water". This facile assessment has plausibility. His anxiety to

gain fame in Lucknow is obvious, and the quarrel with Inshā᾿ was a by-product of this. But it is arguable that his "middle road" between Dihlī and Lucknow was a matter of taste and temperament, and not mere opportunism. Moderation in thought and expression and a feeling of malaise are, one feels, part of the man and the poet. As for his desire to show his superiority as a poet, it was a common failing, found also in Mīr. Incidentally, when Mīr wrote a *mathnawī* called *Daryā-i-ʿishḳ*, Muṣḥafī responded by writing a similar one with the same title translated into Arabic as *Baḥr al-maḥabbat*. Nor was this the only instance.

A re-assessment of this poet, then, is overdue. The process has already begun, though it cannot be completed till more of his poetry is available in print. Abu 'l-Layth Ṣiddīḳī's *Muṣḥafī awr un kā kalām* (Lahore 1950) was the first major study of the poet. A 100-page summary of it will be found in the same author's *Lakhnāō kā dabistān-i-shāʿirī*, Lahore 1955, 191-295. While making no drastic amendment of the traditional view of Muṣḥafī, Ṣiddīḳī places him third after Sawdā᾿ and Mīr, and he claims that both the number and quality of his *ḳaṣīdas* place him among the leading Urdu ode-writers (*Dabistān*, 270). A few years later, Firāḳ Gōrakhpūrī wrote a long essay to prove that Muṣḥafī was not only a major influence in Urdu poetry but an outstanding poet (*Dīwān-i-Muṣḥafī*: *intikhāb*, ed. Ḥasrat Mōhanī, Lahore 1965, Introd. 7-66. This essay is repeated verbatim, but in clearer print, in vol. i of the *Kulliyyāt Muṣḥafī* mentioned above, 11-53). Gōrakhpūrī believes that the main difference between the Dihlī and Lucknow Schools is that the former stressed meaning and the latter language: Muṣḥafī represents a transitional stage, without whose influence it would be difficult to envisage later Lucknow poets like Anīs [*q.v.*]; and Muṣḥafī's poetry—including his *ghazal*—with its amalgam of simple yet colourful language, naturalness, realism and restrained passion, is *sui generis*, and the work of a genius. It remains to be seen whether these claims will gain ground.

Bibliography: Editions of Muṣḥafī's poetry include *Dīwān-i-Muṣḥafī*, ed. Ḥasrat Mōhānī, ʿAlīgaṛh 1905, which is almost entirely confined to short *ghazals* or extracts, which do scant justice to the poet. *Dīwān-i-Muṣḥafī*: *intikhāb* (1965), seemingly a reprint of the above, and vol. i of the *Kulliyāt Muṣḥafī* (1968), both containing Gōrakhpūrī's valuable essay, are mentioned above in the article. For an example of his *mathnawīs*, with a critical comparison of Muṣḥafī with Mīr, see Farmān Fataḥpūrī, *Daryā-i-ʿishḳ awr Baḥr al-maḥabbat kā taḳābulī muṭālaʿa*, Lahore 1972. Muṣḥafī's *tadhkira* of Persian poets was published as *ʿIḳd-i thurayyā*, ed. with intro. by ʿAbd al-Ḥaḳḳ, Dihlī 1934. One of his two *tadhkiras* of Urdu poets was published as *Riyazul Fusaha*, Dihlī 1934, with the same editor and identical introduction. For detailed accounts of the poet, see the two works by Ṣiddīḳī mentioned in the text. Brief accounts include: Ram Babu Saksena, *A history of Urdu literature*, Allahabad 1927, 90 ff.; Muhammad Sadiq, *A history of Urdu literature*, London, Karachi, etc. 1964, 124 f.; L.C. Randhir, *Ghazal—the beauty eternal*, New Delhi, 61 ff., writes more favourably of the poet, and the whole book forms a useful general account of the Urdu *ghazal*. In Urdu, Muḥammad Ḥusayn Āzād, *Āb-i-ḥayāt*[9], Lahore 1917, 309 ff., provides a well-written statement of the traditional lukewarm assessment. To some extent, Āzād relied on the old *tadhkiras* for his anecdotes and criticism. A good example is *Madjmūʿa-yi-maghz* by Ḥakīm Abu 'l-Ḳāsim Ḳudratullāh Ḳāsim, ed. Ḥāfiẓ Maḥmud Shayrānī, 2 vols., Lahore 1933: for Muṣḥafī, see ii, 188-95). This work has more biographical and critical material than most other *tadhkiras*, which might best be described as chrestomathies. Finally, Sayyid ʿAbdullāh, *Shuʿarā᾿-i-Urdū kē tadhkirē awr tadhkirē kā fann*, Lahore 1952, 46 f., gives a very short account of Muṣḥafī's two Urdu *tadhkiras*; but as a general critical history of the *tadhkira* form in the context of Urdu poetry, it is an essential reference.

(J.A. Haywood)

MUSHĀḲA, Mīkhā᾿īl b. Djirdjīs al-Lubnānī, Lebanese historian and polemicist who is at the same time the most important of modern Arabic writers on the theory of music; the present article is devoted to his activity in this latter sphere, in order to complete the brief entry already given s.v. Mashāḳa.

Born in 1800 at Rashmayyā, he followed his family (after 1807) to Dayr al-Ḳamar, the residence of the famous Amīr Bashīr Shihāb II [*q.v.*] who was favourably disposed towards the elder Mushāḳa. In 1819, the Amīr, having given offence to the Sublime Porte, was compelled to take refuge in Egypt, and the following year Mīkhā᾿īl Mushāḳa also found it necessary, on account of the "subsequent disturbances" to leave for Damascus. In this town Mīkhā᾿īl lived for the rest of his life, following the profession of a physician and man of letters, save for a short period (1845-6) spent in Cairo, where he studied at the Ḳaṣr al-ʿAyn school of medicine.

Mushāḳa's particular studies had been directed to mathematics, the physical sciences and medicine, but about 1830 he began to take an interest in music (Parisot, *Mus. orient.*, 15). Piqued by the arrogance of Egyptian musicians, who were great favourites in Syria and boasted their superiority over the Syrians, Mushāḳa decided to study the theory of music (Collangettes, 380) and took lessons from the best masters, including the *shaykh* Muḥammad al-ʿAṭṭār, "a master of several sciences and much learning", as Mushaḳa himself tells us. The *Shaykh* had written a book on the theory of music, but Mushāḳa was dissatisfied with it on the scientific side, and having "a good knowledge of mathematics as well as much practical skill in music" (Smith, 174), he decided to write a treatise himself. The work was entitled *al-Risāla al-Shihābiyya fi 'l-ṣināʿa al-mūsīḳiyya*, its name being due to the Amīr Muḥammad Fāris Shihāb, to whom Mushāḳa attributed the germ of the work. We do not know the precise date of its composition, but as the oldest ms. is dated 1840, it must have been written at least as early as this year (cf. Ronzevalle, 2, 116). In 1847, (cf. Ronzevalle, 2; Brockelmann, II[2], 648) the work was presented in a free English translation by Eli Smith in *JAOS*, i (1847), 173 ff. Among the Arabs, the book circulated in ms. until 1899, when the Arabic text was given by L. Ronzevalle in *Machriq*, ii (1899), 149 ff., and in an octavo volume (1900), which soon ran out of print. In 1913, other mss. having become available for collation, Ronzevalle issued a fresh text, together with a French translation, in *MFOB*, vi (1913), 1-120. Mushāḳa's work became the standard one on the theory of music in Syria and contiguous lands, and still holds that position. In the West, his theories have been much commented on by Land, Ellis, Parisot and Collangettes.

In the early 1840s, Mushāḳa came in touch with Eli Smith (his translator) and C.V.A. Van Dyck, two American missionaries in Damascus. He renounced the Melkite Greek Church in favour of Protestantism, and was appointed the American consul there.

Mus͟hāḳa was "a born controversialist" says Ronzevalle, and his gifts in this direction are displayed in his several books and pamphlets against the Catholics, including: *Ad͟jwibat al-Ind͟jīliyyīn* (1852); *al-Dalīl ilā ṭāʿat al-Ind͟jīl* (2nd ed. 1860); *Kas͟hf al-niḳāb ʿan wad͟jh al-Masīḥ al-kad͟hd͟hāb* (1860); *al-Barāhīn al-ind͟jīliyya* (1864); *al-Radd al-ḳawīm* (1869); al-*S͟huhub al-t͟hawāḳib* (1870); and others. He also wrote a treatise against the ideas of Voltaire entitled *al-Burhān ʿalā ḍuʿf al-insān* (2nd ed. 1867). He also composed *al-D͟jawāb ʿalā iḳtirāḥ al-aḥbāb*, which is a history of his family and his time up to the Druze massacres of 1860, in which he was wounded but escaped through the protection of the exiled Algerian Amīr ʿAbd al-Ḳādir [*q.v.*], who was then in Damascus. The second edition of this is entitled *Mas͟hhad al-ʿiyān bi-ḥawādit͟h Sūriyā wa-Lubnān* (cf. *Taʾrīk͟h Ḥawādit͟h al-S͟hām wa-Lubnān* by Mīk͟hāʾīl al-Dimas͟hḳī, edited by P. Louis Malouf, 1912). For another work on the religious and educational buildings of Damascus, see H.L. Fleischer, *Michael Meschâka's Cultur-Statistik von Damaskus*, in *ZDMG*, viii (1854), 346-74, improved version in his *Kleinere Schriften*, iii, 307-40. Mus͟hāḳa died in Damascus in June 1888.

(H.G. FARMER*)

AL-**MUS͟HAḲḲAR**, a settlement and port on the eastern coast of Arabia in pre-Islamic and early Islamic times, situated in the region of Had͟jar or Baḥrayn; its exact location is however unknown and would appear to be only discoverable by future archaeological investigations.

Varying traditions attribute the foundation of al-Mus͟haḳḳar to one of the kings of Kinda [*q.v.*], Mūsā b. al-Ḥārit͟h, or to a commander of the Sāsānid heavy cavalry (*asāwira*; see on these, C.E. Bosworth, *EIr* art. *Asāwera*) B.s.k.b. Māhbūd͟h in the time of the Kisrās (al-Ṭabarī, i, 985-6, tr. Nöldeke, *Geschichte der Perser und Araber*, 260-1; al-Bakrī, *Muʿd͟jam*, i, 311, iii, 1060, iv, 1232-3). Subsequently, the place is especially associated with the tribe of ʿAbd al-Ḳays [*q.v.*], where, according to Muḥammad b. Ḥabīb, was situated their tribal idol D͟hu 'l-Labā and where was held an important fair (*sūḳ*) *in* D͟jumādā II to which Persian traders came from across the Gulf (*al-Muḥabbar*, 265, 317; Yāḳūt, *Buldān*, ed. Beirut, iv, 134-5). At the time of the first Muslim expansion into eastern Arabia, it seems to have been held for the Sāsānids by a chief of Tamīm (*al-Muḥabbar*, 265; cf. M.J. Kister, *Mecca and Tamīm (aspects of their relations)*, in *JESHO*, viii [1985]). It was still flourishing in the first century or so of Islam. During the *Ridda* [*q.v.*] wars, the defeated leader of the Baḥrayn rebels, al-Mund͟hir b. al-Nuʿmān, retreated into al-Mus͟haḳḳar before going to join Musaylima (al-Balād͟hurī, *Futūḥ*, 84), and in 73/692-3, Baṣran and Kūfan troops of ʿAbd al-Malik's general ʿUmar b. ʿUbayd Allāh b. Maʿmar pursued the K͟hārid͟jite leader Abū Fudayk and besieged him in al-Mus͟haḳḳar till he surrendered (al-Ṭabarī, ii, 853).

Thereafter, it seems to have declined, and although Ibn al-Faḳīh (wrote *ca.* 290/903), 30, cf. 255, tr. Massé, 35, cf. 308, located the Friday mosque of Baḥrayn there, describing the place (its mosque or fortress?) as one of the wonders of the Islamic world, the other geographers of this period do not mention it.

Omar, *Urban centres in the Gulf during the early Islamic period: a historical study*, in *Bull. BSMES*, xiv/2 (1988), 157.

(C.E. BOSWORTH)

MUS͟HĀRAKA (A.), a commercio-legal term that has come into increasing prominence as efforts have been made in the Muslim world to organise or re-organise their financial systems according to what are held to be the requirements of the *S͟harīʿa*. In English, "participation financing" is the translation commonly adopted by modern Islamic financial institutions committed to commercial operations traditionally known to Islamic jurisprudence.

In general terms, the *mus͟hāraka* is a contractual partnership (*s͟harikat al-ʿaḳd*) as opposed to a proprietary partnership (*s͟harikat al-milk*). In the case of the latter, joint ownership of property (e.g. a house passing to legal heirs on the death of the owner) is a prerequisite, and there is no joint exploitation of the property involved. The essence of the former, however, is joint exploitation of capital (or, in full or in part, of the work and skills of the partners or of the credit for partnership investment) with joint participation in profits and losses, joint ownership being an effect—not a prerequisite—of the partnership's formation.

Unlike the *mufāwaḍa* [*q.v.*], the *mus͟hāraka* is a limited investment partnership in which the core of the investment is money. The *modus operandi* of the parties to a *mus͟hāraka* as handled within the modern Islamic system may be explained somewhat as follows. A client with a specific plan for a business venture submits his proposal to an Islamic financial institution, usually a bank, together with an application for equity capital (i.e. venture, or risk, capital) to support it. If agreement is reached, the institution will supply the necessary capital as well as any cash flow that may be required on the basis that (a) the profits will be shared by the two contracting parties in the proportion on which they have agreed at the time of the contract, and (b) such losses as may be incurred will be proportionate to the parties' shares in the partnership capital, as generally taught.

In order that its client may be left with a viable share of the profits, the financial institution that is party to the *mus͟hāraka* will, in many cases, not reserve to itself the right to a return on all its shares from the venture's profits, but will divide its participation into (a) a share in the partnership capital, and (b) working capital supplied by means of an interest-free loan (*ḳarḍ ḥasan*).

Obviously, as in all business ventures, an element of risk attaches to "participation financing" partnerships. Notwithstanding, the straightforward business risk is something that cannot be secured by the participating institution since Islamic law permits no security to be taken from the partner *qua* partner. What it does permit, on the other hand, is the taking of securities against the risk of the partner's breach of contract of partnership, his negligence and his wilful

misconduct. Such securities are in fact demanded by certain Islamic banks and other financial institutions as a precondition of the partnership.

To trace the history of the mus͟hāraka through a study of the ʿinān (limited investment partnership) in the various schools of Islamic law—in which a single term or expression can, at times, be found to be used in different or ambiguous senses—is clearly beyond the scope of the present article.

Bibliography: 1. Primary sources. See for these the *Bibl.* to MUFĀWAḌA. 2. Studies. N.A. Saleh, *Unlawful gain and legitimate profit in Islamic law*, Cambridge 1986, of which the bibliography is a good guide to both primary and secondary sources (123-6); idem, *The general principles of Saudi Arabian and Omani company laws*, Namara, U.K. 1981, notably 62-5 on the details of the distribution of profits and losses. A.L. Udovitch, *Partnership and profit in medieval Islam*, Princeton 1970, provides material that is essential to the understanding of the early development of the concept of partnership in Islamic law. On the use of the term *mus͟hāraka* to translate the technical term "participation" in the (non-Islamic) context of health and accident insurance, see N. Ghattas, *A dictionary of economics, business & finance: English-Arabic with an Arabic glossary*, Beirut 1982, 404. (J.D. LATHAM)

MUS͟HAʿS͟HAʿ, a S͟hīʿī Arab dynasty of the town of Ḥawīza [*q.v.*] or Ḥuwayza in K͟hūzistān (ʿArabistān).

The founder of the dynasty, Sayyid Muḥammad b. Falāḥ, claimed to be a descendant of the Seventh Imām Mūsā al-Kāẓim [*q.v.*]. He was born at Wāsiṭ and studied with S͟hayk͟h Aḥmad b. Fahd at Ḥilla. The 9th/15th century was an important phase in the history of S͟hīʿī *g͟hulāt* extremism. But it was also characterised by a rising tendency towards folk Islam, propelled by regional forces in an increasingly fragmented power structure. In his environment Sayyid Muḥammad developed strong views about his messianic mission; S͟hayk͟h Aḥmad excommunicated him (*takfīr*) but failed to have him executed by the *Amīr* of ʿUbadā, as he pretended to be a Sunnī Ṣūfī.

One year before the death of S͟hayk͟h Aḥmad in 840/1436 (Kasrawī, *Tārīk͟h-i panṣad sāla-yi K͟hūzistān*, 9; not 828/1424 as in S͟hūs͟htarī, *Mad̲j̲ālis al-muʾminīn*, ii, 395), he announced his mission (*ẓuhūr*) among the Arab tribes of the Banū Sulāma, Ṭayyiʾ and Sudān in the marshy neighbourhood of Wāsiṭ. Although defeated in 844/1440, he devastated S͟hawḳa and converted the Nays, a clan of the Maʿādī tribe, in the Dūb area, forcing them to exchange their cattle for arms. Sayyid Muḥammad continued to fight against the local lords of D̲j̲azāʾir. Finally, after a heavy defeat by the governor of Wāsiṭ he turned towards Ḥuwayza which was in the hands of S͟hayk͟h D̲j̲alāl b. Abi 'l K͟hayr D̲j̲azāʾirī, a representative of the Tīmūrid prince-governor of Fārs, ʿAbd Allāh. Sayyid Muḥammad and his son Mawlā ʿAlī conquered this strategically important place (except for the citadel) on 4 Ramaḍān 845/16 January 1442. The lord of Bag͟hdād, Ispand b. Ḳara Yūsuf Ḳara Ḳoyunlu, exploiting the weakened position of the Tīmūrid rule in the eastern part of Persia, defeated Sayyid Muḥammad, but the latter overpowered the Ḳara Ḳoyunlu garrison after Ispand b. Ḳara Yūsuf had left for Baṣra. Although Ispand, who had converted to S͟hīʿism in 840/1436-7, was not in a position to prevent the Mus͟haʿs͟haʿ continuing their missionary activities among the ʿArab tribes in K͟hūzistān and southern ʿIrāḳ, it was only after his death in 848/1444, and that of S͟hāhruk͟h three years later, that the Mus͟haʿs͟haʿ began to challenge the weakened authority of the Ḳara Ḳoyunlu in middle ʿIrāḳ. Sayyid Mawlā ʿAlī attacked Wāsiṭ in 858/1454 after D̲j̲ahān S͟hāh Ḳara Ḳoyunlu had appointed his son Pīr Budāḳ governor of Fārs but had not provided him with sufficient military forces for the defence of Bag͟hdād. The Mus͟haʿs͟haʿ sacked Nad̲j̲af and desecrated the shrine of the Imām ʿAlī b. Abī Ṭālib.

The devastation of the adjacent areas of Bag͟hdād only came to an end when an army of D̲j̲ahān-S͟hāh Ḳara Ḳoyunlu forced him to retreat. Finally, he was killed in the river Rūd-i Kurdistān (Tāb) when campaigning in Kūh Gilūya against Pīr Budāḳ in 861/1456-7 (Kasrawī, *Tārīk͟h*, 17-19). In the same year, Sayyid Muḥammad was forced to take the field against Amīr Nāṣir b. Farād̲j̲ Allāh who had moved from Bag͟hdād to destroy the Mus͟haʿs͟haʿ. With his defeat near Wāsiṭ, their supremacy was finally established in K͟hūzistān and southern ʿIrāḳ. In the last years of his life, Sayyid Muḥammad was mainly occupied with writing his Ḳurʾān commentaries and prayers. He died in 870/1465-6 (less likely 866/1461-2, according to Sayyid ʿAlī b. ʿAbd Allāh in the history of his family).

The doctrines of Sayyid Muḥammad. The etymology of the word *mus͟haʿs͟haʿ* is not clear. It may be connected with the notion of light, radiation, less possibly intoxication, although it could refer to mystical exaltation. According to the *Mad̲j̲ālis al-muʾminīn*, the Mus͟haʿs͟haʿ practised a *d̲h̲ikr* which enabled them to perform extraordinary acts.

The *Kalām al-Mahdī* by Sayyid Muḥammad, the major source for examining the doctrine of the early Mus͟haʿs͟haʿ, expounds ideas about Mahdism. The terminology used clearly comprises that of an esoteric sect. According to it, ʿAlī and the Prophet Muḥammad are the revolving mystery (*al-sirr al-dāʾir*) in heaven and on earth. Muḥammad as the messenger was the embodiment (*ḥid̲j̲āb*) of the truth (*ḥaḳīḳa*), which unlike the embodiment does not change its place. The body can become personalised but the truth remains in its unvaried state.

After initially showing some caution, Sayyid Muḥammad clearly expounded his mission as the *Mahdī*, declaring that he functioned like Muḥammad and any other prophet. The ideas of Sayyid ʿAlī appear to have been more extreme. According to S͟hūs͟htarī (*Mad̲j̲ālis al-muʾminīn*, ii, 399-400), he claimed to be the incarnation of Imām ʿAlī, *amīr al-muʾminīn*, a claim which raised considerable criticism among the leading *ʿulamāʾ* in Bag͟hdād, as an ensuing correspondence between them and Sayyid Muḥammad indicates (Kasrawī, *Tārīk͟h*, 31).

Subsequent history. Sayyid Muḥammad's son and successor Sulṭān Muḥammad strengthened the power of the Mus͟haʿs͟haʿ further. His rule extended into the area of Luristān, the land of the Bak͟htiyārī and Faylī Lurs, and a larger part of al-D̲j̲azāʾir; even the area around Bag͟hdād seems to have temporarily fallen under his control. He also attracted the attention of scholars like Mawlānā S͟hams al-Dīn Muḥammad Astarābādī. The S͟hīʿī doctrine, now less extreme, was successfully spread throughout the area. A major role was played by the Marʿas͟hī *sayyids* [*q.v.*], of whom a branch had come from their homeland Māzandarān and settled in S͟hūs͟htar, led by Ḍiyāʾ al-Dīn Nūr Allāh al-Ḥusayn al-Marʿas͟hī al-S͟hūs͟htarī, whose grandson was Ḳāḍī Nūr Allāh, the author of the *Mad̲j̲ālis al-muʾminīn* (Sayyid ʿAbd Allāh Niʿmat Allāh al-Ḥusaynī, *Kitāb-i Tad̲h̲kira-yi S͟hūs͟htar*, 35).

The end of the reign of Sayyid Muḥsin coincided with the rise of Ṣafawid power under S͟hāh Ismāʿīl

who laid claim to be recognised as the sole legitimate Shīʿī ruler. He was, however, only able to move against Ḥuwayza after the capture of Baghdād in 914/1508. Sayyid Muḥsin's death, either in 905/1499-1500 (Kasrawī, *Tārīkh*, 40) or about 914/1508-9 (Caskel, *Ein Mahdī des 15. Jhs.*, 93; see also Khʷāndamīr, *Ḥabīb al-siyar*, iv, 497) further weakened the defence of the Mushaʿshaʿ. Two of his sons, ʿAlī and Ayyūb, tried to open negotiations with Shāh Ismāʿīl but were executed. The independence of the Mushaʿshaʿ was finally destroyed after Sayyid Fayyāḍ, probably another son of Sulṭān Muḥsin, had been killed with many of his supporters in Ḥuwayza (so Khʷāndamīr, *op. cit.*, iv, 497. But according to Kasrawī, *Tārīkh*, 42, Fayyāḍ was just another title for Sayyid ʿAlī b. Muḥsin).

Although Sayyid Falāḥ b. Muḥsin reconquered Ḥuwayza and established himself as a semi-independent ruler, he remained mainly confined to Ḥuwayza and the western parts of Khūzistān. Shāh Ismāʿīl was recognised by him as the overlord. Dizfūl remained in the hands of the Raʿnāshī *shaykhs*; Shūshtar came under the control of a local ruler. During the reign of Shāh Ismāʿīl or under Shāh Ṭahmāsp, the province was divided into ʿArabistān, the western part, which remained under the control of the Mushaʿshaʿ, and Khūzistān, which was placed under the military command of the governors of Kūh Gilūya, or sometimes also under that of Fārs.

When Sayyid Falāḥ died in 920/1514, his successor Sayyid Badrān b. Falāḥ maintained some autonomy under the changing political fortunes of the two major powers, Ṣafawid Persia and the Ottoman empire. Shāh Ṭahmāsp confirmed his rule in 948/1541 (Ḥasan Rūmlū, *Aḥsan al-tawārīkh*, 389; Iskandar Beg Munshī, *ʿĀlam-ārā-yi ʿAbbāsī*, i, 95). Whereas Sayyid Badrān clearly indicated his loyalty to the Ṣafawids, under his successor Sadjdjād, the Mushaʿshaʿ seemed to have moved closer towards the Ottomans, probably under the pressure of ʿAlī Pasha, the governor of Baghdād, who dispatched a military force against Ḥuwayza in 992/1584 (Nīyāzī, *Hüner-nāme*, f. 38b ff.; Caskel, *Ein Mahdī des 15. Jahrhunderts*, 81; see also Ferīdūn Beg, *Münsheʾāt-i selāṭīn*, ii, 315-16). With the appointment of Ḥaydar Ḳulī Sulṭān as governor of Dizfūl, the Afshārs emerged as a major political force in northern Khūzistān and the adjacent area. The Mushaʿshaʿ remained more or less confined to Ḥuwayza. Sayyid ʿAlī was followed in 992/1584 by his son Zanbūr ʿAlī, who governed till 998/1590 (not 996, as in Minorsky, *EI*[1] Suppl., art. *Mushaʿshaʿ*).

During the troubled years of Shāh ʿAbbās I's accession to the throne, the south-west of Persia, then mainly under the control of the Afshār *amīrs*, had been in turmoil. Sayyid Mubārak b. Muṭṭalib b. Badrān, who had spent his youth as a brigand in the region of Dawraḳ and Rām Hurmuz, drove his uncle Zanbūr ʿAlī out of Ḥuwayza at the end of 995-beginning of 996/November-December 1587. Mubārak tried to strengthen his position in Khūzistān by occupying Dizfūl and gaining control over Shūshtar. But in 1003-4/1594-5 Shāh ʿAbbās I pacified the whole area: Luristān, Kūh Gilūya, Khūzistān and the border area, ʿArabistān. Khūzistān was given to a Shāmlū governor. Sayyid Mubārak managed to escape major punishment for his misdemeanour (Iskandar Beg Munshī, *Tārīkh*, i, 501-2). As the Shāh did not want to be engaged in major military operations against the Mushaʿshaʿ any further, and as it was feared that the Ottomans might interfere directly in the affairs of south-western Persia, Sayyid Mubārak was reinstated as governor (*ḥākim*) for ʿArabistān, a decision confirmed in 1005/1596-7, when another revolt of the Afshār supported by him was crushed. The Mushaʿshaʿ seemed to be the only force on which the Ṣafawids could rely for controlling the various tribal forces in ʿArabistān, particularly the Arabs in the Djazīra region.

The integration of ʿArabistān into the Ṣafawid realm became easier after Mawlā Muṭṭalib had turned against extreme forms of Shīʿī dogmas as expounded by earlier rulers. Sayyid Mubārak continued to bring Shīʿī beliefs even further into line with mainstream Twelver Shīʿī teaching, supported by leading *ʿulamāʾ* of his time. The recognition of the special position of the Mushaʿshaʿ ruler in the Ṣafawid realm was underlined by his rank as one of the four viceroys (*wālī*): *wālī-yi ʿArabistān-i Ḥuwayza*. The *wālī* had only a loose connection with the Ṣafawid state, e.g., he sent presents instead of paying taxes. After the death of Sayyid Mubārak in 1025/1616, his son Nāṣir, who had been brought up at the court and was married to a sister of Shāh ʿAbbās I, succeeded him for a short period (Kasrawī, *Tārīkh*, 65-6). But at the end of the same year, Sayyid Rashīd b. Salīm b. Muṭṭalib became the new ruler following the wishes of the elders of the Arab tribes (Iskandar Beg Munshī, *Tārīkh*, ii, 915). Shortly afterwards, he was killed by a dissident group of the Banū Lām [*q.v.*] (*ibid.*, ii, 951-2). After his death, dissension broke out between the various tribal groups which ended in 1030/1620 when the exiled Sayyid Manṣūr b. Muṭṭalib was installed as the new *wālī*. He was supported by both the governors of Luristān and Shūshtar. However, in 1033/1623-4 he was replaced by his nephew Sayyid Muḥammad b. Mubārak, since he showed reluctance to assist the *shāh* in his campaign against Baghdād in 1032/1623 (Iskandar Beg Munshī, *Tārīkh*, ii, 959, 1013). His close relationship with the governor of Fārs, Imām Ḳulī Khān, who was dismissed and killed in 1042/1632, was probably the main cause for his replacement by Mawlā Manṣūr (Rettelbach, *Khulāṣat al-siyar*, 130-1; Iskandar Beg Munshī, *Dhayl-i tārīkh-i ʿālam-ārā-yi ʿAbbāsī*, 152-3).

Shūshtar was governed in those years by a Georgian *ghulām*, Wakhushtū Sulṭān (since 1042/1632-3, see Rettelbach, *op. cit.*, 126; Sayyid ʿAbd Allāh Djazāʾirī, *Tadhkira-yi Shūshtar*, 46-7). Mawlā Manṣūr tried unsuccessfully to wrestle Aḥwāz from Sayyid Farhād, who was in coalition with ʿAlī Pasha, the ruler of Baṣra. In 1053/1643-4, by the demands of the Arab *shaykhs*, Mawlā Manṣūr was replaced by Sayyid Baraka and exiled to Mashhad. The *wālīs* were considered to be a stabilising element in the volatile situation of the region. Since the rule of Sayyid Mubārak, the *wālī* carried the rank of a *khān*. Intermarriages with the ruling house and also with other major families of the Ṣafawid élite are an indication of this policy. The rulership of Ḥuwayza remained hereditary in their family. There seem to be no instances when they were appointed to posts outside their region. Senior members of the family, however, stayed more permanently at the Ṣafawid court. Often they were exiled to Mashhad, from where they could easily be recalled and reinstated as ruling *khāns*.

Sayyid Baraka was such a case. Although lauded by the court poet Ibn Maʿtūḳ as the prototype of the chivalresque warrior, he had to be replaced by Sayyid ʿAlī Khān b. Khalaf b. Muṭṭalib in 1060/1650 as he was unable to exert proper control over the Arab tribes. With the latter the third branch of the Muṭṭalib family came to power. Soon, however, he was embroiled in major controversies over his lenient

attitude towards members of his family. The ensuing revolt was suppressed by the governor of Luristān, Manūčihr Khān, who occupied Ḥuwayza and sent ᶜAlī Khān, together with his children, to the court in Iṣfahān. According to the author of the *Riyāḍ al-firdaws*, ᶜAlī Khān was driven out of Ḥuwayza by Arab tribesmen after he had killed a son of the *shaykh al-mashāʾikh* Shaykh Khalaf Ḥammūd b. Marwān (Muḥammad Mīrak b. Masᶜūd al-Husaynī, *Riyāḍ al-firdaws*, 231-2). Zamān Khān, governor of Kūh Gilūya, however, arranged ᶜAlī Khān's return to Ḥuwayza which was considered to be an important link in the defence system against the Ottomans after 1048/1638-9.

Increasingly, the family of the Mushaᶜshaᶜ fell into internecine fighting. After Sayyid ᶜAlī Khān's death in 1092/1681, heavy conflicts broke out among his sons in which the Arab tribes of Āl Fuḍūl and Kaᶜb became involved. His brother Sayyid ᶜAbd Allāh ruled only eight months in 1097/1685-6. Under Faradj Allāh b. ᶜAlī Khān, the Mushaᶜshaᶜ renewed their expansionist activities at the western border. Both Baṣra and Ḳūrna were taken from Shaykh Mānīᶜ b. Mughāmis and his Muntafiḳ tribe [*q.v.*] in 1109/1697-8. But the former was recaptured by Ottoman troops in 1112/1700-1. Faradj Allāh's success in 1109/1697-8 was only shortlived, as the new military governor in Ḥuwayza, Ibrāhīm Khān, did not support him. He had him replaced by his nephew Sayyid ᶜAlī in 1112/1700-1 and imprisoned until 1120/1708-9 (Kasrawī, *Tārīkh*, 94-5).

The frequent changes of the *wālī*s reflected not only the widening gulf between them and their mainly Arab tribal following but is also a strong indicator of the increased disorganisation at the Ṣafawid court. The members of the Mushaᶜshaᶜ family affiliated themselves to different parties there but also tried to win support among the Arab tribes. The lack of law and order, and the continuous fighting outside Ḥuwayza, considerably damaged the rich agriculture of the region. With the fall of Wakhushtū's family in Shūshtar, Khūzistān and ᶜArabistān were deprived of one of their stabilising factors. In 1114/1702-3 Sayyid ᶜAbd Allāh Faradj Allāh was appointed as the new *wālī*, but he faced strong opposition from his father. When strife and discord in Ḥuwayza had become uncontrollable, the Ṣafawid court was forced to reappoint Sayyid ᶜAlī in 1127/1715. By now Ṣafawid power was a shadow of its former self. Threatened by Arab tribes, the *wālī* turned for help to the Ottoman governor of Baghdād. Nevertheless, the Ṣafawid administration seemed to have intervened again in 1132/1719-20, when Sayyid Muḥammad b. ᶜAbd Allāh became *wālī* of ᶜArabistān, supported by Ṣafawid troops.

Still, the *wālī* remained a major factor in Ṣafawid politics. When in 1135/1722 the Afghāns attacked Iṣfahān he was one of the remaining military forces on which the court relied for the defence of the capital. However, the *wālī* seems to have played a rather ambiguous role in the battle of Gulnābād against Maḥmūd Afghān. The sources are not clear whether the *khān* of Ḥuwayza actually was ᶜAbd Allāh, as some of the European sources and a later Persian source claim, or a certain Muḥammad Khān b. Faradj Allāh Khān who has been mentioned as governor of Ḥuwayza after ᶜAbd Allāh had been in collusion with the *pasha* of Baghdād in 1132/1719-20 (Sayyid ᶜAbd Allāh, *Tadhkira-yi Shūshtar*, 69; Lockhart, *The fall of the Safavid dynasty*, 132-43. However, Kasrawī, *Tārīkh*, 102-4 "Muḥammad Khān", and Caskel, *Die Wālī's von Ḥuwēzeh*, 429, assume that ᶜAbd Allāh had returned from Baghdād where he had moved in 1719, and was leading an Arab contingent in the battle, but was at that time no longer governor of Ḥuwayza).

In the short-lived peace agreement between the Ottoman government and Ashraf Khān in 1140/1727, Ḥuwayza was allocated together with the other western provinces to Turkey, but this did not change the situation in the south-west of Persia as the main Ottoman thrust was directed against Kurdistān and ᶜIrāḳ-i ᶜAdjam. During the 1730s and 1740s, Ḥuwayza was restored as a Persian border province. Nādir Ḳulī Khān (Nādir Shāh [*q.v.*]) had repossessed it in Ramaḍān 1142/March-April 1730. The peace treaties of 1733 and 1736, confirmed in 1746, re-established the boundary between the two powers as agreed at Zuhāb in 1638 (Olson, *The siege of Mosul and the Ottoman-Persian relations, 1718-1743*, 90-1, 99-104; Lockhart, *Nadir Shah*, 255). Nādir Shāh reorganised the administration of the south-west in 1150/1737-8 and appointed a Persian governor for Khūzistān with his seat in Ḥuwayza. The Mushaᶜshaᶜ ruler Sayyid Faradj Allāh was moved to Dawraḳ, which became his new residence for the following ten years (Caskel, *Wālī's*, 430-1). During Nādir Shāh's last years of rule, Sayyid Muṭṭalib b. Muḥammad b. Faradj Allāh Khān overthrew Nādir's governor for Khūzistān, Muḥammad Khān Balūč, and returned to Ḥuwayza in 1060/1747.

Nādir's successor ᶜĀdil Shāh confirmed Sayyid Muṭṭalib, but in the ensuing power struggle over the control of Shūshtar and Dizfūl, the Āl-i Kathīr under Shaykh Saᶜd strengthened their commanding position in Khūzistān, operating from their camp between the Karkha and Diz. Internal strife among the Āl-i Kathīr, however, allowed Sayyid Muṭṭalib to restore some of the previous authority of the *wālī* in 1167/1754. But he was unable to establish his control over the various Arab tribes who in the past had served the Mushaᶜshaᶜ so well. The long drawn-out fight between the two rival groups in which the powerful Afshār *amīrs* were also eliminated adversely affected the fertile agriculture in the vicinity of Shūshtar and Dizfūl. Increasingly, the Āl-i Kathīr gained the upper hand. Sayyid Muṭṭalib was killed by the sons of Shaykh Saᶜd in revenge for the murder of their father. The Zand ruler Karīm Khān [*q.v.*] himself was forced to move to Khūzistān [*q.v.*] to restore order. The Mushaᶜshaᶜ were from now on mainly confined to their old capital (Kasrawī, *Tārīkh*, 126-7).

After the death of Nādir Shāh, the well-organised and mainly sea-borne power of the Banū Kaᶜb [*q.v.*] emerged as the major force in the coastal region, having previously managed to stand on the sidelines in the constant wars between the Āl-i Kathīr and the Mushaᶜshaᶜ, In southern ᶜArabistān their position had been checked by Karīm Khān Zand between 1763 and 1768 as the Zand ruler was able to enforce some control over them. In Ḥuwayza, Sayyid Muṭṭalib was succeeded by his cousin Mawlā Djūd Allāh, and after him, Mawlā Ismāᶜīl. Following Karīm Khān's death in 1779, ᶜAlī Murād Khān Zand tried to stem the process of disintegration of the Zand rule in that area by taking a stronger interest in the affairs of the Mushaᶜshaᶜ. He appointed Sayyid Mawlā Muḥsin, under whose rule a certain Hāshim built a canal further up the Karkha, diverting the irregational water for the agriculture and garden culture of Ḥuwayza and so destroyed the supply of grain for Baṣra. The continuing internal strife for the control of Dizfūl and Shūshtar among the Arab tribes in the area accelerated the economic decline of Ḥuwayza even

further, although a major catastrophe could be averted when another son of Djūd Allāh, Sayyid Mawlā Muḥammad, who had been appointed *wālī* at the demand of the agriculturalists, dammed the new water channel.

At the beginning of the reign of Fatḥ ʿAlī Shāh, ʿArabistān/Khūzistān was split into various rival factions: Shūshtar, Dizfūl, the areas of the Āl-i Kathīr, the Mushaʿshaʿ and the powerful Kaʿb. The former three were put under the control of Muḥammad ʿAlī Mīrzā Dawlatshāh. Rām Hurmuz, Fallāḥiyya, Hindiyān and the southern part became the responsibility of Ḥusayn ʿAlī Mīrzā Farmānfarmā. Dawlatshāh came in 1221/1806-7 to restore order in Shūshtar, but he does not seem to have interfered much in the internal affairs of Ḥuwayza (Kasrawī, *Tārīkh*, 66-77). Little is known about the situation in Ḥuwayza itself, except that in 1810 the *wālī* was taken prisoner and brought to Dizfūl (Kinneir, *Memoirs*, 106). Like most other parts of ʿArabistān and Khūzistān, Ḥuwayza suffered much during the cholera epidemic in 1247/1831-2. The final collapse of the Karkha dam in 1250/1834 was a catastrophe from which it never recovered. By 1840 the town had only about 500 inhabitants. Most of the people had left the area or continued their lives as Bedouins. This major change is also indicated by the taxes paid, which fell to only 6,000 tomans compared with 50,000 paid by Dizfūl and Shūshtar (Caskel, *Wālī's*, 432-3; Kasrawī, *Tārīkh*, 138). The Mushaʿshaʿ family ruled on behalf of the Persian governor of Khūzistān, collecting taxes and paying revenue to him. Compared with previous periods, the province had lost its major status. The Persian governor normally acted as deputy for the governors in Kirmānshāh, Shīrāz or Iṣfahān. Manūčihr Khān Muʿtamid al-Dawla, governor of Iṣfahān, Luristān and Khūzistān, appointed Mawlā Faradj Allāh as *ḥākim* of the whole province in 1257/1841, after Shaykh Thāmir and Shaykh ʿAbd al-Riḍā, head of the Banū Kaʿb, had fled to the Ottomans. The southern parts of the province ʿArabistān, from Hindidjān to Muḥammara [see KHURRAM-SHAHR], remained the responsibility of Farhād Mīrzā, the deputy governor of Fārs (Fasāʾī, *Fārs-nāma-yi Nāṣirī*, 269-70).

The Treaty of Erzurum in 1843 conveyed full sovereignty of land on the eastern bank of the Shaṭṭ al-ʿArab, Muḥammara included, to Persia. With it began the rise of the local Kaʿb (Muḥaysīn) ruler Ḥādjdjī Djābir Khān, who was supported by the Persian authorities. He was able to extend his active control over most of the Arab tribes like the Banū Ṭuruf, Bāwiyya, Nāṣir and Rābiʿa. The Mushaʿshaʿ leaders were increasingly fighting their own nomadic followers. By acting mostly as his deputies they practically became subordinates of Ḥādjdjī Djābir Khān, who in fact had been given a fairly free hand in this part of ʿArabistān (Talib Hamid, *History of ʿArabistān, 1857-1897*, 147). The Persian governor-general of Khūzistān still remained officially in control of affairs. In 1872 Ḥamza Mīrzā Hishmat al-Dawla installed Sayyid Mawlā Muḥammad b. Naṣr Allāh b. ʿAbd Allāh (?) as the new ruler in Ḥuwayza. Mawlā Muṭṭalib b. Naṣr Allāh was recognised as ruler in 1881 but Niẓām al-Salṭana replaced him with Sayyid Mawlā Naṣr Allāh, probably in 1888 (Lorimer, *Gazetteer, Affairs of Hawizeh district, 1848-1896*, 1680 ff.). This decline in the authority of the Mushaʿshaʿ rule led to the breakaway of the Banū Ṭuruf, who refused to pay tribute any longer. Although the Persian troops were successful in putting down the serious disturbances in Ḥuwayza, after a further rising of their inhabitants against the garrison in 1894, Shaykh Mizʿal b. Djābir Khān was entrusted to deal with the affairs in Ḥuwayza and sent his brother Khazʿal there in 1300/1882. Mawlā Muṭṭalib b. Naṣr Allāh was forced after considerable resistance to move to Dizfūl, where he remained for the rest of his life. Shaykh Khazʿal married a Mushaʿshaʿ woman and appointed his wife's brother in place of Sayyid Mawlā ʿAbd al-ʿAlī in 1910. After the deposition of Shaykh Khazʿal in 1924, Mawlā ʿAbd al-ʿAlī was recognised as head of the Mushaʿshaʿ but did not play a political role any further.

Coins. The Mushaʿshaʿ exercised the right of coinage. Probably the oldest known coins are two silver pieces from Shūshtar, dated 906, which bear the name Falāḥ b. al-Muḥsin (University of Tübingen, Collection of Islamic coins). Several *dirhams* have been found at Sūsā struck at Shūshtar and Dizfūl in the name of *al-Mahdī b. al-Muḥsin*, which may belong to a son of Sayyid Muḥsin, probably Fayyāḍ, dated 914/1508 (Caskel, *Ein Mahdī des 15. Jahrhunderts*, 93, changes it to *al-Muḥsin b. al-Mahdī*). Kasrawī (*Tārīkh*, 94) mentions a coin of Ḥuwayza dated 1085/1674-5, but although having the Shīʿī legend *ʿAlī walī Allāh* it was probably issued in the name of the *shāh*. Coins called *ḥuwayza* play an important part in the rites of the *Ahl-i ḥakk* [*q.v.*].

(P. LUFT)

AL-**MUSHATTĀ** OR AL-MSHATTĀ (A., presumably

mushattā "a place where one spends the winter, winter camp"), a palatial, ruined structure almost certainly of early Islamic date, in what is now Jordan, situated 35 km south of ʿAmmān just east of the main north-south road connecting the capital with Maʿān.

It consists of a nearly square stone-walled enclosure measuring *ca.* 144 m. internally on each side and divided into three sections by north-south walls of which the foundations are preserved. The wider central zone has three main elements—blocks of symmetrically arranged rooms adjacent to the northern and southern enclosure walls and a central courtyard 57 m. square which once contained a central pavilion or water-basin. Both groups of rooms consist of a central zone flanked by two lateral ones. The centre of the southern block consists of an entrance hall followed by a courtyard, whereas the northern one has a basilical hall with a triple-arched façade and a tri-apsed inner chamber. These central zones were flanked by a number of smaller chambers. The northern ones are four separate suites of rooms or *bayts* consisting of pairs of small rooms flanking a larger central chamber; each unit faces a courtyard. The residential character of these *bayts* is underscored by the presence of latrines in each of the three adjacent wall-towers. The northern block of rooms had brick walls on stone foundations. The small chambers were covered by brick barrel vaults with a pointed arched profile. Brick semi-domes covered the three niches of the central chamber, but the type of roofing intended for the rest of the basical hall is uncertain. Only the foundations of the southern block were ever laid so that less is known about it. The presence of a semicircular niche in the south wall of a long narrow room east of the central zone identifies it as a mosque, and there is a latrine in the tower adjacent to the equivalent room on the west. The two lateral zones flanking the central area are devoid of structures, but it is probable that some were intended. The perimeter wall has three-quarter-round towers at the corners and a series of half-round towers on each side. There are five equidistant towers on the east, north and west sides and four on the south one, which also contains a monumental entrance flanked by half-octagonal towers. The central portion of the south façade stretching between the middle two half-round towers had a richly decorated zone of upright and inverted triangles in alternation framed by projecting mouldings. Most of these decorated blocks are now exhibited in the Islamisches Museum of the Staatliche Museen, Berlin.

From the time of its initial publication by H.B. Tristram in 1873, the building has been the focus of debate. The presence of rich carvings on its southern façade and its half-finished state have fuelled speculation about its purpose and date. A chronology and tabulation of these opinions was published by K.A.C. Creswell. Speculations which attributed it to the Sāsānids, Ghassānids or Lakhmids have been laid to rest and a consensus has emerged that it belongs to the Umayyad period, and probably to the middle decades of the 8th century. H. Lammens and E. Herzfeld were convinced that it should be connected with the short reign of the caliph Walīd II (126/744-5 [*q.v.*]), known for his interest in building and linked with this region by references in the *Kitāb al-Aghānī* and in the writings of the Coptic Bishop Severus b. Muḳaffaʿ, who reported on the hardships endured by workmen conscripted from Egypt to build structures for al-Walīd in a waterless plain. This attribution of al-Mshattā to the patronage of al-Walīd II was accepted by J. Sauvaget and F. Ṭūḳān.

Al-Mshattā also figured prominently in discussions about the purpose and origin of so called "desert palaces". Both Lammens and Herzfeld identified it with a type of structure which they named the *bādiya* [*q.v.* in Suppl.] or the *ḥīra*, thought to imitate a desert encampment and to exemplify the traditional Arab preference for life in the open air. This explanation of Umayyad monuments was challenged by Sauvaget on historical, linguistic and archaeological grounds, and he proposed that many residential structures of the Umayyad period were connected with agriculture. Recently, Ṭūḳān has stressed the importance of hunting for the Umayyad rulers and identified a number of walled enclosures found near their residences as *ḥāʾir* or game preserves. Thus the sweeping theories of Lammens and Herzfeld are being replaced by detailed topographical and archaeological investigations of specific Umayyad structures with a view to determining their precise function. In the case of al-Mshattā, however, the only evidence currently available is the building itself, although its location appears more suited to hunting than to agriculture.

Efforts by Herzfeld and Creswell to isolate elements of this structure which could be connected with the pre-Islamic traditions of specific regions have had limited success. It is generally agreed that whereas the stone masonry has a Syrian character, its brick vaults are more typical of ʿIrāḳ. Some elements of the carved ornament appear to have precedents in the art of Coptic Egypt and still others are reminiscent of Sāsānid designs from ʿIrāḳ or Persia. Also, more recently the presence of a basilical chamber with a triple apse has been used by I. Lavin to link al-Mshattā with a group of monumental structures from Syria, Egypt, Constantinople and the Roman Mediterranean. These findings, however, serve more to underscore the hybrid artistic culture of Umayyad Syria than to elucidate the particular circumstances which led to the creation and abandonment of the palatial enclave presently known as al-Mshattā.

(PRISCILLA SOUCEK)

MUSHFIḲĪ, the pen-name of the Persian poet ʿAbd al-Raḥmān, who was born *ca.* 945/1538 in Bukhārā. His ancestors came from Marw, which is probably why he sometimes refers to himself as Marwī. According to Saʿīd Nafīsī, he received a religious education during his youth, but went on to choose the poetical vocation, in which he was the disciple of Mawlānā Ḥasan Kawkabī, a well-known poet of Bukhārā (*flor.* end of the 9th- beginning of the 10th/15th-16th centuries). In 972/1564-5 Mushfiḳī went to Samarḳand, where he subsequently worked as

librarian for the Shaybānid ruler Sultan Saʿīd (975-80/1568-72). It is reported in the *Muntakhab al-tawārīkh* that he visited India twice, but the book fails to give any dates of the visits. He did, however, travel to that country in 985/1578 when, according to the *Akbar-nāma*, he was presented before Akbar at Pāk Paṭan. He is included by the *Ṭabaķāt-i Akbarī* among the poets who served under Akbar, enjoying the generosity of the Emperor. Finally, he settled down in his native city, Bukhārā, and was created poet-laureate under the Uzbek ruler ʿAbd Allāh Khān (991-1006/1583-98). He died in 996/1588.

Mushfiķī's output comprises various kinds of poetry. A selection of his poems was published in 1959 in Tādjīkistān, where he has received considerable attention recently from scholars and critics. His *ghazals* express, without the embellishment of style or language, simple feelings of love and frustration. He was also noted for his satires, which form a large part of his poetical works.

(MUNIBUR RAHMAN)

MUSHĪR (A.), lit. "one who points out, advises", hence "counsellor, adviser" in administrative usage, in recent times also acquiring in military usage the connotation of "field-marshal" in both the Arab and Turkish worlds.

According to some authorities, *mushīr* was at first (before the ʿAbbāsids) the title of the ministers (later *wazīr* [*q.v.*]) or secretaries of state (*kātib*). So at least we are told by Ibn al-Ṭiķṭaķā, *Fakhrī*, ed. Derenbourg, 206, tr. Amar, 244, tr. Whitting, 146. Khalīl al-Ẓāhirī, *Zubda*, ed. Ravaisse, 106, 114, says that "formerly" an official to whom he gives fourth rank in the hierarchy, which shows he clearly distinguishes him from the *wazīr*, bore the title of *mushīr*. We seem, however, to have very little other information about this dignitary. On the other hand, the word *mushīr* in a non-technical sense is often found along with *wazīr* of which it sometimes seems to be a doublet or synonym (cf. al-Maķrīzī, *Khiṭaṭ*, ed. Wiet, iv/1, 20, 74; Th. Nöldeke, *Die Erzählungen vom Mäusekönig und seinen Ministern*, Göttingen 1879, 53: *Mushīr nāṣiḥ, wazīr nāṣiḥ*).

We may note, however, that this older and broader conception did not survive. According to Ibn Khaldūn, the *wazīr* is, it is true, an "assistant" to the sovereign, but to his predecessor al-Māwardī, *Les statuts gouvernementaux*, tr. Fagnan, 43 ff., the *wazīr* is not the adviser of the *imām* but his delegate.

If Ibn al-Ṭiķṭaķā's statement is correct, we must see a survival of this older state of affairs in the usage of the Mamlūk chancellery, where we find among the honorific *laķab*s of the *wazīr* that of *mushīr al-dawla* (or *al-salṭana* or *al-mulūk wa 'l-salāṭīn*). Cf. al-Ķalķashandī, *Ṣubḥ*, vi, 70.

The same usage, which perhaps came from the Saldjūķs, is still more clearly established in the Ottoman chancellery. We actually find the word *mushīr* among the *alķāb* of the Turkish *wazīr* (*vezīr*) and almost at the head of the formula, which shows its importance: *düstūr-i mükerrem, müshīr-i mufakhkham, niẓām ül-ʿālem* etc. Whence in the epistolary style, the epithets *müshīrī* and *müshīrāne* are used along with *düsturī* and *düstūrāne* or *khidīwī* and *khidīwāne* to designate all that belongs to an official of the rank of *wezīr*.

Sultan Maḥmūd II, in creating the principal ministries, naturally thought of again giving a real value to this title of *mushīr*, which he gave to the principal ministers, and in the reign of his successor ʿAbd al-Medjīd "the privy council (*medjlis-i khāṣṣ*, a regular council of ministers), consisted of the grand vizier, the *shaykh al-islām*, eleven *müshīrs* and three officials of the first rank" (Bianchi, *Le premier annuaire impérial de l'Empire Ottoman*, Paris 1848, 7; Bianchi translates *müshīr* by "councillor or under-secretary of state", and has been followed by Barbier de Meynard in his *Supplément*, the references in which should be taken with this reservation). In 1250/1834-5, the title of *müshīr* was given to the new *nāẓīr* of the Interior (*Mülkiyye nāẓirī* = the former *ketkhüdā*) and of Foreign Affairs (*khāridjiyye nāẓirī* = the former *reʾīs ül-küttāb*; cf. Lutfī, v, 29). The *ḍabṭiyye müshīrliği* was created in 1262/1846 (Luṭfī, viii, 87).

Maḥmūd II also created the post of *beylerbeyi wezīr* or chief of the imperial guard, who bore the title *müshīr-i ʿasākir-i khāṣṣe* (*pasha*), an officer who took rank after the *ser ʿasker* or War Minister (Hammer, *Hist. de l'Emp. Ott.*, xvii, 188-9). This title was soon to be contrasted with that of *müshīr-i ʿasākir-i shāhāne* by the other troops (Luṭfī, v, 28).

The ministers did not long bear the title of *müshīr*, which gave place to *nāẓīr*, but the former of these titles, perhaps under the influence of the word "marshal", which it more or less resembles, became a special military title. It became the highest rank in the army, corresponding to vizier in the civil service and of *ķāḍī ʿasker* in the religious hierarchy. At first, the title *redīf-i manṣūre müshīri* (cf. Luft, v, 68, 74) was given to the *wālī*s of certain provinces, or simply *mushīr* of such-and-such a province (*ibid.*, 165 ff.; vi, 102-3; vii, 70). This corresponded to the demarcation of the army corps.

The number of *müshīr*s or "marshals" soon increased, and in the reign of ʿAbd al-Ḥamīd II there were 39 in 1890 and 31 in 1895 (see the *Salnāme-yi ʿaskerī* for the years 1306 and 1311). Those who had the right to this title were the *ser ʿasker*, the *topkhāne-yi ʿāmire müshīri* or "grand master of artillery", the *sarāy müshīri* or "grand master of the Palace" (replacing the old *čawush bashi*, according to Aḥmed Rāsim, *Taʾrīkh*, i, 156, 186), the *khāṣṣe müshīri* (as under Maḥmūd II), the commanders of the seven army corps (*kol ordu*), the heads of the army services, the aides-de-camp to the sultan (*yāwer-i ekrem*). The only duty of five of the *müshīrs* was to superintend the ceremony of the Selāmlik (*selāmlik resm-i ʿālīsine meʾmūr*). The officer in charge of the police station (*merkez*) of Beshiktash, near the Yildiz Kiosk, was also a *müshīr* (*MSOS*, vii [1908], part 2, 40). Instead of *sarāy müshīri*, the more usual phrase was *mā-beyn mushīr* (Luṭfī, vii, 62).

The honorific form of address for a *müshīr* was *dewletli* (*dewletlü*) *efendim ḥazretleri*. In the plural, the Persian form *müshīrān* or with epithet *müshīrān-i ʿiẓām*. The name of the office was *müshiriyyet or müshīrlik*, more rarely *müshīrī* (Luṭfī, v. 91).

The title of *müshīr*, which was borne by Muṣṭafā Kemāl Atatürk himself, has survived in the Turkish

republic, but in its early years there was only one *mü<u>sh</u>īr* (modern orthography, *müşir*) in office, the Chief and the General Staff, Fewzī Pa<u>sh</u>a.

In <u>Kh</u>edivial Egypt, there was a halt at a stage where the influence of the reforms of Maḥmūd II was still felt. The *rutbet mu<u>sh</u>īr* there was, down to the reign of King Fuʾād I [*q.v.*], exclusively the highest grade of officers, but without distinction between military and civil offices. It was also in theory a civil rank (*rutba mulkiyya*) to which all the princes of the <u>kh</u>edivial house had a claim.

In modern Arabic usage, *mu<u>sh</u>īr* is used in a military context, as in modern Turkish, for "field-marshal", as used e.g. by ʿAbd al-Ḥakīm ʿĀmir, Commander-in-Chief of the Egyptian armed forces under President <u>Dj</u>amāl ʿAbd al-Nāṣir [*q.v.* in Suppl.], and by the President of the Yemen Arab Republic (North Yemen), ʿAlī Ṣāliḥ. In a civil context, however, *mu<u>sh</u>īr* is a general term for "adviser", but has tended to be replaced in formal administrative usage, e.g. for the sense of "adviser to a minister, ruler, etc." by the related term *musta<u>sh</u>ār* [*q.v.*].

In Persian, the title *mu<u>sh</u>īr* has been rarely used. Note, however, the case of the *mu<u>sh</u>īr al-dawla* (cf. the similar title above) borne by an aide-de-camp of Naṣr al-Dīn <u>Sh</u>āh (L. Feuvrier, *Trois ans à la Cour de Perse*, 135-6), and see also MU<u>SH</u>ĪR AL-DAWLA.

Kibrizli-Mehemet-Pacha, *30 ans dans les Harems d'Orient*, Paris 1875, 126 (description of a ceremonial presentation of a *mu<u>sh</u>īr*'s *firmān*); on the word *mu<u>sh</u>īriyye* in early 20th century use in Damascus, cf. Saussey, *Les mots turcs dans le dialecte arabe de Damas*, in *Mél. de l'Inst. fr. de Damas*, i (1929), 117; *İA*, art. *Müşir* (M. Tayyib Gökbilgin).

(J. DENY*)

MU<u>SH</u>ĪR AL-DAWLA (A. "counsellor of the state"), a title bestowed on six separate men of affairs in Ḳā<u>dj</u>ār Persia during the 19th and early 20th centuries, the last of these being Mu<u>sh</u>īr al-Dawla Ḥasan Pirniyā (d. 1935), prime minister in 1920 towards the end of Ḳā<u>dj</u>ār rule. All six of them served as diplomatic envoys or ambassadors, and all except the first one became minister for foreign affairs in Tehran.

It is the first Mu<u>sh</u>īr al-Dawla, Mīrzā Sayyid <u>Dj</u>aʿfar <u>Kh</u>ān Tabrīzī, Muhandis Ba<u>sh</u>ī (*ca.* 1790-1862), who will concern us here. He had been one of the group of five Persians sent in 1815 by the Crown Prince ʿAbbās Mīrzā [*q.v.*] to London for four years to train as a military engineer. During 1848-52 he was in charge of a detailed survey of Persia's western boundary with the Ottoman empire, experiences which he set down in his *Risāla-yi taḥḳīḳāt-i sarḥaddiyya* (see *Bibl.*). Already on the accession of Nāṣir al-Dīn <u>Sh</u>āh [*q.v.*] he had been appointed to the post of official in charge of important matters relating to foreign affairs (*nāẓir-i mahāmm-i duwal-i <u>kh</u>āri<u>dj</u>a*), and then in 1858 he became president of the supreme advisory council to the <u>Sh</u>āh, *raʾīs-i dār al-<u>sh</u>ūrā-yi kubrā*, whose constituting was a first, very tentative step towards the limiting of the monarch's autocratic power; he held this post till his death, and shortly after his presidency also became a member of a second council, the *ma<u>dj</u>lis-i <u>sh</u>ūrā-yi dawlatī*. In 1860 Nāṣir al-Dīn <u>Sh</u>āh appointed him, by now a distinguished elder statesman who had received the *laḳab* of Mu<u>sh</u>īr al-Dawla and had already headed missions to France and Belgium, as envoy to London, with the aim of strengthening Anglo-Persian relations and of securing support against possible threats from Russia, but the Foreign Secretary Lord John Russell proved unreceptive to such Persian requests as an indefinite guarantee by the British government of Persia's territorial integrity, and Mu<u>sh</u>īr al-Dawla left London in June 1861. A year after his return to Tehran he was appointed *mutawallī* of the shrine at Ma<u>sh</u>had [*q.v.*], but died two months later in <u>Dj</u>umādā II 1279/November-December 1862.

Among his compositions, in addition to the *risāla* mentioned above, was a popular manual of mathematics (Tehran 1263/1847 and subsequent editions) and three other works still in manuscript.

Bibliography: Mihdī Bāmdād, *<u>Sh</u>arḥ-i ḥāl-i ri<u>dj</u>āl-i Īrān dar ḳurūn-i 12 wa 13 wa 14-i hi<u>dj</u>rī*, Tehran 1347-51/1968-72, i, 341-4; the *muḳaddima* to Muḥammad Mu<u>sh</u>īrī's edition of the *Risāla-yi taḥḳīḳāt-i sarḥaddiyya*, Tehran n.d. [1348/1969] (a Russian tr. of this had been published at St. Petersburg in 1877, together with the account of Mu<u>sh</u>īr al-Dawla's Ottoman Turkish counterpart on the boundary commission, <u>Kh</u>ur<u>sh</u>īd Efendi, as *Opisanie pute<u>sh</u>estviya po turetsko-persidskoi granitsi*); Sir Denis Wright, *The Persians amongst the English, episodes in Anglo-Persian history*, London 1985, 74-81, 119-20.

(C.E. BOSWORTH)

MU<u>SH</u>ĪR ḤUSAYN ḲIDWĀʾĪ, Indian lawyer and politician (1878-1937), born at Gadia, Bārābankī district, and educated at Lucknow and London (Barrister-at-Law).

He received the Order of ʿO<u>th</u>māniyya from the Sultan of Turkey, and proposed the idea of the *An<u>dj</u>uman-i <u>Kh</u>uddām-i Kaʿba* [*q.v.* in Suppl.] (1913-18) for the protection of Mecca and other holy places as a reaction to the Turco-Italian and Balkan wars (Y.B. Mathur, *Muslims and changing India*, Delhi 1972, 145-64). He played a leading part in the <u>Kh</u>ilāfat Movement [*q.v.*] representing the militant trend within the movement, presiding over the Awadh <u>Kh</u>ilāfat Conference in May 1920 at Faizabad (Fayḍābād), and was also active in the All-India Muslim League (AIML) in the 1920s; he took part in its enquiry into the Mapilla uprising (1921) and was a member of the AIML committee to frame a scheme of constitution for India (1924). Elected to the central legislature three times since 1924, he became the leader of the Socialist group there, and a member of the Council of State (1931 till his death). He was furthermore the president of the non-communal All-India Independent League. A keen gardener, his name is immortalised in the "Kidway" rose; he died on 23 December 1937. His published works included *The future of the Moslem empire*, London 1919; *Swaraj and how to obtain it*, Lucknow 1924; *Pan-Islamism and Bolshevism*, London 1937; and *Woman under different social and religious laws*, repr. Delhi 1976. His Urdu poems are collected in *Nāla-i Mu<u>sh</u>īr* and *Nāma-i Mu<u>sh</u>īr*.

Bibliography (in addition to the works cited above): *Who's who in India, Burma and Ceylon*, Poona 1938; J.C. Ker, *Political trouble in India*, Calcutta 1973, 356 f., 396 f.; F. Robinson, *Separatism among the Indian Muslims*, Cambridge 1974, 379 f.; Naresh Kumar Jain, *Muslims in India*, Delhi 1983, ii, 22 f.; Riaz-ur-Rahman Kidwai, *Biographical sketch of Kidwais of Avadh*, Aligarh 1987, 122-9.

(ẒAFARUL-ISLĀM <u>KH</u>ĀN)

MU<u>SH</u>RIF (A.), active participle from the form IV verb *a<u>sh</u>rafa*, literally "overseer, supervisor, controller", the title of an official who appears at various times and with various duties in the history of the ʿAbbāsid caliphate and its successor states, from the Ma<u>gh</u>rib to the eastern Islamic lands.

1. In the Arab and Persian lands.

The office of *ishrāf* seems basically to have been a financial one. The supervision of financial operations was in the first century or so of the ʿAbbāsid caliphate usually entrusted to the *dīwān al-zimām/al-azimma* [see DĪWĀN. i. The caliphate]; in the reign of al-Muʿtaṣim, the inspector appointed to control the actions of his vizier al-Faḍl b. Marwān was called a *zammām* (al-Ṭabarī, iii, 1183). By the early 4th/10th century, however, *mushrif* is regularly used for inspectors sent out to the provinces to check financial affairs there, e.g. it is used for the inspector sent out by the vizier al-Ḳāsim b. ʿUbayd Allāh b. Sulaymān in 287/900 to investigate the estates of the Banu 'l-Furāt [see IBN AL-FURĀT] in the Wāsiṭ region (Hilāl al-Ṣābiʾ, *K. al-Wuzarāʾ*, ed. ʿAbd al-Sattār Aḥmad Farādj, Cairo 1958, 150-1; cf. also D. Sourdel, *Le vizirat ʿabbāside*, ii, 353, 457, 468, 474, 661).

Under the Umayyads of al-Andalus, the *mushrif* was in the 4th/10th century likewise an inspector in the provinces sent out by the central treasury in Cordova (E. Lévi-Provençal, *Hist. Esp. mus.*, iii, 40). Then the office seems to have been inherited from the Umayyad administration by the Berber dynasties of North Africa, for there is mentioned one Ibn al-Khayyār al-Djayyānī who was *mushrif* of Fās at the end of the Almoravid rule there. Then *mushrifs* are regularly mentioned in the towns of Morocco and the eastern Maghrib all through the Almohad period and in Ifrīḳiya under the Ḥafṣids (J.F.P. Hopkins, *Medieval Muslim government in Barbary until the sixth century of the Hijra*, London 1958, 51-2; R. Brunschvig, *La Berbérie orientale sous les Ḥafṣides*, ii, 67-8). The Ḥafṣid *mushrif*, in particular, was concerned with the levying of customs duties, and this may have been likewise the case latterly in Muslim Spain, for P. de Alcala has the mediaeval Spanish form *almoxarife*, modern Spanish *almojarife* (see Dozy, *Supplément*, i, 750).

Turning to the central and eastern Islamic world, under the Ghaznawids [*q.v.*], one aspect of the duties of the *mushrif* continued to be financial. Thus when in 422/1031 Masʿūd b. Maḥmūd's new vizier Aḥmad b. Ḥasan Maymandī [*q.v.*] made an investigation of the sultan's wealth, he made the treasurers (*khāzinān*) and *mushrifān* bring forward their accounts and documents of financial assignments (Abu 'l-Faḍl Bayhaḳī, *Taʾrīkh-i Masʿūdī*, ed. Ghanī and Fayyāḍ, 158). But in the early Ghaznawid sultanate, the *mushrifs* were also spies and internal intelligence agents; the suspicious rulers would, as a matter of course, set *mushrifs* to watch over the activities of their military commanders, provincial governors and even the royal princes. and this intelligence system was organised from a special *dīwān*, that of the *shughl-i ishrāf-i mamlakat*. The two great mediaeval Persian Mirrors for Princes, the *Siyāsat-nāma* of Niẓām al-Mulk [*q.v.*] and the *Adab al-ḥarb wa 'l-shadjāʿa* or *Ādāb al-mulūk* of Fakhr-i Mudabbir Mubārak-Shāh [*q.v.* in Suppl.], devote considerable space to the *mushrif* and his duties, and their information must relate to Ghaznawid and then Saldjūḳ and Ghūrid practices. In both of these works, the inspectorial function is emphasised. Niẓām al-Mulk states that the *mushrif* at the court should have deputies in the provinces to oversee the collectors of taxes, whilst Fakhr-i Mudabbir has a lengthy review of the *mushrif*'s responsibilities, including inspection of the state workshops, the stables and supplies of fodder, the kitchens, etc., whilst it is further stressed that he should always be present on the battle field to extract the ruler's fifth of captured plunder (*Siyāsat-nāma*, ch. ix, ed. Darke[1], 78, tr. idem, 66; *Adab al-ḥarb*, India Office ms. 647, ch. vii, fols. 40b-41b [not in the incomplete printed edition of Aḥmad Khʷānsarī, Tehran 1346/1967]; M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 144-5; C.E. Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran*, 72, 94-5).

Under the Great Saldjūḳs, the *mushrif-i mamālik* had, as with the Ghaznawids, some intelligence duties, but the *dīwān-i ishrāf-i mamālik* in the reign of Malik-Shāh [*q.v.*] was mainly concerned with the auditing and supervision of the finances. He had subordinate *mushrifs* in the provinces who supervised the collection and disbursement of the taxes, inspected the growing crops and the harvest, watched over the running of the markets and the coining of money, etc.; these officials received their salaries (*marsūm*) from the provincial revenues (investiture diploma for a *mushrif* in the *inshāʾ* collection of Muḥammad b. ʿAbd al-Khāliḳ Mayhanī, see H. Horst, *Die Staatsverwaltung der Großselğūqen und Ḫōrazmšāhs (1038-1231)*, Wiesbaden 1964, 11-12, 38-9, 57, 133-4; A.K.S. Lambton, in *Camb. hist. of Iran*, v, 258-9). Headship of the *dīwān-i ishrāf* was often a stepping-stone to higher office: Kamāl al-Mulk Simīrumī was appointed Muḥammad b. Malik-Shāh's *mushrif* through the influence of the sultan's wife Gawhar Khātūn, and later in the reign became *mustawfī* [*q.v.*] and then vizier to Maḥmūd b. Muḥammad; the caliphal vizier in this same century (the 6th/12th), ʿAwn al-Dīn Yaḥyā Ibn Hubayra [*q.v.*], was, early in his career, *mushrif al-makhzan* in al-Muḳtafī's treasury, responsible for the caliphal estates on the west bank of the Tigris (H. Mason, *Two statesmen of mediaeval Islam*, The Hague 1972, 16; C.L. Klausner, *The Seljuk vizierate, a study of civil administration 1055-1194*, Cambridge, Mass. 1973, 18, 42, 51, 65).

In the Egypt and Syria of the Ayyūbids and Mamlūks, the title *mushrif* was known, on the evidence of al-Ḳalḳashandī (*Ṣubḥ al-aʿshā*, v, 454), who says that the *mushrif* in these states was in charge of the royal kitchens, watching over the food cooked there, and responsible to the *ustād-dār al-ṣuḥba*. Subsequent usage of the term seems, however, to have been mainly in the eastern Islamic world. In Īl-Khānid Persia, the *mushrif al-mamālik* was one of two or more financial officals assisting the head of finances, the *mustawfī 'l-mamālik*, this last person being, in B. Fragner's surmise, the prototype of the Ṣafawid *darūghā-yi daftar-khāna* (*Camb. hist. of Iran*, vi, 554). By Ṣafawid times, in fact, *mushrif* seems to have designated middle-level inspectors and supervisors; Chardin states that the *mushrif* ("mouchref ou écrivain") was one of the overseers of the state or palace household workshops (*buyūtāt*) (V. Minorsky, *Tadhkirat al-mulūk*, GMS, London 1943, 30, 158), but the *Tadhkīrat al-mulūk* itself lists several other *mushrifs* besides this one, from that of the royal treasury to those of the falcon-house and the arsenal (*ibid.*, tr. 93-5).

2. In Muslim India.

Before the reign of the Tughluḳid Fīrūz Shāh, the *mushrif-i mamālik* was essentially the accountant-general, ranking immediately below the *wazīr* and the *nāʾib wazīr* in the *dīwān-i wazāra*; the office of auditor-general was filled by the *mustawfī al-mamālik* (Shams-i Sirādj ʿAfīf, *Taʾrīkh-i Fīrūz-Shāhī*, Bibl. Ind. ed., 419; Ḍiyāʾ al-Dīn Baranī, *Taʾrīkh-i Fīrūz Shāhī*, Bibl. Ind. ed., 24). A redistribution (or possibly a re-definition of the status quo) in the time of Fīrūz Shāh left the *mushrif* dealing with income and the *mustawfī* with expenditure (ʿAfīf, 409-10). The *mushrif*, assisted by a *nāẓir*, supervised the collection of revenues over the

entire sultanate through local staffs, and was also responsible for the audit of local accounts (ʿAfīf, 420); a *mus͟hrif* also inspected crops in order to determine the government share (Baranī, *op. cit.*, 288 f.), where the word seems to refer to a local government official rather than to an officer of state.

By the time of S͟hēr S͟hāh, the *mus͟hrif* was an official under the *s͟hikḳdār*, the administrator of a *s͟hikḳ* or *pargana*; the word seems to be used loosely as synonymous with *amīn* and *munṣif*, although ʿAbbās Sarwānī (B.L. ms. Or. 164, fol. 73b) says that a *mus͟hrif*'s duty was to assess the produce of the crops, and an *amīn*'s to assess the damage caused to crops through movements of armies.

MUS͟HRIK [see s͟hirk].

al-**MUS͟HTARĪ**, the planet Jupiter, Pers. *Hurmizd* < *Aurmazd* (*Ahura-mazdāh*). The name of the planet is in Sumerian *S͟hulpaʾe*, later also *Mulu-babbar* "the white star" (= Μολοβαβαρ in Hesychios; cf. Meissner, *Babylonien und Assyrien*, Heidelberg 1925, ii, 404); in the later Akkadian period it is always identified with the numen supremum Marduk (Biblical Merodach). In Hebrew it is called *Ṣedeḳ*, in Greek — just as among the Babylonians, as the symbol of the highest deity — *ὁ τοῦ Διὸς ἀστήρ*. As a synonym of al-Mus͟htarī we find (e.g. in *Ḥadīt͟h*) the name *Bard͟jīs* (cf. *Lisān al-ʿArab*, vii, 323).

The Arab astronomers, like Pythagoras and Ptolemy, put Jupiter in the sixth sphere (*falak*) from within, i.e. the third from without. On the interior it adjoins the outer surface of the sphere of Mars and on the exterior the inner surface of the sphere of Saturn. The following table gives the least, mean and greatest distance of Jupiter from the centre of the earth, expressed in radii of the earth, as given by al-Battānī (*Opus astronomicum*, ed. Nallino, ch. 50), al-Farg͟hānī (*Compilatio*, ch. 21), Ibn Rusta (18-20) and Abrāhām bar Ḥīyā (*Sphaera mundi*, ch. 9), as well as the Hindu values given by al-Bīrūnī from the compilation by Yaʿḳūb b. Ṭāriḳ of the year 161/777-8, and the modern figures for these distances.

	least distance (*perigree*)	
al-Battānī	8,022	rad. of the earth
al-Farg͟hānī	8,876	,,
Ibn Rusta	8,820	,,
Bar Ḥīyā	8,000	,,
Hindu (al-Bīrūnī)	8,019 1/21	,,
Modern	92,500	,,
	mean distance	
	10,473	rad. of the earth
	11,640½	,,
	11,503½	,,
	10,200	,,
	10,866 2/3	,,
	122,250	,,
	greatest distance (*apogee*)	
	12,924	rad. of the earth
	14,405	,,
	14,187	,,
	12,400	,,
	13,714 2/7	,,
	152,000	,,

The radius of the earth is here estimated at 3,250 (al-Battānī, al-Farg͟hānī and Bar Ḥīyā) and 3,818 Arab miles respectively (Ibn Rusta) while, according to al-Bīrūnī, the Hindus give it as 1,050 *farsak͟h*s = 3,150 Arab miles (1 Ar. m. = 1,973 metres; cf. Nallino, *Il valore metrico del grado di meridiano*). The true geocentric distances of the planet Jupiter are actually about 11½ times greater than given by al-Battānī for example. It should, however, be pointed out that the relation of 37 : 23° 1 11/18 for the greatest and least observed apparent diameter taken by this scholar, with the help of which the distance of the apogee was calculated from the estimated distance of the perigree at 8,022 radii of the earth, agrees remarkably well with the modern estimate. The apparent diameter of Jupiter at the mean distance is given by al-Battānī as 1/12 of the diameter of the sun. From this and the mean distance he calculates the true diameter of Jupiter at 4 1/3 diameters of the earth (= 8 2/3 radii), and its volume at 81 times that of the earth (i.e. $4\frac{1}{3}^3$). The true values are 2.56 (i.e. 170 times larger): diameter of Jupiter = 11.14 diameters of the earth, volume = 1,380 times the volume of the earth.

Following Ptolemy (*Almagest*), al-Battānī gives the greatest observed northern (geocentric) latitude as 2° 4', the greatest southern as 2° 8'. On the other hand, he points out (chs. 31 and 45) that he found the length of the apogee of the eccentric circle from his observations to be about 8° smaller (in 265/879, 164° 28') than was to be expected from the *Almagest*, taking into account the precession.

The movement of Jupiter is, as in the *Almagest*, represented to be through four circles (*aflāk*) (cf. al-Battānī, *Op. astr.*, ch. 31). The astronomical tables take for its mean daily sidereal motion the value of 5'. Its period of sidereal revolution is given by al-Ḳazwīnī (*Āt͟hār*, ed. Wüstenfeld, i, 26) at 11 years, 10 months, 15 days.

Al-Mus͟htarī in astrology. Al-Mus͟htarī is the ruler (*rabb*) of the *Buyūt al-Rāmī* (Sagittarius, night-house) and *al-Ḥūt* (Pisces, day-house), also night-ruler of the 1. *Mut͟hallat͟ha* (*Triquetrum*), which consist of *al-Ḥamal* (Aries), *al-Asad* (Leo) and *al-Rāmī* (Sagittarius), whose ruler by day is the sun, and finally companion (*rafīḳ*) of the 3 *Mut͟hallat͟ha*s. It has its *s͟haraf* (exaltation) in the 15° of *al-Saraṭān* (Cancer), its *hubūṭ* in the 15° of *al-D͟jady* (Capricorn). According to al-Ḳazwīnī (i, 22), "the astrologers call al-Mus͟htarī the larger star of fortune", *al-Saʿd al-akbar*, because its good influence surpasses that of Venus; they attribute to it numerous happy states and the greatest good fortune. The idea that the planet Jupiter is a star of good fortune is general among other peoples also; we also find it in Babylonia, India and China. For further details of the part played by Jupiter in Arab astrology, see the works of Abū Maʿs͟har.

MUS͟HTARIK or Mus͟htarak (a.), the active or passive participles of the form VIII verb *is͟htaraka* "to be associated with, common to". Al-D͟jurd͟jānī defines the term as qualifying a noun "which has come into use for its multiple meanings, like the word *ʿayn*, because of its association with several meanings". In Ibn Sīnā (Avicenna), the term qualifies a noun associated with a certain number of meanings, i.e., a noun which can have several meanings. As used by modern linguists, it denotes "polysemy".

This is the name which al-Zamak͟hs͟harī gives to the fourth part of his *K. al-Mufaṣṣal*, in which he treats of phonetic phenomena which are "common" to the three parts of discourse or to two of them only. These phenomena are nine in number: the inclination of the vowel /a/ towards the vowel /i/; pause; the lightening

of the glottal stop (*hamza*); the coming together of two quiescent letters; and the letters inserted within other letters. In his commentary, Ibn Yaʿīsh takes especial care to justify the vocalisation *mushtarak*, for he observes that, since the verb *ishtaraka* is intransitive, it cannot be used in the passive except when it is followed by a preposition and a pronoun which stands for the subject; one must accordingly understand *fī-hi*, and read *mushtarak fī-hi*.

MŪSĪĶĪ, later **MŪSĪĶĀ**, music.

1. Theory. *Mūsīķī* denotes, strictly speaking, the theory of music, and contrasts therefore with *ghināʾ*, song (i.e., musical practice). But the distinction is not rigidly maintained —the Ikhwān al-Ṣafāʾ even equate the two— and the term *mūsīķī* is not associated particularly with the works of Greek-inspired theorists, even though its Greek origin is normally acknowledged. It is typically defined as the science of the composition of melodies (*taʾlīf al-alḥān*), but the use of e.g. *mūsīķār/ī* to denote the performer clearly shows the tendency, which has increased through time, for its meaning to encompass music in general (excluding only specifically religious genres such as Ķurʾānic cantillation — for the religious controversy over the legality of music see SAMĀʿ). Normal in modern Arabic is such phraseology as *al-mūsīķā al-shaʿbiyya* "popular music", while in Persian we have e.g. *mūsīķī-yi maḥallī* and in Turkish *halk musıkisi* "folk music" (in Turkish *musiki/musıki* has now also to compete with the French-derived *müzik*). Here, however, discussion will be confined to theory, broadly understood, practice being covered in the articles GHINĀʾ and MAĶĀM.

Beginnings. If the first great achievements in this field are to be found in the 3rd/9th-century treatises of al-Kindī, it should not be thought that the subject begins with him, nor that it is to be identified solely with the elaboration of the Hellenic legacy. Although the works of earlier writers have failed to survive, there is ample evidence of musical speculation, and many of the main concerns of the first two centuries of Islam can be established from the abundant material preserved in the *Kitāb al-Aghānī*. One theme that emerges clearly, but is only sporadically tackled by later theorists, is that of origins, together with an interest in change viewed in historical perspective. Not surprisingly, there is no general creation myth for music (although a mythical origin is provided for various instruments: the invention of the *ʿūd* (lute), for example, is ascribed to Lamak [*q.v.*], who constructed it, in order to mourn his son, on the analogy of parts of his dead body), but rather conjecture as to the identity of the primitive genres of Arab music. According to a commonly held, if not unanimous, view the *ḥudāʾ* (cameleer's song), the earliest genre, contrasts with *ghināʾ*, under which three types are subsumed, *naṣb*, *sinād* and *hazadj*, the last two being related antithetically, the former characterised as "heavy", the latter as "light". Behind such speculative (but not unreasonable) reconstructions may be detected an awareness of functional differentiation, of the contrast, say, between work-songs and entertainment music. Further, a realisation of the separate status of ceremonial music may be discerned in the fact that the *nawḥ* (lament) fails to be integrated into such schemes.

Given this presumed pre-Islamic background, fleshed out by legendary accounts of musicians, mainly *ķiyān* (singing slave-girls) [see ĶAYNA], the transition to the evidently different discriminations between 3rd/9th-century genres could not be ignored, and accounts of the development of music in the first century of Islam are inevitably dominated by the themes of change and innovation. The latter received special attention, particular individuals being singled out as the first to introduce a certain technique, instrument, style or genre in a given area or social context.

If we can speak here of a latent historiography, more specifically theoretical concerns are to be detected in the growing precision of vocabulary and nuance of definition encountered in such fields as modal and rhythmic categorisation and discussions of performance technique. At one end of the scale the Umayyad singer Ibn Suraydj's concise catalogue of the qualities sought in a good singer (*Aghānī*, i, 315; Farmer, *History*, 73) shows a keen awareness of a wide range of subtleties, while at the other, the great variety of materials presented in the *Kitāb al-Aghānī* can be seen to illustrate, and demonstrate an interest in, many aspects of music-making that have become the particular concern of ethnomusicology in the 20th century: musical training, for example, transmission of repertoire, the economics of the profession, the organisation and nature of the performance context, and the relationship between musician and audience (on these aspects see Sawa, *Music performance practice*). Justly recognised as a document of incomparable value in the fields of social and literary history, the *Kitāb al-Aghānī* contains in addition a fund of ideas about music, however anecdotal their presentation, that place it alongside more technical treatises as a primary source, and especially for any study of what Farmer has felicitously called "practical theory", i.e., that which directly engages with, and emerges out of, contemporary practice.

Early theorising approaches most closely what will be the dominant concerns of the major scholars from al-Kindī on in the more formal domain of modal and rhythmic categorisation. As a matter of routine, the *Kitāb al-Aghānī* will identify in relation to a given song text both the poet and the composer and also the melodic mode and the rhythmic cycle. For earlier pieces, however, the definition of the mode, although not that of the rhythmic cycle, may be omitted, suggesting that during the Umayyad period the modal system may have been less clearly articulated; certainly the most precise formulation of this kind of information is associated with pieces transmitted on the authority of Isḥāķ al-Mawṣilī (150-235/767-850 [*q.v.*]), and it may well be to him that should be attributed the final explicit codification of the system of eight melodic modes and eight rhythmic cycles. He is credited with having worked out definitions of a lute-fretting independently of the Greek theoretical sources that were beginning to be translated, and he is certainly one of the main authorities used by Yaḥyā b. al-Munadjdjim (d. 300/912 [see MUNADJDJIM, BANU 'L-]) in his short and somewhat enigmatic *risāla*, the source on which all attempts to reconstruct the early modal system must be based (the various interpretations are reviewed in Shawķī, *Risālat Ibn al-Munadjdjim*). But if controversy still surrounds the structure of the modes, the nature of the lute fretting is clear, and is essentially the same as that propounded by the first of the Greek-inspired theorists, al-Kindī [*q.v.*], in the mid 3rd/9th century. (Despite the evidently imported nature of some of his concepts, al-Kindī articulates scale structures in terms of frettings,

whether real or ideal, on the fingerboard of the Arab lute, an approach followed by all major theorists down to the 9th/15th century.)

The philosophers. For both Isḥāḳ al-Mawṣilī and al-Kindī, the basic scale is Pythagorean diatonic. In this system the subtraction of a perfect fourth (4/3) from a perfect fifth (3/2) yields a (major) whole tone (9/8). Two whole tones make a (slightly sharp) major third of 408 cents (81/64) which, when subtracted from the fourth, yields a semitone of 90 cents, termed limma, while the subtraction of the limma from the whole tone yields a slightly larger semitone of 114 cents termed apotome [see also MAḲĀM]. For Isḥāḳ the fretting on any one of the four strings of the *ʿūd* will yield the sequence whole tone, limma, apotome, limma, e.g., *c d e♭ e♮ f*. Al-Kindī adds a fifth string, but this is a notional entity designed to encompass the two octaves of the Greek greater perfect system, the tuning of the strings being in fourths throughout, e.g., *G-c-f-b♭(-e♭')*. (It is in this area of analysis, in particular, that theory will justify the placing of music among the mathematical sciences, the medieval *quadrivium*, in such classificatory works as the 4th/10th-century *Iḥṣāʾ al-ʿulūm* of al-Fārābī and the *Mafātīḥ al-ʿulūm* of al-K͟hʷārazmī [*q.vv.*].) But al-Kindī is also aware of practical considerations: he lists variant tunings in which the pitch of the lowest string is changed to reinforce a modally significant note, and gives a detailed account of an elementary lute exercise.

The several short treatises attributed to al-Kindī are quite eclectic. They not only encompass material of a descriptive, scientific nature (the Aristotelian end of the spectrum), but also deal with the doctrine of ethos, cosmological affiliations and numerology (the Neo-Platonic end). On the former side we may note, further, schematic outlines of melodic movement which interestingly imply visual metaphors (through such terms as *lawlabī* "spiral", *ḍafīr* "braid" and *muwas͟hs͟haḥ* "girdled"); and a descriptive account of the rhythmic cycles used in his day which is in some respects puzzling and imprecise, possibly because it is a pioneer attempt not relying on previous analytical models. (Later treatments of rhythm will be more obviously indebted for their concepts and terminology to prosody — not for nothing is al-K͟halīl b. Aḥmad [*q.v.*] sometimes invoked as a founding father.)

Al-Kindī also gives the earliest account of the dimensions and construction of the *ʿūd* [*q.v.*, and also MALĀHĪ]. For the most part, however, he uses instruments as props for sets of associations, normally related to the number of strings: the basic four strings of the *ʿūd*, for example, allow connections to be made with the elements, humours, seasons, and points of the compass, while in the *Kitāb al-Muṣawwitāt al-watariyya* various instruments are ordered according to the number of strings, from one to eight, each with particular associations: to that with two strings, for example, is related a sequence of pairs beginning day/night, sun/moon, and essence/accident, while its seven frets match the days of the week and the seven heavenly bodies. Such apparently gratuitous assemblages form part of a wider theory of correspondences involving also, according to al-Kindī, the right choice of rhythmic cycle to fit the time of day and the mood of the poem being set. Aspects of the same psychology of music that will be further developed by later writers concern the effects of music on the soul and the emotions, and the belief in its therapeutic value, while cosmological affiliations will in later centuries crystallise around particular sets of melodic modes (see Neubauer, *Arabische Anleitungen zur Musiktherapie*).

Cosmology and numerology are, however, largely ignored by the next two great theorists, al-Fārābī and Ibn Sīnā [*q.v.*]: indeed, by the latter they are brusquely dismissed. Their works represent the first great peak of scientific enquiry, utilising and building upon Greek sources, especially in such areas as the physics of sound and the technical analysis of intervals and scales with particular reference to the various tetrachord species. (The full history of the transmission of Greek musical ideas into Arabic has still to be written (for a general survey see d'Erlanger, *La musique arabe*, ii, 257-306), but it is clear that the main sources, directly or indirectly, are Aristotle, Aristoxenos, Euclid, Nicomachos and, above all, Ptolemy, through whom others are filtered.)

The *Kitāb al-Mūsīḳī al-kabīr* of al-Fārābī (d. 339/950) has been justly praised as an outstanding intellectual achievement. Despite the range of interests exhibited by al-Kindī, little in the preceding literature anticipates its scope and analytical profundity. Its qualities are demonstrated at the outset in an extensive methodological introduction beginning with basic concepts (of music itself and its production; and of the discriminating and creative faculties) and marked by rigorously logical argumentation. The Aristotelian tone is reinforced by repeated reference to the *Posterior Analytics* as the introduction proceeds with such topics as types of melody (viewed as evolving towards a present state of perfection) and classes of instruments (the highest status accorded those that most closely approximate to the human voice). Consideration of theory —to which practice is deemed temporally and logically prior— begins with a distinction within *laḥn*, melody, of essentials (*uṣūl*) and non-essentials (*tazyīdāt*) that echoes the conceptualisations of practising musicians, and proceeds to a discussion of questions of scale. The means of demonstration is again the fingerboard of the *ʿūd*, with the addition of al-Kindī's hypothetical fifth string to complete the second octave. Insistence on being able to produce all the notes of one octave in the other leads to an increase in the number of frets postulated, and al-Fārābī also goes beyond the Pythagorean confines of al-Kindī's (and Isḥāḳ al-Mawṣilī's) fretting by introducing a neutral third (*wusṭā zalzal*). Here al-Fārābī is reflecting current practice, as also in maintaining the mutual exclusivity of the notes produced by the second (*wusṭā*) and third (*binṣir*) fingers. The remainder of the introduction and, after an initial discussion of the physics of sound, the beginning of the second part, are devoted to intervallic analysis (definitions, addition, subtraction), and to the combination of intervals within a fourth, that is, to the exposition of various tetrachord species. Here the link with contemporary practice is broken: many of the species listed (particularly among the chromatic and enharmonic sets) can have had no place in the Arab music of the day, and this part of the work is quite clearly indebted to, and a synthesis of, Greek theory. The emphasis becomes even clearer in the ensuing treatment of the greater perfect system and the dispositions of the tetrachord species within it — a topic that will also recur in later sections.

Just as theoretical, but independently constructed, is al-Fārābī's treatment of rhythm. This can be viewed as a daring attempt, not to analyse just the rhythmic cycles in use, but to construct a global classification able, through the use of variables, to account for virtually any possible cycle, flexibility being provided by the disjunct (*mufaṣṣal*) cycles, made up of feet of differing lengths. Al-Fārābī also introduces the concept, used by later theorists, of a

disjunction (*fāṣila*) between cycles: a cycle is deemed to terminate not with the last time unit preceding the onset of the next but with the last time unit marked in the basic percussion pattern. Other works by al-Fārābī devoted solely to rhythm (Neubauer, *Die Theorie vom Īkāʿ*) give a rather different picture, concentrating more on existing cycles and on the many techniques of differentiation applied to them (Sawa, *Music performance practice*).

Further important topics covered in the *Kitāb al-Mūsīḳī al-kabīr* are instruments and melodic structure. Treatment of the former is revelatory, but at the same time restricted, dwelling almost entirely upon the scale-systems associated with each instrument: there is virtually nothing, despite the model of al-Kindī's account of the lute, on construction, dimensions, materials or context of use. Not surprisingly, given the emphasis on pitch discriminations, there is no mention of percussion, and the initial classification simply separates strings from wind, dividing the former in two ways: plucked or bowed, stopped or open. Extraordinary in the material on scale is its sheer variety. If we ignore the extended treatment of theoretically possible frettings and the schematic presentation of variant tunings, we are left with radically different scales associated with the *ʿūd*, the *ṭunbūr bag̲h̲dādī* (which had, originally, a most curious quartertone fretting yielding a total range of less than a fourth), the *ṭunbūr k̲h̲urāsānī* (the scale of which is analysed in terms foreshadowing the later Systematist scale), and the *rabāb* [*q.v.*] (the earliest attested bowed instrument). We are evidently faced here with material taken from different analytical traditions, but in contrast to the composite fretting of the lute, which in some areas superimposes alternative definitions, there is no real attempt at integration, and it may be that the various instruments were associated with particular regional and still markedly different idioms.

Melodic structure is considered in two ways: in relation to the text, and to pitch organisation. Melismatic and syllabic styles of setting are explored, as are aesthetic aspects of phonology and voice production. As with rhythm, the treatment of melodic shape is largely schematic and is to be seen more as a codification of possible combinational patterns than as an attempt to describe contemporary melodic norms. It was, nevertheless, to be influential, being reproduced by several later theorists.

Ibn Sīnā's (d. 428/1037) major contribution to the theory of music is contained in a chapter of the *Kitāb al-S̲h̲ifāʾ*. There are, in addition, two slighter (and nearly identical) texts, one Persian (in the *Dānis̲h̲nāma-yi ʿalāʾī*), the other Arabic (in the *Kitāb al-Nad̲j̲āt*), but these add nothing new. The treatment of music in the *Kitāb al-S̲h̲ifāʾ* is considerably briefer than that provided by al-Fārābī, is necessarily narrower in scope, and fails to break much new ground; but it is in some ways more logical in its organisation. Of particular interest in the introduction are the ideas about the nature of sound, seen ultimately as a signalling device designed to help preserve the species, but also as a means of expression that can be used to aesthetic effect. Although by no means identical, the following treatment of intervals (involving definitions, consonance ranking, addition and subtraction) and scalar analysis is clearly dependent on the model provided by al-Fārābī, while the examination of tetrachord species is carried even further to include one or two species not derived from Greek sources — a clear indication of the ways in which areas of theory could develop as autonomous fields of speculation increasingly divorced from practice.

There follows an extensive treatment of rhythm, again indebted to al-Fārābī, and employing the same technique of including variables to construct generic structures comprising cycles with differing totals of time units as well as differing patterns of percussions. Instruments are then briefly considered, of particular interest being the organological classification. For chordophones Ibn Sīnā adds to al-Fārābī's criteria a distinction regarding the mounting of the strings, and differentiates between aerophones according to whether the air stream passes through a hole, across a reed, or is produced from a reservoir. Pitchless percussion instruments are again ignored, and the chapter concludes with a lute fretting to which is appended a definition of the intervallic structure of some of the best known melodic modes of his day.

Modal analysis was to become one of the major concerns of the Systematist school, but some two hundred years separate the *Kitāb al-S̲h̲ifāʾ* from the *Kitāb al-Adwār*, the earlier of the two treatises by Ṣafī al-Dīn al-Urmawī, its first and most influential theorist. The intervening period is one from which there are very few works of theoretical interest, the only one of real note being the *al-Kāfī fī 'l-mūsīḳī* by Ibn Zaylā (d. 440/1048 [*q.v.*]), a pupil of Ibn Sīnā, and it may well be that the apparent decline in theoretical writing, particularly of the more scientifically and mathematically oriented kind, is to be causally linked with the eclipse of philosophy as a major intellectual concern. It is true that many works of these, as of earlier centuries, have failed to survive, but unlikely that there were any subsequent to the lost treatise of Ibn Bād̲j̲d̲j̲a (d. 533/1139 [*q.v.*]) that might have rivalled those of al-Fārābī and Ibn Sīnā. At the same time, it should be emphasised that the Aristotelian tradition they represent was not the only one to produce significant writings about music, and the Neo-Platonic tradition that they rejected was to prove, with its emphasis on numerology and cosmological affiliations, extremely durable, reaching its first important expression, after the initial exploratory forays of al-Kindī, in the *risāla* on music of the Ik̲h̲wān al-Ṣafāʾ (4th/10th century [*q.v.*]). This relates the rhythms and the strings of the *ʿūd* to a more elaborate series of associations, headed by the seasons, which includes also colours and perfumes, integrating such material under the general notion of a cosmic harmony governed by ideal numerical relationships which yield the music of the spheres. Related concepts of equilibrium inform discussion of the moral and medical effects of music. But practice is not wholly ignored: definitions, however opaque, are given for the rhythmic cycles, and details on proportions and construction are given for the lute. On the more strictly scientific side the *risāla* is noteworthy above all for a clear expression of the theory of the spherical propagation of sound. Nevertheless, the *risāla* is perhaps less remarkable for its handling of any one issue that for the way in which all contribute towards a broad educational and ethical design: it is not without significance that the *risāla* concludes with aphorisms on music culled from the philosophers and anecdotes about religious ecstasy.

A further work from the same period that deserves mention is the *Kamāl Adab al-g̲h̲ināʾ* of al-Ḥasan al-Kātib (late 4th/10th or early 5th/11th century). This presents a unique combination of materials derived from earlier theorists (it preserves, interestingly, fragments from a lost work by al-Sarak̲h̲sī (d. 286/899), a pupil of al-Kindī) combined with extensive discussions of areas of interest to practising musicians. The former are less interesting than the latter,

which include examination of such issues as aesthetics, etiquette and deportment in performance, and investigation of an unexpectedly rich vocabulary of technical terms relating to instrumental performance and, in particular, voice production and quality. A similar range of topics is also dealt with in a slightly later work of the same genre, the *Ḥāwī al-funūn* of Ibn al-Ṭaḥḥān (5th/11th century).

The Systematists. Such a prolongation of the concerns of the *Kitāb al-Aghānī* will recur only fitfully in later writings. The most influential of all later treatises, the *Kitāb al-Adwār* of Ṣafī al-Dīn al-Urmawī (d. 693/1294), which ushered in the Systematist school in the first half of the 7th/13th century and was to be commented on, copied many times, and translated, reverts to the theoretical high ground previously covered by al-Fārābī and Ibn Sīnā. A compressed but precise work, it proceeds by alternating innovatory and traditional material, making its principal contributions in the fields of scale; the use of a consonance grading to generate the tetrachord types found in practice; modal analysis; the description of the rhythmic cycles in current use; and notation. The scale system, derived from that of al-Fārābī's *ṭunbūr khurāsānī*, has the cardinal virtues of coherence and symmetry; the octave is divided into two tetrachords plus whole tone, each tetrachord into two whole tones plus limma, and each whole tone into two limmas plus comma (the comma being the difference between limma and apotome). For purposes of presentation and analysis the neutral seconds and thirds of practice were thus adjusted upwards to (minor) whole tone and (virtually just intonation) major third respectively, but these and other distortions were insufficient to prevent the enthusiastic adoption of this system by all the major theorists of the next two centuries, most of whom explicitly recognise their indebtedness to Ṣafī al-Dīn. They also take over his modal analysis, which over-emphasises the octave as a structural framework, and probably disguises one important tetrachord type, but otherwise allows fairly realistic representations of scale structure.

Where the speculative theorist takes over is in the systematic utilisation of all 17 degrees of the octave for transposition games, and in the importation of essentially redundant material from al-Fārābī, on tetrachord species and melodic movement, into his second and more extensive (but less original) treatise, the *Risāla al-sharafiyya.* A more significant contribution is his analysis of rhythm, again characterised by clarity of presentation and general economy of means. After an initial exposition of technique, using a straightforward equivalent of the prosodic foot to indicate combinations of time units (a short syllable representing one time unit, a long two), attention is concentrated on representing the basic set of common rhythmic cycles, the appropriate syllable sequence being qualified by a verbal statement of the number and position of those time units marked by a percussion. Thus *thaḳīl awwal*, for example, is given as *tanan tanan tananan tan tananan*, i.e., 16 time units, with the first time unit of each foot marked by a percussion, giving an internal 3 + 3 + 4 + 2 + 4 pattern. This information is then represented in the form of a circle, the syllabic outline, coupled with symbols for the presence or absence of percussions, being inscribed around the perimeter. (Such circles, which give the *K. al-Adwār* its name, are also used to indicate the number of consonant relationships in some of the modes, shown as lines across the circle joining the notes in question inscribed around the perimeter.) The only drawback to Ṣafī al-Dīn's description of the rhythmic cycles is the insufficient detail it gives about variability: the extent to which percussions could be added (or suppressed), and the extent to which contrasts of timbre were an integral aspect of structure. But to voice this as a criticism might imply that the business of theory is to describe practice, and the relationship between the two is often by no means straightforward. Thus the fact that Ṣafī al-Dīn is the first theorist to supply examples of notation in some way relatable to music that was performed (Ibn Sīnā had promised to supply an example, but apparently failed to deliver) should not make us think that his purpose was to provide an accurate record of part of the repertoire: in a purely aurally transmitted tradition this would serve no useful purpose. Rather, his aim is as much to demonstrate a technique of notation as it is to manifest the melodic structure of particular forms. One of the instrumental examples may have been, quite deliberately, an archaic and technically elementary exercise having a solely pedagogic function; and it is significant that in his second and otherwise fuller treatise the total number of examples is reduced, as it also is in later works that draw from Ṣafī al-Dīn.

The one theorist who does, exceptionally, include a fully notated piece —a song by Ṣafī al-Dīn— is his first great successor, Ḳuṭb al-Dīn Shīrāzī (634/1236-710/1311 [*q.v.*]). His technical innovation consists of expanding Ṣafī al-Dīn's alphabetic and numerical representation of pitch and duration into a grid, the divisions along the horizontal axis representing time units, while the various superimposed layers provide for pitch, the text, a percussion part, indications of expression and dynamics, and specifications of changes of mode respectively (see Radjabov, *Maḳomlar*, 79-83). This unique example concludes a large-scale chapter in an encyclopaedia, the *Durrat al-tādj*, probably written a few years after Ṣafī al-Dīn's death, which breaks no new theoretical ground, but provides considerably more material on modal and rhythmic structures, showing in particular that the modal system allowed for a large number of looser concatenations of basic elements in addition to the fixed combinations making up the great majority of the modes recorded by Ṣafī al-Dīn. Most of the ensuing theoretical works of the 8th/14th and 9th/15th centuries are also to a greater or less extent derivative of Ṣafī al-Dīn, either directly, or through the intermediary of the treatises of his most influential successor, ʿAbd al-Ḳādir al-Marāghī (d. 839/1435) who, like Ḳuṭb al-Dīn, wrote in Persian. Of the various commentaries on the *Kitāb al-Adwār*, by far the most significant is the so-called *Sharḥ Mawlānā Mubārak Shāh bar adwār* (777/1375), a work that in its intellectual rigour and willingness to scrutinise and question basic concepts can be ranked alongside those of al-Fārābī and Ibn Sīnā. Equally important are the works of ʿAbd al-Ḳādir, but less for their purely theoretical contributions than for the ways in which they reflect developments in musical practice. By reputation the greatest composer-performer of his day, ʿAbd al-Ḳādir sheds light on the major changes that had affected the systems of modes and rhythmic cycles (having himself made a significant contribution to the development of the latter by the invention of several new cycles including one, *ḍarb al-fatḥ*, that has survived, albeit much altered, into the modern period). But he also discusses areas that had received scant attention from earlier writers, notably form and instruments. In his major treatise, the *Djāmiʿ al-alḥān*, the catalogue of forms gives a succinct description of the major structural features of each, noting any

associations with particular rhythmic cycles and, more characteristically, with verse in a particular language or form. It is also juxtaposed with an extended analysis, including skeletal notation, of one piece, in which the various sections are clearly segmented and aspects of verse setting are illustrated, to the extent of exemplifying the possible interjection of passages of nonsense syllables between (and sometimes within) verse sections. His account of musical instruments enlarges on the coverage of the 8th/14th century *Kanz al-tuḥaf*, not in descriptive detail, lacking, for example, the outline drawings found in the earlier work, but in the number of examples considered. It presents information, arranged according to a broad string/wind/ (pitched) percussion classification, on some 40 instruments drawn from various cultures (including Indian and Chinese) that were presumably to be encountered, even if only as curiosities, in Tīmūrid Central Asia. Little detail is given on structure, unfortunately, attention being concentrated on, say, the number of strings and their tuning.

The scientifically and mathematically dominated heritage of al-Fārābī and Ṣafī al-Dīn finds its last significant expression in the works of four mid- to late-9th/15th-century authors: the *Madjalla fi 'l-mūsīḳī* of Fatḥ Allāh al-Shirwānī (d. *ca.* 857/1453); the *Risāla al-fatḥiyya* and the *Zayn al-alḥān* of al-Lādhiḳī (of which a Turkish version also exists); the *Risāla dar mūsīḳī* (888/1483) of ʿAlī b. Muḥammad Bannāʾī; and the *Muḳaddima-yi uṣūl* of ʿAlīshāh b. Būka Awbahī. The *Madjalla* exists in two versions, the second relying heavily on ʿAbd al-Ḳādir, who is quoted extensively, but despite its indebtedness to previous theorists it does concern itself critically with definitions and the mathematical analysis of scale. The main value of al-Lādhiḳī's treatises is to be located in the material they contain on musical practice: the explicit contrast they draw between the usage of ancients and moderns as far as modal and rhythmic structures are concerned allows certain developments to be traced quite clearly.

Later literature. Of the many other surviving Arabic and Persian treatises of the 8th/14th to 12th/18th centuries few have been studied in any detail, and hardly any published. With the decline of Systematist theory the dominant tradition becomes yet again the cosmological, virtually always articulated with reference to the two canonic sets of melodic modes, the 12 *shudūd* and the 6 *āwāzāt* first recorded by Ṣafī al-Dīn. These are, inevitably, organised first in relation to the signs of the Zodiac, and then to an open-ended series of phenomena normally beginning with those that had already been referred to by al-Kindī and the Ikhwān al-Ṣafāʾ, such as the elements and humours, and going on to encompass times of day, say, months, colour, sex, minerals and countries, as in, for example, the *Kitāb al-Luʾluʾ al-manẓūm* of Ibn Ṭūlūn. In Arabic, the form of expression is frequently the *urdjūza*, another reason for neglect, since in verse any descriptive content becomes allusive, elliptical and difficult to interpret without reference to other, more explicit, works which can render the consultation of such texts superfluous. Further, many works of the period are anonymous and hard to date with any precision, thus reducing their value as historical sources. But there are, inevitably, exceptions, and some would repay further study, including the 8th/14th century *Ghāyat al-maṭlūb* of Ibn Kurr, which initiates a tradition of modal description not through notational symbols relating to a pre-described fretting, but by specifying finger positions in relation to a fretting which the reader is assumed to know. This tradition is continued in a number of later anonymous works (the relationship between some of these has been studied by Shiloah, *Sources*, 394-8), among which may be mentioned the *Shadjara dhāt al-akmām*. Although this still contains faint echoes of Greek theory in its definitions, it proceeds to discuss scale in wholly non-mathematical terms, distinguishing merely a set of principal notes, termed *muṭlaḳ* (those of the *rāst* scale), from others intermediate between them (termed *muḳayyad*). The discrimination is presumably one made by practising musicians. The modes are then articulated in terms of these individually named notes, being defined in a way akin to that employed for contemporary usage by al-Lādhiḳī, and appearing in consequence as melodic matrices rather than, as generally with previous theorists, abstract scales. (A further, incidental, interest of this work is that it was the principal source for Villoteau's section on music in the *Description de l'Égypte*.) One other significant Arabic text of the period is the verse treatise of al-Ṣaydāwī, often copied and noteworthy for its attempt at a graphic representation of modal structure.

Apart from the major works of ʿAbd al-Ḳādir and ʿAlīshāh, the Persian texts of the period tend to be too derivative to be of great interest. The contributions of Āmulī and Djāmī, for example, largely repeat material from, respectively, Ḳuṭb al-Dīn and ʿAbd al-Ḳādir, and the latter's works are also relied upon quite heavily in the treatises of his son and grandson, composed, tactfully, after his death. Turkish writings are fewer in number, but by no means without significance. They include translations of key texts by Ṣafī al-Dīn and al-Lādhiḳī and, beginning with the mid-9th/15th-century treatise of Khiḍir b. ʿAbd Allāh, works that differ somewhat in style and analytical approach from their Arabic and Persian equivalents. Among the more substantial of these is the *Maṭlaʿ fī bayān al-adwār* (910/1504), which contains a mixture of cosmological and descriptive materials presented in alternating verse and prose. But for factual content the most important work in Turkish, recording in sober prose an expository account, purged of virtually all cosmological accretions, of the main structural features of what is now a specifically Ottoman musical idiom, is the treatise by Cantemir (d. 1727), who also left a comprehensive record, in notation, of the instrumental repertoire of the day. His approach to scale is akin to that of the *Shadjara dhāt al-akmām*, but he provides a much fuller account of the modal system incorporating a parallel distinction between primary (*maḳām*) and secondary (*terkīb*) modes. He adopts, further, the circular presentation of Ṣafī al-Dīn for the rhythmic cycles, but indicates also contrasts of timbre through the use of the now standard *düm tek* mnemonics, giving therefore definitions of a type still current today. He also provides a full account of the vocal and instrument forms in vogue, including a description of the *faṣīl*, the suite-like sequence in which they were normally performed. Aspects of musical practice at the end of the 12th/18th century are recorded in the *Tedḳīḳ we taḥḳīḳ* of ʿAbd al-Bāḳī (d. 1821), noteworthy for its inclusion of examples of notation, while indebtedness to Cantemir's analysis is exhibited in a number of other treatises, the last of which is the *Edwār* of Hāshim Bey (1864) [see also MEHTER].

A number of Persian texts were written in Central Asia, others, particularly late works of the 11th/17th to early 13th/19th centuries, in India. The degree to which the former might reflect regional usages is not easy to determine, but they certainly fail to provide evidence to help date the emergence of the now dominant *shashmaḳom* tradition (see Jung, *Quellen*, 1989).

The latter, in contrast, betray their origin readily enough. Although comparative material is sometimes present (lists of *maḳām/rāg* equivalences, for example), there is little hint of cultural symbiosis, and it is clear that the majority of this group (the corpus as a whole still awaits critical evaluation) reflect specifically Indian practices and concepts, being heavily influenced by (when not actually translations of) the Sanskrit literature on music [see HIND. viii. Music].

The modern period. Assuming the continuing existence of the neutral intervals first noted in association with Zalzal at the beginning of the 3rd/9th century, the descriptive accounts of Cantemir and the *Shadjara dhāt al-akmām* imply the existence of an approximate quartertone, and it is in relation to this (and a theoretical octave of twenty-four intervals derived from it) that modern Arab ideas of scale will develop, finding their first mathematically-based formulation in the early 19th-century work of Mushāḳa [*q.v.*]. Theorising in relation to Persian and Turkish music (the intonational norms of the latter being by the 19th century, if not before, markedly different) will follow other paths, but all three traditions have, in varying degrees (the Persian being the least affected), reverted to the mathematical expression of what may sometimes be seen as a veritable obsession with intonation. This development is to be understood largely in terms of a more general reaction to a dominant Western culture, encountered in its expansionist imperial phase. The reaction is expressed either as adoption/adaptation (as seen, for example, in the widespread utilisation by theorists of Western notation) or, more interestingly, self-justification, as in the evident desire to demonstrate —the posture is clearly defensive— the possession of intonational and modal subtleties absent from Western music.

A particularly clear example of this trend is shown in the large-scale chapter on Turkish music written for the Lavignac encyclopaedia by Rauf Yekta Bey, and it is in the Turkish tradition that this form of theorising has received its richest expression. Modern theory has been dominated by the Ezgi-Arel school which, carrying on from the work of Rauf Yekta Bey, has essentially gone back to Ṣafī al-Dīn's limma-limma-comma formulation of the whole tone, but has added to it further comma subdivisions, with the result that the comma has now been extrapolated as the basic unit of measurement, the whole tone, for example, being described as a nine-comma interval. The urge to be systematic results, as usual, in certain distortions in relation to practice, and an alternative theory has been elaborated by Karadeniz, less rigorously symmetrical but more realistic. Developments in Arab theory have, in general, been not so much concerned with intellectual models as with attempts to generalise from observation, that is, from actual measurements. Debate has been inconclusive, as witness the report of the 1932 Cairo Conference (see Shawḳī, *Ḳiyās al-sullam*). Similarly in Persia, although there intonation has been a less significant issue. What work has been done has again tended to be empirical, recognising diversity rather than trying to impose a priori norms, and theory has centred more around the codification of the *dastgāh* system and the consequent notation of the *radīf*, while in the Arab and Turkish traditions we see rather the reintroduction (another reversal to systematist methods) of modal analysis in terms of trichord, tetrachord and pentachord units [see MAḲĀM].

Theorists most concerned with intonation have normally devoted some attention to the physics of sound, but the matter is now wholly derivative. With regard to rhythmic analysis, another major area of enquiry for earlier writers, there is again little that is new, the most important contributions being the extensive catalogues of the repertoire of existing cycles to be found in Arabic and Turkish sources. In short, the general trend, both here and in the analysis of mode, has been towards codification and systematisation, original thinking being largely eschewed in favour of the production of implicitly or explicitly prescriptive compendia with regulatory and didactic aims that find their natural outlet as conservatoire teaching manuals.

But the danger of ossification should not be exaggerated. Many scholars have now had a Western training, and are writing more within the general discipline of ethnomusicology (and are increasingly doing so in Western languages). Despite the dangers this may present of creating on the one hand a further cultural gap and, on the other, a possibly unhealthy uniformity, conformity even, the development is not unwelcome. For all its great achievements, the indigenous theoretical tradition has tended to concern itself with an increasingly narrow range of issues, thereby neglecting large areas of the phenomenon of music conceived of as social interaction. Such new approaches, provided they become readily accessible, could act as a valuable intellectual stimulus within the culture at the same time as they help to make available fresh insights to those outside it.

MUSLIM (A.), the active participle of the IVth form of the root *s-l-m*, designates the person who professes Islam [*q.v.*], *islāmī* being exclusively used today for what is relative to Islam and having, as a corresponding term, the forms in western languages *islamic, islamique, islamisch*, etc. However, in the 4th/10th century the theologian al-Ashʿarī [*q.v.*] called his heresiographical work *Maķālāt al-Islāmiyyīn* in order not to prejudice the question which of the various sects could or could not be called *muslim*.

Whilst forms like *mohammedan, mahométan, maomettano*, etc., whose use is justly deprecated by Muslims, have tended to disappear, *muslim* has been adopted, as a noun or adjective or both together, in an unchanged form or in the variants *moslim, moslem*, above all in English, in which *musulman* has fallen out of use. The origin of *musulman* is probably *muslim*, with the suffix *-ān* of the adjective in Persian. In some countries, such as Germany and the Netherlands, popular etymology has mixed up the element *-man* with the local term *man/mann*, whence the plural forms *Muselmänner, muzelmannen*, etc.; these forms have however fallen into disuse.

(A.J. Wensinck*)

MUSLIM b. ʿAĶĪL b. ABĪ ṬĀLIB, a leading supporter of al-Ḥusayn b. ʿAlī [*q.v.*] (d. 60/680).

There are unusually large discrepancies in the sources as regards his date of birth: the difference between the extreme figures is more than 30 years. According to one report, he fought in Ṣafar 37/July 657 in the right wing (*maymana*) of ʿAlī's army at the battle of Ṣiffīn, together with his cousins al-Ḥasan, al-Ḥusayn and ʿAbd Allāh b. Djaʿfar (Ibn Aʿtham al-Kūfī, *K. al-Futūḥ*, Ḥaydarābād 1388-95/1968-75, iii, 32; Ibn Shahrāshūb, *Manāķib*, ii, 352). This report may have been disseminated to show that ʿAlī enjoyed

the support of all branches of his family, including in particular that of his brother ʿAķīl [*q.v.*], with whom he was on strained terms. The report implies that Muslim was born no later than the early 20s/640s. An even earlier date is suggested by an account that during ʿUmar's reign Muslim took part in the conquest of al-Bahnasā [*q.v.*] (Ps.-Wāķidī, *Futūḥ al-Shām*, Cairo 1354, ii, 136, 146, 153, 159, 160, 169, 181, 184, 185, 190), in the course of which two of his brothers, Djaʿfar and ʿAlī, were killed (*ibid.*, ii, 177). He is said to have been appointed as the first Muslim governor of the town, and to have retained this position until ʿUthmān's caliphate, when he returned to Medina, leaving his brothers and sons behind (*ibid.*, ii, 193). Other accounts, in contrast, point to a date of birth in the late 30s/650s: according to these accounts, Muslim's mother, an *umm walad* of Nabataean origin (cf. Muḥammad b. Ḥabīb, *al-Munammaķ*, 505) whose name is variously given as ʿUlayya, Khalīla and Ḥilya, was bought by ʿAķīl in Syria, with the help of Muʿāwiya. This purchase probably took place after ʿAlī's assumption of the caliphate (in Dhu 'l-Ḥidjdja 35/June 656), which is the time usually given as the beginning of ʿAķīl's friendship with the Umayyad ruler. Further corroboration of this date appears in the story of an encounter between Muslim and Muʿāwiya (d. 60/680) which is said to have taken place when Muslim was 18 years old, some time after ʿAķīl's death (in 50/670). In this encounter, Muslim told Muʿāwiya that he owned a plot of land in Medina worth 100,000 *dirhams*, and persuaded Muʿāwiya to buy it from him at this price. When the caliph later heard that the land in fact belonged to al-Ḥusayn he had it returned, while letting Muslim keep the money; al-Ḥusayn praised him for this act of generosity (Ibn Abi 'l-Ḥadīd, *Sharḥ Nahdj al-balāgha*, ed. Muḥammad Abu 'l-Faḍl Ibrāhīm, Cairo 1378-83/1959-64, xi, 251-2).

Muslim came into prominence when he was sent to Kūfa as al-Ḥusayn's personal representative. His task was to measure the extent of Kūfan support for the Prophet's grandson. He set off from Mecca on 15 Ramaḍān 60/19 June 680 in the company of a number of Kūfans who had come to al-Ḥusayn with messages of support. His first destination was Medina, where he took leave of his family and hired the services of two Ķaysīs to guide him on his way. The guides lost their way in the desert and were too weakened by thirst to be able to proceed; they just managed to show Muslim the right direction before they both (or one of them) died. Muslim saw in this a bad omen, and wrote al-Ḥusayn from al-Maḍīķ asking to be relieved of his mission. Al-Ḥusayn sent back a curt note accusing Muslim of cowardice and ordering him to continue.

On 5 Shawwāl 60/9 July 680 Muslim reached Kūfa. According to most sources, he went first to the house of al-Mukhtār b. Abī ʿUbayd al-Thaķafī [*q.v.*], later known as Dār Sālim (or Salm or Muslim) b. al-Musayyab (cf. Muḥsin al-Amīn, *Aʿyān al-Shīʿa*, xxxiii, Beirut 1369/1950, 402). Other accounts (e.g. Muḥammad al-Bāķir, as reported in al-Ṭabarī, ii, 228) maintain that Muslim proceeded first to the house of Muslim b. ʿAwsadja al-Asadī. In his place of hiding he received the oath of allegiance on behalf of al-Ḥusayn; the number of men who gave the oath is put at between 12,000 and over 30,000. Muslim, encouraged by this response, sent a letter to al-Ḥusayn urging him to come. The governor of Kūfa, al-Nuʿmān b. Bashīr [*q.v.*], was told of Muslim's arrival but refused to attack him. Some supporters (or spies) of Yazīd, regarding this as a dangerous sign of weakness, wrote to the caliph urging him to send a strong man to deal with the situation. Yazīd thereupon had al-Nuʿmān replaced by ʿUbayd Allāh b. Ziyād [*q.v.*], then already governor of Baṣra, and ordered him to have Muslim killed or banished.

When Muslim heard of ʿUbayd Allāh's arrival, he left the house in which he was staying and, under cover of darkness, went to the home of Hāniʾ b. ʿUrwa al-Murādī [*q.v.*]. Hāniʾ, aware that Muslim was a wanted man, was at first reluctant to admit him yet subsequently treated him with all due hospitality. During his stay there, Muslim missed an opportunity to kill ʿUbayd Allāh. According to one version, Hāniʾ was behind the plot; he feigned sickness, knowing that ʿUbayd Allāh would come to visit him, thus providing Muslim with a chance to strike. But at the crucial moment Muslim's nerves failed him, and ʿUbayd Allāh left unscathed (Ibn ʿAbd Rabbihi, *ʿIķd*, iv, 378; al-Bayhaķī, *Maḥāsin*, 60). A second version, more complimentary to Muslim, attributes the plot to Sharīk b. al-Aʿwar al-Ḥārithī, an ardent supporter of ʿAlī who none the less enjoyed ʿUbayd Allāh's confidence and had arrived with him from Baṣra. Sharīk, who had been taken ill, also stayed at Hāniʾ's home, and his plan similarly called for Muslim to kill ʿUbayd Allāh when the governor came to pay him a sick call. ʿUbayd Allāh came, but Muslim remained in the closet in which he was hiding. The reasons given by Muslim for his inaction are said to have been opposition by Hāniʾ (or by one of his wives), as well as a Prophetic tradition forbidding the slaying without prior warning of someone who has been given an assurance of safety (cf. Lane, *Lexicon*, s.v. *f-t-k*). Sharīk, who had hoped to deliver Baṣra to Muslim, died of his illness three days later.

Meanwhile, ʿUbayd Allāh was making strenuous efforts to discover Muslim's hideout. He dispatched a *mawlā* of his (called Maʿķil in some sources) with orders to ingratiate himself with al-Ḥusayn's followers by swearing allegiance to al-Ḥusayn and by donating 3,000 *dirhams* for the cause. The *mawlā* succeeded in infiltrating the inner circle of followers, finally gaining access to Muslim himself. When he found out where Muslim was staying, ʿUbayd Allāh summoned Hāniʾ, forced him to admit that he was harbouring Muslim, and beat him on the face with an iron-tipped cane. One version has it that Hāniʾ died on the spot from these blows. According to more widespread reports, he was badly wounded and then incarcerated in ʿUbayd Allāh's fortress; Hāniʾ's clansmen thought that he had been killed, and the *ķāḍī* Shurayḥ was sent to allay their fears.

When news of Hāniʾ's arrest reached Muslim, he decided to tarry no longer and to revolt openly. The uprising is dated to 2, 7, 8 or 9 Dhu 'l-Ḥidjdja 60/3, 8, 9 or 10 Sept. 680. Muslim is said to have initially disposed of 4,000 men (other numbers are also given); he arranged them in military formation and, placing himself at their head, marched on the governor's fortress, where ʿUbayd Allāh had locked himself with a small band of sympathisers. Although ʿUbayd Allāh's situation seemed desperate, he managed, by a combination of threats and blandishments, to induce many tribal leaders to abandon Muslim. By nightfall Muslim was left with only 30 men, and these too soon disappeared. He wandered despondently in the alleys of Kūfa, until he finally found refuge with a woman from Kinda called Ṭawʿa, whose son Bilāl was a *mawlā* of Muḥammad b. al-Ashʿath [*q.v.*]. When Bilāl discovered the identity of his mother's guest, he waited until morning and then notified Ibn al-

As͟hʿat͟h, who in turn informed ʿUbayd Allāh. Another version has it that the person whom Bilāl informed (and who passed on the information) was Ibn al-As͟hʿat͟h's son ʿAbd al-Raḥmān. (This is one of several deeds for which ʿAbd al-Raḥmān earned the title of "the most perfidious of the Arabs"; see Ibn Ḥabīb, *al-Muḥabbar*, 244-6.)

ʿUbayd Allāh sent Ibn al-As͟hʿat͟h (or his son ʿAbd al-Raḥmān) at the head of 60 (or 70) men to Ṭawʿa's house. Muslim, realising that he was surrounded, came out with his sword in hand and, true to his reputation as a fierce warrior, chased off his attackers, inflicting serious losses on them. (One fanciful report has him kill 41 of them; cf. Ibn S͟hahrās͟hūb, *Manāḳib*, iii, 244.) His attackers responded by pelting him from the roof-top of Ṭawʿa's house with stones and burning missiles. At this point Ibn al-As͟hʿat͟h gave him a guarantee of safety (*amān*) and Muslim, wounded and exhausted, gave himself up. Another version has it that Muslim did not trust Ibn al-As͟hʿat͟h's *amān* and continued fighting until he was finally overcome. According to some accounts, Ibn al-As͟hʿat͟h was sincere in his offer but was overruled by ʿUbayd Allāh. Other reports maintain that Ibn al-As͟hʿat͟h acted in concert with the governor, and never meant to honour his pledge.

Muslim was brought before ʿUbayd Allāh, and the two had a heated exchange. Muslim then received permission to give his final instructions (*waṣiyya*). In most accounts he is said to have chosen for this purpose ʿUmar b. Saʿd b. Abī Waḳḳāṣ as the only member of his tribe (Ḳurays͟h) present. Muslim asked him to send a messenger to al-Ḥusayn to inform him of the treachery of the Kūfans and to urge him not to come; he also asked him to pay a debt of his and take his corpse for burial to prevent its being mutilated. In other reports, Muslim is depicted as receiving a promise from Ibn al-As͟hʿat͟h (rather than ʿUmar) to inform al-Ḥusayn. ʿUbayd Allāh entrusted Muslim's execution to Bakr b. Ḥumrān al-Aḥmarī, whom Muslim had wounded before being taken prisoner. Bakr led Muslim to the top of the fortress, decapitated him in sight of the populace, and threw down first the head and then the rest of the body. Hāniʾ was also executed, and the two bodies were dragged through the market-streets of Kūfa. Muslim is said to have been posthumously crucified, and his head was sent to Yazīd in Damascus and hoisted on a pole; he was the first Hās͟himite to be treated in this fashion (cf. al-Masʿūdī, *Murūd͟j*, § 1899). An elegy on the fate of Muslim and Hāniʾ which is cited in the sources is variously attributed to al-Farazdaḳ, to ʿAbd Allāh b. al-Zabīr al-Asadī and to Sulaymān (or Sulaym) b. Salām al-Ḥanafī.

Muslim's death, which followed his uprising by one day, is said to have coincided with al-Ḥusayn's departure for ʿIrāḳ. Al-Ḥusayn was at Zubāla (or T͟haʿlabiyya, or Zarūd, or S͟harāf) when he received news of the tragedy. According to some Sunnī authors, he thereupon decided to abandon his original plan, and either to return to Mecca, or to go to Yazīd and swear allegiance to him, or to join the Muslim armies at the frontier (*t͟hag͟hr*) (Ibn Taymiyya, *Minhād͟j al-sunna al-nabawiyya*, Cairo 1322, ii, 248); he continued the journey only after Muslim's brothers insisted on going forth into battle to avenge Muslim's death or to share his fate. In contrast, many S͟hīʿī authors (though not all; cf. al-S͟harīf al-Murtaḍā, *Tanzīh al-anbiyāʾ*, Nad͟jaf 1379/1960, 222-3) argue that al-Ḥusayn needed no prodding as he was determined to reach ʿIrāḳ. These authors maintain further that al-Ḥusayn gave his entourage the option of withdrawing, and that members of Muslim's family were among those who chose to stay with him to the end. The lists of those killed at Karbalāʾ do indeed include Muslim's brothers ʿAbd Allāh, ʿAbd al-Raḥmān and D͟jaʿfar; some say that in all five brothers died on the battlefield (Ibn Maʿṣūm al-S͟hīrāzī, *al-Darad͟jāt al-rafīʿa*, Nad͟jaf 1382/1962, 165). ʿAbd Allāh, a son of Muslim from his marriage to ʿAlī's daughter Ruḳayya, was also reportedly killed in the battle; some sources refer to two sons who perished there (e.g. al-Ṣafadī, *al-Wāfī*, xii, ed. Ramaḍān ʿAbd al-Tawwāb, Wiesbaden 1399/1979, 426). Two other sons (sometimes identified as Muḥammad and Ibrāhīm) are said to have escaped from ʿUbayd Allāh's camp a year after Karbalāʾ only to be brutally murdered by a Kūfan who expected to be rewarded by ʿUbayd Allāh (but who was beheaded instead) (Ibn Bābawayh, *Amālī*, Nad͟jaf 1389/1970, 73-9). Their story, like that of their father, is re-enacted in the annual *taʿziya* plays (Pelly, *The Miracle play*, i, 190-206). In some versions of these plays, the two sons are said to have been decapitated at the same time as their father (e.g. Metin And, *The Muḥarram observances in Anatolian Turkey*, in P.J. Chelkowski (ed.), *Taʿziyeh: ritual and drama in Iran*, New York 1979, 251); and the text accompanying several pictorial renderings of this event identifies their executioner as al-Ḥārit͟h b. Badr (R. Milstein, *Miniature painting*, 101, 102, 104).

Although Muslim did not die at Karbalāʾ, he is counted among its martyrs (cf. al-Ṭabarī, ii, 387), and is even referred to as the first *s͟hahīd* (al-Mad͟jlisī, *Biḥār al-anwār*, c, 428). The S͟hīʿīs recommend visiting his grave in Kūfa, and the text is preserved of a number of prayers to be recited there (*ibid.*, 426-9).

(E. Kohlberg)

MUSLIM B. AL-**ḤADJDJĀDJ**, one of Islam's outstanding early collectors of Prophetic traditions.

Abu 'l-Ḥusayn Muslim b. al-Ḥadjdjādj b. Muslim al-Ḳushayrī al-Naysābūrī was born in Naysābūr (Nīshāpūr) in 202/817, but according to another report in 206/821, the latter date tallying better with his alleged age at death in 261/875 given as fifty-five (lunar) years. (Cf. Ibn Khallikān, *Wafayāt*, ed. I. ʿAbbās, v, 195, who weighs both dates against each other.) From an early age on, he is reported to have travelled to ʿIrāḳ, the Ḥidjāz, Syria and Egypt in search of *ḥadīth*, on so-called *ṭalab al-ʿilm* journeys. He is alleged to have heard traditions with a number of masters, among whom the most influential are the following: Yaḥyā b. Yaḥyā al-Naysābūrī (d. 224-6/839-41), ʿAbd Allāh b. Maslama al-Ḳaʿnabī (d. 220-1/835-6), Ḳutayba b. Saʿīd (d. 240/854), all three major pupils of Mālik b. Anas [*q.v.*]; furthermore, ʿUbayd Allāh b. ʿAmr al-Ḳawārīrī (d. 235/849), Abū Kurayb Muḥammad b. al-ʿAlāʾ (d. 248/862), ʿUthmān b. Abī Shayba (d. 239/853), Muḥammad b. al-Muthannā (d. 252/866) and Muḥammad b. Rāfiʿ (d. 245/859). Those mentioned so far are not listed in *GAS*, i, but of the following masters, works have come down and are (partially) available in printed editions (cf. *GAS*, i): ʿAlī b. Ḥudjr (d. 244/858), ʿAbd b. Ḥumayd (d. 249/863), Abū Khaythama Zuhayr b. Ḥarb (d. 234/848). Abū Bakr b. Abī Shayba (d. 235/849), Aḥmad ibn Ḥanbal (d. 241/855 [*q.v.*]); Isḥāḳ b. Ibrāhīm ibn Rāhawayh (d. 237-8/851-2 [*q.v.*]); Muḥammad b. Bashshār Bundār (d. 252/866) and Saʿīd b. Manṣūr (d. 227/842). Another master is Ḥarmala b. Yaḥyā (d. 244/858), whose own works are lost but who is the main pupil of ʿAbd Allāh b. Wahb (d. 197/812) [*q.v.*]), the Egyptian tradition collector whose partially-preserved works are among the oldest extant; another important master of this Ḥarmala is al-Shāfiʿī (d. 204/820 [*q.v.*]). Finally, among Muslim's *shaykhs* there are Ismāʿīl b. Abī Uways (d. 226-7/841-2), a controversial transmitter who once admitted that he settled disputes among Medinan scholars by means of some fabricated traditions (cf. Ibn Ḥadjar, *Tahdhīb*, i, 312) and Muḥammad b. Ḥātim (d. 235-6/849-50), who was suspected of having proliferated forgeries.

Muslim is associated in the first place with his collection of Prophetic *ḥadīth*, *al-Djāmiʿ al-ṣaḥīḥ*, usually called *Ṣaḥīḥ* for short. According to the consensus of Sunnī Muslim tradition experts, it forms together with the *Ṣaḥīḥ* of al-Bukhārī [*q.v.*] the most reliable collection of Prophetic traditions of all times. This resulted for these two books, to which in the course of time four more were added making up the Six Books (*al-kutub al-sitta*), in a prestige commensurate with canonisation. There has been some controversy on whether Muslim's work should be given preference even to that of al-Bukhārī. In the Maghrib, Muslim's *Ṣaḥīḥ* seems at times to have been preferred to al-Bukhārī's. It is especially Ibn Ḥazm [*q.v.*] who is mentioned in this context: he is alleged to have censured al-Bukhārī for having added numerous *taʿlīḳāt* (i.e. additional substantiating traditions with interrupted (*munkaṭiʿ*) *isnād* strands) to his traditions, a practice Muslim very rarely resorted to. (For a list of Muslim's fourteen *taʿlīḳāt*, see al-Nawawī's commentary, i, 16 f.; Yaḥyā b. Sharaf al-Nawawī (d. 676/1278 [*q.v.*]) is, with Ḳāḍī ʿIyāḍ b. Mūsā al-Yaḥṣubī (d. 544/1149 [*q.v.*]), Muslim's most important commentator.) Surveys of how the one collector compares with the other are given in e.g. al-Khaṭīb al-Baghdādī, *Taʾrīkh Baghdād*, xiii, 101-3, Ibn al-Ṣalāḥ, *Muḳaddima* [sc. *fī ʿulūm al-ḥadīth*], ed. ʿĀ. ʿAbd al-Raḥmān, 90 f., al-Nawawī's commentary, i, 14 ff., al-Suyūṭī, *Tadrīb al-rāwī*, ed. ʿA. ʿAbd al-Laṭīf, i, 88-95. In the long run it was al-Bukhārī's work which took pride of place and became Islam's holiest book of religious learning after the Ḳurʾān, albeit immediately followed by Muslim's collection. Muslim is alleged to have stated that he amassed 300,000 traditions out of which he made his selection for his *Ṣaḥīḥ*. The total number of traditions which he incorporated in it is 4,000 according to mediaeval scholars, not counting repetitions. However, according to the modern editor of the *Ṣaḥīḥ*, Muḥammad Fuʾād ʿAbd al-Bāḳī, who took stock of even more repetitions, the total number of individual, different traditions is a little over 3,000.

Muslim's *Ṣaḥīḥ* may be the second most prestigious tradition collection in Islam; for modern historians it is surely the most useful of the Six Books. It owes this usefulness to the special organisation of its chapters. Al-Bukhārī's *Ṣaḥīḥ*, also praised for its organisation, had been rated more highly in the beginning than Muslim's for the most part because of the former's more sophisticated *tardjamas*, the introductory

statements in his chapter headings, in comparison with which Muslim's chapter headings were felt to fall short (although they were later considerably improved upon by al-Nawawī). But whereas, at first glance, Muslim's and al-Bukhārī's chapter headings may show up a broad resemblance, the respective contents of the chapters do not. The chapters in al-Bukhārī's *Ṣaḥīḥ* are presumed to be organised strictly according to their juridical content, but closer scrutiny reveals this organisation to be somewhat loose, with, in the majority of chapters, several traditions added from vaguely related, and, frequently, even unrelated, juridical foci. All along it had been al-Bukhārī's design to contribute as many angles of approach to juridical or ritual-related issues as he could muster; this eventually resulted in dozens or more reiterations of one particular problem or issue, many of which with their own *isnād* strands, turning up in a wide variety of chapters, which have no discernible juridical base in common.

On the other hand, the mainstay of practically each chapter in Muslim's *Ṣaḥīḥ*, is one, sometimes more than one, *matn* cluster (for the definition of this expression, see below), which, once listed, is hardly ever reiterated in another chapter. So, while in al-Bukhārī's collection reiterations of one *matn* in its numerous different versions, most of which having their own individual *isnād* strands, are scattered all over his *Ṣaḥīḥ*, reconstruction of *matn* clusters solely from that collection, even with the help of the *Tuḥfat al-ashrāf* of al-Mizzī [*q.v.*], is laborious. In Muslim's collection, all reiterations of traditions, which are even more numerous than in al-Bukhārī's, are virtually always all crammed into one and the same chapter, allowing a quick overall view of how many times *in toto* that *matn*, sc. in its different versions plus accompanying *isnād* strands, occurs. All this is aptly summarised in a remark of ʿUmar b. Raslān al-Bulḳīnī (d. 805/1403): *ikhtaṣṣa Muslimun bi-djamʿi ṭuruḳi 'l-ḥadīthi fī makānin* (cf. Ibn al-Ṣalāḥ, *Muḳaddima*, 91, in margin; al-Suyūṭī, *Tadrīb al-rāwī*, i, 95).

The expression *matn* cluster has been newly coined to indicate that the contents (= *matn*) of a particular Islamic tradition, rather than as an individual entity, should in the majority of cases be viewed as one out of two to sometimes even ten or more facets of one basic idea, which may pertain to a particular legal or ethical concept, or which reflects the ongoing controversies regarding some point of Islamic ritual. In an obvious attempt to create some sort of schematisation of Muslim's seemingly untwinable, multi-strand *isnāds*, Ḳāḍī ʿIyāḍ introduced for the basic concepts which he had learned to distinguish in Muslim's collection the term *aṣl*, pl. *uṣūl*. (From a remark of Ibn Ḥadjar in his preface to his commentary on al-Bukhārī, *Hady al-sārī muḳaddimat Fatḥ al-bārī*, ed. Muḥibb al-Dīn al-Khaṭīb, Cairo n.d., 11 (15), the *uṣūl* are perhaps to be interpreted as *uṣūl al-aḥkām*, the "roots of legal judgements".) But, as that term suggests, each *aṣl* exists within a framework of less basic, less pertinent, but at least (partly) illustrative, additional material, for which he used two more terms, the *mutābiʿāt* and the *shawāhid*. (It seems that these terms were first introduced by the tradition scholar Abū Ḥātim Muḥammad b. Ḥibbān al-Bustī (d. 354/965 [*q.v.*]), cf. Ibn al-Ṣalāḥ, *Muḳaddima*, 182.) Although he does not say this in so many words, Ḳāḍī ʿIyāḍ must have detected that in Muslim's *Ṣaḥīḥ* the first *isnād*-cum-*matn* mentioned in a chapter always has the appearance of something basic, upon which the following *isnāds*-cum-*matns* form some sort of commentary. (The quest for these secondary *isnāds*-cum-*matns* is conveyed in Arabic with the verb *iʿtabara* = "to consider", "to ponder", cf. al-Suyūṭī, *Tadrīb al-rāwī*, i, 241 (18)-242(9); Ḳāḍī ʿIyāḍ's words are quoted in Nawawī, i, 23 f.)

With the said technical terms defined, the expression *matn* cluster as technical term comes in handy, especially in connection with Muslim's *Ṣaḥīḥ* in which these clusters are so much more easily distinguishable than in the collections of his peers: a *matn* cluster is in modern *ḥadīth* parlance the equivalent of Ḳāḍī ʿIyāḍ's *aṣl*-cum-*mutābiʿāt*-cum-*shawāhid* which he had learned to distinguish in Muslim's organisation of his *isnād* strands. But one consideration has to be borne in mind: close scrutiny of the *isnād* strands of the *uṣūl* yields the information that, contrary to what one might expect, they are more often than not of relatively late origin, whereas various accompanying *mutābiʿāt* strands usually show up much older common links. In short, because of Muslim's particular arrangement of his traditions, with *uṣūl* being illustrated by *mutābiʿāt*, both of which rubrics allowing with the help of al-Mizzī the quick identification of the respective common links, both then followed by *shawāhid*, which testify to the extent of *isnād* proliferation and sometimes even contain clues as to authorship, Muslim's *Ṣaḥīḥ*, in contrast to the other canonical collections, is indispensable for tradition analysis and dating.

One important, unique feature of Muslim's *Ṣaḥīḥ* is its introduction. For an annotated translation and appraisal, see *Bibl.* Its final section deals with a controversial point, the (un)acceptability of *muʿanʿan isnāds* [*q.v.*], in which Muslim is reported to have taken a somewhat more flexible stance than his fellow-traditionists.

Muslim is credited with a number of other works. Of those mentioned in *GAS*, i, 143, the *K. al-Kunā* and the *K. al-munfaridāt wa 'l-wuḥdān* are quoted from in Ibn Ḥadjar's *Tahdhīb*, cf. Juynboll, *Muslim tradition*, 239.

Bibliography: The best, and because of its multiple *ḥadīth* numberings the most useful, edition of the *Ṣaḥīḥ* is the one by Muḥammad Fuʾād ʿAbd al-Bāḳī, Cairo 1955-6, 5 vols, for which the editor eclectically excerpted Nawawī's *sharḥ*, otherwise available in the reliable Cairo 1349 edition in 18 parts; a complete English translation (however without the introduction) was published by A.H. Siddiqui in 4 vols, Lahore 1976; for the introduction, see G.H.A. Juynboll, *Muslim's introduction to his Ṣaḥīḥ, translated and annotated* etc., in *JSAI*, v (1984), 263-302; for the transmission of the *Ṣaḥīḥ* to following generations, see J. Robson, *The transmission of Muslim's Ṣaḥīḥ*, in *JRAS* (1949), 46-60; for the *isnād*-analytical technical terms mentioned in the article, cf. G.H.A. Juynboll, *Muslim tradition. Studies in chronology, provenance and authorship of early* ḥadīth, Cambridge 1983, index s.v.; idem, *Some* isnād-*analytical methods illustrated on the basis of several woman-demeaning sayings from* ḥadīth *literature*, in *al-Qanṭara*, x (1989), 343-84; idem, *Some notes on the earliest* fuqahāʾ *of Islam distilled from* ḥadīth *literature*, in *Arabica*, xxxix (1992); idem, *On the origins of the poetry in Muslim tradition literature*, forthcoming in the *Ewald Wagner Festschrift*; idem, *Analysing* isnāds *in* ḥadīth *and* akhbār *literature*, in L.I. Conrad (ed.), *History and historiography in early Islamic times: studies and perspectives*, Princeton 1992.

(G.H.A. JUYNBOLL)

MUSLIM B. ḲURAYSH, SHARAF AL-DAWLA ABŪ 'L-MAKĀRIM, of the Arab family of the ʿUḳaylids [*q.v.*] was the most important ruler of this

significant Bedouin Arab dynasty; during his reign the struggle between Fāṭimids and ʿAbbāsids for supremacy in Syria and al-Djazīra was decided in favour of the latter.

In the year 433/1042 the 20 year-old Muslim was chosen chief of the tribe after the death of his father Ḳuraysh b. Badrān and succeeded him as ruler of al-Mawṣil. Like most Arab rulers of the lands of the Euphrates, he recognised the Fāṭimid caliph in Cairo as his suzerain, partly because he was himself a Shīʿī. Quite early in his reign he began to cherish the ambitious plan of gradually extending the rule of his tribe over al-Djazīra. Every means of extending his power was taken by him. The first opportunity occurred when in 458/1066 the Saldjūḳ Sultan Alp Arslān [*q.v.*], after conquering the Khʷārazmians, was proceeding to establish his supremacy in Syria. For this he had to entice the Arab chiefs from the sphere of influence of the Fāṭimid caliph and win them over to an alliance with him and to a recognition of the ʿAbbāsid caliph. He therefore concluded an alliance with Muslim and granted him several towns in al-Djazīra. As a partner in this alliance, Muslim defeated the Banū Kilāb who were vassals of the Fāṭimids. In 463/1070 Alp Arslān died. The alliance was renewed with his son Malik Shāh [*q.v.*]. With his help, Muslim was able a few years later to extend his power into Syria and take Aleppo. In 472/1079 this town had no strong owner; the town was ruled by the Ḳāḍī al-Khutaʾītī, and the citadel by one of the last Mirdāsids [see ḤALAB and MIRDĀSIDS]. There was a lack of provisions, as the town was continually threatened by enemies and the roads to it were cut off.

Damascus was in possession of the Saldjūḳ *amīr* Tutush [*q.v.*], to whom his brother Malik Shāh had granted Syria, which was still to be conquered. It was natural for Tutush to wish to bring Aleppo also into his power, but the people did not care for him because of his cruelty and greed, shut their gates against him and appealed for help to Muslim. After Tutush had withdrawn, Muslim approached the town with large supplies of provisions and, after lengthy negotiations, both town and citadel were handed over to him [see ḤALAB] and the Mirdāsid chiefs received some smaller towns in compensation. He received a grant of confirmation from Malik Shāh, who did not want his brother to become too powerful, on paying a considerable annual tribute. Muslim extended his territory by adding to it al-Ruhā (Edessa), Ḥarrān and a number of smaller fortresses, out of which he drove the leaders of Turkish bands so that his power stretched from northern Syria to the Euphrates. Instead of being content with this, his unbounded ambition made him overestimate his strength. Like Tutush, he had dreams of conquering all Syria, especially Damascus. He could not obtain the town from Malik Shāh, who had granted central Syria to Tutush. He therefore again joined forces with the enemy of the Saldjūḳs, the Fāṭimid caliph, who promised to send troops to assist him to take Damascus. Muslim took advantage of the absence of Tutush, who was engaged in a campaign against the Byzantines in Antioch, to advance on Damascus. He occupied several towns in central Syria, including Baʿlabakk [*q.v.*]. But the Fāṭimid help did not materialise, and Tutush was called back by his vassals, who hated Muslim. These circumstances and a rising in Ḥarrān forced him to retire.

To replace Muslim, who had deserted him, Malik Shāh bestowed his favour on the sons of a former vizier of the ʿAbbāsids, Ibn Djahīr [see DJAHĪR, BANŪ], and sent him against a supporter of the Fāṭimids, the Marwānid Manṣūr, to deprive him of his chief possession Āmid. The latter found support from Muslim. They joined forces, were attacked at Āmid and withdrew into the fortified town leaving their other possessions undefended. Malik Shāh seized the opportunity to send ʿAmīd al-Dawla, another son of Djahīr, to al-Mawṣil in order to take this city from Muslim, who had in the meanwhile escaped from Āmid. When Muslim saw that he had lost his possessions, he made overtures to the Sultan through the son of the vizier Niẓām al-Mulk and humbly begged for mercy. The Sultan, who thought Muslim no longer dangerous, pardoned him and restored his lands to him; but Muslim could not be at peace. Perhaps in secret agreement with Malik Shāh, he turned in 477/1084 against a Saldjūḳ prince of Asia Minor, Sulaymān b. Ḳutlumush, who had taken Antioch from the Byzantines, and demanded from him the same tribute as the Byzantines had paid. When Sulaymān refused to pay, he advanced against him with a force of Arabs and Turkomans. In the neighbourhood of Antioch in Ṣafar 478/May 1085 the forces met, unexpectedly for Sharaf al-Dawla; his troops, who hated Muslim, went over to Sulaymān. Muslim was defeated and slain, along with 400 of his Arabs (cf. Ibn al-ʿAdīm, *Zubda*, fol. 68b). With his death, the power of the ʿUḳaylids was at an end. They lost Aleppo on Muslim's death and only survived a few years longer (till 489/1090) as governors of al-Mawṣil [*q.v.*].

Muslim is described as an able and just man, and his tolerance of Christians was remarkable for its time. His rule is said to have been able and orderly, and indeed, he did bring the finances of Aleppo into order in a very short time after taking it. In any case, he had wide vision and successfully endeavoured to maintain the power of the Arab tribes in Syria and al-Djazīra. It ceased with him; henceforth Turkish generals of the Saldjūḳs became the rulers of Syria and al-Djazīra.

(M. SOBERNHEIM)

MUSLIM B. ʿUḲBA of the Banū Murra [*q.v.*], famous commander of the Sufyānid caliphs. We know very little about the early stages of his career. We find him early established in Syria, to which he probably came with the first conquerors. Completely devoted to the Umayyads and of great personal valour, he led a division of Syrian infantry at the battle of Ṣiffīn [*q.v.*], but he failed in an attempt to take the oasis of Dūmat al-Djandal [*q.v.*] from ʿAlī. The caliph Muʿāwiya appointed him to take charge of the *kharādj*, the finances, of Palestine, a lucrative office in which he refused to enrich himself. Muslim was prominent at the death-bed of Muʿāwiya. The caliph had charged him and al-Ḍaḥḥāk b. Ḳays [*q.v.*] with the regency until the return of Yazīd, who was in Anatolia at the head of his troops. The confidence which the great Sufyānid had in his loyalty is seen in his advice to his heir: "If you ever have trouble with the Ḥidjāz, just send the one-eyed man of the tribe of Murra there" (Muslim had only one eye). This time had now come.

Muslim had been a member of the embassy sent to Medina to bring the Anṣār back to obedience. All other efforts at conciliation having failed, Yazīd I decided to resort to force. In spite of Muslim's age and infirmities, Yazīd felt he was the man to command the expedition. He was obliged to travel in a lit-

ter on account of his infirmity. At Wādī 'l-Kurā, Muslim met some Umayyads who had been driven out of Medina; these exiles informed him of the military situation of the town. When he reached the oasis of Medina, Muslim encamped on the *harra* [*q.v.*] of Wākim and for three days awaited the result of the negotiations begun with the rebels, Anṣār and descendants of the *muhādjirūn* of Kuraysh. On the fourth day, all overtures having been rejected, he made his plans for battle. It was a Wednesday, 26-7 Dhu 'l-Ḥidjdja 63/26-7 Aug. 683). After a slight initial advantage for the Anṣār, the battle ended at midday in the complete rout of the rebels. The Syrians followed them into Medina and began to plunder the city. Anti-Umayyad legend has much exaggerated the horrors and the duration of this pillaging which it extends to three days. On the day after the battle, Muslim's intervention restored order and he used the next few days in drawing up the case against and trying the principal leaders of the rebellion who had fallen into his power.

Having established order in the town, which he left in charge of Rawḥ b. Zinbāʿ [*q.v.*], in spite of the aggravation of his malady, he resumed his march on Mecca to deal with ʿAbd Allāh b. al-Zubayr [*q.v.*]. Arriving at Mushallal he became so ill that he had to stop. In obedience to the caliph Yazīd's instructions, he appointed to succeed him in command of the army Ḥusayn b. al-Numayr [*q.v.*], his second-in-command. He died at Mushallal, where his tomb long continued to be stoned by the passers-by (cf. *Ziyārāt*, 51). Writers with Shīʿī sympathies are fond of twisting the name Muslim into *Musrif* (spendthrift, one who acts irresponsibly: an allusion to Kurʾān, V, 36, VII, 79, XI, 29, 36, and *passim*). One statement which must be a ridiculous exaggeration puts his age at 90. Everything, however, points to his having been born before the Hidjra. He died a poor man. This disinterestedness is not the only feature in his character which makes us take him as one of the most representative of the types of this generation of soldiers and statesmen, whose talents contributed so much to establish the power of the Umayyads. Dozy described him as "un Bédouin mécréant". Muslim, it is true, retained all the proverbial uncouthness (*djafāʾ*) of the Banū Murra. But his whole career reveals the Murrī general as a convinced Muslim of a rectitude rare in this period of unsettlement, which saw so many extraordinary vicissitudes of fortune and wavering loyalties.

(H. LAMMENS)

MUSLIM B. **AL-WALĪD** AL-ANṢĀRĪ (called *Ṣarīʿ al-Ghawānī* "he who is laid low by the fair maidens", as was al-Kuṭāmī [*q.v.*] before him), an Arab poet of the early ʿAbbāsid period, born in Kūfa *ca.* 130-40/747-57, d. 208/823 in Djurdjān.

His father, a *mawlā* of the Anṣār, was a weaver. Nothing is known of the poet's education. He probably got his literary training not from particular teachers or from books but in the busy life of the ʿIrākī cities, the intellectual life of which had risen to a still higher level with the advent of the ʿAbbāsids. Like most of his contemporaries he earned his living as poet by writing panegyrics and was acquainted with many statesmen and *amīrs*. Among the former were the general Yazīd b. Mazyad al-Shaybānī (see *Dīwān*, 1, 6, 10, 16, 49), Dāwūd b. Yazīd al-Muhallabī (20), Manṣūr b. Yazīd al-Ḥimyarī (31) and many others. He gradually won the favour of the influential Barmakids [see AL-BARĀMIKA] (nos. 17, 40, 45) and of the caliph Hārūn al-Rashīd (nos. 14, 41, 57); according to one story, he received his nickname from the latter on account of a verse of his (no. 3, v. 35; see also no. 23, v. 39). He even mentions the caliph's sister ʿAbbāsa in an ode (no. 57, vv. 7 ff.). The fall of the Barmakids in 187/803, did not affect his career: he dedicated some of his odes to al-Amīn (7, 28, 30) but his principal patron in later times was al-Maʾmūn's vizier al-Faḍl b. Sahl [*q.v.*]. Through his intervention he received from al-Maʾmūn an official post (probably *ṣāḥib al-barīd*) in Djurdjān. He remained faithful to al-Faḍl b. Sahl until his death in 202/818, and out of grief for him he wrote no more. There is a story told by his *rāwī* according to which he destroyed a considerable part of his poems before his death.

As regards the matter and style of his poems, he was on quite traditional ground. In addition to his old-fashioned odes and elegies, his satires are particularly interesting in this respect; in his polemics with the (otherwise little known) poet al-Ḥakam al-Kanbar [*q.v.*] on the merits of the Anṣār and Kuraysh, he revived the coarse and bitter tone of the polemics of an al-Farazdak or an al-Ṭirimmāḥ [*q.vv.*] on a similar subject. The two hundred years of development of Arabic poetry were naturally not without influence on him; in his *nasīb*s we frequently find the style of an ʿUmar b. Abī Rabīʿa or al-ʿAbbās b. al-Aḥnaf [*q.v.*], Muslim's contemporaries. His drinking songs deserve special mention. Although Nöldeke only very rarely finds in them "the natural effusion of Bacchantic joy as so frequently in Abū Nuwās", Arab critics are of another opinion. These two poets are to them practically the same in this respect, and we must confess they are right. His drinking-songs are not only of great value for the descriptions of society and social life in the cities, but from the point of view of poetry they are among the best of Muslim's work. If we must, as regards subject matter, number Muslim among the imitators of the old poets, in style he belongs to a more modern period. The historians of Arabic literature frequently mention him as the first to introduce the "new style", *al-badīʿ*, with its tropes and figures. This is, however, not quite such a simple point; the "new style" arose only gradually in Arabic poetry, although Muslim with his contemporaries, Bashshār b. Burd [*q.v.*], Abū Nuwās [*q.v.*], etc., was one of the first who definitely struck out on the new path.

Muslim was on terms of friendship or enmity with many contemporary poets, e.g. Abū Nuwās, Abu 'l-ʿAtāhiya [*q.v.*], al-ʿAbbās b. al-Aḥnaf (who maliciously called him *Ṣarīʿ al-Ghīlān* or *Ṣarīʿ al-Kās*), Abu 'l-Shīṣ [*q.v.*], al-Ḥusayn b. al-Ḍaḥḥāk [*q.v.*], etc. His literary influence was not inconsiderable: Diʿbil [*q.v.*] was his pupil (which did not prevent him exchanging satires with Muslim); Abū Tammām was particularly fond of studying his poems. His *Dīwān* has been transmitted in very unsatisfactory fashion; it was collected in alphabetical order by al-Ṣūlī [*q.v.*], but this recension has not come down to us (there are few traces of it in the *Kitāb al-Aghānī*); another story speaks of the collection made by al-Mubarrad.

The manuscript long considered as unique, that of Leiden University Library (Or. 888), is very incomplete, since it contains only vols. ii and iii of the recension and commentary of the Andalusian scholar (d. Shawwāl 352/October-November 963) Abu 'l-ʿAbbās Walīd b. ʿĪsā al-Ṭabīkhī (and not al-Ṭandjī as the Maghribī script of the preserved copy might sug-

gest). The 75 surviving pieces of verse are not classified according to the alphabetical order of the rhymes. They are succinctly presented but more extensively commentated upon. On the apocryphal elements in them, see Barbier de Meynard, *Un poète arabe*, 17 ff. A further ms. of the *Dīwān*, plus a fragment, are now known, see Sezgin, *GAS*, ii, 529.

Bibliography: The Leiden ms. was the basis of the 1875 Leiden edn. of M.J. De Goeje, *Diwan poetae Abu-'l-Walíd Moslim ibno-'l-Walíd al-Ançárí* cognomine *Çarío-'l-ghawání*. This *dīwān* was reproduced lithographically, without the introd., notes and indices (which were in Latin), by Mīrzā ʿAlī Muḥ. al-Ḥusaynī, at Bombay in 1303/1885; in 1325/1907 there appeared at Cairo, with a reclassification according to the alphabetical order of rhymes, a reproduction of De Goeje's Arabic text, soon followed, again at Cairo, n.d., by a further pirated edition. Finally, one may consider as definitive the work of Sāmī Dahhān, who published at Cairo in 1376/1957 a *Sharḥ Dīwān Ṣarīʿ al-Ghawānī* of 69 + 524 pp. This remarkable work, based on the Leiden ms., includes a long introd. on the poet, his work and the history of the *Dīwān*, and then, after the 75 pieces, 205 fragments drawn from various sources, the texts of notices devoted to the poet by 45 mediaeval authors and seven indices (including one of rhymes, lacking in De Goeje's edn.). Amongst the classical sources brought together by Dahhān, the most extensive is that of the *K. al-Aghānī*, ed. Beirut, 313-53. There are very few modern studies. Apart from the histories of Arabic literature, see the review of the De Goeje edn. by Nöldeke, in *GGA* for 9 June 1875, 705-15; C. Barbier de Meynard, *Un poète arabe du IIe siècle de l'hégire*, in *Actes du XIe Congrès des Orientalistes*, Paris 1899, 1-21; A.F. Rifāʿī, *ʿAṣr al-Maʾmūn*, ii, Cairo 1927, 374-92; Sezgin, *GAS*, ii, 528-9.

MUSLIMŪN (A.), Muslims.

1. The old-established Muslim communities of Eastern Europe
2. Migrant Muslims in Western Europe
3. Migrant Muslims in the Americas [see DJĀLIYA]
4. The so-called "Black Muslims"

1. The old-established Muslim communities of Eastern Europe.

The Muslim communities of Europe as a whole may be divided into two distinct groups: on the one hand, the old communities, formed in the distant, or very distant past, through the vicissitudes of history, in a certain number of countries (Greece, Bulgaria, Rumania, Albania, Yugoslavia, Hungary, Poland and Finland); and on the other hand, the new communities, established much more recently, in the industrialised countries (France, Great Britain, Germany, Belgium, the Netherlands, Sweden, etc.), as a result of the uninterrupted flow of immigrants arriving from the most diverse of origins (North Africa, Black Africa, East Africa, Near and Middle East, the Indian subcontinent, Indonesia, South-East Asia, etc.). The brief survey which follows deals exclusively with the former group.

The long-established Muslim communities (those of South-Eastern Europe, Poland and Finland, all of them Sunnīs of the Ḥanafī rite) are composed of a relatively large number of ethnic groups, speaking a dozen different languages and living under conditions which vary according to the successive régimes of the countries to which they belong. This account relates to the current situation as its exists "on the ground", first in northern Europe, then in the Balkan peninsula and the adjacent countries.

A. *The Muslim communities of northern Europe.*

(1) Poland. The Muslim community of Poland was constituted by the arrival and settlement, in the Grand Duchy of Lithuania, of two groups of Tatars: one comprising natives of the Khānate of the Golden Horde and the Khānates situated on the Volga (arriving in the 14th and 15th centuries), and the others comprising emigrants from the Crimea [see ḲIRĪM] (arriving especially in the 17th and 18th centuries). Subsequently, these two groups were fused into a single entity, living in harmony with the diverse populations of the region, but conserving their religious and cultural identity. It is generally reckoned that, around 1930, these Muslims numbered approximately 10,000. Decimated and dispersed during the Second World War, this community was to lose a large proportion of its members following the changes to the eastern frontier of the country which favoured the USSR. Currently, no more than some 2,200 Tatars remain in Poland (notably in the villages of Bohoniki and Kruszyniany, also in Warsaw, Gdańsk and Białystok). On the history and recent situation of this community, see LEH; LIPḲA; A. Popovic, *La situation actuelle*, in *L'Islam en Europe a l'époque moderne*, Paris 1985, 99-104; G. Lederer and I. Takacs, *Chez les musulmans de Pologne*, in *La transmission du savoir dans le monde musulman périphérique* (C.N.R.S./E.H.E.S.S., Paris), *Lettre d'information*, no. 8, January 1988, 39-47, which contains the list of principal publications on the subject.

(2) Finland. The Muslim community of Finland consists of about a thousand "Turko-Tatars", the descendants of emigrants from the Idel Ural and Volga regions, who seem to be perfectly integrated in their new domicile. Some of them arrived in the country during the 19th century, and the majority after the Soviet revolution of 1917. These Muslims live dispersed among a dozen towns and villages, and almost all are engaged in trading in furs, fabrics and carpets. They would include a number of wealthy individuals. Relatively little is known of the current conditions of life of this tiny community, still less of its potential role in the international scene. It was officially recognised in 1925, and its headquarters are located in Helsinki, see Popovic, *op. cit.*, 105, where other references are to be found; and, in particular, a valuable article by the best contemporary expert on the subject, Harry Halen, *Islaminuskoisista Suomessa*, in *Eripainos*, no. 5 (Helsinki 1984), 341-53, containing a thorough bibliography.

B. *The Muslim communites of South-Eastern Europe.*

(1) Hungary. Two Muslim communities have existed successively in Hungary. Both have subsequently disappeared in peculiar circumstances. The history of the disappearance of the first Muslim community of the country is well-known. This had been formed between 1526 and 1699 as a result of the Ottoman conquest and occupation of some Hungarian territory, but it had disappeared totally in the aftermath of the reconquest at the end of the 17th century, with the flight of Muslim populations, and the massacre or summary conversion to Christianity of the populations who remained. Subsequently, especially from 1878 onward, the birth was witnessed of a new Muslim community in the country, and this for two reasons: on the one hand there was an influx of a number of Muslims from Bosnia-Herzegovina (a migration provoked by the military occupation of these two regions by Austria-Hungary in 1878, under the terms of the Congress of Berlin, and later by their annexation in 1908 by the Double Monarchy [see BOSNA]); on the other hand there was an influx (as a result of increasingly close ties with Turkey) of a

number of Ottoman Turkish citizens (artisans, merchants and students) who were soon to form, especially in Budapest, what amounted to a minor Turkish colony. Subsequently, both these groups were to be progressively weakened (particularly during the first half of the 20th century) as a result of the increasing and significant number of mixed marriages (there being a shortage of Muslim women in the country), ultimately becoming assimilated into the local population. Although a few "individual" Muslims are still to be found in Hungary, there no longer exists a Hungarian Muslim community in the sense in which it existed some fifty years ago, and this in spite of recent efforts on the part of various foreign Muslim sects such as the Aḥmadiyya, and also of the Bahāʾīs. See MADJAR, MADJARISTĀN; A. Popovic, *L'Islam balkanique*, Berlin-Wiesbaden 1986, 184-95; G. Lederer, *Sur l'Islam à Budapest*, in *La transmission du savoir... Lettre d'Information*, no. 6, November 1986, 23-37; idem, *ʿAbdu 'l-Baha's visit to Budapest*, in *Lettre d'Inf.*, no. 9, February 1989, 13-25.

2. Rumania. The Muslim community of Rumania must currently number some 50,000 persons, Turks and Tatars living, for the most part, in the Dobrudja [*q.v.*] (although a handful also exists in Bucharest and there are a few others dispersed across the country). The Rumanian state had inherited this small religious and ethnic minority at the time of its creation in 1878, a minority which was later to belong sometimes to Rumania, sometimes to Bulgaria, according to the political vicissitudes of the time and the successive phases of unification or partition of the "Greater Dobrudja" (formed from what is correctly called the Dobrudja and the Quadrilateral). Finally, it may be added that the small Danubian Muslim community of Ada Ḳalʿe [*q.v.*] which comprised approximately a thousand persons, was dispersed in 1968, when the island was submerged by hydraulic constructions at the Iron Gates.

The great majority of this population is composed of farmers (there being, apparently, no more semi-nomads in the Dobrudja, just as the steppes, described at length by all geographers and ethnologists at the beginning of this century, have ceased to exist), but there are also some town-dwelling Muslims, in Constantza [see KÖSTENDJE], Medjīdiyya [see MEDJĪDIYYE], Mangalia, Tulcea, Macin, etc. In most cases, this is a population of relatively modest social status.

This community is governed by the *muftī* of Constantza and by a "synodal college" (which exists more in theory than in practice). After the end of the Second World War, it seemed to be living in a precarious condition; the closure of Turkish and Tatar schools in 1957, the closure of the "Muslim seminary" of Medjīdiyya (the only establishment of its kind in the country) in 1967 (or as early as 1962?), the non-existence of Islamic religious publications, the impossibility of participating in the pilgrimage to Mecca, etc. Then, in 1972 or thereabouts, the international situation and the economic difficulties of the country obliged the Rumanian authorities of the time to grant to the local Muslim community certain concessions, with the object of visibly improving the image of the régime vis-à-vis a number of Arab and Muslim countries. Among the developments witnessed in the recent period have been the dispatch of Rumanian Muslim delegations to these countries, the publication of a small book of propaganda relating to the local Muslims and of a local Islamic review, as well as a very diffident (but constantly growing) renewal of pilgrimages to Mecca, financed by the Libyan government. At the time of writing (end of 1989), nothing is known of the likely consequences, for the small Muslim community of Rumania, of the collapse of the local Communist régime. See BOGHDĀN; EFLĀḲ; Popovic, *L'Islam Balkanique*, 196-253.

(3) Greece. The Muslims of Greece must currently number between 130,000 and 150,000 persons. It should, however, be born in mind that in the past a large number of Muslims have been obliged to leave the country at various times, between 1821 (the start of the Greek insurrection against the Ottomans) and 1923 (the exchange of populations between Greece and Turkey) [see MUHĀDJIR. 1]. They belong to three clearly distinct communities which are not united in a common organisation. The communities in question are the Turks (and gypsies) of eastern Thrace, the Bulgarophone Pomaks [*q.v.*] of the Rhodopes, and the Turks of Rhodes [see RODOS] and of Kos.

(a) The "Muslim community of the Dodecanese" (principally the islands of Rhodes and Kos, see ON IKI ADA) consists of between three and four thousand Turkish-speakers, most of whom have opted in recent decades for Greek nationality. This is a community in an advanced state of decline, containing a high precentage of elderly people and showing practically no sign of organised community life beyond the absolute minimum (Friday prayers, the major religious festivals, weddings and burials). Its schools have been closed since 1972, and its cultural life as such is virtually non-existent; the mosques, cemeteries, public baths and other buildings belonging to the *waḳfs* have been neglected, and the *muftī*, who died in 1974, has not been replaced.

(b) It is very difficult to supply accurate information regarding the Muslim community constituted by the Bulgarophone Pomaks of Greece (some 25,000 persons) living in the mountains of the Rhodopes, along the Bulgarian frontier. This is an exclusively village-based and very introvert community, inhabiting mountainous territory (which is also a military zone) to which access is forbidden to Greeks and to foreigners alike (and which cannot be entered without special authorisation, difficult to obtain). The cultural level of this population seems to be fairly modest (although there exists a *madrasa* at Echinos), and (as in the case of the Pomaks of Bulgaria) no written testimony relating to them is available. Those of them who have come to settle in the towns of eastern Thrace seem to have been gradually assimilated into the Turkish milieu.

(c) We are much better informed regarding the history and the current situation of the Turkish-speaking Muslims of eastern Thrace (between 100,000 and 120,000 persons). These are in the main Turks and a certain number of gypsies but also, perhaps, included among them are a few groups of Roumeliotes from various Balkan regions (and from diverse origins) who turned towards Turkey before 1912 and stopped off on the way. It is a living community, although muzzled by the local authorities and very much dependent on everyday relations between Greece and Turkey, relations in which it is itself a weighty factor. It nevertheless leads a relatively intense religious and cultural life: we may point out the existence of two "major" *muftīs* (those of Xhanti and of Komotini) and one "minor" *muftī* (that of Didimotiho); of an administration of *waḳfs*; of numerous religious, sporting and cultural associations; of primary schools; of two secondary schools; and finally, of numerous journals and reviews in Turkish. They write their Turkish in Arabic script, including elementary school books. No precise infor-

mation is available regarding religious life as such, but worth mentioning is a vigorous participation in the pilgrimage to Mecca (200 persons on average over recent years). See Popovic, *L'Islam balkanique*, 107-83.

(4) Albania. Islamised during the Ottoman domination of the Balkans, this proportion extending to 70% of the population, Albania contained in 1945 (shortly after the seizure of power by the local Communist party, which later became the "Albanian Workers' Party"), 816,677 Muslims. At that time this community exhibited two notable peculiarities: it was on the one hand (unlike the situation in the other countries of the region), a perfectly homogenised community, in view of the fact that all the Muslims of the country were Albanians, by racial stock and by language; on the other hand it was composed in reality of two parallel communities: that of the Sunnīs (very much the majority, comprising 75 to 80% of the Muslims of the country) and that of the Bektās̲h̲īs [see BEKTĀS̲H̲IYYA], accounting for the remaining 20 to 25%.

These phenomena had, however, no bearing on the changing fortunes of local Islam (and of religion in general), a process which reached its climax some twenty years later during the Albanian "cultural revolution" of 1967: the date of the absolute suppression by the authorities of the country of all religious organisations and the closure of all places of worship, without exception.

This act had been preceded by two clearly distinct periods, that of 1945-53 and that of 1954-67.

During the first of these periods, the authorities quite rapidly dismantled all the religious organisations, eliminated their religious and secular rivals and ultimately brought into line the leaders of the four religious persuasions (Sunnī and Bektās̲h̲ī Muslims, Orthodox and Catholic Christians), whose official pronouncements demonstrated their degree of subservience to the régime. There is documentary evidence available for this first period which shows, on the one hand, the process of this step-by-step seizure of control, and, on the other, the first attempts of adaptation and internal reform on the part of the two Muslim communities, adaptation which very soon degenerated into total collaboration with the officially approved "clergy".

Documentation subsequently becomes increasingly rare, and practically nothing is known of an official nature regarding Albanian Islam after 1954, with the exception of a few titles of religious publications (year books for the most part) which are now virtually inaccessible. This period of decline is characterised by the fact that the Albanian government no longer seeks public approval from the Muslim authorities for its major policy decisions, excluding them from celebrations and major popular rallies. The final blow was to be struck in 1967.

Two subsequent dates are to be noted: 28 December 1976, the date of the adoption of the new Constitution, of which articles 37 and 55 stipulate: "The State does not recognise any religion; it supports and promotes atheistic propaganda to inculcate in the people the materialist-scientific concept of the world"; "The creation of organisations of fascist, anti-democratic, religious or anti-socialist nature is forbidden"; the second date, end of 1976- beginning of 1977, marks the publication of a decree ordering the changing of names of Biblical or Ḳurʾānic origin.

Officially then, Albanian Islam no longer exists. But is it really dead? The answer to this is unknown. What is undeniably true however, is that the Albanian press periodically castigates religious survivals and calls for vigilance. See ARNAWUTLUḲ; Popovic, *L'Islam balkanique*, 11-65.

(5) Bulgaria. According to the census of 31 December 1946 (the last official census to take account of the religious affiliation of the population), the Muslim population of Bulgaria numbered 938,418 out of a total of 7,029,349 inhabitants, thus 13.35% of the population of the country. Bearing in mind natural growth on the one hand, and emigrations to Turkey on the other (155,000 in the winter of 1950-51; approximately 300,000 in summer-autumn 1989 [see MUHĀD̲J̲IR. 1]), it would currently amount to some 600,000 persons, or possibly more. It consists of four groups which are, from an ethnic viewpoint, very different from one another:

(a) The islamised Bulgarians (about 150,000) who are known as *Pomaci* (singular *Pomak* [*q.v.*]). They speak Bulgarian, have no knowledge whatsoever of the Turkish language and live in the mountains of the Rhodopes and in the region of Razlog. For the most part illiterate until a relatively recent period, they have virtually never had a local intelligentsia. It would be logical to suppose that their assimilation (imposed with excessive force by the authorities in recent years) is in a process of acceleration from day to day, and that their religiosity has suffered since 1878 (the date of the creation of Bulgaria) and especially since 1945, the corrosive effects of time.

(b) The most important group, by far, is that of the Turks. Their number has varied considerably since 1878, and is evidently susceptible to further variation, in view of the volatile and still unpredictable political situation of the region. It is estimated that there are currently some 500,000 (or possibly more) Turks distributed among various regions of Bulgaria (Deli Orman, Dobrud̲j̲a, along the Danube, the eastern Rhodopes) but we have no knowledge of how many of them are actually believing Muslims.

(c) There are also in Bulgaria a few thousand Tatars, of whom at least a part (impossible to quantify) is of the Muslim religion. They speak Tatar and in the main inhabit the region of the Dobrud̲j̲a, although there are also a few scattered pockets elsewhere.

(d) Finally, it is appropriate to mention the existence of a certain number of Muslim gypsies, whose exact number is unknown and who are generally of very tenuous religious affiliation.

The religious situation of the Bulgarian Muslim community is very unfavourable. The practice of religion is officially free, but the Bulgarian state has since 1945 followed a sustained policy of secularisation and bulgarisation, using every available means to restrict religious liberty (of Muslims and Christians alike) with the result that today religion is undoubtedly in decline throughout the country. As regards the Muslim community in particular, this is expressed by the following: state appointment of senior religious leaders, suppression of religious festivals, the outlawing of a Muslim press, measures to prevent Bulgarian Muslims from participating in the pilgrimage to Mecca or establishing contacts with external Muslim communities, proliferation of societies of "scientific atheism" designed to intensify work on the land, etc. The recent campaign aimed at the bulgarisation of Turkish names provoked the mass emigration in 1989 of some 300,000 Muslims, a number of whom have however returned to Bulgaria since. See BULGARIA; Popovic, *L'Islam balkanique*, 66-106.

(6) Yugoslavia. The exact number of Muslims currently living in Yugoslavia is unknown, in view of

the fact that recent censuses have not taken account of the religious affiliations of the population, but their number must exceed, to a considerable extent, the figure of three million out of a total population of 22,418,331 inhabitants (census of 1981).

The three principal groups are located in Bosnia-Herzegovina (Slavs of "Muslim nationality"—whose existence was officially recognised by the authorities, for political reasons, in 1969—Muslims of Serbian nationality and Muslims of Croatian nationality, a total of approximately 2 million persons); in Serbia, in the region of Kosovo (mostly Albanians, slightly more than a million in number, plus several tens of thousands of Turks); finally, in Macedonia (Macedonians of whom the exact number is unknown—100,000-200,000 (?)—as well as several tens of thousands of Albanians, plus about 100,000 Turks). To these three groups, should be added several tens of thousands of Muslims in Montenegro (Montenegrins and Albanians), as well as a several tens of thousands of Muslim gypsies, and tens of thousands of other Muslims, belonging to all the nationalities aforementioned, dispersed throughout the country. Thus it is evident that the Yugoslav Muslim community exists in the form of numerous regional communities whose official (and non-official) relations with the authorities, and whose actual situation on the ground, show significant differences. For this reason, the researcher seeking to unravel and understand this complex situation should examine the case of each of these communities separately.

(a) There is little of significance to be said regarding the Muslim community of Montenegro [see Ḳaradagh], whose representatives are seldom seen in public and play, in any case, a modest role in the administration of the "Supreme Islamic Authority" of Yugoslavia.

(b) The Muslim community of Serbia is composed of Albanians. Its centre is located at Priština which is the capital of the region of Kosovo. The community possesses a *madrasa* (of inferior status compared to that of Sarajevo) and publishes, in Albanian, its own religious review entitled *Edukata Islame*, which is generally considered to be an edition aimed at the Albanian populations of the country, of the official Yugoslav Muslim review *Glasnik Vrhovnog Islamskog Starješinstva* of Sarajevo.

(c) Little has been heard since 1945 of the Muslim community of Macedonia [see Māḳadūnyā] (composed, as stated above, of Macedonians, Albanians and Turks), whose recent and present circumstances have been a subject generally avoided. The riots of Kosovo in April 1981 and the fears of the Macedonian authorities, faced with a massive influx of Albanians from Kosovo into Macedonia (a further manifestation of a process which has been continuing for decades), suddenly set in motion a whole series of actions (it is impossible to be more specific), concerning a part of this community. This has since been balanced by the hasty construction and inauguration of a regional *madrasa* at Skoplje, by the launch of a local Islamic religious review, and most of all by a quite extraordinary insistence on the Macedonian origin of the local Muslim Slavs, whose existence and potential as an object for research are issues to which efforts are now being addressed.

(d) The Muslim community of Bosnia-Herzegovina [see bosna] is the most numerous and the most important Muslim community of Yugoslavia. It possesses a renowned *madrasa* and a Faculty of Islamic theology, maintains direct and solid relations with the majority of Arab and Muslim countries, published a number of journals and reviews, and every year sends scores of scholarship students to study theology in Arab universities, in Egypt, ʿIrāḳ, Saudi Arabia, Libya, etc. The political decisions taken (since the Bandoeng Conference in 1955) by the Yugoslav authorities regarding Arab and Muslim countries and regarding countries of the Third World in general, had permitted the Muslim community of Yugoslavia (meaning that of Bosnia-Herzegovina, the origin of all the senior leaders) to enjoy a more stable situation than ever before, with considerable freedom of action and not insignificant material advantages. But this privileged position has declined to a great extent over recent years, for a whole series of reasons of which the most important is the intensification of ethnic and religious antagonisms, following the Yugoslav economic disaster and the beginnings of the collapse of the Communist dictatorship which ostensibly favoured the Muslim community to the detriment of the other religious communities of the country.

Since the history of these various groups of Muslims of Yugoslavia is beyond the scope of this article, we shall confine ourselves to describing very briefly, in a global fashion, the current situation.

The Yugoslav Muslim community is composed of four quite distinct strata:

The urban intelligentsia which is non-believing and entirely secularised, to the extent that it considers itself simply as being "of Muslim descent", and has virtually no contact either with the Muslim religious authorities or with the Muslim press of its country (except in the case of a complex political game between the Muslims in power, belonging to the recently recognised "Muslim nationality", and those who govern the Muslim religious affairs of the country).

A popular stratum, composed of the rural population and of the urban middle and lower classes, which professes a traditionalist Islam linked inextricably to certain local customs and traditions. This category lives in a style that belongs intimately to the totality of the Islamic *umma* of yesterday and of today, to which it feels itself bound by the whole of the common mythic past. The characteristic features of this category are universally known: the great importance of the family and of family ties, high birth-rate, primacy of males, relative absence of the woman in social life, primitive level of religious education, importance of magical-religious customs and (sometimes) of Muslim mystical sects, strict observance of religious festivals, a perceived attractiveness of the pilgrimage to Mecca, etc.

The Muslim religious intelligentsia, composed most of all (although not exclusively) of the urban middle classes, which generally professes a reformist Islam adapted to a pronounced socialistic tendency. The representatives of this category have often studied in the Arab countries: in Cairo (al-Azhar), in Medina, in Libya or in the Gulf States, having received their initial education in local Muslim theological high schools, and remain much influenced by a certain category of contemporary Arabic religious publications. They are by nature very mistrustful of western scientific Islamology (and of orientalism in general), disciplines which most of the time they are aware of only at second or third hand, but which are supposed to be the most subtle weapons of Western imperialism and of other "maleficent forces" of our time. On the other hand, the representatives of this category admire immensely European apologetic publications of inferior quality, publica-

tions which they distribute on a wide scale alongside their own home-produced articles, on the major figures of the Muslim world of the past (Ibn Khaldūn, Muḥammad ʿAbduh, Avicenna and Djamāl al-Dīn al-Afghānī in the first place). However, it is futile to seek, on the part of the current Yugoslav Muslim religious intelligentsia (for tactical reasons?), any statement of position or controversial issues such as the policies of Gaddafi, Khomeini, etc.

Finally, there is a (currently still very small) stratum of young Islamologists and Muslim "orientalists" (who are divided into two groups, that of theologians and religious functionaries, and that of secular persons of Muslim descent), experienced in modern scientific methods and perfectly conversant with the results obtained in these disciplines outside the frontiers of the country, which is making gradual progress but in rather difficult circumstances. In fact, as regards Islam and the Muslim world, it is caught in a vice between the mistrust and suspicion of local traditionalist Muslims on the one hand, and the incomprehension, more or less total, of non-Muslim Yugoslav intellectuals on the other. See Popovic, *L'Islam balkanique*, 254-365.

Bibliography: Given in the article. It should however be stressed here that a large section of the press of the Arab and Muslim countries (either for ideological reasons, or influenced by a naïve tendency towards apologia belonging to another age, or a combination of both) is in the habit of inflating figures to a considerable extent and of presenting a mythical vision of the situation, much removed from what is to be observed "on the ground". For an impression of the damage which this deplorable tendency is liable to produce even in the best work, see for example M. Ali Kettani, *Islam in Post-Ottoman Balkans: a review essay* in *Journal of the Institute of Muslim Minority Affairs*, ix/2 (July 1988), 381-403. (A. Popovic)

2. Migrant Muslims in Western Europe.

(i) Until 1945

There have been individual Muslim traders, diplomats and travellers visiting and sometimes settling in Europe probably for as long as Islam has existed historically. In eastern Europe, the Tatar successors of the Mongol empires and the Turkish and Islamicised populations of former Ottoman territories continue to form substantial Muslim communities today. However, this article will concentrate exclusively on the immigrant Muslim populations of the countries of western Europe.

Although the Muslim presence in western Europe is in general conceived of as being a phenomenon of the years after 1945, the roots of Muslim immigration can be traced back to the 19th century and earlier. Thus the origins of the Muslim communities in Germany lie in the increasingly close links which the German states developed with the Ottoman empire through periods of war and peace. A substantial number of stragglers and prisoners were left in the southern German states after the second siege of Vienna in 1683. During the 18th century, the Prussian kings regularly had Muslim units. A century later trading treaties between Istanbul and various German states were the impulse for a growing Muslim presence to the extent that the Ottoman sultan patronised a mosque built in a Muslim cemetery in Berlin in 1866. The links with the Ottoman empire leading into the first world war ensured a continuing close economic and diplomatic relationship between Turkey and the unified German state.

The link between the European colonial powers and their colonies as a determinant of migration routes is even clearer in the cases of Britain and France. The British East India Company had from an early date taken on labour for its ships in the ports of India and dismissed them to fend for themselves in London between sailings. Some of these seamen settled to join the already large numbers of Asians and Africans living in London and other ports. After the opening of the Suez Canal in 1869, the Muslim component of these groups increased, as British ships took on labourers from the Yemen through the coaling station at Aden. Soon Yemenis were settling in port cities and marrying locally. At the end of the 19th century a *shaykh* of the ʿAlawī Ṣūfī order arrived, and by 1914 every Yemeni settlement in Britain had a *zāwiya* of that order. The first mosques were opened for more cosmopolitan Muslim communities in Liverpool (1891) and Woking (1889). The Liverpool mosque did not survive the outbreak of the First World War, but the Woking mosque continued as a lively centre between the two world wars. For some time it was linked with the Lahōrī branch of the Aḥmadiyya movement [*q.v.*], and both the two Ḳurʾān translators Marmaduke Pickthall [*q.v.*] and ʿAbd Allāh Yūsuf ʿAlī were associated with it. But as the early sponsors of the mosque died and relations between the Aḥmadīs and the mainstream Sunnīs broke down, especially in British India, the leaders of the Woking mosque declared their adherence to Sunnī Islam in 1935. In 1944, King George VI inaugurated the Islamic Cultural Centre on a site in Regent's Park donated in exchange for a site in Cairo for the new Anglican cathedral.

Muslim immigration into France before 1945 shows, perhaps, much greater continuity of character than elsewhere. Certainly there were businessmen and students, the most well-known of the latter being the Egyptians sent by Muḥammad ʿAlī [*q.v.*] and his successors. But already before the First World War there were labour migrants from Algeria, most of them from Kabyle tribes, and by 1912 there was a significant Algerian labour force in olive oil refining and related industries in the region of Marseilles. Others were to be found in the industrial areas of the east and the north. During the First World War, there was a major immigration of Moroccans, Algerians and Tunisians into the civil and defence industries including a majority of requisitioned men. In recognition of this war involvement, the French government sponsored the opening of a mosque in Paris in 1926. North Africans continued to seek work in France between the wars, although the uncertain economic situation, especially after 1929, made for an often erratic pattern of movement back and forth. During the Second World War, the Vichy government in 1942 contracted to supply North African labour to help the Germans build the Atlantic Wall.

(ii) After 1945

Immediately after 1945, the economies of Europe were for a short time busy working towards reconstruction of industry and absorption of military personnel into the civilian labour force. But soon growing economies began to seek labour further and further afield. The first West Indian immigrants had begun to arrive in Britain by 1950, and during the following decade people from the Indian subcontinent joined the movement, although it was not till the end of the decade that significant numbers of Pakistanis migrated. In France the number of Algerians reached over 200,000 in the 1954 census. For a time, much of the rest of Europe, including West Germany, was able to staff its expanding industry from the poorer coun-

tries in southern Europe: Greece, Yugoslavia, Italy, Spain and Portugal. But in 1961 Germany entered into a treaty with Turkey for the supply of industrial labour. During this decade Turkey entered into similar agreements with Austria, the Netherlands, France and Sweden. In 1962, in the Evian agreement ending the Algerian war of independence, France granted privileged access to Algerians, and in the following year West Germany signed a labour agreement with Morocco, as did the Netherlands in 1969. Other countries to enter into such treaties were Denmark, Belgium and Switzerland, while Tunisia joined the countries sending migrant workers abroad.

Virtually all the migrants who entered western Europe during this period came to work and had no intention of settling. This perspective began to change when the gates were closed to men seeking work. It was in Britain that this first happened with the introduction of the first Commonwealth Immigration Act in 1962. Ten years later, the rest of the countries of western Europe followed suit, as economies went into stagnation or recession with the rise of oil prices. Immigration continued to take place in substantial numbers, but it was now wives and children who arrived. As families were established, so practical issues of everyday life necessitated a much more conscious definition of attitudes towards Islam and its cultural expression than hitherto had been the case. Family relations of a traditional type were open to question, as the extended family was broken up by migration. The role of male and female both inside and outside the family became a critical area, as women had to shoulder much more individual responsibility in running family affairs, while their husbands were working unsocial hours. They had to deal with social and health authorities in surroundings which were alien to their experience. Children had to go to schools which had little or no comprehension of the force of Islam in their lives. Children have been growing up in cultural and political systems which have emphasised tolerance and liberty of thought but which, with an ever stronger experience of prejudice and racism, are perceived to have withheld that tolerance from the Muslim communities.

A direct consequence of family reunion in European cities has been the appearance and growth of institutional expressions of Islam. Soon after the 1962 Immigration Act in Britain, the number of mosques started to rise, until an annual registration rate of about thirty was reached in the late 1970s. A similar growth in the number of mosques can be noted in other European countries after 1972-4. At the same time, the various Muslim movements of the countries of origin joined the immigration and set up branches among their compatriots in Europe. In this process, both the countries of origin and other Muslim countries have sought to take a hand. The influence of some oil-rich states has been exaggerated, despite often substantial amounts of assistance which have been granted.

By the mid-1980s there was evidence of a change of emphasis among young Muslims who had been born in Europe or had arrived at a very young age. On the one hand, they were beginning to question their parents' assumption of complete congruence between Islam and its particular cultural expression. Many young people were beginning to develop conceptions of a Muslim life which was compatible with, though not the same as, the way of life of their surroundings. Others have sought Islamic identification clearly distinct from that of their European surroundings. Others again, though fewer, have moved into political and social commitment in the European surroundings, usually in some form of radical activism against racism.

Individual countries

In the following paragraphs, the specific situation of each country, or group of countries, will be outlined with reference to the numbers and ethnic origins of the Muslim communities, the types of Muslim organisations and mosques and their legal status. Hardly any countries maintain religious statistics, so population figures have to be estimated from nationality figures, with the exception of Britain where the base is data on place of birth. At various times censuses have been held, but most regular statistics (again with the exception of Britain) are those issued annually by the civil registries, which in most countries keep records of all residents by district. This does not, by definition, include those who are "irregular" or "illegal". The data on mosques is equally uncertain because legal definitions of places of worship differ not only among countries but also internally as between national legislation and local authority regulations for different purposes such as taxation or town-planning. In the following, the term "mosque" means any building which is used regularly for prayer and often as a place of at least simple Islamic instruction — hence most mosques, on these terms, are older buildings converted to Muslim use.

France. The overall population of Muslim background is about 3 million. The 1981 census showed about 800,000 Algerians, 430,000 Moroccans, 190,000 Tunisians, and 125,000 Turks. In addition, there are nearly half a million "Harkis", Algerians who had remained loyal to France during the war of independence. There are also a fast-growing number of Muslims from West Africa, especially Senegal and Mali. The largest concentrations of North African Muslims are to be found in and around Paris, Lyon and Marseilles. Turks have particularly settled around Lille and in Alsace, as well as Paris. The vast majority of immigrants have retained their nationality of origin, but their children born in France are entitled to French nationality if they wish. Strict separation between church and state from the beginning of the 20th century has meant that, with the exception of the Paris mosque, Muslims have had to rely on their own resources. In 1976, a new law was passed allowing public support for the cultural activities also of Muslim associations, and in 1981 an old distinction between foreign and French associations was abolished. A 1978 estimate indicated that there were at least 87 mosques and prayer houses, while a 1985 estimate suggests almost one thousand. Many early organisations were linked with Algerian or Moroccan political conflicts, but with time other movements have entered the field. The Ṣūfī orders of the countries of origin maintain a strong presence also in France. West African Muslims were prominent in the creation of immigrant trade unions during the automobile factory strikes in the early 1980s. Since then, a major new development has been the spread of the *Djamāʿat al-Tablīgh*, known in France as *Foi et pratique*.

Great Britain. Serious attempts to estimate the Muslim population of Britain reach about one million, although some Muslim spokesmen claim up to three times as many. About one-third of the total originate in Pakistan and a further 10% each of the total from India and Bangladesh. Smaller significant groups come from the countries of East Africa, mostly of Indian origin, West Africa, Cyprus, Malaysia,

Iran, and a variety of Arab countries. People from all of these ethnic origins are concentrated in London. Outside London, Muslim populations, overwhelmingly of Indian subcontinent origin, are concentrated in the West Midlands around Birmingham, in Yorkshire around Bradford, in Manchester and its suburbs, with smaller but still significant communities in cities like Glasgow, Leicester, Sheffield, Leeds, Cardiff and Southampton. As most of the countries of origin are members of the Commonwealth, British law allowed routine extension of nationality until 1983. All children born in Britain are automatically citizens. So by the end of the 1980s almost half of the Muslim community is British by birth, while the majority of the rest have acquired full British passports. While some of the older churches operate under parliamentary legislation, there is no general legal framework for the recognition of religious communities. Most Muslim organisations and mosques are registered under the law of charitable organisations. The first major growth in the number of mosques took place after 1964 and accelerated from the mid-1970s. By 1985 there were almost 400 mosques at a time when the registration of new mosques was averaging thirty a year. The process of organisation has been dominated by movements migrating from the Indian subcontinent. As most Pakistanis have come from Punjabi and Mirpuri villages, the Barēlwī movement and its various subgroups is prominent. Against them have often been ranged the Deobandi network and its related movement *Djamāʿat al-Tablīgh*. A smaller movement in numbers, but influential and widely visible outside the community, is the *Djamāʿat-i-Islāmī* with its daughter organisations in Britain: the UK Islamic Mission, the Muslim Educational Trust, and the Islamic Foundation. Ṣūfī-related groups have taken on a more public shape during the 1970s, particularly Naḳshabandīs, Ḳādirīs, and Čishīs, in addition to the older ʿAlawī presence.

West Germany. The total of less than two million Muslims in 1988 is made up of an overwhelming majority of around 1.5 million Turks. The rest are small numbers (tens of thousands) of Iranians, Pakistanis, Moroccans, Tunisians, and Arabs of various nationalities. Between a quarter and a third are resident in the federal state of North-Rhine-Westphalia, concentrated in the industrial region from Cologne in the south through Duisburg to Dortmund in the north-east. Other concentrations are to be found in all the major industrial cities across the Federal Republic. Most Muslims remain of foreign nationality, partly because it has become increasingly difficult to acquire West German citizenship but also because government policy has been that the foreign communities are migrants, or "guest workers", not immigrants and settlers. The Federal Republic has a legal status of recognised public body (*Körperschaft öffentlichen Rechts*) by which the main churches and the Jewish communities have an arrangement whereby a voluntary "church tax" is collected by the state on their behalf. Since the early 1970s, a number of different Muslim organisations have sought similar recognition without success. However, under existing legislation Muslim organisations have access to public funding for cultural activities (usually flexibly interpreted by the authorities) and are entitled to Islamic instruction in schools for Muslim children. The latter issue has been complicated by the lack of agreement to cooperate among various Muslim organisations, and in consequence some state governments have taken the initiative to develop such instruction. There are almost one thousand mosques across the country, including several in West Berlin. Until the early 1980s, most Turkish Muslim associations, almost all linked to a mosque, were related to movements banned in Turkey. The largest of these were the Süleymanis with smaller numbers linked to the Milli Görüs and the Nurcülük (*Djāmiʿat al-Nūr*). Then a more active religious policy on the part of the Turkish government, encouraged by the German government, led to a significant growth in the number of mosques and associations linked to a federation sponsored by the Religious Affairs Department of the Prime Minister's Office (*Diyanet*), so that this grouping has become the largest by the end of the 1980s. There is an active association of German-speaking Muslims and a number of organisations grouping together various Muslim ethnic communities.

Netherlands. The Dutch Central Bureau for statistics is one of the few such agencies in Europe which keeps religious data. In 1986 it gave a figure of 337,900 Muslims of foreign origin at a time when the general trend was upwards at an annual rate of about 5,000 a year. The majority of this population was in 1988 made up of 180,000 Turks and 120,000 Moroccans. The largest proportion of the remainder were Surinamese of Indian origin and a few thousand each from Pakistan, Yugoslavia, Indonesia, and Arabs other than Moroccans. The Muslims are concentrated in the major conurbations of Amsterdam, Utrecht, Rotterdam, with smaller communities in most other significant industrial centres. The vast majority of Muslims remain citizens of their countries of origin. The Netherlands is constitutionally a lay state with strict separation between religion and state. Part of the system is, however, a recognition of the social and institutional function of the religious communities, traditionally the Catholic and the various Protestant churches, in particular their involvement in education. Government structures have, through commissions of inquiry, local support, and the like, attempted to incorporate the new Muslim presence into the traditional system, with mixed results. A Muslim organisation has been allocated regular times on Dutch radio and television. Since 1988, over ten publicly-funded Muslim schools have opened. There are over two hundred mosques. On the Moroccan side, most are autonomous, although there have been attempts to organise them through a federation sponsored by the Moroccan government. On the Turkish side, the pattern of organisation is similar to that in West Germany.

Belgium. The total number of Muslims was in the region of 300,000 in 1986, two-thirds of whom were from North Africa, mainly Moroccans, and the majority of the rest Turks. The main concentration is around Brussels, with other significant communities in the main industrial towns. While most remain citizens of the country of origin, Belgian nationality law was changed in the late 1980s to make acquisition of Belgian nationality significantly easier. In 1974 Belgium added Islam to the list of recognised religious communities with the consequence, in Belgian law, that Muslim children would be entitled to Islamic instruction in schools at public expense. It took almost ten years for the implementation of this under the central direction of the Islamic Cultural Centre in Brussels. The process has not been without problems because the Centre is sponsored by the Muslim diplomatic community with Saudi Arabian leadership, a situation which many Turkish and Moroccan associations have found unsatisfactory. The pattern of Turkish and Moroccan associations is similar to that in West Germany and France respectively.

Austria. The Muslim population of about 100,000 at the end of the 1980s consists mostly of Turks, but there are about 15,000 Yugoslavs and almost 10,000 Austrians. Muslims are concentrated in the region of Vienna and the western province of Vorarlberg. Most Muslims retain their nationality of origin. The majority of Austrian Muslims are descended from Muslim citizens of the old Austro-Hungarian empire who moved to Vienna in the decades before the end of the empire. With the occupation of Bosnia-Herzegovina in 1878, the imperial government sponsored Muslim institutions within the government structures, including a *Muftī* in Vienna. In 1912 Islam was given full recognition, but the law fell into disuse after 1918. In 1979 the law was revived, giving the Muslim community access to religious instruction in schools and to religious broadcasting on the government radio and television. There are about thirty mosques in the country, most linked to organisations which are affiliated to the legally recognised federal association.

Switzerland. The 1980 census recorded just over 56,000 Muslim residents. Estimates based on residence registrations by nationality suggests a total of about 100,000 at the end of 1988, a figure which does not include substantial numbers of mainly Yugoslav seasonal workers. Half of the total were Turks, about a quarter Yugoslavs, and most of the rest from North Africa. Muslim communities are to be found in most larger cities, in particular Basel, Zürich and Geneva. Most retain their citizenship of origin, since acquisition of Swiss nationality is difficult. There is no legislation specifically for Muslims, whose associations function under the general law of associations. There are no data on mosques but there are records of about thirty Muslim associations, mostly linked with the various Turkish movements known elsewhere in Europe.

Scandinavia. Sweden since 1945 has, in addition to immigrants, also had a relatively liberal refugee policy. Consequently, it is particularly difficult to estimate the number of Muslims, since many of the large number of Turkish citizens are Syrian Orthodox Christians. Two different government publications gave 37,000 in 1981 and 22,000 in 1984. Another source estimated 70,000 in 1989, whilst others estimate 100,000 in 1991. Whatever the figure, most are of Turkish origin (including a large number of Kurds) with a smaller group of Yugoslavs. The largest concentrations are in greater Stockholm, Gothenburg and Malmö. Many have become Swedish citizens. Next to the Lutheran state church, all religious congregations with a membership above a certain number are entitled to state funding, and many Muslim congregations have achieved this status on a regular basis. There are about fifty mosques, but the influence of Turkish Muslim associations of the kind to be found in West Germany is minimal.

The Muslim population in Denmark approached 50,000 in the late 1980s. Over half originate from Turkey, and there is also a significant Pakistani population. During the 1980s, the number of Iranians increased from a few hundred to almost 10,000. The vast majority live in and around Copenhagen and smaller numbers in provincial cities such as Odense and Aarhus. Most retain their original nationality, although a number of Pakistanis are nationals of the United Kingdom, having immigrated under European Community rules. Mosques and associations operate under the general laws of association, but the liberal "free school" legislation has allowed the creation of about a dozen publicly funded Muslim schools, mostly in and around Copenhagen.

In 1984 there were around 15,000 Muslims in Norway, half of whom were Pakistanis, and the rest mainly from Turkey and Morocco. Well over half were resident in and around Oslo. The Norwegian government gives financial assistance to religious congregations, by the late 1980s to about a dozen.

Southern Europe. Reliable information on the Muslim communities in Italy, Spain and Portugal is almost impossible to find, primarily because the vast majority of foreigners are unregistered. In Portugal, most Muslims, possibly two-thirds of a total of 50,000, are stateless immigrants from former Portuguese colonies in India or southern Africa. Under General Franco, Islam was forbidden in Spain, and it is only slowly that Muslims are coming to public notice. Most are immigrants or temporary residents from Morocco or Algeria. Italy has the largest number of immigrant Muslims, some estimates ranging as high as 200,000, mostly from North Africa including a good proportion of Libyans. To be found in almost all major industrial cities, there are particularly large numbers in Sicily around Palermo.

Bibliography: Regular information on Muslims in Europe can be found in *CIBEDO* (Frankfurt), in *Research Papers: Muslims in Europe*, and its successor *CSIC Papers: Europe* (Birmingham), and in *Hommes et migration* (Paris). Official data on foreign nationals in selected countries are summarised in the annual *SOPEMI Report* (Paris, OECD). Overviews of the history of migrant Muslims in western Europe are to be found in J.S. Nielsen, *Muslims in Europe*, in *Renaissance and modern studies* (Nottingham University), xxxi, 58-73; F. Dasetto and A. Bastenier, *Europa: nuova frontiera dell' Islam*, Rome 1988; Nielsen, *Muslims in Western Europe*, Edinburgh 1992; T. Gerholm and Y.G. Lithman (eds.), *The new Islamic presence in Europe*, London 1988, is a collection of articles covering most of western Europe, with good bibliography for individual countries. For statistics relating to Muslim populations in the world at *ca.* 1960, see ISLĀM, ii. (J.S. NIELSEN)

3. Migrant Muslims in the Americas [see DJĀLIYA].

4. The so-called "Black Muslims" or *Bilāliyyūn*.

(a) *History*. The organisation of the Black Muslims, also known as the Nation of Islam, was founded in Detroit in 1931 by Wallace D. Fard (1877?-1934?), variously referred to as Wallace Fard Muhammad, W.F. Muhammad, Walli Farrad, Prof. Ford, Farrad Muhammad etc., under the name Allah Temple of Islam. He had previously been associated with the Moorish-American movement founded in 1913 by Noble Drew Ali, formerly Timothy Drew from North Carolina. The name refers to the fact that the organisation was composed of Black Muslims, descendants of the "Moors" among the Spanish conquistadores, who first introduced Islam to the New World, and because in the English colonies, the only Muslim presence was among the slaves imported from sub-Saharan Africa. It is alleged that Wallace D. Fard was born in Mecca of mixed Arab and European parentage. It is more likely that he was of Turko-Persian origin. (For divergent opinions regarding Wallace D. Fard's origins and nationality, see C.E. Lincoln, 1973, 14, and E.U. Essien-Udom, 1962, 44 f. He was allegedly born on 26 February, a day which under his immediate successor was celebrated as Saviour's Day, but is today observed as Ethnic Survival Day by the movement.) He established the Fruits of Islam, a paramilitary élite trained in karate and the use of firearms to act as the normal right arm of the Black Muslims. Its members provided security,

searched everyone who entered a mosque or major meeting, acted as ushers, and sometimes as enforcers of discipline. He disappeared under mysterious circumstances in 1934. After some internal conflict among his followers, Elijah Muhammad (1897-1975), formerly E. Poole, the son of a Baptist preacher in Georgia, who had moved to Detroit in 1923 in search of work and had become acquainted with Wallace D. Fard in 1931, led a major faction of the organisation to Chicago, which became the main headquarters of the movement. Under Elijah Muhammad's leadership the movement was consolidated and grew, emerging in the 1950s as the most prominent organisation of Muslims in the United States, holding considerable property. Its prominence was further enhanced at this time by the conversion of Malcolm Little (1925-65), also the son of a Baptist preacher, later to become known as Malcolm X, signifying that he was an ex-smoker, ex-drinker, ex-Christian and ex-slave. Doctrinal disputes with other African-American groups as well as predominantly Arab ones also strengthened the movement. Because of its numerical strength, its popular appeal among African-Americans, who appreciated its outspokenness on socio-economic conditions and its alleged Islamic character, the organisation was seen as a possible ally of the Muslim World, particularly in countries such as Egypt, India and Pakistan, which were showing an interest in international Islam. To strengthen these relations, Elijah Muhammad visited Egypt, Ethiopia, Jordan, Saudi Arabia, Sudan, Syria and Turkey in 1959, where he met Muslim scholars and politicians including the former S͟hayk͟h al-Azhar, Maḥmūd S͟haltūt and Gamāl ʿAbd al-Nāṣir. His regard for Muslims in the East was diminished by the poor social and economic conditions he encountered among them.

The rise of political radicalism in Africa, the Middle East and the United States, the growth of the immigrant Muslim population and the new organisations founded by them, had a profound impact on the Black Muslims. The emergence of Pakistan in 1947, the Egyptian revolution in 1952, the independence of Sudan and the nationalisation of the Suez canal in 1956, encouraged Elijah Muhammad to demand that the United States allocate land to be controlled exclusively by his followers. Malcolm X played a central role in conveying Elijah Muhammad's message in the United States as well as abroad. He became one of the most articulate critics of racial injustice in the United States during the civil rights period. He rejected the non-violent approach of Martin Luther King, Jr., arguing that separatism and self-determination were necessary if Blacks were to achieve full equality.

After 1964, when Malcolm X had made the pilgrimage and been converted to orthodox Islam, taking the name El-Hajj Malik El-Shabazz, a *nisba* derived from the teachings of Wallace D. Fard claiming that the Black African diaspora were all of Muslim heritage, the "lost-found members of the tribe of Shabazz", and as a result of an internal scandal known as the "Elijah affair" which referred to Elijah Muhammad consorting with his secretaries and fathering a number of children, Malcolm X left the organisation and founded his own one, the Muslim Mosque, Inc. in New York. He published *Muhammad Speaks*, now renamed *Bilalian News*. Shortly after he was assassinated,

When Elijah Muhammad died in 1975 his son, variously referred to as Warithuddin Muhammad, Wallace or Warith Deen Muhammad, Chief Imam Wallace D. Muhammad, etc., in spite of three expulsions for disobedience by his father, succeeded him to the leadership of the Nation of Islam. Influenced by his pilgrimage to Mecca in 1967, he started a process of moving the organisation towards embracing orthodox Islam as soon as he took over the leadership, opening up membership to Whites and encouraging his followers to participate in the civic, social and political life of the country. Up to this point the Black Muslims, with their notion of Black supremacy, were not Muslims by any definition of that word, e.g. they had been observing seven daily prayers and fasted in December. Black Muslims observed Ramaḍān for the first time in 1976. The name was changed to World Community of Islam in the West (WCIW) and subsequently to American Muslim Mission (AMM), indicating that he was trying to develop closer links with the worldwide community of Muslims, an attempt also indicated by the use of the name Bilalians. The same emphasis appears in the community's weekly *American Muslim Journal*. Like his father he established cordial relations with leading religious and political figures in the Muslim world, including Anwar Sādāt. Muslim World leaders have always been interested in establishing an indigenous outpost in the United States. By inviting Warith Deen Muhammad to participate in the Annual Islamic Conferences of Ministers of Foreign Affairs and in 1978 naming him the sole consultant and trustee for the recommendation and distribution of funds to all Muslim organisations engaged in *daʿwa* or missionary work in the United States, they have found a way of doing so. He has been given the title *mud͟jaddid* and the rights of certifying the *ḥad͟jd͟j* to Mecca from the United States.

These changes were rejected by some Black Muslims. Under the leadership of Minister Louis Farrakhan, also known as Minister Louis X, born Louis Eugene Walcott, they broke away from the American Muslim Mission in 1977 and returned to the original teachings and ideals of Elijah Muhammad. They publish *The Final Call*, originally started by Elijah Muhammad in 1934 and resurrected by Louis Farrakhan in 1979. This group demands social and economic justice for all Black People, equality of employment and education, the freeing of Black prisoners, control of Black institutions and a separate territory. They denigrate integration with whites. In 1984 he pledged a voter registration drive for Jesse Jackson, convinced that a black man could make a credible run for the U.S. Presidency. His fund-raising visit to Libya and his anti-Jewish pronouncements as when he told Jews, "Don't push your 6 million (Holocaust) victims when we (Negroes) lost 100 million (in slavery)". forced Jackson to repudiate the views for which Farrakhan had become notorious. In the 1988 presidential elections he supported Jesse Jackson against Michael S. Dukakis.

Schisms are not a new phenomenon among Black Muslims. In the 1960s, Hamaas Abdul Khaalis led a secession of Ḥanafī Muslims. One Abdul Muhammad, who rejected Wallace D. Fard's teaching that Black Muslims were not Americans and did not owe allegiance to the American flag, led another splinter group, based on loyalty to the American Constitution and the flag. The latter group has not survived.

(b) *Doctrines*. The original Black Muslim movement had basic beliefs that did not conform with Orthodox Islam. Basic to their doctrines was the "hidden truth" regarding the knowledge about the Black Man, God, the devil, the universe, etc. It assigns a cosmic significance to the racial divisions of the human race.

Their creed expresses their Black nationalistic trends. It stated, "In the Name of Allah who came in the person of Master Farad Muhammad, the Beneficient, the Merciful, the One God to whom all things is due, the Lord of the Worlds and his Apostle, the Honourable Elijah Muhammad, the last of the Messengers of Allah". God, in their thinking, was incarnated in a Black person and had as his prophet another Black person. The ascription of divinity to Wallace D. Fard was a gradual process. Initially, he represented himself to his Detroit followers as a brother and an emissary of the Muslim World. He assured them that racially he was one of them, and that all belonged to the first inhabitants of earth, the Original Black Man. He subsequently became known as the *Mahdī*, Prophet and the Son of Man, who had been expected for two thousand years. It is said that he later upgraded his status and announced that he was the Supreme Ruler, Allah in person.

This anthropomorphic concept of God, under Elijah Muhammad, took on a collective dimension. Allah seems to have become identical with the collective entity of the Original People, the Black Nation, the Righteous. Thus the Ḳurʾānic verse "He is the first and the last" (LVII, 3) came to mean that the Black Man was the first and the last, was the maker and owner of the universe. Hence all Blacks were Allah, yet one of them was so in a special sense. Knowledge, wisdom and power were His chief attributes.

Similarly the belief in the Messenger of God has been centred around the person of Elijah Muhammad. The Black Muslims believed in the earlier prophets, including Muḥammad b. ʿAbd Allāh, conceding that the Ḳurʾān was revealed but otherwise ignoring if not belittling him. He was described as "a sign of the real Muhammad". A corollary of this is the claim that Elijah Muhammad's interpretations of the Scriptures were authoritative and that they, including the Ḳurʾān were time-bound. It has been misinterpreted by most Muslim scholars and will be superseded by another revelation.

They believed in the metaphysical view that identifies whiteness with evil and white people with the devil. Yakub, a Black mad scientist in rebellion against Allah, created the white race, a weak hybrid race devoid of any humanity. The race would rule for 6,000 years through trickery and deviousness, causing chaos and destruction. At the end of their time their rule would end in a cosmic apocalyptic battle with the Black Man, who would emerge victorious, since he belongs to a higher order of humanity. This central teaching about Yakub functions as a theodicy, as an explanation and rationalisation for the pain and suffering inflicted upon Black people in America.

Black Muslim eschatology is earthy. The Day of Judgement will occur late in the 20th century. It will mark the destruction of American international, political and economic hegemony. Heaven, thought to be in Mecca or the Muslim world, was said to be a human state of material welfare and spiritual peace. Hell was supposed to be in America, which would be consumed by fire. The political developments in the Middle East in the 1950s and the throwing off of the colonial yoke were events with an eschatological significance. Prophetically, the "devil" was being thrown out of the Original Man's lands. The Hereafter is the period which will follow the end of the dominance of the White man and the destruction of his "world of sin" inaugurating the never-ending rule of the Original and righteous man. Consistent with their denial of "spirit God", they do not believe in life after death. Heaven is on earth and consists of freedom, justice, equality, money, good houses and friendships in all walks of life, enjoying peace of mind and contentment with the God of the righteous and the Nation of the righteous.

Elijah Muhammad's debates with Muslim scholars during his visit in 1959 influenced him in two directions. On the one hand, he was impressed by their arguments in favour of the transcendence of Allah, the mission of the prophet Muḥammad, and the natural humanity of European-Americans, in spite of the fact that these were in direct contrast to those he propagated as fundamental to his religious and social philosophy. On the other hand, it seems to have confirmed him in his convictions that his was the "true" Islam.

Malcolm X's religious beliefs were influenced by developments in the Middle East and his experiences there in 1960 and 1964, and became interwoven with his activist political ideology. Whereas Elijah Muhammad had used the expression "God helps those who help themselves" (cf. Ḳurʾān, VIII, 55/53, XIII, 12/11), Malcolm X's characteristic phrase was "God aids those who get involved and do their utmost to change their circumstances". Islam, nationalism and socialism were compatible. Reference was made to the ancient states of Ghana, Mali and Songhay which had been ruled by Muslims. Arabic, Hausa and Swahili names were adopted, and an emphasis placed on learning Arabic.

His ideas became the foundation on which Warith Deen Muhammad was to build after 1975. Thus he discarded the belief in the divinity of Wallace D. Fard, the apostleship of his father, describing him as a social reformer, the evil nature of European-Americans and the superiority of one people over another. The former hostile position of the Black Muslims towards the govennment of the United States, Christian and Jewish groups, has given way to a conciliatory attitude. Warithuddin Muhammad has participated in several dialogue encounters between Christians, Jews and Muslims. He is opposed to any representation of God. He denounces the Christian Caucasian image of God because of its undertones of racism. In spite of the rapprochement to Islamic orthodoxy, the community has retained its distinctiveness vis-à-vis immigrant Muslim communities.

MUSNAD (a.). 1. As a term applied to the ancient South Arabian script.

In the first couple of centuries AD, Sabaean and

Ḳatabanian inscriptions used the term *ms³nd* for an inscribed bronze plaque affixed (*musnad*) to the wall of a temple; by the 5th-6th centuries AD it came to be applied to inscriptions engraved directly on a rock face. In early Islamic times, *musnad* designated any inscription in the pre-Islamic South Arabian alphabet, the earliest examples of which date back to the first half of the first millenium BC. This has close affinities both with the scripts used by the pre-Islamic North Arabian bedouin and with the Ethiopic alphabet. This South Semitic group of scripts has a common origin, albeit at a very remote date, with the Northwest Semitic group to which the Arabic alphabet belongs, but the two groups have diverged very substantially. The folktale of the "letter of al-Mutalammis" [see AL-MUTALAMMIS] has often been understood as showing that the poet was illiterate; but it could perhaps imply that the poet was able to read only the bedouin (South Semitic) script, while the letter of the king of al-Ḥīra would have been written in early Arabic script.

Old South Arabian script has 29 letters, requiring no diacritics for distinguishing them (as was the case when the Northwest Semitic 22-letter alphabet was adapted for expressing Arabic); it also distinguishes three sibilants, commonly noted as *s*¹, *s*², *s*³ (*s*¹ having etymological cognates with Hebrew *s̲h̲īn*, Mahri *ś*, Arabic *sīn*; *s*² with Hebrew *sīn*, Mahri lateralised *ś*, Arabic *s̲h̲īn*; *s*³ with Hebrew *samek*, Mahri *s*, Arabic *sīn*).

Early Islamic scholars had little or no knowledge of the languages of the *musnad* inscriptions; and what they give as the content of them is imaginary, with no resemblance to their real contents; but the scholars preserved a knowledge of the letter-values of the *musnad* script. In the 8th volume of al-Hamdānī's *Iklīl* (ed. N.A. Faris, Princeton 1940, 123) a list of the letters is given, with their Arabic equivalents; in the exant mss. of the work, however, the forms have become considerably distorted by copyists who had never seen the real inscriptions. In the latter, the letter-forms are upright, geometrically angular, and unligatured, having considerable resemblance to fine Greek uncials of the 5th century BC. For the basic forms, see A.F.L. Beeston, *Sabaic grammar*, Manchester 1984, pp. [vii], 4. There was a conventional alphabetic order, which seems to have been: *h, l, ḥ, m, q, w, s², r, b, t, s¹, k, n, ḫ, ṣ, s³, f, ʿ, ʾ, ḍ, g, d, ġ, ṭ, z, ḏ, y, ṯ, ẓ*. Al-Hamdānī was further aware of some of the orthographic rules of the *musnad* script, such as the fact that long *ā* is not written with *alif*, so that Hamdān, Riyām are written *hmdn, rym*.

Bibliography: given in the article.

(A.F.L. BEESTON)

2. As a term in Arabic grammar. Later classical Arabic grammarians define *musnad* as "that which is leant upon [or propped against] (the headword or subject), is supported by (it)". They define *musnad ilayhi* as "that which supports", i.e. the headword or subject. The relationship between them is termed *isnād* "the act of leaning (one thing against another)", "the relationship of attribution or predication". However, the terms have a different, almost reversed, meaning in Sībawayh, as pointed out by Ulrike Mosel, *Die syntaktische Terminologie bei Sībawayh*, diss. Munich 1975, unpubl., i, 221-3 and n. on 223, and by A. Levin, *The grammatical terms* al-musnad, al-musnad ʾilayhi *and* al-ʾisnad, in *JAOS*, ci (1981), 145-65.

Bibliography: See also Wright, *Arabic grammar*³, ii, 250; Reckendorf, *Arabische Syntax*, 1. (ED.)

3. As a term in the science of *ḥadīt̲h̲*. Here it is applied to an *isnād* that goes back all the way to the Prophet without a link missing. Al-K̲h̲aṭīb al-Bag̲h̲dādī (*al-Kifāya fī ʿilm al-riwāya*, Ḥaydarābād 1357, 21) mentions that some scholars equate *musnad* with *marfūʿ* ("raised to the level" of a Prophetic tradition), but most Muslim *ḥadīt̲h̲* scholars hold that a *marfūʿ isnād* need not necessarily be uninterrupted (*muttaṣil*), whereas in their definition a *musnad isnād* must be at the same time *muttaṣil*. The debate is expertly summarised in Ṣubḥī al-Ṣāliḥ, *ʿUlūm al-ḥadīt̲h̲ wa-muṣṭalaḥuhu*, Damascus 1959, 226-31. (That *marfūʿ isnād*s need not be *muttaṣil* in practice is amply attested in the *Lisān al-mīzān*, Ibn Ḥad̲j̲ar's lexicon comprising biographies of mostly unreliable transmitters, which contains hundreds of traditions explicitly labeled *marfūʿāt* that are adduced as examples of traditions *not* to be relied upon.)

An early use of the term *musnad* can be discerned in a report of the *awāʾil* genre [*q.v.*] about al-Zuhrī (50-124/670-742 [*q.v.*]) which has it that he was the first *man asnada al-ḥadīt̲h̲* (Ibn Abī Ḥātim, *Taḳdimat al-maʿrifa li-kitāb al-D̲j̲arḥ wa 'l-taʿdīl*, Ḥaydarābād 1952, 20), which probably means in this context that he was allegedly the first to make consistent use of *isnād*s (see G.H.A. Juynboll, *Muslim tradition. Studies in chronology, provenance and authorship of early* ḥadīth, Cambridge 1983, 18 f.).

Musnad (plural *masānīd*) as technical term in *ḥadīt̲h̲* literature is, furthermore, used to describe a tradition collection organised on the basis of the first authority in the *isnād* above the Prophet, that is, the Companion. A *musnad* collection may comprise either the *musnad* of one, a few, or all Companions. In this last type of collection, the order in which the different *masānīd* are presented underlies mostly the individual prestige of each Companion, based upon age and alleged date of conversion to Islam, but alphabetically arranged *musnads* are also found (e.g. the *Tuḥfat al-as̲h̲rāf* of al-Mizzī [*q.v.*]). In both, woman Companions are mostly listed only after the men.

Musnads are by no means the oldest tradition collections. There are a few dozen or so collections, often called simply *d̲j̲uzʾ*, *ḥadīt̲h̲* or *aḥādīt̲h̲*, which lack as yet any structured arrangement such as the personal *ṣaḥīfas* listed in *GAS*, i, 84 ff., whose ascription to their alleged authors/compilers is in most cases still to be established. (Perhaps the earliest, not altogether unstructured, collection is one of *ṭalāḳ* traditions associated with ʿĀmir b. S̲h̲arāḥīl al-S̲h̲aʿbī (d. *ca.* 103/721), cf. al-Suyūṭī, *Tadrīb al-rāwī fī s̲h̲arḥ Taḳrīb al-Nawāwī*, ed. ʿA. ʿAbd al-Laṭīf, Cairo 1966, i, 89.) These compilations either preceded by a few decades or originated at the same time as the first *musnads*. There are also the *muṣannafs* [*q.v.*], collections arranged in chapters on the basis of subject matter, such as the *Muwaṭṭaʾ* of Mālik (d. 179/795 [*q.v.*]) or the *Muṣannaf* of ʿAbd al-Razzāḳ b. Hammām (d. 211/827), which were compiled a little earlier or at more or less the same time as the first *musnads*. Beside the early *musnads* and *muṣannaf*-type works (some of which we know of but are no longer extant, see Juynboll, *Muslim tradition*, 22), there emerged various other types of collections limited to one particular genre of traditions, such as compilations entitled *kitāb al-zuhd*, *kitāb al-d̲j̲ihād* or *tafsīr*, cf. the title index of *GAS*, i.

Various collections, though known by the title *Musnad*, underlie the *muṣannaf* principle, i.e. they are subdivided into chapters on legal issues (e.g. the *Musnad* of Abū ʿAwāna (d. 316/928), cf. *GAS*, i, 174, or Muḥammad b. Maḥmūd al-K̲h̲ʷārazmī, *D̲j̲āmiʿ masānīd al-imām al-aʿẓam* (meant is Abū Ḥanīfa, d. 150/767), Ḥaydarābād 1332, and many others; cf. also Goldziher, *Muhammedanische Studien*, ii, 227 ff.).

Other collections are known by two appellatives e.g. the *Sunan* or *Musnad* of ʿAbd Allāh b. ʿAbd al-Raḥmān al-Dārimī (d. 255/869), cf. *GAS*, i, 114, or the *Muṣannaf*, also called *Musnad*, of Ibn Abī Shayba (d. 235/849); both are arranged as *muṣannafs*. This seems to indicate that the identification of tradition collections as belonging to one type or the other was in the early days somewhat loose. This looseness is aptly exemplified in a statement ascribed to the tradition collector Muslim b. al-Ḥadjdjādj (d. 261/875 [*q.v.*]), who is once reported to have said (cf. al-Nawawī in his preface to his commentary on Muslim's *Ṣaḥīḥ*, ed. Cairo 1349, i, 15): *ṣannaftu hādhā al-musnad al-ṣaḥīḥ min thalāthimiʾati alfi ḥadīthin masmūʿatin*, i.e. "I composed this sound *musnad* of mine (which is a *muṣannaf*-type work, later called *al-Djāmiʿ al-ṣaḥīḥ*, or simply *Ṣaḥīḥ Muslim*) out of 300,000 traditions I heard"; besides, the term *musnad* in Muslim's statement is surely to be taken as a double entendre, also conveying the idea of a collection supported by *musnad isnāds*, i.e. going back to the Prophet. Another type of *musnad* is the (unfinished) collection entitled *Tahdhīb al-āthār* of al-Ṭabarī (d. 310/923 [*q.v.*]) in which that collector presents *musnads* of the Companions ʿAbd Allāh b. ʿAbbās, ʿUmar b. al-Khaṭṭāb and ʿAlī b. Abī Ṭālib, each tradition being accompanied by a host of reports (with *mursal* [*q.v.*], *mawḳūf* (i.e. "stopping" at the Companion), *maḳṭūʿ* (i.e. "cut off" at the level of the Successor) and *munḳaṭiʿ* (i.e. interrupted *isnāds*)) which substantiate it, list its shortcomings (*ʿilal*) and/or illustrate its legal and ethical implications. These accompanying reports may, with J. Schacht (see *JRAS* [1949], 147, and *Origins*, 5; cf. also Juynboll, *Some notes on the earliest* fuqahāʾ *of Islam distilled from* ḥadīth *literature*, in *Arabica* [1992]) be taken to be of considerably older origin than the traditions going back via uninterrupted *isnāds* all the way to the Prophet on the basis of which al-Ṭabarī's collection is organised. For an appraisal of al-Ṭabarī's *Tahdhīb*, see F. Rosenthal's general introduction (128 ff.) in vol. i of the English translation (SUNY Press 1989, New York) of al-Ṭabarī's *Taʾrīkh*.

The oldest pur sang *musnads* presently available in printed editions are those compiled by Abū Dāwūd al-Ṭayālisī (d. 203/819; that the only available edition of Ḥaydarābād 1321 should be considered as far from complete is argued by Juynboll in the *Arabica* [1992] article, n. 27), al-Shāfiʿī (d. 204/820 [*q.v.*]) (although this collection in the currently available edition is arranged according to the *muṣannaf* principle) and ʿAbd Allāh b. al-Zubayr al-Ḥumaydī (d. 219/834). By far the most famous early *musnad* is that of Aḥmad b. Ḥanbal (d. 241/856 [*q.v.*]). For its *musnad* arrangement, see M. Hartmann, *Die Tradenten erster Schicht im Musnad des Aḥmad Ibn Ḥanbal*, in *MSOS*, ii (1906), 148-76, which gives an alphabetical list of the Companions included. Furthermore, each entry of a Companion in the index volume (viii) of *Concordance et indices de la tradition musulmane* indicates where his *musnad* is located in Ibn Ḥanbal's *Musnad*. (There is now also a two-volume index based on *ṭarafs*, see below.) For a further evaluation of the work and its two editions (one complete and one left unfinished), see Juynboll, *Aḥmad Muḥammad Shākir (1892-1958) and his edition of Ibn Ḥanbal's* Musnad, in *Isl.*, xlix (1972), 221-47. Among the early *musnads* not yet mentioned and (partly) available in printed editions are the following:

Yaʿḳūb b. Shayba (d. 262/875) wrote a *musnad muʿallal* (see Juynboll, *Muslim tradition*, 239) which contains, apart from the traditions centring on one Companion, the *ʿilal* (= "defects") in parallel reports which are mostly supported by single strand *isnāds*. Of this work, only the part containing the *musnad* of ʿUmar b. al-Khaṭṭāb is extant today (ed. Sāmī Ḥaddād, Beirut 1940);

Aḥmad b. ʿAlī al-Marwazī (d. 292/905, see *GAS*, i, 162) compiled a *musnad* of Abū Bakr traditions, many of which are listed also in the Six Books;

Ibn al-Bāghandī (d. 312/925, see *GAS*, i, 172 f.) compiled a *musnad* of a Successor, the Umayyad caliph ʿUmar b. ʿAbd al-ʿAzīz, arranged according to the Companions between ʿUmar II and the Prophet;

A *musnad* collected by Ibn Rāhawayh (d. 238/853 [*q.v.*], see *GAS*, i, 109 f.) was partly edited by Jamila Shawkat, Ph.D. diss., Cambridge 1984. This edition only contains the traditions attributed to ʿĀʾisha.

Tracing traditions in pre-canonical and other *musnads* and *muṣannafs* is no sinecure. The recently-published indices of a number of collections (e.g. al-Ḥumaydī, ʿAbd al-Razzāḳ, Ibn Abī Shayba, Ibn Ḥanbal, Abū Nuʿaym's *Ḥilya*, Ibn Ḥibbān's *Ṣaḥīḥ*) require that the tradition which is sought is first reduced to its *ṭaraf*, a technical term for the gist, or most salient feature, of a tradition. It is these *ṭarafs* which are alphabetically arranged in those index volumes, but attempts to arrive at the correct *ṭaraf* of a given tradition for tracing purposes often lead nowhere. On the other hand, although Ibn Ḥanbal's *Musnad* is not one of the recognised six canonical collections, it is incorporated in *Concordance* etc. while al-Ṭayālisī's was drawn upon in Wensinck's *Handbook of early Muhammadan tradition*, albeit not satisfactorily. When that manual is consulted in vain, al-Ṭayālisī's index of Companions—a typical feature of several ancient *musnads* lacking in *muṣannafs*—often comes in handy.

Although tracing traditions to these early *musnads* which pre-date the canonical collections may cause problems, these collections are nonetheless indispensable tools in *isnād* analysis, and this is also true for early *muṣannafs*. *Isnād* analysis seeks to determine when and where a tradition originated and who may be held responsible for its proliferation, all this on the basis of its *isnād*. The earlier the collections, the more often can historically relevant *isnād* data be distilled from them in order to shore up, or, the case so being, undermine, the historicity of the transmission position of some of Islam's most important and prolific "common links", i.e. the originators of the most ancient and authoritative traditions in the entire literature.

al-**MUSTAḌĪʾ** bi-Amr ʼllāh, Abū Muḥammad al-Ḥasan, ʿAbbāsid caliph (566-75/1170-80), born on 23 S̲h̲aʿbān 536/23 March 1142, son of al-Mustand̲j̲id [*q.v.*] and an Armenian slave named G̲h̲aḍḍa. After his father's death on 9 Rabīʿ II 566/20 December 1170, al-Mustaḍīʾ succeeded him, and at the beginning of the following year was formally recognised as caliph in Egypt also, which passed into the hands of the Ayyūbids at this time [see fāṭimids]. The assassins of al-Mustand̲j̲id soon quarrelled among themselves. ʿAḍud al-Dīn [*q.v.*], whom al-Mustaḍīʾ had been forced to make vizier, was dismissed by 567/1171-2 at the instigation of the *amīr* Ḳaymaz. In D̲h̲u 'l-Ḳaʿda 570/May 1175, Ḳaymaz was about to attack the treasurer Ẓāhir al-Dīn b. al-ʿAṭṭār, but the latter fled to the caliph, whereupon Ḳaymaz began to besiege the palace of the latter. Al-Mustaḍīʾ appealed to the people to help him; the house of Ḳaymaz was pillaged, and he himself fled but died soon afterwards, and ʿAḍūd al-Dīn again became vizier. Al-Mustand̲j̲id already had quarrelled with S̲h̲umla, lord of K̲h̲ūzistān. In 569/1173-4 a war broke out between the latter's nephew Ibn S̲h̲ankā and al-Mustaḍīʾ; Ibn S̲h̲ankā was soon taken prisoner and put to death. The insignificant al-Mustaḍīʾ died on 2 D̲h̲u 'l-Ḳaʿda or, according to another statement, at the end of S̲h̲awwāl 575/end of March 1180 and was succeeded by al-Nāṣir [*q.v.*].

(K.V. Zetterstéen)

MUSTAD̲J̲ĀB K̲H̲ĀN BAHĀDUR, Nawwāb, thirteenth son of the celebrated Rohilla leader Ḥāfiẓ al-Mulk Ḥāfiẓ Raḥmat K̲h̲ān (1707-74) and author of a biography of his father, which he wrote in Persian under the title *Gulistān-i Raḥmat*. Ḥāfiẓ Raḥmat K̲h̲ān, who was an Afg̲h̲ān of the tribe of Yūsufzāy by descent, had been since 1161/1748 a chief in Rohilk̲h̲and (Kaṭahr) and throughout his life waged a bitter warfare with the Marāṭhās. He fell in 1188/1774 in a fight at Mīrānpūr Katra where he was fighting against the combined forces of the Nawwāb of Oudh (Awadh [*q.v.*]) S̲h̲ud̲j̲āʿ al-Mulk and the English. Warren Hastings' act in supporting the Nawwāb with English troops became the subject of a judicial investigation in the English Parliament. Mustad̲j̲āb K̲h̲ān's book describes Ḥāfiẓ Raḥmat K̲h̲ān as a fine representative of Afg̲h̲ān chivalry and contains much of value for studying the relations between the individual Afg̲h̲ān tribes.

Bibliography: There is an abbreviated English translation of the *Gulistān-i Raḥmat* by Ch. Elliott, *The life of the Hafiz ool-moolk, Hafiz Rehmut Khan, written by his son the Nuwob Moost'ujab Khan Buhadoor and entitled Goolistan-i Rehmut*, London 1831; H. Hamilton, *The East-India gazetteer*[2], London 1828, ii, 468; *Imperial gazetteer of India*, London 1908, xx, 138, xxi, 307-8; Storey, i, 696-7. (E. Berthels)

MUṢṬAFĀ I, the fifteenth Ottoman sultan (1026-7/1617-18 and 1031-2/1622-3), was born in the year 1000/1591 as son of Meḥemmed III [*q.v.*]. He owed his life to the relaxation of the *ḳānūn* authorising the killing of all the brothers of a new sultan, and was called to succeed his brother Aḥmed I [*q.v.*] at the latter's death on 23 D̲h̲u 'l-Ḳaʿda 1026/22 November 1617. But his weakmindedness —which is said to have him made escape death on account of superstitious fear of Aḥmed— made him absolutely incapable of ruling. Aḥmed's son ʿOt̲h̲mān, who felt himself entitled to the succession, had little difficulty in procuring Muṣṭafā's deposition in a meeting in the Imperial *Dīwān*, by the *ḳizlar ag̲h̲asi*, the *muftī* and the *ḳāʾim-maḳām*, the grandvizier K̲h̲alīl Pas̲h̲a [*q.v.*] being absent. This happened on 1 Rabīʿ I 1027/26 February 1618.

Unexpectedly, Muṣṭafā I was again called to the throne when, on 8 Rad̲j̲ab 1031/19 May 1622, the rebellion of the Janissaries broke out against ʿOt̲h̲mān II [*q.v.*]. He was taken by force from his seclusion in the ḥarem and the Janissaries forced the *ʿulamāʾ* to acknowledge him as sultan. The next day ʿOt̲h̲mān was killed and until June the grand vizier Dāwūd Pas̲h̲a, the man responsible for the murder, remained in power. Then he was deposed by the *wālide*. The real masters were the Janissaries and Sipāhīs; several grand viziers were nominated and deposed again at their pleasure. The Sipāhī party began, after some time, to exact vengeance for ʿOt̲h̲mān and in January 1623, when Gürd̲j̲ü Pas̲h̲a [*q.v.*] was grand vizier, Dāwūd Pas̲h̲a was killed. Soon the Janissary party came again to influence under the grand vizier Mere Ḥuseyn Pas̲h̲a (3 Rabīʿ 1032/3 February 1623). The latter succeeded in maintaining himself until 23 S̲h̲awwāl/20 August; then the general feeling amongst the *ʿulamāʾ* and the people, combined with the steadily growing opposition in the provinces against the tyranny of the military in the capital, as manifested by the action of Sayf al-Dīn-og̲h̲lu in Tripoli and still more by the revolt of Ābāza Pas̲h̲a [*q.v.*] in Erzerūm, brought about Mere Ḥuseyn's deposition. The new grand vizier, Kemānkes̲h̲ ʿAlī Pas̲h̲a [*q.v.*], together with the *muftī*, deposed the sultan on 15 D̲h̲u 'l-Ḳaʿda 1032/10 September 1623 and called Aḥmed's son Murād to the throne as Murād iv [*q.v.*].

During all his reign, Muṣṭafā had continued to give signs of his complete mental aberration; he died in 1638 and was buried in the Aya Sofya. The only important international act that took place during his reign was the peace concluded with Poland in February 1623.

Bibliography: The Turkish sources for this period are the historical works of Naʿīmā, Ḥād̲j̲d̲j̲ī K̲h̲alīfa (*Fed̲h̲leke*), Pečewī, Ḥasan Bey-zāde and Ṭūg̲h̲ī. Contemporary reports in the *Memoirs* of the English envoy Sir Thomas Roe. See further the general historical works of von Hammer, Zinkeisen and Jorga; A.D. Alderson, *The structure of the Ottoman dynasty*, Oxford 1956, index s.v.; S.J. Shaw, *History of the Ottoman empire and modern Turkey*, i, Cambridge 1976, 190-1, 193-4; R. Mantran (ed.), *Histoire de l'empire ottoman*, Paris 1989, index s.v.; *İA*, art. s.v. (A. Münir Aktepe).

(J.H. Kramers)

MUṢṬAFĀ II, the twenty-second Ottoman sultan (1106-15/1695-1703), was a son of Meḥemmed IV [*q.v.*].

Born in 1664, he succeeded to his uncle Aḥmed II on D̲j̲umādā II 1106/6 February 1695, at a time when the empire was at war with Austria, Poland, Russia and Venice. The new sultan in a remarkable *k̲h̲aṭṭ-i s̲h̲erīf* proclaimed a Holy War and carried out, against

the decision of the *Dīwān*, his desire to take part in the campaign against Austria. Before his departure a mutiny of the Janissaries had cost the grand vizier Defterdār ʿAlī Pas̲h̲a his life (24 April 1695), and the campaign was led by the new grand vizier Elmās Meḥmed Pas̲h̲a [*q.v.*]. The Turkish army operated not without success in the region of Temesvár, taking Lippa, Lugos and Sebes. The Venetians had been beaten again in September. In October, Azov was delivered from the Russian siege. Next year, the sultan and his army were again successful in raising the siege of Temesvár, but no part of the lost territory could be recovered from the Austrians. That year, however, the Russians took Azov. The campaign of 1696 is memorable for the heavy defeat inflicted on the Turks near Zenta on the Theiss (13 Ṣafar 1108/11 September 1696) where Elmās Meḥmed lost his life, while the sultan, who had already crossed the river, had to fly to Temesvár. The imperial seal fell into the hands of the Austrians. From Temesvár, Muṣṭafā nominated ʿAmūd̲j̲a-zāde Ḥuseyn [*q.v.*], of the Köprülü family, as his grand vizier. Under this very able statesman, peace was at last concluded. In 1698 the grand vizier went to the frontier, while the sultan stayed at Edirne, but the peace negotiations were pursued more earnestly than the war. In October of that year began the peace negotiations at Carlowitz (Turk. Ḳarlofča [*q.v.*]) on the Danube, where on 25 S̲h̲aʿbān 1110/26 February 1699 peace was concluded with Austria, Poland and Venice. With Russia, only an armistice was concluded, to be followed in 1700 by a definite peace. The English and Dutch ministers took part in the negotiations as intermediaries. The peace treaty meant the loss of Hungary and Transylvania, with the exception of the district of Temesvár; Poland recovered Kameniecz, while Venice had to cede Lepanto and some other towns in the Morea. With Russia, the Dniestr became the frontier.

The peace enabled the grand vizier to bring order into the affairs of state, which had suffered by the long and disastrous war. The Reʾīs Efendi Rāmī and the *muftī* Fayḍ Allāh, who had great influence with the sultan, were his collaborators. Some interior troubles were easily appeased; only in 1701 a campaign in ʿIrāḳ was needed to take Baṣra from the hands of a local party that had submitted to Persia. Fortresses were put in a better state of defence and a new *Ḳānūn-nāme* was issued for the fleet. Ḥuseyn Pas̲h̲a resigned his offices in September 1702 and died soon afterwards. His deposition was partly the work of the *muftī*, who made the sultan appoint in his place Dalṭaban Meḥmed Pas̲h̲a. When the latter showed himself of too warlike a disposition and caused at the same time unrest in the capital by favouring the claims of the Tatar *k̲h̲ān*, the influence of the *muftī* caused his deposition and execution (Ramaḍān 1114/January 1703). Rāmī Pas̲h̲a [*q.v.*] became grand vizier. Rāmī's measures to enforce the authority of the central government were salutary but made him many enemies; moreover, the Janissaries were not contented with a grand vizier who was not a military man. The general unrest was increased by the permanent residence of Muṣṭafā in Edirne. All these circumstances brought about in July 1703 a Janissary revolt in Istanbul, directed at first against Rāmī Pas̲h̲a and against the *muftī*. The latter's deposition was obtained without much difficulty, but the rebellion continued under the leadership and organisation of a certain Ḥasan Ag̲h̲a. A deputation of the rebels to Edirne was imprisoned and treated harshly. Too late, the sultan promised to come himself to give a *fatwā* authorising the sultan's deposition. In August 1703 a rebel army went on its way to Edirne, after having agreed on Muṣṭafā's brother Aḥmed as successor to the throne. When Muṣṭafā saw himself at last abandoned by his own Janissaries, he abdicated on 22 S̲h̲aʿbān 1115/21 August 1703. He died soon afterwards on 8 Rabīʿ II 1115/31 December 1703, and was buried in the Aya Sofia. He is rightly considered as a wise and good ruler, as is proved by his careful choice of able statesmen. He wrote poems under the *tak̲h̲alluṣ* of Meftūnī and Iḳbālī. Under him, the imperial *ṭug̲h̲ra* [*q.v.*] appeared for the first time on the Ottoman coins.

Bibliography: The chief source is the *Taʾrīk̲h̲* of Rās̲h̲id, besides an anonymous historical work, used by von Hammer and only mentioned in a note by Babinger, *GOW*, 247 and 248. Useful information also in the history of the Crimea by Meḥmed Girāy (*GOW*, 235) and Sayyid Meḥmed Riḍā (*GOW*, 281). The *Ins̲h̲āʾ* of the grand-vizier Rāmī Pas̲h̲a (not mentioned in *GOW*) has importance as containing contemporary documents. See further the general histories of von Hammer, Zinkeisen and Jorga; A.D. Alderson, *The structure of the Ottoman empire*, Oxford 1956, index s.v.; S.J. Shaw, *History of the Ottoman empire and modern Turkey*, i, Cambridge 1976, 223-8; R. Mantran (ed.), *Histoire de l'empire ottomane*, Paris 1989, index s.v.; *İA*, art. s.v. (Cengiz Orhonlu). (J.H. Kramers)

MUṢṬAFĀ III, the twenty-sixth sultan of the Ottoman Empire (1171-87/1757-74), was one of the younger sons of Aḥmed III [*q.v.*] and was born on 14 Ṣafar 1129/28 January 1717 (*Sid̲j̲ill-i ʿot̲h̲mānī*, i, 80). When he succeeded to the throne, after ʿOt̲h̲mān III's [*q.v.*] death, on 16 Ṣafar 1171/30 October 1757, his much more popular brother and heir to the throne, Meḥemmed, had recently died, in Rabīʿ I 1170/December 1756. Turkey enjoyed at that time, since the peace of Belgrade of 1739, a period of peace with her neighbours. Since December 1756 the very able Rāg̲h̲ib Pas̲h̲a [*q.v.*] was grand vizier and remained the real administrator of the empire until his death in 1763. Rāg̲h̲ib had removed from the capital all those who might have counteracted his influence, taking at the same time wise financial measures and endeavouring to keep the military forces in good condition. The sultan meanwhile, who was of a lively and active temperament, busied himself, like his predecessor, with regulations concerning the clothes of his non-Muslim subjects and the appearance in public of Muslim women; at this time there was also taken up again the never-realised plan of linking the gulf of Izniḳ with the Black Sea [see ṢABAND̲J̲A]. The Seven Years' War in Europe (1756-63) had not remained without influence on the policy of the Porte; after long hesitation, Turkey agreed at last to conclude a treaty of friendship with Prussia (22 S̲h̲aʿbān 1174/29 March 1761). Rāg̲h̲ib himself was inclined to conclude even an alliance, but the sultan and the influential *ʿulamāʾ* were peacefully minded.

After Rāg̲h̲ib's death, Muṣṭafā began to reign himself and different grand viziers succeeded one another at short intervals. From 1765 to 1768 the grand vizierate was held by Muḥsin-zāde Meḥmed Pas̲h̲a, under whom the disastrous war with Russia broke out. Difficulties with Russia had already commenced in 1762, when Russia had supported the ruler of Georgia against the Turkish Pas̲h̲a of Ak̲h̲isk̲h̲a (Čaldïr); here, as well as in Montenegro [see ḲARA DAG̲H̲], Russian emissaries worked in secret against the Turkish rule. Moreover, the *k̲h̲ān* of the Crimea repeatedly complained about Russian military measures on his northern frontier, while the party of

the Polish Confederates urgently appealed for the intervention of the Porte against the aggression of Catherine's government on Polish liberty. In these circumstances, the Porte had no more interest in seeking the alliance of Prussia, where, in 1764, Aḥmed Rasmī Efendi had gone as envoy, of which embassy he afterwards wrote his well-known *Sefāret-nāme*. The sultan himself was decidedly anti-Russian, but the diplomacy of the Russian minister Obreskov and the pacifism of the *ʿulamāʾ* delayed the war, until, in August 1768, Muṣṭafā obtained from the then *muftī* Welī al-Dīn a *fatwā* authorising the war with Russia. War was declared only on 6 October, after the dismissal of the grand vizier Muḥsin-zāde, who had advised delay until the spring. Obreskov was imprisoned in Yedi Ḳule.

The war began in January with destructive raids of the Crimean Tatars in southern Russia under their newly appointed *khān* Ḳirīm Girāy; at that time, de Tott was an eye-witness with the Tatar army. In Dhu 'l-Ḳaʿda 1182/March 1769, the then grand vizier Meḥmed Emīn Pasha left Istanbul with the Holy Banner; on this occasion there was an outburst of Muslim fanaticism against the Austrian internuntio and his party, who had come to witness the procession. While the grand vizier went to the Dobrudja, the Russians made an attack on Chotin (Turk. Khočin), which they were able to take only in August. In the meantime, the grand vizier had been deposed and executed; his place was taken by Moldowandji ʿAlī Pasha, who fought with the Russians on both sides of the Dniestr. Other Russian armies took Jassy and Bucharest and advanced into Transcaucasia. The year 1184/1770 was still more disastrous for Turkey. The Russians reached, through Rumania, the Danube and in the autumn they took Kilia, Bender and Braila, in the immediate neighbourhood of the Turkish general headquarters in Baba Daghi. In the same year, a Russian fleet appeared in the Mediterranean; several towns in the Morea were conquered and evacuated again, but the heaviest blow was the burning of the Turkish fleet in the bay of Česhme (Rabīʿ I 1184/July 1770). Moldowandji ʿAlī —already dispossessed of his grand vizierate— was sent to strengthen, with de Tott, the defences of the Dardanelles. But the Russian fleet had ceased to be a danger and the Danube campaign of the following spring also was rather favourable for the Turks. In the beginning of 1771 the military organisation had been improved. That year, however, the Russians forced the isthmus of Perekop and conquered the entire Crimea. This was a definite loss for Turkey, and a great majority of the Tatars declared their allegiance to the Russian empress. The Turks were able, however, to remain in Očakow and Kilburnu. In Istanbul, meanwhile, laborious diplomatic negotiations went on with the envoys of the European powers who offered to mediate, notably Austria and Prussia. With Austria the Porte concluded in July 1771 a secret "treaty of subsidy" for diplomatic services, while the Porte disinterested herself completely in Polish affairs, going so far as to propose a partition of Poland. The result was an armistice, concluded in June 1772 at Giurgewo, followed by the peace congress of Fočani (Djumādā I 1186/August 1772), where Turkey's chief representative was the arrogant *nishāndji* [*q.v.*] ʿOthmān Efendi. After the failure of the negotiations, the armistice was prolonged and a new conference began at Bucharest in November. These negotiations were again broken off in Dhu 'l-Ḥidjdja 1186/March 1773, mainly from lack of agreement on the subject of the Turkish fortresses on the Black Sea; as to the Crimea, Turkey had already agreed to a formula such as was later adopted in the peace of Küčük Ḳaynardji. In Istanbul, it was chiefly the *ʿulamāʾ* who had opposed the Russian peace conditions. The war in 1187/1773 was not very eventful; the general headquarters had been transferred to Shumma after Muḥsin-zāde had become grand vizier a second time (Dec. 1771). The Russians won a victory at Ḳaraṣu in the Dobrudja, but attacked Silistra and Varna in vain. Beirut was bombarded by Russian ships in connection with the rebellion of the Mamlūk ʿAlī Bey [*q.v.*] in Egypt, who was supported by them. In the summer of 1773, sultan Muṣṭafā made known his desire to accompany the army against the Russians, but he was prevented from doing so by his entourage and by his illness, to which he succumbed on 9 Shawwāl 1187/24 December 1773, to be succeeded by his brother ʿAbd al-Ḥamīd I [*q.v.*]. Muṣṭafā was buried in his own *türbe*, connected with the Lāleli Djāmiʿi, which he had begun to build in 1759 (*Ḥadīḳat al-djawāmiʿ*, i, 23).

Muṣṭafā III is praised in the Turkish sources as a good ruler. He had a special liking for religious disputations held in his presence and was particularly interested in astrological calculations. He took an interest in the least important affairs, and this prevented him from such a real statesmanlike insight as was much wanted in the later years of his reign. In his way, he was an "enlightened despot". But even a more able ruler would probably have failed to save Turkey from her military inferiority against the Russian armies; measures of military organisation were taken with the aid of de Tott, but this could not prevent the desertion of the troops from assuming disastrous proportions during certain episodes of the war. Besides the Lāleli Djāmiʿ, Muṣṭafā built the Ayazma Djāmiʿi at Scutari for his mother; and he caused a new suburb of Istanbul to be built outside the Yeñi Ḳapu. His reign is further marked by the extremely severe earthquake that laid large parts of the capital in ruins in 1766.

Bibliography: The *Taʾrīkh* of Wāṣif [*q.v.*] is the chief historical source for Muṣṭafā's reign; Wāṣif himself played a prominent part as secretary during the long-drawn-out peace negotiations with Russia. It is completed by the *Taʾrīkh* of Enwerī. The *Waḳāʾiʿ-nāme* of Ḍiyāʾī, son of Ḥekīm-oghlu ʿAlī Pasha, seems not to be preserved (*GOW*, 300). The well-known Aḥmed Rasmī Efendi wrote a history of the war with Russia under the title *Khulāṣat al-iʿtibār* (*GOW*, 310). The *Talkhīṣāt* of the learned grand vizier Rāghib Pasha (*GOW*, 288) give documents from the beginning of Muṣṭafā's reign. A contemporary western source is the *Mémoires sur les Turcs et les Tartares* of Baron Fr. de Tott, Maestricht 1785. See further the historical works of von Hammer, Zinkeisen and Jorga; A.D. Alderson, *The structure of the Ottoman dynasty*, Oxford 1956, index s.v.; S.J. Shaw, *History of the Ottoman empire and modern Turkey*, i, Cambridge 1976, 246-50; R. Mantran (ed.), *Histoire de l'empire ottoman*, Paris 1989, index s.v.; *İA*, art. s.v. (Bekir Sıtkı Baykal).

(J.H. Kramers)

MUṢṬAFĀ IV, the twenty-ninth sultan of the Ottoman Empire (1222-3/1807-8), was a son of ʿAbd al-Ḥamīd I and was born on 26 Shaʿbān 1193/19 September 1778 (Meḥmed Thüreyyā, *Sidjill-i ʿothmānī*, i, 81). When the anti-reform party, headed by the *ḳāʾim-maḳām* Mūsā Pasha and the *muftī*, and supported by the Janissaries and the auxiliary troops of the Yamaḳs, had dethroned Selīm III [*q.v.*] on 21 Rabīʿ I 1222/29 May 1807, Muṣṭafā was proclaimed sultan. Immediately afterwards, the *niẓām-i djedīd*

[*q.v.*] corps was dissolved and Ḳabaḳdji-oghlu, the leader of the Yamaḳs, was made commander of the Bosphorus fortresses. Turkey was at that time at war with Russia and England, but peace negotiations had already begun and, moreover, the foreign affairs of the empire were really governed by general European politics. A secret article annexed to the peace treaty of Tilsit (7 July 1807) had in view —already at that time— a conditional partition of Turkey. Turkey's ally, France, tried to urge a peace with Russia and obtained a Russo-Turkish armistice at Slobosia (near Ginrgewo), by the terms of which the Danube principalities were to be evacuated. When, in the end, Russia was unwilling to put into effect the terms of the armistice, relations with France became strained (departure of Sebastiani in April 1808) and new preparations for war followed, while overtures were made to England; the English admiral Codrington had already entered into negotiations with ʿAlī Pasha [*q.v.*] of Yanina.

Meanwhile, the *ḳāʾim-maḳām* and the *muftī* were the real rulers in Istanbul; the grand vizier Čelebi Muṣṭafā Pasha remained with the army in Edirne and had no influence. The Janissaries and Yamaḳs, however, continued to be rebellious; measures had to be taken against them and the sultan himself went so far as to favour secret plans for restoring the *niẓām-i djedīd* under another name. In December 1807 Mūsā Pasha was dismissed from the office of *ḳāʾim-maḳām* —on account of dissension with the *muftī*— and was succeeded by Ṭayyār Pasha. The latter, dismissed in his turn, fled to Bayraḳdār Muṣṭafā Pasha [*q.v.*], an acknowledged friend of the reform party, in Rusčuḳ. From here began the action against the régime in the capital. Bayraḳdār went first to Edirne and joined forces with the grand vizier in June 1808. They arrived in July before the gates of Istanbul at Dāwūd Pasha. Sultan Muṣṭafā came there on July 23 to accept their terms, which for the moment were only the destruction of the ruling party and of the Yamaḳs. On 28 July, Bayraḳdār, after having seized the sultan's seal from the grand vizier, began to act on his own account. He went with his troops to the palace, where the sultan, —who had left shortly before for an excursion— returned in haste. He had only the time to order the execution of Selīm III, but was deposed immediately afterwards by the intruders, who put his younger brother Maḥmūd on the throne. After having passed some months in confinement, he was killed by order of the new sultan on 16 November in the days of the general revolt against Bayraḳdār's régime, when the existence of the former sultan had become a real danger for Maḥmūd's position. Muṣṭafā was buried in the *türbe* of his father ʿAbd al-Ḥamīd I, near the Yeñi Djāmiʿ.

(J.H. Kramers)

MUṢṬAFĀ, the name of several princes belonging to the Ottoman dynasty.

1. Muṣṭafā Čelebi, Düzme, eldest son of Bāyezīd I [*q.v.*], counter-sultan or pretender (?-804/1402, 825/1422, or *ca.* 1430).

The date of birth of Muṣṭafā, a son of the Ottoman sultan Bāyezīd I [*q.v.*], is unknown. Shükr Allāh (ed. Atsız, 58), lists Muṣṭafā as the last of his six [male] children, all of whom were born of slave-women (*ḳïrnaḳ*). It is probable that Bāyezīd had appointed Muṣṭafā governor of Ḥamīd and Tekke [*q.vv.*]; indubitably it was at the head of troops from these provinces that he fought alongside his father at the battle of Ankara (16 Dhu 'l-Hidjdja 804/28 July 1402). Thereafter the fog of uncertainty descends on the career of Muṣṭafā—or of the resourceful and plausible pretender who later took his name.

Shükr Allāh (*loc. cit.*) states simply that Muṣṭafā was taken prisoner with his father and was never seen again. The general view is that he was taken by Tīmūr into captivity in Central Asia, but a reading of Ibn ʿArabshāh (Cairo, 1310, 133; tr. Sanders, 187) would seem to suggest that Tīmūrid agents, having failed to locate him after the battle, contented themselves with putting to death a large number ("nearly thirty") of his namesakes. Some Ottoman sources, however, indicate clearly that Muṣṭafā was taken captive by Tīmūr, returning home after "some years" (Enwerī, *Düstūrnāme*, ed. Yınanč, 91; cf. *Medhal*, 97); he may have been liberated, together with other princely hostages, after the death of Tīmūr (Feb. 1405).

Thus at least three major historical problems must be faced in any treatment of Muṣṭafā's career; the authenticity of his claim to be a son of Bāyezīd I; his whereabouts during the years following 1402, if, as seems almost certain, he was a son of Bāyezīd, or, alternatively, the origins of the pretender ("*düzme*"); and, finally, the serious discrepancies which exist between the Byzantine, Ottoman and Latin sources concerning the real or pretended Muṣṭafā's activities. None of these problems has yet been provided with a totally watertight solution.

The Ottoman view, that the post-1415 Muṣṭafā was an impostor, may be traced back to the remark—possibly apocryphal—attributed to Meḥemmed I in the context of the events of 1415-16, that the real Muṣṭafā had died in childhood (Chalcocondyles, tr. B. de Vigenère, Paris 1662, 97). The earliest Ottoman literary reference to Muṣṭafā, in the *taḳwīm* for 835/1431-2 (C.N. Atsız, *Osmanlı tarihine ait takvimler*, Istanbul 1961, 70) also describes him as an impostor (*djaʿlī*), as do both ʿĀshïḳpashazāde and the Anonymous chronicles, which employ what came to be the generally adopted sobriquet of *düzme*. Conversely, in the later *taḳwīms* published by Turan, in Enwerī and, (probably as a consequence) in the conflation of ʿĀshïḳpashazāde and the Anonymous made by Neshrī, the authenticity of Muṣṭafā is recognised (cf. M.H. Yınanç, *Medhal*, 96; V.L. Ménage, *Beginnings of Ottoman historiography*, 175-6).

The reappearance of Muṣṭafā in 1415 is also historically problematical. On the one hand, Venetian sources report the arrival there in January 1415 of a galley from Trebizond, bearing a "Turkish" agent charged with negotiations "with the basileus" on behalf of Muṣṭafā. This may also be connected with a report (Chalcocondyles, *loc. cit.*) that he had taken refuge at Sinop in the territory of the Isfendiyār-oghullarï [*q.v.*], and with further Venetian reports that Muṣṭafā was "in Asia", looking for a galley to transport him to Europe, where he claimed to have many partisans. Equally, Ragusan sources reported that in mid-June 1415 Muṣṭafā was [still] in Trebizond, gathering support (but from whom?) against Meḥemmed. By August 1415 he was in Wallachia under the protection of the *voivod* Mircea, attracting support from the *beg*s of Rūmeli, and raiding into the Ottoman-held lands south of the Danube (F. Thiriet,

Régestes du Sénat de Venise concernant la Romanie, *ii*, (*1400-1439*), Paris-The Hague, 1959, nos. 1563-4; S. Stanojević, *Die Biographie Stefan Lazarevic's von Konstantin dem Philosophen als Geschichtsquelle*, in *Archiv für slavische Philologie*, xviii [1896], 456-7). On the other hand, there is conflicting evidence furnished by a late copy of a *nis̲h̲ān* tentatively attributed by Wittek to Muṣṭafā (*Zur einigen frühosmanischen Urkunden* (*III*), in *WZKM*, lv, 135-41; cf., for Wittek's brilliant if questionable reconstruction of Muṣṭafā's *tug̲h̲rā*, *ibid.*, 136-7). This document is ostensibly dated 808/1405, but later (*Urkunden*, (*IV*), 271, n. 20), Wittek reassigned it "aus historischen Gründen" (unspecified) to 818/1415, thus placing Muṣṭafā, in March of that year, on the Asian shore of the Bosphorus in Ḳod̲j̲a Eli, "playing at ruler" under Byzantine protection. Accordingly, neither 1405 nor 1415 may be regarded as entirely tenable dates and the authenticity of this supposed *nis̲h̲ān* of "Muṣṭafā b. Bāyezīd" must in some degree be called into question. On historical grounds there may be some reason to reattribute it to Muṣṭafā's nephew and namesake, "Küčük" Muṣṭafā b. Meḥemmed [*q.v.*].

The activities of Muṣṭafā in 819/1416 are inextricably bound up with the simultaneous revolt against Meḥemmed I led by *s̲h̲ayk̲h̲* Bedr el-Dīn (cf. the study by M. Balivet, in *Turcica*, xviii [1986], 137-46). His own attempt to seize power, in cooperation with Mircea of Wallachia and the *beglerbegi* of Nigbolu, the former Aydîn-og̲h̲lu Ḳara D̲j̲unayd [*q.v.*], failed, Muṣṭafā and D̲j̲unayd were defeated by Meḥemmed outside Byzantine-held Thessaloniki, and forced to seek refuge with its governor, Demetrios Leontarios. By an agreement concluded between Meḥemmed and the Byzantine emperor Manuel, the sultan agreed to raise his siege of the city in exchange for the detention of Muṣṭafā in Byzantine custody for Meḥemmed's lifetime (Ducas, §XXII). Muṣṭafā was exiled to Limnos. Chalcocondyles, i, 98 states that Muṣṭafā and D̲j̲unayd were held intitially at Monemvasia, later on Imbros and Limnos; Enwerī, 92, that they were detained on Aghrîboz (Negroponte).

The sequence of events concerning Muṣṭafā's counter-sultanate in Rūmeli in 824-5/1421-2 has been fairly satisfactorily established by recent research (cf., for a clear account, C. Imber, *The Ottoman Empire, 1300-1481*, Istanbul, 1990, 91-4). Meḥemmed I died at Edirne in the spring of 824/1421 (for the exact date—May 21, Ind. 14, A.M. 6729—see S. Kugéas, *Notizbuch eines Beamten der Metropolis in Thessalonike aus dem Anfang des XV. Jahrhunderts*, in *BZ*, xxiii [1914], 143-63, no. 80, pp. 151-2; cf. Schreiner, *CBB*, ii, 412, no. 67). Meḥemmed's death was said to have been concealed for 41 days (? = until 1 July) until his son Murād could reach Bursa and ascend the throne (Inalçık, in *İA*, s.v. *Murād II*: on 25 June). ʿĀs̲h̲îkpas̲h̲azāde also states that once Meḥemmed's death was known, there was an outbreak of *fitne*, all of which may conceal a more complex situation, alluded to by Ducas and Chalcocondyles. This involved the rejection by Murād and his chief adviser, the *beglerbegi* of Rūmeli, Bāyezīd Pas̲h̲a, of Meḥemmed's testamentary disposition, bequeathing Rūmeli to Murād and Anatolia to his second son "Küčük" Muṣṭafā [*q.v.*], while leaving his other two sons, Yūsuf and Maḥmūd, to the protection of the Byzantine emperor.

The Byzantines, in retaliation for Bāyezīd Pas̲h̲a's refusal to surrender Yūsuf and Maḥmūd, brought the elder Muṣṭafā once more into play, seeing him as a suitable figurehead for a Byzantine client régime in Rumeli, from which, in exchange for support, valuable territorial concessions could be extorted. A Byzantine flotilla under the command of Demetrios Leontarios transported Muṣṭafā from Limnos and landed him, together with D̲j̲unayd, at Gallipoli on 15 August 1421 (Kugéas; Inalcık, *loc. cit.*; "September"). From there—or, as most of the Ottoman sources state, from Thessaloniki (but cf. pseudo-Rūḥī, Bodl. ms. Marsh 313, 106a-b: Gallipoli)—Muṣṭafā marched on Edirne, taking possession of Yeniče Vardar and Serez. There he struck what is probably his first, pre-Edirne coinage. At Gallipoli or en route he received the homage of the *töviče*s and *sipāhī*s of Rūmeli and of the foremost Rūmelian *ud̲j̲-begi*s, including Turḥan Beg, the Evronos-zādes [*q.v.*] and the Gümlü-og̲h̲lu; according to the pseudo-Rūḥī, he "went to the Rūmeli forces and showed his scars [sc. of the wounds received at Ankara]; all Rūmeli followed him". At Sazlî-dere, near Edirne, Muṣṭafā and D̲j̲unayd encountered Bāyezīd Pas̲h̲a, sent from Bursa via "the upper straits" with an army to hold Edirne, Bāyezīd Pas̲h̲a's troops defected to Muṣṭafā after he had again demonstrated his battle-scars; Bāyezīd himself was seized and executed. Muṣṭafā entered Edirne; later, in defiance of his agreement with Byzantium, he took possession of Gallipoli, refusing to surrender it to Leontarios.

Late in 1421 Muṣṭafā crossed the Dardanelles at Gallipoli and marched on Bursa. At Ulubād he found the bridge across the Nilüfer Çayı destroyed and the army of Murād waiting on the other side. After a series of stratagems and ruses, ably executed by Murād and his advisors and graphically described by ʿĀs̲h̲îkpas̲h̲azāde, who was an eyewitness, Muṣṭafā was deserted by D̲j̲unayd and by his followers. He fled to Gallipoli, followed by Murād, who was able to draw on the assistance of Giovanni Adorno, the Genoese *podestà* of New Phokaia, in transporting his troops across the Straits (15 January 1422). Muṣṭafā retreated to Edirne, where he found his authority was no longer recognised. According to most accounts, while attempting, most probably, to gain sanctuary in Wallachia, he was seized at Yenid̲j̲e Ḳîzîl Ag̲h̲ač by Murād's agents, brought back to Edirne, and hanged. It is possible, however, that he may have succeeded in escaping to Wallachia and from thence to Caffa (Kefe [*q.v.*]), from where he came to Thessaloniki (cf. *Takwimler*, ed. Turan, 60). From there he maintained his struggle until the town fell into Ottoman hands in 1430 (cf. the important and otherwise inexplicable Venetian notices, Thiriet, *Régestes*, ii, nos. 2132, 2134).

What can be said concerning the régime of "Düzme" Muṣṭafā? In his granting privileges to the *ʿazeb*s and the *yaya*, he seems to have continued the policies of Mūsā. On the other hand, he followed a pacific policy towards Byzantium, and did not imitate Mūsā by a widespread reintroduction of *aḳîn*; in this aspect of his policies, insofar as we may speak of them with certainty, he resembles Süleymān. Were the *ud̲j̲ begi*s who supported him, then, no more than opportunists, as was the case with D̲j̲unayd and Mircea of Wallachia, for whom Muṣṭafā, like Mūsā and S̲h̲ayk̲h̲ Bedr el-Dīn, served merely as a tool for their anti-Ottoman policies?

Muṣṭafā's actions during his short-lived régime seem to be a combination of the astute and the opportunistic. He went back on his promise to restore Gallipoli to Byzantium, an act which can be regarded either as folly, alienating an important ally, or as a politically necessary move to satisfy his followers and establish his credentials as an Ottoman ruler. His generous accession donative to the lower paid troops in the end failed to ensure their loyalty at Ulubād.

The Rumelian *udj begis*, likewise, abandoned him in the face of clever propaganda for the cause of Murād. Certainly Muṣṭafā showed himself to be an incompetent military leader, when faced with Murād at Ulubād—he was a bad strategist and a bad psychologist.

Muṣṭafā's ostensible end—hanging, the fate of a common criminal (cf. Cantemir, *History of the growth and decay of the Othman Empire*, tr. N. Tindal, London, 1734, 44, n. 28)—was ignominious, Murād had to be seen to disassociate him from the Ottoman house; the final piece of evidence, perhaps, that "Düzme" Muṣṭafā was indeed no impostor. It is not known what happened to the body, except that it was not accorded a royal burial. The present scarcity of Muṣṭafā's coinage almost certainly indicates that it was suppressed immediately after the violent end of his counter-sultanate. All indications thus point to the need to consider to what extent there existed in early 9th/15th-century Ottoman society an element which wished to establish an "independent" beylik in Rūmeli. In that sense, the failure of Muṣṭafā, as of his brothers Süleymān and Mūsā, to establish a durable régime in Rūmeli underlines the fact that in the first half of the 9th/15th century the preponderance of Ottoman political power still resided on the Anatolian side of the Straits.

The coinage of Muṣṭafā b. Bāyezīd is of great interest and, hitherto, of considerable rarity. Muṣṭafā, like Süleymān and Mūsā—and like Meḥemmed I—before him, made an issue of silver *akčes* at Edirne. He also struck *akčes*—in very limited numbers—at Serez (Serres). A so far unique copper *mangïr* is also known to exist. The riddling nature of the date on some of the Edirne coins has long perplexed historians. Some bear the expected *hidjrī* date 824; others carry the legend "8224" (cf. C. Ölçer, *Yıldırım Bayezid'in oğullarına ait akçe ve mangırlar*, [Istanbul, *ca.* 1970?], 97, ff.). The theory has been advanced that this should be read as "A.H. 822, 4[th year of Muṣṭafā]", and that the "8224" coins represent evidence for a hypothetical "second revolt" by Muṣṭafā. If 819/1416, the year which witnessed the outbreak and failure of Muṣṭafā's first attempt to gain the sultanate, is taken as year 1, year "4" falls indeed in 822 (28.1.1419-16.1.1420). But at this time Muṣṭafā was still in Byzantine hands, while Meḥemmed I himself struck an extensive coinage, the last issue of his reign, at Edirne (and elsewhere) in 822. Clearly, there was no "second revolt". The legend itself, while defying explanation, can now be accounted for. A study of the coinage of Muṣṭafā, based on a hoard of more then one hundred coins, has demonstrated conclusively that multiple die-linkages connect in parallel the various sub-types of the 824 and "8224" coins and that the whole Edirne issue of Muṣṭafā—together with (on stylistic grounds) the much smaller emission from Serez—must have been struck in the last quarter of 824 or very early in 825 (sc. Aug./Sept. 1421-Jan. 1422).

Şehâbettin Tekindağ), with references to Ottoman manuscript sources. The above article is a résumé of two forthcoming studies by C.J. Heywood, dealing respectively with Muṣṭafā's regime and his coinage, where more extensive general and numismatic bibliographies will be supplied.

(C.J. Heywood)

2. Muṣṭafā Čelebi, Küčük Muṣṭafā), son of Meḥemmed I [*q.v.*] and counter-sultan (*ca.* 810-11/1408-9—825/1423). Meḥemmed I had five sons: Murād (i.e. Murād II [*q.v.*]); Muṣṭafā, who received the nickname *Küčük* ("Young") to distinguish him from his uncle, *Düzme* Muṣṭafā b. Bāyezīd (see 1 above); Aḥmed, who had died in the lifetime of his father; Yūsuf and Maḥmūd. There is evidence from Byzantine sources (Ducas; Chalcocondyles) that Meḥemmed's testamentary disposition may have envisaged a partition of the Ottoman state on his death, with Muṣṭafā receiving its Anatolian possessions (Murād was to rule over Rūmeli; the two younger sons would be kept in protective custody at the Byzantine court). Thus the twin evils of civil war and fratricide would be obviated. In the event, on his father's death (25 June 1421) Murād, whom the Ottoman chronicle sources (ʿĀshïḳpashazāde; the Anonymous chronicles, Orudj) clearly regard as Meḥemmed's designated *walī-ʿahd*, was aided by the late sultan's chief advisors to ascend the throne (at Bursa, 25 June 1421—cf. *İA*, s.v. *Murad II* (H. İnalcık); Meḥemmed's two youngest sons were put to death there (Shükr Allāh, 62)).

Muṣṭafā, who was twelve years of age on the death of his father, had been appointed by him *sandjaḳ-begi* of Ḥamīd [*q.v.*]. He was taken under the protection of Yaʿḳūb Beg of Germiyān, who "adopted him as a son" (ʿĀshïḳpashazāde) and refused to recognise Murād. Ḥamīd itself (*i.e.*, Aḳshehir, Begshehri, Oḳluḳ-ḥiṣārï, Saʿīd-ili and Seydī-shehir) was occupied by the Ḳaramānids. Muṣṭafā seems to have played little part in the immediate aftermath of Meḥemmed's death, when Murād was faced with the simultaneous general uprising against Ottoman rule in Anatolia and the attempt by Düzme Muṣṭafā to gain the sultanate, as well as the open hostilty of Byzantium (summer 1421-spring 1422); it is possible that he may have been residing in Ḳaramān (Chalcocondyles), or placed by a certain Ḳara Tādj al-Dīn-oghlu under the tutelage of one Sharabdār Ilyās in Ḳastamonu (Ducas). Thereafter, with these threats overcome, Murād turned against Byzantium (sieges of Constantinople and Thessaloniki, June 1422). At this point Küčük Muṣṭafā reappeared and, most probably with Byzantine money (channelled via Sharabdār Ilyās, who, together with Ḳara Tādj al-Dīn-oghlu, appears throughout to have played the role of kingmaker to the young prince), together with military support from Ḳaramān and Germiyān—apparently including Turkomans from the Ṭurghud tribes—was enabled to raise up a strong army which besieged Bursa (late August 1422). Murād, abandoning the siege of Constantinople (final, unsuccessful assault on 24 August; departure of Murād on 6 September), retired to Edirne. From there he sent an army under Mīkhāl-oghlu Mīkhāl Beg against Muṣṭafā, who fled to Constantinople (30 September 1422). Muṣṭafā established

a short-lived base at Selembria (Silivri) on the north coast of the Sea of Marmara, but was attacked by the troops of Rūmeli and forced to cross over "again" and re-establish himself in Ḳodja-eli, on the Asian shore of the Bosphorus, where he was recognised by the population and troops as sultan (*Takvimler*, ed. Turan, 60; Chalcocondyles, tr. B. de Vigenère, 110). From Ḳodja-eli Muṣṭafā advanced on Iznik, which opened its gates to him. He also gained control over "part of the region of Bursa" (*Takvimler*, 60), and seems at this time to have been recognised as sultan over much of Anatolia. The population of Bursa, however, remained loyal to Murād, requesting Muṣṭafā not to besiege the town, Murād, counselled by his *lālā* Yorguč Pasha, and preceded by Mīkhāl Beg, crossed over to Anatolia (24 January 1422). Murād won over Ilyās Pasha, Muṣṭafā's chief advisor, and advanced on Iznik, which declared itself for him. After violent fighting, in which both Mīkhāl Beg and Ḳara Tādj al-Dīn-oghlu lost their lives, Iznik was taken by Murād. Muṣṭafā was handed over by Ilyās Pasha to Murād, who caused him to be strangled outside Iznik (20 February (?) 1423). His corpse was sent to Bursa, where it was buried beside his father.

(C.J. Heywood)

3. Muṣṭafā, son of Süleymān Ḳānūnī [*q.v.*] (921-61/1515-53). A favourite of Süleymān's mother, Ḥafṣa Sulṭān, he was brought to Istanbul with his mother Mahīdewrān (also known in the sources as Gulbahār) in 926/1520 when Süleymān ascended the throne. When Ḥafṣa died in 939/1533, Muṣṭafā was sent with his mother to serve as governor of Ṣarukhān in Maʿnīsa where he had been born. Muṣṭafā exhibited interest in political and military affairs and was a confident of the Grand Vizier Ibrāhīm Pasha until the latter's execution in 942/1536. Opponents of Muṣṭafā (led by Khurrem Sulṭān and Rüstem Pasha [*q.vv.*] spread rumours in 945/1538 and again in 948/1541 that he planned to rebel against his father. In 948/1541 he was re-assigned further away from the capital as governor of Amasya. Here he served until 961/1553, when he was executed on 5 October at the orders of his father Sultan Süleymān. The sources are unclear about the circumstances surrounding this event. Süleymān was convinced that Muṣṭafā intended to stage a coup d'état, and he received reports that Muṣṭafā had aroused the Janissaries by charging that his father was too ill and old to lead the army and the state. The Grand Vizier Rüstem Pasha, who had pressed for Muṣṭafā's execution, was himself dismissed to appease the Janissaries.

Muṣṭafā's death was mourned by poets and scholars, a number of whom wrote elegies for the dead *shehzāde*; best known is the *merthiye* of Yaḥyā Bey. Muṣṭafā himself wrote poetry under the *takhalluṣ* of Mukhliṣī.

MUṢṬAFĀ ʿABD AL-RĀZIḲ, Egyptian journalist who became Rector of al-Azhar [*q.v.*].

Born in Egypt in 1882 (according to Y.A. Dāghir, *Maṣādir*) or in 1885 (al-Ziriklī, *Aʿlām*) and dying in 1946 or 1947, he belonged to a rich and aristocratic family. He was the son of Ḥasan Pasha ʿAbd al-Rāziḳ and the brother of ʿAlī ʿAbd al-Rāziḳ, his junior by several years and famed for the "scandal" raised by his book *al-Islām wa-uṣūl al-ḥukm* in 1925, a little before the one which Ṭāhā Ḥusayn provoked with his *al-Shiʿr al-djāhilī*. Despite being on a very different social level, Muṣṭafā ʿAbd al-Rāziḳ followed an education which recalls that of Ṭāhā Ḥusayn, five or seven years younger than him. After having studied the Ḳurʾān in the *kuttāb* [*q.v.*] of his village, he pursued his studies at al-Azhar where, contrary to Ṭāhā Ḥusayn, he obtained his diploma. He was unable to enter Cairo University, which was only to open its doors after his departure for Paris, in 1909. He followed Durckheim's courses at the Sorbonne, and specialised in Islamic philosophy. Having become Docteur-ès-Lettres, he returned to Egypt in 1915 to fill several posts and to follow a less dramatic career than those of his father and brother: as secretary-general of the Council of al-Azhar, inspector of the religious courts, professor of Islamic philosophy, in 1927, at the secular University of Cairo, minister of *awḳāf* in 1938, and supreme *Shaykh* of al-Azhar from 1945 till his death.

He was a disciple of Muḥammad ʿAbduh [*q.v.*], whose courses he had followed at al-Azhar; he became his friend and one of the main sources for his biography. He first of all collaborated on the daily *al-Djarīda* (founded in 1908 at Cairo, and edited by Aḥmad Luṭfī al-Sayyid), where he became friendly with the leading lights of modern Arab thought, including ʿAḳḳād, M.Ḥ. Haykal, Salāma Mūsā, Ṣādiḳ al-Rāfiʿī and Ṭāhā Ḥusayn. Then he worked on *al-Siyāsa*, founded in 1922, with Muḥammad Ḥusayn Haykal as editor-in-chief. This daily newspaper was at the time the mouthpiece of the dissident party from the Wafd, *al-Aḥrār al-Dustūriyyūn*, whose founder ʿAlī Yakan had become the rival of Saʿd Zaghlūl [*q.v.*]. The masses, fervent worshippers of the latter, stoned the premises of the newspaper, and two of whose members were even murdered, one of these being Muṣṭafā ʿAbd al-Rāziḳ's father Ḥasan Pasha. *Al-Siyāsa* defended freedom of expression for the intellectuals persecuted by the malevolence of al-Azhar, Ṭāhā Ḥusayn for his *al-Shiʿr al-djāhilī* (in 1926) and ʿAlī ʿAbd al-Rāziḳ for the book mentioned above, which preached the separation of religion and the state.

At Lyons, Muṣṭafā ʿAbd al-Rāziḳ presented his thesis on the Imām al-Shāfiʿī, published at Cairo in 1944. Ṭāhā Ḥusayn said of him in his obituary notice: "he was a man of letters, a scholar who produced little (*adīb ʿālim mukill*), but this 'little' was of greater value than much else" (cited by al-Ziriklī, *Aʿlām*, 131-2). Towards the end of his life, he published *al-Ṣūfiyya wa 'l-firaḳ al-islāmiyya* (Cairo 1938), an introduction to Islamic philosophy (Cairo 1944), and studies on al-Kindī and al-Fārābī, *Faylasūf al-ʿarab wa 'l-muʿallim al-thānī* (Cairo 1945). Above all, he wrote authoritatively on ʿAbduh (Cairo 1946) and published his "memoirs" (*Mudhakkirāt*) in the press. At his death, numerous articles were written about him, including by Ṭāhā Ḥusayn (*al-Kātib al-Miṣrī*, 1947, no. 5), by ʿAḳḳād (*al-Risāla*, 1947, no. xv) and many others (*al-Thaḳāfa*, 1947, nos. 429, 431, 481).

cheikh Moṣṭafâ ʿAbd el-Râzeq, in *BIFAO*, lix (1960), 81-131; T. Khemiri and G. Kampfmeyer, *Leaders in contemporary Arabic literature*, in *WI*, iv (1930).

(N. Tomiche)

MUṢṬAFĀ BARZĀNĪ, Mullā, probably the best-known Kurdish leader of his generation (1902-79), was born in Barzān [*q.v.*], (now in the province of Duhuk), northern ʿIrāk, into a family of Naḳshbandī [see NAḲSHBANDIYYA] *shaykhs*. His father, Shaykh ʿAbd al-Salām, sent a petition to the Young Turk government in 1908 asking for Kurdish officials to be employed in the Kurdish areas, and for Kurdish to be an official language of the region; he was subsequently hanged in Mawṣil in 1915 for his defiance of the Ottoman state. ʿAbd al-Salām was succeeded as head of the order and leader of the tribe by his son Shaykh Aḥmad, Mullā Muṣṭafā's elder brother; in the late 1920s, Aḥmad briefly declared himself Jesus Christ, enjoining his followers to eat pork and drink wine, which caused some concern to the authorities in Baghdād. In 1930-2 police posts were established in the Barzān area and the ʿIrākī Army was sent in to incorporate the area fully into the state administration. Aḥmad put up considerable resistance, but was eventually defeated with the help of the British R.A.F.; he was subsequently exiled to Turkey and imprisoned there, while Mullā Muṣṭafā took over the effective leadership of the Barzān tribe and, in time, of the Kurdish movement as a whole.

By 1936 Aḥmad had returned from Turkey, and both the Barzānī brothers were living in Sulaymāniyya under house arrest. Mullā Muṣṭafā escaped in 1943 and returned to Barzān, where he raised a revolt and attempted, unsuccesfully, to persuade the British authorities to convince the ʿIrāḳī government to support Kurdish autonomy. In mid-1945, some 14,000 ʿIrāḳī troops were sent to Barzān, and succeeded in expelling Mullā Muṣṭafā and some 1,200 Barzānī tribesmen from ʿIrāḳ into Persia, that October. Their arrival in Persia coincided with one of the principal events in contemporary Kurdish history, the foundation of the Kurdistan Democratic Party (KDP) in Māhābād [*q.v.*] and subsequently the proclamation of the Republic of Māhābād in January 1946. The Barzānīs came to form the core of the Republic's army, and remained there until the overthrow of Māhābād in the spring of 1947; at this point they were chased back into ʿIrāḳ, and in May 1947 Mullā Muṣṭafā and 600 followers escaped to the Soviet Union, where they stayed until 1958. In Mullā Muṣṭafā's absence the KDP (ʿIrāḳ) was led by Ibrāhīm Aḥmad, under whom it gradually developed into a political as distinct from a nationalist party; the uneasy coexistence of these two tendencies, and Barzānī's autocratic style as a traditional tribal leader, was to be the cause of major rifts in the Kurdish movement in later years.

After the Revolution of 1958, ʿAbd al-Karīm Ḳāsim [*q.v.*] and the Free Officers invited Mullā Muṣṭafā to return to ʿIrāḳ, and it seemed that a new era in Kurdish-ʿIrāḳī government relations had begun. Unfortunately, however, although Ḳāsim himself seems to have supported the idea of some form of autonomy for the Kurds, other Free Officers, especially those who were keen supporters of Arab unity, were less enthusiastic about making concessions in that direction. As a result, the position of Mullā Muṣṭafā and the KDP was generally close to that of the ʿIrāḳī Communist Party, which was also profoundly suspicious of the likely implications of the nationalists' professed goal of merging ʿIrāḳ with the United Arab Republic of Egypt and Syria. By 1961 relations between the government and Mullā Muṣṭafā had greatly deteriorated; Barzānī forces occupied Zakhō in September and the government retaliated by bombing Barzān village, causing considerable loss of life.

The fighting which began in 1961 continued intermittently until Mullā Muṣṭafā and the Kurdish movement generally were defeated in March 1975. Broadly speaking, the ʿIrāḳī Kurds wanted a form of meaningful autonomy within ʿIrāḳ, which most ʿIrāḳī governments of the period were unwilling to consider, since they considered that such autonomy would amount to a derogation of national sovereignty. In addition, many government ministers were either serving or former military officers, who had seen active service against the Kurds in northern ʿIrāḳ. In the course of the 1960s, a split, partly a clash of personalities and partly a difference of principle, occurred between Mullā Muṣṭafā and the KDP (in the persons of Ibrāhīm Aḥmad and his son-in-law Djalāl Ṭalabānī), to the point where KDP units were fighting alongside government troops against the Barzānīs. In addition, Mullā Muṣṭafā maintained cordial contacts with the Shāh of Persia for most of the period, an association which was much criticised both by his Kurdish opponents and by successive ʿIrāḳī governments.

When the Baʿth government came to power in 1968, it began by making overtures to Mullā Muṣṭafā's Kurdish opponents, but soon realised that although they might be more congenial ideologically, the Aḥmad-Ṭalabānī group had little support on the ground in Kurdistān. Accordingly, negotiations between Mullā Muṣṭafā and the Baʿth began at the end of 1969, and in March 1970 a programme for Kurdish autonomy was announced which was to be put in place by March 1974. If implemented, the Manifesto would have been a major step forward, but in fact its main function was to enable the Baʿth to gain time and to establish itself sufficiently to be able to recast its Kurdish policy more to its own advantage at a later date, a purpose which it succeeded in serving for at least two years. Cracks soon began to appear in the façade, especially over the Baʿth's concern to avoid taking a census of the area, since this would have shown that the majority of the population around the Kirkūk oilfields, over which the Baʿth wanted to retain its control, was Kurdish, and over the expulsion of many thousands of Shīʿī Kurds to Persia in 1971 and 1972. There were also several attempts to assassinate Mullā Muṣṭafā and his sons in the early 1970s.

By 1973, Mullā Muṣṭafā had come to the conclusion that the Baʿth did not have any serious intention of implementing the Manifesto. He had already resumed his relations with Persia, and, for the first time, began a serious dialogue with the United States. In an interview in the *Washington Post* in June 1973 he declared that the Kirkūk oilfields were the inalienable property of the Kurds, and offered the United States participation in "Kurdish oil" if it would only send its forces to assist him in his struggle against the "wolves" in Baghdād, Thus when fighting between the government and Kurds finally broke out in 1974, it was easy for the Baʿth and its Communist supporters to criticise the Kurds for their alliance with the forces of "reaction and imperialism." Māhābād became the headquarters of the ʿIrāḳī Kurdish forces, and there were some 30-40,000 Kurdish refugees in or near the city. By January 1975 the conflict had escalated to such a point that an all-out war between Persia and ʿIrāḳ looked likely.

Mullā Muṣṭafā's miscalculation was to rely too heavily on Persia and the United States, especially as the Shāh had no intention of allowing the Kurds to defeat the ʿIrāḳī Army. More pragmatic considerations prevailed, and in March 1975 Ṣaddām Ḥusayn and Muḥammad Riḍā Shāh [*q.v.*] signed the Algiers Agreement, which effectively ended Persian support to the Kurds in return for various border and other rectifications in Persia's favour. For the time being, the Kurdish resistance was at an end, and 100,000 Kurdish refugees fled to Persia.

Mullā Muṣṭafā went into exile in Tehran, and eventually died in the United States in 1979. The leadership of the KDP passed to his son Masʿūd, and Djalāl Ṭalabānī left the Party to form his own movement, the Patriotic Union of Kurdistān, in 1975. In general, Mullā Muṣṭafā was a charismatic leader but far less competent as a politician; he was unable to adjust to the new socio-political realities experienced by many of his people, and too prepared to take undertakings on trust from Ṣaddām Ḥusayn and Muḥammad Riḍā Shāh. In his lifetime, however, no other Kurdish leader wielded anything approaching his influence.

MUṢṬAFĀ EFENDI [see Suppl.].

MUṢṬAFĀ KĀMIL PASHA, leader of the second nationalist movement in Egypt (on the first, see ʿURĀBĪ PASHA and MIṢR. D.7).

The son of an Egyptian army engineer, he was born in Cairo on 1 Radjab 1291/14 August 1874, studied at the Khedivial school of law there and after taking his examination went to study in Toulouse, where in 1894 he took his *licence en droit*. When still a student of 18 he began his political activity and entered into personal relations with the Khedive ʿAbbās II [*q.v.*]. On his return from France, he founded in 1894 the second Egyptian national party (*al-ḥizb al-waṭanī*) with the object of inducing Britain by appeals to justice to abandon the occupation and restore the complete independence of Egypt. Later, he also aimed at getting the Sūdān [*q.v.*] handed back to Egypt and tried to prepare the Egyptians by modern education for parliamentary government. As the representative of his party, he spent each year a considerable time in Europe, especially France where he consorted with politicians and journalists and conducted a vigorous propaganda for his object. All his life he was very friendly with the journalist Juliette Adam; he had dealings with Rochefort, Drumont, Col. Marchand, Pierre Loti, and in 1896 had some correspondence with Gladstone. Later, he visited Berlin, London, Vienna, Budapest, Geneva and Istanbul, where he was highly thought of because he insisted on the sultan's suzerainty over Egypt; ʿAbd al-Ḥamīd II [*q.v.*] gave him in 1904 the title of Pasha. In Cairo, he founded in 1898 a school for training the youth in nationalist ideas, and in 1899 started the newspaper *al-Liwāʾ* ("The Banner"), which appeared early in 1900, had a great success, and from 1907 appeared also in English and French editions. From 1902 onwards, he published the nationalist quarterly *Madjallat al-Liwāʾ*. In his speeches and articles, he emphasised his aims with fiery eloquence; at the same time, he expressed his approval of the building of the strategic Ḥidjāz railway by the Ottomans and his sympathy with the Japanese in their war with Russia (1904-5). Muṣṭafā Kāmil also regularly emphasised the privileged position of Muslims as belonging to the state religion, and he recognised the sultan as caliph and head of Islam and thus contribued to the pan-Islamic movement which began early in the 20th century.

The "Entente Cordiale" concluded on 8 April 1904 between Britain and France was a severe blow to him and the nationalist party; by it France, in return for a free hand in Morocco, dropped its objections to the British occupation of Egypt. The Egyptian nationalists thus lost all hope of open or secret support from the French government and were thrown back upon their own resources. This situation caused Muṣṭafā Kāmil to redouble his energy, and in vigorous speeches and writings against France and Britain, in travelling and negotiating with statesmen of different lands, he endeavoured to make Egypt's point of view clear. As a result of the intensity of his agitation, there was a breach between him and the Khedive ʿAbbās II (October 1904); on the other hand, his following in Egypt rapidly increased and began to be troublesome to Lord Cromer, who had so far treated the new nationalism created by Muṣṭafā Kāmil as a "quantité négligeable". The Dinshawāʾī (a village near Ṭanṭā in the Delta) affair gave the nationalists a great stimulus; on 13 June 1906, some British officers out shooting were said to have wounded an Egyptian woman and were attacked by *fellāḥīn* with clubs and one of the officers was killed. At the instigation of the British government and under the presidency of the Egyptian Minister of Justice, the Copt Buṭrus Ghālī, a special court was set up, and this sentenced four *fellāḥīn* to death and 17 to prison or flogging, and the sentence was carried out next day. The indignation in Egypt and Europe rose to great heights, and even in the British House of Commons the authorities were criticised. Muṣṭafā Kāmil hurried to London and discussed the matter with the Prime Minister, Sir Henry Campbell-Bannerman, whom he endeavoured to convince of the necessity of recalling Lord Cromer and giving greater freedom to Egyptians. On this occasion, he mentioned as suitable representatives in a parliamentary system of government all those Egyptians who in the later political movement after the First World War played important parts. On his return to Egypt, through the press and mass meetings in which he urged Egyptians to unite against Britain, he gave a great stimulus to the nationalist movement and soon had the satisfaction of seeing Lord Cromer resign (in April 1907)—although he was by no means the only cause of this—and replaced by Sir Eldon Gorst. The latter adopted a milder tone with the Egyptians, was on good terms with the Khedive and endeavoured to support him with a newly-founded party. Muṣṭafā Kāmil attacked this representative of Britain vigorously also, in October 1907 put his National Party on a broader basis and summoned it to a "National Congress", which met on 7 December of the same year in Cairo; 1,017 delegates from all over Egypt appeared, and

after a speech by Muṣṭafā Kāmil which carried them away, the latter was elected life-President of the party. This was however his swan-song. He had been ill since the summer of 1906; he died on 10 February 1908 (8 Muḥarram 1326) at the age of 34 of a slow internal trouble (intestinal tuberculosis). The rumour inevitably spread that he had been poisoned at British instigation. His funeral was an impressive expression of the national grief. Muṣṭafā's creations did not long survive him and his party, which produced no leader to equal him and was broken up by dissensions, gradually sank into insignificance. Although he obtained no positive results by his agitation, he prepared the way for the third and greatest nationalist movement (under Saʿd Zaghlūl Pasha [*q.v.*] from 13 November 1918).

In retrospect, Muṣṭafā Kāmil appears essentially as a demagogue and opportunist, often unscrupulous and giving his support to e.g. French foreign policy or the Khedive and then abandoning these without compunction. In many ways he was a spiritual descendant of Djamāl al-Dīn al-Afghānī [*q.v.*], whose ideas he knew through ʿAbd Allāh al-Nadīm [*q.v.*], the orator and spokesman of the ʿUrābī movement of the 1880s (although he disliked al-Afghānī's chief disciple in Egypt, Muḥammad ʿAbduh [*q.v.*]), but nevertheless seems to have viewed Islamic religion primarily as a means for the advancement of Egyptian nationalism, and some observers thought him basically irreligious. His Egyptian patriotism was nevertheless fundamental and genuine, and the interests of what he called both the *umma miṣriyya* and the *shaʿb miṣrī* were always the mainsprings of his polemics, amply warranting the veneration of him by the Egyptian masses. He stressed the solidarity of Muslims and Copts, as being each components of the Egyptian nation, although in practice, this solidarity was largely a myth; and the more strident of his nationalist supporters after his death, such as his successor as leader of the Nationalist Party Muḥammad Farīd Bey [*q.v.*] and, above all, his successor as editor of *al-Liwāʾ*, the Tunisian ʿAbd al-ʿAzīz al-Shawīsh or al-Djawīsh, did much to exacerbate Muslim-Copt relations in the years before the First World War. Muṣṭafā Ḳamil regarded the Syrian, Armenian, etc. immigrants into Egypt with suspicion, as intruders (*dukhalāʾ*), seeing in them competitors in the professions and supporters of the British occupation, but he had to be more wary in his public attitude towards the European residents (*al-nuzalāʾ al-Urubiyyūn*), as representatives of powers which needed to be placated if Egypt was to achieve independence.

Of Muṣṭafā Kāmil's numerous writings, only the more important can be mentioned; many of them were only printed after his death, some in the great (never completed) biography by his brother ʿAlī Bey Fahmī Kāmil, *al-Masʾala 'l-sharḳiyya* (1898, 1909); *Miṣr wa 'l-iḥtilāl al-indjlīzī* (collection of speeches and essays, Cairo 1313); *Difāʿ al-miṣrī ʿan bilādihi*, Cairo 1324/1906; *al-Shams al-mushriḳa* (Cairo 1904, on the Russo-Japanese war); *Lettres françaises-égyptiennes* (Cairo 1909; also in Arabic and Eng. tr., his letters to Juliette Adam); *Egyptiens et Anglais*, Paris 1906 (speech of 4 July 1895 in Toulouse); *Le péril anglais*, Paris 1899; *What the National Party wants* (Cairo 1907, speech of 22 Oct. 1907). See further on his writings, Sarkīs, *Muʿdjam al-maṭbūʿāt*, ii, cols. 1754-5.

(M. MEYERHOF*)

MUṢṬAFĀ KEMĀL [see ATATÜRK].

MUṢṬAFĀ KEMĀL PASHA [see KIRMĀSTĪ].

MUṢṬAFĀ KHAYRĪ EFENDI, ÜRGÜPLÜ (1283-1339/1867-1921), *Sheykh ül-Islām* of the Ottoman Empire. A member of an old established local *ʿulamāʾ* family, he was born at Ürgüp as a son of ʿAbd Allāh ʿAwnī Efendi. Members of the family were the administrator of the *waḳf* of the town's principal mosque complex, the *ulu djāmiʿ* founded by Ḳaramānoghlu Ibrāhīm Bey [see ḲARAMĀN-OGHULLARÏ]. Khayrī received his early education locally *inter alia* in Arabic, Persian and Turkish classical literature and calligraphy. His elder brother, an Inspector of Justice in the *wilāyet* of Sivas [*q.v.*], supervised his continued schooling. In 1882 Khayrī came to Instanbul to study there for two years at the Bashkurshunlu Medrese of the Ṣaḥn-i Theman Medreses. He returned to Ürgüp with his father and studied for another two years at the Yaghmuroghlu Medrese in Kayseri, after which he returned to Istanbul at some time. In 1895 he took his *idjāzet* and at the same time completed his studies at the Law School.

His career in the ranks of the *ʿİlmiyye* [*q.v.*] went very smoothly. In 1896 he ranked as *ibtidāʾ-i khāridj*, and in 1897 *ibtidāʾ-i dākhil*. In 1898 he was appointed deputy public prosecutor at the Court of First Instance (*Bidāyet Maḥkemesi*) of the *sandjaḳ* of Marʿash [*q.v.*]; in 1899 he was transferred as such to Ṭarābulus-i Shām [*q.v.*]. In 1901 he became presiding judge of the Criminal Division of the Court of First Instance of the *sandjaḳ* Lādhikiyya [*q.v.*], then public prosecutor at the Central Court of First Instance of the province of Syria (SŪRIYĀ). From 1904 to 1906 he held the same function at Monastir [see MANĀSTÏR] (now Bitola). He was promoted to *ḥareket-i dākhil* rank and transferred to Salonica [see SELĀNIK] to be presiding judge of the Criminal Division of the *Bidāyet Maḥkemesi*. Here he joined the Committee of Union and Progress [see ITTIḤĀD WE TERAḲḲĪ DJEMʿIYYETI], and was a member of the central committee in 1908.

After the restoration of constitutional government (July 1908) brought about by the Young Turk revolution, Khayrī Efendi was elected member of the Ottoman parliament for the *sandjaḳ* of Niğde [*q.v.*], the district of his home town. He also became professor of Medjelle [*q.v.*] law at Istanbul University. It thus becomes clear that his ambition was not to remain within the restricted scope of an *ʿIlmiyye* career but to join the ranks of the civil servants [see MÜLKIYE] and politicians. In fact, Khayri qualified himself more frequently as "Bey" than as "Efendi" by this time.

At the reshuffle of the cabinet after the failure of the counter revolution of April 1909 (the so-called "31st March Incident", Turkish: *31 Mart Waḳʿasī/Olayī*), he entered the government as Minister of Justice for a short time. While remaining a member of parliament

[see MADJLIS. 4. A. (i)] he took up a professorship in the *Medreset ül-Ḳuḍāt* ("Cadis' Training College"), one of the modern teaching establishments of the *ʿIlmiyye*. In 1910 Khayrī Bey became Minister of *Ewḳāf* [see WAḲF]. In the absence of his colleague, he also acted as Minister of the Interior. During the next cabinet of the government led by Küčük Saʿīd Pasha [*q.v.*], he was President of the Council of State and acting Minister of Education. In 1913 he was re-elected for the third time as member of parliament for Niğde. He became again Minister of *Ewḳāf*. During this time he actively occupied himself with the reorganisation along modern lines of the educational institutions of the *ʿIlmiyye* and the administration of the *Ewḳāf* Ministry.

On 16 March 1914 (Rabīʿ II 1332), Khayri Bey/Efendi also became *sheykh ül-Islām* in the cabinet of the Grand Vizier Saʿīd Ḥalīm Pasha (1913-17). Thus it fell to him to issue the ill-famed *fatwā* sanctioning the *djihād-i ekber* (the "Great Holy War"—made in Germany according to the Dutch Islamologist C. Snouck Hurgronje) against Russia, Great Britain, France and their allies (14 November 1914/25 Dhu 'l-Ḥidjdja 1332) (photograph in *Mufassal Osmanlı tarihi*, vi, 3522, Istanbul 1963; text in transcript in Altunsu, 245 f.). On 25 April 1916/20 Djumādā II 1334, he resigned, according to some because of the lavish style of living of the leading Unionists, which he found morally unacceptable at the time when the majority of the Sultan's subjects were suffering the hardships of war. Khayrī Efendi now became a member of the Ottoman Senate.

At the end of the war, he became Minister of Justice in the government formed by Aḥmed ʿIzzet Pasha [see ʿIZZET PASHA (Furgaç)]. Together with other leading Unionists, such as Djāwīd [*q.v.*] Bey and Fetḥī Bey [see OKYAR, ʿALĪ FETḤI], he had to resign on 19 November 1918. On 4 March 1919, together with many politicians of the Unionist régime, he was arrested. Before a court-martial was held, he and other members of parliament were deported by the British authorities to Malta. Because of ill health he was released early and transported to Rome for treatment. From there, together with Hüseyin Rāghib [Baydur], he went on to Antalya whence Shaykh Aḥmad al-Sanūsī was to bring him to Ürgüp. However, Muṣṭafā Kemāl Pasha (Atatürk [*q.v.*]) invited him to Ankara to take a seat in the Grand National Assembly. Khayrī Efendi excused himself with the argument that his links with the former Unionist leaders would be an embarassment for the Ankara government. However, he expressed his loyalty to the nationalists' cause and promised to support Muṣṭafā Kemal's struggle. Thereupon Khayrī Efendi retired from public life and settled down in the town of his ancestors. He died at Ürgüp on 1 Dhu'l-Ḳada 1339/7 July 1921. He lies buried there next to the Great Mosque (Ḳaramānoghlu Ibrāhīm Djāmiʿi). His son Suat Hayri Ürgüplü (b. Damascus, 1903, d. Istanbul, 1981), a prominent lawyer and politician, was a member of parliament, government minister, ambassador and Prime Minister of Turkey 1965-6 and again in 1972.

MUṢṬAFĀ KHAZNADĀR (1817-78), Tunisian official. A *mamlūk* of Greek origin originally called George Kalkias Stravelakis, he became a convert to Islam. He was born at Kardamila in the island of Chios, where his father Stephanis had been killed in the massacres of 1821, taken as a slave at an unknown date and brought to Izmir, sold at Istanbul and then re-sold at Tunis, where he was brought to the court during the reign of Ḥusayn Bey (1824-35). Ḥusayn brought up the young *mamlūk* in the circle of his own nephew Aḥmad (b. 1806), and links which were almost brotherly grew up between the two. The prince appointed for him two tutors, the *shaykhs* Abū Zayd ʿAbd al-Raḥmān al-Kāmil, a Mālikī, and Muṣṭafā Bū Ghāzlī, a Ḥanafī, who taught him Arabic and inculcated the bases of Islamic culture (cf. Ibn Abi 'l-Ḍiyāf, *Itḥāf*, vi, 179). Although he retained memories of his Greek origin, Muṣṭafā had completely forgotten his native language; but he understood Italian, which was currently spoken at the Ḥusaynid court of Bardo.

Muṣṭafā was an intelligent, open-minded person and remarkably adaptable to circumstances, hence by the age of 20 succeeded in raising himself to the highest rank in the state; he was to retain power for 36 years. He would probably have kept this till his death at Tunis in 1878 if the French agents' intervention had not brought about his fall on 21 October 1873.

The characteristic feature of his career is that he was successively prime minister to three Beys, Aḥmad (1837-55), M'ḥammad (1855-9) and Muḥammad al-Ṣādiḳ (1859-73), and one can speak about a progressively-increasing share of the power held by him, whilst at the same time he managed to leave the ruler under the impression that he was the real master. With certain qualifications, this seems to hold good for all three of the Beys whom he served.

From the outset, Aḥmad Bey selected him to be his personal secretary and adviser, and promoted him to be treasurer of the state finances (*khaznadār*)—this last position not being a surprising one, since he was already in charge of the prince's personal finances before his investiture. He took up office on 10 Radjab 1253/10 October 1837, and speedily assumed the title of prime minister, holding this till the Bey's death on 14 Ramaḍān 1271/30 May 1855.

For these 18 years, he strove to raise his office in importance, without however making any apparent change in the governmental system. At the time of the first regulation of the currency in 1847, his signature appears on the notes issued then at the side of the Bey's, as if they were co-rulers. Also, he had enough influence over the Bey to dissuade him from condemning a provincial deputy-governor to death. It is true that his marriage to the Bey's sister Kulthūm brought with it family connections which favoured his interventions.

The case of M'ḥammad Bey brings with it differing modes of action. To begin with, Muṣṭafā Khaznadār's position suffered an eclipse, but the buying over with gold of the Bey's old retainers and his skill in apparently adapting himself to the new sovereign's ways allowed him to remain in power. Nevertheless, the tone of their mutual relations was very different from the one prevailing during the previous reign. It is true that when he threw himself at the Bey's feet to seek pardon for an old soldier condemned to death without a trial for immorality, M'ḥmmad Bey brusquely repelled him: "A man of this low breed should

not have pardon sought for him by someone of your rank" (cf. Ibn Abi 'l-Ḍiyāf, *Itḥāf*, vii, 197). It seems that he was conscious of suffering to a certain extent from his lack of real lineage (*nasab*), and the episode of the decoration (*ibid.*, vii, 219-20) throws a vivid light on this aspect of his psychology.

Moreover, when M'ḥammad Bey issued a new gold coinage, the name of his Khaznadār was no longer associated with his own (*ibid.*, vii, 201); hence it is not surprising that shortly before his death on 24 Ṣafar 1276/22 September 1859, M'ḥammad had ceased to repose trust in him.

The case of Muḥammad al-Ṣādiḳ Bey is much clearer. Confidence may be placed in pieces of evidence which assert that Muṣṭafā Khaznadār secured a kind of magical ascendancy over the Bey. His tactics are defined as follows: he flattered the ruler and encouraged him in his vices in order to divert him from the reality of power and to leave him the mere shadow of his title, and he organised a network of acts of collusion among his entourage. Duchesne de Bellecourt, the French Consul-General at Tunis, saw in Muṣṭafā Khaznadār, in September 1865, the real absolute ruler of the land. How could one doubt this, when it was averred that he had been able to organise a minor palace revolution in order to place his partisans and confidants in positions of power—the Ministries of the Interior, of War and of the Navy? He held personally, in addition to his post as prime minister, two ministries, sc. Foreign Affairs and Finance (cf. J. Ganiage, *Les origines du Protectorat*, 280).

In regard to foreign policy, it may be noted that in general, he followed a seesaw policy balanced between the consuls of France and Britain, justifiable for the maintenance of his country's independence, and his eulogist Ed. Desfossés defends him warmly on this point. He states that "He resisted the intrigues and threats of the Porte, England, France and Italy, and knew how to prevent his country's occupation by foreign troops and to preserve his sovereign's integrity and independence" (*Affaires d'Orient, la disgrâce de Sidi Moustapha...*, 16). Desfossés observes also that as a Greek, he had no natural leaning towards Turkey, and under Aḥmad Bey, he seems to have been in agreement with his master to resist the Porte's pretentions in treating the Bey as a vassal and demanding an annual tribute. Fear of seeing France, henceforth established in Algeria, invade Tunisia, led him to seek support in the French side in order to prevent this danger. In practice, from 1856 onwards, he felt the influence of Britain through his cordial relations with the British Consul Richard Wood, whilst after December 1864, the date of the ending of the rebellion led by ʿAlī b. Ghadāhum [see IBN GHIDHĀHUM in Suppl.], he was led to favour a restoration of the French influence, if only in order to keep his own position. It was nevertheless Wood who advised him to resume relations with the Porte and to ask Sultan ʿAbd al-ʿAzīz for the *fermān* regulating relations with the Bey promised in 1864 and which he had abandoned in the face of firm French opposition (cf. Ganiage, *op. cit.*, 415-19). It seems that one may assume foreign policy, with its many fluctuations, to have been directed by Muṣṭafā Khaznadār, more or less affected, according to the circumstances, by the interventions of the French and British Consuls. The Beys themselves seem to have made few decisive initiatives of their own in this respect.

Concerning internal policy, three facts are of note. The first one, of juridical significance, involves the granting of the first Tunisian constitution. A coalition of the French and British consuls led Muṣṭafā Khaznadār to impress on the Bey the need for this reform, aimed largely at establishing for him a liberal reputation in the European nations' eyes. M'ḥammad Bey on 9 September 1857, before an assembly of all the dignitaries of the nations, announced his intention of granting to his people a constitution and enumerated the main principles of a Basic Agreement, *ʿAhd al-amān*, which was to link the ruler with his subjects and act as the basis of the constitution [see DUSTŪR. Tunisia]. This constitution was proclaimed in January 1861 and put into effect on the following 23 April, and it was intended to legalise and confirm Muṣṭafā Khaznadār's supreme power. It led to the formation of a Supreme Council of 60 members, in which all power, influence and riches were concentrated. The constitution was only a smoke-screen to mask the accumulation of all power by the *mamlūks* to the detriment of the mass of Tunisian countrymen. All these considerations led to the revolt en masse of Tunisia in 1864.

The second fact is of a social nature and concerns this rebellion. It was in fact in regard to this rising of the tribes under ʿAlī b. Ghadāhum in April 1864 that Muṣṭafā Khaznadār plunged in affairs up to his neck, almost single-handed, since the Bey gave the impression of being absent. He put into practice an ingenious policy of dissociation which helped to make the tribal movement crumble and caused a multitude of rivalries. At the time of pacification, he promised an amnesty, cut the tithe (*ʿushur*) on cereals by a half and proceeded to nominate native Tunisian *ḳāḍīs* instead of *mamlūks*; but in reality, he was defending his own position as prime minister, directly threatened.

The third fact, of a financial nature, can be summed up as a falling into debt followed by two loans. The state of debt was characterised by payments only intermittently to officials, the army, and the contractors to and creditors of the government, who were paid with *tadhkiras* which were not honoured. In order to save the country's finances, Muṣṭafā Khaznadār had recourse to a double loan, one in 1863 and one in 1865, which both had catastrophic consequences. The reply to bankruptcy was the setting-up of an international financial commission (France, Britain and Italy) with Khayr al-Dīn [*q.v.*] as President and the Inspector-General of the French finances, François Villet, as Vice-President (from 1869 to 1874). The latter, in two notes addressed to the Quai d'Orsay, drew up an indictment severely accusing Muṣṭafā Khaznadār of a vast operation aimed at pillaging the funds of the Tunisian state.

The difficulty of making an impartial judgment here, given the extensive camouflage over the numerous financial speculations, remains great, but it seems impossible to exculpate the prime minister. Desfossés' arguments seem highly inconsistent. Nevertheless, it would be hazardous to place the entire blame on Muṣṭafā Khaznadār and to exempt from censure the three Beys and all the high officials in the government, those involved in or associated with the abuses in some degree or other. On 21 October 1873 Muṣṭafā Khaznadār suffered a complete disgracing; he was deprived of all his offices and dignities and was arrested and confined in his palace at Tunis on the accusation of malversation of 80 million francs of state funds.

The ultimate appreciation of Muṣṭafā Khaznadār's career must be this: that he used his subtle intelligence to secure such an ascendancy over three Beys of Tunisia in the 19th century and that his suppleness in

adapting himself to the shifting realities of the period allowed him to keep himself in power, whilst at the same time concealing from superficial observers the real mainspring of his behaviour, sc. his avid love of gold, which presented a target for the criticisms of contemporaries.

MUṢṬAFĀ PASHA, BAYRAḲDĀR or ʿAlemdār, Ottoman Turkish grand vizier in 1808, was the son of a wealthy Janissary at Rusčuḳ, born about 1750.

He distinguished himself in the war with Russia under Muṣṭafā III, and acquired in these years the surname of *bayraḳdār* "standard-bearer". After the war he lived on his estates near Rusčuḳ, and acquired the semi-official position of *aʿyān* [*q.v.*] of Hezārgrād and later of Rusčuḳ. With other *aʿyans* he took part in an action against the government at Edirne, but became finally a reliable supporter of the government. Having already received the honorary offices of *ḳapīdjī bashī* and of *mīr ākhur*, he was, in 1806, promoted to the rank of Pasha of Silistria and at the same time was appointed *ser-ʿasker* on the Danube frontier against the advancing Russian army. This made him one of the most influential men in Rūm-ili. He had become a zealous supporter of Selīm III's reform policy and, after that sultan's deposition, it was to him that the enemies of the new reactionary government turned. In June 1808 he was joined by the dismissed *ḳāʾim-maḳām* of the grand vizierate in Istanbul, Ṭayyār Pasha; from Rusčuḳ they went to Edirne, where they joined forces with the grand vizier Čelebi Muṣṭafā Pasha. So the entire Rumelian army marched against the capital, where they dictated their will to the sultan Muṣṭafā IV (23 July). On 26 July Bayraḳdār was appointed commander in chief and on 28 July, after having taken by force the sultan's seal from the weak grand vizier, he marched with his troops to the palace of the sultan, under the pretext of bringing back the holy standard of the prophet. At first he was allowed only to enter the first court of the serāy, while Muṣṭafā IV —who had been absent— returned in haste from the seaside. As Bayraḳdār had made known his intention of restoring Selīm III to the throne, Muṣṭafā had just time to have his predecessor killed. But immediately afterwards he was himself deposed and Bayraḳdār now recognised Maḥmūd II [*q.v.*] as sultan.

After this began the short personal régime of Bayraḳdār Muṣṭafā Pasha as grand vizier. He had a number of the supporters of the former sultan executed, arranged a magnificent funeral for Selīm III and began to form a corps of troops called this time *niẓāmlī ʿasker* [see niẓām-i djedīd]. At the same time he summoned a great imperial conference in the capital, to which all the high-placed officials of the empire were invited. Many of them answered the appeal and subscribed to the extensive programme of reforms which the grand vizier laid before them in a solemn meeting in the first days of October and which was also approved of by a *fatwā* of the *muftī*. But the precipitation with which the new measures were taken in hand and the tactless procedure in the abolition of long-established abuses, made him ever more unpopular. The influential *ʿulamāʾ* were also alienated by the exaggerated reforming zeal. His only support were his Rumelian troops and a small number of friends, such as Begdji Efendi and Rāmiz Pasha, together with Ḳāḍī Pasha of Ḳaramān, who had remained in the capital after the imperial conference. Matters came to a head on 14 November 1808, in the last days of Ramaḍān 1222, by a rebellion of the Janissaries. The night following that day they surrounded the grand vizier's residence and set the quarter on fire. Bayraḳdār, surprised by the fire, saw no way of escape; he hid himself in a tower of his palace, where his body was found three days afterwards, after the fire was quenched. The rumour had been spread that Bayraḳdār had escaped, which had caused much uncertainty.

The grand vizier was buried in the fortress of Yedi Ḳule, where his bones were dug up in 1911 during railway works; they were transported to the mosque of Zayneb Sulṭān.

Although brief, Muṣṭafā Pasha Bayraḳdār's vizierate was important in that he revived aspects of the modernisation programme envisaged by Selīm III, e.g. by reviving in effect the *Niẓām-ī Djedīd* as the *Segbān-ī Djedīd*, by working towards removal of the abuses connected with the Janissaries and by confirming the rights and privileges of the *aʿyān* and *derebey* [*q.v.*] classes in the provinces of the empire. A period of reaction followed, but over the next eighteen years, Maḥmūd II was cautiously able to bring about the overthrow of the Janissaries in 1826 (the so-called *waḳʿa-yi khayriyye* "auspicious event") and the transformation of the army in the direction of a modern force.

(J.H. Kramers-[C.E. Bosworth])

MUṢṬAFĀ PASHA, BUSHATLÎ (1797-1860), Ottoman statesman of Albanian origin, son of Meḥmed Āṣāf Pasha and nephew of the renowned Ḳara Maḥmūd Pasha Ishḳodralî Bushatlî [*q.v.*]; this last article will provide information on the controversies regarding the origin of this family. For the eminence of the Bushatlî, at Ishḳodra, dating from the first half of the 12th/18th century and achieved through the efforts of Meḥmed Pasha Bushatlî and his successors, see arnawutluḳ, at vol. I, 656a.

Born on 27 Ramaḍān 1211/26 March 1797, Muṣṭafā Pasha made rapid progress in his career: appointed to a post in the *mutaṣarrifliḳ* of Ishḳodra in 1225/1810, he became *wezīr* in 1227/1812. His administrative and military career, and in particular the campaigns conducted on behalf of the Porte against ʿAlī Pasha Tependelenli [*q.v.*] and against the Greek insurrection in 1823, as well as his passive stance in the Russo-Turkish war of 1828-9, are surveyed at length by M. Cavid Baysun in his article s.v. *İA*, viii, 727-30, usefully summarising passages

drawn from various Ottoman historians (Luṭfī, in particular).

Opposed to the reforms which sultan Maḥmūd II intended to introduce (which threatened to deprive him of his hereditary privileges), and driven by personal ambitions, which Albanian historians now interpret as manifestations of Albanian nationalism (cf. S.N. Naçi, *Pashallëku i Shkodrës ne vitet e para të shek. xix (1796-1831)*, Tirana 1896), he rebelled against the Ottoman power. He is known to have established "culpable" relations, on the one hand with discontented Bosnian Muslims and the *pas͟ha* of Egypt Muḥammad ʿAlī [*q.v.*], and on the other hand with the Serbian prince Miloš Obrenović (Drag. M. Pavlović, *Pokret u Bosni i u Albaniji protiv reforama Mahmuda II*, Belgrade 1913, chs. viii and ix; M. Gavrilović, *Miloš Obrenović*, Belgrade 1908-12, iii, 91-6, 102-14, 124-6, 332-50, 361), and the prince-bishop of Montenegro, the distinguished poet Petar II Petrović Njegoš (these latter relations were however to be thwarted by the Russian consul in Dubrovnik, J. Gagić).

After initial successes (the temporary capture of Nis͟h, of Skoplje and of Sofia), the rebel troops of Muṣṭafā Pas͟ha were defeated in April 1831, in the mountainous region of Babuna near Prilep, by Ottoman armies commanded by the grand vizier Muṣṭafā Res͟hīd Pas͟ha [*q.v.*] in person. Surrounded at Is͟hḳodra, Muṣṭafā Pas͟ha remained defiant for a few more months, but was eventually forced to surrender. He was taken to Istanbul, where he lived for a time in the vicinity of the Süleymāniyye mosque, before being allowed to rejoin the Ottoman administration, under the reign of ʿAbd al-Med͟jīd I. He then served, from 1846 onwards, as governor (*wālī*) in various locations (Bolu, Kastamonu, Adana, Marʿas͟h, Konya, etc.) and even returned in 1853 to Rumelia as governor of Herzegovina.

He died in Medina on 7 D͟hū 'l-Ḳaʿda 1276/27 May 1860, having been a member of the brotherhood dervish order of the Mewlewīs (Mawlawiyya [*q.v.*]).

His property, which had been confiscated at the time of his defeat in 1831, was returned to his sons in 1865. One of the latter, a renowned poet and scholar, Ḥasan Ḥaḳḳī, was *wālī* of Aleppo; another, Maḥmūd Pas͟ha (1824-70) served in the Ottoman administration in Rumelia, in particular, at Novi Pazar and in Herzegovina.

It should be emphasised, in conclusion, that there exist at least three different approaches to the career and biography of Muṣṭafā Pas͟ha Bus͟hatlî: that of ancient and modern Turkish historians; that of the Yugoslav historians mentioned above (to which should be added the article MUṢṬAFĀ PAS͟HA BUS͟HATLÎ by F. Bajraktarevic in *EI*[1]), and, finally, that of modern and contemporary Albanian historians. Regarding these last, it is a case of an increasingly "habitual" tendency, to which one should merely draw attention.

MUṢṬAFĀ PAS͟HA, ḲAPLAN [see ḲAPLAN MUṢṬAFĀ PAS͟HA in Suppl.].

MUṢṬAFĀ PAS͟HA, ḲARA S͟HĀHĪN, Ottoman governor (*beylerbeyi*) of Yemen and Egypt in the mid-10th/16th century. A Bosnian recruited through the dews͟hirme [*q.v.*], Muṣṭafā was trained in the inner palace (*enderūn* [*q.v.*]) service and thereafter held a number of minor posts. Although he is said to have gained fame during the Persian campaigns, the claim by the author of *Sid͟jill-i ʿOt͟hmānī* that he was *beylerbeyi* of Erzurum in 951/1544-5 and, four years later, of Diyār Bakr, and that he subsequently was tutor (*lālā*) to Prince Bāyezīd (d. 969/1561), appears uncorroborated and may be owing to that author's having confused him with Lālā Muṣṭafā Pas͟ha (d. 988/1580 [see MUṢṬAFĀ PAS͟HA, LALA]).

Muṣṭafā was named to succeed the late Muṣṭafā Pas͟ha al-Nas͟hs͟hār [*q.v.*] as *beylerbeyi* of Yemen in early 963/1556 while serving as *sand͟jaḳ beyi* of G͟hazza. Two of his sons, Riḍwān and Bahrām, later were governors of Yemen too, and the latter accompanied his father on this occasion. Muṣṭafā administered Yemen for four-and-a-half years, yet the sources report little about him there beyond mentioning his popularity. He was observed to have valued the company of religious scholars, and this may account for his having aroused Zaydī susceptibilities when in 964/1557 he attempted to have the S͟hīʿī formula *ḥayya ʿalā k͟hayr al-ʿamal* deleted from the *ad͟hān* [*q.v.*]. The silence of the Arabic chroniclers suggests that Muṣṭafā Pas͟ha avoided all contact with al-Muṭahhar [*q.v.*], the Zaydī leader.

Ḳara S͟hāhīn Muṣṭafā Pas͟ha was recalled to Istanbul in Rad͟jab 967/April 1560. Documents show that he was considered for governorships of Aleppo and Rūm; but with the death of K͟hādim ʿAlī Pas͟ha the governor of Egypt, Muṣṭafā was appointed his successor on 1 Rabīʿ I 968/20 November 1560. Although he held this office until D͟jumādā II 971/January-February 1564, the Egyptian chroniclers are silent on his activities except for the comment by one (al-K͟hallāḳ) that he was cruel and tyranical. He apparently died shortly after this tenure.

(J.R. Blackburn)

MUṢṬAFĀ PAS͟HA, KÖPRÜLÜ [see KÖPRÜLÜ].

MUṢṬAFĀ PAS͟HA, LALA, famous Ottoman commander of the 10th/16th century, d. 988/1580. The date of his birth is not given.

He was a native of Soḳol, and began his service in the imperial palace. He rose in rank under the grand vizier Aḥmed (960-2/1553-5), but was not in favour with the latter's successor Rüstem Pas͟ha, who made him in 963/1556 *lālā* to prince Selīm with the object of ruining him. The outcome of this nomination was the contrary of what was expected; Muṣṭafā became the chief originator of the intrigues by which Selīm came into conflict with his brother Bāyezīd and which ended with Bāyezīd's execution in Persia [see SELĪM II]. After these events, Rüstem Pas͟ha managed to relegate the intriguer in administrative functions to different parts of the empire; for eight years he was *wālī* in Damascus. Nor was his compatriot from Bosnia, the grand vizier Ṣoḳollu Meḥmed Pas͟ha, favourably disposed to Muṣṭafā, but in the beginning of 1569 Sultan Selīm II called back his former *lālā* as *ḳubbe wezīri* in the capital. Very soon afterwards, Ṣoḳollu appointed him *ser-ʿasker* in the Yemen; Muṣṭafā went to Cairo to take charge of his command, but here he became involved in serious disputes with the *wālī* Sinān Pas͟ha over the equipment of his army. The end was that Sinān was appointed in Muṣṭafā's stead and the latter had to return to Istanbul. Sultan Selīm's protection saved him from death, and in the beginning of the following year he was appointed again *ser-ʿasker* of the army destined for the conquest of the island of Cyprus. Lala Muṣṭafā Pas͟ha led this memorable campaign with complete success; Nicosia was taken in Ṣafar 978/July 1570, while Famagusta surrendered in Rabīʿ I 979/August 1571. With the surrender of this town is connected the brutal and cruel execution of the Venetian commander

Bragadino. After his return, he became a serious candidate for the grand vizierate, should Ṣoḳollu disappear from the scene. His only rival was Sinān Pas̲h̲a. When in 985/1577 the war with Persia broke out [see MURĀD III], both were appointed *ser-ʿasker*, but, on account of Sinān's arrogant character, the latter's appointment had to be withdrawn. In April, Lala Muṣṭafā began his campaign in Georgia, fought the memorable victory of Čaldîr (D̲j̲umādā II 986/August 1578) and took Tiflis besides a number of other towns. These military glories did not bring him to the ambition of his life. After Ṣoḳollu's assassination, Rüstem's son-in-law Aḥmed Pas̲h̲a had been made grand vizier and, on the latter's death in Rabīʿ I 988/May 15870, it was Ṣinān [*q.v.*] who got the sultan's seal. Lala Muṣṭafā died in Ramaḍān/October of the same year and was buried in the court of the mosque at Eyyūb.

Apart from the unquestionably important events in which he played a prominent part, Lala Muṣṭafā Pas̲h̲a has a particular importance in Ottoman historiography because the historian ʿĀlī [*q.v.*] had been attached to his person as scribe since the beginning of his career. Therefore his able, but intriguing and reckless, character is known better than that of many other Turkish statesmen or generals. By his marriage with the grand-daughter of the last Mamlūk sultan Ḳānṣawh al-G̲h̲awrī [*q.v.*], he was a very wealthy man, who, notwithstanding his reputed avarice, founded several mosques (as in Erzerūm) and many buildings of public utility in the different places where he resided as governor.

Bibliography: The chief Turkish source is, as has been said, ʿĀlī, not only in his *Künh al-ak̲h̲bār*, but also in a treatise entitled *Nādirat al-maḥārib*, describing the war between Selīm and Bāyezīd (ms. unknown; cf. Babinger, *GOW*, 132) and in his *Nuṣrat-nāme*, which gives a description of the Georgian campaign. Other sources are the works of Pečewī and Ṣolaḳ-zāde. Western contemporary sources are the *Diary* of Gerlach, the *Letters* of Busbecq and, especially for the conquest of Cyprus, the Italian historical descriptions. See also S.J. Shaw, *History of the Ottoman empire and modern Turkey*, i, Cambridge 1976, 180-1; *İA*, art. s.v. (Bekir Kütükoğlu); and ḲUBRUṢ. (J.H. KRAMERS)

MUṢṬAFĀ PAS̲H̲A AL-NAS̲H̲S̲H̲ĀR, twice Ottoman governor (*beylerbeyi*) of Yemen in the mid-10th/16th century.

A saddler (*sarrād̲j̲*) with the Ottoman army that conquered Egypt in 923/1517, he used the wealth he obtained through plundering the treasury of K̲h̲āʾin Aḥmed Pas̲h̲a [*q.v.*], the rebellious Ottoman governor of Egypt (929-31/1523-5), to win the favour of Dāwūd Pas̲h̲a, a later governor of that province (945-56/1538-49). The latter appointed him commander of the annual Egyptian pilgrimage caravan (*amīr al-ḥad̲j̲d̲j̲*) for 945/1539, a position he held more than once subsequently. It was apparently in discharging this function that Muṣṭafā gained the epithet *al-Nas̲h̲s̲h̲ār* "the sawyer" through his habit of having captured brigands sawn in two. When two months later his viceregal patron secured him the governorship of Yemen, Muṣṭafā arrived at Zabīd in late 947 or early 948/1540-1 and was the first Ottoman incumbent there to have the rank and title of *beylerbeyi* and *pas̲h̲a*. His five-year term embraced the supplying of troops and weapons from Yemen to Somali Muslims in conflict with Portuguese-supported Abyssinians (948-9/1542); the recovery of northern Tihāma from one of the Zaydī *imām*'s sons (950/1543); and a bold but unsuccessful initiative to capture Ṣanʿāʾ, the *imām*'s capital (951/1544).

Muṣṭafā Pas̲h̲a returned to Egypt in 952-3/1545-6, served briefly as *ḳāʾim-maḳām* (acting governor) there during 956/1549, and was back in Yemen in 958/1551 heading a special mission which early next year gained, in uneasy collaboration with Özdemir Pas̲h̲a, the Ottoman governor (956-62/1549-54), recognition of Ottoman suzerainty by al-Muṭahhar [*q.v.*], the Zaydī leader. His second term as *beylerbeyi* of Yemen began in early 962/late 1554, but was cut short by his death at Zabīd five or six months later. Muṣṭafā Pas̲h̲a al-Nas̲h̲s̲h̲ār appears best remembered as the *beylerbeyi* whose considerable experience as *amīr al-ḥad̲j̲d̲j̲* for Egypt led him to institute the first annual pilgrims' caravan to Mecca from Ottoman Yemen.

Bibliography: The most complete and accessible contemporary source is Ḳuṭb al-Dīn al-Nahrawālī, *al-Barḳ al-Yamānī* = *G̲h̲azawāt al-D̲j̲arākisa*, ed. al-D̲j̲āsir, Riyāḍ 1967, 88-9, 94-5, 107-18, 121-5. Three other chronicle sources, those of Fīrūz, *Maṭāliʿ al-nīrān*, Ibn Dāʿir, *al-Futūḥāt*, and ʿĪsā b. Luṭf Allāh, *Rawḥ al-rūḥ*, remain in ms., although the relevant contents of the latter are conveyed in Ottoman Turkish by Aḥmed Rās̲h̲id, *Tārīk̲h̲-i Yemen ve Ṣanʿā*, Istanbul 1291/1874-5, i, 75, 80, 95-107. Additional early works are those of al-Mawzaʿī, *al-Iḥsān*, ed. al-Ḥibs̲h̲ī, Ṣanʿāʾ n.d., 32-3, and Yaḥyā b. al-Ḥusayn, *G̲h̲āyat al-amānī*, ed. ʿĀs̲h̲ūr, Cairo 1968, ii, 688-90, 708-12, 715-19, in Arabic, and of Pečewi, *Tārīk̲h̲*, Istanbul 1283/1866-7, i, 38, and Müned̲j̲d̲j̲im Bas̲h̲î, iii, 213, 238 f., 241-3, in Turkish. Fairly accurate dates for al-Nas̲h̲s̲h̲ār's second term in Yemen and for Ḳara S̲h̲āhīn's tenures in both Yemen and Egypt can be determined from existing Ottoman *Mühimme* documents. Two informative Egyptian chronicles (in Turkish) are al-K̲h̲allāḳ, *Tārīk̲h̲-i Miṣr*, and ʿAbd al-Karīm, *Tārīk̲h̲-i Miṣr* (both in ms. only).

Secondary materials include Wüstenfeld, *Jemen*, Göttingen 1884, 8-9; *Sid̲j̲ill-i ʿOt̲h̲mānī*, iv, 373-5 (faulty); al-D̲j̲urāfī, *al-Muḳtaṭaf*, Cairo 1951, 89; Zabāra, *Aʾimmat al-Yaman*, Taʿizz 1372/1952, 440-6, 449-53; M. Sālim, *al-Fatḥ al-ʿUt̲h̲mānī al-awwal li 'l-Yaman*, Cairo 1969, 157, 184-90, 194, 203-6; N.A. Asrar, *Kânûnî Sultan Süleyman devrinde Osmanlı devletinin dini siyaseti ve Islam alemi*, Istanbul 1972, 230-5; and H. Yavuz, *Yemen'de Osmanlı hâkimiyeti* (*1517-1571*), Istanbul 1984, 54, 59-61. MUṢṬAFĀ PAS̲H̲A, RES̲H̲ĪD [see RES̲H̲ĪD].

MUSTAG̲H̲ĀNIM (Mostaganem), a coastal town in Algeria, 8 miles E. of the mouth of the S̲h̲elif (5′ E. long. Greenwich). It does not occupy the site of any known ancient town. There is no natural harbour here; two capes, not particularly well marked (K̲h̲arūba and Salamander), leave vessels without protection against winds from the north and west. It is therefore not as a port that al-Bakrī (5th/11th century) mentions Mostaganem for the first time. He describes it as a town situated "not far from the sea" (it is less than a mile away) living on the products of its rich territory, notably the cotton plantations. From this time onwards it was surrounded by a wall which strengthened its natural defences. The old town occupies a triangular plateau formed by the sharp bend of the ʿAyn Sefra, and the wall runs along the top of the ravine. On the point of this natural stronghold, the Almoravid Yūsuf b. Tās̲h̲fīn is said to have built in 475/1082 a fortress which was later called Burd̲j̲ al-Maḥāl, from the name of one of the tribes of the neighbourhood, and which became a prison. Like the other towns of the coast, Nedroma or Algiers, Mostaganem was probably given a small Almoravid garrison. Thus strengthened, the town would serve as

a place of refuge against an attack from the sea and the Berber tribes of the hinterland, who belonged for the most part to the Maghrāwa [*q.v.*] confederation, could be kept at a distance. It must thus have developed to some extent. In the middle of the 6th/12th century, al-Idrīsī tells us that it had bazaars and baths; he emphasises the abundance of the water which irrigated the gardens and orchards and drove mills.

The name of Mostaganem does not figure in history throughout all this period when the Almohads in theory held the central Maghrib. The decline of the Almohads enabled the Maghrāwa [*q.v.*] to become complete masters of the country. In 665/1267 and 669/1271 the Zayyānid sultan of Tlemcen, Yaghmurāsān, reduced these turbulent tribes and incorporated their lands in the empire which he had founded. In 680/1281 he entrusted the government of Mostaganem to one of his cousins, al-Zaʿīm b. Yaḥyā, a descendant of one of the collateral branches of the family of the Banū Zayyān, in spite of the lack of confidence he had in those relatives whom he had deprived of the throne. These fears proved well-founded. Al-Zaʿīm, having roused the Maghrāwa to rebel, declared himself independent. Yaghmurāsān had to march on Mostaganem; he blockaded the town strictly and the rebel surrendered after obtaining permission to cross to Spain.

Like all the coast region, Mostaganem in 735 or 736/1335-6 passed to the Marīnid Abu 'l-Ḥasan, who was engaged in the siege of Tlemcen. In 742/1340 the victorious sultan built a mosque in Mostaganem. We have an inscription attesting this foundation of the interregnum of the Moroccan princes. Regained by the sultans of Tlemcen, the town suffered disastrously from their weakness. The Suwayd Arabs of the great Zughba confederation became undisputed masters of the whole district. Mostaganem led a precarious existence. Leo Africanus at the beginning of the 10th/16th century says that it occupied only a third of its former area. He credits it with 1,500 hearths, but tells us however of the weavers and of the roadstead to which ships from Europe came. He says the river runs "through the city", which shows that in addition to the old stronghold on the left bank there were now quarters on the right bank. In the Turkish period we know of two suburbs: Tidjdit (the New) and Maṭmūr (the Silo). In 922/1516 Khayr al-Dīn [*q.v.*] considerably strengthened its defences. Shaw at the beginning of the 18th century speaks of the citadel (the Fort of the East?) which, built on a height, commanded the town and vicinity. In 1830 the garrison consisted of some hundreds of Turks and Ḳulughlīs. The French took them into their service and put them under the command of the Ḳāʾid Ibrāhīm. Distrusting the loyalty of the latter and thinking he had an agreement with the Madjāhir, an unsubdued tribe of the neighbourhood, General Desmichels occupied the town in 1833. The troops whom he stationed there were attacked by ʿAbd al-Ḳādir [*q.v.*]. The vexatious results of the treaty signed by Desmichels with the *amīr* forced Clauzel to retake Mostaganem (1835). Under Bugeaud, Mostaganem became the point of disembarkation and the centre of operations against ʿAbd al-Ḳādir. It was there that in 1847 the first battalion of Algerian Tirailleurs (Turcos) was raised, and the town subsequently became an important centre for recruiting native troops.

Mostaganem has developed considerably since the early days of the French occupation; in 1960 it had 65,000 inhabitants. Its harbour, which owes nothing to nature, has been improved by two jetties which still afford only a rather mediocre shelter for shipping.

MUSTAḤABB (a.), "recommendable", corresponds largely with *mandūb* "recommended", one of five descriptions for human acts [see SHARĪʿA].

MUSTAʿIDD KHĀN, Muḥammad Sāḳī, historian of Mughal India. Born about 1961/1650, he was brought up as an adopted son by Muḥammad Bakhtāwar Khān, whom he faithfully assisted in various capacities. After the death of his patron he passed into the service of Awrangzīb [*q.v.*]. In the reign of Shāh ʿĀlam Bahādur Shāh I (1118-24/1707-12 [*q.v.*]), he became the secretary of ʿInāyat Allāh Khān, son of Mīrzā Shukr Allāh, the minister of Bahādur Shāh, and by his desire Mustaʿidd Khān composed the history of the reign of Awrangzib entitled *Maʾāthir-i ʿĀlamgīrī*. Part 1 is a mere abridgement of Mīrzā Kāẓim's history of the first ten years of the emperor's reign; part 2 contains the history of the last forty years of ʿĀlamgīr's reign (edited in the *Bibliotheca Indica*, Calcutta 1870-1; Eng. tr. Sir Jadunath Sarkar, Bibl. Ind., Calcutta 1947).

He died at the age of seventy-five at Dihlī in 1136/1723.

al-**MUSTAʿĪN** (I) bi 'llāh, Abu 'l-ʿAbbās Aḥmad b. Muḥammad, ʿAbbāsid caliph, reigned 248-52/862-6, grandson of the caliph al-Muʿtaṣim [*q.v.*] and the son of a slave concubine of Ṣaḳlabī origin named Mukhāriḳ.

When his cousin al-Muntaṣir [*q.v.*] died, the Turkish commanders in Sāmarrā plucked al-Mustaʿīn from a life of obscurity (he is said to have made a living as a copyist of manuscripts) to become caliph (6 Rabīʿ II 248/9 June 862). The choice aroused discontent in Sāmarrā and unrest broke out among those who supported al-Muʿtazz [*q.v.*] which was only put down after much bloodshed and financial expenditure by the Turkish soldiers. When al-Mustaʿīn was recognised as caliph, he confirmed the governor of Baghdād, Muḥammad b. ʿAbd Allāh b. Ṭāhir [*q.v.*], in office. He bought all the property of al-Muʿtazz and his brother al-Muʾayyad and then had them arrested. The Turks wanted to put them to death, but they were protected by the secretary Aḥmad b. al-Khaṣīb, who soon afterwards fell into disgrace and was banished to Crete. In 249/863 trouble broke out as a result of a defeat of the army by the Byzantines; the rebels were however scattered by the vizier Utāmish and the two Turkish generals Waṣīf and Boghā al-Ṣaghīr. Utāmish was soon afterwards murdered at the instigation of the latter. As the caliph no longer felt safe in Sāmarrā, he went to Baghdād in Muḥarram 251/February 865. Al-Muʿtazz was then taken by his supporters out of his prison in Sāmarrā,

and a war broke out which ended in Dhu 'l-Ḥidjdja 251/January 866 in the abdication of al-Mustaʿīn. By the arrangement made, the latter was to live in Medina in future; but he was detained in Wāsiṭ and murdered at Sāmarrā on 3 Shawwāl 252/17 October 866 at the age of 35 and after a reign of three years and eight or nine months.

On the administrative level, al-Mustaʿīn's initial choice of vizier, at the side of Aḥmad b. al-Khaṣīb, of Utāmish, a Turkish soldier who had taken part in the conspiracy which had in 247/861 led to the caliph al-Mutawakkil's [*q.v.*] death, is notable; in practice, day-to-day administration was probably carried on by Utāmish's own secretary Shudjāʿ b. al-Ḳāsim, whilst Utāmish acted as virtual regent for the caliph till Utāmish's murder in 249/863 (see above).

Enfeeblement at the centre of the caliphate had a predictable consequence in disturbance and revolts on the peripheries. During al-Mustaʿīn's reign, there are recorded anti-government outbreaks in Syria and Jordan; ʿAlid revolts at Kūfa (248/862 and 251/865) and at Ḳazwīn (250/864); whilst it was in this latter year also that the Zaydī movement under *al-Dāʿī al-kabīr* al-Ḥasan b. Zayd b. Muḥammad [*q.v.*] began in Ṭabaristān and at Rayy.

(K.V. ZETTERSTÉEN-[C.E. BOSWORTH])

AL-**MUSTAʿĪN** (II) BI'LLĀH, Abu 'l-Faḍl al-ʿAbbās, tenth ʿAbbāsid "shadow" caliph in Egypt, son of al-Mutawakkil (I) Muḥammad by a Turkish concubine, Bāy Khātūn.

He succeeded his father on 1 Shaʿbān 808/22 January 1406. Accompanying the sultan al-Nāṣir Faradj [*q.v.*] on his expedition against the rebel *amīrs*, Shaykh al-Maḥmūdī (governor of Aleppo) and Nawrūz al-Ḥāfiẓī (governor of Tripoli), he fell into their hands when the sultan was defeated at al-Ladjdjūn on 13 Muḥarram 815/25 April 1412. There was virtual anarchy in the rebels' camp, where Shaykh, Nawrūz and Baktamur Djilliḳ (who had gone over to them early in the campaign) were competing for the primacy and prospectively the sultanate. The royal secretary (*kātib al-sirr*), Fatḥ al-Dīn Fatḥ Allāh, who had also been captured at al-Ladjdjūn, advised them to set up a sultan to unite their efforts. As they lacked the obvious candidate for such a position, Faradj's infant son, Fatḥ Allāh suggested the appointment of al-Mustaʿīn, who formally deposed Faradj, and reluctantly accepted the sultanate on 25 Muḥarram/7 May. Faradj surrendered, was sentenced to death by a commission of jurists under al-Mustaʿīn, and was duly executed (16 Ṣafar/28 May). The Mamlūk realm was then in effect partitioned. Nawrūz administered the Syrian provinces, while al-Mustaʿīn returned with Shaykh and Baktamur Djilliḳ to Cairo, where he took up his residence in the Citadel (2 Rabīʿ II/12 July). This indication of his intention to rule as sultan, not merely to reign as a titular figurehead, was not welcome to Shaykh, who took steps to isolate him. On 8 Rabīʿ II/18 July, Shaykh was invested as senior *amīr* (*amīr kabīr*, *atābak al-ʿasākir*) with plenary powers, and assumed the title of *niẓām al-mulk*. Henceforward the sultan-caliph was virtually a state prisoner, while Shaykh moved towards the usurpation of the sultanate. The last obstacle in his way was removed on 8 Djumādā II/15 September by the death of Baktamur Djilliḳ. Having obtained the concurrence of the *amīrs*, Shaykh was recognised as sultan on 1 Shaʿbān/6 November. After long hesitation, al-Mustaʿīn formally abdicated as sultan, but tried to ensure his own future security as caliph. His reign as sultan had in no way signified an ʿAbbāsid revival; he was merely filling the role of interim sultan. After abdication he was held in the Citadel. On 16 Dhu 'l-Ḥidjdja 816/9 March 1414, Shaykh, who was about to march against Nawrūz, deposed him from the caliphate, and installed his brother, al-Muʿtaḍid (II) Dāwūd. On 10 Dhu 'l-Ḥidjdja 819/29 January 1417 he was transferred to Alexandria with Faradj's three sons. He died there of plague in Djumādā I or II 833/February-March 1430 at less than 40 years of age.

(P.M. HOLT)

AL-**MUSTAKFĪ** BI 'LLĀH, ABU 'L-ḲĀSIM ʿABD ALLĀH, ʿAbbāsid caliph, reigned 333-4/944-6, son of the caliph al-Muktafī [*q.v.*] by a Greek slave concubine called Ghuṣn.

When the commander-in-chief of the Turkish soldiery in Baghdād, Tūzūn, deposed and blinded al-Muttaḳī b. al-Muḳtadir [*q.v.*], he raised to the throne one of the latter's cousins as al-Mustakfī in Ṣafar 333/September-October 944, al-Mustakfī being then aged 41. The situation in ʿIrāḳ was unpropitious for the new ruler. The caliphs were puppets in the hands of the Turkish troops, whose excesses, combined with an empty state treasury, had reduced the population of Baghdād to economic distress and famine. The whole position in ʿIrāḳ was threatened by the advance of the Daylamī Būyids [see BUWAYHIDS], already established in southern ʿIrāḳ and moving northwards on the capital. The new caliph remained under the control of Tūzūn till the latter's death in Muḥarram 334/August 945, and then under that of the new commander-in-chief Ibn Shīrzād. He did, however, take care to hunt down his relative and rival al-Faḍl, representing the children of al-Muḳtadir, drove him into hiding and pulled down his house. When the Būyid leader Aḥmad arrived in Baghdād in Djumādā I 334/December 945, the caliph was obliged to grant him the *laḳab* of Muʿizz al-Dawla [*q.v.*] (and similar honorifics for his two brothers), to place his name together with his own on the coinage and to recognise the Būyid as *amīr al-umarāʾ* [*q.v.*] and in effect ruler of ʿIrāḳ. This move alarmed the Ḥamdānids [*q.v.*] of Mawṣil and northern Syria, who now recognised

instead of al-Mustakfī the former caliph al-Muttaḳī. Al-Mustakfī may have been tempted to intrigue with other Daylamī commanders; this, at least, was the pretext for Muʿizz al-Dawla, less than a month after his entry into Baghdād, to depose and blind al-Mustakfī on 8 Djumādā II 334/29 January 946 or in Shaʿbān/March and to replace him by al-Faḍl b. al-Muḳtadir, now given the title of al-Muṭīʿ [*q.v.*]. He died in imprisonment in Rabīʿ I 338/September 949.

Al-Mustakfī is described of having been fond of sports and games, a drinker of *nabīdh* [*q.v.*] and a person who had links with the Baghdād *ʿayyārūn* [*q.v.*], in distinction from the pious family of al-Muḳtadir, though a sympathy by him for the Shīʿa—paralleling that of his grandfather al-Muʿtaḍid [*q.v.*]—is mentioned.

(C.E. Bosworth)

MUSTAKHRIDJ (A.), the active participle of the verb *istakhradja* in the sense of "to extract", used in the mediaeval Islamic terminology for the person responsible for collecting money, such as that of the *ṣadaḳa* or poor-tax (al-Ṭabarī, i, 2746) or of the *kharādj* or land-tax; thus in ʿAbbāsid times he was an offical of the *Dīwan al-Kharādj* charged with the latter task (*ibid.*, iii, 1856, year 257/871, caliphate of al-Muʿtamid). In Muslim Spain, it seems to have been the original of the Latin term *exceptor*, the official who collected on behalf of the Muslim state the taxation due from the Mozarabs [*q.v.*] (Lévi-Provençal, *Hist. Esp. Mus.*, iii, 219).

Often, however, *istikhrādj* has the additional nuance of meaning of extracting money by force or violence, no doubt necessary at times when dealing with recalcitrant tax-payers, but also applied to the process of making a dismissed offical disgorge his ill-gotten gains, hence here equivalent to *muṣādara* [*q.v.*] or *muṭālaba* (see al-Thaʿālibī, *Laṭāʾif al-maʿārif*, ed. al-Abyārī and al-Ṣarafī, 14-15, tr. Bosworth, *The Book of curious and entertaining information*, 45; Abu 'l-Faḍl Bayhaḳī, *Taʾrīkh-i Masʿūdī*, cited in Bosworth, *The Ghaznavids*, 91.

Bibliography: Given in the article, but see also Dozy, *Supplément*, i, 359, and the *Bibl.* to MUṢĀDARA. 2.

MÜSTAḲĪM-ZĀDE, Saʿd al-Dīn Süleymān b. Meḥmed Emīn (1719-88), Ottoman scholar and calligrapher.

1. Life. He was born in Radjab 1131/May 1719 in Istanbul, and died there on 22 or 23 Shawwāl 1202/27 or 28 July 1788. He came from a well-known *ʿulamāʾ* family. His grandfather, Meḥmed Müstaḳīm Efendi (d. 1124/1712), had occupied the post of *ḳāḍī* of Damascus and Edirne, while his father, Meḥmed Emīn Efendi (d. 1164/1750), only rose to the rank of a *mudarris* of the Sayyid Ḥasan Pasha *madrasa* in Istanbul.

Müstaḳim-zāde has left an autobiographical note on his education which gives a good insight into the scope and routine of the *madrasa* instruction of the time (printed in *Tuḥfe-yi khaṭṭāṭīn*, introd., 6-7). According to this document, Müstaḳīm-zāde studied the traditional Islamic sciences under prominent scholars of the capital in order to qualify for a career in the ranks of the *ʿulamāʾ*, and at the same time was trained as a calligrapher. Both Müstaḳīm-zāde's grandfather and father had studied under and established close links with the famous Syrian scholar and *shaykh* of the Ḳādirī and Naḳshbandī *ṭarīḳas*, ʿAbd al-Ghanī al-Nābulusī (1050-1143/1641-1731 [*q.v.*]). Müstaḳīm-zāde himself became deeply influenced by the latter's works and teachings, which is evident from his own writings. His marked inclination towards the religious orders finds its expression in his association, while still an adolescent, with the Ḳādiriyya and Naḳshbandiyya, but particularly in his lifelong devotion to the Naḳshbandī *Shaykh* Meḥmed Emīn al-Toḳadī (d. 1158/1745; see A. Ḥilmī, *Ziyāret-i ewliyā*, 158-62), who passed on to Müstaḳīm-zāde the direct line of *shaykhs* (*silsile*) going back to Shaykh Aḥmad al-Farūḳī al-Sirhindī [*q.v.*].

The death of his *pīr* seems to have provoked a crisis in Müstaḳīm-zāde's life, but he continued to study in preparation for the office of Great Mollā, the highest rank within the Ottoman *ʿilmiyye* hierarchy. The second turning point of his life however, his failure in the entry examinations for the coveted career, determined Müstaḳīm-zāde, at the age of 32, to renounce his ambitions and to devote the rest of his life to private scholarship and contemplation. Until his death at the age of 69, he made a pitiful living on fees for his activities as an author and calligrapher, and on a small stipend (*maʿīshet*), a gift of the calligrapher and *Shaykh al-Islām* Ṣāliḥ-zāde Meḥmed Emīn (in office 1189-90/1775-6). Müstaḳīm-zāde never had a family of his own, and only a few disciples and patrons.

2. Works. His uneventful life gave Müstaḳīm-zāde the opportunity to compose around 150 books and treatises—the exact number has not been established yet—which attest his eminence as the most productive and versatile Ottoman author of the 18th century. This work, most of it in Turkish, but some also in Arabic and Persian, is indebted to the traditional Islamic subjects and methods, and thus furnishes an exemplary presentation of 18th century Ottoman learning. Most of it deals with topics from the field of *ḥadīth*, *tafsīr*, *fiḳh* and also of Ṣūfī mystical themes; but his writings on history (particularly biography) and *adab* are in general more voluminous. His poetry is insignificant. Manuscripts of Müstaḳīm-zāde's works can be found in most of the big manuscript collections. The Süleymaniye Kütüphanesi in Istanbul possesses the largest number of Müstaḳīm-zāde mss., some of them unique or autograph copies.

The following works can today be considered as his most important ones:

(a) *Religious sciences*. A Turkish commentary (*ḥāshiye*), finished in 1181/1768, on *al-Ḥizb al-aʿẓam wa 'l-wird al-afham*, a collection of prayers by ʿAlī b. Sulṭān Muḥammad al-Ḳārīʾ al-Harawī (d. 1014/1605), cf. Brockelmann, II², 520, S II, 539-41; autograph ms. Süleymaniye, Esat Ef. 1391. A Turkish commentary (*sherḥ*) on *al-Ḳaṣīda al-muḍariyya* in praise of the Prophet by Sharaf al-Dīn al-Būṣīrī al-Ṣanhādjī [*q.v.* in Suppl.], cf. Brockelmann, I², 308-9, 314, S I, 467; among many ms., Süleymaniye, Pertev Paşa 611/2.

(b) *Biography*. *Madjallat al-niṣāb fi 'l-nisab wa 'l-kunā wa 'l-alḳāb*, in Arabic, finished in 1175/1761-2, a continuation of Kātib Čelebi's [*q.v.*] *Sullam al-wuṣūl ilā ṭabaḳāt al-fuḥūl*; unique ms., Süleymaniye, Halet Ef. 628. *Tuḥfe-yi khaṭṭāṭīn*, biographies of calligraphers, in Turkish, finished in 1173/1759-60; edition by

İbnülemīn Maḥmūd Kemāl [İnal], Istanbul 1928. *Dewḥat ül-meshāyikh*, biographies of the Ottoman *Shaykh al-Islāms*, in Turkish, finished in 1158/1745, with two later continuations; critical edition by B. Kellner-Heinkele in press.

(c) *Adab. Sherḥ-i Dīwān-i ʿAlī al-Murtaḍā*, commentary on the alleged *dīwān* of the caliph ʿAlī (cf. Sezgin, *GAS*, ii, 277-81), in Turkish, finished in 1186/1772; printed in 2 vols., Bulāḳ 1255/1839-40; ed. in modern Turkish by Şakır Diclehan, Istanbul 1981, repr. 1985. *Ḳānūn al-adab terdjümesi*, Turkish translation with commentary of the Arabic-Persian dictionary of Abu 'l-Faḍl Ḥubaysh b. Ibrāhīm b. Muḥammad Kamāl al-Dīn al-Tiflisī (wrote *ca.* 600/1203, cf. Brockelmann, S I, 893, and ʿA. Munzawī, *Farhang-nāmahā-yi ʿarabī bi-farsī*, Tehran 1337/1959, 74-6), written between 1183/1769-70 and 1191/1777; several mss. in the Süleymaniye.

(d) *Ṣūfism. Mektūbāt-i ḳudsiyye*, translation into Turkish of the Persian letters of the famous Indian Naḳshbandī Shaykh and renovator of Orthodox Indian Islam, Shaykh Aḥmad al-Farūḳī al-Sirhindī [*q.v.*] (cf. Muhammad Farman in *A history of Muslim philosophy*, ed. M.M. Sharif, ii, Wiesbaden 1966, 873-83), written between 1162/1749 and 1165/1752; mss. are frequent; printed in 3 vols., Istanbul 1277/1860-1.

Bibliography: Faṭīn, *Tedhkire*, 194-5; *Tārīkh-i Djewdet*, iv, 260-1; Bursalī Meḥmed Ṭāhir, *ʿOthmānlī müʾellifleri*, i, 168-9; A. Ḥilmī, *Ziyāret-i ewliyā*, Istanbul 1325/1907, 155-7; İbnülemīn Maḥmūd Kemāl (İnal), introd. to his ed. of *Tuḥfe-yi khaṭṭāṭīn*, Istanbul 1928, *passim*, for the most extensive description so far of Müstaḳīm-zāde's life and works; A.S. Levend, *Türk edebiyatı tarihi*, Ankara 1973, 370-3, for the biographical writings.

(B. Kellner-Heinkele)

al-**MUSTAʿLĪ** bi **'LLĀH**, Abu 'l-Ḳāsim Aḥmad b. al-Mustanṣir, ninth Fāṭimid caliph, born 20 Muḥarram 467/16 September 1074 (so in all the best sources and in al-Mustanṣir's letter to Aḥmad b. ʿAlī al-Ṣulayḥī, quoted in Idrīs, vii, 152), the youngest son of his father. At this time it was generally assumed in the Ismāʿīlī organisation that the eldest son, Nizār (born 437/1045-6), would, in accordance with custom, succeed his father in the imāmate, although no formal investiture with the *wilāyat al-ʿahd* appears to have been made. The influence of the all-powerful *wazīr* Badr al-Djamālī, however, and of his son al-Afḍal [*q.vv.*] was thrown into the scale in favour of Abu 'l-Ḳāsim and al-Mustanṣir's consent obtained to the marriage of Abu 'l-Ḳāsim with Sitt al-Mulk, the daughter of Badr (the statement in al-Fāriḳī, *apud* Ibn al-Ḳalānisī, ed. Amedroz, 128, that he was the son of Badr's daughter is evidently a misunderstanding). According to the tradition of the Mustaʿlian Ismāʿīlīs [see bohorās], Abu 'l-Ḳāsim was invested with the succession at the time of this marriage; in another version (Ibn Muyassar, 66-7), al-Mustanṣir confided his nomination of Abu 'l-Ḳāsim to his own sister, who divulged it after his death. On the death of al-Mustanṣir on 18 Dhu 'l-Ḥidjdja 487/10 January 1094, the Shīʿī *ʿĪd al-Ghadīr*, al-Afḍal secured the accession of al-Mustaʿlī without serious difficulty. The subsequent revolt of Nizār [see nizār b. al-mustanṣir] at Alexandria failed owing to the opposition of the army, and al-Mustaʿlī's succession was generally recognised, except by the Ismāʿīlīs of Persia [see al-ḥasan b. al-ṣabbāḥ and nizāriyya].

Throughout his reign, the actual power was entirely in the hands of al-Afḍal. At first some successes were gained in Syria; Fāmiya (Apamea) made a voluntary submission in 489/1096, and Tyre was recovered from a rebel governor in 490/1097. A project of alliance with the Saldjūḳ Riḍwān of Aleppo against Damascus in the same year fell through. On the appearance of the Crusaders in Syria (490/1097), an Egyptian embassy was sent to open negotiations with them, and in 491/July-August 1098 Jerusalem was recaptured from the Artuḳids Sukmān and Īl-Ghāzī. The advance of the Crusaders in the following year took al-Afḍal by surprise; Jerusalem was again lost, and the defeat of the Egyptian army near ʿAsḳalān (14 Ramaḍān 492/5 August 1099) definitely established them in possession. Two years later (17 Ṣafar 495/12 December 1101) al-Mustaʿlī died and was succeeded by his son al-Manṣūr (al-Āmir bi-Aḥkām Allāh [see al-āmir].

The personal character of al-Mustaʿlī is highly praised by his Sunnī contemporary Ibn al-Ḳalānisī; later writers speak of him as a fanatical Shīʿī, and it would seem that the Fāṭimid organisation and propaganda was intensified in his reign. Idrīs refers especially to his close relations with the *daʿwa* in the Yaman, represented by al-Malika al-Ḥurra and her *dāʿī* Yaḥyā b. Lamak b. Mālik al-Hammādī. In the capable hands of al-Afḍal, order and good government were maintained, and Egypt continued to enjoy prosperity, except for a famine in 492/1009 or 493/1100, due to the influx of Syrian refugees.

Bibliography: The fullest sources are Ibn al-Ḳalānisī, ed. Amedroz, 128-41, and Ibn Taghrībardī, ed. Popper, ii, part 2, 298-325; the chronology of the latter is defective; Ibn al-Athīr, x, 161-224, Djamāl al-Dīn al-Ḥalabī, ms. B.L. Or. 3685, fols. 74b-77a; Ibn Muyassar, ed. Massé, 34-40, and the other sources mentioned under the articles al-afḍal add little of importance. The Mustaʿlian Ismāʿīlī tradition is given in *ʿUyūn al-akhbār* of the *dāʿī* Idrīs b. al-Ḥasan (d. 872) (ms. in possession of H.F. al-Hamdani), vii, 151-75.—For relations with the Crusaders: *Gesta Francorum*, ed. Bréhier, 86, 96, 208-16; *Fulcher Carnotensis*, i, 19, ii, 10-12; Hagenmayer, *Epistulae et Chartae*, Innsbruck 1901, 151, 286. The general European literature is given in fāṭimids and al-mustanṣir; see also P.M. Holt, *The age of the Crusades*, London 1986, 12; F. Daftary, *The Ismāʿīlīs, their history and doctrines*, Cambridge 1990, index, s.vv. al-Mustaʿlī and Mustaʿlians, and ismāʿīliyya. (H.A.R. Gibb)

MUSTAʾMIN [see amān].

MUSTAMLĪ (a., the active participle of the Form X verb *istamlā* "to ask someone for dictation, to take down dictation from someone"), the title of a tradition transmitter's clerk. From the earliest days when in Islam *ḥadīth* [*q.v.*] was transmitted from master (*shaykh*) to pupil, the writing down of traditions has played a certain role in an attempt to protect them against loss. Although transmitting from memory to a pupil, who then stored what he heard in his memory, was felt in the beginning to be the most meritorious transmission procedure, this was gradually overshadowed by the ever-increasing awareness that writing the traditions down constituted a more reliable guarantee against forgetting. The human capacity to retain large numbers of reports pertaining to the time of Muḥammad and his revered Companions, a capacity especially celebrated with the pious generations of old, became open to doubt, and the result was that, in practice, writing traditions down virtually eclipsed memorising, though never entirely: transmitting from memory became the *pro forma* course of action, but hardly ever without written records of the material to be transmitted being kept for safety's sake, albeit often out of sight.

It is generally assumed that the majority of transmitters of Prophetic traditions could read and write but, in the long run, the steadily-growing bulk of the transmitted material made the employing of secretaries imperative. It was then that the function of *mustamlī* became established, the earliest representatives of this professional class emerging in the course of the first half of the 2nd/8th century.

The task of the *mustamlī* can be gleaned from the lexical meaning of the word. In the first place, the *shaykh* would order his *mustamlī* "to write the traditions down from dictation". This task is more or less the same as that of a *kātib* (secretary) or *warrāḳ* (copyist). In the second place, the *mustamlī* would assist the *shaykh* in the actual communication (*tablīgh*) of the traditions to pupils who, it is alleged, were often so numerous that the *shaykh*'s voice could not possibly reach all of them from the spot where he taught. Thus the *mustamlī*(s) had to reiterate the traditions in a way audible for all concerned. With respect to this activity also, the term *muʿīd* is found, as well as *mulḳī* and *muktib*. However, not every *mustamlī* mentioned in the sources is to be understood as having fulfilled both functions, that of *warrāḳ* and that of *muballigh*, but either one or the other.

Accounts of mass meetings during which hundreds, even thousands, of pupils are alleged to have gathered at a certain mosque or a *shaykh*'s private quarters to hear traditions, meetings which would have necessitated the recruitment of dozens of *mustamlīs*, are found all over the sources, but have met with little credulity on the part of western historians (with the exception of a few, e.g. N. Abbott, *Studies in Arabic literary papyri*, ii, Chicago 1967). In Islam, however, these accounts are cherished as indelible proof of mediaeval pious interest in Prophetic tradition and its transmission. The latest references to *mustamlīs* in active service date to the 10th/16th century.

Bibliography: The most comprehensive study, which includes a chronological list of *mustamlīs* with their alleged *shaykhs* gleaned from a host of mediaeval Islamic sources, is M. Weisweiler, *Das Amt des Mustamlī in der arabischen Wissenschaft*, in *Oriens*, iv (1951), 27-57; for an Arabic source almost exclusively devoted to the function of *mustamlī*, see ʿAbd al-Karīm b. Muḥammad al-Samʿānī (d. 562/1167), *Adab al-imlāʾ wa 'l-istimlāʾ, die Methodik des Diktatkollegs*, ed. M. Weisweiler, Leiden 1952.

(G.H.A. Juynboll)

AL-**MUSTANDJID** (I) BI 'LLĀH, ABU 'L-MUẒAFFAR YŪSUF, ʿAbbāsid caliph in Baghdād, born on 1 Rabīʿ II 510/13 August 1116, the son of al-Muḳtafī [*q.v.*] and a Byzantine concubine called Ṭāwūs or Nardjis, died 566/1170.

He was nominated *walī ʿahd* as early as 542/1147 and became caliph after his father's death on 2 Rabīʿ I 555/12 March 1160. His accession was not, however, secured until he had foiled a plot engineered by a favourite slave of al-Muḳtafī to instal her son, Abū ʿAlī, as caliph. The reign of al-Mustandjid was dominated by powerful viziers and court officials and it is difficult to disentangle from the sources the caliph's own rôle in political events. On his accession, al-Mustandjid confirmed the famous Ḥanbalī vizier, Ibn Hubayra [*q.v.*], in his post, promising him that he could remain in it for life (Ibn al-Djawzī, *Muntaẓam*, x, 193). Although the two men did not enjoy the close relationship which had existed between Ibn Hubayra and al-Muḳtafī, they coexisted relatively harmoniously, if at arm's length (Ibn Khallikān, tr. iv, 119). Ibn Hubayra was later ousted and poisoned by his rivals (12 Djumādā I 560/27 March 1165). Having replaced him briefly by his son ʿIzz al-Dīn, al-Mustandjid next appointed Ibn al-Baladī, the *nāẓir* of Wāsiṭ, as vizier. This proved an unpopular choice, especially with the *ustādh al-dār*, ʿAḍud al-Dīn [*q.v.*], and the latter years of al-Mustandjid's reign were marked by bitter rivalry between Ibn al-Baladī and ʿAḍud al-Dīn. Fearing for their own safety at the hands of the caliph and Ibn al-Baladī, ʿAḍud al-Dīn and his associate, the caliph's *mamlūk*, Ḳuṭb al-Dīn Ḳaymāz, murdered the caliph and his vizier. Al-Mustandjid was taken forcibly to his bath where he was locked in until he died (9 Rabīʿ II 566/20 December 1170).

The ten-years' reign of al-Mustandjid saw the successful continuation of vigorous policies, begun under preceding caliphs, notably al-Muḳtafī, and now pursued by or on behalf of al-Mustandjid. These policies aimed at the exclusion of the Saldjūḳs from Iraq and at maintaining a strong territorial "caliphal state". Early in his caliphate, in 558/1163, al-Mustandjid despatched an army to Ḥilla and finally disposed of Mazyadid resistance there (Ibn al-Athīr, xi, 195). To the east the Saldjūḳs were in full decline and the main threat to caliphal authority during al-Mustandjid's rule was posed by Shumla, a Turcoman of the Afshār tribe, who had held Khūzistān since *ca.* 550/1155 (Ibn al-Athīr, xi, 133; Bundārī, 286-7; Ibn al-Djawzī, x, 161, 255). Shumla had designs on the lower Euphrates area but when the caliph's army defeated forces sent by Shumla in 562/1166-7 the latter withdrew to Khūzistān.

To the west the caliph maintained close relations with Nūr al-Dīn [*q.v.*]. The Ḥanbalī historian Ibn Radjab goes so far as to say that Ibn Hubayra had written spurring on Nūr al-Dīn to conquer Fāṭimid Egypt and that the *khuṭba* had been pronounced in the name of al-Mustandjid on Shīrkūh's third campaign into Egypt (*Dhayl*, i, 258). Although the sources generally agree that the ʿAbbāsid *khuṭba* was finally declared in Cairo in 567/1171, there is, however, good reason to assume that under the influence of Ibn Hubayra and other Ḥanbalīs there had been encouragement from al-Mustandjid for Nūr al-Dīn's activities in Egypt. According to Ibn Khallikān, ʿImād al-Dīn al-Iṣfahānī [*q.v.*] was sent by Nūr al-Dīn on a mission to al-Mustandjid's court (iv, 301).

The reign of al-Mustandjid witnessed the continuing flowering of Ḥanbalism. Al-Mustandjid is praised by Ibn al-Djawzī [*q.v.*] for his honouring of ʿAbd al-Ḳādir al-Djīlānī [*q.v.*] and himself (x, 194, 233). Indeed, a lost work of Ibn al-Djawzī on preaching was entitled *Kitāb al-Mustandjid* (Sibṭ Ibn al-Djawzī, 487-8). The caliph held an annual festivity in Radjab to which religious notables and Ṣūfīs were invited, and on one such occasion he married the daughter of his paternal uncle Abū Naṣr b. al-Mustaẓhir (*ibid.*, 251, 267-8). Al-Mustandjid is blamed, however, in the sources for the death of the scholar Ibn Ḥamdūn (d. 562/1166 [*q.v.*]), who had served as his *ṣāḥib dīwān al-zimām*. Ibn Ḥamdūn fell from grace because of alleged anti-caliphal comments in his writings (Ibn Khallikān, iii, 91). Al-Mustandjid is described as brown-skinned, of average stature, with a long beard (Ibn al-Athīr, xi, 236; Sibṭ, 284). He was famous as a poet and for his first-hand knowledge of astronomy. His scholarly reputation is confirmed by Benjamin of Tudela, who visited Baghdād in the 1160s and praises al-Mustandjid for his erudition and his tolerance towards the Jews.

AL-**MUSTANDJID** (II) BI 'LLĀH, ABU 'L-MAḤĀSIN YŪSUF b. al-Mutawakkil Muḥammad (? 798-884/? 1396-1479), thirteenth ʿAbbāsid "shadow" caliph of Egypt.

He was the last of five brothers (the others being al-Mustaʿīn, al-Muʿtaḍid, al-Mustakfī and al-Ḳāʾim) to be caliph (since 859/1455) and served six Mamlūk sultans (Īnāl, al-Muʾayyad Aḥmad b. Īnāl, Khushḳadam, Yilbāy, Timurbughā and Ḳāyitbāy). When Khushḳadam seized power in 865/1461, facing the fierce opposition of the Syrian viceroy Djānim al-Ashrafī (died ignominiously in 867/1462, a victim of one of his own *mamlūks*, as a refugee in Uzun Ḥasan's realm in the city of Edessa, cf. Ibn Taghrībirdī, *al-Dalīl al-shāfī ʿalā 'l-Manhal al-ṣāfī*, ed. Fahīm Muḥammad Shaltūt, i, Mecca-Cairo n.d., 235, no. 812), he placed the caliph, the supreme judges and the leading generals under custody on the Cairo citadel in order to deprive his foe of potential supporters and legitimators (cf. the remark by Ibn Taghrībirdī, *Ḥawādith al-duhūr*, ed. Popper, iii, Berkeley 1932, 399, 2-10). Whereas the other high-ranking prisoners were allowed to return to the city after the threat posed by Djānim was averted (see also al-Suyūṭī, *Taʾrīkh al-khulafāʾ*, Cairo 1371/1952, 513-14), the caliph al-Mustandjid was forced to remain on the Citadel until the time of his death. There he lodged in the house of the former (short-lived) sultan al-Manṣūr ʿUthmān b. Djaḳmaḳ (cf. al-Djawharī al-Ṣayrafī, *Inbāʾ al-haṣr bi-abnāʾ al-ʿaṣr*, ed. Ḥasan Ḥabashī. Cairo 1970, 1, 115, 183, 317) enjoying sufficient livelihood yet no political power whatsoever, less even than his predecessors. This transfer of the caliph to the Citadel was, to his contemporaries, his main contribution to history. Thereafter,—till the end of the Mamlūk sultanate (see Ibn Taghrībirdī's far-sighted remark in *al-Nudjūm al-zāhira*, ed. Cairo, xvi, 259, 10-11)—the caliphs thus remained under the immediate tutelage of the sultan, lest they be used in the inner-Mamlūk struggles for power. Not untypically for an ʿAbbāsid shadow caliph, al-Mustandjid seems to have been well-versed in the Ḳurʾān (al-Sakhāwī, *Ḍawʾ*, x, 329 f., no. 1247) and is otherwise commended as thoroughly content with his restricted power and position (Ibn Iyās, *Badāʾiʿ al-zuhūr*, iii, 151, 1-12).

Bibliography: Given in the article. (U. HAARMANN)

AL-**MUSTANṢIR** (I) BI 'LLĀH, ABŪ DJAʿFAR AL-MANṢŪR, ʿAbbāsid caliph (623-40/1226-42). He was born in Ṣafar 588/February-March 1192, the eldest son of al-Ẓāhir [*q.v.*]; his mother was a Turkish slave. He was proclaimed caliph after his father's death on 13 Radjab 623/11 July 1226 (Ibn al-Athīr, xii, 298). It is difficult to interpret from surviving sources the extent to which the caliph himself played a significant role in political events. It is especially regrettable that two works which dealt with his caliphate have not survived: a monograph by Ibn al-Sāʿī (d. 674/1276 [*q.v.*]) entitled *Iʿtibār al-mustabṣir fī akhbār al-Mustanṣir* which is quoted by later authors such as Ibn Kathīr (*Bidāya*, xiii, 139) and al-Irbilī (*Khulāṣat*, 287-8); and the history of Baghdād by Ibn al-Nadjdjār (d. 643/1245 [*q.v.*]) which was used by al-Dhahabī and al-Suyūṭī.

The sources present a confused picture of the chronology and names of al-Mustanṣir's viziers and other prominent officials. The exact balance of power between these men is not clear. At least two major figures at the caliphal court were Shīʿīs: Muḥammad al-Ḳummī who had served under al-Nāṣir and al-Ẓāhir and who is described as *kātib al-inshāʾ* (Ibn al-Dubaythī, i, 134) and as *wazīr* (Sibṭ, *Mirʾāt*, 523, 533; Ibn al-Ṭiḳṭaḳā, 568); and Muʾayyad al-Dīn Ibn al-ʿAlḳamī [*q.v.*] who became deputy *wazīr* (al-Irbilī, *Khulāṣat*, 289) or *ustadh al-dār* and later served as *wazīr* of al-Mustaʿṣim [*q.v.*], the last ʿAbbāsid caliph of Baghdād (Ibn Kathīr, *op. cit.*, 139); it was he who was to be blamed later for treacherous complicity with the Mongols. According to Ibn al-Ṭiḳṭaḳā (*loc. cit.*), al-Ḳummī was later replaced as *wazīr* by Naṣīr al-Dīn b. Muḥammad b. al-Naḳīd, who remained in power until al-Mustanṣir's death. Ibn Wāṣil reports that the most powerful officials in al-Mustanṣīr's reign were the military commander Iḳbāl al-Sharābī and the *ustādh al-dār* Ibn al-ʿAlḳamī, who were responsible for installing al-Mustaʿṣim as caliph after al-Mustanṣir's death, an event which was briefly concealed to allow the succession to be arranged (*op. cit.*, 318).

Information on al-Mustanṣir's reign remains lacunary: random in its occurrence and of very unequal importance. Entire areas of his life and activities are simply not recorded. His caliphate spans an uneasy lull between Mongol onslaughts. The first years of his reign were dominated by the flamboyant career of Djalāl al-Dīn Khwārazmshāh [*q.v.*], who was seen by contemporaries as a buffer between the Mongols and the Muslim world (Ibn Wāṣil, iv, 323). The sources devote much more attention to him than to al-Mustanṣir; at this stage of his career he was campaigning principally in ʿIrāḳ, the Djazīra and western Persia. Djalāl al-Dīn seems to have harboured bellicose intentions towards the caliph (Ibn al-Athīr, xii, 276-8). Moreover, Sibṭ Ibn al-Djawzī mentions a letter from al-Mustanṣir to Djalāl al-Dīn, reproaching him for his treatment of his fellow Muslims (*op. cit.*, 668).

The other political events of al-Mustanṣir's reign mentioned in the sources reveal the caliph as a petty territorial ruler and arbitrator. The ruler of Irbil, Muẓaffar al-Dīn Kökbürī, the brother-in-law of Ṣalāḥ al-Dīn (Saladin), being without male issue, had bequeathed the city to al-Mustanṣir. However, on Kökbürī's death, the caliph had to send an army under his military commander, the eunuch Iḳbāl al-Sharābī (Ibn Taghrībirdī, vi, 346), to besiege Irbil before it finally surrendered on 17 Shawwāl 630/27 July 1233 (Sibṭ, 568; Ibn Kathīr, 135). Al-Mustanṣir seems also to have mediated between various political factions. Thus he arbitrated in disputes in ʿIrāḳ between Kökbürī and Badr al-Dīn Luʾluʾ [*q.v.*] (Sibṭ, 680-1) and between the Ayyūbids al-Malik al-Nāṣir Dāwūd and al-Malik al-Kāmil (Ibn Wāṣil, 100-2).

Like his grandfather al-Nāṣir, al-Mustanṣir stands out as a great patron of architecture. Indeed, the most significant event of the second half of his reign was undoubtedly the establishment of the Mustanṣiriyya *madrasa* in Baghdād. The building and inaugural

ceremony of this monument are described in some detail in the sources, notably the *Ḥawādith al-djāmiʿa*, wrongly attributed to Ibn al-Fuwaṭī [*q.v.*]; (cf. Rosenthal's discussion of the authorship of this work) and were analysed by ʿAwwād in a pioneering article written in 1945 (cf. *Bibliography*). On instructions from the caliph, the foundations of the *madrasa* were laid in 625/1227 (*Ḥawādith*, 53) and the building was completed in 631/1234. The official opening of the Mustanṣiriyya was held on 5 Radjab 631/7 April 1234 while the caliph watched the proceedings from a belvedere in the centre of one of the *īwāns* (*ibid.*; Ibn Kathīr, xiii, 149). The Mustanṣiriyya housed all four Sunnī *madhhabs*, (cf. the inscription over the door of the *madrasa*, published by Herzfeld, ii, 164), each of which were represented by their leading *ʿulamāʾ* at the inaugural ceremony. According to Ibn Baṭṭūṭa, each *madhhab* had its own *īwān* (*op. cit.*, 109). The building also included a *dār al-ḥadīth*, a *dār al-Ḳurʾān*, hospital, kitchen, bath and library. The caliph was involved personally in building up the magnificent library of the Mustanṣiriyya (cf. Eche, 172-7). To this library the caliph brought valuable models of calligraphy, such as examples of the "well-proportioned scripts" (*al-khuṭūṭ al-mansūba*) of the famous Būyid calligrapher Ibn al-Bawwāb [*q.v.*] and his illustrious predecessor Ibn Muḳla [*q.v.*] (Sibṭ, 739). The caliph also endowed the library with the best books on *fiḳh*, literature and science (*Ḥawādith*, 54). At the invitation of al-Mustanṣir, desirous no doubt to eclipse the fame of the 5th/11th century Niẓāmiyya *madrasa* in the same city, prestigious scholars were brought to work in the Mustanṣiriyya. They included the historians Ibn al-Sāʿī, who served as librarian for a while (Ibn al-ʿImād, v, 343) and Ibn al-Nadjdjār, who was the principal Shāfiʿī *mudarris* there (al-Kutubī, *Fawāt*, ii, 522).

Although much scholarly attention has been focussed on the Mustanṣiriyya (cf. *Bibliography*), there remains much to be said about its function within its own historical context. In particular, it is noteworthy that the Mustanṣiriyya was the first *madrasa* to be founded by a caliph. It was also (even more importantly) the first universal Sunnī *madrasa*: the patrons of earlier *madrasas* had been *amīrs*, high officials such as *wazīrs*, and occasionally sultans. It built boldly upon the already existing practice of founding *madrasas* designed for more than one *madhhab*, and took the decisive further step of catering for all four *madhhabs*. Moreover, al-Mustanṣir chose to build a *madrasa*, not a mosque or a mausoleum, which were traditionally the preferred buildings for a ruler wishing to perpetuate his name. Why choose a *madrasa*? The key reason may be that by building the Mustanṣiriyya the caliph established a teaching institution for all Muslims, not just for the people of Baghdād alone. There is other telling evidence which clearly points to wider and more grandiose aims on the part of the caliph. Firstly, certain features of this particular *madrasa* are unusual or suggestive. One of the crowning glories of the Mustanṣiriyya was its magnificent riparian inscription of historical content which specifically names the caliph himself. This gigantic inscription, although following local architectural traditions in certain respects, nevertheless decisively flouted convention by its sheer size and lavish rendering. It appears to have been (at least so far as surviving evidence indicates) the largest and longest cursive inscription known in the Islamic world up to that time, and like some vast hoarding it proclaimed its presence to anyone approaching the *madrasa* by river. Thus the privileged and unusual location of the *madrasa* was manipulated for propagandist purposes. Secondly, the Mustanṣiriyya also boasted a highly sophisticated and lavishly adorned zodiacal clepsydra which was similar to those described by al-Djazarī [*q.v.*] and which bore unmistakable royal and cosmological connotations (al-Irbilī, *Khulāṣat*, 287-8 (quoting Ibn al-Sāʿī)). In addition to its scholarly functions, the Mustanṣiriyya was used by the caliph in his role as arbitrator to receive visiting potentates, such as Badr al-Dīn Luʾluʾ of Mawṣil and Nāṣir al-Dīn Dāwūd of Damascus in 633/1235 (Ibn Wāṣil, v, 100-2) and Nūr al-Dīn Arslānshāh of Shahrazūr the following year (*Ḥawādith*, 89).

It is perhaps not too fanciful to argue that al-Mustanṣir intended the Mustanṣiriyya to serve as a symbol of Islamic unity under the auspices of a revitalised ʿAbbāsid caliphate. Al-Mustanṣir may well have been attempting to continue and elaborate the grandiose universalist policies of his grandfather al-Nāṣir [*q.v.*]. In one sense, the decision to house all Sunnī *madhhabs* under one roof was no abrupt innovation; it was merely a logical extension of al-Nāṣir's decision to limit the appointment of ḳāḍīs to the four *madhhabs*, a confirmation of the *status quo* which had prevailed since the demise of the Ẓāhirī *madhhab* around 475/1082 (cf. Makdisi, 6). Al-Mustanṣir is described by Sibṭ Ibn al-Djawzī as having "no fanaticism for one particular *madhhab*" and is shown as behaving in a conciliatory way towards the Shīʿīs whose shrines he visited (*op. cit.*, 739-41). Moreover, a major figure in al-Nāṣir's revitalised caliphate had been Shihāb al-Dīn ʿUmar al-Suhrawardī (died 632/1234 [*q.v.*]). As the most prominent Ṣūfī of his time at Baghdād, it is quite conceivable that he had been influential in the education of al-Mustanṣir and that he continued to influence him whilst he was caliph.

Most of the extant historical sources date from the period after the Mongol capture of Baghdād. Overshadowed by this cataclysmic event, they may well have distorted the perspective of al-Mustanṣir's reign as seen by his contemporaries. The historical evidence of the Mustanṣiriyya, unaffected as it is by *ex post facto* commentary is thus even more important.

It may well be that al-Mustanṣir intended this building to be an instrument for continuing the policies initiated by al-Nāṣir, and to create under the caliphal banner some kind of unity amongst the Muslims whose territories bordered his own. Such a task was given added urgency by the recent Mongol onslaught on the eastern Islamic world. A political regrouping of the remaining Muslim powers in that area was therefore imperative. Al-Nāṣir had tried to encourage Muslim cooperation through establishing equal status for all four Sunnī *madhhabs*, through promoting Ṣūfism and through a pan-Islamic *futuwwa* [*q.v.*]. Whilst there is little positive evidence for al-Mustanṣir's involvement in the *futuwwa*, it is unlikely that he discontinued this aspect of al-Nāṣir's policies. Djalāl al-Dīn had lacked the acumen or the political stability to effect an eastern Islamic coalition against any future Mongol attacks. It may well be that by the building of the Mustanṣiriyya al-Mustanṣir was proclaiming (ironically, far too late in the day) the paramount need for unity in the Islamic world.

Al-Mustanṣir also erected other buildings. These included the *Khān* of Sābūs near Wāsiṭ (Ibn al-Ṭiḳṭaḳā, 567-8) and the *Khān* of Kharnīna between Takrīt and al-Balālīḳ (*ibid.*; G. Bell, *Amurath*, 219). Moreover, inscriptions on the Ḥarbā bridge over the Dudjayla canal between Baghdād and Sāmarrā testify that it was built by al-Mustanṣir in 629/1231 (Ibn al-Ṭiḳṭaḳā, 567; Janabi, Plates 12 and 13). Al-Mustanṣir

also restored the Djāmiʿ al-Ḳaṣr in Baghdād which had been founded by al-Muktafī [*q.v.*] and he placed in it benches on which students could sit and hold discussions after prayers had been performed (Ibn Wāṣil, 317).

Al-Mustanṣir is accorded the usual high-flown panegyrics in the sources. More specifically, he is described as pale-skinned, red-haired, corpulent and short (Ibn Taghrībirdī, vi, 345). As already mentioned, he was a great bibliophile. He is reported to have been copious in alms-giving, especially when plague hit Baghdād in the last year of his reign. He died on 10 Djumādā II 640/12 December 1242 and was buried in the Ruṣāfa cemetery.

AL-**MUSTANṢIR** (II) BI'LLĀH, Abu 'l-Ḳāsim Aḥmad b. al-Ẓāhir Muḥammad, the first ʿAbbāsid "shadow" caliph in Cairo.

When the Mongols captured Baghdād (656/1258), he and a number of other ʿAbbāsids were released from confinement, and he took refuge among the Arab tribesmen of ʿIrāḳ. A group of Arabs brought him to Cairo, where he was given a ceremonious welcome by the sultan, al-Ẓāhir Baybars, on 9 Radjab 659/9 June 1261. Four days later, his genealogy was formally attested by the chief judge, who performed the *bayʿa* to him followed by the sultan, the dignitaries and the Mamlūks generally. He assumed the throne-name of al-Mustanṣir, which had been borne by his brother as caliph in Baghdād (623-40/1226-42). The speed with which al-Mustanṣir was installed as caliph shows his importance to Baybars's political strategy at that juncture. Baybars had newly obtained the sultanate by usurpation on the murder of his predecessor, Ḳuṭuz (657-8/1259-60), and caliphal legitimation would secure his position. This was duly accorded. On Friday, 17 Radjab/17 June, al-Mustanṣir pronounced the *khuṭba* to a congregation of Mamlūks in the mosque of the Citadel at the sultan's instigation, and on 4 Shaʿbān/4 July at a solemn ceremony the caliph invested Baybars with the black livery of the ʿAbbāsids. Fakhr al-Dīn b. Luḳmān, the head of the sultan's chancery, read the diploma (which he himself had composed in the caliph's name) conferring the universal sultanate with plenary powers on Baybars. The provisions of the diploma, which purported to lay down Baybars's duties as sultan, were in fact his political manifesto. Al-Mustanṣir was rewarded with the establishment of a military and civil household. On 6 Shawwāl/3 September, the caliph accompanied Baybars to Damascus, where the two joined in public prayer at the Umayyad mosque on 10 Dhu 'l-Ḳaʿda/5 October. From Damascus, al-Mustanṣir and the sons of Badr al-Dīn Luʾluʾ, the late ruler of Mawṣil (631-57/1233-59) [see LUʾLUʾ] were sent out on separate expeditions to ʿIrāḳ, to regain their ancestral dominions from the Mongols. Setting out on 23 Dhu 'l-Ḳaʿda/19 October, al-Mustanṣir proceeded to ʿĀna, where he encountered a kinsman and rival, a descendant in the fourth generation of the caliph al-Mustarshid (512-29/1118-35 [*q.v.*]), who had been proclaimed as the caliph al-Ḥākim by Āḳūsh al-Barlī, the Mamlūk warlord of Aleppo and at this time Baybars's most dangerous opponent. The two caliphal pretenders, however, joined forces and advanced down the Euphrates to Hīt. The Mongol authorities in Baghdād sent out troops to halt the Muslims, and a battle took place opposite al-Anbār. The Muslims were at first successful, but then fell into a Mongol ambush. Al-Mustanṣir was almost certainly killed in the fighting (3 Muḥarram 660/28 November 1261), while al-Ḥākim escaped and made his way to Cairo, where he was installed as caliph on 2 Muḥarram 661/16 November 1262. His descendants continued the titular caliphate until it lapsed after the Ottoman conquest of Egypt in 922/1517.

Bibliography: The succinct account by Ṣafadī, *Wāfī*, ed. Iḥsān ʿAbbās, vii, 384-6, is based on Abū Shāmā, *Tarādjim ridjāl al-ḳarnayn al-sādis wa 'l-sābiʿ*, Beirut 1974, 213-15; and Yūnīnī, *Dhayl mirʾāt al-zamān*, Ḥaydarābād 1374/1954, i, 441-57, and cf. ii, 94-112. The official account is by Ibn ʿAbd al-Ẓāhir, *al-Rawḍ al-zāhir fī sīrat al-Malik al-Ẓāhir*, ed. ʿAbd al-ʿAzīz al-Khuwayṭir, al-Riyāḍ 1396/1976, 99-112; it is summarised with a critical comment by Shāfiʿ b. ʿAlī al-ʿAsḳalānī, *K. Ḥusn al-manāḳib al-sirriyya al-muntazaʿa min al-sīra al-ẓāhiriyya*, ed. Khuwayṭir, al-Riyāḍ 1396/1976, 37-46. See also D. AL-**MUSTANṢIR** BI 'LLĀH, ABŪ TAMĪM MAʿADD B. ʿALĪ AL-ẒĀHIR, eighth Fāṭimid caliph, born on 16 Djumada II 420/2 July 1029 (according to Idrīs, on 16 Ramaḍān/29 September), succeeded his father al-Ẓāhir [*q.v.*] on 15 Shaʿbān 427/13 June 1036 and died on 18 Dhu 'l-Ḥidjdja 487/10 January 1094, after the longest recorded reign of any Muslim ruler and one which, besides being marked by the most violent fluctuations of fortune, was of critical importance in the history of the Fāṭimid Ismāʿīlī movement.

Internal history. During the childhood of al-Mustanṣir, the authority remained at first in the strong hands of his father's *wazīr* Abu 'l-Ḳāsim al-Djardjarāʾī [*q.v.*]. On his death (7 Ramaḍān 436/28 March 1045), it was seized by the evil genius of al-

Mustanṣir's reign, his mother, who was a Sūdānī slave, and her former master, the Jewish merchant Abū Saʿd al-Tustarī. When Abū Saʿd was assassinated in 439/1047 after an outbreak of rioting between the Turkish and Berber troops, his place as the queen-mother's agent was taken by his brother Abū Naṣr Hārūn (see however the documents published by Mann [*Bibl.*]) and the *ḳāḍī* Abū Muḥammad al-Ḥasan al-Yāzūrī, who eventually accepted also the vizierate (7 Muḥarram 442/1 June 1050) and held it for eight years [see AL-YĀZŪRĪ]. Meanwhile, there was considerable unrest and perhaps also economic unsettlement in the country. If a statement in al-Maḳrīzī, i, 82 [92], ed. Wiet, ii, 4 [67], is to be believed, the *kharādj* of the Egyptian provinces amounted only to one million *dīnārs* in the time of al-Yāzūrī, but this may have been exceptional, though it is plain from other sources that the government had already been forced to the familiar expedient of confiscations and indemnities. The Delta was disturbed by Arab risings, the most serious of which, that of the Banū Ḳurra, was put down only with great difficulty by Nāṣir al-Dawla (see below) with the Ṭayyiʾ and other Arab troops at Kūm Sharīk in 443/1051 (see Ibn al-Ṣayrafī, 42-3; Ibn al-Athīr, ix, 396-7, and for the date Ibn al-Ḳalānisī, 85). At the capital there was an increasing state of tension between the Turkish and Berber troops and the enormous bodies of Sūdānī slaves raised by the caliph's mother (see Maḳrīzī, i, 94 [ed. Wiet, ii, 45] and 335; detailed but probably unreliable figures also in Nāṣir-i Khusraw, ed. Kaviani, 66, tr. Thackston, 48-9). In striking contrast to this is the magnificence of the court and properity of Miṣr-Fusṭāṭ as described by Nāṣir-i Khusraw [*q.v.*]. There can be little doubt that the source of much of this prosperity, apart from the manufacture and supply of luxuries to the court, is already to be sought in the commercial relations between Egypt and the Indian Ocean on the one hand (cf. Nāṣir-i Khusraw's account of ʿAydhāb) and Constantinople on the other. The general insecurity deepened after the execution of al-Yāzūrī, who was the last *wazīr* to attempt to control the situation. He was followed by a rapid succession of puppets in office, many of whom, despite the pompous titles duly recorded by Ibn al-Ṣayrafī, held the position for no more than a few days at a time.

The Fāṭimid caliphate was now destined to pass in a few shattering years through the same agony as the ʿAbbāsid caliphate at Baghdād had suffered in the early part of the previous century. The breakdown of the civil administration and subsequent exhaustion of the treasury gave a free hand to the military, and the sinister policy of the caliph's mother brought matters speedily to a head. In a pitched battle at Kūm al-Rīsh (close to Cairo) in 454/1062 (sometimes confused with the previous battle at Kūm Sharīk), the Turkish and Berber troops led by Nāṣir al-Dawla Ibn Ḥamdān, a descendant of the Ḥamdānids of Mawṣil, defeated and drove the Sūdānīs into the Ṣaʿīd, but the struggle continued for some years and the blacks were not finally routed and driven out until 459/1067; thereafter they were confined to the Ṣaʿīd, which suffered severely from their plundering and devastations. Nāṣir al-Dawla in turn quarrelled with the Turks, and, defeated in battle by a force commanded by al-Mustanṣir in person (461/1068-9), appealed to the Saldjūḳ Alp Arslān [*q.v.*]. Without waiting for his help, however, he regained control of Cairo and the Delta with the aid of the Arabs and Lawāta [*q.v.*] Berbers, reduced al-Mustanṣir (it is said) to the state of a pensioner on a hundred *dīnārs* a month, assumed the title of Sulṭān al-Dawla, and attempted, but unsuccessfully, to restore the ʿAbbāsid *khuṭba*. In Radjab 465/March 1073 he and all his house were killed by the rival Turkish faction, led by Ildegüz, under whom the caliph fared little better. Meanwhile, the constant anarchy and remorseless plundering of the country by the troops brought agriculture to a standstill (although the Nile floods seem to have been uniformly good). The result was a famine which lasted from 459 to 464 (1067-72) and became progressively more severe. During these years the country was a prey to the utmost misery; the royal city and palaces were looted, and Fusṭāṭ was twice plundered and even burned by Nāṣir al-Dawla. Large numbers of the population, including even the caliph's own family, sought refuge in Syria and ʿIrāḳ (for the depopulation and shrinkage of Fusṭāṭ, cf. al-Maḳrīzī, i, 5, ed. Wiet, i, 12; on the fate of the royal library see also Olga Pinto, *Le biblioteche degli Arabi*, Rome 1928, 25-6). The Sunnī historians dwell on this famine with some complacence, regarding it as the retribution for the impious attack of al-Basāsīrī [*q.v.*] on the ʿAbbāsid caliphate (see below), and circumstantial stories are related of the extreme destitution to which al-Mustanṣir himself was reduced. That these must be accepted with some reserve is clear from such passages as Ibn Taghrībardī, ii/2, 186, 18-19.

At length in 465/1073, al-Mustanṣir, taking courage of despair, secretly invited the governor of ʿAkkā, the Armenian general Badr al-Djamālī [*q.v.*] to assume supreme control in Egypt. Badr accepted the commission, on condition of bringing his own troops with him, and sailing from ʿAkkā in the winter, reached Cairo on 28 Djumādā I 466/29 Jan. 1074. His rapid and energetic movements took the Turks by surprise, and he put to death the whole body of their leaders, together with a large number of Egyptian notables and officials. For his further military and administrative measures, by which he restored order and relative prosperity in Egypt (the total revenue of Egypt and its remaining Syrian possessions, which in 466/1073-4 had amounted to 2,800,000 *dīnārs*, rose by 483/1090 to 3,100,000 *dīnārs*: al-Maḳrīzī, i, 100; ed. Wiet, ii, 68; cf. Abū Ṣāliḥ, fols. 7b-9a). The alliance between general and caliph was cemented by the marriage of Badr's daughter to al-Mustanṣir's youngest son Aḥmad, the future caliph al-Mustaʿlī [*q.v.*]. The Fāṭimid caliphate was saved but, like its ʿAbbāsid rival, at the cost of abandoning its temporal authority to a series of military commanders, entitled *umarāʾ al-djuyūsh*, from whose control it never afterwards succeeded in emancipating itself.

Al-Mustanṣir is described in contemporary sources as upright and amiable in character, and just and equitable in his dealings, but as a ruler his personality is entirely obscured by the successive *wazīrs* and generals who kept him virtually a prisoner. The statements of the later anti-Fāṭimid writers must, of course, be entirely discounted; the Fāṭimid sources, on the other hand, praise his sagacity and infallibility (*ʿiṣma*) as Imām.

External relations. The empire to which al-Mustanṣir succeeded was beyond any doubt the most powerful Muslim state of its time. It extended from Ifrīḳiya and Sicily to Mecca and central Syria, and maintained an active propagandist organisation in ʿIrāḳ, Persia and Khurāsān (see the following section). Within a few years of his accession, its territories were still further expanded by Anūshtagīn's conquest of Aleppo in Shaʿbān 429/May 1038 [see FĀṬIMIDS and ḤALAB] and extension of his authority even across the Euphrates, on the one hand, and on the other by the conquests of ʿAlī al-Ṣulayḥī in the

Yaman, after establishing himself at Masār in the same year (see ṢULAYḤIDS and also H.F. al-Hamdani, in *Journal of the Royal Central Asian Society* [1931], 505 ff., and in *JRAS* [1932], 126 ff.). After the deaths of Anūs͟htagīn and the *wazīr* al-D̲j̲ard̲j̲arāʾī, who in spite of their rivalry zealously maintained the interests of the dynasty, the power and prestige of the Egyptian court steadily declined. The Arab tribes in Syria, though defeated in the field, remained unsubdued, and the caliph had to be content with the little more than nominal allegiance of the Mirdāsids [*q.v.*] at Aleppo. At Damascus, the rivalries between the Berber and Turkish troops and the hostility of the citizens reduced the governors to impotence. The disturbed state of Syria was so disastrous that it made it impossible for the Fāṭimid government to give effective support to the *amīr* al-Basāsīrī (see the list of war material and subventions sent from Egypt, Ibn Tag͟hrībardī, 177) in his attempt to oppose the advancing Sald̲j̲ūḳ power, with the result that his occupation of Bag͟hdād and proclamation of al-Mustanṣir in 450/1059 was speedily brought to an end. The subsequent military and economic disorders in Egypt allowed a free hand to the Turkmen (G͟huzz) bands, who had appeared in northern Syria as early as 447/1055, though it was not until 463/1071 that the first Sald̲j̲ūḳ armies entered northern Syria and the G͟huzz bands under Atsïz [*q.v.*] occupied Palestine and began to harass Damascus. In many of the other towns and district of Syria, the authority was seized by local chiefs, such as the *ḳāḍīs* Ibn ʿAmmār (see ʿAMMĀR, Banū, and also G. Wiet, in *Mém. Henri Basset*, 279 ff.) at Ṭarābulus and Ibn Abī ʿAḳīl at Tyre, though both of these acknowledged the spiritual authority of the Fāṭimid caliph (cf. also the account of the foundation of the castle of Ṣark͟had by Ḥassān b. Mismār al-Kalbī in 466/1073-4, quoted from Sibṭ b. al-D̲j̲awzī in Ibn Tag͟hrībardī, 253). The menace of the Sald̲j̲ūḳs became more substantial after the arrival of Tutus͟h [*q.v.*] in 470/1077-8, but the latter never actually organised a full campaign against the Fāṭimids. On the contrary, the offensive was taken by Badr, who succeeded in restoring Egyptian control on the coast as far as Tyre, Sidon and D̲j̲ubayl in 482/1089, but not in recovering the interior of Palestine and Damascus (lost in 468/1075-6), in spite of a certain revulsion of feeling in Syria in favour of the Fāṭimids. It is difficult to know how much weight to lay on the story (Ibn Tag͟hrībardī, 272-3) that Tutus͟h at one time proposed to ally himself in marriage with Badr.

The success of the Sald̲j̲ūḳs also affected the position of the Fāṭimids in Arabia. In 462/1069 the ʿAbbāsid caliph was acknowledged in the Holy Cities, and after a brief return to the Fāṭimid obedience between 467 and 473/1074-81, the Ḥid̲j̲āz passed definitely to the ʿAbbāsid cause. In the Yaman, the Ṣulayḥids in the interior and the Zurayʿids in the important commercial centre of ʿAden maintained the suzerainty of the Fāṭimids, the latter until the Ayyūbid conquest by Tūrāns͟hāh in 569/1173 [see ṢALĀḤ AL-DĪN].

Meanwhile, the Fāṭimid empire had been similarly shorn of its possessions in the West. About 435/1043-4 al-Muʿizz b. Bādīs [*q.v.*], the Zīrid lieutenant of the Fāṭimid caliph in Ḳayrawān, began a series of repressive measures against the S͟hīʿīs of Ifrīḳiya; in 440/1048-9 he seems to have made the first overt gesture of independence, and in 441/1049-50 superseded the Fāṭimid coinage; but it was not until 443/1051 that he formally renounced the Fāṭimid suzerainty and obtained an investiture from the ʿAbbāsid caliph. According to the traditional account (already fully developed in Ibn al-Ṣayrafī), the *wazīr* al-Yāzūrī in revenge launched against him the nomad bands of the Banū Hilāl [*q.v.*], the tribes mentioned in the Egyptian sources are Zug͟hba, Riyāḥ, al-At͟hbad̲j̲ and ʿAdī), who had been a cause of much trouble to the government in the Ṣaʿīd and were now given a free hand to plunder the territories of the Zīrids [*q.v.*]. As Wüstenfeld has already indicated, *Gesch.*, 234 n., the story as it stands is open to serious objections, and there can be little doubt that it has been amplified by popular legend. The westward movement of the Hilāl tribes began as early as 440/1048-9, and there is no reason to reject the account of Ibn ʿId͟hārī that it was al-Muʿizz himself who invited the Arab tribes, then in Barḳa, to enter Ifrīḳiya as his *d̲j̲und* (since he was not on good terms with the Ṣanhād̲j̲a), and that they, having set out in response to his invitation, began to plunder on their own account and already before the close of 443/1051-2 had inflicted a severe defeat on his troops. The two traditions are not, however, mutually exclusive and may be reconciled by supposing that the Banū Hilāl were transported in the first instance to Barḳa (the governor of which had thrown in his lot with al-Muʿizz), and that their advance into Ifrīḳiya was facilitated, for opposite reasons, by both al-Muʿizz and the *wazīr* (cf. also Ibn al-Athīr, ix, 387-8). During the first years of his reign, the son and successor of al-Muʿizz, Tamīm, (453-501/1061-1107), temporarily returned to the Fāṭimid allegiance (see H.R. Idris, *Sur le retour des Zīrīdes à l'obédience fāṭimide*, in *AIEO Alger*, XI [1953], 25-39), but with the conquest of Sicily by the Normans in 463/1070, Barḳa became the western limit of the Fāṭimid state.

The diplomatic relations of al-Mustanṣir with non-Muslim states covered a wide field. In 429/1038 the existing treaty with the Byzantine Emperor was renewed and relatively cordial relations established. If Nāsir-i K͟husraw, ed. Kaviani, 6, tr. Thackston, 49, is to be trusted, the Egyptian government was in communication in 439/1047 also with the Georgians, the Daylamīs, the K͟hāḳān of Turkistān and even the *rād̲j̲ā* of Dihlī, all of whom shared with Egypt a common hostility to the Sald̲j̲ūḳs and the G͟haznavids. The friendly relations with Constantinople, however, were broken off in 446/1054, when the Empress Theodora demanded an offensive alliance against the Sald̲j̲ūḳs. Egyptian troops were despatched on an unsuccessful expedition against al-Lād͟hiḳiyya, the Empress retaliated by opening negotiations with the Sald̲j̲ūḳs, and al-Mustanṣir seized the treasures of the Church of the Holy Sepulchre (*al-Ḳumāma*). This breach with Constantinople had important consequences for the future of Egypt, since to it may perhaps be ascribed the opening up of direct commercial relations with the Italian trading cities, though documentary evidence on the point is lacking (see Heyd, *Histoire du Commerce du Levant*, i, 105, 124).

Religious conditions. The wide expansion of the Fāṭimid power under al-Mustanṣir is reflected also in the religious situation. Propaganda on behalf of the Fāṭimids is synonymous with the dissemination of the official state religion of the Fāṭimids, the Ismāʿīlī S͟hīʿī faith. Not only in Egypt and other lands in actual subjection to the Fāṭimid authority, but in all quarters of the Islamic world, we learn of missionaries (*duʿāt*), who during the long reign of al-Mustanṣir struggled, in part with great success, to secure recognition of his claim to be the religious Imām. In the east, in Persia, and especially in S͟hīrāz, at the court of the Būyid prince Abū Kalīd̲j̲ār [*q.v.*], we can trace the activities at least since 429/1037-8 of the *dāʿī* Abū Naṣr Hibat

Allāh b. Mūsā al-Muʾayyad fī Dīn Allāh [see AL-MUʾAYYAD], doubtless the most prominent personality of his time in the Ismāʿīlī *daʿwa*. He endeavoured to win over the court and the Daylamī troops to the Fāṭimid cause, but was forced to leave his post in 439/1047-8 as the result of pro-ʿAbbāsid intrigues. In the first part of his autobiography (see *Bibl.*), al-Muʾayyad gives a detailed account of his activity, and in particular publishes his correspondence with an unnamed Sunnī from Khurāsān, in which he explains the religious and political principles of his mission. How much the power of the Fāṭimids and the success of their emissaries in ʿIrāḳ and Persia was feared at Baghdād is shown by the fact that several times, and latterly in 444/1052, there was published a document, to which the ʿAlids also subscribed, with the object of declaring false the claim of the Fāṭimids to descent from ʿAlī. At the same time, the Fāṭimid cause gained also new ground in the Yaman. After the political power of the Fāṭimids had been reduced there to a minimum in the course of the 4th/10th century, it now acquired in the Ṣulayḥid ʿAlī b. Muḥammad a powerful supporter. He and his successors regarded themselves not only as political but also as religious representatives of the Fāṭimid Imām in the Yaman. The voluminous correspondence between the Ṣulayḥid rulers and al-Mustanṣir, which is still preserved, collected in a separate work (*Kitāb al-Sidjillāt wa 'l-tawḳīʿāt wa 'l-kutub li-Mawlānā al-Mustanṣir bi 'llāh*, ms. SOAS London; many of these letters are also reproduced in Idrīs, vii [see *Bibl.*]), deals, along with political questions, in the first place with the position of the *daʿwa* in the Yaman and in the Fāṭimid state; see further al-Hamdānī, *al-Ṣulayḥiyyūn*.

In Egypt itself, soon after the accession of al-Mustanṣir, the doctrines of the moderate official Ismāʿīliyya were threatened by the appearance of extremists related to the Druzes [see AL-DURŪZ]. A pretender, al-Sikkīn, together with his associate al-ʿĀnī, gave himself out as the returned caliph al-Ḥākim, but was promptly unmasked (Idrīs, vi, 296). Al-Muʾayyad, who came to Cairo in 439/1047-8 and won the goodwill of al-Mustanṣir, was entrusted with the leadership of the religious mission as *dāʿī 'l-duʿāt* (it should be remarked, however, that al-Yāzūrī during his vizierate also held the title of *dāʿī 'l-duʿāt*; cf. Ibn al-Ṣayrafī, 40). In the reopened seminary in Cairo, where the *duʿāt* of the various countries received instruction, he gave his lectures and gathered into his hands the strings of the whole *daʿwa*. He appears to have exercised a special influence over the development of the *daʿwa* in the Yaman, as the future Yamanī *dāʿī* Lamak b. Mālik was numbered amongst his pupils. From Persia, the newly-converted Ismāʿīlī Nāṣir-i Khusraw [*q.v.*] came to Egypt, to find his master in him. At the same time, al-Muʾayyad seems also to have played an important political role. In his autobiography he quotes numerous letters which he wrote to al-Basāsīrī and other generals of the Fāṭimids in Syria and Mesopotamia. In particular, it was at his instigation that the *khuṭba* for the Fāṭimids was introduced into the prayer at Baghdād in 450/1098 (cf. Ibn Muyassar, 8, l. 1, 10, ll. 6-7). In his poems, he eulogises the *Imām* al-Mustanṣir in a similar manner to Nāṣir-i Khusraw. Other Ismāʿīlī authors of this period were the poet Ḥasan b. Maḥbūb, the *dāʿī* Aḥmad b. Ibrāhīm al-Nīsābūrī, and the author of the *Kitāb al-Madjālis al-Mustanṣiriyya* (lectures in which the imāmate of al-Mustanṣir is demonstrated with the aid of the Ismāʿīlī *taʾwīl*), which are described by the Fāṭimid tradition to Badr al-Djamālī.—For the Fāṭimid propaganda in Transoxania, see also Barthold, *Turkestan*², 304-5.

AL-MUSTANṢIRIYYA [see MADRASA. I. 4, at Vol. V, 1127a, and III, at Vol. V, 1148, and AL-MUSTANṢIR (1) BI 'LLĀH].

MUSTAʿRIB [see MOZARAB].

MUSTAʿRIBA (A.), "arabicised", the name of one of the groups into which the Arab genealogists divide the population of Arabia. The first is the *ʿarab ʿāriba*, the original Arabs of pure stock; they numbered nine (some say seven) tribes which are regarded as the descendants of Iram and Lūdh b. Sām b. Nūḥ and the first settlers in Arabia: ʿĀd, Thamūd, Umayyim, ʿAbīl, Ṭasm, Djadīs, ʿImlīḳ, Djurhum and Wabār. These are extinct except for a few remnants incorporated in other tribes. The second group comprises the *mutaʿarriba* [*q.v.*] who are not pure-blooded Arabs. They are regarded as descendants of Ḳaḥṭān (the Yoḳṭān of the list of nations in Gen. x. 25 ff.) and live in southern Arabia. The third group is called *mustaʿriba*; this name is also applied to tribes who were not originally Arabs; they trace their descent from Maʿadd b. ʿAdnān, a descendant of Ismāʿīl [*q.v.*]. All the north Arabian tribes are included among the *mustaʿriba*, so that the Ḳuraysh, to which Muḥammad belonged, are one of them; his genealogy is in this way traced back to Abraham and he thus thought he could prove his connection with the Biblical prophets. The old term *mustaʿriba*, for tribes not originally of Arab descent, obtained a new meaning after the conquest of Spain. It was applied to the Christian Spaniards who retained their religion under Islam; the word *mustaʿriba* was corrupted to Mozarab [*q.v.*].

(ILSE LICHTENSTÄDTER)

MUSTASHĀR (A.), counsellor, used in Ottoman Turkish as *müsteshār*, meaning "general secretary to a ministry" or "under-secretary of state". The word, which means literally "one who is

consulted", comes from the same root as *mü<u>sh</u>īr* [*q.v.*], which properly means "he who gives advice". Sāmī Bey regards the word *müste<u>sh</u>ār* as a synonym of the old Turkish *inal*. The office was called *müste<u>sh</u>ārī* or more simply *müste<u>sh</u>arlı̊k*.

Like the title *mü<u>sh</u>īr*, that of *müste<u>sh</u>ār* was created by Maḥmūd II. There were at first two *müste<u>sh</u>ārs* in the grand-vizierate, one for foreign and the other for home affairs. The latter was later replaced by a Minister of the Interior who had in his turn a *müste<u>sh</u>ār*. The number of *müste<u>sh</u>ārs* gradually increased, but some less important departments had *muʿāwins* "assistants, deputies" (in 1296/1897 for example there were *muʿāwins* in the finance and police departments). The office was retained under the Turkish Republic and each ministry or *wekālet* has its *müste<u>sh</u>ār*; that of national defence has three (for army, navy and air force).

The chief *ḳāḍī* of Istanbul used to have a *müste<u>sh</u>ār*. According to Luṭfī Efendi, the post of *müste<u>sh</u>ār* of the Navy was created in 1253/1837 (*Taʾrī<u>kh</u>*, v, 91) and that of *müste<u>sh</u>ār* of the *ṣadreyn* or of the two *ḳāḍī ʿaskar* [*q.v.*] in 1262/1846 (viii, 127). On the honorary grades of *müste<u>sh</u>ār*, cf. idem, vi, 66; cf. also 103, line 8 from below.

Müste<u>sh</u>ār is also the name given to the "counsellors" of Turkish or foreign embassies or legations. The title of *müste<u>sh</u>ār awwal* borne by the ambassador himself, sent by the Sultan of Morocco to Istanbul in 1197/1783 is inexplicable to us (cf. <u>Dj</u>ewdet Pa<u>sh</u>a, *Taʾrī<u>kh</u>*, Istanbul 1309, ii, 251; cf. *Recueil de Mémoires Orientaux de l'École des Langues Orientales à Paris*, 1905, 6).

As to the term *mü<u>sh</u>āwir*, a synonym of the preceding and from the same root, it is applied to technical advisers, whether foreigners or not, e.g. *ḥuḳūḳ mü<u>sh</u>āwiri* "legal adviser".

Bibliography: See the various Ottoman calendars. The historians Aḥmed <u>Dj</u>ewdet and Luṭfī, following their predecessors, give few details of the administrative organisation. (J. DENY)

AL-**MUSTAR<u>SH</u>ID** BI'LLĀH, ABŪ MANṢŪR AL-FAḌL, ʿAbbāsid caliph (reigned 512-29/1118-35), was probably born in 486/1093-4 (though some sources suggest a date as early as 484), the son of al-Mustaẓhir [*q.v.*] and a slave girl called Lubāba. Al-Mustar<u>sh</u>id came to the throne after his father's death on 16 Rabīʿ II 512/6 August 1118.

The reign of al-Mustar<u>sh</u>id coincided with a period of intense strife amongst the Sal<u>dj</u>ūḳs of ʿIrāḳ and western Persia after the death of sultan Muḥammad b. Malik <u>Sh</u>āh [*q.v.*] in 511/1118 and the accession of his son Maḥmūd [*q.v.*]. Apart from sultan Maḥmud and the caliph himself, the strong hand of sultan San<u>dj</u>ar [*q.v.*], the most senior member of the Sal<u>dj</u>ūḳ clan, often intervened from <u>Kh</u>urāsān. There is also frequent mention of other Sal<u>dj</u>ūḳ pretenders, as well as a series of powerful *<u>sh</u>iḥnas*, especially Aḳ Sunḳur al-Bursuḳī and Zangī. The interplay of these figures with the caliph is chronicled in confusing detail and reveals constantly shifting alliances. Al-Mustar<u>sh</u>id initially juggled with these factions, depending on one group or another for military support. Later, he espoused the more intrepid and fateful policy of trying to rid ʿIrāḳ of all these opposing forces.

The early years of al-Mustar<u>sh</u>id's caliphate were dominated by his bitter feud with the Mazyadid Dubays b. Ṣadaḳa of Ḥilla [see MAZYAD, BANŪ]. Initially, Dubays had no doubt hoped to wield influence over the new caliph as his father Ṣadaḳa had done with al-Mustaẓhir. The caliph sent warning letters to Dubays reproaching him for plundering ʿIrāḳ during the revolt of the Sal<u>dj</u>ūḳ prince Masʿūd b. Muḥammad [*q.v.*] against his brother, sultan Maḥmūd, in 514/1120-1. Dubays responded by coming to Ba<u>gh</u>dād and threatened al-Mustar<u>sh</u>id from his tent pitched opposite the caliphal palace (Ibn al-A<u>th</u>īr, x, 397-8). At this stage al-Mustar<u>sh</u>id, needing military support, requested Maḥmūd to stay on in Ba<u>gh</u>dād because of the threat posed by Dubays. Maḥmūd agreed and was honoured by the caliph in a lavish ceremony (Ibn al-<u>Dj</u>awzī, ix, 222-3). In 516/1122-3, al-Mustar<u>sh</u>id sent the *<u>sh</u>iḥna* of Ba<u>gh</u>dād, Aḳ Sunḳur al-Bursuḳī, to drive Dubays out of al-Ḥilla. This attempt proved a failure (Ibn al-A<u>th</u>īr, x, 423-4; Ibn al-<u>Dj</u>awzī, ix, 232). In Muḥarram 517/March 1123 al-Mustar<u>sh</u>id decided to take matters into his own hands. Having distributed money and weapons to the people of Ba<u>gh</u>dād, he sallied forth in person to fight Dubays. Wearing full caliphal regalia, al-Mustar<u>sh</u>id stood prominently behind the battlelines, accompanied by prayer-leaders and Ḳurʾān readers. He scored a resounding victory against Dubays and returned triumphantly to Ba<u>gh</u>dād on the Day of ʿĀ<u>sh</u>ūrāʾ (Ibn al-ʿAdīm, *Bu<u>gh</u>ya*, 227-8; Ibn al-A<u>th</u>īr, *Atābegs*, 25-6; Ibn al-<u>Dj</u>awzī, ix, 235, 242-3). The caliph also humiliated Dubays by writing to his father-in-law, the Artuḳid Na<u>dj</u>m al-Dīn Il <u>Gh</u>āzī, ordering him to annul Dubays' marriage with Il <u>Gh</u>āzī's daughter (Ibn al-ʿAdīm, *Bu<u>gh</u>ya*, 226). Even after Dubays had fled from ʿIrāḳ and fallen into the hands of Būrī, the ruler of Damascus, al-Mustar<u>sh</u>id remorselessly pursued him, sending the caliphal *kātib al-in<u>sh</u>āʾ*, Ibn al-Anbārī, to bring the prisoner to him. Dubays, however, had already been handed over to Zangī, who released him (Ibn al-Ḳalānisī, 230; Ibn al-ʿAdīm, *Bu<u>gh</u>ya*, 249, 256; Ibn al-A<u>th</u>īr, x, 470-1; Sibṭ b. al-<u>Dj</u>awzī, 135-6).

The growing assertiveness of al-Mustar<u>sh</u>id clearly alarmed Maḥmūd's *<u>sh</u>iḥna*, Yürün-Qü<u>sh</u>, who clashed openly with the caliph in 519/1125-6. Yürün-Qü<u>sh</u> visited the sultan and warned him that the caliph was no longer docile and that he would not tolerate the sultan's interference in Ba<u>gh</u>dād (Ibn al-<u>Dj</u>awzī, ix, 255-6). Sultan Maḥmūd advanced rapidly, ignoring the excuses fabricated by al-Mustar<u>sh</u>id to delay his arrival. After skirmishes between the troops of caliph and sultan, al-Mustar<u>sh</u>id sued for peace. Before leaving Ba<u>gh</u>dād on 10 Rabīʿ II 520/5 May 1126, Maḥmūd took the precaution of appointing a new *<u>sh</u>iḥna*, Zangī, to keep a close eye on the caliph (Ibn al-A<u>th</u>īr, x, 447-50; *Atābegs*, 28-31; al-Ḥusaynī, 97; Ibn al-Azraḳ, 51).

In the complicated power struggle which followed sultan Maḥmūd's death in <u>Sh</u>awwāl 525/August-September 1131 and the short reign of his brother, sultan Ṭoghrīl, San<u>dj</u>ar's appointee (526/1132-529/1134), al-Mustar<u>sh</u>id behaved in a quietly subversive way and played off the various factions against each other, no doubt in an attempt to increase his own power. Several earlier caliphs had practised such brinkmanship. But in the case of al-Mustar<u>sh</u>id, an inflated sense of his own importance coupled with his awareness of Sal<u>dj</u>ūḳ division at this critical point made a dangerous combination, and his own rash (perhaps even bellicose) personality tipped him over the brink and precipitated an adventure that was to be fatal to him. When San<u>dj</u>ār attempted to instal Ṭoghrīl as sultan, al-Mustar<u>sh</u>id urged Ṭoghrīl's brothers, Masʿūd and Sal<u>dj</u>ūḳ <u>Sh</u>āh, to rebel. San<u>dj</u>ar responded by launching Zangī and Dubays into an attack on Ba<u>gh</u>dād (Ibn al-A<u>th</u>īr, x, 476-7; *Atābegs*, 44). The caliph defeated them on 27 Ra<u>dj</u>ab 526/13 June 1132. It is interesting to note that Usāma [see

MUNKIDH, BANŪ] in an unnamed book of his mentions that he was present at this battle and that he saw for himself "the caliph's black satin tent in which he sat upon a throne" (as quoted by Ibn Wāṣil, 50, and Ibn al-Furāt, 94). It could be argued that thus far al-Mustarshid had only been defending himself against attack. It was his next step which took the matter a crucial degree further. After the battle, al-Mustarshid once more opposed Sandjar by proclaiming Masʿūd's name in the *khuṭba* at Baghdād in Muḥarram 527/November-December 1132 (Bundārī, 175; al-Ḥusaynī, 102; Ibn al-Djawzī, x, 29).

Later that year, the caliph again left Baghdād to launch a retaliatory attack against Zangī in Mawṣil. After a three months' siege, al-Mustarshid was forced to return home, out-manoeuvred by Zangī, for whilst the latter's deputy, Naṣīr al-Dīn Djaḳar, strengthened the city's fortifications, Zangī had left Mawṣil and cut off the caliph's food supplies (Bar Hebraeus, 127; Ibn Khallikān, i, 330; Ibn al-Azraḳ, 64; Ibn al-Athīr, *Atābegs*, 47-8). At this point, one would have expected al-Mustarshid to have learned his lesson. Manifestly he had not.

It is difficult to disentangle the circumstances surrounding al-Mustarshid's decision to set out to fight Masʿūd in western Persia: the received version of events is as follows. Masʿūd had sought al-Mustarshid's help in 528/1133-4 against Ṭoghrïl, but they had quarrelled. Masʿūd had then rushed to Hamadhān on the news of Ṭoghrïl's death in Muḥarram 529/October-November 1134. Masʿūd subsequently quarrelled with some of his *amīrs*, who arrived in Baghdād and incited the caliph to go out against Masʿūd (Ibn al-Athīr, *Atābegs*, 48-9; Ibn al-Djawzī, x, 36-41). Al-Mustarshid, with heavy baggage train and official entourage, left Baghdād in Shaʿbān 529/17 May-14 June 1135 and joined battle against Masʿūd at Day Marg outside Hamadhān (for a discussion of Day Marg, cf. Schwarz, *Iran*, 497-8, 926). The caliph's army was defeated, after the Turkish *amīrs* rejoined Masʿūd's side, and al-Mustarshid and all his officials were taken prisoner. His goods were seized (according to Ibn al-Ṭiḳṭaḳā, *op. cit.*, 521, 170 mules were needed to carry away the contents of the caliph's camp) and his officials were imprisoned in the castle of Sar-i Djahān near Ḳazwīn and Rayy. As for the caliph, he was obliged to move around Ādharbaydjān with Masʿūd. When the sultan made camp outside Marāgha, the caliph was murdered in his tent in Dhu 'l-Ḳaʿda 529/August 1135, allegedly by Assassins. The body of al-Mustarshid was wrapped in green silk brocade (Sibṭ Ibn al-Djawzī, 156) and borne on the heads of *amīrs* and *ʿulamāʾ* to its burial-place in Marāgha. Ibn al-Ṭiḳṭaḳā mentions that he saw the caliph's tomb when he visited the town in 697/1297-8 (*op. cit.*, 522).

The traditional version of al-Mustarshid's final battle and murder needs some revision. Most of the sources attribute the blame for the caliph's killing to Sandjar or Masʿūd or both. Was the caliph the victim of a trap set by Masʿūd? Did Masʿūd send the *amīrs* to Baghdād to lure the caliph (and more especially, his lavish train) to Ādharbaydjān? This is certainly a strong possibility. All this casts doubt on the story that it was the Assassins who killed him. However, to tackle Masʿūd head on and to rid ʿIrāḳ of his deputies was clearly al-Mustarshid's own policy by this stage. As Usāma commented: "It was that great boldness which destroyed him" (Ibn Wāṣil, 50; Ibn al-Furāt, 94). Al-Mustarshid's march against Masʿūd was famous enough to be enshrined in the *Čahār maḳāla*, in which Niẓāmī ʿArūḍī quotes part of an eloquent *khuṭba* delivered by the caliph at Kirmānshāh, strongly denouncing the Saldjūḳs (tr. E.G. Browne, 37-8).

The reign of al-Mustarshid represents a critical phase in the relationship between caliph and sultan, a phase in which long-suppressed tensions erupted into open conflict, especially at Baghdād, the traditional area of caliphal strength. Al-Mustarshid's efforts to liberate himself from the yoke of the Saldjūḳs were generally praised in the mediaeval sources. He was seen as following the path of the earlier caliphs, al-Ḳādir and al-Ḳāʾim [*q.vv.*] (Sibṭ Ibn al-Djawzī, 156), and he is credited by al-Suyūṭī with having revived the ancient customs of the caliphate and putting "life into its bones" (*op. cit.*, 453). Certainly, al-Mustarshid was acting in a different way from his immediate predecessors in the caliphal office. He levied and reviewed his troops (the alleged size of his army compares favourably with those of his Saldjūḳ opponents) and was often in dire need of funds to pay the troops (in 528/1133-4 al-Mustarshid's men surrounded the citadel of the *shiḥna*, Bihrūz al-Khādim, until he disgorged funds to pay the caliph's army (Ibn al-Djawzī, x, 35). Al-Mustarshid also appeared on the battlefield on several occasions. Thus he arrogated to himself the traditional prerogatives of the Saldjūḳ sultan and his deputies and revealed himself unwilling to accept the usual, albeit uneasy, accommodation between the caliphate and the military authorities.

What of the attitude of the Saldjūḳs towards al-Mustarshid? According to Ibn al-Anbārī, the caliph's *kātib al-inshāʾ*, who was released from prison and brought to sultan Masʿūd at Marāgha, Masʿūd told him categorically that he could no longer endure a caliph like al-Mustarshid. He preferred someone on the throne who would "meddle in nothing but religious matters" and who would not "raise an army, take up arms or assemble men" (Ibn al-Azraḳ, 73). Al-Mustarshid was clearly perceived as a growing threat to the Saldjūḳs; he was an opponent difficult to mollify. Even though he had descended into the military arena and had tarnished the caliphal aura, sultan Masʿūd still baulked at the idea of killing the caliph in battle. Instead, the conventional device of private assassination was chosen. Al-Mustarshid was afraid to return alone to Baghdād fearing to be killed en route and Masʿūd refused to accompany him (Bar Hebraeus, 260). Thus it came about that he was murdered in Masʿūd's camp itself. Most of the sources gloss over this deed; the strongest condemnation of the caliph's murder is given by Ibn al-Ḳalānisī who, expanding on the more muted criticism of al-Bundārī, finds the killing repugnant (*op. cit.*, 249).

How then should al-Mustarshid's unconventional reign be assessed? He certainly made a fateful error in leaving his power base, Baghdād, and its environs. Nor was he likely to achieve frequent military successes against such hardened warriors as the Saldjūḳs or Zangī. Apart from the fiasco which occurred during the short reign of his son al-Rāshid, the military option was not repeated by subsequent caliphs. Nevertheless, al-Mustarshid had gone a considerable way towards removing the Saldjūḳ presence from ʿIrāḳ and towards the creation of a small caliphal state in that area. This proved a valuable basis upon which al-Muḳtafī and above all al-Nāṣir [*q.vv.*] could later build.

Not surprisingly, al-Mustarshid's preoccupation with military matters left him with little time to devote to the activities usually associated with his office. There were few foreign embassies or lavish court ceremonies. Al-Mustarshid's building programme was modest: he is recorded as rebuilding the wall

around Baghdād in Ṣafar 517/April 1123 (Ibn al-Athīr, x, 435; Ibn al-Djawzī, ix, 243), building the octagonal palace (*al-muthammana*) for his wife, Sandjar's daughter, who arrived in Baghdād for the wedding in Radjab 518/August-September 1124 (Sibṭ b. al-Djawzī, 113), and he added the great hall (the *bāb al-ḥudjra*) to the Tādj palace (cf. Le Strange, *Baghdad*, 259-60).

A number of prominent officials served al-Mustarshid. These included the *wazīr* Djalāl al-Dīn Ḥasan b. ʿAlī b. Ṣadaḳa (d. 522/1128) whom, under pressure from the sultan's *wazīr*, ʿUthmān b. Niẓām al-Mulk, the caliph was obliged to remove temporarily in favour of Aḥmad b. Niẓām al-Mulk. In the later years of his caliphate, Abu 'l-Ḳāsim b. Ṭirād al-Zaynabī and Anūshirwān b. Khālid [*q.v.*] served as *wazīr* (Ibn al-Ṭiḳṭaḳā, 523-9; Bundārī, 104, 152; Ibn al-Azraḳ, 80).

Al-Mustarshid is described as having a ruddy complexion with dark-blue eyes and a sparse beard. In his youth, he had practised asceticism, read the entire Ḳurʾān, studied *fiḳh* and *ḥadīth*, and was such a fine calligrapher that, according to Ibn al-Anbārī, he would correct the mistakes made by his scribes (al-Kutubī, ii, 248; Ibn al-Djawzī, ix, 197) Ibn al-Athīr claimed that he had seen al-Mustarshid's handwriting, one of the finest examples of *ruḳʿa* (xi, 17). Al-Mustarshid is mentioned by some sources as belonging to the Shāfiʿī *madhhab* (al-Suyūṭī, 454). He was an accomplished poet (ʿImād al-Dīn al-Iṣfahānī, i, 30; Ibn Wāṣil, 51; al-Kutubī, ii, 249). To him are attributed the grandiose words: "My horses will reach the land of Rūm and the gleam of my blade will extend to the limits of China".

(CAROLE HILLENBRAND)

MUSTASHRIḲŪN (A.), orientalists, those who study the Orient.

A. Terminology

Mustashriḳ (not yet mentioned in Lane) is the active participle of the Xth form of the root *sh-r-ḳ* and means either "people studying/seeking for the East/Orient" or "people becoming (like) Easterners/Orientals", Orient and Orientals tending to have a somewhat more emotional connotation than East and Easterners. The word *mustashriḳūn* consequently conveys a broader scope of meaning than the present-day Western term "Orientalists", i.e. "scholars specialised in Oriental studies" does. The term "orientalist" first occurs in English around 1779, in French in 1799; "orientalism" had then the broad meaning of "being oriented towards an oriental culture".

In 19th and early 20th century usage, the term "orientalist" had both a general cultural and a scholarly meaning. Cultural orientalists were those, including painters and writers, who were inspired by the Orient. Scholarly orientalists were specialists in oriental languages and cultures, as distinct from "classicists", specialists in classical languages and cultures (Latin and Greek). Inasmuch as such an orientalist was more than a pure technician of languages, he was a humanist supposed to possess a real profound knowledge of one or more oriental cultures and devote himself to the study of Oriental languages and literatures in past and present as well as other cultural monuments in the fields of art and archaeology. His search for solid knowledge distinguished him from the cultural orientalists, who were in fact devotees of the Orient.

Until the end of the 19th century, the term "Orient" stood especially for the Near East but it also comprised the rest of the Ottoman empire and, in French parlance, North Africa. The "Ancient" East was the Near East up to the spread of Christianity in the region, which introduced the period of the "Christian" East, followed by that of the "Muslim" or "Islamic" East when the region was Islamicised. During the 19th and early 20th century, the concept "Orient" widened in scope to comprise the whole of Asia, retaining the sense of largely unknown cultures challenging Western man to discover them. Up to the Second World War, Orientalism in its broader sense indicated a particular cultural orientation in Europe and North America, and in its narrower sense it meant empirical Oriental studies.

The first International Congress of Orientalists was held in Paris in 1873, and in 1951 an International Union of Orientalists was founded. Since the Congress in Moscow in 1960 the term has been challenged for various reasons, and after the Congress in Paris 1973 the name of the congresses has been changed. Asian cultures are of course only "East" when seen from Europe, and since these cultures are now also studied by specialists coming from the regions themselves and elsewhere, the term "Orient" has become largely metaphorical. At the present time the tendency is to speak of "human sciences in Asia and North Africa", and orientalist scholars are now identified by their culture, period and region of specialisation, and by their specific discipline. Given the nature of the *Encyclopaedia* we mean by *mustashriḳūn* here specifically scholars of Islam and Muslim societies and cultures. "Oriental studies" stands here specifically for that branch of it which is devoted to the study of

Islam and Muslim societies and cultures, that is to say "Islamic studies" in the broad sense of the word.

The notion of "orientalist" in the domain of Islam and elsewhere has changed in several respects since the beginning of the last century. Whereas formerly *mustashrikūn* were by definition non-Muslim Western scholars of Islam, there are now Western scholars who are Muslim, non-Muslim scholars outside the West, and Muslim scholars in this field both in and outside Muslim countries. And whereas formerly the West and the Muslim world were two different geographical areas, they now interpenetrate and various Muslim communities live in Western countries. At present *mustashrikūn* in Islamic studies should be understood as comprising all impartial scholars of Islam, Muslim societies and cultures, whether of Western or non-Western, Muslim or non-Muslim origin and whether they work in the West or elsewhere. Cooperation between scholars in the field takes place beyond differences of faith, country of origin and place of work. The sole difference seems to be that Muslim scholars are more aware of the immediate implications of their research for the Muslim community.

Another change in the notion of "orientalist" concerns the area of specialisation. In former times almost all *mustashrikūn* were professional philologists specialised in Oriental languages, with or without a historical interest. This was a tough course of study with its own tradition and demands of scholarship, hardly leaving room for new paradigms of research. During the past few decades, however, scholars from other disciplines have increasingly engaged in research on Muslim societies and cultures. They include social historians, anthropologists, sociologists and other researchers in the social sciences, and also specialists in the fields of literature, the arts and religion. In this article the term *mustashrik*, when used for the past, refers to scholars of Oriental languages, literatures and histories; when used for the present, it also includes representatives of other disciplines contributing to our knowledge of Muslim societies and cultures.

The social function of orientalists has changed too. More than formerly, *mustashrikūn* have become experts inside Western societies on certain aspects of Islam, Muslim societies and cultures. They perform certain corresponding roles in society; besides research and teaching, they provide information where necessary and mediate in communication when needed. In some cases special tasks may be assigned to them. More than before, society puts pressure on them to make their expertise socially relevant; more than before, they have to comply with the needs of institutions in their society.

If *mustashrikūn* had an expert knowledge, they have also held certain opinions about Islam; sometimes they have opposed particular Muslim ideas and practices, at other times they have tried to spread their own ideas and practices among Muslims and in many cases they have had personal friends among them. Such personal activities and commitments of *mustashrikūn* should be seen and judged in the particular context of their own society and in the context of the relationships between that society and particular Muslim societies. To the extent that the search for knowledge takes priority, *mustashrik* scholarship increases, but alongside this scholarly knowledge there has always existed a wide margin of private ideas, values and orientations of the *mustashrikūn* themselves which they have communicated to certain groups in their own society. This non-academic human cultural side of the *mustashrikūn* has been interwoven with their work and is not without interest. It is striking, for instance, to see to what extent they have been in the first place specialised researchers, with little idea of the political or social implications which their work could have for either their own society or the society studied. Like other scholars, they have mostly been defenceless against possible misuse of the results of their work. The fact of being a scholar in the field of Islam has little to do with insight into present-day Third World problems. Such scholars are not necessarily keen to distinguish the various ways in which Islam has been presented ideologically or used politically for different interests, those of Muslims and of non-Muslims alike. And they are not *per se* aware of situations of social tension in which Islam has been used as a battle-cry, as a symbol of a programme of social and political action, or simply as a utopian formula.

The work done by the *mustashrikūn*, like any study of other societies and cultures in the past and at present, has different dimensions: (1) the technical expertise acquired by detached scientific treatment of factual data; (2) the researcher's attitude to and possible involvement with his subject-matter in the course of his work; (3) the various motivations (romantic, humanist, religious) and objectives for which such studies are carried out, including particular causes adhered to by the researcher, and his personal experiences, involvements and commitments which are relevant to his research; (4) the social setting in which the research is carried out, its place in society and its relationships with particular Muslim societies; this also includes its organisation and funding and its institutional setting; (5) the extent to which the researcher fulfills a bridge function between two or more cultures, developing distance from his own society and an increasing impartiality in his evaluations and judgements on either society.

The question remains to what extent there has been a direct correspondence between the role which their society has attributed to the *mustashrikūn* and the kind of knowledge and general ideas which these last have developed about Islam and Muslim peoples. Where have they developed knowledge and ideas, so to say, ahead of their own society and where have they simply complied with its current ideas and behaviour? Where and how did they relativise or criticise norms and values adhered to in Western societies? Some *mustashrikūn* have, consciously or not, created a distance between their own society and Islam or Muslim people by describing Islam as absolutely different, as a danger or as an object or mission. Others of them have, consciously or not, created a rapprochement between their own society and Islam or Muslim people by describing what human beings, societies and cultures have in common, taking communication and learning from each other as self-evident. More than has been appreciated generally, most *mustashrikūn* have been much less original in their attitudes than is generally thought of and have merely been spokesmen of their societies in their assessment of the distance between Islam and the West. Except when they have wanted explicitly to study Islam and Muslim societies and cultures independently of current ideas and practices (sometimes emphatically against them), their appreciations of Islam have been heavily dependent on ideas and values current in their own society or community.

B. The period until the 19th century

When the Arabs carried out their conquests in the south, and in the 8th and early 9th centuries in the south-west of Europe, two worlds found themselves

opposed to each other. For centuries they identified themselves as the Christian and Muslim worlds according to where political authority lay. The Turkish conquests of the Arabic speaking lands (except Morocco), Anatolia, and the south-east of Europe up to the mid-16th century created a similar situation. In this case, however, the worlds which confronted each other were not only identified as Christian and Muslim but also increasingly as the European and the "Oriental" domain, the Orient starting at the boundary of Ottoman rule.

The history of the encounter between these two worlds and their relations, specifically around the Mediterranean and in the Balkans (also, further east, on and within the borders of the Russian empire) is complex; the borders of the two worlds have witnessed many kinds of interaction. Here we shall only deal with one aspect of cultural interaction: the development of the knowledge which European scholars acquired of the world represented by Islam, including the Arabic and Turkish languages, before the 19th century, when Islamic studies became firmly established as a distinct field of research in European universities. What knowledge of Islam had been attained, what motivated the search for it, what major obstacles had to be conquered, and what was the European cultural context within which this search for knowledge developed?

1. The Arabic heritage; the mediaeval period

Until the Crusading movement began in the second half of the 11th century, with the conquests of Toledo in 1085, Sicily in 1091 and Jerusalem in 1099, knowledge about Islam and Muslim lands in Latin Europe was limited. Its sources were scattered: incidental reports from Christians living in the Levant or in Spain under Muslim domination, doctrinal positions typical of Islam which had been related by John of Damascus and Byzantine theologians in their refutations of Islam, and what had been reported to the Church of Rome about Muslim dealings with Christians, outside or under the authority of the Roman Church. This knowledge was very limited. It was mixed with elements of religious imagination and coloured by efforts to show that Muslims constituted a danger for Europe and Islam for Christendom not only politically but also religiously. Islam was not the right religion: at best it was a Christian sect, but it was certainly not based on Revelation like Christianity.

Spain

The first instruments of work for the study of Arabic in Europe known to us come from Spain: a 12th century *Glossarium Latino-Arabicum* (with *ca.* 11,000 Latin key words of which one-third have not been translated) and a 13th century *Vocabulista in Arabica* (with *ca.* 4,000 Latin key words and *ca.* 8,000 Arabic index words). They must have served the purpose of translating from Latin into Arabic, largely for purposes of missionary work among Muslims in areas brought under Christian rule by the *Reconquista.*

The first written information about Islam and Muḥammad comes from a certain Moses Sefardi (1062-1110) who knew Arabic astronomical works well. In 1106 he converted to Christianity and took the name Pedro de Alfonso, moving subsequently to England where he became the king's personal physician. This information is contained in the fifth of his *Dialogi in quibus impiae Judaeorum confutantur* (Migne, *PL*, 157). Little is known, however, about the author.

More solid information is contained in the so-called Cluniac Corpus. After the capture of Toledo in 1085, this city was chosen as the principal see of the Roman Church in Spain (1088). Some decades later it became a centre of translation of Arabic scientific and philosophical texts into Latin, in particular thanks to the efforts of Archbishop Don Raymundo (r. 1125-51). When Peter the Venerable (1094-1156), abbot of the Benedictine monastery of Cluny, visited Spain in 1142, the two men may have discussed the project of translating some Islamic texts from Arabic into Latin. In any case, Peter the Venerable then commissioned two scholars of his order working on Arabic astronomy, Robert of Ketton (Chester) and Hermann of Dalmatia, to translate five Islamic texts, including the Ķurʾān, into Latin; Robert succeeded in finishing the Ķurʾān translation by 1143. Peter the Venerable himself wrote two texts in addition to these translations, the more descriptive *Summa totius haeresis Saracenorum* and the polemical *Liber contra sectam sive haeresim Saracenorum.* These texts together constitute the so-called Cluniac Corpus or Toledo collection.

Peter the Venerable, known for his anti-Jewish stand over against Bernard of Clairvaux, also differed from him as regards the attitude to be taken to the Muslims. Whereas Bernard actively preached the call to the second Crusade, Peter believed that, rather than war, it was missionary work that would bring victory over Muslims. But to combat Islam one had to know it, and this was the reason that he ordered original Arabic texts to be made accessible in Latin. Robert of Ketton's Ķurʾān translation was printed in Basel in 1543 (1550²) thanks to the efforts of Bibliander.

The coexistence of the three monotheistic faiths in mediaeval Spain meant that intellectuals adhering to one faith needed to possess knowledge of the others, not only because it was a demand of culture but also because it was a prerequisite for any claim to superiority on the part of their own faith. Ibn Ḥazm (*ca.* 994-1064) in his *Kitāb al-Fiṣal* and Yehuda Halevi (*ca.* 1085-*ca.* 1143) in his *al-Khuzarī* (1140) write from a Muslim and Jewish point of view. Peter the Venerable in his *Liber contra sectam sive haeresim Saracenorum*, Raymond Martin (*ca.* 1230-86) in his *Pugio fidei adversos Mauros et Judaeos* (1278), Raymond Lull (*ca.* 1231-1315) in his *Liber de gentili et tribus sapientibus*, and his *Liber de Tartari et Christiani*, and finally Ricoldo da Monte Croce (d. 1321) in his *Disputatio contra Saracenos et Alchoranum* ("*Improbatio Alchorani*") and *Libellus ad nationes orientales*, express a Christian point of view. With other, less important authors, they produced a flood of anti-Islamic writings which, however, betray increasing information about Islam. Raymond Lull, sometimes called the founder of Western orientalism, not only had a religious vocation but also was of a creative philosophical, scientific and poetic turn of mind. Wishing to demonstrate the Christian truth to Muslims by peaceful discussion and rational argument, he founded a school of Arabic for future Christian missionaries at Miramar in Majorca, which existed from 1276 till 1294. The study of Arabic became institutionalised in a more regular way when the Council of Vienna in 1311 at his recommendation laid down that in each of five European universities (Rome, Bologna, Paris, Oxford, Salamanca) two scholars should be appointed to teach Oriental languages, that is to say, Greek and Hebrew, Syriac and Arabic, the first two being the most important. In fact, however, the number of people who knew Arabic well in Europe during the 13th and 14th centuries has been estimated to have been less than twenty.

Role of the Roman Church in Europe with regard to Islam

These efforts to obtain a better knowledge of Islam all originated in the Roman Church, in particular the

Cluniac Benedictine, Dominican and Franciscan orders. Since one of the most important themes in the encounter of the Christian and Muslim worlds, mentioned at the beginning, was the relationship between the Christian and Muslim faiths, views of this very relationship have greatly influenced the way in which people coming from these two worlds have perceived the encounters between them, rationalising them in terms of their respective religions.

In connection with the Crusading movement which started in the second half of the 11th century in Spain, Sicily and the rest of Western Europe (with Urban II's call of 1096), an image of Islam as the great Adversary of Christianity arose in Europe. W.M. Watt describes the following four main features of this image as follows (*The influence of Islam on Medieval Europe*, Edinburgh 1972, 73): "(a) the Islamic religion is falsehood and a deliberate perversion of the truth; (b) it is a religion of violence and the sword; (c) it is a religion of self-indulgence; and (d) Muḥammad is the Antichrist."

The author correctly speaks here of a "distorted" image of Islam, an image which has been scrupulously analysed by Norman Daniel (*Islam and the West*, Edinburgh 1960). It is fair to add that the factual improvements in knowledge of Islam possessed by the authors quoted above always remained within the limits of the four features of the image of Islam just mentioned, sanctioned by the Roman Church and later endorsed by the Reformation.

On a popular level, Muḥammad and his prophetic claims, the Ḳurʾān and certain cultural traits of Arab-Muslim society like polygamy were ridiculed. On an ideological level Islam was depicted as a coherent system of false doctrines, a hostile ideological structure. Both levels together incited the religious collective imagination to an anti-Islamism which had its parallel in a rising anti-Judaism. The Church may have asserted its identity over against Muslims and Jews in this way as it had done earlier over against gnostics and pagans in its first centuries, and Europe may have sought and found its soul, but it may also be contended that the European Christians were mobilised for the wrong cause and with the wrong means. In any case, the Crusading ideology with its centres, propaganda and the missionary efforts based on a distorted image of Islam did not merely constitute the greatest obstacles to true knowledge of Islam and Muslim societies. In Spain the mediaeval Christian syndrome and the underlying attitudes, supported by the Inquisition, led to the human tragedy of the elimination of both Islam and Judaism within three centuries after the military victories of the 13th century by the Christian kings. Both Jews (1492) and Muslims (1502) were put before the alternative of baptism or expulsion, the final solution of the time. This political action was ideologically justified by the distorted image of Islam and Judaism and by the absolute claims of the Church and its institutions, and had been prepared theologically by Augustin's *De civitate dei*, Anselm's *Cur deus homo* and Aquinas' *Summa contra gentiles*.

Arab sciences and philosophy

It was in Spain, too, that another type of studies developed and another kind of knowledge was acquired which may more properly be called the forerunner of Oriental studies in the modern sense of the word. This was the translation activity which started in Toledo after it was taken in 1085, with the encouragement of Don Raymundo mentioned above. This concerned in particular the translation from Arabic into Latin of scientific and philosophical texts sought after in Europe. They were either translations of Greek philosophical, scientific and medical texts (*e.g.*, Aristotle in Arabic translation) or texts, including commentaries, written by Muslim authors (*e.g.*, Ibn Sīnā, 980-1037 [*q.v.*]) whose work became known in Europe *ca.* 1180. A group of scholarly translators devoted themselves to this translation work for more than two centuries, some of them from outside Spain; Jewish scholars played here a role similar to that which Nestorian scholars had played in the earlier 9th and 10th century translation activity in Bag̲h̲dād from Syriac (Greek) into Arabic.

Outstanding leaders of the translation work in the 12th century were Domingo Gonzalez and the proliferous Italian scholar Gerard of Cremona (1114-87) who is said to have been responsible for the translation of more than 70 works in Arabic. Among the prominent Jewish scholars working in the movement was Abraham ben Ezra (1089-1167). It was especially in the 13th century that philosophical works were translated, partly serving as a basis for the great apologetic treatises of Christianity written at the time, partly stimulating the increasing debate among Christian thinkers about the relationship between faith and reason. Two translators in the service of the Emperor Frederick II (r. 1215-50) were famous for these philosophical translations: Michael Scotus (*ca.* 1200-*ca.* 1236) and Jacob Anatoli (*ca.* 1230-50). In the second half of the 13th century, the names of Hermannus Alemannus and Moses ibn Tibbon (1240-83), the latter working in Syria-Palestine, are well known. In Spain it was the great King Alphonso X of Castile, Alfonso el Sabio (r. 1252-84), who commissioned translation work and founded several institutions of higher learning.

The influence of Arabic philosophy on European thought in the 13th century is a case of "orientalism" in itself. Several European philosophers studied and quoted it: Roger Bacon (*ca.* 1214-92) in his *Opus maius* (he also treated the different religions in his *Moralis Philosophia*, IV), Robert Grosseteste (d. 1253) of the Platonic tradition, Albertus Magnus (*ca.* 1206-1280) and Thomas Aquinas (1226-74) of the Aristotelian tradition, and the Latin Averroist Siger of Brabant (*ca.* 1235-*ca.* 1282). After much debate, Latin Averroism was finally condemned by Bishop E. Tempier of Paris (1277).

Sicily, Syria-Palestine and Europe until 1500

Orientalism in its wider sense, the taste for Oriental culture and the desire to know it and derive values from it, did not arise in Spain where the Roman Church imposed its institutions and doctrines by force, but in other places of encounter between the Christian and Muslim worlds. Sicily, where the Arab Kalbī dynasty had ruled (902-1091), became such a meeting-place after its conquest by Roger I (d. 1101). His son Roger II (r. 1130-54), the latter's grandson Frederick II of Hohenstaufen (r. 1215-50), and later Manfred and Charles of Anjou, not only engaged translators for Arabic-Latin translation work but also themselves possessed a direct knowledge of Arab-Muslim manners and customs, accepting Arab cultural norms and values.

Another place of encounter was Syria-Palestine during the Crusader period (1099-1291). William of Tyre's (*ca.* 1130-84) *Historia rerum in partibus transmarinis gestarum*, describing the period 1094-1184 (the year of the author's death), contains careful observations of Arab Muslim behaviour and may be called an Orientalist's historical work in its own right. Here, too, certain translations of scholarly works from

Arabic into Latin were made. The knowledge which the Franks obtained here first-hand from an essentially superior culture, while meeting Muslims in actual life, gave a more realistic turn to Europe's knowledge of the East; numerous cultural borrowings occurred and trade increased between both sides of the Mediterranean.

Godfrey of Viterbo (12th c.) was now able to give a reasonable historical account of Muḥammad's life in his *Universal Chronicle*. Don Rodrigo Jiménez de Rada, Archbishop of Toledo (early 13th century) provided a fair account of the history of the Arabs, in particular in the West, including Spain in his *Historia Arabum* (or: *Saracenica*). Somewhat later travellers like William of Rubruck (William de Rubruquis, *ca.* 1220-*ca.* 1294, travelled in 1254) and Marco Polo (1254-1324) were to discover other worlds, cultures and religions beyond the realm of Islam. And within Europe itself spiritual travellers along initiatory paths discovered positive features of Islam represented for instance by the figure of Ṣalāḥ al-Dīn and given an esoteric form in Wolfram von Eschenbach's *Parzifal* and *Willehalm* as well as in the German version of the *Grail*.

The last two contributions to Arabic studies of this period are again from Spain and can be dated to thirteen years after the fall of Granada (1492). In his *Vocabulista aravigo en letra castellana* (printed 1505), the scholar Pedro de Alcalá (Petrus Hispanus) left a precious account in Latin script of the Arabic vocabulary of the spoken language in Granada at the time. And in the same scholar's *Arte para ligeramente saber la lengua araviga* (printed 1505, 2nd ed. corrected and enlarged also 1505) we have the first Arabic grammar written by a European, describing the spoken Arabic of Granada by means of the categories of Latin grammar.

During the 14th and 15th centuries, humanists of the Italian Renaissance studied not only the classical Greek and Latin authors but also paid attention to Hebrew kabbalistic writings and Arabic texts basic to European science, medicine and philosophy. At the time, the Arab cultural heritage was still part of the European conscience, at least in Italy. In the course of the 15th century, however, a change occurs, represented by the great humanist Giovanni Pico della Mirandola (1463-94) who, though knowing Arabic and Hebrew well, reverted to the classical heritage and left the Arab heritage aside. Over against the "classicists" it was the "orientalists" to whom the task fell of revealing the facts and significance of the Arab Islamic world and its heritage.

2. The Turkish threat; the period 1450-1700

After the failure of the Balkan Crusades and the efforts at unification with the Greek Orthodox Church, the Roman Church's initial reaction to the fall of Constantinople (1453) was one of relative openness, thanks to the efforts of some great intellectuals. Immediately after the fall of Constantinople John of Segovia (*ca.* 1400-58) proposed a conference between Christian clergy and Muslim *fuḳahā*ʾ to open a dialogue on their respective faiths. Nicholas of Cusa (1401-64) had already published his *De pace fidei*, a dialogue between representatives of the major religions in search of what was their truth and unity. His *Cribratio Alcoran* (1460) is a careful examination of the contents of the Ḳurʾān, trying to identify what connects Islam with, and what separates Islam from Christianity on the basis of the text. Moreover, he suggested practical measures to realise the Muslim-Christian conference proposed by John of Segovia. And the new Pope Pius II, the humanist Aeneas Silvius (1405-64), Pope from 1458 onwards, at John's instigation wrote a letter to the Ottoman sultan Meḥemmed II [*q.v.*], the conqueror of Constantinople, in which he appealed for reason and practical common sense in the foreseeable relations between the two worlds confronting each other.

The proximity of the Ottoman empire, a firmly-established state whose power was still increasing until the mid-16th century (Vienna was besieged in 1529) affected the development of knowledge of Muslim societies and Islam in Europe. Whatever the reasons, the Europeans recognised a clear need for true and objective knowledge of this Muslim empire, its administration, resources, religious institutions, and so on; its proximity, moreover, facilitated the acquisition of this directly and indirectly. Besides primarily military and political interests, there were economic interests at stake in establishing and expanding trade relations with Istanbul, Smyrna and the Levant. This need for practical knowledge was supplemented by the stimulus of humanist and Renaissance thought. A new subject of study arose: Islam in its Ottoman context, Islam being now largely identified with the Turcs and their rule. The idea of Islam as a hateful religion and ideological structure was subtly transformed into the idea of Islam as Ottoman power and civilisation. This civilisation was regarded as different from the European one, but there were still more remote civilisations beyond the Ottomans, in Persia, India, China and Japan. This idea of an Islamic civilisation was later to develop into the idea of Islam as a subtle and refined culture expressed in attractive (*1001 Nights*) and even beautiful literature (Arabic and Persian poetry).

Printing presses and their use

Ottoman Turkish was written in Arabic script and the technology first of woodcut and then of loose letter printing imposed itself as an important tool for Oriental studies. The first Arabic printed edition was made in Rome in 1514; it was a Christian liturgical text meant for Oriental Christians. An Arabic Ḳurʾān seems to have been printed in Venice about 1530 but the whole edition must have been destroyed on the order of Pope Paul III (r. 1534-7). Be that as it may, Daniel Bromberg installed an Arabic press in Venice around 1537.

There were several Arabic presses in Rome, the most important being that of Ferdinand de Medici, installed around 1586, which printed the four Gospels in Arabic in 1590, again for use by Oriental Christians, among other texts. In fact, the Roman Church's interest in Arabic printing had to do with intensive efforts to establish contacts and eventually union with the Oriental Churches in the Ottoman empire, just as in mediaeval Spain during the *Reconquista* the study of Arabic had been inspired by missionary activity among the Muslim population living in territories conquered by the Christian kings. In the same perspective of church union, a Maronite College was established in Rome in 1584 (and also an Armenian one) and Maronite clergy and laymen were invited to Rome both to receive instruction and to render services, for instance, in matters of Arabic language. In 1627 Urban VIII founded the College of the Propagation of Faith (*Officium de propaganda fide*) which also encouraged the study of Oriental languages for missionary purposes.

Another famous Arabic press was the one installed by François Savary de Brèves, first in Rome around 1613 and then transferred to Paris in 1615, where it became the *Imprimerie des Langues Orientales*. Franciscus Raphalengius (1539-97) established a commercial press in Holland, while Thomas Erpenius (1584-1624)

installed a private one which was later sold to Elzevir in Amsterdam. On a smaller scale, Arabic texts were printed in Breslau on a press which Peter Kirsten (1575-1640) established before he migrated to Sweden in 1636 (see further, MAṬBAʿA. B. 1. In Europe).

Guillaume Postel and the French context

Following Portugal and Spain, 16th century England and France both enjoyed an immense broadening of their horizons and interests, and people developed a vivid sense for what was new and foreign yet accessible. This happened literally through the voyages of geographical discovery and, probably more than in the Iberian peninsula, through intellectual and spiritual discovery. Guillaume Postel (1510-81) is representative of such a discovering state of mind, within the special context of France, Italy and Austria at the time. Gifted for languages, he studied a number of them and Francis I (1494-1547, king of France from 1515 on), who was eager to attract artists and humanists at his court, became interested in him. Given his pro-Ottoman Levant policies, which had produced a treaty including valuable Capitulations in 1535 [see IMTIYĀZĀT], and in view of the Papal policy of union with Oriental Churches, a policy which he supported, Francis I needed expertise. Postel, who had just finished an extensive journey to Egypt and Constantinople and published his *Grammatica Arabica*, based on the Arab grammarians (1538-9), was appointed Professor of Arabic (1538) at the newly established Collège Royal (1530) which was later to become the Collège de France. Postel published a book on the Ottoman Empire, *De la république des Turcs* (1539-40), in which he presented a highly idealised picture of the King's ally. For various reasons Francis I dismissed Postel from the Collège Royal in 1543, and this marked the beginning of a new period in this man's agitated life. After far-reaching spiritual, intellectual and political adventures, and several brushes with the Roman Inquisition, he ended his life as a *de facto* prisoner in a French convent (1562-81), still moved by great ideas of world conversion and world domination before the nearby apocalyptic end of times. His precious manuscripts went to the University of Heidelberg.

Institutionalisation of Oriental studies: Leiden

An interesting example of a concerted effort to develop Oriental studies in the first half of the 17th century is provided by the history of this field at the University of Leiden, which soon achieved eminence. The university was established in 1575 as a reward for the city's withstanding the Spanish siege of 1574. The Low Countries declared their independence in 1581. Oriented as they were towards the sea and maritime trade, with vital interests in the Ottoman empire and Morocco, the Dutch considered a knowledge of Oriental languages a demand of the time. Franciscus Raphalengius (1539-97) started to teach Hebrew in Leiden in 1586, and in 1593 he added Arabic and prepared his *Lexicon Arabicum* which was published posthumously in 1613. The classicist, historian and Arabist Joseph Scaliger, a pupil of Postel, was appointed professor in 1593 without specific teaching duties. A separate chair of Arabic was created in 1599. After Scaliger, the reputation of Leiden in this field was enhanced by two scholars of great stature. In 1613 Thomas Erpenius (1584-1624), whose main interest was in languages, was appointed Professor of Oriental Languages; in the same year he published his important *Grammatica Arabica* which was to become a classic for two centuries (1636[2]; enlarged edition 1656[3]; 1748[4]). Jacob Golius (1596-1667) was appointed his successor in 1624; in 1653 he published his important *Lexicon Arabico-Latinum*, based on Arab dictionaries and his own readings, which also became a classical instrument of research. Besides publishing these major works of scholarship, the two men distinguished themselves also with a typical pedagogical concern; both prepared Arabic reading materials for beginners which lasted for nearly two centuries. In this regard, Erpenius prepared the *Locmani Sapientis Fabulae* together with some Arabic maxims (1615) and a voweled text with notes and Latin translation of the *Sūrat Yūsuf* (1617), while Golius published his *Shadhrat al-adab*... in 1629.

But Leiden established its reputation for Oriental studies in another scholarly and practical sense too. Just as Guillaume Postel had been sent out by Francis I to buy Oriental manuscripts in the East, Golius after his appointment spent from 1625 until 1629 in the East, bringing back a harvest of some 300 Arabic, Turkish and Persian manuscripts. Still more importantly, the Dutch representative of the States General at the Porte after 1655, Levinus Warner (1619-65) who had studied in Leiden and lived in Istanbul since 1644, bequeathed his precious collection of about 1,000 manuscripts and his books to the University Library of Leiden. This had already earlier acquired Scaliger's library and Golius' manuscripts, and it subsequently became a kind of Mecca for Arabists.

Examples of scholarly work

Among the scholarly works of the period under consideration which deserve mention is first of all Joseph J. Scaliger's *De emendatione temporum* (1583; enlarged edition 1598; 1629). This was the fruit of extensive Oriental researches and readings, encompassing various Oriental calendars and expounding a kind of world history. A century later Richard Simon (1638-1712) was able to offer his *Histoire critique de la créance et des coutumes des nations du Levant* (1684), in which he presented side-by-side and as objectively as possible the Muslim and Christian communities living in the Near East. Around the same time appeared in Vienna the precious *Thesaurus linguarum orientalum*... of Franz Meninski, in three volumes, a Turkish-Arabic-Persian-Latin dictionary which became a classic.

In this connection, the problem of the edition and translation of the text of the Ḳurʾān must be mentioned. Pope Alexander VII (1655-67) still forbade both its edition and its translation. Thanks to the Protestant theologian Bibliander, the Latin Ḳurʾān translation by Robert of Ketton, dating from 1143, could be printed in Basel in 1543, with a second edition appearing in 1550. In 1647 André du Ryer published an original French translation accompanied by a "Sommaire de la religion des Turques"; this translation was in turn translated into various other European languages. In 1694 A. Hinckelmann published the first Arabic text edition of the Ḳurʾān. It was in 1698 that the learned Catholic scholar Lodovico Maracci published an Arabic text edition and Latin translation of the Ḳurʾān, preceded by a lengthy introduction called the *Prodromus*. This was the standard scholarly edition and translation for at least a century and a half.

Other editions of important texts besides the Ḳurʾān are that of Ibn Sīnā's *Kitāb al-Shifāʾ* and his *Kitāb al-Nadjāt*, published together as early as in 1593, in Rome. Erpenius edited the vowelled *Sūrat Yūsuf* with a Latin translation and notes as an introduction to reading the Ḳurʾān (1617), and also the Arabic New Testament (1616) and Pentateuch (1622). In 1625 his edition and translation of the larger part of the world chronicle of the Coptic historian al-Makīn

(d. 1273), from Muḥammad onwards, together with the *Historia Arabum* (or *Saracenica*) of Rodrigo Jimenez de Rada (*ca.* 1210), saw the light. The British scholar Edward Pocock (1604-91), who travelled extensively in the Near East between 1637 and 1640 to collect manuscripts, was appointed to the new Oxford chair of Arabic in 1638. He edited the great history of Abu 'l-Faradj Gregorius (Bar Hebraeus), *Taʾrīkh mukhtaṣar al-duwal*, first in part with extensive notes in his *Specimen historiae Arabum* (1650) and then in its totality, which was published posthumously by his son in 1663, who edited himself Ibn Ṭufayl's *Ḥayy ibn Yakẓān* (1671). The Arabic New Testament was edited again, after Erpenius' edition of 1616, by the Syrian Christian Salomo Negri (London 1727).

3. The breakthrough of enlightenment; the 18th century

The end of the 17th century saw the appearance of a new series of publications on or related to Islam which breathed another air than most publications mentioned until now. These had stood in the old scheme of the controversy between Muslims and Christians, the declared opposition between the Islamic and Christian religions. Scholars like Erpenius and Pocock had not hidden their hostility to Muḥammad's claims to be a prophet and the idea of Islam as an acceptable religion. This was not only a matter of personal judgement but had to do with the dominant place of Christian theology at the universities. Arabic philology was often used as an aid to the exegesis of the Hebrew Old Testament; a scholar like Albert Schultens (1686-1570), as others before him, even considered Arabic as a dialect of Hebrew. Islam was nearly always compared with and judged in the light of the doctrines of Christianity. In other words, Arabic and Islam had in fact been studied according to norms of Christian theology or even as *ancilla theologiae*.

The breakthrough and emancipation of the study of Islam and Muslim lands in a spirit of rational Enlightenment (*Aufklärung*) happened to take place precisely at a time in which the Ottoman empire, after its last siege of Vienna in 1683, was on the retreat and had to sign the Treaty of Carlowitz (1699) [see ĶARLOFČA]. This disappearance of the Turkish danger from the European scene, marking the end of the wars of religion, must have meant an easing of tension, not only political but also psychological, cultural and religious. Just as the Turks were no longer a political danger, Islam could no longer be seen as an inherently dangerous religion. Through the voyages to the East, Europe on its part had already started to develop a curiosity and cultural openness in the second half of the 17th century and this could now extend beyond Chinese culture to Islamic culture too.

One of the first publications breathing this new, fresh and open spirit was the thousand pages-long *Bibliothèque Orientale* (1697) edited by Bartholomé d'Herbelot (1625-95), who represented a new type of enlightened "orientalist". It was prepared with royal support and sought to offer the French public all that could be of interest in Arabic, Turkish and Persian works in alphabetical order. Another publication, which opened up a still more imaginative side of Muslim culture was the French translation of the *Arabian Nights* in twelve volumes between 1704 and 1717. It was made by Antoine Galland (1646-1715), from 1709 Professor of Arabic at the Collège de France, who had made several journeys to the Near East and already published in 1694 a book of maxims from Muslim literature illustrating Muslim wit.

The new, rational trend of thought of the times, which had already distanced itself from, if not opposed, traditional Christianity, was also able to study and appreciate other religions with greater openness than before. Leibniz (1646-1716) considered Islam as a natural religion, and in 1720 an anonymous pamphlet circulated under the title "Mahomet no impostor, or a Defence of Mahomet". In 1730 appeared *Vie de Mahomet*... written by Henry Boulainvilliers (1658-1722), in which Muḥammad is described as a heroic figure. Simon Ockley (1678-1720) wrote his *History of the Saracens* (1708-18) in a sympathetic spirit and Edward Gibbon (1737-94) would give an objective historical account of the rise of Islam in his *Decline and Fall of the Roman Empire* (1776-81). Voltaire (1694-1778) gave such an account in his *Essai sur les moeurs*... (1753). In an indirect way, Islam was used to express critical ideas about one's own society, state and church: Montesquieu's *Lettres Persanes* (1721) and Voltaire's *Le fanatisme ou Mahomet le prophète* (1742).

Most important, however, was the study by a specialist, Adriaan Reland (1676-1718), Professor of Oriental Languages at the University of Utrecht, about Islamic religion itself, *De religione Mohammedica libri duo* (1705, 1717²). Here Reland presented Islam as it had been described by Muslim authors themselves, translating the original texts, and he denounced and refuted wrong ideas current about Islam in his time. The book, written in Latin, was translated into French and German and may be called the first enlightened study of Islam as a religion. In the same spirit of reasonable presentation, the lawyer George Sale (d. 1736) published his "Preliminary Discourse" on Islam as a religion, preceding his English Ķurʾān translation (1734). That this change of perspective, the freedom of research and the emancipation of Arabic and Islamic studies from theological patronage, was not that easy shows up in the work and still more the autobiography (*Lebensbeschreibung*, 1783) of that gifted but non-recognised Arabist Johann Jakob Reiske (1716-74). As Reland was a predecessor of the modern study of the religion of Islam, Reiske, besides being an Arabist according to modern standards, in his *Prodidagmata ad Hagji Chalifae librum memorialem* (written 1747, published 1766) was a predecessor of the modern study of Islamic history.

Another sign of the new open spirit was the kind of thoughtful travel literature which saw the light now, as for instance Volney's (1757-1820) *Voyage en Syrie et en Egypte* (1787).

This open spirit could also lead to a new sensitivity to *belles lettres* and literary beauty. One of the first Orientalists following this path was William Jones (1746-94), highly gifted in languages and from 1783 judge in Calcutta. In 1774 he published his *Poeseos Asiaticae commentarium libri six*, offering a first panorama of the rich field of poetry existing in particular in Muslim countries in Arabic, Persian and Turkish. Once arrived in India, he put himself to Sanskrit and translated several Sanskrit works into English. At the same time, with a clear awareness of practical necessities, he took the initiative to prepare the publication of the *Digest of Hindu and Mohammedan Law*.

Role of persons from the regions concerned

In several ways, people from the regions concerned, nearly always Christians, played a role in the process of acquiring knowledge about Islam and Muslim societies and cultures. The glossaria in Spain were made with the help of Muslim converts to Christianity who, whatever their knowledge of Arabic, knew little

or no Latin. As "new Christians" speaking Arabic they could act as intermediaries between the Christian conquerors and the Muslim population.

In the second half of the 16th century Near Eastern Christians, mostly Maronites but also members of the Uniate Churches, started to play a role too. A certain number went to the new Maronite College in Rome, founded in 1584, to pursue theological studies. Others went to Italy and France to study or act as translators into Arabic. Others again simply came in order to improve their own situation. All too often lacking proper education, Oriental Christians pretended to be able to teach Arabic, give reliable information about Muslim societies and even give instruction about Islam, creating in this way more confusion than providing knowledge.

There were exceptional figures, however. The Moroccan prisoner al-Ḥasan b. Muḥammad al-Wazzān al-Zayyāti converted to Christianity, took the name Leo Africanus [*q.v.*] and wrote a book on "Famous Men among the Arabs" and his well-known *Descrittione dell'Africa* (around 1520). In Paris, Erpenius learnt much from a Moroccan called al-Andalusī, who also informed him about Islam. Members of the Maronite al-Simʿānī family catalogued Arabic manuscripts in several libraries in Italy during the 18th century and the catalogue of the Arabic manuscripts in the Escurial Library was published in two volumes (1760-70) by the Maronite Michael al-G̲h̲azīrī (Casiri, 1720-91). The learned Syrian Christian Nāṣīf al-Yāzid̲j̲ī (1800-71 [*q.v.*]) wrote a critical commentary on Silvestre de Sacy's edition of al-Ḥarīrī's *Maḳāmāt* (1822), which was published in Arabic with a Latin translation and notes by A.W.F. Mehren in Leipzig in 1848.

New teaching institutions

Besides the chairs of Oriental Languages attached to a growing number of European universities, there was an increasing need for the practical teaching of Oriental languages, in particular for interpreters and translators. Already in 1670 a French school for interpreters had been established in a convent in Pera, and in 1700 the *Ecole des jeunes de langue* was established in Paris for the same purpose. It was directed by Jesuits, as was the *Orientalische Akademie* established in Vienna in 1754 for the same purpose but also preparing young Austrians for the foreign service.

The *Ecole spéciale des langues orientales* was founded in Paris in 1795 for the study of living oriental languages, in view of the increasing need for qualified people to represent French commercial and political interests in Asia and Africa. Teaching concentrated on Arabic, Turkish and Crimean Tatar, Persian and Malayan. The chair of Arabic at the *Ecole spéciale* fell in 1795 to A.I. Silvestre de Sacy (1758-1838), who in 1806 also became Professor of Persian at the Collège de France. With his *Grammaire arabe* of 1810 and his *Chrestomathie arabe* of 1806 and *Anthologie grammaticale* of 1829, he supplanted the older publications by Erpenius and Golius. His impeccable publications in the realm of Arabic philology made Sacy the outstanding Arabist in Europe, inaugurating a new period of the study of the Islamic languages. In 1803 a chair for spoken Arabic was added at the *Ecole spéciale*, and the learned Copt Elias Buḳṭur (Bocthor, 1784-1821) was appointed. He prepared a two-volume *Dictionnaire français-arabe* (spoken Arabic, especially in Egypt) which was published by his successor A.P. Caussin de Perceval Jr. The latter wrote himself a *Grammaire arabe vulgaire* (1824).

As for the British, following William Jones (1746-94) and his creation of the Asiatic Society of Bengal (1784), they established in 1800 in Calcutta the Fort William College for the study of Oriental languages and literatures, right on the spot. The College was to last until 1854, providing courses in the most important Indian languages and publishing a number of text editions and translations, dictionaries and scholarly studies. The scholars worked in the spirit of enthusiasm for Indian (including Islamic) culture which already had inspired William Jones and they were willing to learn from the culture in which history had placed them. Over against this line of enthusiastic "Orientalists" who wanted to learn, serve and study the indigenous cultures of the colonies, arose the line of the "Anglicists" who imposed British education, norms and values. Colonial times started to demand their dues.

In Austria, the third major European power to develop relations with Muslims, in particular in the Balkans, another kind of initiative was taken to spread knowledge about Islamic culture. Joseph von Hammer-Purgstall (1774-1856), who established the scholarly study of Oriental languages and literatures in Austria, founded the first orientalist journal Europe has known. Between 1809 and 1818 six issues of the *Fundgruben des Orients* appeared, bringing and encouraging knowledge about the world of Muslims and Islam, its motto being the second half of Sūra II, 142/147.

C. The period of the 19th and 20th centuries

1. International scholarship until the Second World War

The 19th century saw the rise of Islamic studies as a scholarly field of studies in its own right. The publication of the voluminous *Description de l'Egypte* between 1809 and 1822, written by a number of French scholars who had done research in Egypt during Bonaparte's campaign there, gave a powerful impetus to Oriental studies in general. This enterprise was an example of what scholars could accomplish through co-operation when they enjoyed good financial support and efficient organisation.

A prerequisite for any research on Islam and Muslim societies was the study of Arabic; descriptive grammars and the compilation of dictionaries prepared the way for critical editions of manuscript texts. Scholars of great repute in this field were Antoine Silvestre de Sacy in Paris, Edward William Lane (1801-76) in England and Egypt, Reinhart P. Dozy (1820-83) and Michael Jan de Goeje (1836-1909) in Leiden, Heinrich Leberecht Fleischer (1801-88) in Leipzig and I.Y. Krachkovsky (1883-1951) in St. Petersburg-Leningrad. A landmark was Gustav Flügel's (1802-1879) publication of the Arabic text of the Ḳurʾān in 1834 with the concordance to it in 1842. This was the prerequisite for a more accurate literary and historical study of the Ḳurʾān. A pioneering study in this respect was Theodor Nöldeke's (1836-1930) *Geschichte des Korans*, originally a dissertation in Latin (1856), the German version of which (1860) was to be followed later by a considerably augmented edition in three volumes, supervised by three other German scholars, which appeared between 1909 and 1938. An increasing number of printed critical editions of Arabic, Persian and Turkish texts from manuscripts followed, first in Europe, and then also in Cairo and elsewhere.

Available manuscript resources were described for instance by Moritz Steinschneider (1816-1907) for Arabic Muslim and Jewish manuscripts, followed by Carl Brockelmann (1868-1956) for Arabic manuscripts in general and Georg Graf (1875-1955) for Christian Arabic manuscripts. Brockelmann's *Ge-*

schichte der arabischen Literatur has now in part been superseded by Fuat Sezgin's invaluable *Geschichte des arabischen Schrifttums* (since 1967). C.A. Storey published his *Persian literature. A bio-bibliographical survey* (of Persian manuscripts) from 1927 onwards, with a new enlarged edition by Yuri Bregel (1972).

Broad historical surveys of literature in these languages were undertaken, for instance, by Von Hammer-Purgstall and Elias John Wilkinson Gibb (1857-1901) for Turkish literature, and by Edward Granville Browne (1862-1926) for Persian literature. Reynold Alleyne Nicholson's (1868-1945) preliminary survey of the history of Arabic literature was followed by Régis Blachère's (1900-73) more systematic but unfortunately unfinished survey.

The study of Islamic history required editions and analysis of historical texts. Important pioneers in this field were Alfred von Kremer (1828-89) for Islamic cultural history, and Julius Wellhausen (1844-1918) for the early political history of Islam. Dozy deserves mention for his history of Muslim Spain, published in four volumes in 1861.

It was on the basis of the growing accessibility of the relevant literary and historical sources that Islamic studies proper, that is to say the study of Islam and Muslim societies and cultures, could now come into being. In this respect, scholars like Ignác Goldziher (1850-1921), Hellmut Ritter (1892-1971) and Louis Massignon (1883-1962) paved the way. To them may be added the names of Joseph Schacht (1902-72) for Islamic law, Hamilton Alexander Roskeen Gibb (1895-1971) for the history of Islamic institutions in particular, Gustav Edmund von Grunebaum (1909-72) for the history of Islamic culture and civilisation generally and Arendt Jan Wensinck (1882-1939) for the study of Islam within the perspective of science of religion. A scholar of exemplary modesty, Wensinck was the moving spirit behind two major enterprises of international collaboration in the field of Islamic studies. These are the first edition of the *Encyclopaedia of Islam* [see MAWSŪʿA. 4.], which appeared in five volumes in an English, French and German edition between 1913 and 1942 (and which inspired the Turkish *İslam Ansiklopedisi* which started to appear in 1940), and the *Concordance et indices de la tradition musulmane* which appeared in eight volumes between 1933 and 1989, both published by E.J. Brill in Leiden.

2. Institutionalisation and developments until the Second World War

The immense development of Oriental studies in general and Islamic studies in particular in Europe and North America since the middle of the 19th century cannot be explained only in terms of spiritual motivations and scholarly interest in the non-Western world. It also came about thanks to the availability of funds to develop these studies in new independent institutions and institutional arrangements for research and teaching. Universities became better organised, special chairs were established, scholarly meetings facilitated communication. Certain publishers specialised in books in this field and societies were established specifically to favour Oriental studies.

In France J.B. Colbert had established the *Ecole de jeunes de langues* in Paris in 1700; this functioned as a school for interpreters until its closure in 1873. In 1795 the *Ecole spéciale des langues orientales* was founded, in 1914 renamed *Ecole nationale des langues orientales vivantes* and in 1971 *Institut national des langues et civilisations orientales*; it has now become part of the University of Paris. In 1822 the newly founded *Société asiatique* met for the first time, and the same year it began to publish its *Journal asiatique*.

For a long time, Oriental languages and literatures were not taught at French universities but at special institutions, all of them in Paris; the *Collège de France* from 1530, the institutions mentioned above, and the *Ecole Pratique des hautes Etudes* after 1868. The *Revue du Monde musulman* (1906-26), and its successor the *Revue des Etudes islamiques* (1927-), have been keen to publish on events throughout the contemporary Muslim world with an important part of which France was involved from its occupation of Algeria in 1830 until Algeria's independence in 1962.

The French also established academic research institutes in different countries overseas, for instance the *Institut français d'etudes arabes de Damas*, established in 1930 (replacing an older Institute of 1922) and attached to the University of Paris, which has regular publications until the present time. In 1929 an *Institut d'etudes islamiques* was created as part of the University of Paris. This was to constitute the centre of Islamic studies in France, with numerous students from North Africa attending after the Second World War. The Department of Arabic and Islam at the University of Algiers and similar institutions in Tunis and Rabat had political relevance within the framework of French interests in what was then still French North Africa. Scholars like Robert Montagne (1893-1954), for instance, studied Islam in this framework. French historical and linguistic scholarship on Islam in Spain and North Africa was represented, *e.g.*, by Evariste Lévi-Provençal (1894-1956), Roger Le Tourneau (1907-71), Georges (1876-1962) and William (1874-1956) Marçais. Jean Sauvaget (1901-50), besides his own historical work, wrote a useful bibliographical introduction to the historical study of Islam.

In Germany, Oriental studies developed around the middle of the 19th century as an academic discipline at the newly-founded or organised universities, and it remained firmly linked to the universities, Arabic often being taught as one of the Semitic languages at the Faculties of Theology. In 1845 the *Deutsche Morgenländische Gesellschaft* was founded, bringing together all German orientalists; it has been publishing the *Zeitschrift der DMG* since 1847. Islamic studies acquired some political relevance in Germany in the context of the rapprochement with the Ottoman empire and during the thirty odd years during which Germany had some Muslim colonies in Africa. Carl Heinrich Becker (1876-1933), for instance, besides his historical work paid attention to contemporary Islam in these regions, at the *Kolonialinstitut* established in Hamburg in 1908. The Nazi period and the Second World War (1933-1945) gave an unforeseen ideological twist to German scholarship. A few German orientalists, mostly of Jewish descent, succeeded in escaping abroad; others perished or survived under heavy stress. After 1945 Oriental studies in both parts of Germany had largely to be built up again.

Islamic studies in Germany have remained very much part of the older German orientalist tradition of solid philological and historical work, lack of social and political commitment and relatively little interest in the realities of the contemporary scene. It is probably in Germany that the orientalists' tradition has achieved the greatest degree of technical perfection in what may be termed scholarly precision engineering, a phenomenon which can be observed elsewhere too. This has happened, however, at a price: a certain isolation through remoteness from other scholarly disciplines, an aloofness from contemporary developments and a certain weakness of scholars to

take a personal stand, disciplined objective scholarship being the cause for which they live, imagination being subordinated to mental discipline. Much less formulation of basic problems of research has taken place here than could have been expected, given the German philosophical tradition, and compared with important changes of paradigm in other scholarly disciplines in the country. Islam as a faith and religion as well as contemporary developments have tended, paradoxically, to be marginalised in Islamic studies as an academic discipline. Several German Islamicists have tried, however, to set Islam and Islamic history in the broader context of cultural history, among them the aforementioned Carl Heinrich Becker and Hans Heinrich Schaeder (1896-1957). A younger generation of German Islamicists has established closer communication with and commitment to living Muslim societies and their future.

Oriental studies in Great Britain in the 19th and 20th centuries have been very much influenced by contact with a number of important Muslim regions within and outside the empire, *e.g.*, Persia. Quite a few British scholars have not been attached to university institutions but have carried out research on their own, sometimes working as civil servants in the colonial administration or diplomatic service but also as independent travellers and authors like W.S. Blunt (1840-1922) and others. As early as 1784, the Asiatic Society of Bengal was founded by Sir William Jones in Calcutta. A parallel society in Bombay was to follow. The Royal Asiatic Society of Great Britain and Ireland was founded in London in 1823; it has been publishing its *Journal* since 1834.

Academic studies of Arabic, Persian and Turkish were concentrated in the universities of Cambridge, Oxford and Edinburgh, where old traditions in this field existed. The London School of Oriental Studies, attached to the University of London, was founded after the First World War and renamed the London School of Oriental and African Studies after the Second World War. It brings together a broad range of orientalists' expertise and field experience. Britain, too, founded some academic institutes overseas in Ankara, ʿAmmān, Bag̲h̲dād and Tehran, which stimulated archaeological and art history research in particular.

The Netherlands' overseas history with Islam came through contacts with Indonesia. The world's first society of Oriental studies, the *Batavian Society for Arts and Sciences*, was founded in Batavia (Jakarta) in 1778 and would publish its own Journal. In Dutch Oriental studies as elsewhere, a distinction can be made between academic Oriental studies for the sake of scholarship and the study and teaching of Islamic law and institutions and Muslim languages and ethnography for the benefit of the colonial administration. The second tradition was combined with the first in the dominating personality of Christiaan Snouck Hurgronje (1857-1936), who for a number of years was an official adviser to the government on Muslim affairs.

For Russia, the Orient started with the presence of the Tatars, Islamicised since the 1260s. The main institutions of Oriental studies were in St Petersburg, then the capital: the Asiatic Museum, founded in 1818, and the Institute for Oriental Languages, established as part of the Asiatic Department of the Ministry of the Exterior in 1823. A faculty of Oriental Languages was founded here in 1854. The city held, and holds, important manuscript collections.

A school of Arabic scholarship was established in Russia by Viktor Romanovich Rosen (1849-1908). His most outstanding Arabist pupil was the aforementioned I.Y. Krachkovsky whose *Among Arabic manuscripts* (Eng. tr. 1953) brought Oriental studies nearer to the general public, even in the West. It is, however, Turkic Islam with which Russia has had the most direct relations and a centuries long common history. The foremost scholar in this field was Vasilii Vladimirovich Barthold (1869-1930), also a pupil of Rosen (see Yuri Bregel, *The bibliography of Barthold's works and the Soviet censorship*, in *Survey*, no. 108 [1979], 91-107).

Russian Oriental studies changed greatly after the revolution of 1917, gradually becoming subjected to ideological constraints. Islamic studies, like Islam itself, were severely curtailed from the later twenties on, as part of the general drive to eradicate religion. In the fields of linguistic, literary and historical studies, however, research went on. After the Second World War the Institute of Oriental Studies was founded in Moscow as part of the USSR Academy of Sciences, and the existing Institute of Oriental Studies in Leningrad became a branch of the Moscow institute.

In most other European countries, too, traditions of Islamic scholarship established themselves during the period under consideration. Prominent in the Italian tradition were Leone Caetani (1869-1935), Ignazio (1844-1935) and Michelangelo (1886-1946) Guidi, Carlo Alfonso Nallino (1872-1938) and Giorgio Levi della Vida (1886-1967). Prominent in the Spanish tradition were Julián Ribera y Taragó (1858-1934) and Miguel Asín y Palacios (1871-1944). Special mention should be made of Arminius Vambéry (1832-1918) in Hungary, Adam Mez (1869-1917) in Switzerland, Tor Andrae (1885-1946) in Sweden and Armand Abel (1903-1973) in Belgium.

In the USA, an interest in Oriental studies appeared on the East Coast in the first decades of the 19th century. The American Oriental Society was founded in 1842 and started to publish its *Journal* in 1880. Universities began to teach Oriental studies in the 19th century, but Islamic studies lagged behind somewhat. After the First World War, Princeton University became the main centre for Middle Eastern and Islamic studies, as they were developed by Philip Hitti (1886-1978); The University Library here was able to acquire a large manuscript collection. Other centres of Oriental studies where Islamic languages were taught were Harvard University, and Universities in Philadelphia, Chicago and Berkeley (UCB). Since the Second World War, the teaching of Islamic languages has been regarded as a vital necessity and programmes of Middle Eastern area studies, including Islamic history, have been developed at a number of American universities, to which European scholars like G.E. von Grunebaum, H.A.R. Gibb and B. Lewis have been attached. The Library of Congress has tried to acquire consistently all publications which have appeared in Muslim countries and has the most important collection of materials on the subject in the world.

Similar Islamic studies, based on philology and history, have been pursued at some Western institutions in Muslim countries. To the French institutions in Damascus and North Africa, mentioned earlier, should be added the Jesuit Université de St.-Joseph in Beirut, recognised in 1881, with its *Faculté orientale* (between 1902 and 1914) and its *Institut de Lettres orientales*, from 1937 on. The Belgian scholar H.J. Lammens (1862-1937) worked here. At the American University of Beirut, which goes back to the Syrian Protestant College, founded in 1863, the Arabic Language and Islamic history have been

taught for a long time. Islamic studies were also pursued at several British institutions in British India, for instance in Lahore. Many text editions were published in Cairo, Ḥaydarābād and other centres of Islamic studies in Muslim countries.

From the beginning a number of independent scholars have carried out research, often in disciplines other than philology, textual source analysis and documentary history represented by the universities at the time. Their work has proved to be crucially important for Islamic studies. Some of them studied non-textual material sources like Arabic epigraphy (Max van Berchem, Swiss, 1863-1921), numismatics and archaeology, and art and architecture (Keppel Archibald Cameron Creswell, British, 1879-1974). Others explored contemporary Muslim societies in ethnographical studies such as those carried out by the above-mentioned Christiaan Snouck Hurgronje in Mecca, Acheh and Gajoland; Edmond Doutté (French, 1867-1926) in Morocco and Algeria; and Edward Westermarck (Finnish, 1862-1939) in Morocco. After the Second World War, anthropological fieldwork developed rapidly and Islamic studies are now unthinkable without the contributions from it and other social sciences.

3. Critical evaluations of *mustas̲h̲riḳūn*

Oriental studies generally and, in particular, Islamic studies based on scholarly, and therefore by definition critical philological, literary and historical methods, have been critically evaluated and discussed during the past decades. Specifically, the contribution of Islamic studies to our knowledge of Islam and Muslim societies and cultures, its epistemology and presuppositions, its older ethnocentrism and its ethical implications have been at issue. Criticism has been articulated both by Western scholars, in particular social scientists studying non-Western societies and cultures, and by Muslims on different levels. We shall review some of the main arguments contained in this criticism and show the paradoxical situation in which the *mustas̲h̲riḳūn* as bridges between cultures find themselves, even if they are not always aware of this themselves.

i. Scholarly criticism

As has been observed by Maxime Rodinson (*La fascination de l'Islam*, Paris 1980; Eng. tr. *Europe and the mystique of Islam*, Seattle 1987) and others, the rise and development of Oriental studies in Europe shared in 19th century trends of thought, which for decades put their stamp on this kind of studies. One idea current at the time, which in part even accounted for the enthusiasm for Oriental studies, was that in contrast to the West, the spiritual and in particular the religious element predominates in the Oriental cultures. As a consequence, until recently Islamic studies have been tinged with a certain idealism in that much importance has been attached to the influence of religion, specifically Islamic ideas and practices on Muslim societies, while general technological, economic and social factors tended to be neglected. Another idea current in the 19th century was that peoples could be classified according to races, each possessing inherent cultural and psychological characteristics. The dynamics of Islamic history were then largely explained as a struggle between religious movements or a struggle between races, in particular Semitic and Indo-European. A third idea in vogue at the time when Oriental studies developed was that certain characteristics of a particular language like Arabic or a language group like the Semitic languages reflected themselves in specific cultural features of the speakers of that language. In the case of Islam, this meant that Europeans had a marked tendency to interpret Islam and Muslim societies in terms of what were thought to be unchangeable realities of Islamic religion, Semitic and other races, and Semitic and other languages. Even after the Second World War, such ideas were still accepted by some *mustas̲h̲riḳūn*.

The fact that Oriental studies at the time consisted largely of the study of languages and texts, meant that *mustas̲h̲riḳūn* had difficulties in drawing conclusions about the social and other realities within which the texts originated and functioned. It was possible to reconstruct the chronology of political events mentioned in historical texts but much harder to draw conclusions for instance as to the social history of Muslim societies and the way they functioned and function. While overestimating the role of religion, race and language, *mustas̲h̲riḳūn* greatly underestimated, or even refused to acknowledge, the role of, for instance, particular demographic and ethnic structures, and social and economic causes in explaining particular facts or developments. In short, precisely because of their interest in Islam and in what distinguishes Muslim from Western societies, orientalists tended to stress the specificity of things Islamic and to reify Islam as an explanatory cause. They tended to neglect the many things that human beings, societies and cultures have in common and to disregard general causes as explanations of particular developments in Muslim societies.

Furthermore, the very equipment of orientalists, bound or at least accustomed by their education to work on texts, prevented them from interpreting adequately contemporary developments in Muslim societies. Most of them found themselves at too great a distance from the tangible world they studied, including the psychological and social distance to the people created by the political relationships of colonial times. The orientalists in fact did not know much more about contemporary Muslim societies than other Westerners. In their thinking they mostly tended to accept as self-evident the basic assumptions and presuppositions current in their own society. Consequently, it was not so much professional orientalists as travellers and journalists, missionaries and tradesmen, politicians and military experts who, whatever their natural biases, furnished factual observations and practical knowledge of contemporary Muslim societies, with which they were often involved over many years.

The focus of interest and style of research of most *mustas̲h̲riḳūn* in the period under consideration was fact-finding and the search for permanent structures. A deeper causal or structural cohesion between the known facts was seldom sought; these facts were rarely interrogated with a view to their social implications; the patterns of meaning which these facts taken together conveyed to the people concerned were seldom investigated. Whenever attention was paid to these people's interpretations of the facts, there was a certain predilection in the West and among some orientalists for the exotic, archaic, and poetic meanings of what were held to be the "religious" elements.

Although orientalists in principle and quite naturally could listen to the people of the culture and society they studied, understand what they needed or wanted to convey and defend their interests, most of them refrained from doing so. Their primary concern was their scholarly work. Moreover, a widely-held official view in the colonial period held that natural resistance to Western political and economic domination at the time was to be attributed to Islam ("Muslim fanaticism", "Panislamism", etc.) rather

than admitting self-critically that it was due to the growing penetration of Western power.

Paradoxically, it was not only the colonies but also the orientalists who tended to become victims of Western domination, which caused normal relations between people to become disrupted, and prevented Muslim people and societies, their culture and religion from being perceived and understood as they understood themselves. The uneven relationship between the Western and the Islamic worlds put the orientalists in a difficult position, since this kind of relationship obstructed true insight rather than promoting it. Some did not realise the complex nature of their situation and, rather than trying to build bridges between peoples and cultures and correct misconceptions at home, they tended to legitimate and defend Western domination without question. Those orientalists who took up the defence of the people on the other side often justified this with a religious or ideological terminology which was hardly comprehensible to others. Most, however, working in the service of Western scholarly institutions to study Islam and Muslim societies, must have seen the course of events as irreversible and the people of the Orient as doomed to lose out to the West.

ii. Muslim critical responses

Soon after the establishment of the scholarly field of Islamic studies in Europe, scholars from Muslim countries too became interested in it. Many cooperated with Western scholars in studying and publishing manuscripts. They attended Western universities, took part in broader research projects, and could be appointed to teach and do research at Western scholarly institutions. While the immense amount of knowledge generated by the *mustas̲h̲riķūn* evoked the admiration of Muslims of all persuasions, it also aroused a certain unease because this knowledge was made available in the first place to people in the West. Moreover, was it the right knowledge? A whole literature circulating in Muslim countries alleges that it is not, and insinuates that orientalists have somehow intentionally or because of material interests distorted the reality of Islam and Muslim societies and cultures.

Since the culture and religion under study is theirs, the cooperation of researchers and scholars from Muslim countries has proved to be indispensable as well as self-evident. They have been able to contribute considerably to Islamic studies, in particular when working in Western countries. They have also been able to correct certain mistakes made by *mustas̲h̲riķūn* in their handling and interpreting of materials. In the case of precise data, they could initiate scholarly debates which are the essence of research proper.

Muslim criticisms have gone further than that, however, entering into debate concerning certain orientalists' general ideas, underlying attitudes towards Islam and the value judgements they have passed on it. Some have gone as far as to deny at least in part the scholarly validity of the work of all orientalists, using sweeping arguments which can neither be proved nor disproved and must be seen as part of a broader protest against Western domination. The *mustas̲h̲riķūn* themselves often seem to have been taken by surprise by what they have seen less as a lack of appreciation of hard work than as an attack on their profession and critical scholarship in general. The ensuing debate has led, however, to greater awareness of problems of a both human and technical nature familiar to cultural anthropologists, since they occur in the study of other cultures and religions in general.

Following E. Rudolph's interpretation, to which the present writer owes much (*Westliche Islamwissenschaft im Spiegel muslimischer Kritik. Grundzüge und aktuelle Merkmale einer innerislamischen Diskussion*, Berlin 1991), critical Arab Muslim responses to orientalism, particularly in Egypt (elsewhere the situation seems to be less turbulent), present the following historical development:

a. Debates between modernist reformers and Europeans writing on Islam (al-Afg̲h̲ānī against Renan, ʿAbduh against Hanotaux).

b. Critical reactions by Muslim reformists and Azhar scholars to non-Muslim secular scholarship in the West concerned with Islam (Ras̲h̲īd Riḍā against E. Dermenghem, the campaign against A.J. Wensinck's membership in the Royal Academy of the Arabic Language in Cairo). Parallel to this are the violent reactions, often by the same people, to "secular" research pursued by Muslim scholars, *e.g.*, at the University of Cairo (attacks on Ṭāhā Ḥusayn and M.Ḥ. Haykal).

c. Critical reactions to Western scholarship on the Ķurʾān and historical criticism of *ḥadīth* literature (Muṣṭafā al-Sibāʿī and Muḥammad al-G̲h̲azzālī attacking Goldziher's work), after the Second World War.

d. Accusations that orientalists in general, and certain of them in particular, are engaged in a broader attack on Islam and Muslim societies, in league with Colonialists, Christian Missionaries and Jewish and Gentile Zionists. Such attacks have been launched in the Arab world (*e.g.*, by ʿUmar Farrūk̲h̲, Muḥammad al-Bahāy, Anwar al-D̲j̲undī, Bint al-Shāṭiʾ, Mālik Bennabī). Orientalism is here seen as an ideological enemy of Islam, and from *ca.* 1960 on the debate about it has been of a clearly ideological nature.

e. More subtle criticism of *mustas̲h̲riķūn* through an intellectual analysis of the underlying notions of the Orient, Orientalism and Orientals current in the West, for which orientalists are alleged to be partly responsible or of which they are victims. One of the main proponents of the ensuing debate is Edward W. Said, an Arab but not a Muslim.

Feelings have been the highest when Muslim religious convictions have been hurt by secular Western scholarship. A brief analysis by R. Peters (*Abendländische Islamkunde aus morgenländischer Sicht*, 20. Deutscher Orientalistentag, Erlangen, October 1977) presents critical responses by Arab Muslims to Oriental studies of Islam, in defence of Islamic religion. According to these, the orientalists are divided into two groups. The first group consists of those orientalists who evaluate Islam correctly (*al-munṣifūn*), *i.e.*, they speak positively about Islam or praise it. They suffer, however, from insufficient knowledge and intellectual incapacity.

The second group consists of those who do not appreciate Islam correctly (*g̲h̲ayr al-munṣifīn*). It consists of four subgroups: Christian clerics (out to convert Muslims to Christianity), Zionists (seeking to weaken Islam in order to strengthen political and ideological Zionism), colonialists (*istiʿmāriyyūn*, in the service of colonial governments), and "free thinkers", Marxists and materialists (who aim to weaken the faith and morale of Muslims and mankind generally, in order to enslave them mentally and morally). This second group is held to constitute a coherent movement which tries to achieve through science what the Crusaders sought to do under the banner of religion: to dominate the Muslims.

Peters lists some typical themes which, according to this literature, *mustas̲h̲riķūn* explore in their efforts to defame Islam: the pretended lack of originality of

Islam, textual criticism of Ḳurʾān and historical criticism of *sunna* (*ḥadīth̲* literature), diversity in Islam, the position of non-Muslim minorities, concentration on periods of decline rather than growth in Islamic history, tendentious accounts of Islamic prescriptions like the *d̲j̲ihād*, etc.

While admitting that on closer analysis certain statements made by orientalists may indeed be seen as insulting to Muslim readers, Peters emphasises that the accusation that the majority of orientalists collaborated with the colonial governments is untrue: as philologists, they were far removed from contemporary politics. He then shows that one of the deeper reasons for the defamation of the orientalists and Oriental studies in general has been the onesidedness of these studies carried out by westerners—allegedly, a unilateral and unselfcritical operation performed by Western scholars on Eastern people who are patients in the original sense of the word ("sufferers"). This is also the deeper reason why Muslim critics identify orientalism with colonialism: both exclude an equal exchange between two parties and imply that the one party simply regards and treats the other as an "object". Perhaps because of their high expectations, Muslim critics feel strongly that *mustas̲h̲riḳūn* misunderstand them profoundly and, as they tend to see it, intentionally. If suspicion deepens into distrust, it may even produce a desire to repay Western culture and religion for what the West is supposed to have tried to do to Islamic culture and religion. As a possible solution, Peters suggests that Western researchers into Islam should be able and willing to collaborate with Muslim researchers.

The reproaches described here have been repeated at various times and on various levels. For instance, A.J. Wensinck's official appointment (1933) by King Fuʾād to the Royal Academy of the Arabic Language in Cairo had to be revoked in 1934 under pressure from Muslim activists in Cairo, since his article on *Ibrāhīm* in the *EI* (1st edition) spoke of the Ḳurʾān as relating the "legend" of Ibrāhīm, not his historical reality (see file by L. Massignon on this matter in the University Library of Leiden). Ideological attacks on *mustas̲h̲riḳūn* have been made precisely by people who do not know what scholarship is, and those who know better have not been able to express themselves often because of political and social pressures.

Muslim intellectuals who have studied in the West articulate their reproaches on another level. A recurrent one levelled at the *mustas̲h̲riḳūn* is their lack of the necessary scientific tools to acquire sufficient or true knowledge about Muslim societies and Islam, for instance, competence in the social sciences. The texts which they read do not allow them to draw the right conclusions about Muslim societies and cultures. A second reproach is that they display a cool objectivity, a lack of sympathy or a hidden antipathy even going so far as hatred towards Islam and Muslim societies. The orientalists allegedly exhibit a lack of modesty and a profound incapacity or unwillingness to understand correctly. A third reproach directed at them is their lack of concern with, let alone commitment to, any real improvement in the situation of the people or any authentic development of the societies they study. Summing up, what Muslim critics object to appears to be, above all, a certain inhumane and incommunicative attitude to be found in the West and among orientalists. While claiming to be true knowledge, in fact their scholarship is used by political and ideological agencies and serves to humiliate Muslims as human beings and denigrate their religion, which to them is the highest value.

The relative naivety of many orientalists about their paradoxical situation and their complex condition as bridge-makers between cultures becomes manifest precisely in their emotional reactions of disappointment and anger about such attacks. They feel that, despite their good intentions, and quite incomprehensibly, their scientific work is not understood, let alone appreciated. It is even intentionally misrepresented by the people they study and about whom they claim to present objective scientific knowledge.

Misunderstandings exist on both sides.

iii. Oriental studies as a risk: the meeting of cultures

From the way in which *mustas̲h̲riḳūn* have defined their work and tended to react to critical responses, it becomes clear that in general scholars in Oriental studies have not been prepared for the problems of cultural interaction they have encountered and in which they became involved. They have had little idea of what could happen when, in the name of Science, they started to publish things which offended values not in their own but in another living society and culture. They have had little idea or concern that they could offend people who had become sensitive to any attacks on what they felt to be their basic norms and values, indeed their identity, and who often saw such attacks everywhere.

From the responses described it also becomes clear that, within Muslim societies at the time, very few people have known or understood what Western scholars and in particular orientalists have been doing. They have understood still less what *mustas̲h̲riḳūn* can know scientifically and what are the limits of their science, where the realm of private opinions begins. Given a lack of ordinary everyday communication, much of the natural suspicion of foreigners who, for some mysterious aims and purposes, want to know a foreign society, has been projected on the orientalist in situations of political tension or conflict.

In the ensuing debate on "orientalism", the very perspective in which orientalists carry out their studies is at stake. Consequently, some kind of fundamental reflection is required and to this Edward W. Said's book *Orientalism*, because of its provocative *J'accuse!* tone, seems only to have opened the door halfway. There is no reason why the notion of the "Orient" should not be replaced by a less ambiguous notion, for instance "peoples and cultures of Asia and Africa". There is no reason either why the philological and historial approaches should not be seen within a broader multi-perspective framework in which, for instance, the social sciences and in particular cultural anthropology but also the study of religion have their part to play. Again, the study of living societies and their aspirations, as well as of the underlying norm and value systems, can gain immensely from the collaboration of scholars who themselves come from such societies and have grown up in the traditions concerned. Again, for the study of contemporary societies it is mandatory that researchers have free access to them, meet people and work together with researchers from the country concerned.

It is also questionable whether in the human and social sciences, including history and comparative religion, any research can claim to be satisfactory when it takes no account of the points of view and the values of the people under study. Any kind of social science research, for instance, which objectifies human beings to fit into a particular scholarly model remains limited within the parameters of the model applied. It cannot claim to offer much knowledge

about a society or culture beyond the limits of the particular model chosen or the experimental situation analysed.

As a consequence, the search for knowledge of Oriental as of all foreign societies and cultures requires insight in given limits and absence of any desire to dominate. The venture of intercultural studies requires that the researcher take the personal step of leaving his own world for a time, and reaching a world of other people, for which real communication is required. In the complex relations between people from different societies and cultures, the orientalists, like the anthropologists, at best belong to the few who, not essentially bound by loyalties to either party, in principle have the capacity to transcend the clash of societies and cultures, and for that matter religions, on a personal level. Failing in mediation is the risk of the profession, but it is something to be learned from.

iv. Muslim studies of other cultures and religions

Just as Western orientalists have shown an interest in Islamic civilisation and religion, Muslim scholars recently have developed an increasing interest in the common history of the Muslim world and the West, for instance, in the various forces which have shaped European history. After some travel accounts in the mediaeval period, European culture was "discovered" first by Ottoman Turks and Arabs and later in particular by students from Muslim countries studying in Europe. This interest has been pursued now by professional researchers. Already in the mediaeval period Muslim thinkers had shown a certain interest in other cultures and religions than Islam, and this interest may arise again (J. Waardenburg, *World religions as seen in the light of Islam*, in *Islam: past influence and present challenge*, ed. A.T. Welch and P. Cachia, Edinburgh 1979, 245-75).

4. Progress in Islamic studies since the Second World War

The advancement of Islamic studies since the Second World War can be indicated briefly on three levels: that of institutions and organisation, that of areas covered, and that of reorientations of a more fundamental nature.

i. Institutions and organisation

There is a trend, cautious in Europe and gradual in North America, for university appointments in Islamic languages and history, as well as in social science research on Muslim societies, to include an increasing number of researchers and scholars from Muslim countries themselves. If, at the beginning of the fifties, they were mainly language informants, at present qualified Muslim scholars may occupy posts at higher levels too. The increasing number of Muslim students in Islamic studies at Western universities means that possibilities of instruction and communication have multiplied not only in teaching but later also in research. Whatever the ideas on orientalists in Muslim countries, direct contact with them in the West has become possible on a scale and in ways unimaginable before the Second World War.

Besides the older Oriental research associations, new organisations have been founded specifically to promote the study of the Middle East and Islam, encouraging fresh approaches and new ways of questioning. Local organisations are increasingly coming under the umbrella of larger organisations which stimulate research and mutual collaboration, for instance the *Union européenne d'Arabisants et d'Islamisants* in Europe, and the *Middle East Studies Association* of North America. Besides larger meetings and congresses, workshops and colloquia of a new kind are organised on specialised subjects, with a restricted number of participants from different countries. A new type of research institute, specifically for Islamic Studies, with good libraries, has emerged, like the Institute of Islamic Studies at McGill University in Montreal. There are also several Centres dedicated to the study of Muslim-Christian relations: in Hartford, Ct., USA; in Birmingham, England; and the Pontifical Institute of Arabic and Islamic Studies in Rome.

There are, however, some worrying developments too. Current budget cuts in most Western countries threaten the standard of Islamic studies. There are several cases where financial assistance from Islamic foundations or Muslim countries has permitted chairs to survive. In the present unemployment situation it would be of great help if translation programmes like that of Ṭabarī's *History* could be set up, funded by Muslim foundations or oil-producing states, where younger academics could usefully be employed.

Great care has to be taken that Western academic institutions continue to guarantee freedom of research and publication in the field of Islamics as in other fields. In some notorious recent cases, for instance, pressure has been exerted by Muslim interest groups in connection with university appointments and publications concerning Islam. In other cases, excessively pedantic programming or the organisation of the study of Islam along rigid ideological lines have thwarted research and the emergence of fresh ideas. Academic Islamic studies ought not to serve particular interests but develop as an autonomous field of teaching and research.

Recent history has increased interest in the Middle East, Islamic movements in the region and Islam in general. The immigration of millions of Muslim workers to Western Europe has stimulated more detailed research about Muslim ways of life in general and in the West in particular.

ii. Some areas of research

By contrast with the period before the Second World War, the need for specialisation among Islamicists and scholars in Oriental studies generally has become imperative. If in former times at least some scholars could still realise something of the ideal of the universal man, at present all *mustashriḳūn* have become specialists. Among them a distinction has developed between those who carry out research on the so-called "hard", infrastructural sectors of Muslim societies (in particular social scientists) and those who study the so-called "softer" sectors of language and literature, art and history, culture and religion (in particular humanistic scholars). A distinction has also emerged between those specialists who work on specific Muslim societies, regions and periods, and those who work on particular cultural expressions like art or religion which are common to all Muslim regions. We indicate now, by way of example, some areas of research which have gained prominence since the Second World War.

First of all, precious bibliographical surveys of Islamic history have been published (Cl. Cahen, J.D. Pearson, J. Sauvaget) and manuscript resources brought together (F. Sezgin). Solid historical research has been going on according to the lines laid down since the rise of Islamic studies (H.A.R. Gibb, G.E. von Grunebaum, H. Laoust, B. Lewis). Within the realm of historical studies, social and economic history have enjoyed rapid development (Cl. Cahen, M. Rodinson) and have also thrown new light on the beginnings of Islam and the history of Islamic thought (W. Montgomery Watt). The volume *Islamologie* (ed.

F.M. Pareja) represents the field and the state of Islamic studies as conceived in the 1950s.

Second, critical philological and literary analysis applied to the Ḳurʾān has led to new questions about its early history and composition (A. Neuwirth, J. Wansborough). Similarly, critical *ḥadīth* research has provided further insight into the history, nature and function of this kind of literature (G.H.A. Juynboll) as well as its meaning and that of the Ḳurʾān as "Divine Word" (W.A. Graham). New questions have been put concerning the early history of Islam (M. Cook, P. Crone). Equally, early Islamic thought has been analysed and certain basic positions identified (J. van Ess). Careful research on the semantics of religious terminology has proved rewarding for our understanding of the Ḳurʾān and other religious texts (T. Izutsu). Semiotic research has opened up basic structures in Islamic discourse and writing (M. Arkoun).

More attention has been given to the notion of the Muslim community (*umma*) both in its ideal forms (L. Gardet) and in social reality (W. Montgomery Watt). This has led to further research both on the legal and social status of women within Muslim societies in the past and at present (G. Ascha, L. Beck-N. Keddie and many others), and on the legal and social status of non-Muslim minorities (A. Fattal, S.D. Goitein, A. Hourani, B. Lewis), and the functioning of religious institutions, in particular religious authorities (*ʿulamāʾ*, Ṣūfī *shaykhs*) (N. Keddie) and religious education (G. Makdisi).

Extensive research has been carried out on Islam outside the heartlands of Islam, e.g., in the Indo-Pakistan subcontinent (A. Ahmad, A. Schimmel, W.C. Smith) and Africa (J. Cuoq, J. Spencer Trimingham).

A field which hardly existed before the Second World War, for various reasons, and which has expanded tremendously, is that of contemporary developments in Islam. General surveys have become rare (H.A.R. Gibb, W.C. Smith, W. Ende-U. Steinbach); specialisation has become the rule here too. Attention has continued to be paid to popular Islam (L.R. and H. Kriss) as well as sectarian forms of communal Islam (Klaus E. Müller), devotional practices (C. Padwick) and mysticism (A. Schimmel). Islamic aspects of recent social history (J. Berque) and of political developments (O. Carré, J. Piscatori and many others) in the Arab world and elsewhere have attracted ever more interest. This is also true for the developments of *ṭuruḳ* in modern times (M. Gilsenan, F. de Jong) and of reform and modernisation movements (A. Hussain, M.H. Kerr and others) as well as the Muslim Brotherhood (R.P. Mitchell).

Due to recent developments in Iran and elsewhere, Shīʿī Islam has become an area of renewed interest (first of all H. Corbin, later S.H. Nasr for its gnostic aspects; H. Enayat, K.H. Göbel and others for political thought), as has the more recent history of Iran (N. Keddie, A.K.S. Lambton).

The most noteworthy and innovating contribution to our knowledge of present-day living Islam, however, has probably been made by anthropologists specialised in particular Muslim regions (C. Geertz, E. Gellner, M. Gilsenan and others) or surveying the various Muslim peoples (R.V. Weekes).

An area of research which is developing is that of the study of different religions existing side by side in the same region, for instance the Middle East (A.J. Arberry) and the Indian Subcontinent (W.C. Smith). Questions have been raised about the relationships and interaction between Muslim and other religious communities in history (W.C. Smith) and the development of knowledge in the Muslim world about other religions and the formation of images about them (G. Monnot, J. Waardenburg). The relationships between the Muslim world and Europe have been the subject of historical and comparative studies (M. Canard, G.E. von Grunebaum, A. Hourani, B. Lewis).

The study of Muslim minorities outside the Muslim countries has become a new area of research, especially since the migration of Muslim workers to Europe and the establishment of mainly Turkish and North African communities there (F. Dassetto, T. Gerholm-Yngve G. Lithman, G. Kepel, J.S. Nielsen, H. Safar and others).

iii. New orientations

The question should be raised, to what extent the general scholarly view of Islam has changed in the last decades, not only in the expansion of its subject areas and themes of research but also in the way in which Islam and Muslim societies and cultures as a whole are approached? Or more precisely, has our view of Islam changed intrinsically since the classical times of Goldziher and Snouck Hurgronje, say since the First World War? The answer must be affirmative.

In the first place, breakthroughs have been achieved thanks to the innovations of some prominent scholars: L. Massignon revealing the presence of largely unknown spiritual forces in Islam; G.E. von Grunebaum stressing fundamental analogies between mediaeval cultural expressions in the Muslim, Byzantine and Latin worlds; W.C. Smith affirming first the role of class and the national independence struggle in Muslim presentations of Islam and then Islam's specific kind of faith and its taking shape in various ways; C. Geertz and others calling attention to basic patterns and variations of meaning within Muslim societies; M.G.S. Hodgson writing a new kind of overall history of "the venture of Islam" within world history; and M. Rodinson urging a reconsideration of aims and tools of research in Islamic studies and, on the basis of infrastructural factors, throwing new light on Islamic ideologies developed in history and at the present time.

In the second place, the rise of independent Muslim nation states has brought about an important change in perspective. If older generations of Islamicists customarily regarded contemporary Islam as void of political expression and Muslim societies as developing according to the needs and directives of the West, researchers who started their work after the Second World War, in the fifties, sixties and seventies, have inevitably developed very different views of today's Muslim world, stressing its own internal dynamics.

In the third place, Muslims themselves have asserted their Islamic identity during the last decades in ways that were hardly imagined in the fifties. Such self-assertation in words and deeds, including intense political action, can no longer be interpreted simply as a rebellion against Western law and order. It has its own impetus and since the mid-sixties and still more the late seventies it has had unforeseen effects both political and religious, resisting various current forms of domination. Muslim Islamicists (Fazlur Rahman, Muhammad Arkoun) working in Western universities have given their own interpretations of such developments, M. Arkoun pleading for an applied islamology. Once-aloof Western scholars, too, have become alert to new responsibilities, scholarly and social.

All of this has led to a certain shift in perspective on Islam and the Muslim world at large, with its natural

implications for the development of scholarly research. We may summarise this change of perspective by trying to identify roughly three successive phases since the Second World War which have each implied a new orientation towards Islam.

a. The first phase is that immediately following the colonial period. Scholars in the forties and fifties tended to be very aware of the effects of Western culture in the broadest sense on Muslim societies, which had just been liberated from Western political dominance. The focus of attention was on processes of modernisation, sometimes simply put on a par with "westernisation". Islam was seen as an ancient tradition which seemed to be losing ground under the policies of the rather secular-minded national leaders after independence. Perhaps Von Grunebaum's interpretation of modern Islam as a search for cultural identity (1962) can be seen as representative of this orientation which, in any case, took a positive attitude towards the future of the Muslim world whose own historical and cultural identity it recognised. It thus distinguished itself from the more pessimistic views of scholars of the colonial period such as Snouck Hurgronje, who saw a future only in assimilation to the West.

b. The second phase started when scholars observed that profound and radical economic and social changes were taking place in Muslim countries, often after internal revolutions. Researchers on contemporary Muslim societies became attentive to the use of Islam as a social ideology justifying necessary or desired social changes. Islam, instead of being a hangover from the past, was being used to effect by influential leaders like Gamāl ᶜAbd al-Nāṣir. The adjective "Islamic", far from suggesting something antiquated, was serving to connect present-day solutions with hallowed, age-old religious tradition. Scholars came to realise that processes and events in Muslim countries should be studied not only in terms of Western theories but also within their own cultural framework, in which they became more meaningful. The social functions of Islamic ideas and practices, the social basis of changing interpretations of Islam, the social causes for changes in religious institutions, or institutions legitimated by religion, all became subjects of research. Scholars became aware that elements of Islam could convey political, social and religious meanings simultaneously, and that particular ideologisations of Islam, or chosen Islamic ideas and practices, could appeal explicitly to specific groups in particular circumstances. In short, there was a discovery of Islam as a social ideology, and social scientists started to cooperate in building on this discovery in research on Islam.

c. With the self-affirmation of Islam not only as a social but as a religious ideology, a new phase started. This may be dated broadly speaking from the late sixties in the Middle East and it then spread throughout the Muslim world as a whole. As a result, scholarly attention has come to be directed more towards Islam as a religion and faith which is appealed to in different ways according to country and group. While recognised as a religion providing its own absolute norms and values, Islam is then seen not only as an instrument of political action but also as an instance of appeal against various kinds of injustice, economic deprivation and political oppression. In this phase, the contribution of the study of religion is needed to lay bare the religious aspects, amongst others, of present-day appeals to Islam.

To ensure that scholarly standards are maintained and intellectual rigour is preserved when religion is the object of inquiry, the following remarks are in order.

First of all, Islam is not an empirical piece of data in the same way as a text, a practice or even an ideal which is subjected to the scrutiny of scholarly enquiry. The way in which Islam, in research, is conceptualised, what is held to be the reality of Islam, and whether the scholarly concept of religion (and of Islam) used is simply descriptive or also normative, largely depends on the theoretical framework within which a particular scholar is working. The variability of frameworks and point of departure explains the fact of continous discussions taking place amongst orientalists, between Muslims and orientalists, and among Muslims themselves about what is to be understood by Islam.

Second, when we address our research to the interpretations which Muslims themselves have given of Islam as a religion, some hermeneutical warnings are in order. Scholars as well as believers have often tended to reify Islam, forgetting that we have to do not with an "Islam" in itself but alway with an interpreted Islam and that, throughout history, the Muslim community has kept this interpretative process going. Accordingly, special attention should be paid to what Muslim authors, speakers, groups and movements actually mean when they express themselves in particular situations in terms Islamic or with an appeal to Islam. In such research we should free ourselves as much as possible from current interpretations, applications or explanations or Islam, both Western and Muslim.

What can the study of religion contribute to a better grasp of the religious aspects of Islam and Muslim societies and cultures? Islam as a religion, in the strict sense of the word, can probably best be called a network of signs; when such signs are internalised, they become symbols. The Ķurʾān itself hints at such an interpretation, for Islam, according to it, is supposed to constitute the right human response to the *āyāt* that mankind has been provided with, notably in the Ķurʾān, in nature, and in history. These *āyāt* are considered to be nexus points of divine revelation and human reflection, and Muslims are enjoined to draw the right conclusions from them and to act accordingly. But even apart from this, a scholar of Islam as a religion will study its elements (Ķurʾān verses, *aḥādīth*, ritual prescriptions, living traditions, etc.) as signs and symbols. His enquiry will concern the various ways in which particular Muslim persons and groups in specific situations have interpreted these elements of Islam and the ways in which they have acted.

Insofar as this scholarly approach runs parallel to a notion of religion present in the Ķurʾān, it avoids stamping Islamic data with inadequate Western-coined concepts, while remaining scientific. A study of Islam as a network and reservoir of signs and symbols, constantly interpreted and applied by individual members and groups of the community, reveals certain texts and practices as permanent vehicles of meaning; these permit communication between Muslims despite varying circumstances of place and time. By approaching Islam as a communicative, religious sign and symbol system, we avoid the one extreme of searching for an eternal essence of Islam and reifying it as well as the other extreme of denying any spiritual reality to Islam as measured against the material world. The focus of attention from the point of view of the study of religions should be the interpretations and usages which Muslims have made and make of "their" Islam and its elements. This is fruit-

ful to understand, for instance, what particular Muslims mean when they speak of applying the *sharīʿa*, establishing an Islamic state, or going back to the sources of Islam.

5. Needs and suggestions

The community of the *mustashriḳūn* has become ever more varied and, from the inside, this diversity is just the opposite of what their opponents ascribe to them. They are anything but an ideological bloc, and their present discourse is anything but spellbound by a magic Orient. Present-day conflicts and tensions in and around Muslim countries, particularly in the Middle East, make it nearly impossible for serious, hard working scholarship to float away on the clouds of the Orient or anywhere else.

The subject-matter of Islamic studies has become much less clearly identifiable among *mustashriḳūn* now than in former times, when orientalists were less specialised and Muslims ideologised Islam less. For a long time, a more or less stable image of Islam existed in scholarly research, as a historical reality and a set of doctrines and practices (J. Waardenburg, *L'Islam dans le miroir de l'Occident*, 1970³). This image has been broken by the course of history and the progress of specialised scholarly research. At the same time, new religious, ideological, political and other "readings" of Islam have arisen, of very different kinds, so that one may speak also of a growing plurality of interpretations of Islam among Muslims.

One of the most pressing problems on a more theoretical level is the way in which any particular (Muslim) interpretation and application of (elements of) Islam is related to the particular historical and social context in which it occurs. How should the study of specific Muslim societies in the past and at present be linked to the study of the specific ways in which Islam has been interpreted and applied in those societies? And the other way round, how should the study of interpretations of Islam be related to the study of Muslim societies?

A solution to this problem, at least on a theoretical level, seems to be within reach. For one thing, a certain fixed "reifying" or essentialist view of Islam is being replaced by a view of Islam as a subject of an ongoing process of interpretation. Second, a certain rigid "model" view of Muslim societies is being replaced by a view which allows for a much more precise and differentiated observation of them, their social history and their corresponding articulations of Islam.

Another need in Islamic studies and Oriental studies generally is for scholars to acquaint themselves more than before with certain new developments in the human sciences, including the science of religion, which take place across the borders between the disciplines. Too exclusive a devotion to philology, history or anthropology leaves little time for enquiry about what happens in other disciplines and what can be learnt from them. It also increases the risk of Oriental studies being cultivated as in a ghetto apart from and somehow backward compared to other fields of scholarship.

Again, the field of Islamic studies as well as the study of non-Western societies and cultures in general would also greatly benefit if research problems were to be formulated on a somewhat higher level of abstraction than is done in the day-to-day "technical" work. More reflection on problems of method and theory of research would certainly facilitate cooperation between Islamic studies and other fields of scholarship, including science of religion.

Finally, it may be suggested that, now that the classical image of Islam as a more or less closed entity of religion and culture has been broken, efforts be made to place Islamic history, societies and religious expressions within the broader history of mankind, the manifold human societies, and the large number of man's religious expressions. Special attention can be paid to historical interactions, and to similarities and differences by means of comparative research. In order to understand contemporary developments in Muslim societies, it will be useful to place them within the broader context of contemporary developments of Asian and African societies generally.

Bibliography: History of Islamic studies in general: V. Chauvin, *Bibliographie des ouvrages arabes ou relatifs aux Arabes publiés dans l'Europe chrétienne de 1810 à 1885*, Liège-Leipzig 1892 ff.; G. Dugat, *Histoire des Orientalistes de l'Europe du XIIe au XIXe siècle*, Paris 1868-70; J. Fück, *Die arabischen Studien in Europa bis in den Anfang des 20. Jahrhunderts*, Leipzig 1956; F. (J.D.J. Waardenburg)

al-MUSTAʿṢIM BI 'LLĀH, Abū Aḥmad ʿAbd Allāh b. al-Mustanṣir, the last ʿAbbāsid caliph of Baghdād (640-56/1247-58), born in 609/1212-13.

After the death of his father in Djumādā I or II 640/November-December 1242, he was raised to the caliphal throne, but he had neither the talent nor the strength to avert the catastrophe threatening from the Mongols; he allowed himself to be guided by bad counsellors who were not agreed among themselves but working against one another. In 683/1255-6, the Mongol Khān Hūlāgū [*q.v.*] demanded that the Muslim rulers should make war on the Ismāʿīlīs of Alamūt. The caliph did not trouble about this, and in Rabīʿ I 655/March-April 1257 a Mongol embassy came to Baghdād and demanded that al-Mustaʿṣim should either raze the defences of the city and appear in person before Hūlāgū for further negotiations or send a deputy. As the caliph refused to meet these demands, Hūlāgū threatened him with war. After another message, in which al-Mustaʿṣim tried to intimidate Hūlāgū, the latter set out against the ancient city of the caliphs. On the way, he met another embassy, offering him an annual tribute, but this effort to appease the cruel foe was useless and by Muḥarram 656/January 1258, the Mongols were at the gates of Baghdād. Preparations for the siege advanced rapidly and after all attempts to resume negotiations had failed against the relentless Hūlāgū, al-Mustaʿṣim had to surrender on 4 Ṣafar/10 February and the city was sacked. Ten days later, Hūlāgū had the caliph, with some of his relations put to death [see baghdād], thus ending the line of ʿAbbāsids in Baghdād.

MUSTAWFĪ (a.), an official in mediaeval Islamic administration who was in charge of official accounts and thus acted as an accountant-general.

The title first becomes generally used in the successor-states to the ʿAbbāsid caliphate. Under the Ghaznavids, the *mustawfī al-mamālik* was responsible to the vizier, and kept accounts of income and expenditure in the *dīwān-i wazīr* (M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 132). Under the Great Saldjūḳs, e.g., in the time of Niẓām al-Mulk [*q.v.*], the *mustawfī* was second in importance only to the vizier himself (al-Bundārī,

Zubdat al-nuṣra, ed. Houtsma, 100), and his office seems to have corresponded to the ʿAbbāsid *dīwān al-zimām* or *dīwān al-azimma* "office of financial control" [see DĪWĀN. i], although the term *dīwān al-zimām* is also found under the Saldjūḳs, apparently for the *dīwān al-istīfāʾ*. Although we have no direct information on the workings of this office in Saldjūḳ times, A.K.S. Lambton surmises that it was divided into sub-departments, such as the *dīwān-i muʿāmala wa ḳismat*, concerned *inter alia* with a tax-farming contracts, and that there was a network of provincial *mustawfīs* or *ʿāmils* who allocated locally the taxation required by the centre and disbursed from the money thus collected local pensions, salaries, etc. (see H. Horst, *Die Staatsverwaltung der Großselğūqen und Ḫōrazmšāhs (1038-1231)*, Wiesbaden 1964, 51-2 and *passim*; Lambton, in *Camb. hist of Iran*, v, 257-8). The *mustawfī* in the central administration had certainly to be a man of great administrative and financial competence, and he often wielded extensive influence in the state; thus under Sultan Berk-yaruḳ, Madjd al-Mulk al-Ḳummī al-Balāsānī [*q.v.*] (d. 492/1099) was the real power behind the incompetent vizier Fakhr al-Mulk b. Niẓām al-Mulk. On several occasions in Saldjūḳ history, the office was a stepping-stone to the vizierate itself: thus Saʿd al-Mulk Abu 'l-Maḥāsin was first *mustawfī* and then in 496/1103 vizier to Muḥammad b. Malik-Shāh, and Kamāl al-Mulk al-Simīrumī was *mustawfī* at the end of Muḥammad's reign and then in 512/1118 vizier to Maḥmūd b. Muḥammad (C.L. Klausner, *The Seljuk vizierate. A study of civil administration 1055-1194*, Cambridge, Mass. 1973, 16, 21, 39 and *passim*).

Under the Mongols, the title was given to the superintendents of provincial finances (*e.g.*, Ḥamd Allāh Mustawfī [*q.v.*] and his great-grandfather; cf. E.G. Browne, *Lit. hist. of Persia*, iii, 87), and under the Tīmūrids, Ṣafawids and Ḳādjārs, the *mustawfī 'l-mamālik* filled the office of a secretary of state in charge of the public treasury accounts, while the ordinary *mustawfī* was one of the lesser officers of the court (R. du Mans, *Estat de la Perse en 1660*, ed. Schefer, Paris 1890, 26, 178-9; A. Olearius, *Voyages and Travels*, London 1669, 274; Sir J. Malcolm, *History of Persia*, London 1815, ii, 437; R.G. Watson, *History of Persia*, London 1866, 16-17; *Tadhkirat al-mulūk*, tr. Minorsky, 54, 122-5, 141). There was also in the Ṣafawid period a *mustawfī-yi khāṣṣa* who was in charge of accounting for the crown estates (*ibid.*, 123-4; R.M. Savory and B. Fragner, in *Camb. hist. of Iran*, vi, 354, 554). *Mustawfī 'l-mamālik* might, however, under the latest Ḳādjars, be a title personal to a particular individual, who might be the Minister of the Interior (as in 1890) or even Prime Minister (as in 1910).

In Egypt, under the Fāṭimids and Mamlūks, the *mustawfī* might be the head of a *dīwān* (as of the *dīwān al-djaysh*) or hold a less exalted, but still important, position as financial controller in such matters as the *iḳṭāʿāt* or military fiefs (cf. al-Maḳrīzī, *Khiṭaṭ*, Būlāḳ 1270, ii, 193, middle and 227, under *naẓr al-djaysh*). The ordinary *mustawfī* was a minor official of the status of a clerk employed under a *shādd*, or overseer, in land-surveys or crop-estimation or else in a government office such as the depot of the government office such as the depot of the government grain monopoly (*op. cit.*, ed. Wiet, ii, ch. 32, 23-5).

Bibliography: In addition to works cited in the article, see E. Quatremère, *Hist. des Sultans mamlouks de Makrizi*, i/1, 202-3; Mīrzā Muḥammad Ḳazwīnī, *Muḳaddima* to Djuwaynī, *Taʾrīkh-i Djahān-gushā*, GMS, XVI, London 1912.

(R. LEVY-[C.E. BOSWORTH])

MUSTAWFĪ [see ḤAMD ALLĀH MUSTAWFĪ].

MUSTAZĀD (A.) a classical verse form employed in Persian and kindred literatures, principally Turkish and Urdu. Its literal meaning is "additional", and the term has sometimes been translated in English as "increment poem" (cf. E.G. Browne, *A literary history of Persia*, ii, 41). In its most common form, it is a poem based upon the pattern of the *ghazal* or the *rubāʿī*, in which each hemistich is followed by a short metrical line. This short line is metrically related to the principal hemistich, and usually comprises the first and last feet to the metre employed in the latter. The metres frequently used in the *ghazal*-based *mustazāds* include the *hazadj-i muthamman-i akhrab-i makfūf-i maḥdhūf* (––⏑/⏑––⏑/⏑––⏑/⏑––), the *ramal-i muthamman-i maḥdhūf*, (–⏑––/–⏑––/–⏑––/–⏑–), and the *ramal-i muthamman-i makhbūn-i maḥdhūf* (–⏑––/⏑⏑––/⏑⏑––/⏑⏑–). The *rubāʿī*-based *mustazāds* employ one or the other special metres prescribed for the *rubāʿī*.

The different varieties of *mustazāds* may be distinguished not only by their basic *ghazal* or *rubāʿī* forms, but also by their rhyme scheme. In the majority of cases, the rhyming in the *mustazād* is of two kinds. The first category consists of poems in which the rhyme in the short line corresponds with that of the main hemistich; while the other category is comprised of examples wherein the short line has a rhyme of its own independent from the rhyme in the main hemistich.

The *mustazād* has remained a sparsely-used form, presumably because of its unorthodox character. One of the underlying principles of Arabic-Persian prosody is that all the lines in a given poem should be in one metre and conform to the same metrical length. Accordingly, the *mustazād*, with its mingling of long and short lines, does not fit into the general pattern, and could not but remain an exception in a poetical tradition constricted by rigid conventions.

Perhaps the earliest known *mustazād* in Persian (incidentally a deviation from the metrical rule described in the beginning) is one which was written by Masʿūd-i Saʿd-i Salmān (d. 515/1121) (cf. *Dīwān-i Masʿūd-i Saʿd-i Salmān*, ed. Rashīd Yāsimī, Tehran 1318 *sh*. 1939, 561). Sporadic examples of the *mustazād* are found in the works of several early poets such as Djalāl al-Dīn Rūmī (604-72/1207-73), Amīr Khusraw (651-725/1253-1325), Khwādjū of Kirmān (d. *ca.* 762/1361), and Ibn Ḥusām Harawī (d. 757/1355-7). At a later date, the poet Abu 'l-Ḥasan Yaghmā Djandaḳī (1782-1859) composed a number of *mustazāds* as mourning songs (*nawḥas*) for ceremonies connected with the martyrdom of Ḥusayn. Some of these show a departure from the accustomed trend in the sense that each principal hemistich is followed by two short lines of varying metrical length. During the early period of modern Persian poetry, the *mustazād* was employed by Bahār (d. 1951), Ashraf of Gīlān (d. 1934), Lāhūtī (d. 1957) and ʿIshḳī (d. 1924) for some of their political poems, both serious and satirical.

(MUNIBUR RAHMAN)

AL-**MUSTAẒHIR BI'LLĀH**, ABU 'L-ʿABBĀS AḤMAD, ʿAbbāsid caliph, was born in S̲h̲awwāl 470/April-May 1078. He came to the throne on 18 Muḥarram 487/7 February 1094, three days after the death of his father al-Muḳtadī [*q.v.*]. Al-Mustaẓhir's accession ceremony was attended by such famous figures as al-G̲h̲azālī and Ibn ʿAḳīl [*q.vv.*] (Ibn al-D̲j̲awzī, ix, 82; Ibn al-At̲h̲īr, x, 157).

His reign proved turbulent. By the time of his accession, the stability of the Sald̲j̲ūḳ state had been seriously undermined by the successive deaths of Niẓām al-Mulk and Maliks̲h̲āh, whilst the Nizārī schism had further weakened the Fāṭimid caliphate and unleashed the Assassins' campaigns within Sald̲j̲ūḳ territory. The first years of al-Mustaẓhir's rule were dominated by the rivalry between Barkyārūḳ and Tutus̲h̲ [*q.vv.*] and later by the protracted power struggle between Barkyārūḳ and his half-brother Muḥammad Tapar [*q.v.*]. The caliph was never able to turn these debilitating disputes to his own advantage, since all three Sald̲j̲ūḳ pretenders still saw the need to obtain caliphal ratification for their activities whilst allowing the caliph no scope for political autonomy. On one occasion only was there a hint of military aggression on the part of the caliph. When news of Barkyārūḳ's high-handed treatment of al-Mustaẓhir's representative in Wāsiṭ came to Bag̲h̲dād in 495/1101-2, the caliph announced his desire to fight alongside Muḥammad Tapar against Barkyārūḳ. This suggestion was rejected very firmly by Muḥammad (Ibn al-At̲h̲īr, x, 225). Despite the unstable political situation, al-Mustaẓhir managed, however, to emerge intact from the many, often threatening visits to Bag̲h̲dād made by the different pretenders to the western Sald̲j̲ūḳ sultanate and to co-exist uneasily with the various high-handed *s̲h̲iḥna*s sent (often concurrently) by the three Sald̲j̲ūḳ princes to police the caliphal capital during their absences. Described in the sources as malleable, al-Mustaẓhir tried at times to play the rôle of peacemaker and to humour the claimants to the Sald̲j̲ūḳ throne.

Initially, he juggled adroitly with the numerous requests by the Sald̲j̲ūḳ princes to be mentioned in the *k̲h̲uṭba* at Bag̲h̲dād but he also knew how to curry favour with the eventual victor, Muḥammad Tapar (Ibn al-At̲h̲īr, x, 210). In 495/1101-2 the Sald̲j̲ūḳ brothers Muḥammad and Sand̲j̲ar [*q.v.*], unhappy with Barkyārūḳ's rule (al-Ḥusaynī, 77), were received in solemn ceremony by al-Mustaẓhir clad in full caliphal regalia. Al-Mustaẓhir honoured both Muḥammad and Sand̲j̲ar with the gifts customary to the rank of *sulṭān* and he then had the *k̲h̲uṭba* pronounced in Muḥammad's name (*ibid.*; Bundārī (*sub anno* 496), 261; Ibn al-D̲j̲awzī, ix, 130; Ibn K̲h̲allikān, quoting the lost Sald̲j̲ūḳ history of al-Hamad̲h̲ānī, tr. de Slane, iii, 233).

The struggle between Muḥammad and Barkyārūḳ continued, however (in 496/1102-3 the caliph seems to have been temporarily unsure as to which candidate to support and omitted any reference whatsoever to the sultan in the *k̲h̲uṭba* (Ibn al-At̲h̲īr, x, 245; Ibn al-D̲j̲awzī, ix, 132)). Stability was finally secured with the death of Barkyārūḳ in 498/1105.

The disturbed period of al-Mustaẓhir's caliphate favoured intensified activity from the Assassins, although Muḥammad Tapar, once firmly established in power after 498/1105, made determined efforts to quell them. At the very beginning of al-Mustaẓhir's reign, al-G̲h̲azālī, on the evidence of the *Munḳid̲h̲* (44), had been commissioned by the caliph himself to write the work usually known as the *Kitāb al-Mustaẓhirī*, in which he set out to prove the legitimacy of the ʿAbbāsid caliphate and to refute the claims of the Ismāʿīlī imāmate (this is confirmed by Ibn al-D̲j̲awzī, ix, 170). Underlying al-G̲h̲azālī's arguments, however, was a veiled plea to the sixteen year-old caliph to reach a *modus vivendi* with the military might of the Sald̲j̲ūḳ Turks and to avoid the tensions which had been stirred up between caliph and sultan, al-Muḳtadī and Maliks̲h̲āh, during the latter's last visit to Bag̲h̲dād in 485/1092. Al-G̲h̲azālī's warning was generally heeded by al-Mustaẓhir. When fear of Assassin activity was at its height, he did, however, intervene with sultan Muḥammad on one occasion in 504/1110-11 and persuaded him not to execute the S̲h̲āfiʿī *faḳīh* al-Kiyā al-Harrāsī [*q.v.*] a former pupil of al-D̲j̲uwaynī [*q.v.*], who had been accused of Ismāʿīlī sympathies (Ibn al-At̲h̲īr, x, 221; Ibn al-D̲j̲awzī, ix, 129-30).

The role and importance of al-Mustaẓhir's officials remain imprecise, although a number of names are mentioned in the sources. The office of caliph's *wazīr* was still dominated by the Banū D̲j̲ahīr [*q.v.*]. At the beginning of his reign, al-Mustaẓhir reappointed ʿAmīd al-Dawla Ibn D̲j̲ahīr, who had served the two preceding caliphs in the post (Ibn al-D̲j̲awzī, ix, 82). He was, however, arrested in Ramaḍān 493/July-August 1100 (probably at the instigation of Barkyārūḳ, whose coffers were enriched through mulcting Ibn D̲j̲ahīr) and he died in prison in the caliphal palace the following month (Ibn al-D̲j̲awzī, ix, 118; Ibn al-At̲h̲īr, x, 203). A prominent figure in the early years of al-Mustaẓhir's reign was the Mazyadid ruler of al-Ḥilla, Ṣadaḳa, "the king of the Arabs" (d. 501/1107-8 [*q.v.*]), who sought to gain ascendancy over the caliph. Ṣadaḳa was involved in 500/1106-7 in the dismissal of his *wazīr*, Zaʿīm al-Ruʾasāʾ Ibn D̲j̲ahīr, who had been appointed in 496/1102-3 to the same office as his brother (Ibn al-Ṭiḳṭaḳā, 517; Ibn al-D̲j̲awzī, ix, 149; Ibn al-At̲h̲īr, x, 251). Proof of Ṣadaḳa's status vis-à-vis the caliph is furnished by Ibn K̲h̲allikān's account of his standing on the right of the throne at the official reception for Muḥammad and Sand̲j̲ar in 495/1101-2 (*loc. cit.*). After the dismissal of Zaʿīm al-Ruʾasāʾ Ibn D̲j̲ahīr, the caliph was moved to raze his house to the ground—it had allegedly been built with the "ill-gotten gains" of his father (Ibn al-D̲j̲awzī, ix, 149; Ibn al-At̲h̲īr, x, 305). Nevertheless, Ibn D̲j̲ahīr was reappointed as the caliph's *wazīr* in 502/1108-9 and remained in office until his death in 507/1113-14 (Ibn al-At̲h̲īr, x, 329, 349; Ibn al-D̲j̲awzī, ix, 182). The sources say very little about al-Mustaẓhir in the latter part of his reign, a clear indication that sultan Muḥammad had achieved firm political control over him.

The advent of the Crusaders impinged very little on al-Mustaẓhir's activities. As early as 491/1097-8, the caliph had written to Barkyārūḳ urging him to go to war against the Crusaders before their power increased. This request was not followed up (Ibn al-At̲h̲īr, x, 191; Ibn al-D̲j̲awzī, ix, 105). Between 500/1106-7 and 505/1111-12 Syrian fugitives and dispossessed rulers visited Bag̲h̲dād seeking help against the Crusaders, but this was barely forthcoming. Indeed, when on one occasion the arrival of certain Aleppan notables in Bag̲h̲dād coincided with the festivities for the caliph's marriage to the sister of sultan Muḥammad, ʿIṣma K̲h̲ātūn, in 504/1110-11, al-Mustaẓhir was clearly irritated and asked them to leave (Ibn al-Ḳalānisī, 173). A year later, however, after a further Syrian delegation to Bag̲h̲dād, Mawdūd was finally sent out against the Crusaders (Ibn al-At̲h̲īr, x, 340).

Al-Mustaẓhir is praised in the sources in conventional panegyrical terms. He is described as a poet and fine calligrapher. He also sponsored new building programmes. In Rabīʿ II 488/April-May 1095 he began building the wall of the *ḥarīm* which comprised a large part of eastern Baghdād (Ibn al-Athīr, x, 172; Ibn al-Djawzī, ix, 85). Later, between 503/1109 and 507/1113, he built a new palace known as the *Dār al-Rayḥāniyyīn* (for a detailed description, cf. Le Strange, 272-3). Al-Mustaẓhir died of a throat tumour 4 months after sultan Muḥammad on 16 Rabīʿ II 512/6 August 1118 aged 41. His body was washed by Ibn ʿAḳīl and prayers were recited over him by his son and *walī ʿahd*, the future caliph al-Mustarshid [*q.v.*]. Al-Mustaẓhir was buried initially in the caliphal palace. Later, his body was moved to the Ruṣāfa cemetery alongside his caliphal predecessors. Ibn al-Athīr wryly observes that as with the deaths of Alp Arslan and Malikshāh, which were quickly followed by those of the caliphs al-Ḳā'im and al-Muḳtadī, the caliph al-Mustaẓhir died very shortly after sultan Muḥammad (x, 375).

(CAROLE HILLENBRAND)

MÜSTETHNA EYĀLETLER (T.), literally, "excepted, separated", denoting those provinces of the Ottoman empire separated from the "normally-administered" ones of the Anatolian and Rumelian heartland. In the heyday of the empire (10th-12th/16th-18th centuries) these usually comprised such provinces as Ṣaydā, Aleppo, Baghdād, Baṣra, Mawṣil, Ṭarābulus al-Gharb, Benghazi, Ḥidjāz and Yemen, i.e., essentially those of the more recently-conquered Arab lands. Since the feudal system of *tīmārs* and *ziʿāmets* hardly existed there, taxation from these regions was collected by a local office, *müfred ül-ḳalem*, and any surplus forwarded to Istanbul after the salaries of the governor and his officials had been paid.

(ED.)

MU'TA, a town in the centre of a fertile plain in the land east of Jordan, east of the southern end of the Dead Sea, about two hours' journey south of Karak, renowned for the defeat of the Muslims there in Djumādā I of the year 8.

According to the Arabic account, the reason why Muḥammad sent 3,000 men to this region was that an envoy whom he had sent to the king (presumably the imperial governor of Boṣrā) had been murdered by a Ghassānid, but the real reason seems to have been that he wished to bring the (Christian or pagan) Arabs living there under his control. If the story is correct that he chose three leaders for the expedition, Zayd b. Ḥāritha [*q.v.*] and, if he fell, his cousin Djaʿfar b. Abī Ṭālib [*q.v.*] and, if he also fell, the poet ʿAbd Allāh b. Rawāḥa [*q.v.*], he must have fully recognised the hazardous nature of the enterprise; but the tendency of the stories to describe the dangers of the expedition and the overwhelming nature of the opposing force as very great in order to put the unfortunate result of the battle in a better light is quite evident. In the *dīwān* of Ḥassān b. Thābit (xxi, cf. cxlviii) we are only told that the three leaders above mentioned fell in succession. When the Muslims arrived in Maʿān in eastern Jordan, they learned that no less than 100,000 Byzantine soldiers and Bedouins—a much exaggerated figure which Ibn Hishām doubles—had assembled in Ma'āb. Musil (*Arabica petraea*, i, 29) located this Ma'āb, which according to al-Ṭabarī, i, 2108, was not a town but a camp (*fusṭāṭ*), at Ladjdjūn [*q.v.*], a place near a spring with traces of an old Roman camp. But Abu 'l-Fidā' identifies it with al-Rabba which he describes as a village on the site of the former capital of the district, *i.e.*, Rabbot Moab or Areopolis (P. Thomsen, *Loca sancta*, 25; Brünnow, in *MNDPV* [1895], 70-1, with photographs; Musil, *op. cit.*, 370 ff., 381).

According to the Arab story, it was the emperor Heraclius himself who assembled this great army in Ma'āb, which is of course not true. When the Muslims heard this, we are told, they lost courage and wanted to wait until the Prophet could send them reinforcements, but ʿAbd Allāh b. Rawāḥa was able to fill them with such enthusiasm for a possible martyr's death that they marched on the imperial army. According to Ibn Hishām, the latter met them at a village of the Balḳā' called Mashārif, but this must be a misunderstanding, as this term means the Syrian fortresses on the edge of the desert. At the sight of the great force of the enemy, they withdrew to the south, but fighting began at the village of Mu'ta and they were routed. When the three leaders named by Muḥammad had fallen in the order indicated, they wanted Thābit b. Arḳān to take command but he gave it to Khālid b. al-Walīd, who succeeded in saving the rest of the force; this was the first occasion on which his military talents benefited the Muslims; how he did it, we do not know, as the stratagem related by al-Wāḳidī, tr. Wellhausen, 312, is not to be taken seriously.

Besides the Muslim account we have a Byzantine one, the earliest in the history of the Prophet, by the historian Theophanes, whose version bears the stamp of veracity. According to him, Muḥammad sent four chiefs to the land east of Jordan against the Christian Arabs there. They went, to a village named Mucheon, which M.J. de Goeje, *Mémoire sur la conquête de la Syrie*[2], 6 ff., takes to be a copyist's error for Ma'āb, while Musil, *op. cit.*, 153, identifies it with Khirbet al-Mahna which lies in a broad depression, in order to fall upon the Arabs on a feastday (ἡμέρᾳ τῆς εἰδωλοθυσίας αὐτῶν, which seems to indicate a heathen rather than a Christian population), but the *vicarius* Theodorus there learned of their plans and, rapidly collecting the garrisons of the fortresses, fell upon the Muslims at Mu'ta and defeated them. Three of the leaders and most of the force were killed, and

Chaledos, who was called the "sword of God", alone succeeded in escaping. The tombs of the martyrs who fell there used to be pointed out at Muʾta, where a mausoleum was built over them.

(F. Buhl)

MUTʿA (a.), literally, "enjoyment", used in Islamic law in the sense of temporary marriage (according to the Arab lexicographers "marriage of pleasure"), a marriage which is contracted for a fixed period on rewarding the woman.

I. Before Islam. According to Ammianus Marcellinus, xiv. 4, 4, temporary marriage was in use among the Arabs already in the 4th century A.D.; but this can hardly be a reference to *mutʿa*, as the woman brings a lance and tent to the man and can leave him if she likes after the period has elapsed. It is also doubtful if there is a distinct *mutʿa* character in the marriage of Hāshim with Salma bint ʿAmr, whom he married during a temporary stay in Yathrib and left with her family there after the birth of her child (Caetani, i, 111, § 92). From the passage in *Aghānī*, xvi, 63 (*mattiʿūnī bihā 'l-layla*) as well as from Muslim traditions, it may be concluded that *mutʿa* was known in the Djāhiliyya. If we remember that the same kind of temporary marriage as *mutʿa* was known in Erythaea (Conti Rossini, *Principi di diritto consuetudinario*, Rome 1916, 189, 249), it seems certain that *mutʿa* is an old Arabian institution. (Temporary marriage is also found among other peoples: cf. Wilken, 21-2; Westermarck, *History of human marriage*⁵, London 1925, iii, 267-8; cf. also the ἄγραφες γάμος in Egypt, to which Griffini, 327, calls attention. In a demotic document there is a reference to such a marriage for five months; cf. Mitteis-Wilcken, *Grundzüge der Papyruskunde*, ii, 203 ff.)

II. In the Ḳurʾān, there is undoubtedly a reference to this form of marriage in the Medinan sūra IV, 28, although the orthodox explanation of this passage as early as the 1st/7th century refers it to the ordinary *nikāḥ*; after giving a list of the classes of women with whom marriage is forbidden, it goes on: "And further, you are permitted to seek out wives with your wealth, in modest conduct but not in fornication; but give them their reward (*udjūr*) for what you have enjoyed of them (*istamtaʿtum*) in keeping with your promise". After *istamtaʿtum*, Ubayy b. Kaʿb and Ibn ʿAbbās read the words *ilā adjalin musammaan* "for a definite period" (al-Ṭabarī, *Tafsir*, v, 9), a reading which naturally has not found its way into Sunnī circles but is often added in Shīʿī books.

III. The traditions are contradictory on the question of *mutʿa*. According to some, it was in use in the time of the Prophet and he was even said to have practised it (*mattaʿahā*: al-Ṭabarī, *Annales*, i, 1775, 1776; cf. Caetani, ii, 478 nos. 17, 19). In return for a robe or a handful of dates one could take an unmarried woman (*uyyām*) for a period of cohabitation (Muslim, *Nikāḥ*, tr. 13, 17; al-Ṭayālisī, no. 1637). Especially when a man came to a strange town, he could marry a woman there for the period of his stay so that she could look after him (al-Tirmidhī, *Nikāḥ*, *bāb* 28).

On the other hand, according to one tradition related by ʿAlī, it was forbidden by the Prophet on the day (or in the year) of Khaybar (al-Bukhārī, *Maghāzī*, *bāb* 38; *Dhabāʾiḥ*, *bāb* 28; *Nikāḥ*, *bāb* 31; Muslim, *Nikāḥ*, trs. 31-4; al-Nasāʾī, *Nikāḥ*, *bāb* 71 ["on the day of Ḥunayn" must there be a mistake for Khaybar]; *Ṣayd*, *bāb* 31; Ibn Mādja, *Nikāḥ*, *bāb* 44; al-Tirmidhī, *Nikāḥ*, *bāb* 28; *Aṭʿima*, *bāb* 6; Mālik, *Nikāḥ*, tr. 41; Aḥmad b. Hanbal, i, 79, 103, 142; al-Ṭayālisī, no. 111; Zayd, *Madjmūʿ*, no. 718).

According to other traditions, he is said to have permitted it for a short time on particular occasions. In this connection we have a group of traditions which goes back to Sabra b. Maʿbad; the various accounts of this, some long, some short, which supplement one another, are in part given without date (Muslim, *Nikāḥ*, trs. 20, 26; al-Nasāʾī, *Nikāḥ*, *bāb* 71; Abū Dāwūd, *Nikāḥ*, *bāb* 13; Aḥmad b. Ḥanbal, iii, 404), in part referred to the conquest of Mecca (Muslim, *Nikāḥ*, trs. 21, 24, 25, 27, 28; al-Dārimī, *Nikāḥ*, *bāb* 16; Aḥmad b. Ḥanbal, iii, 404, 405), and in part to the farewell pilgrimage (Ibn Mādja, *Nikāḥ*, *bāb* 44; al-Dārimī, *Nikāḥ*, *bāb* 16; Abū Dāwūd, *Nikāḥ*, *bāb* 13; Aḥmad b. Ḥanbal, iii, 404-5). Their substance is as follows. The Prophet permitted *mutʿa*; Sabra therefore went with a companion to a woman and each offered her his cloak. She chose the younger with the shabbier cloak and slept three nights with him; thereupon the Prophet forbade it. According to the stories associated with the Farewell Pilgrimage, the woman wished *mutʿa* only for a fixed period, so that ten days or nights was agreed upon, but the Prophet forbade it after the first night, saying "Whoever of you has married a woman for a period, shall give her what he promised and ask nothing of it back and he shall separate from her; for God has forbidden this up to the day of resurrection". (For the conclusion, cf. also the fragments of this in Muslim, *Nikāḥ*, trs. 23, 30.)

According to a second group of traditions, which goes back to Djābir b. ʿAbd Allāh and Salama b. al-Akwaʿ, the Prophet permitted *mutʿa* for three days on a campaign (al-Bukhārī, *Nikāḥ*, *bāb* 71; Muslim, *Nikāḥ*, trs. 14, 15; Aḥmad b. Ḥanbal, iv, 47, 51; according to Muslim, *Nikāḥ*, tr. 19, and Aḥmad b. Ḥanbal, iv, 55, this was in the year of Awṭās, *i.e.*, shortly after the capture of Mecca). In al-Bukhārī we have at the end "The partnership of the two parties lasted three nights; and if they agreed to extend it, they did so, and if they wished to separate, they did so". A prohibition is given only in two versions in this group.

According to other traditions, *mutʿa* was first forbidden by the caliph ʿUmar at the end of his caliphate (Muslim, *Nikāḥ*, trs. 16-18; Aḥmad b. Ḥanbal, iii, 304, 380, and iii, 325, 356, 363, where there is a reference to the two kinds of *mutʿa*, *i.e.*, *tamattuʿ* on the pilgrimage and *mutʿat al-nisāʾ*). ʿUmar threatened the punishment of stoning, so that he regarded *mutʿa* as fornication (Ibn Mādja, *Nikāḥ*, *bāb* 44; Mālik, *Nikāḥ*, tr. 42; al-Ṭayālisī, no. 1792). Cf. the angry exclamation of Ibn ʿUmar when he was asked about *mutʿa*: "By Allāh, we were not immodest in the time of the Prophet of Allāh nor fornicators" (Aḥmad b. Ḥanbal, ii, 95, 104).

What then is at the bottom of these contradictory traditions? While Wellhausen regards *mutʿa* as simply prostitution and not an old Arabian custom, Caetani points out that the traditions agree in connecting *mutʿa*

with an entrance of the Prophet into Mecca and sometimes even with the *ḥadjdj*, and that a three days' duration is a feature of the *mutʿa*; taking account of other considerations, he concludes that *mutʿa* in the pagan period was religious prostitution on the occasion of the Meccan festival. However tempting this explanation may be, there is a complete lack of evidence for any religious prostitution in Mecca. With Wilken and Robertson Smith, we must rather regard *mutʿa* as the survival into Islam of an old Arabian custom. The Prophet gives this custom sanction in the Ḳurʾān and also practiced it himself. The traditions, if examined carefully, only mention two cases of prohibition by the Prophet: Khaybar and Mecca. As both these are later than the above Ḳurʾānic passage (years 3-5, according to Nöldeke-Schwally, *G. des Q.*, i, 198) this prohibition would be quite possible. But since on the other hand the caliph ʿUmar prohibited *mutʿa*, which there is no reason to doubt, we might regard the tradition of prohibition as representing later views, which, as is often the case, are put back to the time of the Prophet.

IV. Attitude of the *fuḳahāʾ*. Ibn ʿAbbās (d. 68) was an ardent champion of *mutʿa* (al-Bukhārī, *Nikāḥ*, *bāb* 31; Muslim, *Nikāḥ*, tr. 18; al-Ṭayālisī, no. 1792; Fakhr al-Din al-Rāzī, *Mafātīḥ al-ghayb*, Cairo 1324, iii, 195). In Mecca and the Yaman, according to Ibn Rushd (*Bidāya*, Cairo 1339, ii, 54), he also had followers; but before his death he is said to have been converted to the opposite view (al-Tirmidhī, *Nikāḥ*, *bāb* 28; al-Rāzī, *loc. cit.*). In later times, people still spoke derisively of a marriage by a *fatwā* of Ibn ʿAbbās. In the second half of the 1st century in Mecca, *fatwās* were still given permitting *mutʿa* (Muslim, *Nikāḥ*, tr. 29). The Ḳurʾān commentators Mudjāhid, (d. 100), Saʿīd b. Djubayr (d. 95), and al-Suddī (d. 127) also referred the above verse of the Ḳurʾān to *mutʿa*. Al-Suddī says that it is a marriage for a fixed period and that it should be concluded with the permission of the *walī* and with two witnesses; that after the expiry of this period the man has no longer any claim on the woman and that the two parties cannot inherit from one another (al-Ṭabarī, *Tafsīr*, v, 8). With the 2nd/8th century, the contrary view begins to predominate; although individuals like ʿAmr b. Dīnār (d. 126/743-4), Ibn Djuraydj (d. 150/767) and the Zaydī sect of the Djārūdiyya permit *mutʿa* (Ibn Rushd, *loc. cit.*; Van Arendonk, *Opkomst*, etc., Leiden 1919, 72, n. 9), al-Thawrī (d. 161/778), Ibn al-Mubārak (d. 181/797), (al-Tirmidhī, *Nikāḥ*, *bāb* 28) and all the Sunnī schools of law as well as the Zaydīs (al-Nāṭiḳ bi 'l-Ḥaḳḳ, *Taḥrīr*, Berlin ms., Glaser 74, fol. 53b) consider *mutʿa* forbidden. Its recognition was now limited to the Shīʿa. And if the caliph Maʾmūn tried to introduce *mutʿa* again, this was certainly due to his Shīʿī sympathies (Ibn Khallikān, *Wafayāt*, ii, 218).

At the same time, we still have in the 2nd/8th century the opinions of a period of transition. According to Zufar (d. 158/775), the marriage concluded under the form of *mutʿa* was valid as a marriage, but its limitation in time was invalid (al-Sarakhsī, *Mabsūṭ*, v, 153; cf. also al-Bukhārī, *Ḥiyal*, *bāb* 4). According to al-Ḥasan b. Ziyād al-Luʾluʾī (d. 204/819-20), *mutʿa* was valid if the partners could not survive the time fixed, *e.g.*, 100 years or more (al-Sarakhsī, *loc. cit.*).

But in spite of their refusal to recognise *mutʿa*, the Sunnīs made concessions by which *mutʿa* gained a footing in another form. It became the practice not to insert a definite period in the contract; any agreement made outside the contract was not affected by the law. Al-Shāfiʿī (*Umm*, v, 71), for example, declared a marriage valid when it was concluded with the unuttered resolution (*niyya*) to observe it only for the period of stay in a place or for a few days only, so long as this was not expressly stipulated in the contract. Similarly, if agreement to this effect (*murāwaḍa*) had been previously made and even if made on oath; but he describes such an agreement as *makrūh*. There are also traces in later literature of a decision by Mālik by which he permitted *mutʿa* (al-Sarakhsī, v, 152; Badāʾūnī, *Muntakhab al-tawārīkh*, ed. Lees, ii, 208 ff.) although only the contrary is recorded in the *Muwaṭṭaʾ* and *Mudawwana* (iv, 46).

A good exposition of the two opposite points of view is given from the Sunnī side by al-Kāsānī (d. 587/1191), *Badāʾiʿ al-ṣanāʾiʿ*, Cairo 1327, ii, 272-4, and in al-Rāzī, *op. cit.*, iii, 193-8, and from the Shīʿī side by al-Sharīf al-Murtaḍā, *Intiṣār*, Tehran 1315, 60-5. The Sunnis refer the above-mentioned verse from the Ḳurʾān to regular marriage and declare the *adjr* to be *mahr*, while the Shīʿīs base their view on this verse and consider the traditions of prohibition not to be abrogatory and do not consider ʿUmar authoritative for a prohibition. The Imāmīs even go so far as to say "The believer is only perfect when he has experienced a *mutʿa*" (al-Ḥurr al-ʿĀmilī, v, 69, 2).

V. The teachings of the Imāmīs. 1. Form. *Mutʿa* is an irrevocable (*lāzim*) contract which, like every contract, comes into existence through *ḳabūl* and *īdjāb*. It may be concluded with the words *nikāḥ*, *tazwīdj* or *tamattuʿ*, but must always contain a precise statement of the period (*adjal*) and a definite recompense (*adjr* or *mahr*). This recompense may be the dowry usual in other marriages or a handful of corn, a *dirham* or such-like. The period may vary from a day to months or even years. Witnesses are not necessary; nor need it be concluded before the *ḳāḍī*, if the partners are capable of using the formulae correctly. If the *mahr* is not given, the contract is invalid; if the period is not given, according to some it is a regular marriage provided that the word *tamattuʿ* was not used at the end of the ceremony; in the latter case, the contract is again invalid.

2. The two partners must naturally fulfil the usual conditions for the the conclusion of an agreement. The woman must further be unmarried and chaste (*ʿafīfa*) and, if possible, ought to know about *mutʿa*, *i.e.*, be a Shīʿī, and can only contract a temporary marriage with a Muslim. According to Ibn Bābūya (d. 381/991) and al-Mufīd (d. 413/1022), *mutʿa* with an unbeliever is forbidden, even with a member of the possessors of a scripture (*kitābiyya*). The *nawāṣib* (extreme Khāridjīs) are included among the unbelievers. According to most Imāmīs (and Ṭūsī also), however, *mutʿa* with a Christian or Jewish woman is permitted but *makrūh* with a *madjūsiyya*. *Mutʿa* with a slave-girl is only admitted with the consent of her master. Usually, the woman contracts the marriage without a *walī*; only a virgin (*bikr*), according to some, requires her father's consent (Abu 'l-Ṣalāḥ, d. 82; Ibn Bābūya; Ibn al-Barrādj, d. 481; cf. al-Ḥillī, iii, 92). The man may in this way take other wives in addition to his four legal wives, especially on journeys. He must not, however, take two sisters at the same time, not even during the *ʿidda*.

3. The *mutʿa* ends on the expiry of the period agreed upon. It cannot be prolonged by arrangement between the two parties; a new temporary marriage with a new *mahr* must rather be contracted at the end of the period. Divorce is impossible; according to some, however, *liʿān* and *ẓihār* are permitted.

4. There is no obligation on the man to provide food and home for the woman. The two partners cannot inherit from one another; but according to some,

inheritance may be provided for in the contract. The *ᶜidda* after the expiry of the *mutᶜa* is two menstrual periods or 45 days, *i.e.*, the *ᶜidda* of a slave-girl. There is, however, disagreement whether on the man's death the period of waiting is the usual one for a wife or that for a slave. The children go with the father.

VI. Modern practice. Although these S͟hīᶜī views have a certain amount of moral support, *mutᶜa* in many cases can only be described as legalised prostitution. It is true that in Persia such marriages are made for very long periods, *e.g.*, 99 years, but the Persian, when on a journey, temporarily marries in any place where he is stopping for some time, and in the towns and caravanserais mullahs and other brokers offer a wife to each new arrival. To make this business more profitable, the *ᶜidda* period is evaded by concluding a second temporary marriage with the same man after the expiry of the first, for in the case of such a marriage the *ᶜidda* is not necessary. This marriage and a woman of this kind is called in Persia *ṣīg͟ha* (lit. "form" *i.e.*, of the contract). Cf. Olearius [1637], *Muscowit. u. pers. Reyse*, Schleswig 1656, 609; Chardin [1673], *Voyages*, Paris 1811, ii, 222-3, 225-7; Polak, *Persien*, Leipzig 1865, i, 207-8; E.G. Browne, *A year amongst the Persians*, Cambridge 1927, 505-6; H. Norden, *Persien*, Leipzig 1929, 148-167; the romance of the traveller James Morier, *The adventures of Hajji Baba of Ispahan*, 1824, part iii, chs. 6-8; G.N. Curzon, *Persia and the Persian question*, London 1892, i, 164-5.

The constantly-quoted story (first in Wilken, 19) of Alex. Hamilton (*A new account of the East Indies*, Edinburgh 1727, i, 51) that at the beginning of the 18th century temporary marriages were publicly negotiated in Sounan (= Ṣanᶜāʾ) in South Arabia and concluded before the *ḳāḍī*, is a very improbable one, for Hamilton knew only the coast towns from his own observation and wrote his account of his travels later from memory. He seems to be confusing them with conditions in Persian towns, and he makes mistakes on other matters.

In Mecca, in modern as well as ancient times (for the Middle Ages, cf. *Lisān al-ᶜArab*: *wa-mutᶜat al-tazwīd͟j bi-Makka minhu*), temporary marriages were concluded among the Sunnīs, but nothing is said of this in the marriage contract or this would make it invalid; everything necessary is arranged previously by word of mouth. On the conclusion of the contract, the man utters the *ṭalāḳ* formula with a time limit. Such agreements are as a rule kept (Snouck Hurgronje, *Mekka*, ii, 156; *Verspr. Geschriften*, vi, 150). The same artifice is used in such cases as al-S͟hāfiᶜī indicated long ago (cf. above).

In the early 20th century, marriages of this kind were still concluded at Deir ez-Zor in eastern Syria by Bedouins who came there temporarily to trade (V. Müller, *En Syrie avec les Bédouins*, Paris 1931, 231-2).

Finally, it should be noted that *mutᶜa* is used in Islamic law in a quite different sense from that of "temporary marriage" for the indemnity payable to a divorced wife where no *mahr* or dowry has been stipulated (Coulson, *A history of Islamic law*, 31-2; Schacht, *An introduction to Islamic law*, 167).

(W. Heffening)

MUTAᶜARRIBA (a.), "those who seek to become Arabs", the term applied to the descendants of Ḳaḥṭān (the Biblical Yoḳṭān) who were regarded by the genealogists as "having become Arabs" in contrast to the supposedly indigenous "pure" Arab tribes like ᶜĀd, T͟hamūd, etc. [see mustaᶜriba]. They settled in South Arabia and adopted Arabic from the "pure" Arabs. The latter had learned it through D͟jurhum, the only man who spoke Arabic in Noah's Ark (all the rest spoke Syriac), and his son-in-law Iram b. Sām b. Nūḥ was the ancestor of the ᶜĀd and T͟hamūd, etc. From South Arabia, their main centre, tribes of the Banū Ḳaḥṭān migrated to the north, so that there are in Northern Arabia also tribes whose genealogies make them belong to the Banū Ḳaḥṭān.

MUTADĀRIK, name of the sixteenth metre in Arabic prosody, added to al-K͟halīl b. Aḥmad's list by al-Ak͟hfas͟h al-Awsaṭ [*q.v.*]. It is also called *muk͟htaraᶜ*, *muḥdat͟h*, *k͟habab*, *s͟haḳīḳ*, *muntasiḳ*, *ḍarb al-k͟hayl*, *rakḍ al-k͟hayl*, *ṣawt al-nāḳūs*. It does not seem to have been used by the poets before Islam or of the first century A.H. It is made up, in each hemistich, of four *fāᶜilun*, which may be reduced to *faᶜilun* or even *faᶜlun*. See also ᶜarūḍ. (M. Ben Cheneb*)

AL-MUᶜTAḌID BI'LLĀH, Abu 'l-ᶜAbbās Aḥmad b. Ṭalḥa, ᶜAbbāsid caliph. The son of the

regent al-Muwaffaḳ [*q.v.*] and a Greek slave-girl called Ḍirār, the date of his birth is unknown but was probably around 245/860. His father gave him a military training and from 267/880-1 he is found leading operations against the Zandj rebels [*q.v.*]. In 271/885 he suffered a humiliating defeat at the hands of the troops of Khumārawayh b. Aḥmad b. Ṭūlūn [*q.v.*]. Relations between him and his father were not always cordial, and one occasion in 275/888-9 Aḥmad actually ordered his arrest. The incident showed that the future caliph had already acquired his own military following, who now demonstrated and secured his release.

On his father's death in Ṣafar 278/June 891, Abu 'l-ᶜAbbās was given the honorific of al-Muᶜtaḍid and inherited his father's position as second in line of succession to the caliphate after al-Muᶜtamid's son, al-Mufawwaḍ. He also inherited his father's chief supporters, notably the *wazīr* ᶜUbayd Allāh b. Sulaymān b. Wahb and the commander of his army Badr [see BADR AL-MUᶜTAḌIDĪ in Suppl.]. In Muḥarram 279/April 892 al-Mufawwaḍ was unceremoniously removed from his position as heir apparent, which then passed to al-Muᶜtaḍid and six months later in Radjab 279/October 892 he became caliph without opposition on al-Muᶜtamid's death.

Al-Muᶜtaḍid's great strength was the close relations with the army which he had inherited from his father and the close and harmonious relations between civil and military leaders, and he was determined to use these assets to reassert the power of the ᶜAbbāsid family. He led his armies in person and spent much of his reign on campaign. While he was forced to acknowledge that Khurāsān, Syria and Egypt were lost to the ᶜAbbāsids, at least for the time being, he strove to re-establish control over the core territories, ᶜIrāḳ and al-Djazīra, so important as a source of grain for Baghdād, and western Persia.

In al-Djazīra he was faced by the ruler of Āmid, Aḥmad b. ᶜĪsā b. Shaykh al-Shaybānī. In 280/893 he drove Aḥmad out of Mawṣil and retook the city, and in 286/899 he took Āmid from Aḥmad's son and successor Muḥammad. He also secured the support of the Taghlibī chief Ḥamdān b. Ḥamdūn, so, unwittingly, beginning the rise of the Ḥamdānid dynasty [see ḤAMDĀNIDS].

In Persia, the keystone of al-Muᶜtaḍid's policy was the development of a working relationship with ᶜAmr b. Layth [*q.v.*], the Ṣaffārid leader, perhaps trying to recreate the sort of partnership which his predecessors had had with the Ṭāhirids. The country was divided into spheres of influence, with the Ṣaffārids keeping Khurāsān, the East and Fārs, while the ᶜAbbāsids controlled Rayy, Iṣfahān and the West. The ᶜAbbāsids were unable to maintain themselves in Rayy, which was handed over to the Ṣaffārids in 284/897, but in the Iṣfahān area the last of the Dulafids, ᶜUmar b. Aḥmad b. ᶜAbd al-ᶜAzīz, was dispossessed in 283/896 and the city brought back under ᶜAbbāsid rule. In 285/898 al-Muᶜtaḍid appointed ᶜAmr as governor of Transoxania, but he was humiliatingly defeated by Ismāᶜīl the Sāmanīd and sent to Baghdād, where he was killed in prison in 289/902 immediately after the caliph's death.

ᶜUbayd Allāh b. Sulaymān b. Wahb remained *wazīr* until his death in 288/901 when he was replaced by his son al-Ḳāsim. The all-important finances of ᶜIrāḳ were managed by the Banu 'l-Furāt [see IBN AL-FURĀT] until 286/899, when they were replaced by their arch-rivals the Banu 'l-Djarrāḥ. Command of the army remained in the hands of the loyal Badr. His reign saw the final return of the ᶜAbbāsid capital from Sāmarrā to Baghdād, which had long been his father's base of operations against the Zandj. The geography of the city was altered, however, the new official quarter being on the east bank and down-river from the city of al-Manṣūr and al-Mahdī. It was this new city which was to form the nucleus of modern Baghdād.

From 284/897 the authorities began to be troubled by Ḳarmaṭī [*q.v.*] disturbances. In the early days these were essentially small-scale rebellions among the peasantry of the Sawād of al-Kūfah but from 286/899 the Ḳarmaṭī leader Abū Saᶜīd al-Djannābī [*q.v.*] also controlled Baḥrayn and in 287/900 decisively defeated the ᶜAbbāsid troops under al-ᶜAbbās b. ᶜAmr al-Ghanawī and took the provincial capital of Hadjar. It was not until after the iron hand of al-Muᶜtaḍid was removed, however, that the Ḳarmaṭīs became a serious threat.

Al-Muᶜtaḍid died in Rabīᶜ II 289/April 902. He had already secured the succession for his son al-Muktafī [*q.v.*], who had received a sound practical training as governor in Rayy and al-Djazīra. By his military energy and determination he had greatly extended ᶜAbbāsid power, but his reign was too short to reverse long-term trends and re-establish ᶜAbbāsid power on a lasting basis.

(H. KENNEDY)

AL-MUᶜTAḌID BI 'LLĀH, ABŪ ᶜAMR ᶜABBĀD B. MUḤAMMAD B. ᶜABBĀD, the most important and most powerful sovereign of the ᶜAbbādid dynasty [*q.v.*] who reigned over the little kingdom formed by his father Abu 'l-Ḳāsim Muḥammad b. ᶜAbbād, with Seville [see ISHBĪLIYA] as his capital, at the time of the break up of the Umayyad caliphate of Spain and the rise of the *reyes de taifas* (*mulūk al-ṭawāʾif* [*q.v.*]). In the course of a reign of more than 25 years (433-60/1042-69), he very considerably increased his territory by making himself the champion of the Spanish Arabs against the Berbers in Spain whose numbers, already very large in the 4th/10th century, had been much increased since the period of the ᶜĀmirid dictators.

When he succeeded his father, the new king of Seville, who was then 26, following the usual practice of the period, assumed the title of *ḥādjib*, and a little later the *laḳab* of al-Muᶜtaḍid bi 'llāh by which he is best known. Gifted with real political ability, he was not long in revealing his character, that of an autocratic ruler, ambitious and cruel and little scrupulous in the means which he used to achieve his ends. As soon as he came to the throne he continued the war begun by his father against the petty Berber ruler of Carmona [see ḲARMŪNA], Muḥammad b.

ʿAbd Allāh al-Birzālī, then against the latter's son and successor Isḥāḳ. At the same time, al-Muʿtaḍid was extending his kingdom in the west between Seville and the Atlantic Ocean. It was with this object that he attacked and defeated successively Ibn Ṭayfūr, lord (*ṣāḥib*) of Mertola [see MIRTŪLA], and Muḥammad b. Yaḥyā al-Yaṣḥubī, lord of Niebla (Ar. Labla [*q.v.*]), who in spite of his Arab descent had had the audacity to ally himself with the Berber chiefs. In face of these successes of the king of Seville, the other *mulūk al-ṭawāʾif* [*q.v.*] who distrusted him formed a kind of league into which entered the princes of Badajoz [see BAṬALYAWS], Algeciras [see AL-DJAZĪRA AL-KHAḌRĀʾ], Granada [see GHARNĀṬA] and Málaga [see MĀLAḲA]. This soon became a war between the ʿAbbādid of Seville and the Afṭasid [*q.v.*] of Badajoz al-Muẓaffar [*q.v.*]; it was to last for many years in spite of the efforts at mediation by the Djahwarid ruler of Cordova, which only achieved their end in 443/1051. Down to this year, while harassing the frontiers of the kingdom of Badajoz, al-Muʿtaḍid displayed other activities; in succession he defeated Muḥammad b. Ayyūb al-Bakrī, lord of Huelva [see WALBA] and of Saltes [see SHALTĪSH] (whose son was the famous geographer), the Banū Muzayn, lords of Silves [see SHILB], and Muḥammad b. Saʿid Ibn Hārūn, lord of Santa Maria de Algarve [see UKHSHŪNŪBA], and annexed their territories. To justify these annexations, al-Muʿtaḍid used a very crude pretext; he alleged that he had found the unfortunate Hishām II, who had really died in obscurity a few years before, and would go on till he had restored to him his former empire subdued and pacified in its integrity. In order not to be exposed to the cruelty of the king of Seville, the majority of the petty Berber chiefs settled in the mountains of the south of Andalusia, acquiesced in this make-believe and paid homage to the ʿAbbādid and the Commander of the Faithful, miraculously restored to aid the cause of al-Muʿtaḍid but at the same time carefully concealed by him. It was labour lost for them. One day, the ʿAbbādid invited to his palace in Seville all these petty chiefs with their suites and put them to death by asphyxiating them in baths, the openings in which he walled up. In this way he took Arcos [see ARKUSH], the capital of the principality of the Banū Khizrūn, Moron [see MAWRŪR] defended by the Banū Dammar, and Ronda [see RUNDA], capital of the Banū Ifran (445/1053).

This aroused the wrath of the most powerful Berber ruler in Spain, Bādīs b. Ḥabbūs the Zīrid [*q.v.*], who ruled in Granada and who alone seemed able to resist al-Muʿtaḍid. The latter, however, found that fortune favoured him in this war, and a little later took Algeciras from the Ḥammūdid al-Ḳāsim b. Ḥammūd. He next tried to seize Cordova, and sent an expedition against it in charge of his son Ismāʿīl; the latter tried to profit by the occasion to rebel and created for himself a kingdom with Algeciras as capital. This rash plan cost him his life, which his father took with his own hand, just as before him ʿAbd al-Raḥmān III and al-Manṣūr b. Abī ʿĀmir had inflicted the supreme penalty on their unworthy sons. This was the beginning of the political career of al-Muʿtaḍid's other son Muḥammad al-Muʿtamid [*q.v.*], who was to succeed him on his death; by his father's orders he went with an army to support the Arabs of Málaga, who had rebelled against the tyrannical rule of Bādīs, the despotic Berber of Granada. But the latter routined the Sevillan army, and al-Muʿtamid reached Ronda in sorry state, from which he sought and received the pardon of his terrible father. The latter had long before repudiated the fiction of the pseudo-Hishām which he no longer needed. He was now by far the most redoubtable and the most feared of the Spanish rulers. He had no enemies but the Berbers, Muslims like himself but much further removed from his social ideal of a Spaniard than his Christian neighbours in the north. In another land he might have been called *Berberoktonos*. But the bitterness of his hatred cast a shadow over his last days; it was not without fear that he followed events in the western Maghrib, hitherto the fief of Muslim Spain, at least in the sub-Mediterranean zone. The irresistible advance of the Almoravids [see AL-MURĀBIṬŪN], following Yūsuf b. Tāshfīn through all Morocco, would not find the straits of Gibraltar an insurmountable obstacle for long. Al-Muʿtaḍid realised this very well. Death at least prevented him from seeing his kingdom, entirely built up by his own energy and bold initiative, pass in a few weeks into the hands of invaders, brethren of these Berbers of Spain whom he had detested and in part destroyed.

Bibliography: All the texts of Arabic historians relating to the ʿAbbādids (particularly Ibn Ḥayyān, *apud* Ibn Bassām; *Dhakhīra*, Ibn Khaldūn, Ibn al-Abbār, Maḳḳarī) have been published by R. Dozy in his *Scriptorum arabum loci de Abbadidis*, Leiden 1846. Add also: Ibn ʿIdhārī, *al-Bayān al-mughrib fī akhbār mulūk al-Andalus wa 'l-Maghrib*, iii, ed. E. Lévi-Provençal, Paris 1930, and appendices (cf. indices); Ibn al-Khaṭīb, *Aʿmāl al-aʿlām fī man būyiʿa ḳabl al-iḥtilām min mulūk al-Islām*, part relating to the history of Spain, ed. Lévi-Provençal, Rabat 1934, index. Cf. also Dozy, *Histoire des Musulmans d'Espagne*, new ed., Leiden 1932, index; A. Prieto Vives, *Los reyes de taifas*, Madrid 1926; A. González Palencia, *Historia de la España musulmana*, Barcelona 1929, 73-5; D. Wasserstein, *The rise and fall of the Party-Kings*, Princeton 1985, 95 (with Bibl.), 155-6 and index. (E. LÉVI-PROVENÇAL)

MUTAFARRIḲA, IBRĀHĪM [see IBRĀHĪM MÜTEFERRIḲA].

AL-MUṬAHHAR, eldest son of the Zaydi *Imām* al-Mutawakkil ʿalā 'llāh Sharaf al-Dīn Yaḥyā [*q.v.*], and principal early opponent of Ottoman expansion into Yemen.

Born in Radjab 908/January 1503, he early showed considerable military promise, and to him is owing much of the credit for the securing of his father's sway over most of Yemen. Yet, passed over by his father as his possible successor, al-Muṭahhar grew alienated from his family, even to the point of briefly encouraging the Ottomans to expand inland (953/1546) from their foothold in the Tihāma. The Zaydī aristocracy, facing internal disharmony and repeated setbacks, including the loss of Taʿizz to the Turks (10 Dhu 'l-Ḥidjdja 953/1 February 1547), was at last persuaded that al-Muṭahhar should be recognised as their leader (*ca.* early 954/February-March 1548). But Ottoman expansion could not then be stemmed, and Ṣanʿāʾ, the Zaydī capital since 923/1517, fell to Özdemir Bey [see ÖZDEMIR PASHA] on 7 Radjab 954/23 August 1547. Al-Muṭahhar took refuge in his mountain fortress of Thulā. After peace was concluded with the Ottomans in 959/1552, he acted as an Ottoman *sandjaḳbeyi*, exercising limited authority over districts northwest of Ṣanʿaʾ.

The progressive alienation of hitherto pro-Ottoman native elements by several poor Ottoman governors in succession encouraged al-Muṭahhar to resume the offensive in 973/1566. Although by 976/1568 his followers had reduced the Turks to a small coastal enclave, within two years his fortunes were completely

reversed by a massive Ottoman force under Ḳodja Sinān Pasha. Al-Muṭahhar died in relative obscurity on 3 Radjab 980/9 November 1572.

Al-Muṭahhar was *imām* only inasmuch as he exercised political and military leadership. Both his congenital lameness and the fact that he was not a *mudjtahid* (one learned in Zaydī doctrine and law) precluded his being recognised as a true *imām* like his father).

Bibliography: Two primary sources are *Rawḥ al-rūḥ* (in ms. only) by ʿĪsā b. Luṭf Allāh (d. 1048/1638), the grandson of al-Muṭahhar, and *al-Barḳ al-Yamānī* (*Ghazawāt al-djarākisa*, ed. Ḥ. al-Djāsir, Riyāḍ 1967) by al-Nahrawālī (d. 990/1582). Other Arabic ms. sources include Ibn Dāʿir, *al-Futūḥāt*; Djamāl al-Dīn Muḥammad, *al-Sulūk al-dhahabiyya*; and al-Shillī, *al-Sanā' al-bāhir*.

S. ʿĀshūr, Cairo 1968, ii, 662-745; Shawkānī, *al-Badr al-ṭāliʿ*, Cairo 1348/1929-30, ii, 309 f; Zabāra, *A'immat al-Yaman*, Taʿizz 1375/1955-6, i, 452-86; Rāshid, *Tārīkh-i Yemen*, Istanbul 1291/1874-5, i, 38-145; Wüstenfeld, *Jemen*, Göttingen 1884, 7-28; ʿĀṭif Pasha, *Yemen tārīkhi*, Istanbul 1326/1908, 51-79; al-Djurāfī, *al-Muktaṭaf*, Cairo 1951, 88-90, 134-41; Sālim, *al-Fatḥ al-ʿUthmānī*, Cairo 1969, 118-293; J.R. Blackburn, *The Ottoman penetration of Yemen*, in *Archivum Ottomanicum*, vi (1980), 55-100; and idem, *The collapse of Ottoman authority in Yemen*, in *WI*, xix (1980), 119-76. (J.R. BLACKBURN)

AL-MUṬAHHAR B. ṬĀHIR (or al-Muṭahhar) **AL-MAḲDISĪ**, Abū Naṣr, the otherwise unknown author of an "historical" encyclopaedia called *Kitāb al-Bad' wa 'l-ta'rīkh* composed at Bust [*q.v.*] around 355/966 at the prompting of an anonymous Sāmānid minister. Cl. Huart had the merit of bringing out of oblivion an eloquent piece of work which witnesses to the interest shown in the history of humanity, probably less in regard to actual events than in regard to culture, by mediaeval Muslims. Huart published, on the basis of an Istanbul ms., the Arabic text of this and a French translation (Paris 1899-1919, repr. Baghdad 1962), and up to the sixth volume retained the title adopted originally of *Livre de la Création et de l'histoire attribué à Abou-Zéïd al-Balkhi*, when, thanks to the citations which al-Thaʿālibī [*q.v.*] was able to make from it in his *Kitāb al-Ghurar*, partially tr. by H. Zotenberg in his *Histoire des rois de Perse* (Paris 1900), it was possible for him to identify the author and to rectify, in the prefaces to vols. ii, iii and iv his earlier error of attribution.

The *K. al-Bad' wa 'l-ta'rīkh* recalls al-Masʿūdī's [*q.v.*] *Murūdj*, but history here is envisaged from a more philosophical and certainly from a more critical point of view. The author displays a good knowledge of ancient and alien religions, whose cultural value he stresses without however ceasing to place Islam above them. He follows the usual order. Beginning with the creation of the world, he devotes the first three volumes—half of the whole work—to ancient history and to philosophical, theological, geographical, etc. considerations and does not reach a consideration of Islam until the fourth volume (cf. the parallel lay-out of al-Masʿūdī's work, in which these earlier topics occupy only two volumes out of five), finally reserving a restricted place for the Umayyads and ʿAbbāsids.

One inevitably wonders why this encyclopaedia, whose value is undeniable, should nevertheless have fallen into oblivion. It has remained unknown not only to the Muslims (the extant mss. are all in Istanbul and al-Sakhāwī, e.g., does not cite it in his *Iʿlān*) but also to Orientalists (J. Sauvaget and Cl. Cahen do not make use of it either in their *Introduction à l'histoire du monde musulman*). Such a disdain may possibly arise precisely from the originality and free thought of a writer who seems to have maintained a certain independence and not to have been an adherent of any religious movement of the age when he lived.

Al-Muṭahhar mentions a work that he had written before the *Bad'*, a *Kitāb al-Maʿānī* (above all, at iii, 98) and announces three further ones: *K. al-Nafs wa 'l-rūḥ* (ii, 107/115), *K. al-Diyāna wa 'l-amāna* (i, 64/70-1) and *K. al-Maʿdila* (i, 83/91).

Bibliography: Brockelmann, S I, 222; F. Rosenthal, *A history of Muslim historiography*[2], Leiden 1968, index; Sezgin, *GAS*, i, 337; and above all, A. Miquel, *La géographie humaine du monde musulman*, i, Paris-The Hague 1967, p. xxxii, 211 ff. and the indices to the succeeding volumes. (ED.)

MUṬAHHARĪ, ĀYATULLĀH MURTAḌĀ (1920-79), Iranian religious thinker, writer, and close associate of Āyatullāh Khumaynī, active in fostering the intellectual developments that contributed to the revolution of 1978-9. Born on 2 February 1920 in Farīman, about 60 km distant from Mashhad, to a religious scholar who was also his first teacher, Muṭahharī began his formal schooling in Mashhad at the age of twelve. He soon discovered the predilection for philosophy, theology and mysticism that stayed with him throughout his life. In 1937 he moved to Ḳum, where he remained for many years, studying *fiḳh* and *uṣūl* with Āyatullāhs Ḥudjdjat Kūhkamarī, Sayyid Muḥammad Dāmād, Muḥammad Riḍā Gulpāyagānī, Ṣadr al-Dīn Ṣadr, and — from 1944 onwards— Muḥammad Ḥusayn Burūdjirdī. He also attended the lectures of Āyatullāh (then Ḥudjdjat al-Islām) Khumaynī on ethics and key texts of the Shīʿī philosophical tradition such as the *Asfār al-arbaʿa* of Mullā Ṣadrā and the *Sharḥ-i manẓūma* of Mullā Hādī Sabzawārī, thereby inaugurating an intimate relationship that was to last for the rest of his life. Of almost equal significance were Muṭahharī's ties to the philosopher and exegete Āyatullāh Sayyid Muḥammad Ḥusayn Ṭabāṭabā'ī; he participated in his classes on the *Shifā'* of Ibn Sīnā and in the Thursday evening meetings which he organised to discuss materialist philosophy.

In 1952, Muṭahharī left Ḳum for Tehran, where he began teaching philosophy at the Madrasa-yi Marwī, and two years later he also accepted an appointment at the Faculty of Theology and Islamic Sciences of Tehran University. The scope of his lecturing began transcending these two institutions when he started to collaborate first with the professional Islamic organisations that had been established by Mahdī Bāzargān and Āyatullāh Ṭāliḳānī and then, in 1960, with the *Andjuman-i Māhāna-yi Dīnī* ("Monthly Religious Society"). Many of the lectures which he gave under the auspices of these groups were subsequently published in book form. Muṭahharī was also a leading figure in the Ḥusayniyya-yi Irshād, an institution established in north Tehran in 1965 with the aim of gaining the allegiance of the secularly educated to Islam. The Ḥusayniyya-yi Irshād drew huge crowds to its functions, but Muṭahharī gradually and discreetly withdrew from its work, in large part because of differences of outlook, both ideological and political, with ʿAlī Sharīʿatī, another of its leading members.

The first overt sign of Muṭahharī's commitment to the struggle against the Shah's régime came when he

was imprisoned for forty-three days in the aftermath of the uprising of 15 Khurdād 1342/6 June 1963. After his release, he participated actively in the various organisations that sought to maintain the momentum which the uprising had created, most importantly the *Djāmiʿa-yi Rūḥāniyyat-i Mubāriz* ("Society of Militant Clergy"). He remained in contact with Āyatullāh Khumaynī throughout his fourteen-year exile, visiting him occasionally in Nadjaf and then, in the months leading up to the triumph of the revolution, at Neauphle-le-Château near Paris. He was accordingly named to the *Shawrā-yi Inḳilāb-i Islāmī* ("Council of the Islamic Revolution") which administered the country after the overthrow of the Shah in February 1979, in uneasy tandem with the provisional government headed by Mahdī Bāzargān. A few months later, on 1 May 1979, Muṭahharī was assassinated in Tehran by adherents of Furḳān, a group which espoused a radically modernistic reinterpretation of Shīʿī doctrine and saw in Muṭahharī its most formidable opponent. Muṭahharī was eulogised by Khumaynī as "a part of my flesh" and buried in Ḳum.

Muṭahharī left behind a large and varied corpus of writing, much of it marked by his training as a theologian and philosopher and his devotion to the works of Mullā Ṣadrā. He was also guided, however, by the desire to present Islam as a coherent world-view (*djahānbīnī*) in the modern sense, and to clarify questions that had become controversial or a source of misunderstanding (such as the rights of women in Islam).

Bibliography: (a) Life: M. Hoda, *In memory of Martyr Mutahhari*, Tehran 1982; Muḥammad Wāʿiẓ-zāda Khurāsānī, *Sayrī dar zindagī-yi ʿilmī wa inḳilābī-yi Ustād-i Shahīd Murtaḍā Muṭahharī*, in *Yādnāma-yi Ustād-i Shahīd Murtaḍā Muṭahharī*, ed. ʿAbd al-Karīm Surūsh, Tehran 1360 sh./1981, 319-80; ʿAlī Rabbānī Khalkhālī, *Shuhadā-yi Rūḥāniyyat-i Shīʿa dar yakṣadsāla-yi akhīr*, Ḳum, 1402/1982, i, 345-52; Mudjtabā Muṭahharī, *Zindagī-yi pidaram*, in *Ḥarakat* (journal of the students at the Tehran Faculty of Theology), no. 1 (n.d.), 5-16. (b) Writings: The following may be counted as Muṭahharī's principal works: *Uṣūl-i falsafa wa rawish-i riʾālīsm*, i-iii, v (1332-50 sh./1953-71); *Dāstān-i rāstān*, 2 vols. (1339-40 sh./1960-61); *Niẓām-i ḥuḳūḳ-i zan dar Islām* (1345 sh./1966); *Khadamāt-i mutaḳābil-i Islām wa Īrān* (1346 sh./1967); *ʿAdl-i ilāhī* (1349 sh./1970); *ʿIlal-i girāyish ba māddīgarī* (1350 sh./1971); *Muḳaddima bar djahānbīnī-yi Islāmī*, 3 vols. (1357 sh./1978). For a complete list of his writings, see anon., *Fihrist-i āthār-i ustād-i Shahīd Murtaḍā Muṭahharī*, in *Yādnāma-yi Ustād-i Shahīd Murtaḍā Muṭahharī*, 435-552. Many of Muṭahharī's writings have been translated into a variety of European, Asian and African languages, chiefly under the auspices of the Iranian Ministry of Islamic Guidance; the translations vary widely in quality. (HAMID ALGAR)

MUTAKALLIM [see KALĀM]

MUTAḲĀRIB (A.), the name of the fifteenth metre in Arabic prosody [see ʿARŪḌ]. It comprises, in each hemistich, four feet made up of one short and two longs (*faʿūlun*). A certain number of licences are possible, in particular, the omission of the fourth foot, the shortening or even the cutting out of the third syllable of a foot, etc.

Bibliography: M. Ben Cheneb, *Tuḥfat al-adab*[3], Paris 1954, 87-93. (ED.)

MUTAKĀWIS [see ḲĀFIYA].

AL-**MUTALAMMIS**, surname given to an Arab poet who lived in the 6th century A.D., belonged to the tribe of Ḍubayʿa and was called Djarīr b. ʿAbd al-Masīḥ; another name, ʿAbd al-ʿUzzā, given to his father in some sources, appears to signify that this polytheist had been the first of his family to convert to Christianity.

Al-Mutalammis was the maternal uncle of Ṭarafa [*q.v.*], and both figure in a narrative which may contain only an essence of truth but that the philologists and anthologists of the Middle Ages considered to be a trustworthy account of a series of perfectly authentic deeds. According to the tradition, the uncle and nephew had frequented the court of al-Ḥīra [*q.v.*] and gained the favour of ʿAmr b. Hind (554-69 A.D. [see LAKHMIDS]), with whom they had become familiar; nevertheless, some satirical verses had irritated the king who, in order to seek vengeance, entrusted to each of them a sealed letter addressed to al-Mukaʿbar, governor of Baḥrayn, giving them to understand that, on the receipt of the letters, the latter would bestow on them valuable presents on his behalf. On their way, but not far from al-Ḥīra, the two poets saw an old man who, all at the same time, answered a call of nature, ate a piece of bread and deloused himself. As al-Mutalammis treated him as insane, the man defended himself by saying: "Why do you find me insane? I expel the bad, introduce the good and kill an enemy", then he added: "More foolish than myself (*aḥmaḳ min-nī*, note the elative) is one who holds in his hand the instrument of his destruction". The poet hesitated to take this statement seriously, when, seized with doubt, he came upon a young ʿIbādī from al-Ḥīra who, questioned as to whether he knew how to read, replied in the affirmative; he then gave the letter, after unsealing it, to the young boy who read the following sentence: "After the customary salutations, when al-Mutalammis reaches you, cut off his hands and feet and bury him alive". Ṭarafa, incredulous, refused to imitate his uncle and rushed to his deadly fate. Al-Mutalammis, however, threw his letter into the nearby river (the Ḳāfir: see Yāḳūt, iv, 228 ff., where there is once more an account of the whole story) and made for Boṣrā [*q.v.*], where he lived until his death (in 580, according to the reckoning of P. Cheikho). From this legend, the Arabs have derived a proverbial saying, *ṣaḥīfat al-Mutalammis*, corresponding to the expression "Bellerophon's letter", to designate a letter containing the order to kill (or at least torture) the one who is entrusted with carrying it to its addressee.

The mediaeval philologists who report the narrative make al-Mutalammis ask the young man the following simple question: *yā ghulām, a-taḳraʾ?* without troubling to identify the writing used. Now the authors of this popular tale certainly did not think of the problem that it would pose, for they lived in a period when Arabic writing was sufficiently widespread and when it was easy to commit an anachronism. In any case, if one takes as a historical fact the plot of the narrative, it is evident that al-Mutalammis was illiterate, and there appears to be no reason to follow the suggestion of A.F.L. Beeston who [see MUSNAD] proposes considering that he only knew the Bedouin (South Semitic) writing and was not able to read the primitive Arabic writing (that the king or his scribe had supposedly used).

Al-Mutalammis is said to owe his surname, like many other poets, to a verse of his own composition which runs: "Here is the time when, in the wooded valley, are reborn the common flies, wasps and insistent (*mutalammis*) bluebottles". He is described as not very productive (*muḳill*) and placed for this reason in the seventh class of pre-Islamic *fuḥūl* by Ibn Sallām

(*Ṭabaḳāt fuḥūl al-shuʿarāʾ*, Cairo n.d., 131-2). His works, some fragments of which are cited in a considerable number of sources, were none the less of interest at an early date to the most reputable philologists, notably al-Aṣmaʿī, Abū ʿUbayda, Ibn al-Kalbī and ibn al-Sikkīt. They were collected in a *Dīwān* that K. Vollers published and translated into German in 1903 in Leipzig (a more recent edition was published by Ḥasan Kāmil al-Ṣayrafī, Cairo 1390/1970). Modern historians of Arabic literature, when they come to cite this poet, devote only a brief notice to him, for he is outshone by his nephew, whose renown is certainly much greater. In one of his poems, he calls for revenge for the latter's death (metre *kāmil*, rhyme *-dī*) and naturally attacks ʿAmr b. Hind, the affair of the *ṣaḥīfa* having inspired him to a great extent in his work. He is credited with a certain number of original *maʿānī* [see MAʿNĀ. 3] and proverbial sayings derived from his verses, including a *hidjāʾ* [*q.v.*] of ʿAmr (metre *ṭawīl*, rhyme *-mā*) provoked by accusations relating to his belonging to the Ḍubayʿa or Yashkur (his mother's tribe). R. Blachère (*HLA*, ii, 295-6) describes him as a "tribal poet" and judges the form of his compositions as "not very mannered". The fact is that, for example, the language of a poem which has attracted the attention of the anthologists (metre *ṭawīl*, rhyme *-sū*) is relatively simple; however, another *sīniyya* (metre *basīṭ*, rhyme *-ī/ūsū*) replying to a supposed prohibition on his returning to ʿIrāḳ and "devouring the corn" of the land, decreed by ʿAmr b. Hind, presents variants and inspires such divergent interpretations that one has the impression that the transmitters and commentators did not understand it. Probably a tribal, hence Bedouin, poet who, however, describes a male camel as a *ṣayʿariyya*, term reserved for female camels (metre *ṭawīl*, rhyme *-mī*) and earns the taunts of his fellows who say of him *instanwaḳa 'l-djamal* "He made the male camel into a female", but it is true that the verse in question is also attributed to al-Musayyab b. ʿAlas (*e.g.*, in *LA*, root ṣ-ʿ-r).

Bibliography: The richest source is the *Aghānī* (xxi, 185-8, 198-205; Beirut ed., xxiii, 524-72), whose data was taken and greatly augmented by L. Cheikho (*Shuʿarāʾ al-Naṣrāniyya*, 330-49, with a list of sources used). Apart from the references cited in the art., one may give Djāḥiẓ, *Bayān*, i, 375, iii, 38, 60; idem, *Ḥayawān*, ii, 85, iii, 47, 136, 391, iv, 263, v, 561; Ibn Ḳutayba, *Shiʿr*, 85-8, 91 = Cairo ed. 131-6, 142; Abū Tammām, *Ḥamāsa*, Cairo n.d., 272-5; Ibn al-Kalbī-Caskel, Tab. 173 and ii, 258; Masʿūdī, *Murūdj*, index; Maydānī, *Amthāl*, Cairo 1352, i, 412-14 (on the saying *ṣaḥīfat al-Mutalammis*); Ibn Nubāta, *Sarḥ al-ʿuyūn*, Cairo 1383/1964, 233, 397-400; Baghdādī, *Khizāna*, Būlāḳ ed., i, 446, iii, 73, iv, 214-16; R. MUʿTAMAD KHĀN, MUḤAMMAD SHARĪF, KHWĀDJA TAḲĪ (?-1049/?-1639), Mughal Indian commander and imperial historian.

He was born into an obscure family in Persia, but coming to India, he attained high honours in the reigns of Djahāngīr and Shāh Djahān. He received in the third year of Djahāngīr a military command and the title of Muʿtamad Khān. Subsequently, he joined prince Shāh Djahān in his campaign in the Deccan as a *bakhshī* (paymaster). On his return to court, in the 17th year of Djahāngīr's reign (1031/1622), he was entrusted with the duty of writing the Emperor's memoirs. He attained a higher rank in the service of Shāh Djahān and was appointed *mīr bakhshī* (adjutant-general) in the 10th year of the new reign. He died in 1049/1639. He is the author of a history called *Iḳbāl-nāma-yi Djahāngīrī*, in three volumes: 1. the history of Akbar's ancestors; 2. Akbar's reign (numerous mss.); 3. the reign of Djahāngīr (printed in the *Bibliotheca Indica*, Calcutta 1865, Lucknow, 1286/1869-70, etc.).

Bibliography: *Maʾāthir al-umarāʾ*, iii, 431; *Tuzuk-i Djahāngīrī*, 352; *JRAS*, N.S., iii, 459; Elliot and Dowson, *History of India*, vi, 400; Ibn Hasan, *The central structure of the Mughal empire*, repr. Karachi 1967, index s.v.; M. Athar Ali, *The apparatus of empire*, Delhi 1985, index at p. 355 s.v. Khwāja Taqī; Storey, i, 557, 560-2, 564-5, 1316.

(M. HIDAYET HOSAIN*)

MUʾTAMAR (A.), conference or congress. In the modern Islamic context, the term refers to the convening of Muslims from throughout the world in order to deliberate over common concerns. In the course of the 20th century, Muslim conferences emerged as the organised, modern expression of the deeper sentiment of Muslim solidarity.

The idea of convening Muslims in conferences first gained currency in the late 19th century. The advent of easy and regular steamer transport accelerated the exchange of ideas among widely separated Muslims, and made feasible the periodic assembling of representatives. The idea also appealed to Muslim reformists, who sought a forum to promote and sanction the internal reform of Islam. Such an assembly, they believed, would strengthen the ability of Muslims to resist the encroachments of Western imperialism.

A number of émigré intellectuals in Cairo first popularised the idea in the Muslim world. In 1900, one of them, the Syrian ʿAbd al-Raḥmān al-Kawākibī [*q.v.*], published an influential tract entitled *Umm al-Ḳurā*, which purported to be the secret protocol of a Muslim congress convened in Mecca during the pilgrimage of 1316/1899. The imaginary conference culminated in a call for a restored Arab caliphate, an idea then in vogue in reformist circles. Support for such a conference also became a staple of the reformist journal *al-Manār*, published in Cairo by Rashīd Riḍā [*q.v.*]. The Crimean Tatar reformist Ismāʿīl Gasprali (Gasprinski) [see GASPRALI] made the very first concrete initiative in Cairo, where he unsuccessfully worked to convene a "general" Muslim congress in 1907-8.

Al-Kawākibī's book, Riḍā's appeals, and Gasprali's initiative all excited the suspicion of Ottoman authorities. In Istanbul it was believed that a well-attended Muslim conference would fatally undermine the religious authority claimed by the Ottoman sultan-caliph. In particular, the Ottomans feared the possible transformation of any such conference into an electoral college for choosing an Arab caliph. Steadfast Ottoman opposition thwarted all of the early initiatives of the reformers.

In the void created by the final dismemberment of the Ottoman Empire, a number of Muslim leaders and activists moved to convene general Muslim conferences. In each instance, they sought to mark their causes or their ambitions with the stamp of Islamic consensus. In 1919, Muṣṭafā Kemāl [Atatürk] convened a Muslim conference in Anatolia in order to mobilise foreign Muslim support for his military campaigns. During the pilgrimage season of 1342/1924, King Ḥusayn b. ʿAlī of the Ḥidjāz summoned a "pilgrimage conference" in Mecca to support his claim to the caliphate — a manœuvre which failed to stall the relentless advance of ʿAbd al-ʿAzīz Ibn Saʿūd. Following Ibn Saʿūd's occupation of Mecca,

he convened his own "world" conference during the pilgrimage season of 1344/1926. The leading clerics of al-Azhar in Cairo convened a "caliphate congress" in Cairo in 1926, to consider the effects of the Turkish abolition of the caliphate two years earlier. The conference was supported by King Fu'ād [*q.v.*], who reputedly coveted the title of caliph, but no decision issued from the gathering. In 1931, Amīn al-Ḥusaynī [*q.v.* in Suppl.], *Muftī* of Jerusalem, convened a "general" conference of Muslims in Jerusalem, to secure foreign Muslim support for the Arab struggle against the British Mandate and Zionism. And in 1935, the pan-Islamic activist Shakīb Arslān convened a conference of Europe's Muslims at Geneva in order to carry the protest against imperialism to the heart of Europe. Each of these conferences resolved to create a permanent organisation and to convene additional conferences. But all such efforts were foiled by internal rivalries and the intervention of the European powers.

With the spread of political independence after the Second World War, several Muslim leaders floated new plans for the creation of a permanent organisation of Muslim states. Pakistan took a number of initiatives in the late 1940s and early 1950s, but soon encountered stiff opposition from Egypt, which gave primacy of place to pan-Arabism and the Arab League. When Djamāl ʿAbd al-Nāṣir [*q.v.* in Suppl.] of Egypt transformed pan-Arabism into a revolutionary doctrine, Saʿūdī Arabia sought to counter him by promoting a rival pan-Islamism, and assembling conferences of Muslim activists and *ʿulamā'* from abroad. In 1962, the Saʿūdī government sponsored the establishment of the Mecca-based Muslim World League, which quickly built a wide network of Muslim clients. Beginning in 1964, Egypt responded by organising large conferences of Egyptian and foreign *ʿulamā'* under the auspices of al-Azhar's Academy of Islamic Researches. These rival bodies then convened a succession of dueling conferences in Mecca and Cairo, each claiming the sole prerogative of defining Islam. In 1965-6, King Fayṣal b. ʿAbd al-ʿAzīz launched a campaign for an Islamic summit conference, which would have balanced the Arab summits dominated by Egypt. However, ʿAbd al-Nāṣir had sufficient influence to thwart the initiative, which he denounced as a foreign-inspired "Islamic pact" designed to defend the interests of Western imperialism.

Israel's 1967 defeat of Arab armies and occupation of Jerusalem eroded faith in the brand of Arabism championed by Egypt, and inspired a return to Islam. This set the scene for a renewed Saʿūdī initiative. In September 1969, following an arsonist's attack against the Aḳṣā Mosque in Jerusalem, Muslim heads of state set aside their differences and met in Rabat in the first Islamic summit conference. King Fayṣal took this opportunity to press for the creation of a permanent organisation of Muslim states. The effort succeeded, and in May 1971, the participating states established the Organisation of the Islamic Conference (O.I.C.; *Munaẓẓamat al-mu'tamar al-islāmī*). The new organisation, with headquarters in Djudda (pending the liberation of Jerusalem), adopted its charter in March 1972.

The O.I.C. eventually earned a place of some prominence in regional diplomacy, principally through the organisation of triennial Islamic summits and annual conferences of the foreign ministers of member states. The O.I.C.'s activities fell into three broad categories. First, it sought to promote solidarity with Muslim states and peoples which were locked in conflict with non-Muslims. Most of its efforts were devoted to the causes of Palestine and Jerusalem, although it supported Muslim movements from Eritrea to the Philippines. Second, the organisation offered mediation in disputes and wars between its own members, although its effectiveness was greatly limited by the lack of any force for peace-keeping or truce supervision. Finally, the O.I.C. sponsored an array of subsidiary and affiliated institutions to promote political, economic and cultural co-operation among its members. The most influential of these institutions was the Islamic Development Bank, established in December 1973 and formally opened in October 1975. The bank, funded by the wealthier O.I.C. states, financed development projects while adhering to Islamic banking practices.

The O.I.C. represented the culmination of governmental efforts to organise Muslim states. But it did not end moves by individual states to summon international conferences of supportive *ʿulamā'*, activists and intellectuals. Saʿūdī Arabia and Egypt, realigned together on the conservative end of the Islamic spectrum, increasingly co-operated in mounting large-scale Muslim conferences. Their rivals, revolutionary Iran and Libya, did the same. Divisive events, such as the war between Iran and ʿIrāḳ (1980-8) and the killing of 400 Iranians in Mecca during the pilgrimage season of 1407/1987, produced conferences and counter-conferences, each claiming to express the verdict of united Islam. Leaders of Muslim opposition movements also met in periodic conferences, often on the safe ground of Europe. Less than a century after al-Kawākibī's fantasy, a crowded calendar of conferences bound together the world of Islam as never before. But it remains uncertain whether these often competing institutions would bridge the differences between Muslims or would serve to widen them.

KRAMER)

AL-**MUʿTAMID ʿALĀ 'LLĀH**, Abu 'l-ʿAbbās Aḥmad b. Djaʿfar, ʿAbbāsid caliph (256-79/870-92), son of al-Mutawakkil [*q.v.*] and a slave-girl from Kūfa called Fityān.

He seems to have had no political experience before being chosen as caliph in Radjab 256/June 870 on the

death of his nephew al-Muhtadī [*q.v.*] and he was never able to build up an independent power base. For most of his reign he remained a figurehead in Sāmarrāʾ while effective power was exercised by his brother Abū Aḥmad, who took the quasi-caliphal title of al-Muwaffaḳ [*q.v.*]. Al-Muʿtamid was able to appoint his own *wazīr*, ʿUbayd Allāh b. Yaḥyā b. Khāḳān [see IBN KHĀḲĀN], who had previously served his father al-Mutawakkil. After ʿUbayd Allāh's death in 262/877, he was succeeded by Sulaymān b. Wahb and then by Ismāʿīl b. Bulbul. In Shawwāl 261/July 875 he arranged the succession, designating his son Djaʿfar al-Mufawwaḍ as heir-apparent and governor of the west and his brother al-Muwaffaḳ as next in line to the throne and governor of the east, but it does not seem that al-Mufawwaḍ exercised any real authority. The threat posed by the Zandj [*q.v.*] in southern ʿIrāḳ and the upheavals caused by the rise of the Ṣaffārids [*q.v.*] in Persia meant that power lay with al-Muwaffaḳ, the only member of the ʿAbbāsid family to command the allegiance of the Turkish military.

The limits of the caliph's independence were clearly demonstrated in 269/882-3 when he tried to leave Sāmarrāʾ and take refuge with Aḥmad b. Ṭūlūn [*q.v.*], ruler of Egypt and Syria. He set off to meet Ibn Ṭūlūn's envoys in Raḳḳa, but al-Muwaffaḳ's right hand man, Saʿīd b. Makhlad, wrote to Isḥāḳ b. Kundādj, governor of Mawṣil, with orders to detain him. His followers were arrested and stripped of their estates, and he was returned to Sāmarrāʾ under escort to stay in the Djawsaḳ palace. To add to his humiliation, he was obliged to denounce Ibn Ṭūlūn and assign Egypt to Isḥāḳ b. Kundādj, who, however, made no real attempt to take it. Towards the end of 269/May-June 883 he was obliged to come south to Wāsiṭ, where his brother could keep a closer eye on him, but the next spring (Shaʿbān 270/March 884) he was allowed to return via Baghdād to Sāmarrāʾ. He does not seem to have left it again until Ṣafar 278/April 892, when he and his sons came to Baghdād having heard that al-Muwaffaḳ was ill. His brother's death did not, however, allow al-Muʿtamid to gain real power, which passed directly to the dead man's son, al-Muʿtaḍid. Al-Muʿtamid died in Baghdād in Radjab 279/October 892 aged about 50, apparently as a result of a surfeit of drink and food. It is impossible to know whether he would have made an effective caliph in different circumstances; but he seems to have been naive and ineffective, and after his death, his unfortunate son al-Mufawwaḍ was easily swept away by his ruthless cousin al-Muʿtaḍid [*q.v.*].

AL-**MUʿTAMID IBN ʿABBĀD**, the *laḳab* or honorific by which the third and last ruler of the dynasty of the ʿAbbādids [*q.v.*] in Seville [see ISHBĪLIYA] in the 5th/11th century is best known; his full and real name was MUḤAMMAD B. ʿABBĀD AL-MUʿTAḌID [*q.v.*] B. MUḤAMMAD B. ISMĀʿĪL IBN ʿABBĀD.

1. Life. While still a boy—barely 13, having been born in 431/1040—he was placed by his father in nominal command of an expedition against Silves (Ar. Shilb [*q.v.*]), then in the possession of Ibn Muzayn, and this town was taken by assault as was Santa Maria de Algarve soon after (Ar. Shantamariyyat al-gharb [*q.v.*], now Faro) which was held by Muḥammad b. Saʿīd Ibn Hārūn (444/1052). The young ʿAbbādid prince was then appointed by his father governor of these two towns. His elder brother Ismāʿīl having been executed in punishment for his rebellion (455/1063; cf. AL-MUʿTAḌID), Muḥammad al-Muʿtamid became heir-presumptive to the throne of Seville. A little later, the army which he was leading to the help of the Arabs of Malaga, who had rebelled against the tyranny of Bādīs b. Ḥabbūs, the Berber ruler of Granada of the Zīrid [*q.v.*] dynasty, was routed by the latter and al-Muʿtamid had to take refuge in Ronda [see RUNDA] to which his father, at first very angry at his failure, finally sent him his forgiveness. When the powerful ruler of Seville died in 461/1069, his son succeeded to a considerably extended kingdom which included the greater part of the southwest of the Iberian peninsula.

Early surrounded by men of letters and poets, al-Muʿtamid followed their teaching sessions and made for himself a very honourable place in the history of Arabic literature in Spain (see 2. below). It is likely that Ibn Zaydūn (d. 463/1070) [*q.v.*] taught him the rules of Arabic poetry before becoming vizier; this same function was to be exercised by his son Abū Bakr Ibn Zaydūn from 478 to 484/1085-91, after the disgrace of Ibn ʿAmmār (d. 479/1086 [*q.v.*]). A whole series of more or less romantic episodes, in which the latter plays an extremely influential role, are attached to the life and reign of al-Muʿtamid. His relations with a young slave girl, al-Rumaykiyya, who was herself gifted with considerable poetic talent, have also been the subject of much literary embellishment. It was from the surname of this young woman, Iʿtimād, that al-Muʿtamid is said to have adopted his own name, which comes from the same root. She became his favourite wife and presented him with several sons. As to Ibn ʿAmmār, exiled by al-Muʿtaḍid, he was recalled on the accession of his patron to Seville, from which he went at his own request to be governor of Silves before being appointed grand vizier.

In the second year of his reign, al-Muʿtamid was able to annex to his kingdom the principality of Cordova (Ḳurṭuba [*q.v.*]), over which the Djahwarids had been ruling, in spite of efforts of the king of Toledo, al-Maʾmūn [*q.v.*]. The young prince ʿAbbād was appointed governor of the old capital of the Umayyads. But at the instigation of the king of Toledo, an adventurer named Ibn ʿUkāsha was able in 468/1075 to take Cordova by surprise and put to death the young ʿAbbād and his general Muḥammad b. Mārtīn. Al-Maʾmūn took possession of the town, where he died six months later. Al-Muʿtamid, whose paternal affection had been wounded and pride insulted, tried for three years vainly to reconquer Cordova. He was not successful until 471/1078; Ibn ʿUkāsha was put to death and the part of the kingdom of Toledo between the Guadalquivir and the Guadiana conquered by the armies of Seville. Nevertheless, it took all the skill of the vizier Ibn ʿAmmār to conclude peace by paying double tribute with Alfonso VI of Castile when he sent an expedition against Seville.

This was just the time when, through the energy and tenacity of the Christian princes taking advantage of the feuds which were setting the Muslim rulers of the *taifas* [see MULŪK AL-ṬAWĀʾIF. 2.] against one another, the *reconquista*, which had received a check and then a setback from the last Umayyads, resumed its advance on the south of the Peninsula. In spite of their successes, of which the Muslim chroniclers make a

great deal, it must not be forgotten that by the middle of the 5th/11th century, many Muslim dynasties of Spain were being forced to seek by payment of heavy tribute the temporary neutrality of their Christian neighbours. Shortly before the taking of Toledo [see ṬULAYṬILA], which had far-reaching effects, by Alfonso VI in 478/1085, al-Muᶜtamid began to be involved in serious difficulties. On the imprudent advice of his vizier Ibn ᶜAmmār, he tried to add to his kingdom, after the principality of Cordova, that of Murcia [see MURSIYA], which was ruled by a prince of Arab origin, Muḥammad b. Aḥmad Ibn Ṭāhir. In 471/1078, Ibn ᶜAmmār went to the Count of Barcelona, Ramon Berenguer II, and asked him for assistance to conquer Murcia in return for a payment of 10,000 *dīnārs*; until this sum was paid al-Ras͟hīd, a son of al-Muᶜtamid, was to remain as hostage. After animated negotiations which ended in the payment of a sum three times as large to the Count of Barcelona, Ibn ᶜAmmār resumed his plan of conquering Murcia, and soon succeeded in doing so with the help of the lord of the castle of Bild͟j (now Vilches), Ibn Ras͟hīḳ [*q.v.*]. In Murcia, however, Ibn ᶜAmmār soon rendered himself obnoxious to his master by assuming the attitude of an independent ruler, and on al-Muᶜtamid's reproaching him he replied by insults to the king of Seville, his wife and his sons. Betrayed by Ibn Ras͟hīḳ, he had to take refuge in Murcia and then successively in Leon, Saragossa and Lerida. Returning to Saragossa, he endeavoured to assist its ruler al-Muʾtamin Ibn Hūd [*q.v.*] on his expedition against Segura [see S͟HAḲŪRA], but he was taken prisoner and handed over to al-Muᶜtamid, who in spite of the bonds of friendship which had so long linked them together, slew him with his own hand.

In the meanwhile, Alfonso VI was no longer concealing his designs on Toledo, the siege of which he began in 473/1080. Two years later, when he sent a mission to enforce payment of the annual tribute due to him from al-Muᶜtamid, its members were insulted and the Jewish treasurer Ibn S͟halīn who accompanied it was put to death because he had refused to accept debased money. He therefore invaded the kingdom of Seville, sacked the flourishing towns of Aljarafe (Ar. al-S͟haraf [*q.v.*], advanced through the district of Sidona (Ar. S͟had͟hūna [*q.v.*]) as far as Tarifa [see ṬARĪF], where he uttered his celebrated remark expressing his pride at having reached the utmost limits of Spain.

The capture of Toledo by Alfonso VI dealt a serious blow to Islam in Spain. The king of Castile soon demanded of al-Muᶜtamid that he should surrender those of his lands which had formed part of the kingdom of the D͟hu 'l-Nūnids [*q.v.*] (a part of the modern provinces of Ciudad-Real and Cuenca). Throughout Muslim Spain, his demands, which increased every day, made the position very serious. In spite of their reluctance, the Muslim rulers in Spain, led by al-Muᶜtamid, were forced to seek the help of the Almoravid sultan Yūsuf b. Tās͟hfīn [see AL-MURĀBIṬŪN], who had just conquered the whole of Morocco in an irresistible advance. It was decided to send him an embassy consisting of the vizier Abū Bakr b. Zaydūn and the *ḳāḍīs* of Badajoz, Cordova and Granada. An agreement having been reached, not without difficulty, Yūsuf b. Tās͟hfīn crossed the Straits of Gibraltar and on 12 Rad͟jab 479/23 Oct. 1086 inflicted on the Christian troops the disastrous defeat of Zallāḳa [*q.v.*] not far from Badajoz. We need not recall here how Yūsuf b. Tās͟hfīn, recalled to Africa, could not follow up his victory as the Muslim rulers of Spain had hoped, who through the influence exercised by the Spanish *faḳīhs* on the Almoravid, soon lost all prestige in his eyes. After his departure, the Christians began again to harrass Muslim lands, to such an extent that al-Muᶜtamid had this time to go in person to Yūsuf b. Tās͟hfīn in Morocco to ask him to cross the Straits once more with his troops. Yūsuf consented and landed at Algeciras in the following spring (482/1090). He laid siege to the fortress of Aledo (Ar. Ḥiṣn Liyyīṭ) but without taking it; then stimulated by popular feeling and the advice of the *faḳīhs*, he came to the conclusion that it would be more advantageous for him to wage the *d͟jihād* in Spain on his own account and proceeded to dethrone and dispossess the princes who had sought his intervention. With this object, he sent an army to invade the kingdom of Seville under Sīr b. Abī Bakr, who at the end of 1090 took Tarifa, then Cordova, where one of al-Muᶜtamid's sons, Fatḥ al-Maʾmūn, who was in command of it, was killed, Carmona and then Seville, which was captured in spite of a heroic sortie by al-Muᶜtamid. The latter was taken prisoner by the Almoravid and sent with his wives and children first to Tangier, then to Meknès and, a few months later, to Ag͟hmāt [*q.v.*], near Marrākus͟h. There he led a miserable existence for several years until his death at the age of 55 in 487/1095.

The sad end of al-Muᶜtamid touched all his biographers, who are particularly numerous and expatiate on his natural gifts, poetical talents, generosity and chivalrous spirit. He is one of the most representative types of the enlightened Spanish Muslims of the Middle Ages, patrons of letters and scholarship, liberal and tolerant, but living in an atmosphere of luxury and ease little compatible with the care of a kingdom with frontiers open to envious neighbours on all sides. Not so great a ruler as his father al-Muᶜtaḍid, al-Muᶜtamid is however a much more attractive figure, perhaps just on account of his misfortunes. He is entitled to a place among the great figures of Spanish Islam, alongside of ᶜAbd al-Raḥmān III, al-Ḥakam II, al-Manṣūr b. Abī ᶜĀmir and, at a later date, Lisān al-Dīn Ibn al-K͟haṭīb.

Dozy, *Scriptorum arabum loci de Abbadidis*, Leiden 1846. Cf. also the long discussion of al-Muᶜtamid by Dozy in Bk. IV of his *Histoire des Musulmans d'Espagne*, new ed., Leiden 1932, iii; A. González Palencia, *Historia de la España musulmana*², Barcelona 1929, 77 ff.; E. Lévi-Provençal, *Inscriptions arabes d'Espagne*, Leiden-Paris 1931; A. Prieto Vives, *Los reyes de taifas* (mainly numismatic), Madrid 1926; S. K͟hāliṣ, *al-Muᶜtamid b. ᶜAbbād*, Bag͟hdād 1958; R. Souissi, *al-Muᶜtamid ibn ᶜAbbād* (in French), Tunis 1977; D. Wasserstein, *The rise and fall of the Party-Kings*, Princeton 1985, index. The life and touching end of al-Muᶜtamid were put on the stage in Cairo, by S͟hawḳī [*q.v.*] in *Amīrat al-Andalus*. He is also discussed in numerous monographs —mostly at second hand— composed in recent years in the east (mainly in Egypt) on the Islamic past of Spain. (E. LÉVI-PROVENÇAL)

2. As poet.

The mediaeval *dīwān* is lost, but a partial collection of his and his father's poems is appended to the ms.

dīwān of Ibn Zaydūn, and his poems are widely quoted in mediaeval sources; 188 monorhymed poems and one *muwashshah* are preserved (*Dīwān*, ed. R. Souissi, Tunis 1975; *Studies of the Research Institute of Hebrew Poetry*, ii [1936], 23; *al-Andalus*, xix [1954], 382; Mª Jesús Rubina Mata, *Poesias. Antología bilingüe*, Madrid 1982).

The extant poems are mostly short; several genres such as *madīh* addressed to a patron are wholly lacking and nature description nearly so. His production thus cannot be compared to that of the major poets of al-Andalus, but his poetry was highly regarded by mediaeval readers. To the period before al-Muʿtamid's deposition belongs all his lighter verse, mostly *ghazaliyyāt*, with some *khamriyyāt*, *wasf* poems and other verses. More sentimental than sensual (Souissi, *al-Muʿtamid et son œuvre poétique*, Tunis 1977, 8), the *ghazaliyyāt* are not particularly distinctive. They are addressed to both male and female beloveds, especially to his favourite Iʿtimād, including one with an acrostic of her name. His most characteristic early poems are those addressed to al-Muʿtaḍid, especially his masterpiece and longest extant poem, the *rāʾiyya* apologising for the loss of Malaga. Also much admired was another *rāʾiyya* addressed to Ibn ʿAmmār [*q.v.*], recalling their friendship in Silves.

The forty poems of his exile are distinctive and personal, reflecting the stages by which al-Muʿtamid grappled emotionally with imprisonment. Some are self-pitying laments comparing his opulent past with his present misery; tears and weeping are prominent themes, and occasional angry outbursts at fate. In others he urges himself to *ṣabr*, reflecting on his clan's *muruwwa*, and on the inexorability of fate. Religious themes also provide consolation. Warm poems are addressed to visitors; poignant are those addressed to the ravens of Aghmāt, to his chains, and a poem written as his own epitaph.

Al-Muʿtamid employs a simple vocabulary, but he exploits all the rhetorical figures, especially antithesis and various kinds of *tadjnīs*. Enjambment is unusually frequent, and his poems generally seem to be planned structures rather than mere aggregations of separate verses.

(R.P. SCHEINDLIN)

AL-**MUʾTAMIN** IBN HŪD, YŪSUF B. AḤMAD (al-Muktadir). Hūdid [*q.v.*] ruler of the *taifa* state [see MULŪK AL-ṬAWĀʾIF. 2.] of Saragossa (Sarakusṭa [*q.v.*]), in al-Andalus [*q.v.*], during the 5th/11th century. The date of the beginning of his reign is obscure: it may have started in 474/1081-2, but we have coins of his predecessor, his father al-Muktadir, dated apparently 475/1082-3, and Vives at the end of the last century even reported a coin of al-Muktadir in the University of Valencia dated as late as 476/1083-4 (though Prieto, in 1926, does not record the type). The end of his reign is equally obscure, but he appears to have been succeeded in 476/1083-4 by a son, Aḥmad Sayf al-Dawla al-Mustaʿīn II (his coins begin in that year); however, there are reports indicating that al-Muʾtamin was still ruling two years later. Ibn ʿAmmār [*q.v.*], the poet and politically ambitious servant of the ʿAbbādids [*q.v.*], took refuge at his court and served him for a time, before being captured and returned to Seville (Ishbīliyya [*q.v.*]). Al-Muʾtamin is reported to have had a strong interest in mechanical instruments and to have written a book (now lost), *K. al-Istikmāl wa 'l-manāẓir*, on mathematics; we also have a few lines of verse by him and some lines of ornate prose which may be by him.

(D.J. WASSERSTEIN)

MUTAMMIM B. **NUWAYRA**, a poet, contemporary with the Prophet. He was the brother of Mālik b. Nuwayra [*q.v.*], chief of the Banū Yarbūʿ, a large clan of the Banū Tamīm. Mutammim owes his fame to the elegies in which he lamented the tragic death of his brother Mālik (gathered together at the opening of the 3rd/9th century by Wathīma b. Mirsāl, see Yākūt, *Udabāʾ*, xix, 248; whilst his *dīwān* was put together by Abū ʿAmr al-Shaybānī, al-Aṣmaʿī and al-Sukkarī, see *Fihrist*, 158), and these poems have made the latter's name immortal. The Arabs said there was nothing comparable to these elegies, overflowing with emotion [see MARTHIYA]. They regarded their author as the type of brotherly devotion.

Mutammim does not seem to have played any prominent part before the *Hidjra*. He was eclipsed by the striking personality of his brother, to whose qualities he never hesitated to pay homage. He is represented as having been of unprepossessing appearance, one-eyed and short in stature. The Bakrī chief al-Ḥawfazān eulogised the humanity with which Mutammim treated him during his captivity. Falling in his turn into the hands of the Banū Taghlib, Mutammim was delivered by a stratagem devised by his brother. He seems to have adopted Islam at the same time as his brother. Like the latter, he is numbered among the Companions, although we never find him in direct relations with the Prophet. He escaped from the disaster in which Mālik was overwhelmed; a few fragments of other poems suggest he did not write elegies exclusively.

But after the death of Mālik he devoted himself to celebrating his memory and demanding vengeance for his death. Refused by the caliph Abū Bakr, he thought he might have more success on the accession of ʿUmar. He hurried to Medina where he was very well received by ʿUmar. The latter listened with delight to his elegies, regretted that he himself had not the gift of poetry so that he might worthily celebrate his brother Zayd who had fallen in the wars of al-Yamāma, but he refused to reverse Abū Bakr's decision and limited himself to dismissing Khālid b. al-Walīd, a step which probably owed something to the poetical exhortations of Mutammim.

After this, tradition says that the poet became almost blind through weeping, and that he wandered over the many routes of Arabia, uttering his complaints everywhere. He found himself abandoned by his wives who became tired of his incurable sadness and wandering life. He left two sons Dāwūd and Ibrāhīm, also poets. He survived ʿUmar if, as Ibn Khallikān says (ed. Wüstenfeld, no. 792), he is really

the author of an elegy on the death of this caliph.

(H. Lammens)

al-**MUTANABBĪ**, "he who professes to be a prophet", the surname by which the Arab poet Abu 'l-Ṭayyib Aḥmad b. al-Ḥusayn al-Djuʿfī is usually known (cf. in Ibn Khallikān, *Wafayāt*, Cairo 1310, i, 36, two genealogies, which do not agree, going back to his great-grandfather). Abu 'l-Ṭayyib was born in Kūfa in 303/915 in the Kinda quarter, whence the ethnic al-Kindī sometimes given him. His family, although in very humble circumstances, claimed descent from the Yamanī clan of the Djuʿfī, and he himself all his life was convinced of the superiority of the Arabs of the South over those of the North (cf. al-Wāḥidī, *Sharḥ Dīwān al-Mutanabbī*, ed. Dieterici, 48-9; al-Yāzidjī, *al-ʿArf al-ṭayyib*, 29 [these two works will be quoted as Wāḥ. and Yāz.]). The boy received his early education in his native town and soon distinguished himself by his intelligence, his prodigious memory and his precocity as a poet. He now passed under Shīʿī influences, perhaps Zaydī (cf. ʿAbd al-Ḳādir al-Baghdādī, *Khizāna*, i, 382, 12 = ed. 1348/1929-30, ii, 303, where the editor proposes however to read *ʿarabiyya* instead of *ʿalawiyya*), which served as prelude to his philosophical development, a subject to which we shall return. Circumstances were however to accelerate the speed of Abu 'l-Ṭayyib's religious development. Towards the end of 312/924, perhaps under pressure from the Ḳarmaṭians [see ḳarmaṭī] who had just taken and sacked Kūfa, Abu 'l-Ṭayyib and his family made a first stay of two years (cf. al-Samʿānī, *Ansāb*, 506b; al-Badīʿī, *al-Ṣubḥ al-munbī*, i, 6) in the Samāwa, the region lying between the Sawād of Kūfa in the east and Palmyrene in the west. The Banū Kalb, who led a nomadic life in these desert steppes (al-Hamdānī, *Djazīra*, 129), had been much cultivated by the Ḳarmaṭian *dāʿīs*. It is possible that the young poet at this time came into contact with some of these heretics. It is, however, not very probable, in view of his youth, that this first contact had any definite effect upon him. On the other hand, this stay among the Bedouins certainly gave Abu 'l-Ṭayyib that profound knowledge of the Arabic language of which he was later so very proud.

On returning to Kūfa, at the beginning of 315/927, Abu 'l-Ṭayyib seems to have decided to devote himself entirely to poetry. At this time, he most admired the great panegyrists of the preceding century, Abū Tammām and al-Buḥturī [*q.vv.*]. Like them and like the majority of his contemporaries, he saw in poetry a sure means of attaining wealth and power. He at once attached himself to a certain Abu 'l-Faḍl of Kūfa, to whom he dedicated a short piece (Wāḥ., 17-21; Yāz., 10-11). Though not yet a convert to Ḳarmaṭism, but in any case a complete agnostic—the praises which he allowed to be offered to him show this—this individual seems to have exercised a considerable influence on the religious and philosophical development of al-Mutanabbī (cf. also *Khizāna*, i, 382 = ii, 304). Prepared by the Shīʿī atmosphere in which he had passed his childhood and by the relations which he had had with the Ḳarmaṭians in the Samāwa, Abu 'l-Ṭayyib, in contact with his patron, cast off religious dogmas which he regarded as spiritual instruments of oppression. He then adopted a stoic and pessimistic philosophy, echoes of which are found throughout his work. The world is made up of seductions which death destroys (Wāḥ., 39, ll. 8-13; 162, ll.12-13; Yāz., 23, 97); stupidity and evil alone triumph there (Wāḥ., 161, ll. 8-10; Yāz., 97); the Arabs—representatives of a superior race in his eyes—are ill-treated in it by cowardly and barbarous foreigners (Wāḥ., 148, ll. 1-5; 160, ll. 2-6; Yāz., 87, 96). In contact with this world which lacks harmony, the consciousness of his talent, which Abu 'l-Ṭayyib possessed, developed rapidly; his vanity increased to a degree which is almost inconceivable (Wāḥ., 60; Yāz., 34). His Arab particularism, as with all anti-Shuʿūbīs [see shuʿūbiyya], incited him to attack foreign oppressors (Wāḥ., 58, ll. 30-1; Yāz., 33). This is why, by a contradiction from which he was hardly ever free, al-Mutanabbī was to covet all his life those riches and power which he scorned in his heart, while he stood out from the mass of his contemporaries by his rigid morality and austerity (cf. al-Badīʿī, *op. cit.*, i, 78-81).

At first, however, Abu 'l-Ṭayyib thought only of conquering the world by his poetic gifts, and in order to find a more favourable field for his activity he left Kūfa towards the end of 316/928, probably as a result of the town being again sacked by the Ḳarmaṭians. He was naturally attracted to Baghdād (cf. al-Badīʿī, *op. cit.*, i, 82-3), and there became the panegyrist of a compatriot of his, Muḥammad b. ʿUbayd Allāh al-ʿAlawī (Wāḥ., 6-7; Yāz., 3-4). From there he went to Syria. For two years he led the life of a wandering troubadour of the period (cf. Mez, *Renaissance des Islâms*, 256). It is impossible to follow him in his wanderings, for his *Dīwān*, our only guide, does not present his poems in a satisfactory chronological order. Some pieces of the period are addressed to Bedouin chiefs of the region of Manbidj [*q.v.*] (Wāḥ., 24-5, 38-9, 66-7; Yāz., 12-13, 22-3, 28-9); others are dedicated to the educated classes of Tripoli (Wāḥ., 88-9; Yāz., 19-20) and al-Lādhiḳiyya (Latakia) (cf. Wāḥ., 116-35; Yāz., 66-78). The poems of this period are hurriedly written and mediocre in quality, but traces of his real genius are already apparent. With the exception of a *marthiya* [*q.v.*] or elegy and some impromptu pieces, they are all *ḳaṣīdas* on neo-classical lines. The influence of Abū Tammām and al-Buḥturī preponderates.

In the course of this period of experiment, Abu 'l-Ṭayyib was irritated at not finding his merit recognised. Gradually, he looked forward to his dreams of domination being realised by violence (Wāḥ., 138, ll. 3-7; Yāz., 79). Finally, he abandoned the work of a paid panegyrist and, returning to al-Lādhiḳiyya, he began revolutionary propaganda, the nature of which has long been misunderstood. According to Oriental writers (al-Badīʿī, *op. cit.*, i, 25-30; Ibn al-Anbārī, *Nuzhat al-alibbāʾ*, 369), Abu 'l-Ṭayyib proclaimed himself a prophet in the Samāwa, was taken prisoner by the troops of al-Ikhshīd [*q.v.*] and then received his epithet of al-Mutanabbī. Kratschkowsky (*Mutanabbi i Abu l'Ala*, St. Petersburg 1909, 9-11) does justice to these traditions, without however taking full account of some clear allusions in the *Dīwān*. The latter contains pieces which prove beyond all possible doubt that a rebellion was led by al-Mutanabbī (cf. Wāḥ., 49-58, 86; Yāz., 28-33, 50). This rising, as usual at this period, must have been political as well as religious. The rising began in al-

Lādhiḳiyya and then extended to the western borders of the Samāwa, where the Banū Kalb constituted an element always ready to rebel. Without adhering to Ḳarmaṭism, al-Mutanabbī exploited its principles, which found only too ready an echo among the marauding Bedouins (Wāḥ., 57, ll. 22-3; Yāz., 32; allusion to the massacre of pilgrims by the Ḳarmaṭian Abū Ṭāhir, in 317/930). The ambiguity of the utterance of the rebel, the opportunism of his doctrines and his conception of the imāmate on Ḳarmaṭian lines, may have caused some misunderstanding of his preaching, since at this time any agitator was regarded as a Ḳarmaṭian. After some initial successes, al-Mutanabbī and his Bedouins were defeated; he was captured and imprisoned at Ḥimṣ (towards the end of 322/933). After a trial and two years' imprisonment (*Dīwān*, ms. Paris no. 3092, fol. 16a), Abu 'l-Ṭayyib was condemned to retract his errors and then set free. From his adventure he gained only the epithet of al-Mutanabbī and the conviction that poetry alone would lead him to the realisation of his ambitious dreams.

The poems composed by Abu 'l-Ṭayyib immediately before and during his rebellion are distinguished by spontaneity of inspiration, by the liberty which the poet takes with poetic frameworks and by the vigour of the style, which has a much more personal character than in his first "manner".

As soon as al-Mutanabbī had returned to his profession of panegyrist, he naturally resumed his wandering life (beginning of 325/937). For several years he led a precarious existence, and had to be content to sing the praises of undistinguished bourgeois and minor officials of Antioch, Damascus, Aleppo, etc., who paid him very badly (Wāḥ., 93-206; Yāz., 51-131; Yāḳūt, *Irshād*, v, 203). Little by little, however, his fame grew. At the beginning of 328/939, we find him becoming court poet to the *amīr* Badr al-Kharshānī [*q.v.*] (the Badr b. ʿAmmār of the *Dīwān*), governor of Damascus for the ex-*amīr al-umarā'* Ibn Rā'iḳ [*q.v.*], who had just taken possession of Syria. Of Arab origin, Badr was regarded by al-Mutanabbī as the Maecenas for whom he had been waiting so long. The panegyrics and occasional poems which are dedicated to this *amīr* reveal a sincere admiration for him and possess a sustained inspiration (Wāḥ., 206-45; Yāz., 132-63). These pieces and those that precede them, after Abu 'l-Ṭayyib's return to literature, constitute what might be called the third "manner" of the poet. With the exception of a poem on hunting in the style of Abū Nuwās [*q.v.*] (Wāḥ., 201-2; Yāz., 128-9) and a number of impromptu poems of no particular interest, al-Mutanabbī wrote only *ḳaṣīda*s during this period. He would seem then to have returned to his first "manner", if the work of this period did not show considerable progress in form.

The friendship between Badr and al-Mutanabbī lasted only about a year and a half, and as a result of intrigues of jealous rivals (Wāḥ., 253, ll. 13-16; Yāz., 169), Abu 'l-Ṭayyib, feeling no longer safe, sought refuge in the Syrian desert (Wāḥ., 251-2; Yāz., 168-9). There, the idea of rebelling again took possession of him (Wāḥ., 253-4; Yāz., 170-1). Fortunately, the departure of Badr for ʿIrāḳ enabled him to leave his hiding-place and resume his profession of panegyrist. He now sang the praises of several individuals of second rank (Wāḥ., 107-8, 284-348; Yāz., 60-1, 194-241). Finally, he succeeded in establishing himself at the Ḥamdānid court in Aleppo, where he became the official poet of the *amīr* Sayf al-Dawla [*q.v.*] at the beginning of 337/948.

From the literary point of view, the work of this period which runs roughly from the middle of 329/940, the date of the quarrel with Badr, to the beginning of 337/948, marks his fourth "manner", to which he remained faithful till his death. It is characterised by a compromise between the pure neo-classical tradition and a freer form which the poet had adopted in the poems of the period of his rebellion. Without rejecting the framework of the neo-classical *ḳaṣīda*, he reduces the erotic prelude to a minimum, sometimes even replacing it by a philosophical and lyrical opening which breathes his dreams, disillusionments and anger.

Al-Mutanabbī stayed nine years with Sayf al-Dawla. He was genuinely attached to this patron, who was in his eyes the personification of the ideal Arab chief, brave, magnanimous and generous. Sayf al-Dawla in his turn recognised the worth of his panegyrist, whom he overwhelmed with gifts and never treated with arrogance. Al-Mutanabbī accompanied him on his expeditions, and on returning to Aleppo sang of his exploits against the Byzantines and the Bedouins of the desert. In the brief intervals of leisure between the campaigns of the Ḥamdānid, the poet shared in the leisure of the court of Aleppo, devoting himself to improvisation and writing panegyrics as occasion arose (Wāḥ., 522-37; Yāz., 376-95) or laments (*marthiya*) on the deaths of relatives of Sayf al-Dawla (Wāḥ., 388-9, 408-9, 577-8; Yāz., 271-2, 286-7, 427-8). The difficult character of al-Mutanabbī and the repute which he enjoyed did not fail to gain him implacable enemies. A few devoted friends, like the poet al-Babbaghā' [*q.v.*], tried, it is true, to defend him, but their zeal could do nothing against the enmity of the hostile group led by the famous Abū Firās [*q.v.*]. Sayf al-Dawla at first paid no attention to the attacks made upon his favourite. When he grew tired of the poet's arrogance and his protection ceased, Abu 'l-Ṭayyib no longer felt his life safe, hence fled secretly from Aleppo with all his family and sought refuge in Damascus (end of 346/957).

Eastern critics are generally agreed that the poems composed by al-Mutanabbī during his stay with Sayf al-Dawla mark the highest point in his work. Although there is a certain degree of exaggeration in this, it is certain that the poet, while continuing his fourth "manner", reveals in the highest degree the mastery which he had acquired in his art during this period. Much more than Abū Firās, with whom he is often contrasted, he was able to depict the glories of Sayf al-Dawla's campaigns against the Byzantines. His verse, it is true, has not the charm of that of Abū Firās, but it is fuller and more epic in style.

From Damascus, Abu 'l-Ṭayyib went to Egypt and to al-Fusṭāṭ [*q.v.*], where he obtained the patronage of the Ikhshīdid regent Kāfūr [*q.v.*]. Al-Mutanabbī's career now reveals the necessities to which poets in the 4th/10th century had to submit. Deprived of moral and material independence, Abu 'l-Ṭayyib was forced to sing the praises of a patron for whom in his heart he felt only contempt. The panegyrics which he devoted to him barely conceal his regret at losing the favour of Sayf al-Dawla. They are somewhat forced, and contain points against Kāfūr (cf. al-Badīʿī, *op. cit.*, i, 125-6). The poet perhaps only agreed to celebrate this patron because the latter had promised him the governorship of Ṣaydā [*q.v.*] (cf. *ibid.*, i, 115). When he saw that these promises were not being fulfilled, he tried to gain the favour of another Ikhshīdid general, Abū Shudjāʿ Fātik (*ibid.*, i, 131-2), but the latter dying in 250/960 and relations with

Kāfūr becoming more strained, al-Mutanabbī had once more to decide to fly. On the day of the feast of sacrifice of this year, 20 January 962, after writing a satire on Kāfūr, he left al-Fusṭāṭ secretly, and crossing Arabia after great trials (cf. al-Badīʿī, *op. cit.*, i, 139-40), he reached ʿIrāḳ, spent some time in Kūfa and then settled in Baghdād. He perhaps thought of attaching himself to the famous Būyid vizier al-Muhallabī [*q.v.*], who had gathered a very brilliant court around him. He had, however, to abandon hope of this in face of the hostility to him evinced by poets and scholars established at the court of al-Muhallabī, such as Ibn al-Ḥadjdjādj [*q.v.*] and Abu 'l-Faradj al-Iṣfahānī [*q.v.*], author of the *Kitāb al-Aghānī*. During his stay here, as he had already begun to do in Egypt (cf. Ibn al-Faraḍī, *Taʾrīkh al-Andalus*, no. 453), al-Mutanabbī gave lectures in which he expounded to a group of friends the work he had done till that date (cf. al-Dhahabī, *Taʾrīkh al-Islām*, ms. Paris, no. 1581, fol. 265a). The year 353/964 was spent in this fashion. The poet perhaps also visited Kūfa about this time (cf. F. Gabrieli, *Vita di al-Mutanabbī*, 60, n. 4). At the beginning of 354/965, in any case, he left ʿIrāḳ and went via al-Ahwāz to Arradjān [*q.v.*] in Susiana, where he received the patronage of the Būyid vizier Ibn al-ʿAmīd [*q.v.*]. Al-Mutanabbī devoted some panegyrics to him (Wāḥ., 740-1; Yāz., 564-5), but then he left him to go to Shīrāz in Fārs, where he joined the Būyid ruler ʿAḍud al-Dawla [*q.v.*], who had expressed a desire to have him at his court. The poet enjoyed a splendid reception. After addressing to the Būyid ruler several panegyrics which are among his best work, Abu 'l-Ṭayyib left Shīrāz for reasons not clearly known, perhaps simply out of homesickness (Wāḥ., 766, ll. 1-3; Yāz., 589). He was returning by short stages from Persia to Baghdād when he was attacked by marauding Bedouins near Dayr al-ʿĀḳūl [*q.v.*] at the end of Ramaḍān 354/Aug. 955. He and his son were killed in the fighting and all his baggage, including the autograph mss. of his *Dīwān*, was scattered (cf. al-Badīʿī, *op. cit.*, i, 227-39).

Even in his lifetime, al-Mutanabbī had been surrounded by ardent admirers who defended his work in its entirety against the attacks of detractors no less eager to run him down. Among the latter, however, the majority only criticised him as a poet because they objected to his character as a man. The criticism was therefore not distinguished by impartiality and only reflects the opinions of a coterie. It required the death of Abu 'l-Ṭayyib to produce a third class of admirers who were more clear sighted than the first and sufficiently impartial not to fall into the exaggerations of the second (cf. al-Djurdjānī, *al-Wasāṭa*, 11-12, 45-6). It was the opinion of this new category that prevailed, and when al-Mutanabbī's contemporaries had all disappeared, the educated public remained decidedly favourable to Sayf al-Dawla's panegyrist (except al-ʿAskarī [*q.v.*] and Ibn Khaldūn). From the 5th/11th century onwards, the name of al-Mutanabbī became a synonym for "great poet". His literary influence became one of the most considerable ever exercised on Arabic poetry. Commentated upon by Ibn Djinnī [*q.v.*] and later by Abu 'l-ʿAlāʾ [*q.v.*], by al-Wāḥidī, al-Tibrīzī, Ps.-al-ʿUkbarī and Ibn Sīduh [*q.v.*], to mention only the most eminent, the *Dīwān* of Abu 'l-Ṭayyib throughout the Middle Ages and in modern times has been made accessible to scholars and literary men by learned men from Persia to Spain, often more zealous than intelligent. Space does not permit us to estimate what later poetry owes to al-Mutanabbī. We are content to point out that, in different ways, all Arab panegyrists have been influenced by Abu 'l-Ṭayyib. At the present day, he is still one of the most read in North Africa; Syria and Egypt also hold him in very high esteem, and many critics have devoted studies full of praise to him. It seems, however, that in the last-named country al-Mutanabbī attracts people at least as much by the boldness of his philosophy and the ardour of his pro-Arab feelings as by his purely literary qualities.

Bibliography: This is enormous, and occupies some twenty pages in Sezgin (*GAS*, ii, 484-97, ix, 290-4; further additions by R. Weipert, in *ZGAIW* 2 (1985), 266-67) and stretches over more than 125 pages in K. and A. ʿAwwād's bibliographical guide *Rāʾid al-dirāsa ʿan Abi 'l-Ṭayyib al-M.* given in vol. vi/3 (1977) of the Baghdād journal *al-Mawrid*, an issue in large part devoted to the poet. Note also that Pearson has a special section for him in his *Index Islamicus* (XXXVII).

The abundance of this bibliography is a striking proof of the eminent place occupied by al-M. in Arabic literature from the 4th/10th century till the present day and the interest which has continuously been accorded to him by Arab critics and by Arabists. However, a large part of the mediaeval bibliography on this poet is only known from mentions in the biographical collections or in manuscript catalogues; in the latter case, it seems that those works worthy of study have been largely worked over by researchers.

The *Dīwān*. Al-M.'s *Dīwān* was made the object, in the mediaeval period, of numerous recensions, of which a considerable number of manuscripts are extant; to the independent copies of this should be added the commentaries in which the poet's work is reproduced *in extenso* and explained. Amongst editions of the *Dīwān* should be mentioned those of Buṭrus al-Bustānī (Beirut 1860, 1867, 1882, 1887) and of ʿAbd al-Wahhāb ʿAzzām (Cairo 1363/1944), but there are many others, published at Būlāḳ, Cairo, Beirut and also at Bombay, Deoband and Calcutta.

Al-M.'s fame—his work being considered as model—stimulated the composition of a number of anthologies by anonymous or declared authors who, from mediaeval times onwards, aimed at making a choice of the poems. Amongst these should be mentioned ʿAbd al-Ḳāhir al-Djurdjānī (d. 471/1078), *al-Mukhtār min dawāwīn al-M. wa 'l-Buḥturī wa-Abī Tammām* (ed. Maymanī, in *al-Ṭarāʾif al-adabiyya*, Cairo 1937, 195-305) and, for the modern period, Sāmī al-Bārūdī, *Mukhtārāt* (Cairo 1327-9), F. Bustānī, *Rawāʾiʿ* (nos. xi-xii) and A.J. Arberry, *Poems of al-M. A selection, with introduction, translation and notes* (Cambridge 1967). It is also possible to consider amongst these choices of verses the collection of the Ṣāḥib Ibn ʿAbbād (d. 385/995) containing *al-Amthāl al-sāʾira min shiʿr al-M.* (ed. Āl Yāsīn, Baghdād 1965), which in some degree embodies the poet's popularity.

Commentaries. Al-M.'s neo-classicism, added to the need to supply the reader with explanations not merely philological but also historical concerning the composition of such-and-such a poem, led several philologists to write commentaries on the *Dīwān*, and an incomplete list of these can be found in Ḥādjdjī Khalīfa (*Lexicon*, iii, 306-12), without of course taking into account Sezgin and ʿAwwād. R. Blachère justly highlighted (see the beginning of the article) those of Wāḥidī (d. 468/1075), *Sharḥ Dīwān al-M.* (ed. Bombay 1271/1854; Būlāḳ 1287; above all, F. Dieterici, *Mutanabbii carmina cum commentario Wahidii*, Berlin 1861, and many subsequent eds.)

and of Yāzidjī (d. 1871), *al-ʿArf al-ṭayyib fī sharḥ Dīwān Abi 'l-Ṭayyib* (publ. by his son Ibrāhīm at Beirut in 1885, 1887; new ed. 1964). But there exist others, printed or unpublished, amongst which one of the highest-regarded is that falsely ascribed to ʿUkbarī (d. 616/1219), *al-Tibyān fī sharḥ al-Dīwān* (Calcutta 1261-2, 1264; Būlāḳ 1261, 1277, 1287; Cairo 1303, 1308/1890; Cairo, ed. al-Saḳḳā *et alii*, 1936-8, 1956). One should also mention Muḥibbī (d. 1111/1699-1700), *Sharḥ Dīwān al-M.* (Calcutta 1814), and Barḳūḳī (d. 1944), *Sharḥ Dīwān al-M.* (Cairo 1348, 1357, 1938).

Several partial commentaries deal only with difficult verses, notably Ibn Fūrradja (d. after 437/1141-2), *Sharḥ mushkilāt Dīwān Abi 'l-Ṭayyib al-M.* (ed. Ghayyāḍ, in *al-Mawrid*, ii/1 [1973], 105-40; ed. Dudjaylī, Baghdād 1974); Ibn Sīduh (d. 458/1066), *Mushkil abyāt al-M.* (ed. Saḳḳā and ʿAbd al-Madjīd, Cairo 1976); and Ibn al-Ḳaṭṭāʿ (d. 515/1171), *Sharḥ al-mushkil min shiʿr al-M.* (ed. U. Rizzitano, in *RSO*, xxx [1955], 207-27; ed. Ghayyāḍ, in *al-Mawrid*, vi/3 [1977], 237-60).

Since mediaeval times, some commentaries on the *Dīwān* of al-M. have been severely criticised, notably by Muhallabī (d. 644/1246), *al-Maʾākhidh ʿalā shurrāḥ Dīwān al-M.*, against Ibn Djinnī, Maʿarrī, Tibrīzī and Kindī (partial ed. in *al-Mawrid*, vi/3 [1977], 165-212). The first of these *shurrāḥ*, Ibn Djinnī (d. 392/1002), had made the acquaintanceship of al-M. in Aleppo and, since he appreciated his work, he devoted to him commentaries which stirred up controversies and polemics, above all, the great one called *Fasr shiʿr al-M.* (ed. S. Khulūṣī, Baghdād 1970-8), but also the smaller one, *al-Fatḥ al-wahbī ʿalā mushkilāt shiʿr al-M.* (ed. Ghayyāḍ, Baghdād 1973 [cf. *al-Mawrid*, vi/3, 393-400]), and also a third one, the *Tafsīr maʿānī Dīwān al-M.* Most of the critical works are still unpublished: Zawzanī (d. 370/980), *Ḳashr al-fasr*; Rabaʿī, *al-Tanbīh ʿalā akhṭāʾ Ibn Djinnī*; Ibn Wakīʿ attracted upon himself a refutation by Ibn Djinnī, *al-Naḳd ʿalā Ibn Wakīʿ*; and Abū Ḥayyān al-Tawḥīdī, *al-Radd ʿalā Ibn Djinnī fī shiʿr al-M.* Three critical works have however been published: Iṣfahānī (4th/10th century), *al-Wāḍiḥ fī mushkil shiʿr al-M.* (ed. Ṭāhir b. ʿĀshūr, Tunis 1968) Ibn Fūradja, *al-Fatḥ ʿalā Abi 'l-Fatḥ*, ed. Ghayyāḍ, in *al-Mawrid* 2 (1973) and al-Dudjaylī, Baghdād 1974; and idem, *al-Tadjannī ʿalā Ibn Djinnī* (ed. Ghayyāḍ, in *al-Mawrid*, vi/3, 213-36).

To the attacks against Ibn Djinnī's favourable judgement of the poet should be added the accusations of plagiarism, such as those of ʿAmīdī (d. 433/1042), *al-Ibāna ʿan sariḳāt al-M. fīmā naẓamahu min al-shiʿr* (ed. Dasūḳī, Cairo 1961); by an anonymous author, *Sariḳat al-M.* (ed. Dasūḳī, with the *Ibāna*); and Ḥātimī (d. 388/998), *al-Risāla al-Mūḍiḥa fī dhikr sariḳāt Abi 'l-Ṭayyib al-M. wa-sāḳiṭ shiʿrihi* (ed. Shammāʿ, in *Madjallat Kulliyyat al-Ādāb*, iv [Riyāḍ 1975-6], 237-95). The bad verses have also been highlighted by Ibn ʿAbbād, *al-Kashf ʿan masāwī al-M.* (ed. Dasūḳī, with the *Ibāna*). An author like Bākathīr al-Ḥaḍramī attempts to demonstrate his impartiality in his *Tanbīh al-adīb ʿalā mā fī shiʿr Abi 'l-Ṭayyib min al-ḥasan wa 'l-maʿīb* (ed. R.A. Ṣāliḥ, Baghdād 1976), and Abu 'l-Ḥasan al-Djurdjānī (d. 392/1001) shows himself as conciliatory in *al-Wasāṭa bayn al-M. wa-khuṣūmihi* (Ṣaydā 1336 and edd. Ibrāhīm and al-Bidjāwī, Cairo n.d. (1950s)).

Biographies. As well as biographical data that can be derived from the commentaries, several easily-accessible biographies should be mentioned: ʿAbd al-Ḳādir al-Baghdādī, *Khizānat al-adab* (ed. Cairo 1299, i, 382-9 = ed. Cairo 1348, ii, 302-17); Thaʿālibī, *Yatīma* (Damascus 1304, i, 78-162, *passim*); Khaṭīb Baghdādī, *Taʾrīkh Baghdād* (Cairo 1349/1931), iv, 102-4; this notice is reproduced by Ibn al-Anbārī, *Nuzha*, ed. ʿĀmir, 176-80, and Samʿānī, *Ansāb*, facs. ed. f. 506b); Ibn Khallikān, *Wafayāt*, Cairo 1310, i, 36-8; and Badīʿī, *al-Ṣubḥ al-munbī ʿan ḥaythiyyat al-M.* (edd. al-Saḳḳāʾ, Shitā and ʿAbduh, Cairo 1963; Maḥmūd Shākir, *al-Mutanabbī*, 2nd ed. (Cairo 1977), vol. ii, contains the important biographies contained in Kamāl al-Dīn Ibn al-ʿAdīm, *Bughyat al-ṭalib*, Ibn ʿAsākir, *Taʾrīkh madīnat Dimashk*, and al-Maḳrīzī, *al-Muḳaffā*, all published from mss.).

Modern studies. Al-M. has been the subject of a considerable number of studies both in the East and the West. As well as the standard works on Arabic literature which have sections on him which are sometimes quite lengthy, the works of F. Gabrieli deserve special notice: *La vita di al-M.*, in *RSO*, xi, 27-42; *Studi sulla poesia di al-M.*, in *RCAL* (1927); *La poesia di al-M.*, in *Giornale della soc. asiat. ital.*, i/1 (1929). But the most outstanding synthesis is the basic monograph of R. Blachère, who, following the chronological order of the poems, combines biography with a literary study, *Un poète arabe du IVe siècle de l'Hégire. Abou ṭ-Ṭayyib al-Motanabbî*, Paris 1935. A little after this work's appearance, the 1,000th anniversary of the poet's death (354/965) stimulated in 1354/1935-6 the publication of three lengthy collective works, one organised under the direction of ʿAbd al-Wahhāb ʿAzzām, *Dhikrā Abi 'l-Ṭayyib al-M. baʿd alf ʿām* (Baghdād 1936); the second under the auspices of the Institut Français de Damas, *al-M., recueil publié à l'occasion de son millénaire* (Beirut 1936; cf. A. Fāḍil, *al-M. fī dirāsat al-mustashriḳīn*, in *al-Mawrid*, vi/3, 43-86); and the third was to appear in two numbers of the *Ṣaḥīfat Dār al-ʿUlūm* (April-June 1936). There is a list in Sezgin (ii, 485-6) of the articles in these three collections. Sezgin enumerates, moreover (ii, 497 and ix, 293), a series of articles and works amongst which attention may be drawn to those which deal with al-M.'s language and with his influence on the later poets, in particular those of Muslim Spain, where he enjoyed exceptional prestige; see e.g., al-Ṭāhir Makkī, *Maʿa shuʿarāʾ al-Andalus wa 'l-M.* (Cairo 1974). See also W.P. Heinrichs, "*The Meaning of Mutanabbī*", in James L. Kugel (ed.), *Poetry and Prophecy* (Ithaca, NY 1990), 120-39, 231-39, and A. Hamori, *The composition of Mutanabbī's panegyrics of Sayf al-Dawla*, Leiden 1992.

Translations. The *Dīwān* has inspired some translators, like von Hammer-Purgstall, *Motenebbi, der grösste arabische Dichter* (Vienna 1824), O. Rescher, *Der Dīwān des Motenebbi nach der Ausgabe ʿOkbarī (Būlāq 1287) mit Vergleichung der Edd. Jazydjy (Beyrouth) und Wāḥidī (Berlin ...)* (Stuttgart 1940), and A.J. Arberry, who translated into English the selection of poems mentioned above (under *Dīwān*). It is mainly separate poems which have been the subject of translations (see Sezgin, ii, 497).

(R. Blachère-[Ch. Pellat])

MUTARĀDIF [see ḲĀFIYA].

MUṬARRIFIYYA, a Zaydī sect in the Yemen named after its founder Muṭarrif b. Shihāb b. ʿAmr al-Shihābī, who died after 459/1067 at an advanced age.

They constituted a pietist movement striving to adhere strictly to the teachings of Imām al-Ḳāsim b.

Ibrāhīm, his sons, and of the early Yemenite Imāms al-Hādī, Muḥammad al-Murtaḍā, Aḥmad al-Nāṣir, al-Manṣūr al-Ḳāsim al-ʿIyānī and al-Ḥusayn al-Mahdī, while rejecting the doctrine of the Caspian as well as the contemporary Yemenite Zaydī Imāms. In implementing the religious duty of *hid̲j̲ra*, emigration from the abode of injustice (*dār al-ẓulm*) which had been stressed by al-Ḳāsim b. Ibrāhīm and other Zaydī authorities, they founded "abodes of emigration" where they gathered to engage in worship, ritual purification, ascetic exercises and teaching of their creed. The first of these *hid̲j̲ras* was founded already by Muṭarrif in Sanāʿ, south of Ṣanʿāʾ in the territory of his own tribe, the Banū S̲h̲ihāb. After Sanāʿ had to be abandoned under threat from the Ṣulayḥid Sabaʾ b. Aḥmad between 481/1088 and 491/1098, Muṭarrif's successor Ibrāhīm b. Abi 'l-Hayt̲h̲am founded a *hid̲j̲ra* at Waḳas̲h̲, south-west of Ṣanʿāʾ, which remained the spiritual centre of the movement until its destruction by Imām al-Manṣūr ʿAbd Allāh b. Ḥamza in 611/1214-5. Numerous other *hid̲j̲ras* were founded by the Muṭarrifiyya in various regions of northern Yemen. The Muṭarrifī *hid̲j̲ras* were a major factor in the development of the modern Yemenite concept of *hid̲j̲ra* as a protected enclave in a tribal territory. The persecution of the Muṭarrifiyya and destruction of their *hid̲j̲ras* by Imām al-Manṣūr led to the progressive decline of the sect. By the 9th/15th century it had become extinct.

The religious doctrine of the Muṭarrifiyya was essentially elaborated and systematised by Muṭarrif b. S̲h̲ihāb on the basis of the works of al-Ḳāsim b. Ibrāhīm and the early Yemenite Imāms, especially al-Hādī. Further sources were some statements ascribed to ʿAlī b. Abī Ṭālib and a short treatise attributed to Muḥammad al-Murtaḍā whose authenticity was disputed by their Zaydī opponents. There is no evidence of either Ismāʿīlī or philosophical influence, as alleged by these opponents. Since al-Hādī espoused the theological doctrine of the Bag̲h̲dād school of the Muʿtazila against the Baṣran school, the Muṭarrifiyya also repudiated Baṣran Muʿtazilī doctrine upheld by the Caspian and later Yemenite Imāms. Thus they reduced the divine attributes of hearing, seeing, and perceiving to that of knowing, whereas the Baṣrans considered the attributes of perceiving to be additional to knowing, and they identified the divine will (*irāda*) with the object willed (*murād*) by God, as against the Baṣran concept of God's will as an accident without a substrate. There are, however, also substantial deviations from Muʿtazilī doctrine in general. The Muṭarrifiyya held, on the basis of a sentence of al-Hādī, the divine attributes of essence to be identical with the divine essence itself and with each other. They explained divine justice as meaning that God initially treats all men equally in six respects: their physical constitution (*k̲h̲alḳ*), sustenance, life, death, obligation to worship (*taʿabbud*) and recompense. After men display obedience or disobedience by their free choice, God may prefer some to others and withdraw His grace from some. Against Muʿtazilī dogma, they affirmed that God does, and causes, evil and orders men to perform acts whose performance He prevents. They rejected the Muʿtazilī doctrines of generated acts of man (*tawallud*) and of the obligation of God to compensate man for undeserved pain inflicted by Him.

The most radical deviation from Muʿtazilism was in cosmology. Repudiating the atomism of *kalām* in general, the Muṭarrifiyya affirmed that God had initially created the world out of three or four elements (water, air, winds (*riyāḥ*), fire). The inherent transformations and interaction of these elements, rather than the direct action of God, bring about changes in the world. The Muṭarrifiyya thus affirmed a natural causality in the world. They described events and effects, whether beneficial or harmful to man, as acts (*afʿāl*) only in the sense that God has compelled the elements and bodies through their structure to bring them about. God may, however, interfere in the course of the world through miracles in support of His prophets, through granting or withholding help, benefits, guidance, and through responding to prayers.

Bibliography: Earlier attemps to analyse Muṭarrifī doctrine on the basis of polemical refutations by R. Strothmann, *Die Literatur der Zaiditen*, in *Isl.*, ii (1911), 67-9; C. van Arendonk, *De Jemenitische secte der Mutarrifieten*, in *Oostersch Genootschap in Nederland, Verslag van het Vijfde Congres*, 1927, 23-4, and A.S. Tritton, *The Muṭarrifiyya*, in *Muséon*, lxiii (1950), 59-67, have been rendered partly obsolete by the discovery of an authentic Muṭarrifī work by Sulaymān b. Muḥammad al-Muḥallī, *al-Burhān al-rāʾiḳ*, analysed in W. Madelung, *A Muṭarrifī manuscript*, in *Proceedings of the VIth Congress of Arabic and Islamic Studies*, Stockholm 1975, 75-83. For the history of the sect, see in particular Musallam al-Lahid̲j̲ī, *Ak̲h̲bār al-Zaydiyya bi 'l-Yaman*, ii, ms. in private possession (see D.T. Gochenour, *A revised bibliography of medieval Yemeni history in light of recent publications and discoveries*, in *Isl.*, lxiii [1986], 315-17); idem, *The penetration of Zaydī Islam into medieval Yemen*, unpubl. Ph.D. thesis, Harvard 1983; Madelung, *The origins of the Yemenite hijra*, in *Arabicus felix luminosus britannicus. Essays in honour of A.F.L. Beeston on his eightieth birthday*, Reading 1991, 25-44. (W. Madelung)

AL-**MUṬARRIZĪ**, Burhān al-Dīn Abu 'l-Fatḥ (Abu 'l-Muẓaffar) Nāṣir b. Abi 'l-Makārim ʿAbd al-Sayyid b. ʿAlī al-K̲h̲ʷārazmī al-Ḥanafī, philologist, jurist and *adīb* (538-610/1144-1213). He was born in K̲h̲ʷārazm, at al-D̲j̲urd̲j̲āniyya or Gurgānd̲j̲ [*q.v.*], in Rad̲j̲ab 538/January-February 1144. He began his studies with his father and continued them under the *ak̲h̲ṭab K̲h̲ʷārazm* Abu 'l-Muʾayyad al-Muwaffaḳ b. Aḥmad al-Makkī, a pupil of al-Zamak̲h̲s̲h̲arī [*q.v.*], and others. Later, well-known as an authority in philology, he was called *k̲h̲alīfat al-Zamak̲h̲s̲h̲arī* after his great countryman, who died in the same year and in the same town in which al-Muṭarrizī was born. Like him he was an adherent of the Muʿtazila. As a pilgrim of the *ḥad̲j̲d̲j̲* of 601 (summer 1204), he passed through Bag̲h̲dād twice and had disputations with scholars there. On this occasion, Ibn al-Nad̲j̲d̲j̲ār [*q.v.*], the biographer of the metropolis, met and interviewed him (Ibn al-Nad̲j̲d̲j̲ār/al-Dimyāṭī, 237). He died in al-D̲j̲urd̲j̲āniyya on Tuesday 21 D̲j̲umādā I 610/8 October 1213.

Among al-Muṭarrizī's seven books enumerated by his younger contemporary Yāḳūt—who had left al-D̲j̲urd̲j̲āniyya after a short visit at the beginning of 617/March 1220, fearing the Mongols—in his *Udabāʾ* (vii, 203), the compendium of Arabic grammar, (1) *al-Miṣbāḥ fi 'l-naḥw*, has found the widest circulation. Compiled for his son, the treatise became a text-book in the *madrasas* of the East, often commented and glossed upon, not only in Arabic but also in Persian and Turkish, as well as versified. The number of mss. is abundant, and the basic work itself is printed. The *Miṣbāḥ* was based on three small grammatical monographs of ʿAbd al-Ḳāhir al-D̲j̲urd̲j̲ānī [*q.v.*], to wit, *al-Tatimma*, *al-D̲j̲umal* and *al-ʿAwāmil al-miʾa*. On the latter, al-Muṭarrizī wrote a (1a) *S̲h̲arḥ*

(Brockelmann, S I, 503; Kaḥḥāla, *Mustadrak*, 380). Only the title of another grammatical opuscule, (2) *al-Muḳaddima al-Muṭarriziyya fī 'l-naḥw* (cf. Paris 4254, 2 and 6911?), and that of his (3) *Mukhtaṣar Iṣlāḥ al-manṭiḳ* of Ibn al-Sikkīt [*q.v.*] are known to us. However we do have mss. of his (4) *al-Iḳnāʿ li-mā ḥuwiya taḥt al-ḳināʿ*, a handy lexicon with precise grammatical explanations, a kind of text-book for his son, dealing only with "good and usual" words and omitting the "bad and unusual" ones. It is divided into four parts (*asmāʾ*, *afʿāl*, *ḥurūf*, *naḥw*), which are in turn divided in four chapters each and many subsections. The first part is very rich in synonyms; modern and ancient linguistic usages are distinguished and verses are quoted in illustration. His dictionary (5) *al-Muʿrib fī gharīb alfāẓ al-fuḳahāʾ* is arranged alphabetically after the first letter. It is a reference book of terms used in Tradition and jurisprudence; it exists in a second, enlarged version by the author under the title (6) *al-Mughrib fī tartīb al-Muʿrib*. The work was regarded by the scholars of the Ḥanafī *madhhab* with the same respect as the *Gharīb al-fiḳh* of al-Azharī [*q.v.*] by the Shāfiʿīs. The last print, Aleppo 1402/1982 in 2 vols., is an edition by Maḥmūd Fākhūrī and ʿAbd al-Madjīd Mukhtār; another edition, based on the autograph of 598/1201, is in preparation in Cairo. His commentary on the *Maḳāmāt* of al-Ḥarīrī, entitled (7) *al-Īḍāḥ* (cf. Yāḳūt, *Buldān*, i, 5, and Berlin [Ahlwardt] 8541) has been edited by Ḥamad b. Nāṣir al-Dakhīl (Ph.D. diss., Riyāḍ 1402/1982); the same scholar is now preparing an edition of al-Muṭarrizī's opuscule (8) *Fasr al-Mawlā wa-ḥaṣr maʿānīhi wa 'l-kashf ʿan ḥaḳīḳatihī*. For his (9) *Risāla fī Iʿdjāz al-Ḳurʾān* see O. Spies, in *ZDMG*, xc (1936), 106 and Kaḥḥāla, *Mustadrak*, 380; and for his still undiscovered rhetorical work *fī ʿilm al-badīʿ*, entitled (10) *Zahr al-rabīʿ*, see Ṭāshköprüzāde, *Miftāḥ*, i, 202. Al-Muṭarrizī was also known as a gifted poet, who made frequent use of *tadjnīs*.

(R. Sellheim)

MUTAṢARRIF (A.), a term of Ottoman local administration. In the Ottoman system of local administration defined by the provincial administration laws of 23 Rabīʿ I 1284/25 July 1867 and Shawwāl 1287/1871, this term designated the chief administrative official of the *sandjaḳ* [*q.v.*] or *liwāʾ*, the second highest in the hierarchy of administrative districts. The *sandjaḳ* had existed as an administrative district since early Ottoman times (Ortaylı, *İdare tarihi*, 184-5). However, during the 10th/16th century, the functionary in charge had been known as the *sandjaḳ begi*, who was primarily a military officer. With the decline of the cavalry (*sipāhī*) and the diversion to other uses of the landholdings (*tīmār*, *zeʿāmet* [*q.vv.*]) that had been used to support them, a different pattern began to emerge. From the 11th/17th century onwards, the number of *wezīrs* began to increase without any corresponding increase in the number of provinces or *eyālets* [*q.v.*] to which they could be appointed as *beglerbegis* or *wālīs*. To deal with this problem, the government began to separate some *sandjaḳs* from the provinces of which they were part and assign them to such individuals as a source of income (*arpalīk*). The *wezīr* would not take up such a position in person, but would send an agent to collect the revenues for him. These agents were known by titles such as *müsellim*, later *mütesellim*, or sometimes *ḳāʾim-maḳām*, which suggest their functions. Some references suggest that the term *mutaṣarrif* may already have been used in this period, as a common noun, rather than a technical term, to refer to the titular holder as contrasted with his collection agent, so that the whole arrangement could be described in terms of *mutaṣarrif* (the *wezīr*) and *mütesellim* (his agent; Çadırcı, *Mütesellimlik*, 288, 291; idem, *Kent*, 23-29; cf. Ergenç, 95). Under Selīm III and Maḥmud II [*q.vv.*], the revenues of some *sandjaḳs* and other territorial units were assigned directly to treasuries in Istanbul, which would then appoint their own *mütesellims* to collect the revenues (Çadırcı, *Mütesellimlik*, 288; idem, *Yönetim*, 1216).

When Selīm III and Maḥmūd II began trying, in the interests of centralisation, to supplant local notables with agents of the central government, the term *mutaṣarrif* clearly was used for officials with the rank of *wezīr* who were to be employed in local administration, but for whom positions as governor (*wālī*) of a province (*eyālet*) were unavailable. Such officials would be assigned to administer one or more *sandjaḳs* as *mutaṣarrif* (Çadırcı, *Yönetim*, 1226). This usage of terms continued in places after the inauguration of the *Tanẓīmāt* reforms with the Gülkhāne Decree of 1255/1839.

The term soon acquired other uses, too, as the evolution of the local administrative system proceeded. During the experiment with fiscal centralisation and direct tax collection inaugurated in 1254/1838, the *mütesellim*'s historical role in revenue collection was taken over by *muḥaṣṣils* [*q.v.*] appointed from the capital. After the abandonment of this experiment in 1258/1842, the role of *mütesellim* was not revived. Instead, the earlier fiscal practice of tax-farming (*iltizām* [*q.v.*]) was revived, on the one hand; and local administration was reorganised, on the other hand, with the *sandjaḳ* being entrusted for the first time to an official known as the *ḳāʾim-maḳām*, while a lower-level administrative district, the *ḳaḍāʾ*, was set up under the administration of the *ḳaḍāʾ müdīri* (Çadırcı, *Meclisler*, 260; idem, *Kent*, 236). A set of measures inaugurated in 1265/1849, marking the most important reforms in local administration since the experiment with the *muḥaṣṣils*, again designated the governor of a province (*eyālet*) as the *wālī*, who would normally hold the rank of *wezīr*. The title *mutaṣarrif* was set aside either for a governor of a small *eyālet* who held a lower rank, or for an administrator in charge of more than one *sandjaḳ*; at least from *ca.* 1274/1858 onwards, the same title applied to the administrator of a *sandjaḳ* that was "independent" (*mustaḳill*), meaning that it was subordinate, not to

any *eyālet*, but directly to the Ministry of the Interior in Istanbul. The administration of a *sandjak* remained the task of a *ḳāʾim-maḳām* (Çadırcı, *Meclisler*, 269-70; Scheben, 109-16, 281-302; Kornrumpf, *Territorialverwaltung 1864-1878*, 20, 65; Başbakanlık Archives, Meclis-i Tanzimat defteri, no. 34, untitled printed volume, dated at end 15 Rabīʿ II 1267/1851, containing regulations on local administration, 56-81). Probably the best-known example of an "independent" *sandjak* under the administration of a *mutaṣarrif* who reported directly to Istanbul, rather than to any province, was Lebanon under the special régime introduced there in 1861 (Young, *Corps de droit*, i, 139-59; *Düstūr*[1], iv, 695-701). Meanwhile, the number of *eyālets* had been increased from fifteen to twenty-eight (*ca.* 1250/1834) and then to forty after another twenty years, while the number of *sandjaks* had hardly increased at all. The decrease in the number of *sandjaks* per *eyālet* implies a tightening of the *wālī*'s control—another sign of centralisation (Scheben, 95 n. 130).

The most important steps toward systematisation of local administration occurred with the provincial administration law of 1281/1864, which was initially applied only in the specially-created Danube province but was revised for wider application in 1867, followed by the supplementary provincial administration law of 29 Shawwāl 1287/1871 (Kornrumpf, *Territorialverwaltung 1864-1878*, 24-6, 74-86, 105-15; Heidborn, i, 157-72; *Düstūr*[1], i, 608-51; Çadırcı, *Kent*, 250-2). Under this new system, the provinces were renamed *wilāyet*, instead of *eyālet*, the *wilāyets* were divided into *sandjaks* or *liwāʾs*; the *sandjaks* into *ḳaḍās*; the *ḳaḍās* into villages (*ḳarye*). The law of 1287/1871 inserted another echelon, the *nāḥiye*, between the *ḳaḍā* and the village.

The 1864 law for the Danube province still provided for a *ḳāʾim-maḳām* at the head of each *sandjak* and a *müdīr* to head each *ḳaḍāʾ*; but the 1867 law at last gave the title *mutaṣarrif* its definitive Ottoman meaning as the chief administrator of a *sandjak*, using *ḳāʾim-maḳām* for the head of the *ḳaḍāʾ* (instead of *müdīr*; Kornrumpf, *Territorialverwaltung 1864-1878*, 75-6, 78-82). At this point, other, earlier uses of the term *mutaṣarrif* ceased to apply in administrative usage. The practice of treating some especially sensitive *sandjaks* or *liwāʾs* as "independent" of any province and directly subordinate to the Ministry of the Interior continued, however; these "independent" *liwāʾs* (*alwiya-i mustaḳilla*) remained a familiar category in Ottoman administrative practice.

No further legislation of comparable scope was enacted until the provincial administration law of 17 Rabīʿ II 1331/7 October 1913 (*Düstūr*[2], v, 186-216; Kornrumpf, *Territorialverwaltung 1878-1913*, 118, 122, 129, 137, 140; Findley, *Evolution*, 15-24). Introducing refinements into the earlier system, the new law retained the *mutaṣarrif* as the chief administrator of the *sandjak*. However, the Fundamental Law of 20 January 1921, passed by the Grand National Assembly (*Büyük Millet Medjlisi*) in Ankara, revised local administration by taking the empire's *sandjaks* as the *wilāyets* for what in 1923 became the Turkish Republic. The Republic's *wilāyet* law of 18 April 1929 retained this arrangement, along with many features of the provincial administration law of 1331/1913 (Lewis, 384-6). Long-term continuity thus significantly characterised late Ottoman and Republican local administration. With the transformation of the old *sandjaks* into *wilāyets* in 1921, however, the term *mutaṣarrif* passed out of use as a designation for a type of local official.

(C.V. FINDLEY)

AL-MUʿTAṢIM, ABŪ YAḤYĀ MUḤAMMAD B. MAʿN B. MUḤAMMAD IBN ṢUMĀDIḤ AL-TUDJĪBĪ, second ruler of the dynasty of Tudjībids [*q.v.*] of the kingdom of Almería [see AL-MARIYYA], reigned 443-484/1051-1091. Gifted like his contemporary al-Muʿtamid [*q.v.*] of Seville with a certain amount of poetic talent, he made his capital during his long reign one of the great centres of culture in the Peninsula. But like the other *mulūk al-ṭawāʾif* [*q.v.*] of Spain, he was for the most of his time at war with one or another of his neighbours. He was probably implicated in the conspiracy fomented by the Jew Yūsuf against his master Bādīs, king of Granada [see ZĪRIDS]. Later his forces took part with those of Yūsuf b. Tāshfīn in the famous battle of Zallāḳa [*q.v.*]. Like the other Muslim rulers of Spain, he felt in the following year the weight of the Almoravid sultan's arm. After unsuccessfully besieging the fortress of Aledo and inciting Yūsuf to act harshly against al-Muʿtamid, whom he hated personally, he realised on his death-bed that his capital would be besieged by the Almoravids as Seville had been. This is why he advised his son and successor Aḥmad to seek asylum with the lords of Bougie [see BIDJĀYA]. Almeria was taken very soon afterwards by the Almoravids.

AL-MUʿTAṢIM BI 'LLĀH, Abū Isḥāḳ Muḥammad b. Hārūn al-Rashīd, ʿAbbāsid caliph, reigned 218-27/833-42, son of the caliph Hārūn by a slave concubine Mārida.

During the reign of his brother and predecessor al-Maʾmūn [*q.v.*], al-Muʿtaṣim achieved a reputation as a skilful commander in Anatolia and as governor in Egypt. When al-Maʾmūn died in the Byzantine marches in Radjab 218/August 833, al-Muʿtaṣim was recognised as caliph despite support within the army for his nephew al-ʿAbbās b. al-Maʾmūn (who was, in fact, later to conspire against al-Muʿtaṣim during the return from the Amorium campaign, and as a result to lose his life in 223/838). The beginning of al-Muʿtaṣim's reign was taken up with campaigns against the Khurramiyya [*q.v.*] in Djibāl (218/833), against the Ḥusaynid ʿAlid rebel Muḥammad b. al-Ḳāsim at Ṭālaḳān in Khurāsān (219/834) and against the Zuṭṭ [*q.v.*] or Jhāts in Lower ʿIrāḳ (219/834), who were now deported to the Byzantine frontier region.

The four main, extended campaigns of the reign were, however, those firstly against the Khurramī leader Bābak [*q.v.*] in Arrān and Ādharbāydjān [*q.vv.*], brought to a successful conclusion with the storming of Bābak's headquarters at al-Badhdh [*q.v.* in Suppl.] by the general al-Afshīn Khaydhar (Ḥaydar) b. Ḳāwūs [*q.v.*] in 222/837. Secondly, in revenge for a Greek attack on Zibaṭra in the *thughūr* of the northern Djazīra, al-Muʿtaṣim himself and his commanders al-Afshīn and Ashnās led successful expeditions into Anatolia against the Byzantine emperor Theophilus, sacking Anḳira (Ankara) [*q.v.*] and ʿAmmūriyya (Amorium) [*q.v.*] in 223/838, thereby achieving for himself a great contemporary reputation, reflected in the verse of such poets as Abū Tammām, as a great *ghāzī* and hammer of the infidels. Thirdly, in 223 or 224/838-9, the Ḳārinid prince Māzyār b. Ḳārin b. Wandā(d)hurmuz [see ḲĀRINIDS] rebelled in Ṭabaristān [*q.v.*], seeking to extend his political authority within the Caspian provinces at the expense of other petty Iranian rulers there and to exclude the influence of the Ṭāhirid governors of Khurāsān [see ʿABD ALLĀH B. ṬĀHIR and ṬĀHIRIDS]. Members of the Ṭāhirid family were sent against Māzyār, his rebellion was quelled and Māzyār executed, as was at this time the now disgraced general al-Afshīn, accused of encouraging and colluding with Māzyār (226/841). Finally, revolts in Damascus and in Palestine and Jordan, the latter one led by a leader of the Yemeni Arabs there, one Abū Ḥarb, called al-Mubarkaʿ "The Veiled One" [*q.v.*], whose movement seems to have taken advantage of lingering pro-Umayyad sentiment in Sufyānid messianism there, had to be suppressed in 226-7/841-2.

Whereas ʿIrāḳ and the capital Baghdād had been the focus of prolonged resistance against al-Maʾmūn in the earlier part of that caliph's reign, this province remained quiet under al-Muʿtaṣim. He did, however, adopt a conscious policy of reducing dependence on the *Abnā*ʾ of Baghdād, the Arabs of Khurāsān who had hitherto been the mainstay of the ʿAbbāsid régime until the civil warfare between the brothers al-Amīn and al-Maʾmūn in 195-8/811-13, and of relying more on professional slave troops (*ghilmān*, *mamālīk*), mostly Turkish or Maghribī [see GHULĀM. i]. Hence he now built for these new troops a military centre at Sāmarrā [*q.v.*] to the north of Baghdād, and this was to become the administrative capital of the caliphate for some sixty years. The purge of *Abnā*ʾ and Iranian commanders which followed al-ʿAbbās b. al-Maʾmūn's abortive plot accelerated this trend, but the caliph was nevertheless wise enough to retain the Ṭāhirids as governors in Khurāsān, and one member of the family, Isḥāḳ b. Ibrāhīm b. Ḥusayn b. Muṣʿab, governor of Baghdād, was always one of al-Muʿtaṣim's closest advisers and confidants.

Al-Muʿtaṣim's viziers included al-Faḍl b. Marwān [*q.v.*], who seems to have planted the idea of a move away from Baghdād in the caliph's mind, until 221/836, and then Muḥammad b. ʿAbd al-Malik al-Zayyāt [see IBN AL-ZAYYĀT] until the caliph's death. But a dominant influence over al-Muʿtaṣim was exercised by the Chief *Ḳāḍī* Aḥmad b. Abī Duwād [*q.v.*], under whose stimulus the Muʿtazilī inquisition, the *Miḥna* [*q.v.*], begun by al-Maʾmūn, continued not only in Baghdād but in such provinces as Syria and Egypt also, and involved the *imām* Aḥmad b. Ḥanbal [*q.v.*].

Al-Muʿtaṣim died at Sāmarrā on 18 Rabīʿ I 227/5 January 842, and was succeeded by his son Hārūn al-Wāthiḳ [*q.v.*]. Not much of the caliph's character emerges from the sources, though they stress his lack of culture compared with his brother al-Maʾmūn, with his questing mind; yet al-Muʿtaṣim's qualities as a military commander seem assured, and the ʿAbbāsid caliphate remained under him a mighty political and military entity.

(C.E. Bosworth)

MUTAṬAWWIʿA, Muṭṭawwiʿa (a.), lit. "those who perform supererogatory deeds of piety, those over and above the duties laid upon them by the *Sharīʿa*", echoing the use of the verb *taṭawwaʿa* in Ḳurʾān, II, 153/158, 180/184, IX, 80/79, the term used in military contexts for volunteer fighters. Al-Samʿānī defines them (*Ansāb*, ed. Haydarābād, xii, 317) as "a group who devote themselves to *ghazw* and *djihād*, station themselves in *ribāṭ*s along the frontiers (*thughūr*) and who go beyond the call of duty

(*taṭawwaʿū*) in *ghazw* and undertake this last in the lands of unbelief when it is not incumbent upon them nor is an obvious institution in their land".

As well as the regular troops forming the Umayyad and ʿAbbāsid army or *djund*, those in receipt of regular stipends (*rizḳ*, *ʿaṭāʾ* [*q.v.*]) from the *dīwān al-djaysh*, sc. the *murtaziḳa* "those entitled to living allowances" [see DJAYSH. i. Classical, and DJUND], there were from earliest times volunteers who served without *ʿaṭāʾ* but were entitled to a share in any captured plunder [see GHANĪMA]. However, it seems that they might sometimes be asked to make a contribution (*tanāhud*) to the expenses of a campaign out of their subsequent share of the booty. In early times, these volunteers must have included poor Bedouins, *mawālī* [see MAWLĀ], and, as time went on, an increasing proportion of those motivated by religious zeal and the desire for a martyr's death [see SHAHĪD]. Thus in the campaign of ʿAbd al-Malik's commander ʿUbayd Allāh b. Abī Bakra against a local ruler of eastern Afghānistān, the Zunbīl of Zābulistān, in 79/698, volunteers from the Yemeni tribes of Madhhidj and Hamdān [*q.vv.*] are mentioned (al-Balādhurī, *Ansāb al-ashrāf*, cited in C.E. Bosworth, *ʿUbaidallāh b. Abī Bakra and the "Army of Destruction" in Zābulistān (79/698)*, in *Isl.*, l [1973], 277). Likewise, Yazīd b. al-Muhallab's army assembled in 98/716-17 for an expedition against Ṭabaristān and Djurdjān included 100,000 Syrian, ʿIrāḳī and Khurāsānī troops plus *mawālī*, slaves (*mamālīk*) and volunteers (al-Ṭabarī, ii, 1318; Ibn al-Athīr, ed. Beirut, v, 29).

There was, of course, a disadvantage to commanders having contingents of volunteers attached to their armies in that these volunteers were less amenable to military discipline and could come and go of their own free will, hence could not be relied upon for sustained campaigning or arduous fighting in remote or inhospitable terrains. During the campaign of al-Afshīn [*q.v.*] in northern Ādharbāydjān against the Khurramī rebel Bābak [*q.v.*] in 222/836-7, many members of the contingent of volunteers from Baṣra under the command of Abū Dulaf al-Ḳāsim al-ʿIdjlī [*q.v.*] melted away from the army when the final assault on the Khurramī fortress of al-Badhdh [*q.v.* in Suppl.] seemed to be unduly delayed (al-Ṭabarī, iii, 1209-11, 1214, tr. Bosworth, *Storm and stress along the northern frontiers of the ʿAbbāsid caliphate*, Albany 1991, 62-5, 67).

Volunteers were especially to be found on the frontiers of the Islamic world, where the opportunities for *djihād* [*q.v.*] against the pagans were greatest, e.g., along the Anatolian marches against the Byzantines, in the Caucasus against the Khazars, in Central Asia against the steppe peoples and in eastern Afghānistān and the fringes of north-western India against the local idolaters. In the caliphate of al-Mahdī, both regular troops and *muṭṭawwiʿa* were garrisoned at al-Maṣṣīṣa [*q.v.*] in Cilicia (al-Balādhurī, *Futūḥ*, 166). The frontier towns of Transoxania and Khʷārazm and their *ribāṭ*s had strong concentrations of volunteers within them, and these seem to have been often regarded as a volatile and unruly element, similar in social constitution and function to the *ʿayyārs* [*q.v.*]. They were ready to rush off and fight wherever the possibilities of holy war and plunder presented themselves, but were not always welcome (Barthold, *Turkestan*², 214-16). In 355/966 the Būyid *amīr* Rukn al-Dawla repelled by military force a group of 10,000 *ghāzī*s from Khurāsān who were ostensibly marching westwards against the Byzantines but who were, he feared, being utilised by the rival Sāmānid dynasty to destabilise his amirate (Ibn al-Athīr, ed. Beirut, viii, 569-71).

Where a ruler or commander acquired a particular reputation as a successful war-leader and hammer of the infidels, volunteers would be attracted to his standard in large numbers. This was especially the case with the early Ghaznawids Sebüktigin, Maḥmūd and Masʿūd [*q.vv.*], whose campaigns down to the plains of northern India, with rich prospects of Indian slaves and temple treasures, always included a large proportion of volunteers from all over the eastern Islamic world (see Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040*, Edinburgh 1963, 114).

The bands of volunteers or *ʿayyārūn* in certain parts of the eastern Islamic world might also turn their energies against internal dissent or heterodoxy. This is clear in the province of Sīstān, where bodies of orthodox Sunnī volunteers or vigilantes were active against local Khāridjite elements; out of these bands, the Ṣaffārid brothers Yaʿḳūb and ʿAmr b. al-Layth [*q.vv.*] were to rise to power during the second half of the 3rd/9th century (see Bosworth, *Sīstān under the Arabs from the Islamic conquest to the rise of the Ṣaffārids (30-240/651-864)*, Rome 1968, 85, 112 ff.).

From around the 5th/11th century onwards, the term *mutaṭawwiʿa*/*muṭṭawwiʿa* tends to drop out of use, and such terms as *ghāzī and mudjāhid* [*q.vv.*] are used more and more for the concept of volunteer warriors for the faith.

A modern formation from this Arabic root is *muṭawwiʿ*, lit. "one who compels obedience", used in contemporary Saudi Arabia to designate the religious police who enforce the closure of shops during the times of public prayer, oversee morals, etc.

AL-**MUTAWAKKIL ʿALĀ 'LLĀH**, ABU 'L-FAḌL DJAʿFAR B. MUḤAMMAD, ʿAbbāsid caliph. He was born in Shawwāl 206/Feb.-March 822, son of the caliph al-Muʿtaṣim [*q.v.*] and a Khʷārazmī slave-girl called Shudjāʿ. There is no sign that he had early political ambitions, and he seems to have lived in obscurity until the death of his brother, the caliph al-Wāthiḳ [*q.v.*] in Dhu 'l-Ḥidjdja 232/Aug. 847. Al-Wāthiḳ left a young son but no designated adult successor. The succession was decided by a council consisting of the *wazīr* ibn al-Zayyāt and the chief *ḳāḍī* Aḥmad b. Abī Duwād [*q.vv.*], two other bureaucrats and two leading Turkish military men, Aytākh and Waṣīf. They rejected Ibn al-Zayyāt's advice to appoint al-Wāthiḳ's son and instead chose his brother Djaʿfar, who was duly installed as caliph. They probably hoped that he would prove a pliable instrument like his brother had been, but they soon found out how mistaken they were, and al-Mutawakkil soon showed that he had an independent mind and a clear and decided policy. He was determined from the beginning to assert the independence of the caliph and to break the dominance of the Turkish military and the bureaucracy.

He rapidly removed the leading figures and the old régime, Ibn al-Zayyāt (executed 233/847), Aytākh (assassinated 235/849) and Ibn Abī Duwād (dismissed 237/851-2). In their places he appointed new ministers, notably the *wazīr* ʿUbayd Allāh b. Yaḥyā b. Khāḳān and his personal favourite al-Fatḥ b. Khāḳān [*q.v.*]. In 235/849 he also appointed his sons to take over the vast supervisory governorates held by the Turkish generals, al-Muntaṣir to Egypt and al-Djazīra, al-Muʿtazz to Khurāsān and al-Muʾayyad to Syria and Palestine, intending that the great men of the next generation should be members of the ʿAbbāsid family as they had been under al-Manṣūr. Only the Ṭāhirids [*q.v.*] in Baghdād and Khurāsān

were left unchallenged and continued to work in partnership with the caliph.

Al-Mutawakkil also set about recruiting a new army in order to break the Turkish monopoly of military power, and ʿUbayd Allāh b. Khāḳān sought to recruit troops from the Ḳaysī Arabs of Syria, the *abnāʾ* of Baghdād and from Armenia. The favour shown to these new elements provoked growing anger among the Turks, who felt their position threatened. Just as al-Muʿtaṣim had founded a new capital at Sāmarrāʾ [*q.v.*] to house his Turkish army, so al-Mutawakkil sought a new seat where he could establish himself. He tried Damascus briefly in 244/858, but is said to have been deterred by the plague, but probably also because it was too far from the centres of wealth and power in ʿIrāḳ and Persia. He chose instead a site a few miles north of Sāmarrāʾ in 245/859-60 which he called al-Djaʿfariyya. Despite its proximity to Sāmarrāʾ, this was conceived as an independent town with its own great mosque, palaces and urban centre, the outline of which can still be traced on the ground today.

Perhaps the most controversial aspect of his policy was to break with the Muʿtazilī position which had been the official doctrine of the ʿAbbāsid government since al-Maʾmūn had introduced the *miḥna* [*q.v.*]. In its place, the caliph stressed his adherence to the doctrines of the Ḥanbalīs and other Traditionists. In part, this was a symbolic rejection of his predecessors' policies, but he probably hoped also to attract to himself the undoubted popular support which the Traditionists enjoyed, especially in Baghdād. He appointed a new *ḳāḍī*, Yaḥyā b. Aktham, who was sympathetic to the Traditionists, introduced discriminatory dress regulations for Christians and Jews [see GHIYĀR], and destroyed the tomb of al-Ḥusayn at Karbalāʾ, which had become an important centre of devotion.

Despite these political upheavals, his reign was in the main a time of peace. There were continuing disturbances in Ādharbaydjān, where Ibn al-Baʿīth rebelled in 234/848-9 and in Armenia in 237/851-2, where a rebellion against increasing ʿAbbāsid pressure was put down by the Turkish general Bughā the Elder [see BUGHĀ AL-KABĪR]. Bughā also led successful campaigns against the Byzantines in 245/859 and 246/860, but without producing any decisive results.

The caliph's decisive policies made him a number of enemies, notably among the Turkish military. To these he added his eldest son al-Muntaṣir [*q.v.*], who feared that he was to be deprived of his position as heir apparent, and they came together to assassinate him in Shawwāl 247/Dec. 861. His death deprived the ʿAbbāsid caliphate of a forceful and effective ruler who might well have re-established the caliph's authority on a firm footing. In the event, his death plunged the caliphate into anarchy.

AL-MUTAWAKKIL ʿALĀ 'LLĀH, IBN AL-AFṬAS, ʿUMAR B. MUḤAMMAD b. ʿAbd Allāh, fourth and last ruler of the Afṭasid [*q.v.*] dynasty in the petty state [see MULŪK AL-ṬAWĀʾIF. 2.] of Badajoz (Baṭalyaws [*q.v.*]), in south-western al-Andalus [*q.v.*], in the 5th/11th century.

ʿUmar al-Mutawakkil came to power as a result of intrigues against his brother Yaḥyā in 461/1068-9 (the date emerges from two passages in the *Dhakhīra* of Ibn Bassām, iv, 650 and v, 252); Yaḥyā himself appears to have reigned for some four or five years (the chronology of the dynasty still presents problems). From this time on, al-Mutawakkil played an important political role in peninsular affairs, one consonant both with the (relatively) great size of his kingdom and with its isolation from the main cultural and economic centres further to the east in the Iberian peninsula. A number of well-known littérateurs served him as viziers (e.g., Ibn ʿAbdūn, one of the Banū Ḳuzmān and one of the Banū Ḳabturnu [*q.vv.*]). In 472-3/1079-80, he occupied Toledo (Ṭulayṭula [*q.v.*]), but although he had come at the invitation of the city's inhabitants, who were anxious to be rid of the incompetent and dangerous Dhu 'l-Nūnids [*q.v.*], he was unable to establish a durable régime there, and left after only ten months. In the succeeding years, as the general position of Islam in the peninsula worsened, he adopted a policy, much like those of his peers, vacillating between temporising with regard to Christian demands for tribute (*parias*) and appealing for help to the rising power of the Almoravids (al-Murābiṭūn [*q.v.*]) in North Africa. His attempts to play each side off against the other came to nothing, however; despite his presence in 479/1086 at the battle of Zallāḳa [*q.v.*], which took place in his own territory, and his participation in the struggle against the Christian advance, he was in the end, like virtually all the other *taifa* monarchs, deposed, in 487/1094 or 488/1095, and put to death, together with two of his sons, on the road to captivity. A third son is said to have spent some time in Christian Spain and may even finally have been converted to Christianity. His dynasty was the subject of a famous *marthiya* [*q.v.*] or lament by Ibn ʿAbdūn, on which Ibn Badrūn later wrote a well-known commentary (ed. Dozy).

(D.J. WASSERSTEIN)

AL-MUTAWAKKIL ʿALĀ 'LLĀH, ISMĀʿĪL B. AL-MANṢŪR BI'LLĀH AL-ḲĀSIM (b. *ca.* 1019/1610), the first Ḳāsimī Zaydī *imām* to rule Yemen completely independent of the Ottoman Turks.

Ismāʿīl's claim to the imāmate, following the death

of his brother, Imām al-Muʾayyad bi'llāh Muḥammad [*q.v.*], at Shahāra in Radjab 1054/September 1644, was challenged by three other aspirants, most seriously by his older brother, Abu Ṭālib Aḥmad b. al-Ḳāsim (1007-66/1598-1656). Despite some initial regional support for the latter, Ismāʿīl's claim ultimately won acceptance among the *ʿulamāʾ*, owing to broad recognition of his predilection for scholarship and his knowledge of the principles of Zaydī governance. Once the succession had been resolved after at least one test of arms (1055/1645), the *imām*'s family closed ranks behind him; his brother Aḥmad accepted to become his governor of the important northern city of Ṣaʿda, while several nephews served him well as commanders.

Although Imām Ismāʿīl lacked the martial qualities often associated with Zaydī *imāms*, it is nevertheless the case that in his time the *imām*'s authority was carried to perhaps its widest extent ever in modern history. Most of this expansion occurred in the south and east, where successful campaigns were conducted against Aden and Laḥdj (1055/1645), al-Bayḍāʾ and Yāfiʿ (1065/1655), Ḥaḍramawt (1069-70/1659-60) and even Ẓufār in ʿUmān (1073/1662-3). In these and other military operations the *imām*'s principal commander was his nephew and successor, Aḥmad b. al-Ḥasan b. al-Ḳāsim [see AL-MAHDĪ LI-DĪN ALLĀH AḤMAD].

Imām Ismāʿīl died on 5 Djumādā II 1087/15 August 1676 at Djabal Ḍawrān, south of Ṣanʿāʾ, to where he had transferred the *imām*'s residence from Shahāra in the north. Essentially a scholarly and religious personality who preferred the company of the *ʿulamāʾ*, he composed numerous works on Zaydī jurisprudence and dogma, of which at least 23 have been identified as extant (al-Ḥibshī, *Muʾallafāt*, 140-3). Reflecting this personal preoccupation with religious concerns were his dispatch of an unsuccessful mission to convert the emperor of Abyssinia to Islam (1057/1647) and his revival of the office of *amīr al-ḥadjdj* for Yemen, a position which had not been filled since before the expulsion of the Ottoman Turks in 1045/1635.

Bibliography: 1. Unpublished sources. An unpublished partial biography covering the years 1056-72/1646-62 is that by Djurmūzī (d. 1077/1666-7), *Tuḥfat al-asmāʿ wa 'l-abṣār*. Other ms. sources include Yaḥyā b. al-Ḥusayn (d. *ca.* 1100/1689), *Bahdjat al-zaman*, the continuation to an earlier work (*Anbāʾ al-zaman*) chronicling events in Yemen between 1046/1636-7 and 1099/1687-8; the *Sīrat al-Manṣūr bi'llāh al-Ḳāsim*, a work of unidentified authorship described as a history of Yemen 985-1085/1577-1674 (A. Sayyid, *Maṣādir taʾrīkh al-Yaman*, Cairo 1974, 332); al-Ḥasanī (d. 1104/1692-3), *Takmilat Kitāb al-ifāda*; ʿĀmir b. Muḥammad al-Rashīd (d. 1135/1722-3), *Bughyat al-murīd*.

2. Useful published accounts are Ibn al-Wazīr (d. 1147/1734-5), *Ṭabaḳ al-ḥalwā*, ed. Djāzim, Ṣanʿāʾ 1405/1985, a general chronicle focussing on events in Yemen 1045-90/1635-79; Muḥibbī, *Khulāṣat al-athar*, Cairo 1284/1867-8, i, 411-16, iv, 122 f.; Aḥmed Rāshid, *Tārīkh-i Yemen*, Istanbul 1291/1874-5, i, 258 f.; Wüstenfeld, *Jemen*, Göttingen 1884, 63-71; Zabāra, *Ithāf al-muhtadīn*, Ṣanʿāʾ 1343/1924-5, 82; Shawkānī, *al-Badr al-ṭāliʿ*, Cairo 1348/1929-30, i, 146-9; ʿArshī, *Bulūgh al-marām*, ed. al-Karmalī, Cairo 1939, 67 f.; Djurāfī, *al-Muktaṭaf*, Cairo 1951, 156-66; Kaḥḥāla, *Muʿdjam al-muʾallifīn*, Damascus 1957-61, ii, 287; Bayḥānī, *Ashiʿʿat al-anwār*, Cairo 1391/1971-2, ii, 246-51; Ḥibshī, *Muʾallafāt ḥukkām al-Yaman*, Wiesbaden 1979, 139-43; R.G. Serjeant and R. Lewcock (eds.), *Ṣanʿāʾ, an Arabian Islamic city*, London 1983, 80-2.

(J.R. BLACKBURN)

AL-MUTAWAKKIL ʿALĀ 'LLĀH, SHARAF AL-DĪN YAḤYA B. SHAMS AL-DĪN B. AL-IMĀM AL-MAHDĪ AḤMAD, 10th/16th century Zaydī *imām* in whose time the Ottoman Turks first became established in Yemen.

Born in northwestern Yemen on 27 Ramaḍān 877/25 February 1473, Sharaf al-Dīn announced his claim (*daʿwa*) to the imāmate during Djumādā I 912/September 1506, after years of study to achieve the necessary recognition as a Zaydī *mudjtahid*. It was another three decades (*ca.* 941/1535), however, before he was able to impose his religious and political authority upon the majority of Zaydī communities, particularly upon the rival northern tribal confederations of the Āl al-Maḥmūd (Āl Ḥamza) and Āl al-Muʾayyad. Aided by his sons, principally the eldest, al-Muṭahhar [*q.v.*], a proven commander, Imām Sharaf al-Dīn succeeded in reuniting the Zaydīs and in restoring the ascendancy of the imāmate after a protracted period of weakness. He further regained for the Zaydīs control over much of the southern highlands and of the northern Tihāma from a succession of pretenders to the Sunnī Ṭāhirid sultanate (*ca.* 858-923/1454-1517 [see ṬĀHIRIDS]) and from the Egyptian Mamlūks based in the southern Tihāma since 922/1516. Subsequently, he contained for eight years the tiny Ottoman *sandjaḳbeyilik* established by Khādīm Süleymān Pasha at Zabīd in 945/1539 (and shortly elevated in status to a *beylerbeyilik*).

At the close of 953 or the beginning of 954/February or March 1547, Imām Sharaf al-Dīn, who forever favoured religious and scholarly pursuits to attending to administrative demands, lost *de facto* control of the imāmate to al-Muṭahhar. Following his deposition at a time when the Zaydīs, threatened by an Ottoman thrust into the interior, needed a general more than a jurisprudent as their leader, Sharaf al-Din went into forced retirement. Stripped of power, but not of influence, he remained opposed to al-Muṭahhar's leadership and ambivalent towards the Ottoman Turks. His death from plague occurred on 7 Djumādā II 965/27 March 1555 at Ẓafīr, where he had proclaimed his imāmate half a century before. Despite his lifelong devotion to scholarship, none of his compositions concerned with the Zaydī rite achieved any lasting repute.

Bibliography: Sharaf al-Dīn's life was the subject of at least four biographies (*sīra*s). The oldest, that by al-Zurayḳī (d. 960/1553), goes only as far as 940/1533-4. Another, that by al-ʿAlafī, begins with the year of the *imām*'s *daʿwa* (912/1506). The remaining two were composed by Ibn Dāʿir (the father of the author of *al-Futūḥāt*, see below) and by Djamāl al-Dīn Muḥammad (d. 1085/1674-5), *al-Sulūk al-dhahabiyya*. Other ms. sources are Fīrūz (d. after 970/1562-3), *Maṭāliʿ al-nīrān*; Ibn Dāʿir (d. after 1010/1601-2), *al-Futūḥāt*; al-Mawzaʿī (d. after 1031/1622), *al-Iḥsān*; ʿĪsā b. Luṭf Allāh (d. 1048/1638; the *imām*'s great-grandson), *Rawḥ al-rūḥ*; al-Sharafī (d.1055/1645-6), *al-Laʾālī al-muḍiyya*; al-Shillī (d. 1092/1681), *al-Sanāʾ al-bāhir*; al-Ḥasanī (d. 1104/1692-3), *Takmilat al-ifāda*; and al-Shahārī (d. 1153/1740-1), *Ṭabaḳāt al-Zaydiyya*.

Two printed sources of primary value are Nahrawālī (d. 990/1582), *al-Barḳ al-Yamānī* = *Ghāzawāt al-Djarākisa*, ed. al-Djāsir, Riyadh 1967, 60-8, and Yaḥyā b. al-Ḥusayn (d. *ca.* 1100/1688), *Ghāyat al-amānī*, ed. ʿĀshūr, Cairo 1968, ii, 634-717. Other printed sources include Aḥmed Rāshid,

Tārīkh-i Yemen, Istanbul 1291/1874-5, i, 12-81; Shawkānī, *al-Badr al-ṭāliʿ*, Cairo 1348/1929-30, i, 278-80; Djurāfī, *al-Muktaṭaf*, Cairo 1951, 134-40; Zabāra, *Aʾimmat al-Yaman*, Taʿizz 1375/1955-6, i, 369-453; Sālim, *al-Fatḥ al-ʿUthmānī*, Cairo 1969, 115 ff.; Bayḥānī, *Ashiʿʿat al-anwār*, Cairo 1391/1971-2, ii, 146-9, 222, Ḥibshī, *Muʾallafāt ḥukkām al-Yaman*, Wiesbaden 1979, 119-23, and Blackburn, *The Ottoman penetration of Yemen*, in *Archivum Ottomanicum*, vi (1980), 55-100.

(J.R. Blackburn)

MUTAWĀLĪ (A.), pl. *matāwila/mutāwila, mtawleh* in colloquial Lebanese, *métoualis* in French, name for the Twelver Shīʿīs [see ITHNĀ ʿASHARIYYA] in Lebanon [see LUBNĀN]. The term is also used for those Twelver Shīʿīs who emigrated from there to Damascus, but not, generally speaking, for those resident in Ḥamāt, Ḥims, Aleppo or elsewhere in Syria. The name seems to have come into use at first as *Banū Mutawāl*, and not before the 11-12th/17th-18th centuries. It most probably was the name by which the Shīʿīs of the Djabal ʿĀmil [see ʿĀMILA], of Baalbek [see BAʿLABAKK] and of northern Lebanon designated themselves. From the 17th century onwards, they gradually gained some form of independence from the *amīrs* of Lebanon under their own leaders, the Āl Naṣṣār, the Banū Ḥarfūsh [*q.v.*] and the Āl Ḥamāda (Ṣafadī, *Lubnān*, index, 261; Shidyāḳ, *Akhbār al-aʿyān*, ii, index, 579; Aḥmad Riḍā, in Kurd ʿAlī, *Khiṭaṭ al-Shām*, vi, 252 f.; Muḥsin al-Amīn, *Aʿyān al-Shīʿa*, i/1, ed. 1960, 16 f., ed. 1986, 20; Cohen, *Palestine*, 98-104).

Even after the endeavours of Aḥmad Riḍā, H. Lammens, Muḥsin al-Amīn and others, the etymology of the name is not clearly elucidated. According to Aḥmad Riḍā, *matāwila* is a plural which, contrary to the rules, is formed from *tawallā/mutawallī* or, in accordance with the rules, from *tawālā/mutawālī*. In both cases the name would refer to a relationship of loyalty and adherence to the *Ahl al-Bayt* [*q.v.*] (*al-ʿIrfān*, ii/5 [May 1910], 237; *al-Muḳtaṭaf*, xxxvi/5 [May 1910], 425, and the critical notes to this by Shakīb Arslān in *al-Muḳtaṭaf*, xxxvii/2 [August 1910], 739 f.). In the version mentioned by Arslān (*ibid.*), who refers to Muḥammad ʿAbduh, the name is said to go back to *mut waliyyan li-ʿAlī*, a kind of war-cry, and as such it is a merely popular etymology (for the various explanations of the name, see also Muḥammad Tawfīḳ Āl al-Faḳīh al-ʿĀmilī, *Djabal ʿĀmil*, 31 f.).

At first, the *Matāwila* most probably regarded their name as a mark of honour. It did not however remain unknown to them that, in the common parlance of Sunnīs, Druzes and Christians in Lebanon, the term soon had a negative ring to it. It was only their political consciousness under Imām Mūsā Ṣadr which, around 1974, made them shake off definitely this designation which young educated Shīʿīs in particular associate with backwardness and discrimination (Lammens, *Les "Perses"*, 31 f.; Ajami, *The Vanished Imam*, 155; Rieck, *Die Schiiten*, 140, 147).

It is beyond doubt that the historical presence in Lebanon of the Twelver Shīʿīs is much older than the time in which the name *matāwila* came up. Referring to a passage in the *Amal al-āmil* [see AL-ḤURR AL-ʿĀMILĪ], *matāwila* authors, particularly in the 20th century, point out again and again that the community of the Twelver Shīʿīs in Lebanon was established already in early Islamic times. Their existence there is said to go back to the missionary activities of Abū Dharr [*q.v.*], the Companion of the Prophet; this community thus would be the second oldest after that in the Ḥidjāz (Aḥmad Riḍā, *op. cit.*; Muḥsin al-Amīn, *Khiṭaṭ Djabal ʿĀmil*, ed. 1983, 83 ff.). This assertion was challenged in particular by Shakīb Arslān (see *Bibl.*). But the popularity which Abū Dharr in recent times enjoys with many Twelver Shīʿīs (and with Sunnīs as well) as an alleged socialist and rebel furthers the spread and the affirmation of the idea that he is a sort of founding father of the Shīʿa in Lebanon. This way of representing things is also suitable for rejecting any speculation about an alleged Persian origin of the *matāwila*, which is undesirable from the point of view of Arab nationalism (see Lammens, *op. cit.*). It is true that in Lebanon there never was a centre of Shīʿī learning of the same importance as the ʿAtabāt [*q.v.* in Suppl.] in ʿIrāḳ, but the region of Djabal ʿĀmil throughout the centuries produced a number of important learned families (see the outline map in Momen, *An introduction to Shiʿi Islam*, New Haven-London 1985, 270-1). Members of these families have played an important role in both ʿIrāḳ and Persia, especially since the 10th/16th century (Hourani and Muruwwa, see *Bibl.*). However, their influence on the early phase of the Ṣafawid period in Persia should not be exaggerated.

Authors from the Djabal ʿĀmil such as ʿĀrif al-Zayn (d. 1960), Muḥsin al-Amīn (d. 1952) and Muḥammad Djawād Mughniyya (d. 1979), have had an important part in the development of Twelver Shīʿī modernism (Makkī, *al-Ḥaraka*; Muḥammad ʿAlī Shams al-Dīn, *al-Iṣlāḥ al-hādiʾ*; Khalidi, *Shaykh Ahmad*; Mallat, *Shiʿi thought*).

After the foundation of the State of Lebanon, the *Matāwila* succeeded in 1926 to be recognised as an independent *madhhab* with their own judges and courts (see *OM*, vi [1926], 87 f.). However, in the following period they again and again had occasion to complain about their being discriminated against in the country's political system and about the economic neglect of their regions. The "Shīʿī awakening", the formation of Shīʿī militias and the influence of Iran on this development play a central role in the outbreak and the course of the Lebanese Civil War since 1975 (see the research by Ajami, Pohl-Schöberlein, Rieck and Norton and the literature given there). Because of the *ṭāʾifiyya* system in Lebanon, giving information about their exact number or about their part in the entire population has always been avoided in the case of the Twelver Shīʿīs. There are also only vague reports on their part in the population of Lebanese origin living abroad (West Africa, South and North America).

Bibliography: Aḥmad b. Muḥ. al-Khālidī al-Ṣafadī, *Lubnān fī ʿahd al-amīr Fakhr al-Dīn al-Maʿnī al-Thānī*, ed. A. Rustum and F.A. al-Bustānī, Beirut 1969; Ṭannūs al-Shidyaḳ, *K. Akhbār al-aʿyān fī Djabal Lubnān*, ed. al-**MUTAWALLĪ**, Abū Saʿd ʿAbd al-Raḥmān b. Maʾmūn, Shāfiʿī jurist, born at Nīsābūr in 426/1035 (or 427/1036), died in Baghdād in Shawwāl 478/February 1086. In *fiḳh*, his principal teachers were the *ḳāḍī* al-Ḥusayn al-Marwarrūdhī (d. 462/1070; see al-Subkī, *Ṭabaḳāt*, iv, 356-65) and Abu 'l-Ḳāsim al-Fūrānī al-Marwazī (d. 471/1079; *ibid.*, v, 109-15). In the history of the Shafiʿī school, he is primarily known as *ṣāḥib al-Tatimma*, that is, as author of a "Supplement", which was never completed, to the *Ibāna* of al-Fūrānī (see Brockelmann, I, 387, S I, 669). On the death of Abū Isḥāḳ [*q.v.*] in Djumādā II 476/October 1083, he succeeded him for some time in the Niẓāmiyya at Baghdād; dismissed the same year and replaced by Abū Naṣr b. al-Ṣabbāgh (d. 477/1085), he was restored a few months later to his functions, which he retained until his death.

Besides his works of *fiḳh* (including a "Summary" concerning successions which is attributed to him), al-Mutawallī is also the author of a brief treatise on the *uṣūl al-dīn*, the title of which is not mentioned by his biographers, and which has recently been the object of two editions: the first (1986) under the title of *al-Mughnī* (after the ms. of Alexandria, Baladiyya 2014 d), the second (1987) under that of *al-Ghunya* (after the ms. of Istanbul, Aya Sofya 2340). This treatise, rightly described by al-Subkī as conforming to the doctrine of al-Ashʿarī, is in fact nothing more than a fairly systematic plagiarism —in spite of a few modifications or suppressions—of the *K. al-Irshād* of Abu 'l-Maʿālī al-Djuwaynī [*q.v.*], and is therefore of little interest beyond the assistance which it may supply in the reading of the latter work.

MUTAWĀTIR (a.), active participle of Form VI of *w-t-r*, "that which comes successively". It is used as a technical term in two senses:

(a) In the methodologies of *ḥadīth* [*q.v.*, and for the term see Vol. III, 25b] and of law, the term is the counterpart of *khabar al-wāḥid* [*q.v.*] and denotes a Prophetic tradition (or, in general, any report) with multiple chains of transmission [see isnād]. Concerning the requisite number of concurrent chains that would make a report *mutawātir*, there is no unanimity; it is supposed to be a sufficient number to preclude the possibility of possible agreement on an error or of collusion in a forgery. The Kurʾān, e.g., is clearly transmitted by *tawātur* [*q.v.*]. The works on *ḥadīth* methodology do not devote much attention to the notion, whereas most compendiums on *uṣūl al-fiḳh* (juridical methodology) contain chapters—sometimes lengthy ones—on it within the section dealing with *akhbār* (reports). This is only natural, because the notion of *mutawātir* grew out of discussions of the *ḥudjdjiyya* (possibility of proof, conclusiveness) of a Prophetic tradition for determining the legal status of an act, which was a central concern of the legal theorists. In fact, a *mutawātir* tradition was considered by the majority of authorities to yield knowledge (*ʿilm*) and certitude (*yaḳīn*) rather than presumption (*ẓann*). There are not too many traditions that qualify as *mutawātir*, especially not of the *mutawātir bi 'l-lafẓ* variety, in which the texts appended to the various chains are identical in wording (the opposite being *mutawātir bi 'l-maʿnā* where the texts are identical in meaning only). Al-Suyūṭī [*q.v.*] and others made collections of them. But, as Juynboll has shown, even a recognised *mutawātir* tradition may not reflect recognised historical truth (*Muslim tradition*, ch. iii).

In the epistemology of *kalām* theology (and to some extent, philosophy, see e.g. Ibn Sīnā, *al-Nadjāt*, Cairo 1357/1938, 61), the idea of *tawātur* was extended to all reports on distant times or places and covered such propositions as "there is a city called Mecca" and "there has existed a king called Alexander". Most authors consider that knowledge based on a *mutawātir* report is "immediate" (*ḍarūrī*) just like senseperception, and not "acquired" (*muktasab*) by reasoning.

Al-Taftāzānī in his commentary on the *ʿAḳīda* of Abū Ḥafṣ ʿUmar al-Nasafī (d. 537/1142), 33-4, mentions two objections to the validity of *mutawātir* reports. The first is that Jews and Christians accept as *mutawātir* reports that are rejected by Muslims. To this objection, al-Taftāzānī simply replies that the possibility that these reports should be *mutawātir*, is excluded. The second objection is that the reports of every single reporter (*āḥād* [see khabar al-wāḥid]) represent an opinion only and that an accumulation of opinions cannot be said to afford certainty. To this, al-Taftāzānī replies that often plurality has a power of which singleness is devoid, e.g., a cord made of hair.

(b) In prosody, the term is applied to the rhyme in which only one moving letter intervenes between the last two quiescents. See also ḳāfiya, esp. at IV, 412b, top.

(A.J. Wensinck-[W.F. Heinrichs])

MUṬAWWIF, the pilgrim's guide in Mecca. The word literally means one who leads the *ṭawāf* [*q.v.*]. The task of the *muṭawwif* is, however, by no means limited to assisting pilgrims from foreign lands, who entrust themselves to their guidance, to go through the ceremonies required at the circumambulation of the Kaʿba. On the contrary, they act as guides at the *saʿy* also and at all other ceremonies which are prescribed or only recommended for the *ḥad̲j̲d̲j̲* or *ʿumra* [*q.vv.*]. The *muṭawwifs* also cater very completely for the physical welfare of the pilgrims. As soon as the pilgrims arrive in D̲j̲idda or in Mecca, their agents are ready on the arrival of the steamers or airplanes to provide all the services they require from disembarkment to departure for Mecca. In Mecca, the *muṭawwifs* or members of their families and servants take charge of the pilgrims. During the whole of their stay they provide the pilgrims with lodging, service, food, purchases (necessary and unnecessary), attend them if they fall ill and in case of death take charge of what they leave behind them.

The *muṭawwifs* of course do not all this for nothing. They are appropriately paid for their trouble and see that, if the pilgrim is rich, their friends and relations also make something out of him. Of the money which they themselves receive, they have to hand over a considerable part in the form of fees, presents etc. to the *s̲h̲ayk̲h̲* of the gild and to the treasury, another reason for getting as much as possible out of those entrusted to their care. It is therefore no wonder that many pilgrims have complained bitterly about the covetousness of these particularly prominent representatives of the Meccan pilgrim industry. Under ʿAbd al-ʿAzīz b. Suʿūd, the fees for guides were first fixed by a legal enactment of the Ḥid̲j̲āz government (*OM*, xii [1932], 249).

Reference has already been made to the fact that the *muṭawwifs* are organised in gilds; they are divided up into separate groups who sometimes have the right to exploit the pilgrims from a definite area only (e.g., Lower Egypt). All these groups together form the gild with a chief *s̲h̲ayk̲h̲* officially recognised as its head. The gild is also very exclusive. "Wild" (*i.e.*, independent) guides (*d̲j̲arrārs*) have to be content with the scanty pickings left over for them by the organised *muṭawwifs*. On the rôle of the *muṭawwifs* in Mecca in recent, post-war decades, see makka. 3.

(R. Paret)

MUṬAYR, a major camel-rearing Bedouin tribe of Arabia, now living in Saudi Arabia and Kuwayt, and counted among the *aṣīl* or "noble" tribes in local taxonomy. They were particularly prominent in the period of the Ik̲h̲wān movement of the 1920s when, under Fayṣal al-Duwīs̲h̲, they, with other Ik̲h̲wān tribes raided into ʿIrāḳī territory until Fayṣal's final surrender to the British at D̲j̲ahrā in 1930. Muṭayr, originally a tribe of central Nad̲j̲d and Ḥid̲j̲āz, are now divided into an eastern and a western section, the former being more prominent. The eastern section are often known as ʿIlwa, the western as Banū ʿAbdillāh. This nomenclature is, however, a simplification, as shown in the following listing of the main subsections and their location after Dickson: I. Dūs̲h̲ān, the ruling clan (singular Duwīs̲h̲), eastern; II. ʿIlwa, comprising Mwaha, D̲h̲uwi ʿAwn, D̲j̲iblān, all eastern; and III. Burayh, comprising Awlād Wāṣil, eastern, and Awlād ʿAlī and Banū ʿAbdillāh, both western.

Their original homeland, as shown by toponomy and tradition, is the volcanic uplands between Mecca and Medina (Doughty, ii, 366). They are first mentioned by Ibn Bis̲h̲r (64) in 1080/1669 in connection with the S̲h̲arīf Ḥamūd b. ʿAbd Allāh's expedition to Nad̲j̲d. During the 12th/18th century, with the help of the G̲h̲aṭān (Ḳaḥṭān) and in a long series of wars, they contested the ʿAniza (ʿAnaza) for the pasturages of central Nad̲j̲d (Burckhardt, 461) and finally managed to force them out northwards. They were both, nevertheless, superseded by the ʿUtayba, who remain to this day numerically the largest tribe of central Nad̲j̲d, although as late as 1287-8/1870-1 they are recorded as fighting the G̲h̲aṭān around ʿUnayza. Up till the early 12th/18th century, they occupied the desert between Ḳaṣīm and Medina. However, by the time of Doughty's visit in the 1870s they were already regularly migrating towards Kuwait in summer, this following the eclipse of the Banū K̲h̲ālid, the previous rulers of al-Aḥsā. In 1239/1823 with the help of the ʿAd̲j̲mān, they had defeated the Banū K̲h̲ālid in the ʿArma plateau. However, later in 1243/1827 they were allied with the latter against Turkī b. Suʿūd. Such quick changes of alliance characterised Bedouin political relationships in those times. By that time they can be seen to have moved the focus of their attention to the east. During the 13th/19th century they opposed the growing power of the Āl Suʿūd, sometimes allied with the Āl Ras̲h̲īd, sometimes with the Egyptians. But by the beginning of this century they had joined the Ik̲h̲wān movement and were the spearhead of Ibn Suʿūd's attacks into Ḥid̲j̲āz, D̲j̲abal S̲h̲ammar and Kuwayt territory. They were prominent in the ill-fated Ik̲h̲wān rebellion against Ibn Suʿūd, and Fayṣal al-Duwīs̲h̲ ended his days a prisoner of the latter after being handed over to him by the British in defiance of Bedouin rules of sanctuary.

The territory of the eastern Muṭayr centres on the Ṭuwāl, the "deep" wells of Muṭayr, Wabrā, Garʿa (Ḳarʿa), Luṣāfa, Lahāba, D̲z̲arya (Ḳarya) ʿIlyā and

Dzarya Siflā; extending south they embrace Khufaysa and ʿIrḳ Ṭuraybi, then west to Ḳayʿiyya and Arṭāwiyya, Burayda and ʿUnayza, then northeast along the Bāṭin to al-Ḥafar. They border the ʿAdjmān and ʿAwāzim on the east, the Subayʿ and Suhūl on the south, and the Ḥarb, Shammar and Ẓafīr on the west.

Their main traditional enemies in the days of intertribal raiding were the Shammar and Ẓafīr, the latter taking the brunt of their attacks into ʿIrāḳ in the Ikhwān period. They are counted Ahl al-Djunūb "southern Bedouin" like the ʿUtayba, Ḥarb and ʿAdjmān. In fact, they are the northernmost of these, the Shammar and Ẓafīr being Ahl al-Shimāl "northerners". Their dialect, of a central Nadjdī type, links them with some sections of Ḥarb and ʿUtayba, also west-central Nadjdī in origin and present location.

MUṬAYYABŪN [see LAʿAḲAT AL-DAM].

MUʿTAZILA, the name of a religious movement founded at Baṣra, in the first half of the 2nd/8th century by Wāṣil b. ʿAṭāʾ (d. 131/748 [*q.v.*]), subsequently becoming one of the most important theological schools of Islam.

The origin of this term—which has the sense of "those who separate themselves, who stand aside"—remains enigmatic. According to a traditional explanation (sometimes acknowledged by the Muʿtazila themselves), the word would have been applied to Wāṣil—or to his lieutenant, ʿAmr b. ʿUbayd (d. 144/761 [*q.v.*])—because on the question relating to the definition applicable to the Muslim guilty of a serious offence, the former (or the second) "would have separated himself" from al-Ḥasan al-Baṣrī (or from Ḳatāda) (on this tradition and its variants, see W. M. Watt, *The formative period of Islamic thought*, Edinburgh 1973, 209-11). An explanation, more plainly hostile, propounded notably by Ibn al-Rāwandī (according to al-Khayyāṭ, *K. al-Intiṣār*, ed. Nader, Beirut 1957, 118, ll. 2-9, later by al-Ashʿarī, *K. al-Lumaʿ*, ed. McCarthy, Beirut 1953, § 184), is that, on the same question of the name to be given to the sinful Muslim—who should, according to Wāṣil, be described by the definition of *fāsiḳ*, an "intermediate rank" between that of *muʾmin* and that of *kāfir*—Wāṣil was opposed to the consensus of the Muslims for whom, in any circumstances, the sinful Muslim could not be other than "believing" or "disbelieving". To this, the Muʿtazila replied that, on the contrary, Wāṣil's intention was in fact to retain only that which, among Muslims, was the object of a consensus: while they differed as to whether the sinful Muslim should be termed *muʾmin* or *kāfir*, all, on the other hand, were agreed in defining him as *fāsiḳ* (*K. al-Intiṣār*, 118, ll. 10-19). In other words, on this question, Wāṣil was as unwilling to side with the Murdjiʾa (*q.v.*; partisans of the first solution) as with the Khāridjites (*q.v.*; partisans of the second); he chose to "stand aside" from this debate.

It is an explanation of this kind which today, in particular as a result of the studies undertaken by Nallino (*Sull'origine del nome dei Muʿtaziliti*, in *RSO*, vii [1916]), is generally accepted: *iʿtizāl* would designate a position of neutrality in the face of opposing factions. Nallino drew support for this argument from the fact that at the time of the first civil war, some of the Companions (ʿAbd Allāh b. ʿUmar, Saʿd b. Abī Waḳḳāṣ, etc.), who had chosen to side neither with ʿAlī nor with his adversaries, were for this reason called *muʿtazila*. He even drew the conclusion that the theological Muʿtazilism of Wāṣil and his successors was merely a continuation of this initial political Muʿtazilism; in reality, there does not seem to have been the least connection between one and the other. But, in its principle, this explanation is probably valid.

Little is known of the origins of the movement. It appears to be established that Wāṣil, originally a disciple of al-Ḥasan al-Baṣrī [*q.v.*] was indeed the sole founder, and this during the lifetime of the latter. It was only at the end of a relatively long period, and after the death of al-Ḥasan (110/728), that ʿAmr b. ʿUbayd—another disciple of al-Ḥasan, and a particularly eminent one—decided to join him. After the death of Wāṣil in 131/748, it was ʿAmr who took on the leadership of the group. It is hardly likely that at this early stage of the movement the Muʿtazilī doctrine, as it was to be formulated several decades later by Abu 'l-Hudhayl, was already fully developed. No doubt the theses defended here were essentially the same as those previously current in the milieu of the Ḳadariyya [*q.v.*], to which al-Ḥasan belonged: rejection of the doctrine of predestination, affirmation of the absolute responsibility of every individual with regard to his transgressions which could not be in any sense the work of God. It will be noted that, on the question of the name to be applied to the sinful Muslim, al-Ḥasan seems to have accepted the notion of an "intermediate rank", although in the event he proposed *munāfiḳ* ("hypocrite" [*q.v.*]) in place of *fāsiḳ* ("malefactor" [*q.v.*]). Similarly, al-Ḥasan subscribed to the principle that every unrepentant sinner will suffer for ever the torments of Hell, an essential element of what was later to be called "the promise and the threat" (*al-waʿd wa 'l-waʿīd*).

Did the movement launched by Wāṣil also have political objectives? Nyberg believed so, on the basis of a singular interpretation of the *iʿtizāl* and of the doctrine of the "intermediate rank" (cf. *EI*[1], s.v. *Muʿtazila*, at III, 787-8). This, according to him, should in fact be interpreted as denoting a position of a political nature, characterised simultaneously by a declared hostility with regard to the Umayyads and a cautious attitude towards the Shīʿa, at least in consideration of its more radical elements. Now, Nyberg claimed, this position corresponded exactly to that of the ʿAbbāsid movement, to the extent that the doc-

trine of "intermediate rank" would be nothing other than "the theoretical encapsulation of the political programme of the ʿAbbāsids before their accession to power". This explains why, "for at least a century", Muʿtazilī theology "remained the official doctrine of the ʿAbbāsid court". This would also account for the fact that Wāṣil sent envoys to the different countries of the Muslim world; the object was to spread the propaganda of the ʿAbbāsids. This interpretation, as proved now, has no validity. Not only did the first Muʿtazila not support the ʿAbbāsid movement, but a large number of them participated in the insurrection of Ibrāhīm b. ʿAbd Allāh [*q.v.*] in 145/762 against al-Manṣūr (cf. J. van Ess, *Une lecture à rebours de l'histoire du muʿtazilisme*, 120-1). The "propaganda" organised by Wāṣil was, in all probability, of a purely religious nature (*ibid.*, 104-8). As for the supposed amicable relations between al-Manṣūr and ʿAmr b. ʿUbayd, this is probably an instance of a legend invented after the event (*ibid.*, 118-22). It was only on the accession of al-Maʾmūn that Muʿtazilism became, for a brief period, official doctrine.

Historical evolution. The author of the present article is not a historian, and therefore will not venture to describe the history of Muʿtazilism (which extends over a period of approximately five centuries) in detail and with reference to all its elements, doctrinal, political and social. On this subject, and in particular on the earliest periods, some very detailed and informative analyses have been compiled, in recent years, by J. van Ess. While inviting the reader to avail himself of these sources (see *Bibl.*), we confine ourselves here to a few succinct references.

The great age of Muʿtazilism is not limited, as is still all too often the general view, to the first ʿAbbāsid century. The revocation by the caliph al-Mutawakkil, in 234/848, of the decrees instituting the *miḥna* [*q.v.*] marks only the end of one period, that during which, for a period of some thirty years, the Muʿtazilī school enjoyed the favour of the caliphs of Baghdād. In fact, by the time this reversal took place, the Muʿtazila were established not only in the capital but also in numerous regions of the Islamic world, especially in Persia, where measures taken in Baghdād did not necessarily have an effect. Furthermore, although deprived of the patronage of the ʿAbbāsid caliphate, they subsequently found other princes or influential persons (under the Būyids, in particular) to support them. Better still: this first period, which we are quite willing to term the "heroic" period, or that of the "great ancestors", is not—in our view, at least—the most important. It was only at a later stage that there appeared, from the point of view of elaboration and systematisation of doctrine, what may be described as the "classical" period of Muʿtazilism, lasting approximately from the last quarter of the 3rd/9th century to the middle of the 5th/11th century (in other words, until the arrival of the Saldjūḳids). It could almost be said, *mutatis mutandis*, that, in relation to persons such as Abū ʿAlī and Abū Hāshim al-Djubbāʾī, the Muʿtazila of the first period correspond to the pre-Socratic philosophers in relation to Plato and Aristotle.

This difference between two periods of Muʿtazilism is very clearly felt within the school itself: thus Ibn Abi 'l-Ḥadīd distinguishes systematically between *al-mutaḳaddimūn* (or *al-ḳudamāʾ*), "those of the earlier period", and *al-mutaʾakhkhirūn*, "those of the later period" (cf. *Sharḥ Nahdj al-balāgha*, ed. M. Abu 'l-Faḍl Ibrāhīm, i, 7-8; iii, 288, l. 19; xi, 119, l. 17-18 and 120, l. 5). Mānkdīm, for his part, readily uses, to denote the first, the term *salaf*: *al-salaf min aṣḥābinā* (*Sharḥ*, 634, l. 10), *al-mashāyikh min al-salaf* (*ibid.*, 146, l. 11).

Furthermore, it is known that, very soon, the Muʿtazila constituted two separate schools, "those of al-Baṣra" and "those of Baghdād" (terms which, over the course of time, were to become purely conventional, having no association with specific geographical location). Taking into account the two periods mentioned above, there is thus a total of four groups of theologians, clearly distinguished, again, by Ibn Abi 'l-Ḥadīd: the "Baṣrans of the earlier period" (*ḳudamāʾ al-baṣriyyīn*) and "those of the later period", the "Baghdādīs of the earlier period" (*ḳudamāʾ al-baghdādiyyīn*) and "those of the later period".

Among the "Baṣrans" of the first period, the most significant figures are Ḍirār b. ʿAmr (d. *ca.* 200/915 [*q.v.* in Suppl.]), Abū Bakr al-Aṣamm (d. 201/816? [*q.v.* in Suppl.]), Abu 'l-Hudhayl (d. 227/841? [*q.v.*]), al-Naẓẓām (d. 221/836 [*q.v.*]), nephew and disciple of the preceding, Muʿammar b. ʿAbbād (d. 215/830 [*q.v.*]), Hishām b. ʿAmr al-Fuwaṭī (d. between 227/842 and 232/847, cf. Gimaret-Monnot, *Shahrastani, Livre des religions et des sectes*, i, 249 [*q.v.*]), the eminent writer al-Djāḥiẓ (d. 255/869 [*q.v.*]), a disciple of al-Naẓẓām, ʿAbbād b. Sulaymān (d. *ca.* 250/864 [*q.v.*]), a disciple of Hishām al-Fuwaṭī, Abū Yaʿḳūb al-Shaḥḥām (d. after 257/871, cf. Gimaret-Monnot, *op. cit.*, 199), a disciple of Abu 'l-Hudhayl. Among the "Baghdādis" of the same period, it is appropriate to mention in particular Bishr b. al-Muʿtamir (d. 210/825 [*q.v.*]), founder of the school of Baghdād, Thumāma b. Ashras (d. 213/828? [*q.v.*]) and Abū Mūsā al-Murdār (d. 226/841 [*q.v.*]), disciples of Bishr, Djaʿfar b. Ḥarb (d. 236/850 [*q.v.*]) and Djaʿfar b. Mubashshir (d. 234/848 [*q.v.*]), disciples of Abū Mūsā, Abū Djaʿfar al-Iskāfī (d. 240/854 [*q.v.*]), disciple of Djaʿfar b. Ḥarb.

The most characteristic feature of this first period is the extreme diversity of people and of doctrines; it is a case of a collection of distinguished individuals, of often "colourful" personalities, rather than continuous and homogeneous associations. On the human level, nothing could be more dissimilar, for example, than the two disciples of Bishr b. al-Muʿtamir: Thumāma, courtier, personal friend of al-Maʾmūn, hedonist, and Abū Mūsā, ascetic, nicknamed the "monk" (*rāhib*) of the Muʿtazila, who denounced as infidels all those who sought the favour of princes. On the doctrinal level, divergencies are no less stark. Thus Ḍirār b. ʿAmr is distinguished from all the rest of the school by his affirmation that voluntary human acts are created by God, a thesis which associated him with Djahm b. Ṣafwān [*q.v.*] and as a result of which he was to be disowned by later generations of Muʿtazila (cited as such, among others, by Ibn al-Nadīm, he is explicitly challenged, in his turn, by Abu 'l-Ḳāsim al-Balkhī in his *Maḳālāt*; furthermore, he does not appear in the *Ṭabaḳāt al-Muʿtazila* of the *ḳāḍī* ʿAbd al-Djabbār). Al-Naẓẓām radically rejects the atomist theory adopted by his uncle and master Abu 'l-Hudhayl, and thus is likewise isolated in relation to all the others. Al-Aṣamm also rejects the cosmology of Abu 'l-Hudhayl, but in his case, on a different point: he absolutely denies the existence of accidents, another fundamental element of this cosmology. The same al-Aṣamm also rejected the very thing that had characterised the *iʿtizāl* at the outset, this being the thesis of the "intermediate rank"! Another of the (theoretically) cardinal principles of Muʿtazilism, that which affirms the reality of the "threat" (in other words, of Hell in perpetuity for sinners), was rejected by an entire group of Murdjiʾa Muʿtazila, including Abū Shimr, Muways b. ʿImrān [*q.v.*] (two contemporaries of Abu 'l-Hudhayl), and later Muḥammad b. Shabīb [*q.v.*] (of the following

generation). The thesis supported by Abu 'l-Hudhayl and al-Naẓẓām, according to which God necessarily does for every man what is the most advantageous (*al-aṣlaḥ*) for him, including that relating to his future life, was contradicted by Bishr al-Muᶜtamir, author of a theory of *luṭf* which he was almost alone in supporting (with his disciple Djaᶜfar b. Ḥarb), and which stated on the contrary that God does not impart to all men the "grace" which would assure their well-being; paradoxically, in view of the fact that Bishr was the founder of the school of Baghdād, it was specifically the "Baghdādīs" who, later, were to be seen as partisans of the theory of *al-aṣlaḥ*. The doctrine of "generation" (*tawallud*), also supported by Bishr, (and, to a lesser extent, by Abu 'l-Hudhayl), according to which a man is capable of producing an act outside himself through the intermediary of another whom he himself produces, was rejected on the one hand by al-Naẓẓām, Muᶜammar, Thumāma, al-Djāḥiẓ, in the name of a concept of "nature" (*ṭabᶜ* or *ṭibāᶜ*), on the other by Ṣāliḥ known as Ḳubba [*q.v.*], in the name of an absolute divine arbitrariness.

Also present in this tableau are figures who adopted more or less eccentric positions. The asceticism preached by Abū Mūsā as well as by the two Djaᶜfars, his disciples, clearly takes, in some cases, the form of Ṣūfism: these are the *ṣūfiyyat al-Muᶜtazila*, including such notable figures as ᶜĪsā b. al-Haytham al-Ṣūfī (d. 245/860), a disciple of Djaᶜfar b. Ḥarb, of whom Ibn al-Nadīm relates that he ultimately "became delirious" (*khulliṭa*), or Abū Saᶜīd al-Ḥuṣrī, likewise charged with "delirium" and "innovation" by the author of the *Fihrist*, and whom ᶜAbd al-Djabbār, in his *Tathbīt dalāʾil al-nubuwwa* (ed. ᶜA. K. ᶜUthmān, Beirut 1966, i, 129), does not hesitate to place among the *zanādiḳa*. In the same vein attention may be drawn to two disciples of al-Naẓẓām, passed over in tactful silence in the majority of Muᶜtazilī *ṭabaḳāt*, namely Aḥmad b. Khābiṭ (or Ḥābiṭ [*q.v.*]) and al-Faḍl al-Hadathī, whose theories (including in particular the affirmation of transmigration) evoke very directly those of certain Shīᶜī *ghulāt*. Finally, also to be counted among the Muᶜtazila—although absolutely disowned by them—are the two enigmatic personalities Ibn al-Rāwandī [*q.v.*], a disciple of ᶜĪsā b. al-Haytham, and Abū ᶜĪsā al-Warrāḳ [*q.v.*].

Turning now to the second period, the landscape becomes altogether different. This time, genuine schools are established, around a coherent body of doctrine which may truly be called a "system". On the "Baṣran" side (in fact, both the persons named below spent almost their entire lives at ᶜAskar Mukram, in Khūzistān), appear the two dominant figures of Abū ᶜAlī al-Djubbāʾī (d. 303/933 [*q.v.*]) and of his son Abū Hāshim (d. 321/933 [*q.v.*]), "the two *shaykhs*", whose names appear repeatedly in the works of all the authors who quote their teaching, to such an extent that it is appropriate to speak of a "Djubbāʾī" school. Among the very numerous members of this school, worthy of mention are Abū ᶜAlī Ibn Khallād [*q.v.*], a disciple of Abū Hāshim; Abū ᶜAbd Allāh al-Baṣrī (d. 369/980 [*q.v.* in Suppl.]) and Abū Isḥāḳ b. ᶜAyyāsh, both disciples of Ibn Khallād; the *ḳāḍī* ᶜAbd al-Djabbār (d. 415/1025 [*q.v.*]), a disciple of the two preceding, friend and protégé of the Ṣāḥib Ibn ᶜAbbād (himself a disciple of Abū ᶜAbd Allāh al-Baṣrī); Abū Rashīd al-Nīsābūrī [*q.v.*], Abu 'l-Ḥusayn al-Baṣrī (d. 426/1044, *q.v.* in Suppl.), Abū Muḥammad Ibn Mattawayh, all three disciples of ᶜAbd al-Djabbār. The "Baghdādī" school, for its part, is represented principally by Abu 'l-Ḥuṣayn al-Khayyāṭ (d. *ca.* 300/913 [*q.v.*]), described by Ibn Abi 'l-Ḥadīd as *shaykh al-mutaʾakhkhirīn min al-Baghdādiyyīn* (*Sharḥ Nahdj al-balāgha*, xi, 120, l. 5); Abu 'l-Ḳāsim al-Balkhī (d. 319/913 [*q.v.*]), a disciple of the preceding (although described as a "Baghdādī" he lived most of his life in Khurāsān); Abū Bakr Ibn al-Ikhshīd (d. 326/938 [*q.v.*]); the grammarian ᶜAlī b. ᶜĪsā al-Rummānī (d. 384/994 [*q.v.*]), a disciple of the last-named.

The opposition between the two schools is now much more decisive than in the preceding period. A famous work by Abū Rashīd al-Nīsābūrī, fortunately preserved, reveals, in matters of cosmology and anthropology, "The questions on which the Baṣrans and the Baghdādis are opposed" (*al-Masāʾil fi 'l-khilāf bayn al-Baṣriyyīn wa 'l-Baghdādiyyīn*, ed. M. Ziyāda and R. al-Sayyid, Beirut 1979), where primary attention is given to the theses upheld on the one hand by Abū ᶜAlī and (especially) Abū Hāshim al-Djubbāʾī, on the other by Abu 'l-Ḳāsim al-Balkhī. It is in particular the theory of "states" (*aḥwāl*), conceived by Abū Hāshim, which was violently attacked from the "Baghdādī" side (especially by Ibn al-Ikshīd). It is true that, even among the "Baṣrans", this thesis was not unanimously accepted, far from it; some opposed it with the utmost vigour, including Muḥammad b. ᶜUmar al-Ṣaymarī (d. 315/927)—although it should be said that al-Ṣaymarī was at least as much "Baghdādī" as "Baṣran"—and in particular, Abu 'l-Ḥusayn al-Baṣrī. As a result, there was constituted in the very midst of the "Baṣran" school a sub-group of supporters of Abū Hāshim, known as *Bahshamiyya* (though comprising almost all of the "Djubbāʾīs" mentioned above).

The arrival of the Saldjūḳids marks, in general, the end of this second period (without there being any genuine relation of cause to effect), and, consequently, of the "Golden Age" of Muᶜtazilism. Nevertheless, the latter did not disappear.

On the one hand, Muᶜtazilīs as such continued to exist for a long time. Even in Baghdād, the forced recantation of Ibn ᶜAḳīl [*q.v.*], under pressure from Ḥanbalī circles, should not be invested with undue significance. Many Ḥanafīs were Muᶜtazilīs, and, as is known, the Saldjūḳid sultans favoured the Ḥanafī *madhhab*. Consequently, throughout the last two centuries of the ᶜAbbāsid caliphate, a fair number of *ḳāḍīs*, in Baghdād as in Rayy, were avowed Muᶜtazilīs (cf. W. Madelung, *Religious schools and sects in medieval Islam*, London 1985, ii, 135-7). Among these, mention should be made of Abū Yaᶜḳūb Yūsuf al-Lamghānī (d. 606/1209), who was one of the masters of Ibn Abi 'l-Ḥadīd (cf. *Sharḥ Nahdj al-balāgha*, ix, 192, ll. 10-11). In Khwārazm, where it was overtly supported by the local princes, Muᶜtazilism continued throughout this period as the dominant ideology (cf. Madelung, *op. cit.*, 115-16), to such an extent that outside this area *khwārazmī* was understood as a synonym of *muᶜtazilī* (cf. Yāḳūt, *Udabāʾ*, vi, 155, ll. 7-10). Khwārazm was the birthplace of Maḥmūd al-Zamakhsharī (d. 538/1144 [*q.v.*]), author of a famous Ḳurʾānic commentary entitled *al-Kashshāf*; it was also in Khwārazm that the young Fakhr al-Dīn al-Rāzī [*q.v.*] had such violent arguments with the local Muᶜtazilīs that he was forced to leave the country. It appears that by this time the "Baghdādī" tendency had ceased to exist; according to al-Rāzī (*Iᶜtiḳādāt firaḳ al-Muslimīn*, ed. ᶜA. S. al-Nashshār, Cairo 1938, 45) the only survivors were the supporters of Abū Hāshim and those of Abu 'l-Ḥusayn al-Baṣrī. But it was only after the Mongol conquest that Muᶜtazilism as such finally disappeared altogether.

On the other hand, Muᶜtazilī theses have not remained the exclusive property of the school bearing

this name. Other groups, within Islam and even outside Islam, have adopted and perpetuated them, to such an extent that they could be said to be still current at the present day.

Within Islam, these are the Shīᶜīs, Zaydīs and, later, Imāmīs. Already implicit, to some extent, in the teaching of al-Ḳāsim b. Ibrāhīm al-Rassī (d. 246/860), Muᶜtazilism was decisively adopted as much by al-Ḥasan b. Zayd (d. 270/884 [*q.v.*]), founder of the Zaydī amirate of Ṭabaristān (his brother and successor, Muḥammad, employed as secretaries Abu 'l-Ḳāsim al-Balkhī and Abū Muslim al-Iṣfahānī, one of the Muᶜtazilī commentators of the Ḳurʾān), as by Yaḥyā b. al-Ḥusayn al-Hādī ilā 'l-Ḥaḳḳ (d. 298/911 [*q.v.*]), founder of the Zaydī principality of the Yemen. Among the Yemenīs, it is the "Baghdādī" tendency which prevailed, while among the Zaydīs of the Caspian region, the Djubbāʾī doctrine was followed. The Imām al-Muʾayyad bi 'llāh (d. 411/1020 [*q.v.*]) had been the pupil of Abū ᶜAbd Allāh al-Baṣrī and of the *ḳāḍī* ᶜAbd al-Djabbār. One of the claimants to his succession, known by the curious name of Mānkdīm (or Mānakdīm) Shashdīw (d. 425/1034), is the author of the well-known paraphrase of the *Sharḥ al-uṣūl al-khamsa* of ᶜAbd al-Djabbār. (On all of the above, cf. W. Madelung, *Der Imam al-Qāsim ibn Ibrāhīm und die Glaubenslehre der Zaiditen*, Berlin 1965.) This state of affairs had a particularly fortunate consequence, the preservation of quantities of Muᶜtazilī writings; it is principally in the Yemen (the Zaydī amirate of Persia having disappeared at the beginning of the 6th/12th century) that there have been recovered, in all or in part, the works of ᶜAbd al-Djabbār, Abū Rashīd al-Nīsābūrī, Ibn Mattawayh, etc.

On the Imāmī side, Muᶜtazilism first made an impact at the end of the 3rd/9th century, with the Banū Nawbakht [*q.v.*]: Abū Sahl al-Nawbakhtī (d. 311/924) and his nephew al-Ḥasan b. Mūsā (d. *ca.* 310/923), the author of the *K. Firaḳ al-Shīᶜa*. It was initially short-lived; the theology of Ibn Bābawayh (d. 381/991 [*q.v.*]) affirmed, on the contrary, that God creates the actions of men and wills everything which comes into being (including evil). But Muᶜtazilī theses prevailed again, this time definitively, with the disciple of Ibn Bābawayh, al-Shaykh al-Mufīd (d. 413/1022 [*q.v.*]), upholding the theses of the "Baghdādīs", as is abundantly illustrated by his *Awāʾil al-maḳālāt* (cf. M. J. McDermott, *The theology of al-Shaikh al-Mufīd*, Beirut 1978). Then it was the turn of al-Sharīf al-Murtaḍā (d. 436/1045 [*q.v.*]), a disciple of ᶜAbd al-Djabbār, who, for his part, successfully championed the theses of the "Baṣrans". The Ḳurʾānic commentaries of Abū Djaᶜfar al-Ṭūsī (d. 459/1067 [*q.v.*]) and of al-Ṭabarsī (d. *ca.* 548/1155 [*q.v.*]) are overtly Muᶜtazilī commentaries, even more so than the *Kashshāf* of al-Zamakhsharī, and not their least interesting feature is the innumerable references made in them to the (now lost) *tafsīrs* of al-Djubbāʾī and al-Balkhī (the same observation applies, moreover, to the Ḳurʾānic commentary of the Zaydī theologian al-Ḥākim al-Djushamī (d. 494/1101 [*q.v.*]).

Finally, outside Islam, Muᶜtazilī thought has exerted a decisive influence, as is shown by the studies of G. Vajda, on the Jewish theologians living in Islamic countries: Rabbanites (like Saᶜadyā al-Fayyūmī, d. 330/942), and especially Karaites, notably Yūsuf al-Baṣīr (first third of the 5th/11th century), whose entire theological corpus is directly modelled on the work of ᶜAbd al-Djabbār (cf. G. Vajda, *Le* kalām *dans la pensée religieuse juive du Moyen Age*, in *RHR* [1973]). The adoption of Muᶜtazilī theses by the Karaites had, moreover, the same beneficial consequence as that observed among the Zaydīs of the Yemen: the preservation (although in rather less significant proportions) of a quantity of Muᶜtazilī literature (often transcribed, in this instance, in Hebrew characters). It is thus, for example, that the Firkovitch Collection in the Public State Library of Leningrad contains, among others, numerous fragments—as yet unedited—of the *Mughnī* and the *Muḥīṭ* of ᶜAbd al-Djabbār (cf. A. Ya. Borisov, *Muᶜtazilitskiye rukopisi Gosudarstvennoy Publičnoy Biblioteki v Leningrade*, in *Bibliografiya Vostoka*, 8-9, 1935; cf. also H. Ben-Shammai, *A note on some Karaite copies of Muᶜtazilite writings*, in *BSOAS* [1974]).

After centuries of suppression or systematic misrepresentation in Sunnī Islam, Muᶜtazilism has been "rediscovered" at the beginning of the 14th/20th century, and since then a significant trend towards its rehabilitation has been observed, especially in Egypt. In the first instance, Aḥmad Amīn, in his *Ḍuḥā al-Islām* (1936), devoted to it a chapter of some two hundred pages, where he shows that the Muᶜtazilīs were before all else men of religion, committed to the defence of Islam, and concludes with this unequivocal statement: "In my opinion, the demise of Muᶜtazilism was the greatest misfortune to have afflicted Muslims; they have committed a crime against themselves". Then, notably, Zuhdī Ḥasan Djār Allāh, whose book *al-Muᶜtazila* (Cairo 1947) is an eloquent plea in favour of the school, the author considering its historical elimination as a "victory of obscurantism" and the cause of the decadence of the Arabs (cf. R. Caspar, *Le renouveau du moᶜtazilisme*, in *MIDEO* [1957]). Again in the present day, because it affirms the primacy of reason and of free will, many Muslim thinkers continue to see in Muᶜtazilism (sometimes to an exaggerated extent) a symbol of intellectual liberty and modernity (cf. *inter alios*, Ch. Bouamrane, *Le problème de la liberté humaine dans la pensée musulmane, solution muᶜtazilite*, Paris 1978; ᶜĀdil al-ᶜAwā, *al-Muᶜtazila wa 'l-fikr al-ḥurr*, Damascus 1987).

Theses. This term will be understood here as applying exclusively to the theses characteristic of the Muᶜtazilīs, those by which they are recognised as such, and as a result of which their opponents—Sunnī theologians in particular—combatted them. There will thus be no discussion here of their cosmology, based (except in the case of al-Naẓẓām) on the principle of atomism [see DJUZʾ] and the distinction between substance and accident; elaborated, in all probability by Abu 'l-Hudhayl, this cosmology was to become, in effect, the common doctrine of all the *mutakallimūn*, Sunnī as well as Muᶜtazilī. Nor will there be reference to their theses regarding the Imāmate, their views on this subject also being (almost without exception) identical to those of the Sunnīs [see IMĀMA].

In his time, Abu 'l-Hudhayl had believed it possible to propound the distinctive theses of Muᶜtazilism in the form of "five principles" (*al-uṣūl al-khamsa*), these being (cf. among others al-Masᶜūdī, *Murūdj*, ed. Pellat, §§ 2254-6): 1. uniqueness of God (*al-tawḥīd*); 2. justice of God (*al-ᶜadl*); 3. "the promise and the threat" (*al-waᶜd wa 'l-waᶜīd*), by which, it will be recalled, it is understood that on account of the "threat" uttered against him in the Ḳurʾān, every Muslim guilty of a serious offence, who dies without repentance, will suffer for eternity the torments of Hell; 4. the theory of an "intermediate state" (*al-manzila bayna 'l-manzilatayn*) formulated by Wāṣil b. ᶜAṭāʾ, according to which the same sinful Muslim cannot here on earth be classed either as "believing"

(*muʾmin*) or as "disbelieving" (*kāfir*), but belongs to a separate category, that of the "malefactor" (*fāsiḳ*); 5. finally, the obligation laid upon every believer (in accordance with Ḳurʾān, iii, 104 and 110; vii, 157; ix, 71, etc.) to "command the good and forbid the evil" (*al-amr bi-'l-maʿrūf wa 'l-nahy ʿan al-munkar*), in other words, to intervene in public affairs to uphold the Law and oppose impiety.

Two centuries after the death of Abu 'l-Hudhayl, this scheme was still considered pertinent, since it constituted the basis of the best "manual" of Muʿtazilī theology currently known, the paraphrase by Mānkdīm Shashdīw (see above) of the *Sharḥ al-uṣūl al-khamsa* of the *ḳāḍī* ʿAbd al-Djabbār. It is, however, difficult to be entirely satisfied with it. First, while the first four principles represent, or cover, the characteristic positions of the school, the same cannot be said of the fifth, particularly in view of the fact that in the course of their history the Muʿtazilīs showed little inclination to put it into practice (except perhaps at the very beginning); the politico-religious activism which it implies was to a much greater extent the prerogative of the Khāridjites, later of the Ḥanbalīs. Furthermore, there is an evident disproportion between, on the one hand, the third and fourth principles, which refer to particular, relatively secondary points of doctrine (the importance given to the theory of an "intermediate state" consists only in the fact that historically it was the first formulation) and, on the other, the first and second principles, which genuinely represent the two major theses of the Muʿtazilīs, as illustrated by the generic term *ahl al-ʿadl wa 'l-tawḥīd* which they themselves gladly embraced. It could even be considered that the third principle (the reality of the "promise" and the "threat") derives in fact from the second, the justice of God implying, on the one hand, that He rewards those who obey Him and punishes those who disobey Him, on the other and in parallel, that He accomplishes that which He has said He will do, since otherwise He would render Himself guilty of an untruth, which is an evil act. In the *Mughnī*, furthermore (according to Mānkdīm, *Sharḥ*, 122, ll. 14-15), ʿAbd al-Djabbār considered that the whole dogma depends on these two principles of *tawḥīd* and *ʿadl*; following him, Mānkdīm claims to show that in fact everything which does not derive from the one necessarily derives from the other (*ibid.*, 123, ll. 5-14). Finally—as is quite clear from the foregoing—the very terms *tawḥīd* and *ʿadl* are not entirely adequate. Under the first heading (which may be interpreted as meaning quite simply, initially, the affirmation of the absolute monotheism of Islam, as opposed to dualist theses or the Christian dogma of the Trinity) there figure a number of conceptions regarding the nature of God—that He is invisible, that the anthropomorphic expressions applied to Him by the Ḳurʾān are to be taken in a metaphorical sense, etc.—which, in fact, depend on an affirmation of transcendence rather than of divine uniqueness. As for "justice", as will be seen, this is to be understood as meaning not only that God is not "unjust" in the narrow sense of the word, but that in all things He necessarily does that which is (morally) good, and is exempt from any act that is (morally) bad. For these various reasons, the analysis which follows will be partly arranged according to headings other than the "five principles" set out above.

1. The nature of God and the divine attributes.

1. A primary thesis characteristic in this context is what could be called the *negation in God of "substantive attributes"*. Like all theologians, the Muʿtazila habitually describe God by means of His "attributes", or *ṣifāt*. By this term, following the example of the grammarians, they refer exclusively, for their part, to adjectives, such as "powerful" (*ḳādir*), "knowing" (*ʿālim*), "creating" (*khāliḳ*), "nourishing" (*rāziḳ*), etc., the word *ṣifa* here being nothing more than a direct synonym of *waṣf*, or even of *ism*. But the question is then posed: by virtue of what does God merit such qualifying adjectives? In the context of what may conventiently be called "attributes of the act" (*ṣifāt al-fiʿl*), i.e. adjectives which He merits on account of such-and-such an act accomplished by Him, such as *khāliḳ*, *rāziḳ*, *muthīb*, *muḥsin*, etc., it will be accepted without difficulty that such adjectives can be applied to Him on account of something which comes into being, an existent created by Him. But when approaching the "attributes of the essence" (*ṣifāt al-dhāt* or *al-nafs*), i.e. adjectives which are applied to him from all eternity, by the very fact of His nature as God, such as *ʿālim*, *ḳādir*, *ḥayy* (since it cannot be conceived that God has ever been not knowing, not powerful, not living), the question may be asked whether these other adjectives do not themselves imply, according to the same rule, "existents" which would be their reason for being, and which, through the fact that God merits these adjectives eternally, would necessarily be themselves eternal; in other words, God would be knowing from all eternity on account of the presence in Him of an eternal knowledge, etc. It is known that the Sunnī theologians—following the example, in particular, of Ibn Kullāb [*q.v.* in Suppl.]—explicitly accepted this conclusion. The Ashʿarīs, for their part, affirm the existence in God of seven (or eight) eternal "entities" (*maʿānī*): knowledge, power, life, hearing, sight, will, word (and occasionally, duration), i.e. "substantives" by virtue of which God merits for all eternity the corresponding "adjectives". It is true that such a doctrine implies the formal acceptance of a plurality of eternals, which is apparently contrary to the principle of monotheism, of a God who is the sole uncreated One; the Sunnīs seek to avoid this difficulty by stating, following Ibn Kullāb (although this principle had previously been upheld by the Zaydī theologian Sulaymān b. Djarīr [*q.v.*]), that these "entities" are at the same time neither identical to God nor other than Him, just as between themselves they are neither identical nor other.

Reasoning in this fashion, it may be noted that the Sunnī theologians did nothing other than to apply without restriction two principles which the Muʿtazila also normally held to be true, and which they had possibly been the first to formulate: on the one hand, the principle that every adjective has a cause (*ʿilla*), a reason for being (such is the primary sense of the word *maʿnā*) which is nothing other than, precisely, the corresponding substantive; an object is "mobile" on account of the presence in it of an entity of "movement", "white" on account of the existence in it of an entity of "whiteness", etc.; on the other hand, there is the principle of the necessary "analogy of the invisible to the visible" (*ḳiyās al-ghāʾib ʿalā 'l-shāhid*), by virtue of which that which is true of the creature is likewise true of God; it is through analogy with man that we know that God is powerful, knowing and living. Hence, if Zayd is necessarily knowing on account of a knowledge (by virtue of the first principle), the same must inevitably apply to God (by virtue of the second principle). Such is the reasoning explicitly invoked, for example, by al-Bāḳillānī (*Tamhīd*, ed. McCarthy, Beirut 1957, § 335).

And such indeed was, apparently, the reasoning of

Abu 'l-Hudhayl who, for his part, accepted the statement that God is "knowing through a knowledge", "powerful through a power", etc. With, however, a significant difference; with the evident object of avoiding the conclusion to which adherents of this thesis habitually find themselves drawn, i.e. the admission of a plurality of eternals—in other words as an advocate of the principle of *tawḥīd*—he maintained that this knowledge by virtue of which God is knowing is nothing other than God himself. "God", he said, "is knowing through a knowledge identical to Himself (*huwa ᶜālimᵘⁿ bi-ᶜilmⁱⁿ huwa huwa*), powerful through a power identical to Himself, living through a life identical to Himself, and likewise he spoke of His hearing, His sight ... and of all the attributes of His essence" (al-Ashᶜarī, *Maḳālāt*, 165, ll. 5-7). This is a paradoxical thesis, which has the effect of simultaneously asserting and refuting the first of the two principles enunciated above, since, while basing each divine qualificative on the corresponding substantive, it removes all reality from this substantive by identifying it each time with the divine essence. This is no doubt the reason why this thesis did not have a following and why, instead of taking this artificial detour by way of entities that do not exist, the majority of the later Muᶜtazila, equally concerned to maintain the principle of divine uniqueness, preferred to declare directly that God is "knowing, powerful, living through Himself (*bi-nafsihi*), and not through a knowledge, a power and a life" (*Maḳālāt*, 164, ll. 13-14; cf. also al-Shahrastānī, *K. al-Milal*, ed. Badrān, Cairo 1947-55, 62, ll. 2-3). Such would also be the point of view of al-Djubbāʾī (cf. *Sharḥ*, 182, ll. 13-14; *Milal*, 122, ll. 3-4).

Between Muᶜtazilīs and Sunnīs, there are not only differing points of view, there is also a difference in vocabulary. As has been observed, for the Muᶜtazila, the word *ṣifāt*, used in reference to God, could denote nothing other than the adjectives ("powerful", "knowing", etc.) which are applied to Him. The Sunnīs, curiously (although the Imāmī theologian Hishām b. al-Ḥakam [*q.v.*] had previously used the term in this sense, cf. *Maḳālāt*, 222, ll. 1-5 and 369, ll. 1-3), normally understand by *ṣifāt* not the adjectives (for which they tend to reserve the term *awṣāf*) but the corresponding substantives, in other words, those eternal "entities" from which God derives the said adjectives. Whence, on the part of the Sunnīs, the assertion, astonishing at first sight, according to which the Muᶜtazila, since they deny the existence in God of such entities, "deny the *ṣifāt* (*op. cit.*, 483, ll. 2-7), whereas the Sunnīs, for their part "affirm the *ṣifāt*" (*ibid.*, 170, l. 12) and call themselves *aṣḥāb al-ṣifāt* (*ibid.*, 171, ll. 12 and 16) or *ṣifātiyya* (cf. *Milal*, 145, ll. 4-12).

The truth is that the simple solution proposed, among others, by al-Djubbāʾī did not eliminate all the problems. If the reason that God is, for all eternity, powerful, knowing, living, is nothing other than His very essence, then how is it to be explained that a unique, undifferentiated essence can give rise to distinct qualificatives? It is for this reason that Abū Hāshim, son of al-Djubbāʾī, was to propose a solution of compromise between pure and simple negation of the substantive attributes and their affirmation: the adjectives applied to God are not simple words applied directly to a pure and plain essence, they are each the expression of something other than the essence itself, which is a "state" (*ḥāl*) of this essence; there is in God, for all eternity, a "fact-of-being-powerful" (*kawnuhu ḳādirᵃⁿ*), a "fact-of-being-knowing", etc., which legitimise the corresponding adjectives. Without being veritable "existents" (this with the object of preserving the principle of divine uniqueness), these "states" are nevertheless ontologically "real" (*thābita*), and are thus capable of founding objectively, and independently of one another, the adjectives which express them [see ḤĀL in Suppl.]. But this thesis, as has been observed, was far from being a factor of unanimity among the Muᶜtazila, even among those of the "Djubbāʾī" line; while ᶜAbd al-Djabbār accepted it, Abu 'l-Ḥusayn al-Baṣrī, on the other hand, vigorously opposed it.

2. Among these eternal essences, linked to the divine essence, the existence of which is affirmed by the Sunnī theologians, there are also the word of God and His will. Regarding the word, the Muᶜtazila do indeed uphold the doctrine of the created Ḳurʾān [see KALĀM and ḲURʾĀN]. For the majority of them, the Ḳurʾān is, in the technical sense of the term, an accident (*ᶜaraḍ*); like every word, it is made up of "letters serially arranged and sounds separately articulated" (*ḥurūf manẓūma wa-aṣwāt muḳaṭṭaᶜa*), which God creates in one or other corporeal framework (*maḥall*). Regarding the will, the Djubbāʾīs propound a singular thesis; according to them, God wishes through wills that He creates and which are, again, in the nature of accidents, but which He could not create, they say, either in Himself (since God cannot be "a receptacle of casuals") nor in any body (since, henceforward, it is the body that would be wishing on account of these wills), and which therefore exist—in a manner contrary to the normal rule, concerning accidents—*lā fī maḥall* (cf. Gimaret-Monnot, 265, n. 3). It might be thought that the same conclusion would apply to the word: once God has created a word in a certain body, it is this body that would be speaking as a result; but the Djubbāʾīs reply to this that a "speaker" is not "he in whom the word resides" (*man ḳāma bihi 'l-kalām*) but "he who produces the word" (*man faᶜala 'l-kalām*) (cf. *ibid.*, 267, and no. 13-14). As for Abu 'l-Ḳāsim al-Balkhī, following al-Naẓẓām, he unequivocally denied the existence of a divine will in the sense of a specific entity; when we say that God "wills" His own acts, this simply means that He creates them; when we say that He "wills" the acts of men, this means that He commands them (*ibid.*, 262-3).

3. As much as the absolute uniqueness of God, the Muᶜtazila stress His absolute transcendence. By this it is to be understood fundamentally that, for them, God is not a body, and therefore is not to be attributed with any of the properties of a body, such as being localised, moving about, having a form, etc. Two principal consequences are entailed. The first is that all anthropomorphic representations of God are to be rejected; furthermore, any Ḳurʾānic expression of this kind—the "hands" of God, His "eyes", His "face", His "side"—is to be understood only in a figurative sense: by the "hand" of God, His blessing (*niᶜma*) is meant, by His "eye", His knowledge (cf. *Maḳālāt*, 165, ll. 12-13; 195, ll. 13-15), by His "side", His command (*amr*) (*ibid.*, 218, ll. 46), by His "face", His very essence (*ibid.*, 521, l. 16). The second consequence is that God cannot be seen, in the literal sense of the term, either in this world or in the other, since only a body can be seen, all vision operating through contact between a ray (*shuᶜāᶜ*) emitted by the eye and the object that is seen (cf. ᶜAbd al-Djabbār, *al-Mughnī*, iv, 57, ll. 10-11; al-Djuwaynī, *al-Irshād*, ed. Luciani, Paris 1938, 96, ll. 2-13). The Ḳurʾān, moreover, states explicitly of God that "vision does not comprehend Him" (*lā tudrikuhu 'l-abṣāru*, vi, 103). It is true that it says elsewhere, regarding the elect on the Day of Resurrection: "faces, that day, will be resplen-

dent, looking at their Lord (*ilā rabbihā nāẓirat^un*)", LXXV, 22-3); but for the Muᶜtazila this second formula is to be interpreted as previously proposed by Mudjāhid (cf. the commentary of al-Ṭabarī): on the one hand, *naẓara* here signifies not "to look at" but "to wait"; on the other, the proper complement of *nāẓirat^un* is not *rabbihā*, but a word implied, this being *thawābi*, so that the true meaning of the formula is: "waiting for the reward of their Lord" (cf. *Sharḥ*, 245, ll. 4-5; al-Ashᶜarī, *Lumaᶜ*, § 78). As for the *ḥadīth* according to which the Prophet said to his Companions: "On the day of resurrection, you will see (*sa-tarawna*) your Lord as you see the moon, on a night of full moon", if the *ḥadīth* is authentic, which is doubtful (cf. Gimaret-Monnot, 418, n. 40) the verb "to see" (*raʾā*) is to be understood here in a figurative sense (a type of which the Ḳurʾān provides many examples), that is, as a synonym of "to be acquainted with" (*ᶜalima*) (cf. *Mughnī*, iv, 231, ll. 4-17; *Sharḥ* 270, ll. 10-17).

It is necessary, however, to observe closely in what sense the Muᶜtazila understand this divine transcendence. Certainly, they adhere as firmly as members of any other school to the letter of the Ḳurʾānic formula stating that "nothing is of His likeness" (XLII, 11). But what they basically understand by this, once more, is that God can have none of the characteristics of a body as such; that He has neither form, nor colour, nor length, nor breadth, nor height, that He cannot be said to be either mobile or immobile, that He has neither parts, nor members, etc. (cf. *Maḳālāt*, 155-6). This does not mean that there is no resemblance, in any respect, between Him and His creatures. If such were the case, we would be unable to say anything of Him and we could only describe Him negatively. Now God, because He is just (cf. below), has made it possible for us to know Him, with a positive knowledge which, here below, is accessible to us only through reasoning. Consequently, it is on account of our experience of creatures, and on account of a necessary "analogy of the invisible to the visible" (*ḥaml al-ghāʾib ᶜalā ʾl-shāhid*) that we can know, first, that God exists (because we know that here below everything which comes into being implies that someone makes it come into being), subsequently that He merits certain adjectives: "powerful", because every agent (and God is known to us first as such, as creator) is necessarily powerful; "knowing", because He performs acts "skilfully executed" (*afᶜāl muḥkama*), or whoever is capable of producing such acts is necessarily knowing; and so forth. All the adjectives which we apply to God, we first become aware of them in this visible world (*fī ʾl-shāhid*), and it is in the same sense that we apply them to God as to man; just as what is proof for us is likewise proof for Him (cf. Gimaret, *Théories de l'acte humain en théologie musulmane*, Paris 1980, 281-2).

II. Concerning the justice of God, and the doctrine that He wills and does only that which is good.

The principle of the necessary justice of God is not only one of the characteristic dogmas of Muᶜtazila, it may be said without exaggeration to be their fundamental dogma. Even more than *ahl al-ᶜadl wa ʾl-tawḥīd*, they are and they call themselves, in brief, *ahl al-ᶜadl* (cf. *Mughnī*, iv, 139, l. 4; vii, 3, l. 15; viii, 3, l. 4; xiii, 4. l. 17: *Milal*, 57, l. 7).

While no Muslim theologian, of whatever persuasion, has ever asserted the contrary and described God as "unjust", it is the manner in which the Muᶜtazila conceive this necessary justice of God that characterises them. For one such as al-Ashᶜarī, God is necessarily just whatever He does; He would be so even if He acted in a contrary fashion. God, according to al-Ashᶜarī, is not subject to any rule; rules are applied only to us, on account of the Law which God has imposed upon us. For the Muᶜtazila, on the other hand (and here again there is a form of "analogy of the invisible to the visible"), God is subject, in this respect, to the same laws which apply to man; that which is just or unjust for us—i.e., that which our reason, for its part, tells us to be so—is the same for God. This is why, from the Muᶜtazilī point of view, the necessary justice of God is not only fact, it is for Him a permanent obligation; in the name of His justice, God is required to act in such-and-such a fashion, since otherwise He would be unjust. Whence arises the question which the Muᶜtazila were constantly debating (a question which, for al-Ashᶜarī, would be quite meaningless), which is whether God has the power to be unjust, or, in a broader sense, to act badly; this is a question with no satisfactory answer, since, whether the answer be affirmative or negative, either the justice of God, or his omnipotence, will be compromised.

The necessary justice of God first of all excludes any notion of predestination; it would be unjust on the part of God, say the Muᶜtazila, to decide in advance the fate of every man in the Hereafter and to ordain that one will be saved and another damned, without either having merited this by his actions. It is for humans to decide their future lot, according to whether they choose to believe or not to believe, to obey or to disobey the Law. God would be unjust if He Himself were to determine faith or disbelief, the fact that some are "well guided" and others "astray". It is true that the Ḳurʾān states that God "leads astray (*yuḍillu*) whom He wills and guides (*yahdī*) whom He wills" (XIV, 4; XVI, 93, etc.). But these terms can be interpreted otherwise than envisaged by the proponents of predestination. Either, by "to guide" it is to be understood that God "shows and makes clearly seen" where the truth is, in which case it will be said that He "guides" all men equally (otherwise He would be unjust). Or, if His "guidance" applies only to the believers, given that it can only intervene following the free choice which the latter have taken to believe, this could signify either that God "says and judges" that they are "well guided", or indeed (the interpretation preferred by al-Djubbāʾī) that in the other world, God will "guide" them on the road to Paradise, *hadā* having, in this context, the sense of "to reward" (cf. *Maḳālāt*, 260 ll. 9-10). Conversely, when the Ḳurʾān says that God "leads astray", this can only concern those who, of their own accord, have chosen "to go astray", and this means either that God "says and judges" that they are "astray" (*op. cit.*, 261, ll. 10-11) or (again the preference of al-Djubbāʾī) that in the Hereafter, he will "lead them astray" far from the road to Paradise in order to lead them to Hell, *aḍalla* consequently having the sense of "to punish" (*ibid.*, 262, ll. 1-4). As for those other Ḳurʾānic formulae where it is said that God has "set a seal" (*khatama, ṭabaᶜa*) on the hearts of the unbelievers, al-Djubbāʾī, for his part, took this quite literally, in the sense of a "mark" (*sima, ᶜalāma*) made by God on the hearts in question, so that on the Last Day the angels will be capable of distinguishing unbelievers from believers.

Not only must God leave to men the freedom of choosing between belief and disbelief, and thus deciding their future lot, but it is further necessary that He gives to all the same means of believing, that He offers them all the same "aid". Curiously, it was a Muᶜtazilī, Bishr b. al-Muᶜtamir, who expressed the

contrary notion that God, if He wished, could make all men believe (but He does not do so); that "He has available to Him a grace (*luṭf*) such that, if He produced it in one whom He knows ought not to believe, the latter would believe" (*Maḳālāt*, 246, ll. 3-4 and 573, ll. 9-11). This thesis, which only Dj̲aᶜfar b. Ḥarb subsequently took seriously, was rejected—quite logically—by all the rest of the school (*ibid.*, 247, ll. 3-14 and 574, ll. 4-7). The Dj̲ubbāʾīs did, indeed, retain the term, but distorted the sense. There does exist, according to them, a divine "grace", or rather "graces" of all kinds, such that, through them, men are led, or helped, to believe (thus the intelligence that God gives them, the "clear proofs" by which He makes Himself known to them, the prophets whom He sends to them, etc.); but there can be no question, as implied by the thesis of Bis̲h̲r, of seeing here a pure favour which God, arbitrarily, would grant to some and withhold from others; God, in the name of His justice, is bound to grant these "graces" to all equally, since otherwise it would have to be admitted that He deliberately wills the perdition (*fasād*) of those to whom He denies them, a notion that cannot be conceived (cf. *Mug̲h̲nī*, xiii, 116 ff.).

This same justice of God likewise implies that men have control over their voluntary acts, in other words, they are themselves the producers of them; this principle contradicts the thesis of the "coercionists" (*al-mud̲j̲bira*), according to which these acts are created in them by God. Only such an autonomy of the human agent can justify the fact that in this world God imposes a law upon him, and that in the next he will be rewarded or punished according to whether he has observed it or not. Obligation and sanction can only be understood in reference to a responsible being; now, according to Muᶜtazilī thinking, the only one authentically responsible for an act is the one who is the author of it in the full sense of the term, who, therefore, "makes it to be" (*yuḥdit̲h̲uhu, yūd̲j̲iduhu*). To claim—as do the adherents of the theory of *kasb* [*q.v.*]—that man can be in some way the agent, or the one responsible for an act, without causing it to be, is meaningless.

While God does not create the voluntary human act, He does at least create in the man the power (*ḳudra, istiṭāᶜa*) corresponding to this act. But it could not be the case, as thought by these same adherents of *kasb*, of a power which only comes into being when the act is put into effect, which God would create simultaneously with this act. For the Muᶜtazila, the notion of power is linked to that of free choice (*ik̲h̲tiyār*), itself implied, once again, by the principle of divine justice. One who has power is recognised by the faculty which he has of "not choosing that for which he has power" (*Mug̲h̲nī*, viii, 188, l. 10). A typical formula of al-Dj̲ubbāʾī, as of his son Abū Hās̲h̲im, was that "whoever has the power of a thing can equally well do it or not do it" (*min ḥaḳḳi 'l-ḳādir ᶜalā 'l-s̲h̲ayʾ an yaṣiḥḥa an yafᶜalahu wa-an lā yafᶜalahu*, *ibid.*, ix, 73, ll. 8-10). In other words, every power is equally the power of an act and of its opposite (*ḳudratᵘⁿ ᶜalayh wa-ᶜalā ḍiddih*, *Maḳālāt*, 230, ll. 12-13). Hence, the power cannot be other than prior to the act; if it were concomitant with it, owing to the fact that it is at the same time the power of an act and of its opposite, its coming into being would entail the simultaneous realisation of opposites, which cannot be. On this question of the priority (or non-priority) of the power in relation to the act, Muᶜtazila and Sunnīs are opposed, the Ḳurʾān itself being invoked in support of both arguments (cf., for example, *Lumaᶜ*, ch. vi).

Naturally, it is the duty of God to create in us the powers necessary for the fulfilment of acts which His law imposes upon us. Any form of obligation to the impossible (*taklīf mā lā yuṭāḳ*) would be contrary to His justice. The powers in question are specifically among those "graces" which He is required to grant to all those subject to the Law.

Finally, in the next world, God must of necessity reward those who have merited His reward, and punish those who have merited His punishment. There is no doubt that He has the ability to pardon; the Ḳurʾān states that He "pardons whom He wills and punishes whom He wills (II, 284; III, 129, etc.). In fact, there is no possibility that He will pardon anyone who has not merited His pardon; pardon is only conceivable where there has previously been repentance on the part of the unbeliever or the sinner (*inna 'l-mag̲h̲fira bi-s̲h̲arṭi 'l-tawba*, says ᶜAbd al-Dj̲abbār, *Mutas̲h̲ābih al-Ḳurʾān*, ed. ᶜA. Zarzūr, Cairo 1969, 596, l. 13). Similarly, only sinners who have already repented will be able, on the Day of Judgment, to benefit from the intercession of the Prophet (*S̲h̲arḥ*, 688, l. 3). Conversely, God is required to pardon the man who repents; "accepting repentance", so long as it is sincere, is for Him an obligation (*ḳabūl al-tawba wād̲j̲ib*; cf. *Mug̲h̲nī*, xiv, 377, ll. 6 ff.). It is likewise out of the question that God will punish those who have not merited it, since "to punish someone when there has not been an offence (on his part) is injustice" (*S̲h̲arḥ*, 477, ll. 15-16). This applies in particular to young children (*aṭfāl*), irresponsible beings; it is inconceivable that God would punish the children of idolaters (*aṭfāl al-mus̲h̲rikīn*) for the sins of their fathers (*ibid.*, 477, l. 8). All suffering inflicted by God, in this world or in the next, must be merited; if such is not the case (thus in particular the sufferings experienced in this world by children and animals) God will be obliged to grant, either here below, or in the next world, a compensation (*ᶜiwaḍ*) commensurate with the suffering experienced (cf. Gimaret-Monnot, 281-3).

Such are the manifold implications of the Muᶜtazilī principle of divine "justice", interpreted *stricto sensu*. But the Muᶜtazila, as already indicated, also understand this term in a much wider sense, as meaning that God only wills or does that which is (morally) good (*ḥasan*), and He is necessarily exempt from any act which is (morally) bad (*munazzah ᶜan kull ḳabīḥ*). These notions of good and bad are interpreted in the same way as the notion of "justice" in the narrow sense; it is always a question, for the Muᶜtazila, of that which we ourselves judge to be so, God, here too, being subject to the same rules which apply to us. There exists objective good and bad, acknowledged as such by every being endowed with reason. Thus, our reason makes us spontaneously recognise as acts bad in themselves injustice, deceit, ingratitude; all the more so is God aware of evil, since, by nature, He is omniscient. Moreover it cannot be imagined that He has the need to commit such acts, since, also by nature, He is devoid of need (*g̲h̲anī*). We are thus assured, according to al-Dj̲ubbāʾī, that God is incapable of doing evil, by virtue of the principle that anyone who recognises an act as bad, and does not need to commit it (and knows that he does not need, which is also the case), necessarily does not commit it (cf. *Mug̲h̲nī*, vi/a, 207. ll. 1-7). It is true that according to the same principle, it could be supposed that God does not do good either, since He does not need to do it! Against such an objection, al-Dj̲ubbāʾī and his successors set out to show that a good act, even on the part of man, can be performed for the sake of its own goodness (*li-ḥusnih faḳaṭ*), without need on the part of its agent (*op. cit.*, 223, ll. 17 ff.).

The fact that God is exempt from any evil act im-

plies in particular that He is "wise" (*ḥakīm*) and not "foolish" (*safīh*). This means essentially that, of necessity, He acts for a certain motive, towards a certain end, since otherwise His action would be a "vain act" (*ʿabath*); now the vain act is, in itself, among the morally evil acts spontaneously acknowledged as such (*op. cit.*, 61, 9). Consequently, if God has created men and imposed a Law upon them, it is because He had a reason to do so, and the next task is to show, as is done by, among others, ʿAbd al-Djabbār, how God has been "wise" in creating His creatures (*wadjh al-ḥikma fī 'btidāʾihi 'l-khalḳ*), then in imposing obligation upon them (*wadjh al-ḥikma fi 'l-taklīf*) (*Mughnī*, xi, 58, l. 16 and 134, l. 1). What then is this end? It cannot be self-interest, since in this case too God is devoid of need. Nor could it be conceived that God has created men and imposed a Law upon them with the sole object of tormenting them, which would be pure injustice. Consequently, the only motive which could, in this respect, determine divine action is the benefit, the good (*ṣalāḥ*) of creatures. "All the Muʿtazila", according to al-Ashʿarī, "agree in saying that God has created men for their advantage (*li-yanfaʿahum*)" (*Maḳālāt*, 251, l. 4). Similarly, it is for their good that He has imposed a Law upon them, with the object of enabling them thereby to accede to the sublime form of happiness, which is the reward consecutive upon a pain endured (cf. *Mughnī*, xi, 387, l. 10 and 393, l. 2). Some Muʿtazilīs even considered that, from all points of view and in all circumstances, God does for men what is to their greatest advantage (*al-aṣlaḥ lahum*) (otherwise, if He were to deny them any advantage, this would imply that He is "avaricious", and avarice is a sin); thus Abu 'l-Hudhayl, al-Naẓẓām, and subsequently and in particular Abu 'l-Ḳāsim al-Balkhī and the "Baghdādīs", for whom God is obliged to do for men that which is to their greatest advantage both "in their future life and their terrestrial life" (*fī dīnihim wa-dunyāhum*), a principle applying to the poor as to the rich, to the sick as to the healthy (cf. al-Mufīd, *Awāʾil al-maḳālāt*, Nadjaf 1393/1973, 64, ll. 4-5; al-Djuwaynī, *Irshād*, 165, 1, ll. 12-14). The Djubbāʾīs do not go so far, and oppose on this point the theses of the *aṣḥāb al-aṣlaḥ* (cf. *Mughnī*, xiv, 56 ff.). But they agree with them as regards life in the Hereafter: for all Muʿtazilīs—with the minor exception of Bishr b. al-Muʿtamir and his few supporters—God necessarily does (i.e. has an obligation to do) for men *al-aṣlaḥ lahum fī dīnihim*; it cannot be conceived that He does not grant to them all that they need in order to fulfil the obligations which He imposes on them, in other words, all the "graces" (*alṭāf*) which He can bestow on them (cf. *Maḳālāt*, 247, ll. 5-8 and 248, ll. 1-3). God, in any event, could not will their "perdition". For this same reason, al-Djubbāʾī went so far as to say that God is obliged to keep an unbeliever alive, if He knows that, in this case, the latter will become a believer (cf. especially the commentary of Abū Djaʿfar al-Ṭūsī on Ḳurʾān, VI, 27; it was on this last point, with regard to the notorious problem of the "three brothers", that al-Ashʿarī, originally a disciple of al-Djubbāʾī, broke with him; cf. Gimaret-Monnot, 313).

Finally, because He cannot will the perdition of men, it is not possible that God should will of them that which leads them thither, i.e. their disbelief and their sins. God wills of men only their good acts. (On the debate between Muʿtazilīs and Sunnīs on this issue, cf. Gimaret, in *SI*, xl and xli.)

III. The definition of faith and the lot of the sinful Muslim.

The point hardly needs stressing, since the Muʿtazila are clearly distinguished from the other schools only by the definition which, following Wāṣil b. ʿAṭāʾ, they apply to the sinful Muslim (i.e. guilty of a serious offence, *ṣāḥib al-kabīra*). For them, as for the Ḥanbalīs and other *aṣḥāb al-ḥadīth*, faith is not only adherence to the dogma of Islam but includes "works"; they most often define it as "the totality of acts of obedience (to God)" (*djamīʿ al-ṭāʿāt*), the only point of disagreement between them being as to whether acts which are simply recommended (*nawāfil*) constitute a part of this or not (cf. *Maḳālāt*, 266-9). This is why, according to them, if it is inappropriate to describe the sinful Muslim as *kāfir* (since this can only be said of one whose beliefs contradict the dogma of Islam, one, for example, who maintains that God is "the third of three"), it is likewise inappropriate to describe him as *muʾmin*, all the more so, according to al-Djubbāʾī, since on account of the Revelation, *muʾmin* has become a laudatory term (*ism al-madḥ*), whereas the sinner, on account of his sin, deserves only censure (cf. *Sharḥ*, 701, ll. 17ff.). This does not mean that, in the Hereafter, the sinful Muslim will not deserve just as much as the unbeliever to dwell for eternity in Hell (except that his punishment there will be less severe). As a result of this, it is said, al-Ashʿarī regarded the Muʿtazila as "effeminate Khāridjites" (*makhānīth al-khawāridj*), because, like the Khāridjites, they consign the sinful Muslim to eternal Hell, without daring however, like them, to describe him explicitly as "unbelieving". (In fact, as has been observed, not all were of this opinion; there were also, even during the "second period", Murdjiʾa Muʿtazila for whom the possibility existed that the punishment of sinners might not be permanent.)

IV. Muʿtazilī rationalism.

It is quite legitimate to consider the Muʿtazila as "rationalists". It is, however, necessary to show precisely what is to be understood by this term, and in what respect their rationalism is specific.

They are clearly not rationalists in the sense of those who claim to formulate a system solely by the exercise of reason, independent of all revelation. As has been well underlined by A. Amīn, the Muʿtazila are not philosophers (even though, in many regards, their speculations touch on philosophy), but theologians. Intimately involved in the internal debates of Islam, they reckon (just as their adversaries do!) to represent the true orthodoxy, in other words, what they consider, as Muslims, to be the correct interpretation of the Ḳurʾānic revelation.

But the Muʿtazila are incontestably rationalists, in the true sense of the term, in that they consider that certain awarenesses are accessible to man by means of his intelligence alone, in the absence of, or prior to, any revelation. First, in the strictly theological domain, they say that God can be known to us through reasoning; it is, furthermore, only in this fashion that here below we can know Him (and this is why, according to them, the first of the obligations laid upon man is specifically reasoning to know God). Not only does reason enable us to establish that God exists, in the capacity of a creator (since this world has begun to exist, and everything which begins to exist implies that someone has brought it into being), it also informs us concerning His nature: that He is powerful (because every agent is necessarily powerful), wise (in that He is the author of acts "skilfully executed"), living (because one who is powerful and wise is necessarily so), endowed with hearing and sight (because every living being free of disabilities is capable of perceiving); that He is not a body; that He is self-sufficient (*ghanī*); that He is just and cannot do or will anything other than what is good; etc. It is only

once it has been shown—by reasoning, again—that Muḥammad is authentically the Messenger of God (in that his credentials are proved by miracles), that the Ḳurʾānic revelation can be taken into account. This revelation can, in fact, only confirm that which reason has established; there can be no contradictions between one and the other. Such contradictions as there are are only apparent, and can be resolved by an appropriate interpretation (*taʾwīl*) of the revealed text: this applies, as has been observed, to all the Ḳurʾānic formulae which could give the impression that God has a body similar to ours, that He is situated in a certain direction, that He can move from place to place, or that He can be seen, and to anything which apparently challenges the principle of divine justice. It is not, of course, the case that the revelation teaches us nothing that our reason has not already discovered: it is through the revelation that we know that God has imposed a Law upon men, that He will resurrect them, that He will reward and punish others. It remains true that all these facts, not demonstrable initially, must themselves correspond, according to their modalities, to the exigencies of reason, especially where the principle of *ᶜadl* is involved.

But the truth is that, on this point, the Muᶜtazila do not differ fundamentally from the rival theological schools. All, essentially, proceed in the same fashion, and it is in fact the entirety of *kalām* (i.e. the theology of the *mutakallimūn*) which should, by this reckoning, be termed "rationalist". The Muᶜtazila simply gave the example, opened the way (whether theology as a science was really born with them, as they claim, is a point which remains open to discussion). The Sunnī theologians also considered that the existence of God is known to us through reasoning, and by no other means. Thus the well-known argument first devised, it is said, by Abu 'l-Hudhayl (according to *Sharḥ*, 95, ll. 9-12), demonstrating the existence of God by means of the principle of the "adventitiousness" of substances (*ḥudūth al-djawāhir*), itself demonstrated by the adventitiousness of accidents, was adopted with alacrity by all Ashᶜarī and Māturīdī theologians. Just like the Muᶜtazila, the Sunnī theologians are at pains to interpret the Ḳurʾān in their own fashion, such that it accords with their doctrinal positions. It may certainly be reckoned that in a number of cases the Muᶜtazila do greater violence to the letter of the Ḳurʾānic text (for example in the interpretation of *hudā* and *iḍlāl*), but this is simply because the Ḳurʾān, in its literality, is in general supportive of Sunnī theses.

Something else which may legitimately be seen as an element of "rationalism" is the formulation by the Muᶜtazila of a substantial system for explaining the world and mankind which, essentially, owes nothing to the Ḳurʾān, but much—initially—to fragments of Greek philosophy, and later, and more significantly, to their own speculations: the conception of bodies as agglomerates of atoms, the distinction between substance and accident, the explanation of all phenomena belonging to the physical world through the inherence of accidents in the atoms of which bodies are constituted; then, in this context, the genuinely "philosophical" project seeking to define, for example, location and movement; to establish the cause of the immobility of the earth, the nature of fire, or whether such a thing as a void exists in the universe; to understand the modalities of perception through the eye and through the ear; to consider how to define man (*insān*); what is to be understood by *rūḥ* and *nafs*; what are the different forms of will, and whether desire and hope should be included among them; etc. For modern tastes, it is here, without doubt, that Muᶜtazilī literature appears at its most interesting and most original. But in this case also, such considerations have not remained exclusively characteristic of this school; the Sunnī theologians, as already mentioned, adopted them as a whole for their own purposes, and this may furthermore be seen as a characteristic of *kalām* in general. Possibly such matters simply hold, for the Muᶜtazila, a more important status; there seems little likelihood in finding, in all Sunnī theological literature, a work exclusively devoted to the "rules of substances and accidents", as is the case with the *Tadhkira fī aḥkām al-djawāhir wa 'l-aᶜrāḍ* of Ibn Mattawayh (partial, and seriously flawed edition by S. N. Luṭf and F. B. ᶜAwn, Cairo 1975). But it is sufficient to glance, for example, at what remains of the *Shāmil* of al-Djuwaynī to gain an impression of the interest taken by the latter in these issues.

On this point, as on the preceding, the rift is not between Muᶜtazila and Sunnīs taken as homogeneous wholes, but between those who accept the methods, problems and vocabulary of the *ᶜilm al-kalām* and those who reject them, such as the Ḥanbalīs in the first instance (which is not however true for the *ḳāḍī* Abū Yaᶜlāʾ Ibn al-Farrāʾ [*q.v.*], as consummate a *mutakallim* as al-Djuwaynī) or those who, in the very midst of the Ashᶜarī school (including for example Abū Bakr al-Bayhaḳī [*q.v.*]), maintain loyalty to the inspiration of the *aṣḥāb al-ḥadīth*.

Where there is a rationalism exclusive to the Muᶜtazila, it is in the sphere of ethics. For them, as has been observed, man is also capable of knowing by his reason alone that which is morally good or evil. Spontaneously, they say, he recognises as evil acts injustice, deceit, ingratitude; and recognises as obligatory the deed of repaying a debt, keeping himself clear of harm (*dafᶜ al-ḍarar ᶜan nafsihi*), or showing thankfulness towards a benefactor (whereby all are obliged to adore God, the supreme Benefactor, adoration representing the highest form of thankfulness). In this context also, the revelation can only confirm that which our reason tells us. Of course, the latter is not sufficient to make us aware of everything that is evil (i.e. forbidden), nor everything that is obligatory; only the revealed Law can inform us that it is obligatory, for example, to perform a prayer to God, according to a certain ritual, five times a day, or that it is forbidden to eat and drink during the days of Ramaḍān. It could even be supposed that there is a contradiction here between revelation and reason, bearing in mind that, spontaneously, reason makes us recognise as evil (because arduous, therefore harmful) the exercise of the rituals of prayer, and conversely obligatory (because it removes harm) the act of eating and drinking when one is hungry or thirsty. But, in fact, reason understands without difficulty the necessity to undergo a minor harm, as a means of avoiding the major harm which is the punishment promised by God to those who disobey Him. In this manner, even the prescriptions of the Law have a rational basis; if our reason were capable of knowing by itself that the fulfilment or non-fulfilment of a certain act would earn the torments of Hell for all eternity, it would necessarily know, by itself, that the act in question is either evil or obligatory (cf. Gimaret-Monnot, 270-1).

On this last point, the Muᶜtazila are, for once, very clearly in disagreement with the Ashᶜarī theologians. For al-Ashᶜarī, the sole foundation of good and evil, in all respects, is the revealed Law; that which God commands is obligatory, that which He permits good, that which He forbids evil. If deceit is morally evil, it

is because God has declared it so; if He had declared it good, it would be good (cf. *Lumaʿ*, § 171). However, not all Sunnīs shared this opinion; in this respect, al-Māturīdī and a large number of his supporters maintained a position comparable to that of the Muʿtazila (see al-Māturīdī, *K. al-Tawḥīd*, ed. F. Kholeif, Beirut 1970, 178, l. 16; al-Pazdawī, *K. Uṣūl al-dīn*, ed. H. Linss, Cairo 1383/1963, 207, ll. 9-13).

Bibliography: Over the past thirty years, with a quantity of new sources becoming available, studies relating to Muʿtazilism have progressed considerably, and given rise to a large number of publications, which cannot possibly be listed here in an exhaustive manner. A number of important references have already been indicated in the course of the article.

There does not yet exist a comprehensive study, taking account of recent gains in knowledge, of the history and doctrines of Muʿtazilism, with the exception of the substantial article by J. van Ess in *The Encyclopedia of Religion*, New York 1987, x, 220-9. The works of Z. Djār Allāh (*al-Muʿtazila*, Cairo 1947) and A.N. Nader (*Le système philosophique des muʿtazila*, Beirut 1956) are out of date. The books by J. van Ess, *Une lecture à rebours de l'histoire du muʿtazilisme*, Paris 1984, and *Theologie und Gesellschaft im 2. und 3. Jahrhundert Hidschra*, Berlin-New York 1991, relate only to the "first period" (as far as Ibn al-Rāwandī), and is in the form of a simple outline of what the author expects to develop, and eventually correct, in his *Geschichte der frühen islamischen Theologie*.

The most important sources concerning the history of Muʿtazilism are the works of *ṭabaḳātʿ* devoted to this school. The *Ṭabaḳāt al-Muʿtazilaʿ* drawn from the *K. al-Munya wa 'l-amal* of the Zaydī Imām Aḥmad b. Yaḥyā b. al-Murtaḍā (d. 840/1437) and published by S. Diwald-Wilzer (Beirut-Wiesbaden 1961) are a recasting (sometimes flawed) of those which figure in the *K. Sharḥ al-ʿuyūn* of al-Ḥākim al-Djushamī, themselves derived from a work of ʿAbd al-Djabbār entitled *Faḍl al-iʿtizāl wa-ṭabaḳāt al-muʿtazila*. F. Sayyid published (posthumously) in Tunis in 1393/1974, under the same title, a volume comprising: 1. the chapter of the *Maḳālāt al-Islāmiyyīn* of Abu 'l-Ḳāsim al-Balkhī which concerns the Muʿtazila; 2. the entire text of the book of ʿAbd al-Djabbār (or the first ten *ṭabaḳāt*); and 3. the section of the *Sharḥ al-ʿuyūn* of al-Djushamī dealing with the later period (or *ṭabaḳāt* 11 and 12).

The very valuable chapter of the *Fihrist* of Ibn al-Nadīm on the Muʿtazila is almost entirely missing in the Flügel edition; it is to be found in the more recent edition of R. Tadjaddud, Tehran 1971.

Regarding the study of doctrines, a fundamental source (for the "first period") remains the *Maḳālāt al-Islāmiyyīn* of al-Ashʿarī (2nd ed. Ritter, Wiesbaden 1963). The chapter of the *Maḳālāt* of al-Balkhī, mentioned above, is remarkably succinct in this respect. The information given in the *K. al-Milal wa 'l-niḥal* of al-Shahrastānī is the object of substantial critical annotation in D. Gimaret and G. Monnot, *Shahrastani, Livre des religions et des sectes*, i, Louvain-Paris 1986 (see especially pp. 177-289).

On Djubbāʾī's theses, the most accessible source is the compendium already mentioned (and to which the present article refers under the abbreviation *Sharḥ*) by the Zaydī Imām Mānkdīm Shashdīw, which is a collection of lecture notes (*taʿlīḳ*) on the *Sharḥ al-uṣūl al-khamsa* of the *ḳāḍī* ʿAbd al-Djabbār; this work, published under the same title of *Sharḥ al-uṣūl al-khamsa* by ʿA. K. ʿUthmān, Cairo 1965, was erroneously attributed by the latter to ʿAbd al-Djabbār himself (on this faulty attribution, see Gimaret, in *Annales Islamologiques*, xv [1979]). Of the enormous theological corpus of ʿAbd al-Djabbār, *al-Mughnī fī abwāb al-tawḥīd wa 'l-ʿadl*, not all has been preserved; of the twenty volumes which it comprised, only fourteen figure in the Cairo edition (1960-5). For the missing sections, a substitute may be found in *al-Madjmūʿ fī 'l-Muḥīṭ bi 'l-taklīf* by Ibn Mattawayh, a paraphrase of the *Muḥīṭ* of ʿAbd al-Djabbār (two volumes published, Beirut 1965 and 1981).

Among the works concerning ʿAbd al-Djabbār or the Djubbāʾī school in general, three deserve particular attention: G.F. Hourani, *Islamic rationalism, the ethics of ʿAbd al-Jabbâr*, Oxford 1971; J.R.T.M. Peters, *God's created speech, a study in the speculative theology of the Muʿtazilî Qâḍî l-Quḍât Abû l-Ḥasan ʿAbd al-Jabbâr bn Aḥmad al-Hamaḏânî*, Leiden 1976; R.M. Frank, *Beings and their attributes, the teaching of the Basrian school of the Muʿtazila in the classical period*, Albany 1978.

It may be noted in conclusion that, as a result of the progress of studies since the inception of the new *Encyclopaedia of Islam*, some of the articles published in the earliest instalments are no longer up to date, and therefore it is recommended that, for the authors concerned, the more recent *Encyclopedia Iranica* (London 1985-) should also be consulted. This applies in particular to ʿAbd al-Djabbār and Abu 'l-Ḳāṣim al-Balkhī. (D. GIMARET)

AL-**MUʿTAZILA**, the name given by al-Masʿūdī (*Murūdj*, § 2226) to a group of four extremist Shīʿī (*ghulāt*) sub-sects. This same author divides the *ghulāt* into two categories each with four subdivisions: on one hand, the Muḥammadiyya [*q.v.*], also known as the Mīmiyya (sc. the initial of Muḥammad); and on the other, the Muʿtazila or ʿAlawiyya (and vars.). These last also deified Muḥammad and ʿAlī but invert the hierarchy and place ʿAlī first (whence their name of ʿAyniyya), make Muḥammad the envoy of his son-in-law and blame him for having preached in his own name; this is why they are further called Dhammiyya [*q.v.*]. (ED.)

AL-**MUʿTAZZ BI 'LLĀH**, ABŪ ʿABD ALLĀH MUḤAMMAD B. DJAʿFAR, ʿAbbāsid caliph, reigned 252-5/866-9, and son of the earlier caliph al-Mutawakkil [*q.v.*] by his favourite slave concubine Ḳabīḥa.

The reign of al-Muʿtazz's predecessor, his cousin al-Mustaʿīn [*q.v.*], ended in strife and violence stirred up by the Turkish guards in Sāmarrā. Al-Mustaʿīn was forced to abdicate at Baghdād, and on 4 Muḥarram 252/25 January 866, al-Muʿtazz, having been brought out of jail, was hailed as caliph. The first part of the succession arrangements envisaged towards the end of his life by al-Mutawakkil, that his sons al-Muʿtazz and al-Muʾayyad should succeed after his other son al-Muntaṣir [*q.v.*], was thus realised; but the treacherous new caliph now proceeded to break his pledge of safety for the ex-caliph al-Mustaʿīn, having him murdered at al-Ḳāṭūl at Sāmarrā in Shawwāl 252/October-November 866, and he also killed his brother Ibrāhīm al-Muʾayyad after forcibly compelling him to renounce his succession rights. With the aid of his vizier and former secretary, Aḥmad b. Isrāʾīl, he further succeeded in reducing the influence of the Turkish generals Waṣīf and Bughā al-Ṣaghīr—the former was killed by rebellious Turkish troops, clamouring for pay, in 253/867, and the latter killed by the caliph's own orders in the following year—and

he sent off the chief of the *barīd* system, Mūsā b. Bug̲h̲ā al-Kabīr, to Hamadān (253/867).

However, Turkish influence in the state revived in 255/869 under Ṣāliḥ b. Waṣīf and Bāʾikbāk, whilst that of the Ṭāhirid governors and commanders of the guard in Bag̲h̲dād [see ṬĀHIRIDS] declined under Sulaymān b. ʿAbd Allāh, inferior in capability to his brother ʿUbayd Allāh, whose dismissal the suspicious caliph had procured. Ṣāliḥ was now able to set aside the vizier Aḥmad b. Isrāʾīl. The clamour of the Turkish soldiery for more pay could not be satisfied by the caliph; and at the end of Rad̲j̲ab 255/mid-July 869, al-Muʿtazz was deposed by a combination of the Turks, the Farg̲h̲ānans and the Mag̲h̲āriba. He died of ill-treatment three days later (2 S̲h̲aʿbān 255/16 July 869) at the age of 24, and the Turks now raised to the throne al-Wāt̲h̲iḳ's son Muḥammad al-Muhtadī [*q.v.*].

The insecurity of al-Muʿtazz's four-and-a-half years' reign and his inability to master events in Bag̲h̲dād and Sāmarrā allowed the process of the attenuation of caliphal power in the provinces to proceed apace. His reign marks the beginning of what was in effect autonomy for Egypt under Aḥmad b. Ṭūlūn [*q.v.*] (254/868); K̲h̲ārid̲j̲ī revolts in al-D̲j̲azīra and the Mawṣil region; the opening phases of the Zand̲j̲ [*q.v.*] rebellion in the neighbourhood of Baṣra; ʿAlid outbreaks in the Ḥid̲j̲āz under the Ḥasanid Ismāʿīl b. Yūsuf and in Ṭabaristān under the Zaydī al-Ḥasan b. Zayd b. Muḥammad [*q.v.*]; and above all, the advance into southern Persia of the Ṣaffārid Yaʿḳūb b. al-Layt̲h̲ [*q.v.*], although it was not until after al-Muʿtazz's death that Yaʿḳūb penetrated through Fārs into ʿIrāḳ itself and almost overthrew the caliphate in Bag̲h̲dād [see DAYR AL-ʿĀḲŪL].

Iḥsān ʿAbbās, Beirut 1973-4, iii, 319-21; Ibn al-Tiḳṭaḳā, *Fak̲h̲rī*, ed. Derenbourg, 332-5; Ibn K̲h̲aldūn, *K. al-ʿIbar*, iii, 287 ff.; G. Weil, *Geschichte der Chalifen*, ii, 355, 374, 385 ff.; Sir W. Muir, *The Caliphate, its rise, decline and fall*, new edn. by Weir, 529, 531, 534-9; G. Le Strange, *Baghdad under the Abbasid Caliphate*, Oxford 1900, 171, 247, 311-13; E. Herzfeld, *Die Ausgrabungen von Samarra*, vi, *Geschichte der Stadt Samarra*, Hamburg 1948, 233-48; Sourdel, *Vizirat ʿabbāside*, i, 294-8; M. Forstner, *Al-Muʿtazz billāh (252/866-255/869). Die Krise des abbasidischen Kalifat im 3./9. Jahrhundert*, Germersheim 1976 (exhaustive study); H. Kennedy, *The Prophet and the age of the Caliphates*, London 1986, 173-4. (C.E. BOSWORTH)

MÜTEFERRIḲA (T.), the name of a corps of guards, who were especially attached to the person of the sultan at the Ottoman Turkish court. The name is also applied to a member of the guard. Their occupations were similar to those of the *Čawus̲h̲* [*q.v.*], not of military character, nor for court service only, but they were used for more or less important public or political missions. Like the *Čawus̲h̲*, the Müteferriḳa were a mounted guard. The name appears early, e.g., in a *wakfiyya* of 847/1443, one Ibrāhīm b. Isḥāḳ is mentioned as being one. In later times there were two classes, the *gedikli* or *ziʿāmetli* Müteferriḳa, and the fiefless. Their chief was the *Müteferriḳa Ag̲h̲asî*. In course of time their number constantly increased; at the end of the 11th/17th century, the maximum was fixed at 120 (*GOR*², iii, 890, after Rās̲h̲id), but in the beginning of the 19th century, von Hammer gives the number 500 for the total. The Porte needed sometimes to lay stress on the importance of the office in order to make them acceptable as extraordinary envoys by foreign governments (*GOR*², iii, 929, after Rās̲h̲id).

Among those who occupied this rank was the well-known first Turkish Islamic printer Ibrāhīm Müteferriḳa [*q.v.* and MAṬBAʿA. 2. In Turkey].

Although different explanations of the title *müteferriḳa* are given, the most probable interpretation is that these functionaries were not given a special duty but formed originally a corps used for "various matters". This is still the use of the word in modern Turkish.

KRAMERS*)

MÜTEFERRIḲA, IBRĀHĪM [see IBRĀHĪM MÜTEFERRIḲA].

MUT̲H̲ALLAT̲H̲ (A.), also MUT̲H̲ALLAT̲H̲A, pl. always *mut̲h̲allat̲h̲āt*, triangle; it forms the first category of plane surfaces bounded by straight lines (*al-basāʾiṭ al-musaṭṭaḥa al-mustaḳīmat al-k̲h̲uṭūṭ* (cf. al-K̲h̲ʷārazmī, *Mafātīḥ*, 206). Following Euclid's Elements, i, Ὅρος 24-9, the Arab mathematicians classify triangles from two points of view: either according to the sides (*ḍilʿ*, pl. *aḍlāʿ*) into equilateral (*al-mut̲h̲allat̲h̲ al-mutasāwī 'l-aḍlāʿ*, in Euclid τρίγωνον ἰσόπλευρον), isosceles (*al-mut̲h̲allat̲h̲ al-mutasawi 'l-ḍilʿayn*, τρίγωνον ἰσοσκελές), and scalene (*al-mut̲h̲allat̲h̲ al-mukhtalif al-aḍlāʿ*, τρίγωνον σκαληνόν), or according to the angles (*zāwiya*, pl. *zawāyā*), into right-angled (*al-mut̲h̲allat̲h̲ al-ḳāʾim al-zāwiya*, τρίγωνον ὀρθογώνιον), obtuse-angled (*al-mut̲h̲allat̲h̲ al-munfarid̲j̲ al-zāwiya*, τρίγωνον ἀμβλυγώνιον) and acute-angled (*al-mut̲h̲allat̲h̲ al-ḥādd al-zāwiya* [*zawāyā*], τρίγωνον ὀξυγώνιον).

In the equilateral triangle, the base is called *al-ḳāʿida*, the apex *al-raʾs* and the sides *al-ḍilʿān* (see above); in the right-angled triangle the hypotenuse is called *al-ḳuṭr*, i.e., "diameter" (because the hypotenuse represents the diameter of the circle described around the right-angled triangle); for the two sides, the term *al-ḍilʿān* is generally used.

Misāḥat al-mut̲h̲allat̲h̲āt as a technical term means trigonometry (cf. Dozy, *Supplément*, i, 163a).

MUT̲H̲ALLAT̲H̲A (always with the feminine ending) is a technical term in astrology. Astrology divides the zodiacal circle (*minṭaḳa* [see MINṬAKAT AL-BURŪD̲J̲]) into four *mut̲h̲allat̲h̲āt* (Gr. τρίγωνα, Lat. *trigona*, *triquetra*), each of which includes three signs 120° apart. These "are situated together in the trigonal plane" (*tat̲h̲līt̲h̲*, Gr. τρίγωνον, Lat. *aspectus trinus*); the word *tat̲h̲līt̲h̲* itself is frequently found as a synonym of *mut̲h̲allat̲h̲a* which comes from the same root (*th-l-th*) (cf. Dozy, i, 162b).

In star nomenclature, Kawkab al-Mut̲h̲allat̲h̲ is the constellation of the (northern) Triangle (in Eratosthenes Δελτωτόν, in Ptolemy Τρίγωνον) which is adjoined in the east by Perseus, in the north by Andromeda, in the west by Pisces and in the south by Aries. According to Ptolemy (*Almagest*) and al-Ṣūfī (ed. Schjellerup, 123), it consists of three stars of the

third magnitude and one of the fifth. The star at the apex (α Trianguli) is an astrolabe star and is called *Raʾs al-Muthallath*. The latter name is found in *Libros del saber de astronomia del rey D. Alfonso X de Castilla* in the corrupted form *alcedeles*.

G. van Vloten, Leiden 1895; Codex Leidensis 399, 1. *Euclidis Elementa ex interpretatione al-Hadschdschadschii*, Copenhagen 1893-1932, i; ʿAbd al-Raḥmān al-Ṣūfī, *al-Kawākib wa 'l-ṣuwar* (*Description des étoiles fixes*), ed. H.C.F.C. Schjellerup, St. Petersburg 1874. (W. Hartner)

MUTHAMMAN (a.), "octagon, octagonal", describes in architecture plan figures and buildings of eight equal sides. The irregular octagon with four longer and four shorter sides—which may assume the shape of a square or rectangle with chamfered corners—was termed *muthamman baghdādī* ("Baghdādī octagon") in Mughal architecture, where it enjoyed a particular popularity.

With the Ḳubbat al-Ṣakhra [*q.v.*] or Dome of the Rock at Jerusalem (72/691-2) the octagon made an impressive entry into Islamic architecture and, thereafter—true to the commemorative character of the prototype, and because of the symbolism of the number eight, alluding to the eight stages of the Ḳurʾānic Paradise (for the latter point, see A. Daneshvari, *Medieval tomb towers of Iran*, Lexington, Ky. 1986, 27-30)—octagons were at all periods and in all regions of Islam preferably used for tombs and mausolea [see also maḳbara]. An interesting purely secular memorial octagon is the tower built by Akbar in 996/1588 on an ancient Buddhist mound now known as "Čawkhandī" at Sarnath near Benares; according to its inscription it was to commemorate a visit of his father Humāyūn. Octagonal plans were also popular for (garden) pavilions and pleasure houses; known or extant examples belong to Tīmūrid, Ṣafawid, Deccani, and, in particular, Mughal architecture [*q.v.*]. A special plan—often inscribed in the figure of a *muthamman baghdādī*—is here the *hasht bihisht* ("Eight Paradises") of eight rooms (four oblong) [open] axial porches and four usually double-storeyed corner rooms) arranged around a central (often octagonal) domed hall. Octagons played also an important role in religious and secular water architecture, such as cisterns, basins or wells, and their superstructures; an early and striking example is the fountain pavilion at Khirbat al-Mafdjar [*q.v.*, fig. A] between 105-25/724-43 (for further examples, see ḥawḍ).

Octagons occur also—often as halves (*nīm muthamman*) or three-quarters of the full figure—as the shape of towers in a fortificatory context, which may also be adapted for residential purposes [see burdj, at I, 1323-4]. The shaft of minarets assumes often an eight-sided form, in particular in the lower stages [see manāra]. In the construction of domes, octagons were throughout Islamic architecture a favourite plan figure for transition zones and drums, suitable to effect the transition to the polygonal or round base line of the dome. Octagons were also one of the most frequently used figures in Islamic ornament.

At times, eight-sided figures were even used for large-scale architectural planning. Ḥiṣn Ḳādisiyya, near Sāmarrā, a vast, quasi-regular octagon (the sides of which vary from 612 to 623 m.), was probably an unfinished city built by Hārūn al-Rashīd in the 790s (A. Northedge, in K.A.C. Creswell, *A short account of early Muslim architecture*, rev. and supplemented by J.W. Allan, Aldershot 1989, 279-80). Further examples are Shāh Djahān's no longer extant bazaar at Āgra (begun 1046/1637), which encircled a piazza (*čawk*) connecting the fort and the Djāmiʿ Masdjid; and the fortress palace of Shāhdjahānābād (1048-58/1639-48) at Dihlī [*q.v.*], a giant oblong *muthamman baghdādī* (the longer sides of which measure *ca.* 656 m., the shorter sides *ca.* 328 m. and the corner chamfers *ca.* 116 m.), but modified in the execution. Traditional courtyard building types of Islamic architecture may, at times, be given an octagonal shape. Noteworthy in particular are the Ḳapī Aghasī Medrese in Amasya [*q.v.*], Anatolia (894/1488); and Persian *kārwānsarāy*s of the Ṣafawid period (for which see khān, pl. xxviii; W. Kleiss and M.Y. Kiyānī, *Fihrist-i kārwānsarāhā-yi Īrān*, i, Tehran 1362, 14, 48 ff.).

The most outstanding contributions to the theme of the octagon in Islamic architecture were made by Indian tombs of the Dihlī Sultanate and, even more so, by mausolea of the Mughal period.

The Sultanate group attracts attention by adhering consistently over centuries to one clearly defined formula, first expressed in the Tughluḳ period. It is made up of an octagonal domed chamber surrounded by a lower octagonal ambulatory opening on each side into a tripartite arcade fashioned in the heavy membering of the Tughluḳ style. The building type can be traced back—via somewhat hypothetical Persian intermediary stages (for which see S.S. Blair, *The octagonal pavilion at Natanz*, in *Muqarnas*, i [1983], 69-94) and the Ḳubbat al-Ṣulaybiyya at Sāmarrā, probably 248/862 (Creswell, *op. cit.*, 372-4) (which has, however, not three but only one opening in each of the outer faces) to the Dome of the Rock (minus its second outer closed ambulatory). The Indian series—which thus represents the most remarkable formal offspring of the first building of Islam—begins at Dihlī with the tomb of the Tughluḳ official Khān Djahān Maḳbūl Tilangānī (d. 770/1368-9) (A. Welch and H. Crane, *The Tughluqs, master builders of the Delhi Sultanate*, in *Muqarnas*, i, fig. 7), was taken up again by the Sayyid rulers (tombs of Mubārak Shāh Sayyid, d. 838/1434-5 and of Muḥammad Shāh Sayyid, d. 849/1445-6), and was maintained in the Lōdī period (tomb of Sikandar Shāh Lōdī, d. 923/1517; the tomb of ʿĀlam Khān [Mewātī?] at Tidjārā) was brought to its apogee in the Sūrī period (tombs of Ḥasan Khān Sūr, *ca.* 950/1543-4; of Shēr Shāh Sūr, 952/1545; of Bakhtiyār Khān, *ca.* 952/1545; all at Sasārām in Bihār; of ʿĪsā Khān Niyāzī, Dihlī, 954/1547-8), and was also adopted with some stylistic changes by the early Mughals (tomb of Ādam Khān at Mihrawlī, Dihlī, d. 969/1562) [see hind, at III, 442-3, 449]. After that, the building type was discontinued in funerary architecture but emerges instead—in a lighter trabeate idiom—in residential architecture (which in Mughal India is largely interchangeable with sepulchral architecture), a *čhatrī* may replace the sepulchral outer dome over the central chamber (Ḳūsh Khāna, Fatḥpūr Sikrī, 1570s; Čālīs Sutūn, Allāhābād Fort, *ca.* 991/1583 (not preserved); Shāh Burdj, Āgra Fort, completed 1046/1637). Finally, the type in its new lighter shape, is restored once more to sepulchral architecture in three of the subsidiary tombs of the Tādj Maḥall complex (1640s).

The most interesting and complex treatment of the octagon occurs, however, in the massive masonry tombs of the Mughals.

The standard type are variations on the regular or irregular octagonal tomb of Tīmūrid inspiration. The regular version has a central octagonal, square, or cruciform chamber and an arched niche in each of the eight outer faces (tombs of Shāh Ḳulī Khān, Nār-

nawl, 982/1574-5; of Ḳuṭb al-Dīn Khān, Baroḍā, d. 991/1583; of Bahādur Khān, and of Husayn Khān (with double storeyed outer niches), both Bahlōlpūr, Akbar's period (S. Parihar, *Mughal monuments in the Punjab and Haryana*, New Delhi 1985, 30-2); of Ḥādjdjī Muḥammad, Sarhind, 1014/1605-6; of Āṣaf Khān (d. 1051/1641) and of ʿAlī Mardān Khān (*ca.* 1060/1650), Lāhawr; of "Ṣādiḳ Khān" between Sikandra and Āgra, with an upper gallery; and of "Shaykh Čilli", Thānesar, both of Shāh Djahān's period. The irregular octagonal tomb has usually rectangular axial outer niches (*pīshṭāḳs*) communicating with the inner chamber and half octagonal niches (which may be double storeyed) in the shorter sides (Sabz Burdj, Nīlā Gunbad, Dihlī, both probably 1540s; tomb of "the Ustād", Nākodār, 1021/1612) representing thus an abbreviation of the *hasht bihisht* plan. Another distinct type, a Mughal invention occurring most frequently in Djahāngīr's period, is the octagonal version of the platform (*takhtgāh*) tomb which consists of an octagonal low platform (which may contain vaulted rooms) on which is placed in the centre an eight-sided domed sepulchral pavilion. In the periphery may be set other individual subsidiary structures such as gates, small mosques or pavilions (tombs of Ṣādiḳ Khān Harātī, Dhōlpūr, 1005-6/1596-7, which has no pavilion but an octagonal platform surrounded by a screen in the centre; of "Fīrūz Khān", Āgra; of "Tambulan Begam" in the Khusraw Bāgh at Allāhābād; of Muḥammad Wāsiṭ in the *dargāh* of Shāh Ḳāsim Sulaymānī at Čunār, all first third of the 17th century).
Fig. 1. Lahore, tomb "of Anārkalī", 1024/1615. Reconstructed ground plan.

The ultimate point of elaboration, perfecting the Tīmūrid-inspired tradition of consistent geometrical planning and intricate designs, is reached in three outstanding Mughal mausolea, all developed around a central octagonal domed chamber. Not only does the eight-sided Islamic tomb reach here its culmination but perhaps does also the treatment of the octagon in the general history of architecture altogether:

(1) The tomb of Humāyūn at Dihlī (970-8/1562-71); the main body of the tomb is raised on the figure of a radially-planned *hasht bihisht* inscribed in a *muthamman baghdādī*. The four corner units consist in turn of *hasht bihishts* echoing the spatial organisation of the main plan figure. The clear logic of the plan is reflected faithfully in the elevation; its structural components are brought into relief by the studied use of red sandstone highlightened with white marble.

(2) The tomb "of Anārkalī" at Lāhawr, completed 1024/1615 (Fig. 1); in the plan figure of an irregular octagon with half octagonal towers at its points is inscribed an octagonalised radial symmetrical *hasht bihisht* plan with two patterns of cross axes: a (+) that of the axial porches (*pīshṭāḳs*) and b (x) that of diagonally placed composite rooms. The originality of the invention can be shown by comparing it with masterpieces of western architecture: it is as if Michelangelo's last design for the San Giovanni de' Fiorentini church in Rome (1559) were inscribed in the outline of Frederick II's Castel del Monte in Apulia, South Italy (*ca.* 1240)!

(3) The Tādj Maḥall at Āgra (1041-52/1632-43); a perfectly balanced radially planned *hasht bihisht* is inscribed in a *muthamman baghdādī*, the two cross axes (+ and x) are further interconnected by an inner square ambulatory surrounding the central octagonal chamber.

Bibliography: There is as yet no monographic treatment of the octagon in Islamic architecture. Individual aspects are discussed in the works cited in the text. See, in addition, for the octagonal tombs of the Dihlī sultanate, R. Nath, *History of sultanate architecture*, New Delhi 1978, 84-95; C.B. Asher, *The mausoleum of Sher Shāh Sūrī*, in *Artibus Asiae*, xxxix/3-4 (1977), 273-98. For the Mughal tombs, see MUGHALS. 7. Architecture ; E. Koch, *Mughal architecture: an outline*, Munich 1991. (EBBA KOCH)

AL-MUTHANNĀ B. ḤĀRITHA, Arab tribal chieftain and hero of the early Islamic conquest of ʿIrāḳ. Al-Muthannā's tribe, the Banū Shaybān, was part of the Bakr b. Wāʾil group and had its home on the eastern desert fringes of southern ʿIrāḳ in the late 6th and early 7th centuries A.D. Although the leading clans of Shaybān had been involved in battles against the Persians before the rise of Islam—most notably the famous battle of Dhū Ḳār (*ca.* 611 A.D. [*q.v.*])—the same clans seem initially to have opposed the Muslim advance into ʿIrāḳ; al-Muthannā, on the other hand, was from the minor Shaybānī clan of Saʿd b. Murra, and it may be that the Muslims employed a divide-and-conquer tactic in dealing with Shaybān, winning in this case a minor chieftain to their side, with whose assistance they were able to overcome other parts of the tribe who remained aligned with the Persians.

The sources tell us nothing of al-Muthannā's early life, nor do they give us a consistent picture of how he came to join the Muslims. With the collapse of Sāsānid control in southern ʿIrāḳ, al-Muthannā, along with other tribal chiefs such as al-Madhʿūr b. ʿAdī al-ʿIdjlī, appears to have engaged in raiding settled land. But the sources disagree on whether al-Muthannā's raids were undertaken independent of the régime in Medina, or whether they were carried out with Medina's blessings or even on its orders. A few accounts in late authors (Ibn al-Athīr's *Usd al-ghāba*, Ibn Ḥadjar's *Iṣāba*) portray al-Muthannā as part of a delegation of Shaybān tribesmen who came to the Prophet, and others have him coming to Medina early in Abū Bakr's caliphate (or even com-

ing at both times); in either case, he is said to have been authorised by the Prophet or caliph to undertake raids against the Persians. But these accounts may be later efforts to portray his raids in ʿIrāḳ as part of a master plan for the Islamic conquests emanating from Medina, rather than as independent action on the part of al-Mut͟hannā. Against such a centralised view we may note that several accounts suggest that al-Mut͟hannā was unknown to Abū Bakr when his raiding was brought to the caliph's attention. Ibn Saʿd's account of the S͟haybān delegation to the Prophet makes no mention of al-Mut͟hannā, and the accounts in the *Usd al-g͟hāba* mention al-Mut͟hannā in the delegations but make another figure the leading character in the negotiations, suggesting that al-Mut͟hannā's name may have been added later to existing accounts.

It seems likely, then, that al-Mut͟hannā's first raids on ʿIrāḳ were made on his own initiative. He must have been persuaded to join the Muslims some time during the *Ridda*, however, before the arrival of the first Muslim army sent from Medina to ʿIrāḳ headed by K͟hālid b. al-Walīd (early 12/spring 633), for during the wars of the *Ridda*, al-Mut͟hannā is mentioned among those sent by the Muslim commander al-ʿAlāʾ b. al-Ḥaḍramī to prevent the defeated supporters of the rebel al-Ḥuṭam of al-Baḥrayn from fleeing to the island of Dārīn in the Persian Gulf in 11/632-3 (al-Tabarī, i, 1971).

Al-Mut͟hannā played an important role in the initial phases of the conquest of southern and central ʿIrāḳ after the arrival of the first Muslim armies sent there by Abū Bakr and ʿUmar b. al-K͟haṭṭāb. Although the narrative sources contain many apparent contradictions and anomalies in reporting al-Mut͟hannā's exploits, the general outlines of their presentation can be summarised as follows. Al-Mut͟hannā served as a subordinate commander under K͟hālid b. al-Walīd during the Muslim conquest of al-Ḥīra and nearby localities (Ullays, etc.). He also appears to have led some raids across the Euphrates into the *Sawād*, both during the period of K͟hālid's command and later. When K͟hālid received Abū Bakr's order to reinforce the Muslims in Syria in early 13/spring 634, he took with him half of the Muslim forces in ʿIrāḳ and left al-Mut͟hannā in command of the remaining half. Al-Mut͟hannā may have come to Medina at this time to plead with Abū Bakr for reinforcements to confront the Persians. Subsequently, the caliph ʿUmar b. al-K͟haṭṭāb dispatched an army led by Abū ʿUbayd al-T͟haḳafī, who became the new supreme commander in ʿIrāḳ. This army was, however, destroyed by the Persians at the Battle of the Bridge (13 or 14/634-6); in the accounts of this battle, al-Mut͟hannā is described as having played a key role in protecting the defeated Muslims' rear so that they could repair a pontoon bridge and make an orderly retreat across it, thus saving countless lives among the Muslim forces. Al-Mut͟hannā is generally reported to have received wounds at the Battle of the Bridge from which he died months later. In the meanwhile, however, he is said to have launched numerous raids into the *Sawād*. Some versions claim that al-Mut͟hannā defeated a large Sāsānid army in a major pitched battle at a place called Buwayb, in the *Sawād*, an exploit that is presented in some sources as erasing the defeat at the Bridge. His death seems to have occurred just before the arrival in ʿIrāḳ of the next major Muslim army, led by Saʿd b. Abī Waḳḳāṣ, which was to be responsible for the decisive conquest of ʿIrāḳ from the Persians. His death probably occurred, then, in 14/635-6 or 15/636-7.

The many inconsistencies or traces of apparent hyperbole in the narratives on which the aforegoing summary is based must lead us to question the historicity of numerous episodes in which al-Mut͟hannā is said to have been involved. For example, some accounts claim that al-Mut͟hannā raided far afield from his home territory near al-Ḥīra—to Ṣiffīn far up the Euphrates, Takrīt on the upper Tigris, and deep into the *Sawād* as far as the future site of Bag͟hdād (a claim rejected already by al-Balād͟hurī, *Futūḥ*, 246). Similarly, the many reports of al-Mut͟hannā's early raiding include a number that describe him as having engaged and defeated a Persian commander named D̲jābān, but the site of this encounter is variously said to have been Ullays (al-Ṭabarī, i, 2018), al-Namāriḳ (*ibid.*, i, 2163), Nahr al-Dam (al-Balād͟hurī, *Futūḥ*, 242), or Tustar (*ibid.*, 245-6). According to the reports of Sayf b. ʿUmar, the commander of a troop of reinforcements sent to ʿIrāḳ after the débâcle at the Bridge, D̲jarīr b. ʿAbd Allāh al-Bad̲jalī, willingly accepted al-Mut͟hannā as commander and served under him at the battle of Buwayb; but according to Ibn Isḥāḳ, D̲jarīr refused to subordinate himself to al-Mut͟hannā. In the accounts of the Battle of Buwayb and elsewhere, al-Mut͟hannā's role is sometimes described in terms that seem to be seriously exaggerated; at Buwayb, for example, he engages in heroics while nursing fatal wounds suffered at the Bridge, and in other instances, where he is portrayed as negotiating with high-ranking Persian commanders, he responds with such finesse that the reports have the tone of purely literary inventions. These aspects of the traditional narratives lead us to question whether a major battle (rather than occasional small skirmishes and raids?) even took place at Buwayb.

Resolving these problems must await a fully detailed re-examination of the development of the accounts about al-Mut͟hannā's campaign. On the other hand, in the present writer's opinion it must be accepted as certain that al-Mut͟hannā was a historical figure, and that he played a significant role in the conquest of ʿIrāḳ; it is merely that historiographical difficulties for the moment make unclear the exact scope of his activities.

With the rise of a specifically ʿIrāḳī strain of Arab nationalism following the creation of the independent state of ʿIrāḳ in the 20th century, the figure of al-Mut͟hannā b. Ḥārit͟ha has become a symbol of ʿIrāḳī national pride. For this reason, public and private monuments and institutions are sometimes named after him in modern ʿIrāḳ. Noteworthy among these was the nationalist club of the 1930s and 1940s, the Nādī al-Mut͟hannā.

(F.M. DONNER)

MUṬĪʿ B. **IYĀS** AL-KINĀNĪ, a minor poet of Kūfa who lived in the last years of the Umayyads and the first ones of the ʿAbbāsids, making him a *muk͟haḍram* [*q.v.*] *al-dawlatayn*.

G.E. von Grunebaum (*Three Arabic poets of the early*

Abbasid age, in *Orientalia*, Rome) brought together, in the first part of his study (xvii/2 [1948], 167-204) 77 poetical fragments attributed to al-Muṭīʿ and also provided an exemplary critical study of the materials given by the biographers, anthologists and other authors of *adab* works, concerning this poet, whose personality is difficult to establish despite an image which appears superficially to be of perfect clarity but which reveals itself on closer examination as equivocal and strained.

His grandfather, or some more distant ancestor, was called Salmā b. Nawfal, and it happens that Ibn al-Kalbī, in his *Djamhara* (Tab. 43) terminates the line to which the poet belongs with this person. His father Iyās b. Muslim was sent by ʿAbd al-Malik b. Marwān with the contingent meant to provide aid for al-Ḥadjdjādj b. Yūsuf in his struggle against Ibn al-Zubayr, and then settled at Kūfa, and there is no reason to doubt his Arab lineage. Von Grunebaum in fact wrongly interpreted a passage of the *Aghānī* (xii, 96 = ed. Beirut, xiii, 309) and noted that, according to another tradition, Muṭīʿ was the son of a *mawlā* of Muḥammad b. al-Faḍl al-Hāshimī called Muḥammad b. Sālim, when in reality the text says that the poet had amorous relations with a certain Muḥammad b. Sālim, who was the son of a *mawlā* of Muḥammad b. al-Faḍl; he mourned his death in a fragment which has been preserved (no. XXIII; metre *ṭawīl*, rhyme *-dū*).

Muṭīʿ b. Iyās, born in Kūfa at an unknown date, which must however have been in the first decade of the 2nd century/third decade of the 8th century, seems to have attempted very early to take up the career of a professional poet, whilst at the same time leading a dissolute life to which he owes, in great part, his place in literary history. The first episode marking his career—so far as we at present know—is the dedicating of a panegyric to the prince al-Ghamr b. Yazīd (d. 132/750; see Ṣ. al-Munadjdjid, *Muʿdjam Banī Umayya*, Beirut 1970, no. 287), which is said to have brought him 10,000 *dirhams* (fragment III; metre *kāmil muraffal*, rhyme *-āʾih*), but it is not known when this event took place, the Umayyad hardly ever having left Damascus except to command a summer expedition (*ṣāʾifa*) against Byzantium. It is not impossible that this prince recommended Muṭīʿ to his brother al-Walīd b. Yazīd (caliph from Rabīʿ I 125 to 28 Djumādā II 126/February 743 to 17 April 744 [*q.v.*]) or else caused to intervene in his favour the singer Ḥakam al-Wādī (on whom see the index to al-Masʿūdī's *Murūdj*). This last was a *mawlā* of Yazīd b. ʿAbd al-Malik who set to music several of Muṭīʿ's poems, notably nos. V (metre *ramal*, rhyme *-ābā*), XXXIII (metre *kāmil*, rhyme *-rī*), LXXI (metre *khafīf*, rhyme *-ānī*) and especially LXXII (metre *radjaz*, rhyme *-ānū*), Muṭīʿ being said to have attracted the attention of al-Walīd, perhaps at a moment when he had not yet achieved the throne. Whatever the case, the latter is said to have brought Muṭīʿ to Ruṣāfa by the horses of the postal service, but other versions have also been put forward. It is said that Muṭīʿ remained with the caliph until the latter's death, after which he returned to Kūfa. He is then found in the entourage of the ʿAlid ʿAbd Allāh b. Muʿāwiya b. Djaʿfar b. ʿAlī b. Abī Ṭālib [*q.v.*], who rebelled at Kūfa in 127/744 and was put to death by Abū Muslim in 129/747 or in 131. There is nothing to prevent us from thinking that his anti-conformism could go as far as filling him with sympathy for a partisan of the ʿAlids who was in open revolt against the Umayyad régime which he had nevertheless served until the moment when it was on the point of disintegrating. He must have remained in Kūfa in the first years of the ʿAbbāsid dynasty, since we see him frequenting the salon of Muḥammad b. Khālid b. ʿAbd Allāh al-Ḳasrī, governor of the town in 132/750. In the reign of al-Manṣūr (136-58/754-75 [*q.v.*]), since he was attached to the caliph's son al-Djaʿfar (d. before 158/775), on whom he exercised a pernicious influence, he is said to have been given the office, according to a very dubious tradition, of levying the *ṣadaḳa* at Baṣra, in order to get him away from the young prince. He attracted the latter's anger for having favoured the designation as heir presumptive, in 141/758-9, of the future al-Mahdī, who, moreover, much appreciated his poetry. It is known that he travelled to Rayy in 145/762, to the presence of Salm b. Ḳutayba (d. 159/776; see the index to the *Murūdj*). Subsequently, no outstanding events seem to have been recorded until his death in Djumādā I 169/November 785 at Baṣra.

Muṭīʿ b. Iyās probably owes the survival of his memory less to his poetic talent than to his membership of a group of individuals connected with *zandaḳa* [*q.v.*]. According to what is given in the *Aghānī* (xii, 89 = ed. Beirut, xiii, 296), his daughter, a victim of the hunting down of the Manichaeans, confessed before al-Rashīd that her father had taught her that religion, but that she had renounced it. This affirmation would confirm the accusation brought against Muṭīʿ and his companions of Manichaeism. He is said to have himself written books defending the dualists, but his "Manichaeism"—insofar as the term can be applied to him—was certainly only a façade and consisted of a conduct contrary to the morality of Islam, a nonconformism characteristic of the upper levels of society at that time, a complete indifference to religious precepts, and the current practices of drunkenness, homosexuality and debauchery in general. Abu 'l-Faradj al-Isfahānī, in no way shocked by happenings of this kind which were quite rife in a certain stratum of society, sums up in three words Muṭīʿ's nature, and describes him as *ẓarīf*, *khalīʿ* and *mādjin*, terms whose meaning, difficult to render precisely, corresponds substantially to a person of refinement (= witty, depraved and libertine).

This poet is rarely cited by himself, since he was inseparable, in the minds of the contemporaries and, by *taḳlīd*, of the succeeding generations, from the group of his friends, of the same stamp, "who formed, it might be said, one soul" (al-Djāḥiẓ, *Ḥayawān*, iv, 447-8) and amongst whom may be distinguished the three Ḥammāds (ʿAdjrad, al-Rāwiya and Ibn al-Zibriḳān), Wāliba b. al-Ḥubāb and Abān al-Lāḥiḳī, to mention only the best-known. In sifting through the lists appearing in the sources, G. Vajda (*Les zindīqs en pays d'Islam*, in *RSO*, xvii [1937], 137-229) did justice to the accusations of *zandaḳa* brought against these rather pretentious individuals, who flaunted a scepticism which went as far as atheism.

As for Muṭīʿ's work, is it certainly varied and probably touched on all the poetical genres cultivated at that time, but it would be imprudent to make a definite pronouncement, given that his *dīwān* has not been preserved. Of the 77 fragments gathered together by Von Grunebaum, 71 are certainly by this poet, comprising 391 verses out of 412, which can only represent a small proportion of his total production, estimated by Ibn al-Nadīm (*Fihrist*, 162 = ed. Cairo, 230) at about a hundred leaves. Among these fragments, 4 are panegyrics (notably of Maʿn b. Zāʾida [*q.v.*]), 5 are *marthiyas* [*q.v.*] of his companion in debauchery Yaḥyā b. Ziyād (see Sezgin, *GAS*, ii, 467-8), to whom he addressed several other pieces of

verse in various circumstances, a dozen are more or less obscene satires, 3 offend by their vulgarity, some 24 concern love and women (especially *ḳiyān* [see ḲAYNA]) and some 8 are recitals of drinking sessions. It is perhaps astonishing to learn that the poem which was most admired (no. 71; metre *k͟hafīf*, rhyme *-ānī*) is an address to the Two Palm Trees of Ḥulwān, begging them to console him for his separation from "the *dihḳān*'s daughter" left behind at Rayy, and threatening them with a gloomy destiny (*naḥs*) of being likewise separated. These verses are not only frequently cited, but the Two Palms of Ḥulwān became a motif dealt with on several occasions by other poets; the story goes, moreover, that al-Manṣūr and then al-Mahdī had the plan of cutting them down, but changed their minds, not wanting to be the instrument of the *naḥs* announced by Muṭīʿ. In total, the fragments preserved simply reveal a poet who was certainly a debauchee, but neither more or less of this than his contemporaries.

In regard to poetic form, one would hardly expect frequent usage of the *ṭawīl* and *basīṭ* metres (5 and 7 times, respectively) in poetry as light as that of Muṭīʿ, which requires less majestic metres. One nevertheless notes a remarkable variety of metres used, since out of the 16 known, 13 are used in these fragments alone; out of these, 12 are used between one and nine times, but the thirteenth, *k͟hafīf*, is clearly dominant, with 19 attestations. As a whole, the language is simple, somewhat scabrous in some poems but with an unexpectedness in some others, especially when sincere feeling is expressed.

Bibliography: The essential study is that of Von Grunebaum, cited in the article, and the main biographical source is *Ag͟hānī*, xii, 87 ff. (= ed. Beirut, xiii, 274-336). Among other works which can usefully be consulted are: Ibn al-Muʿtazz, *Ṭabaḳāt*, 38; Buḥturī, *Ḥamāsa*, 390-1; D̲j̲āḥiẓ, *Ḥayawān*, iv, 447-52 and index; Mubarrad, *Kāmil*, 770-1; Ibn K͟hallikān, i, 166, tr. de Slane, i, 474; Marzubānī, *Muʿd̲j̲am*, 480; Murtaḍā, *Amālī*, Cairo 1325, i, 99-100; Yāḳūt, *Buldān*, ii, 318-21; al-K͟haṭīb al-Bag͟hdādī, *Taʾrīk͟h Bag͟hdād*, xiii, 225; S͟hābus͟htī, *Diyārāt*, 159-66; Nuwayrī, *Nihāya*, iv, 58-63; Bag͟hdādī, *K͟hizāna*, iv, 286. Gabrieli, in *RSO*, xv (1934), xvii (1935); Ṭaha Ḥusayn, *Ḥadīt͟h al-arbiʿāʾ*, i, 182-212; Ziriklī, *Aʿlām*, viii, 161-2; Kaḥḥāla, *Muʾallifīn*, xii, 296; Sezgin, *GAS*, ii, 467, ix, 288.

(CH. PELLAT)

AL-MUṬĪʿ LI ʾLLĀH, ABU ʾL-ḲĀSIM AL-FAḌL, ʿAbbāsid caliph, reigned 334-63/946-74, son of al-Muḳtadir [*q.v.*] by a Ṣaḳlabī slave concubine called Mas͟hʿala, brother of al-Rāḍī and of al-Muttaḳī [*q.vv.*].

Al-Muṭīʿ was a bitter enemy of al-Mustakfī [*q.v.*] and therefore went into hiding on the latter's accession, and after Muʿizz al-Dawla [*q.v.*] had become the real ruler, al-Muṭīʿ is said to have taken refuge with him and incited him against al-Mustakfī. After the deposition of the latter in D̲j̲umādā II or S͟haʿbān 334/January or March 946) al-Muṭīʿ was recognised as caliph. His reign marks a very unfortunate period in the history of the ʿAbbāsids. The caliph himself had not the slightest authority; the power was in the hands of Muʿizz al-Dawla and after his death (356/967) in those of his son ʿIzz al-Dīn Bak͟htiyār [*q.v.*]. The Fāṭimids were growing more and more powerful, and until 344/955 the Sāmānids also declined to recognise al-Muṭīʿ as the legitimate suzerain. The Ḥamdānids were weakened by their wars with the Būyids and the Fāṭimids. In Bag͟hdād, the Sunnīs and S͟hīʿīs were fighting one another and several S͟hīʿī usages were introduced by the Būyids, who had ʿAlid sympathies. At last the weak and sickly caliph, incapacitated by a paralytic stroke, was forced by the Turks to abdicate in favour of his son ʿAbd al-Karīm al-Ṭāʾiʿ (13 D͟hu ʾl-Ḳaʿda 363/5 August 974). Al-Muṭīʿ died in Muḥarram 364/September-October 974 in Dayr al-ʿĀḳūl.

The character of al-Muṭīʿ hardly emerges from the exiguous mentions of him by historians of the period such as Miskawayh, events in Bag͟hdād being dominated by the activities of Muʿizz al-Dawla and ʿIzz al-Dawla Bak͟htiyār. On his succession to power there, Muʿizz al-Dawla assigned the caliph 2,000 *dirhams* a day for living expenses, but chose for him all his household officials; the chroniclers regard al-Muṭīʿ's reign as the lowest ebb of the caliphate before events began to revive somewhat under his eventual successors al-Ḳāʾim and al-Ḳādir [*q.vv.*]. Rivals to al-Muṭīʿ for the caliphate from the progeny of the preceding caliph al-Mustakfī and his brother ʿĪsā led risings in Ad͟harbāyd͟jān (349/960) and ʿIrāḳ (357/968), but the protection of the Būyids enabled al-Muṭīʿ to survive as ruler for nineteen years, a long reign compared with those of his immediate predecessors, and to preserve the ʿAbbāsid caliphate permanently in the line of al-Muḳtadir.

(K.V. ZETTERSTÉEN-[C.E. BOSWORTH])

MUṬLAḲ (A.), passive participle of form IV verb *ṭ-l-ḳ*, "to loose the bond (*ḳayd*) of an animal, so as to let it free" (e.g. Muslim, *D̲j̲ihād*, trad. 46; Abū Dāwūd, *D̲j̲ihād*, *bāb* 100). The term is also applied to the loosening of the bowstring (al-Buk͟hārī, *D̲j̲ihād*, *bāb* 170), of the garments, the hair, etc. Thence the common meaning absolute, as opposed to restricted (*muḳayyad*), and further the accusative *muṭlaḳ^{an}* "absolutely". The use of the term is so widely diffused that a few examples only can be given.

In grammar, the term *mafʿūl muṭlaḳ* denotes the absolute object (cognate accusative), i.e., a verbal noun (either *maṣdar* or *ism al-marra* [noun of a single instance] or *ism al-nawʿ* [noun of manner]) derived, mostly, from the verb of the sentence and put in the accusative to serve as an object, even if the verb is intransitive. The verbal noun may be used alone, often for emphasis, or modified by an adjective or a genitive; it may itself be governed by an elative. The following basic types result: *ḳaʿada ḳuʿūd^{an}* ("he sat down for good" [emphasis]); *ḳuʿūd^{an} sarīʿ^{an}* ("quickly"), *ḳuʿūd^{a} sāʾil^{in}* ("like a beggar"), *ḳaʿdat^{an}*, *ḳaʿdatayn^{i}*, *t͟halāt͟h^{a} ḳaʿadāt^{in}* ("once", "twice", "three times"), *kiʿdat^{an} ʿad͟jībat^{an}* ("in a strange manner") and *aswaʾa ḳiʿdat^{in}* ("in the worst manner").

In the doctrine of *uṣūl al-fiḳh*, the term is applied to the *mud͟jtahids* of the heroic age, the founders of the *mad͟hhabs* who are called *mud͟jtahid muṭlaḳ*, an epithet which none after them has borne [see IDJTIHĀD].

In dogmatics, the term is applied to existence, so

that *al-wudjūd al-muṭlaḳ* denotes Allāh as opposed to His creation, which does not possess existence in the deepest sense.

In ontology, the term is also applied to existence (*wudjūd*) in connection with the question of the nature of the latter. Here *al-wudjūd al-muṭlaḳ* is opposed to *al-wudjūd al-maḥmūl li 'l-mawḍūʿ* (see MANṬIḲ).

In other contexts, the term has the meaning "general" as opposed to *khāṣṣ*; cf. the definition in al-Djurdjānī's *Taʿrīfāt*: *muṭlaḳ* denotes the one without specification. Cf. further al-Tahānawī, *Dictionary of the technical terms*.

On the meaning of *rawī muṭlaḳ* in prosody, see ḲĀFIYA.

MUṬRĀN [see KHALĪL MUṬRĀN].

AL-**MUTTAḲĪ LI 'LLĀH**, ABŪ ISḤĀḲ IBRĀHĪM, ʿAbbāsid caliph, reigned 329-33/940-4, son of al-Muḳtadir [*q.v.*] and a slave-girl named Khalūb.

At the age of 26 on 21 Rabīʿ I 329/24 Dec. 940 he succeeded his half-brother al-Rāḍī [*q.v.*]; by this time the caliphate had sunk so low that five days passed after the death of al-Rāḍī before steps were taken to choose his successor. Al-Muttaḳī at once confirmed the *Amīr al-Umarāʾ* Bedjkem [*q.v.* in *EI*¹] in office; after his death however, in Radjab 324/April 941, the Turks and Daylamīs in the army began to quarrel with one another. Abū ʿAbd Allāh al-Barīdī [see AL-BARĪDĪ] seized the capital but could only hold it a few weeks. He was driven out by the Daylamī chief Kūrtigīn who, however, was soon overthrown by Ibn Rāʾiḳ [*q.v.*]. When Abū ʿAbd Allāh sent his brother Abu 'l-Ḥusayn with an army against Baghdād, the caliph and Ibn Rāʾiḳ escaped to al-Mawṣil to the Ḥamdānids (Djumādā II 330/February-March 942). After the assassination of Ibn Rāʾiḳ, the Ḥamdānid Abū Muḥammad al-Ḥasan was appointed *Amīr al-Umarāʾ* and received the honorific title of Nāṣir al-Dawla, his daughter ʿUlayya marrying the caliph's son. The occupation of Baghdād offered him no difficulty; the Turkish general Tuzun rebelled a little later and Nāṣir al-Dawla had to evacuate the capital which was entered by Tuzun in Ramaḍān 331/June 943 as *Amīr al-Umarāʾ*. Al-Muttaḳī soon found himself forced to seek the protection of the Ḥamdānids again and at the beginning of the following year (autumn 943) he fled to al-Mawṣil. Then he settled in al-Raḳḳa, but when Tuzun made peace with Nāṣir al-Dawla, al-Muttaḳī appealed for help to the Ikhshīdid of Egypt Muḥammad b. Ṭughdj [*q.v.*]; the latter came to al-Raḳḳa in Radjab 332/March 944; the negotiations however were unsuccessful and finally the caliph put his trust in Tuzun, who, after assuring him of his loyalty by the most sacred oaths, had him blinded (19 Ṣafar 333/11 October 944). Al-Muttaḳī was then declared to have been deposed. He died in Shaʿbān 357/July 968.

Al-Muttaḳī was famed for his piety, proclaiming that his boon-companion was the Ḳurʾān. At his accession, Sulaymān b. al-Ḥasan b. Makhlad continued as vizier, as he had functioned in the previous reign, but there then followed a series of ephemeral viziers, ending with Abu 'l-Ḥasan ʿAlī Ibn Muḳla, son of the famed vizier of al-Muḳtadir and al-Ḳāhir [see IBN MUḲLA]. The veteran statesman ʿAlī b. ʿĪsā [*q.v.*] also acted as judge of *maẓālim* [*q.v.*] during the early part of the reign. But in fact, as the historians note, the vizierate as an effective office ceased to exist at this time, all power in the state lying with first Bedjkem and then Tuzun.

(K.V. ZETTERSTÉEN-[C.E. BOSWORTH])

AL-**MUTTAḲĪ** AL-**HINDĪ**, author of several works in Arabic, whose full name was ʿALĀʾ AL-DĪN ʿALĪ B. ḤUSĀM AL-DĪN ʿABD AL-MALIK B. ḲĀḌĪ KHĀN AL-SHĀDHILĪ AL-ḲĀDIRĪ, was born at Burhānpūr in Gudjarāt of a respectable family of Djawnpūr [*q.v.*]. He first joined the Čishtī order, as a disciple of ʿAbd al-Karīm b. Shaykh Bādjan at Burhānpūr, and afterwards went to Multān where he read with Ḥusām al-Dīn al-Muttaḳī, after whom he is called al-Muttaḳī. He spent the remaining portion of his Indian life at Aḥmadābād during the reign of Bahādur Shāh, but left India for Mecca after Humāyūn defeated Bahādur Shāh in 941/1534. He spent his last days in Mecca, where he lived for thirty years more, during which he read with Ibn Ḥadjar al-ʿAskalānī and others and entered the Ḳādirī and Shādhilī orders. His high spiritual life and learning led many people to become his *murīd* (spiritual disciple). He died a highly respected saint and scholar in Mecca 975/1567 at the age of ninety. He is the author of some twenty works including the following:

1. *al-Burhān fī ʿalāmāt Mahdī ākhir al-zamān*, an account of the Mahdī and of his coming at the end of the world;
2. *al-Burhān al-djalī fī maʿrifat al-walī*;
3. *Talkhīṣ al-bayān fī ʿalāmāt Mahdī ākhir al-zamān*;
4. *Djawāmiʿ al-kalim fi 'l-mawāʿiẓ wa 'l-ḥikam*, a collection of sentences on morals;
5. *Hidāyat rabbī ʿinda faḳad al-murabbī*;
6. *al-Ḥikam*;
7. *Kanz al-ʿummāl fī sunan al-aḳwāl wa 'l-afʿāl*, a combined edition of al-Suyūṭī's *Djāmiʿ al-masānīd* or *Djamʿ al-djawāmiʿ* or *al-Djāmiʿ al-kabīr*, newly arranged according to chapters (printed Ḥaydarābād 1312);
8. *al-Mawāhib al-ʿaliyya fī djamʿ al-ḥikam al-Ḳurʾāniyya wa 'l-ḥadīthiyya*;
9. *Mahhadj al-ʿummāl fī sunan al-aḳwāl wa 'l-afʿāl*, an abridgement of al-Suyūṭī's well-known alphabetically arranged work *al-Djāmiʿ al-ṣaghīr* containing a collection of traditions from authentic sources, newly-arranged according to chapters together with a supplement;
10. *Mukhtaṣar al-Nihāya*, an abridgement of Madjd al Dīn Ibn al-Athīr's dictionary of traditions entitled *al-Nihāya fī gharīb al-ḥadīth*;

11. *Niʿam al-miʿyār wa 'l-miḳyās li-maʿrifat marātib al-nās*, a short tract on the classification of mankind. For a full list, see Brockelmann, II², 503-4, S II, 518-19.

Bibliography: ʿAbd al-Ḥaḳḳ al-Dihlawī, *Akhbār al-akhyār*, 249; Āzād al-Bilgrāmī, *Subḥat al-mardjān*, 43; Faḳīr Muḥammad al-Lahawrī, *Ḥadāʾiḳ al-Ḥanafiyya*, 382; Ṣiddīḳ Ḥasan al-Kannawdjī, *Abdjad al-ʿulūm*, 895; Rieu, *Persian cat.*, 356.

(M. HIDAYET HOSAIN)

MUWĀḌAʿA (A.).

1. In Islamic law, this means the rescission of a sale or transaction (synonym, *mutāraka*); see for lexical aspects of the term, *LA*¹, x, 282; *TA*¹, v, 535; Freytag, *Lexicon*, iv, 476.

2. In mediaeval Eastern Islamic administrative usage, it denotes the contract of service of officials, in accordance with the term's further meaning of "the laying down of conditions for an agreement with some one". We possess the texts of two *muwāḍaʿas* made by early Ghaznavid viziers with their sovereign: one made by Aḥmad b. Ḥasan al-Maymandī [*q.v.*] with Sultan Masʿūd b. Maḥmūd [*q.v.*] on his appointment in 422/1031, and the other by Aḥmad b. ʿAbd al-Ṣamad al-Shīrāzī with the same master in 431/1040. In both cases, the ministers in question feared interference from other officials in their own spheres of duty and recrimination from the ruler, hence were concerned to define and delimit their duties and responsibilities (Sayf al-Dīn ʿUḳaylī, *Āthār al-wuzarāʾ*, ed. Djalāl al-Dīn Urmawī, Tehran 1337/1959, 179-85; Abu 'l-Faḍl Bayhaḳī, *Taʾrīkh-i Masʿūdī*, ed. Ḳāsim Ghanī and ʿA.A. Fayyāḍ, Tehran 1324/1945; cf. M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 130-2, and C.E. Bosworth, *The Ghaznavids*, 62-3, 74, 230.

Bibliography: Given in the article. See also M.Z. Pakalın, *Osmanlı tarih deyimleri ve terimleri sözlüğü*, ii, 587-8.

(C.E. BOSWORTH)

AL-**MUWAFFAḲ**, ṬALḤA B. DJAʿFAR, normally known by his *kunya*, Abū Aḥmad, son of the caliph al-Mutawwakil and a slave girl Umm Isḥāḳ, regent and virtual ruler of the caliphate during the time of al-Muʿtamid [*q.v.*]. As a young man he witnessed the murder of his father by the Turkish military leaders in 247/861. In 251/865 his brother al-Muʿtazz, then caliph in Sāmarrāʾ, chose him as his army commander against their cousin al-Mustaʿīn and Muḥammad b. ʿAbd Allāh b. Ṭāhir in Baghdād. It was probably at this time that he developed the links with the Turkish army which were to be the foundations of his success. When al-Muʿtazz attempted to curb the power of the Turkish generals, Abū Aḥmad distanced himself from the caliph and went into exile while maintaining close relations with them. The death of al-Muhtadī in 256/870 left Abū Aḥmad, who hastily returned from Mecca, and his chief lieutenant Mūsā b. Bughā in effective control although his brother al-Muʿtamid was nominally caliph.

Abū Aḥmad was governor of ʿIrāḳ and Arabia until 261/875 when he took over responsibility for the east as well and was given a place in the succession after al-Muʿtamid's son al-Mufawwaḍ. He became the chief ʿAbbasid military commander and set about restoring the power of the caliphate. He was dependent on his contacts among the Turkish military, notably Mūsā b. Bughā and, after his death in 264/877, on Kayghalagh and Isḥāḳ b. Kundādj, but they remained subordinate to him and never challenged his authority. He also had his own *wazīrs*, Sulaymān b. Wahb, Ṣāʿid b. Makhlad and Ismāʿīl b. Bulbul. Al-Muʿtamid was effectively confined to Sāmarrāʾ, especially after his attempted escape to Egypt in 269/882, while al-Muwaffaḳ effectively ruled from Baghdād.

The first major challenge he faced was from the Ṣaffārids. From 255/869 Yaʿḳūb b. al-Layth had been trying to assert his power in Fārs, but was opposed by a local adventurer Muḥammad b. Wāṣil al-Tamīmī and al-Muwaffaḳ. In 262/876 there was a final trial of strength when Yaʿḳūb invaded ʿIrāḳ but was defeated by al-Muwaffaḳ and Mūsā b. Bughā at Dayr al-ʿĀḳūl [*q.v.*]. This victory left al-Muwaffaḳ and his commanders free to turn their attentions to the Zandj of southern ʿIrāḳ. This rebellion had begun in 255/869, but it was not until 266/879 that al-Muwaffaḳ and his son Abu 'l-ʿAbbās [see AL-MUʿTAḌID] began a systematic campaign against them. After four years of careful amphibious warfare, the rebellion was finally extinguished in 270/883.

After the end of the Zandj rebellion, al-Muwaffaḳ was much less active. In 271/884-5 he was content to send his son to oppose Khumārawayh b. Aḥmad b. Ṭūlūn [*q.v.*] in southern Palestine. In 276/889 he left Baghdād for al-Djibāl, apparently in search of money, and only returned in 278/891 when he was already mortally ill. Relations between him and his son Abu 'l-ʿAbbās had deteriorated; in 275/889 he had him arrested, but they were reconciled just before his death in Ṣafar 278/June 891.

(H. KENNEDY)

AL-**MUWAḤḤIDŪN**, the name given to the adherents of the reformist movement of which the principal element was the divine unicity, *tawḥīd*; the promulgators of this doctrine ruled during the 6th/12th and 7th/13th centuries over the empire which they had founded in North Africa and in Spain. From this Arabic term is derived the name "Almohads" by which they are designated in western literature.

The origins of the Almohad movement. For the life and works of the Mahdī Ibn Tūmart, founder of the movement and originator of the Almohad doctrine, see the article devoted to him. This study will be confined to elements of this initial phase of Almohad history which bear directly on subsequent events, or to aspects of the Almohad doctrine which have come to light since the composition of the above-mentioned article.

As regards the origins of the movement, the publication of numerous chronicles from shortly after the Almohad period, a more assiduous reading of the circumstances surrounding the emergence of the Almohad doctrine and new studies of the subject, have recently illustrated in a more precise fashion the importance of the Berber context in the elaboration of this doctrine and, above all, in the political development of the movement, which did not begin with the return of Ibn Tūmart from the East to the Maghrib (510/1116 or 511/1117), but rather with his return to his Berber origins among the Maṣmūda in 517/1123. The mission of the Mahdī, initially proclaimed as an effort aimed at moral reform, was transformed into a political movement seeking the overthrow of the Almoravids [see AL-MURĀBIṬŪN] after he took up residence at Tinmallal (Tinmel), an isolated village in

the Atlas mountains. The influence of the Berber setting is also illustrated by the fact that the political organisation of the movement evolved simultaneously with the written formulation of the doctrine within Berber circles and by the revelation of the existence of Khāridjite-Ibāḍī notions among the Berbers of the region where Ibn Tūmart was born (D. Urvoy, *La pensée d'Ibn Tūmart* in *BEO*, xxvii [1974], 19-44). According to al-Marrākushī, Ibn Tūmart, on arriving in Tinmallal, began by teaching religious knowledge to the Berbers and composed for them an *ʿaḳīda* in their own language. Subsequently, the *Murshida* was written, again for the benefit of the Berbers and in their language. Both of these exist today in Arabic. The fact that a version of the *Muwaṭṭaʾ* [see MĀLIK B. ANAS], attributed to Ibn Bukayr and transmitted by Ibn Tūmart to ʿAbd al-Muʾmin, his disciple, exists today in copies of the very highest quality produced in 590/1193 for the third Almohad caliph, Abū Yūsuf Yaʿḳūb al-Manṣūr, suggests that the works of the Mahdī were originally composed under the influence of and for the needs of the Berbers. The Arabic versions of these works which we possess today were probably written some time after ʿAbd al-Muʾmin's death, for al-Manṣūr, responsible for a reform of the doctrine (J. Schacht, *Deux éditions inconnues du* "*Muwaṭṭāʾ*", in *Studi orientalistici in onore de Giorgio Levi Della Vida*, ii, Rome 1956, 477-92). The composition in Berber of the *ʿaḳīda* is in accordance with the replacement of *khaṭībs* and *imāms* in the mosques by religious functionaries capable of pronouncing the *tawḥīd* in Berber, and the increased value given to "Berber matters" by the assimilation of the Mahdī to the Prophet. These elements suggest that the origins of the movement are to be associated with the social, religious and intellectual tensions which stirred the parties, ethnic groups and communities of Morocco in this period, and attention should be given to the question posed by W. Montgomery Watt, whether opposition to Mālikism does not rather reflect the aspiration of the Berbers to assert themselves in relation to the Arabs (*Philosophy and social structure in Almohad Spain*, in *IQ*, viii [1964], 46-51). The chroniclers record a period of political stability and economic prosperity under the Almoravids, but, as was often the case in mediaeval North Africa, social discord was expressed in terms drawn from the religious context (M. Shatzmiller, *The legacy of the Andalusian Berbers in the 14th century Maghreb: its role in the formation of Maghrebi historical identity and historiography*, in *Relaciones de la Peninsula Ibérica con el Maghreb*, Madrid 1988, 205-31).

The foundation of an empire. The military occupation of North Africa and Spain by the Almohads did not begin until after the death of Ibn Tūmart (524/1130). The occupation of Morocco was a lengthy process, lasting over a period of some twenty years from the first abortive offensive against Marrakech in 523/1129 until its capture in 542/1147. A coalition of the Maṣmūda tribes, established under Ibn Tūmart, embarked on military campaigns supervised by ʿAbd al-Muʾmin [*q.v.*]. Chosen as his successor by the Mahdī during his lifetime, in spite of his Zanāta origins, he was proclaimed caliph in 524/1130. In their war against the Almoravids, the Almohads adopted the tactic of staying constantly in the shelter of the mountains and avoiding confrontation in open country. The conquest of Morocco was of a brutal nature. The massacres and the persecutions of the civilian population led Ibn Taymiyya to accuse the Almohads of having killed thousands of good Muslims, the fact that they were Mālikīs being no excuse. Frequent revolts by tribes and towns against the "Almohad pact" provoked immediate military reprisals. The intolerant nature of the Almohad occupation was reinforced by a "purge" (*tamyīz*) among the Muwaḥḥidūn themselves (A. Merad, *ʿAbd al-Muʾmin et la conquête d'Afrique du Nord, 1130-1163*, in *AIEO*, xv [1957], 110-63).

After establishing his rule in Marrakech (542-5/1147-50), ʿAbd al-Muʾmin spent two years in the port of Salé, building up a large army. Instead of taking the short crossing in the direction of Spain, the Almohad army marched towards the central Maghrib. In this region, as well as in Ifrīḳiya, the towns and the countryside were in a parlous political and material state. Invasions of nomadic Arab tribes arriving from the direction of Egypt had crippled economic and social structures, thus facilitating the Norman Christian offensive against the coastal cities of the Mediterranean. The Almohad conquest was therefore rapid and easy: Algiers, Bougie, the Ḳalʿa of the Banū Ḥammād and Constantine were taken in 547/1152. In 554/1159, the city of Tunis, seized from the Ifrīḳiyans, Mahdiyya, Sfax and Tripoli seized from the Normans, were the last conquests leading to the creation, for the first time in North Africa, of a single state, ruled by the Almohads.

The Almohad empire attained its highest point of material and cultural success under the three successors of ʿAbd al-Muʾmin (d. 558/1163): Abū Yaʿḳūb Yūsuf (558-80/1163-84), Abū Yūsuf Yaʿḳūb al-Manṣūr (580-95/1184-99) and Muḥammad al-Nāṣir (595-610/1199-1213) [*q.vv.*], in spite of having to devote unrelenting military efforts to retaining the territories conquered in the Maghrib. The Almohad army was invincible. Consisting of Berber troops of the Maṣmūda and Zanāta tribes, it was complemented by a large and powerful fleet, which played a decisive role in maritime engagements. Naval dockyards were established in the ports of the Atlantic and Mediterranean ports. Ṣalāḥ al-Dīn tried to obtain the support of this fleet at the time of the siege of Acre in 585/1189, an appeal refused by al-Manṣūr (M. Gaudefroy-Demombynes, *Une lettre de Saladin au calife almohade*, in *Mélanges René Basset*, Paris 1925, ii, 279-304). According to Ibn Khaldūn, al-Manṣūr subsequently changed his mind and sent the Egyptian sultan 190 ships. In Spain, the temporary halt of the Reconquista coincided with the arrival of the Almohads and the independence, probably precarious, of towns and regions which took advantage of the weakness of the Almoravids to cast off their yoke. The Almohad military intervention in Spain began under ʿAbd al-Muʾmin, but Almohad authority was never completely established in that country. Almohad sovereignty was first recognised by the cities of Cadiz and Jerez in 541/1146, a recognition followed by the intervention of Almohad troops and the capture of Seville in 542/1147. In 545/1150, a delegation of *amīrs* from Spain came to Salé at the invitation of ʿAbd al-Muʾmin to offer official recognition of Almohad authority. It was during the reign of his son, Abū Yaʿḳūb Yūsuf, that the major Almohad military involvement in Spain took place. An initial offensive had the object of occupying eastern Spain (568/1172) and of wresting the cities of Valencia, Jaen and Murcia from the hands of their chieftains. It was in 591/1195, at Alarcos [see AL-ARAK] that the decisive victory of the Almohads over Castile took place. In North Africa, meanwhile, an Almohad military effort was required in the direction of Ifrīḳiya which was threatened by princes of the Almoravid family, the Banū Ghāniya [*q.v.*]. With the aid of their fleet, a remnant of the former Almoravid fleet, they succeeded in establishing themselves in the Balearic Islands,

a base from which they extended their power over Ifrīḳiya and the central Maghrib. During this period of intense military activity, the Almohads, always aware of the need to reinforce their ranks with new recruits, decided, in 583/1187, to transfer nomadic Arab tribes to Morocco by force. There was thus introduced into the land a factor which disrupted the delicate equilibrium between nomads and sedentary dwellers, between cities and the countryside. The increase in the number of nomads interfered with the habitual life-style of the Berber tribes and forced them to change their routes in quest of new pastures. This action unleashed the process of the formation of the Marīnid power [see MARĪNIDS], which was to replace that of the Almohads some fifty years later. Although the army of the fourth Almohad caliph, Muḥammad al-Nāṣir, liberated the eastern region of the Maghrib and the Balearic Islands from the hold of the Banū Ghāniya in 602/1205, it was unable to sustain resistance in Spain, where the defeat of Alarcos had contributed to the formation of a powerful coalition of Spanish kings and knights, inspired by the call to crusade issued by the bishop of Toledo, Rodrigo Jimenez de Rada. The defeat of the Almohads at Las Navas de Tolosa (609/1212 [see AL-ʿIḲĀB]) not only loosened their hold on Spanish towns and rural areas, it also marked the end of the first period of Almohad ascendancy and the beginning of its decline.

The military weakness which characterised the second period of the political history of the Almohads was accompanied by anarchy, rebellions of towns, defection of allies and, finally, repudiation of the Almohad doctrine by the caliph al-Maʾmūn. The rulers of this second phase succeeded one another at a rate accelerated by the weakening of central authority and the decline in the personal status of the dynasty. Sometimes acclaimed as caliphs in Spain but rejected by the Almohad *shaykh*s of Morocco, sometimes supported by the Arab tribes but not recognised by the city-dwellers, eight Almohad caliphs, all of the Muʾminid family, are mentioned by the chroniclers: Yūsuf b. Abī ʿAbd Allāh al-Mustanṣir (610-20/1213-23), Abū Muḥammad ʿAbd al-Wāḥid al-Makhlūʿ (621/1224), Abū Muḥammad ʿAbd Allāh al-ʿĀdil (621-4/1224-6), Yaḥyā b. Nāṣir al-Muʿtaṣim bi-llāh (624-33/1227-35), contemporary with Abu ʾl-ʿUlā Idrīs al-Maʾmūn (624-30/1227-32), ʿAbd al-Wāḥid al-Rashīd (630-40/1232-42), Abu ʾl-Ḥasan ʿAlī al-Saʿīd (640-6/1242-8), Abū Ḥafṣ ʿUmar al-Murtaḍā (646-65/1248-66), Abū Dabbūs al-Wāthiḳ bi-llāh (665-8/1266-9). Despite political instability and the collapse of political and administrative structures, the city of Marrakesh remained a centre of artistic life and of vigorous intellectual activity during the second phase of Almohad history. The regions situated at the extremities of the empire, which had been the last to submit to the Almohads, were also the first to detach themselves. Almohad policy, which consisted in appointing a member of the family as independent governor in the towns and the regions, supplied with troops and a high degree of financial independence, had encouraged and accelerated this process of fragmentation. In 627/1229-30, the Ḥafṣid governor of Ifrīḳiya had declared the independence of his province, to be followed in 637/1239 by the chief of the Banū ʿAbd al-Wād, ruler of Tlemcen and of the central Maghrib. A campaign of resistance led by the deposed caliph Yaḥyā b. Nāṣir had cut off the south from its capital of Sidjilmāssa [*q.v.*], an important post of trans-Saharan trade. In Morocco, the Marīnids, nomadic Zanāta tribes of the plains, began during this period to take control of towns situated at a distance from the centre of Almohad power and ultimately eliminated the Almohads with the conquest of Marrakesh (668/1269) and of Tinmallal, cradle of the *Tawḥīd* and of the Muwaḥḥidūn (676/1276).

Organisation. A number of political, monetary, literary, artistic, architectural and even titulary innovations came into being under the Almohads, and survived them to a certain extent. The first innovation was the structuring of the Almohad community on hierarchical principles, which took place with the arrival of Ibn Tūmart in Tinmallel. The new order placed at the head of the community a group of persons related to the Mahdī, his "house", constituting a supreme inner council. At the second level there were two committees, one of ten relatives of the Mahdī, the other of fifty tribal representatives. The Maṣmūda tribes themselves were arranged in descending order and, in the community as a whole, a categorisation according to profession was instituted (*muḥtasibūn, sakkākūn, muʾadhdhinūn*). The various units of the army were also described in terms of organisation, social customs and institutions of the Berbers. This form of organisation also illustrates the concern to honour the first loyal adherents of the Mahdī, both individuals and tribes, by assimilating them into the Islamic tradition. According to another interpretation, the Almohad hierarchy was the embodiment of a philosophical principle cherished by Ibn Tūmart, as by al-Ghazālī and Ibn Rushd. It is a fact nevertheless that the Almohad hierarchy has not been mentioned by the chroniclers as existing beyond this initial phase in the formation of the community, and that it never genuinely took root. Besides the Council of Fifty, an established part of the caliph's retinue throughout the Almohad period, the other structures initiated at Tinmallal were abandoned. With the accession of ʿAbd al-Muʾmin, the Almohad government adopted more traditional patterns. By naming his son Muḥammad heir-presumptive, ʿAbd al-Muʾmin inaugurated the Muʾminid dynasty, which remained in power until the end of the Almohad empire. In addition to the title of *khalīfa*, the Almohad sovereigns also bore that of *amīr al-muʾminīn*, a novelty perpetuated by the Ḥafṣids, who inherited the Almohad structures, and, periodically, by the Marīnids. The administrative machine of the Almohad state was not particularly sophisticated. As Ibn Khaldūn indicates, the Almohads were barely civilised at the outset, and the protocol of the court was not properly established until the end, with the predominance of Andalusian personnel. In response to the administrative requirements of an army, ʿAbd al-Muʾmin needed teams of trained staff which he personally organised at the court. These functionaries had undergone religious studies but were also skilled swimmers, archers and horsemen. A stratum of such officials was sent out into the provinces, headed by a governor descended from the Muʾminid family who was assisted by an Almohad *shaykh*.

The administration of the Almohad caliph's court at Marrakesh was initially dominated by a *kātib*, personal secretary, who, at the outset, performed the functions of a *wazīr*. Later, the title *wazīr*, which denoted a function considered by Ibn Khaldūn as comparable to that of the *ḥādjib*, did not appear under the Almohads. The office of *ṣāḥib al-ashghāl* was of considerable importance in the Almohad administration of the court, since the holder of this title was responsible for the collection of taxes and other revenues as well as for expenditure, and supervised the other officials of the capital and of the provinces. Like him, the *ḥākim*, chief of police, was an Almohad *shaykh*. The

official religious policy of the Almohad sovereigns, starting with the Mahdī and ʿAbd al-Muʾmin, was to replace Mālikism with the new doctrine, at the expense of existing religious institutions and functionaries. The most renowned victim of this policy was the *ḳāḍī* ʿIyāḍ [*q.v.*] of Ceuta, a Mālikī writer and leading protégé of the Murābiṭūn, who was exiled to Marrakesh after the rebellion of his city and dismissed from his functions. The Mahdī had not, however, undertaken a revision of the judicial code or produced manuals codifying the practices of everyday life according to the new doctrine. Thus Mālikī law continued to regulate the lives of Maghribis, and Mālikī jurists in the Maghrib, and especially in Spain, continued to practise their functions unhindered. The Almohads also continued to appoint *ḳāḍīs* and retained the post of *ḳāḍī 'l-djamāʿa*, an office frequently held by Andalusians. At least three of the latter were known Mālikīs (see the list of names of Almohad *wazīrs*, *kātibs* and *ḳāḍīs* in Hopkins, *Medieval Muslim government in Barbary*, Appendix ii).

Monetary reform. The Almohads changed the design and the weight of the coinage, and these new dimensions remained the norm in later dynasties. Almohad gold *dīnārs* measured 19 to 22 mm. in diameter and weighed 2.4 g. The inscription took the form of a square *naskhī* script. The Almohads also struck double *dīnārs* as well as fractions of *dīnārs* to facilitate transactions in gold coinage. It was also under the Almohads that the square *dirham* made its appearance, to remain the standard form of silver money. Like the Almoravids, the Almohads made no use of copper coinage. No money seems to have been coined in the lifetime of the Mahdī, but his name, as well as that of ʿAbd al-Muʾmin and his descendants, always features in the inscription, except for the brief period of the reign of al-Maʾmūn, who had repudiated the Almohad doctrine. Usually, dates are not stamped on the coins, and the names of mints seldom appear. The quality of the metal used and the standard of workmanship were both excellent, and mints were in operation in the following towns: Bidjāya, Tadgha, Tūnis, Salā, Fās, Marrākush, Miknās, Ishbīliya, Djayyān, Ḳurṭuba, Ribāṭ al-Fatḥ, Tilimsān and Sidjilmāssa. The Almohad period also saw the appearance in North Africa of millarés, silver coins struck by the Christians after the pattern of the Almohad *dirhams* and exported to Muslim countries (A. Bel, *Contribution à l'étude des dirhems de l'époque almohade d'après un groupe important de ces monnaies récemment découvert à Tlemcen*, in *Hespéris*, xvi [1933], 1-68).

Relations with Christians and Jews. On the arrival of the Almohads, the only Christian presence in Morocco consisted of the militia, incorporated into the Almohad army with their commander, son of the famous Reverter, Count of Barcelona. In the early stages the Almohad Christian militia, like the Almoravid one before it, was recruited for the most part among prisoners taken into slavery. From 625/1227 onward, it was constituted of free men who enlisted of their own accord, mostly Castilians, but also some Catalans, recruited in Spain by the Almohads and then sent to Morocco. In 626/1228, al-Maʾmūn, preparing in Spain for the conquest of Morocco, had recruited 500 Christian knights (not 12,000, the figure put forward by Ibn Abī Zarʿ in the *Ḳirṭās*). Either at the request of the Spanish king, or on his own initiative, al-Maʾmūn had undertaken the construction of a church in Marrakesh to enable the soldiers to practice their faith. An exchange of letters between the Popes Innocent III (1198), Honorius III (1226), Gregory IX (1233) and Innocent IV (1245) and the Almohad caliphs, on the subject of the ransom of prisoners and the sending of missionaries in the very ill-founded hope of stimulating conversion, has been preserved. Five Franciscan friars minor, arriving as missionaries in 1220 in Marrakesh, and seven others who came in 1227 to Ceuta, were put to death by the Almohads (E. Tisserand and G. Wiet, *Lettre de l'Almohade al-Murtaḍā au Pape Innocent IV*, in *Hespéris*, vi [1926], 27-53). The military success of the Almohads and the extension of their empire were observed with great interest in Christian Spain. The ecclesiastical authorities, eager to show sympathy towards Islamic theology with a view to the eventual conversion of the Muslims, entrusted the translation of the creed of Ibn Tūmart to Mark of Toledo, already known for his translation of Arabic texts, including one of the Ḳurʾān (M.-T. d'Alverny and G. Vajda, *Marc de Tolède, traducteur d'Ibn Tūmart*, in *al-And.*, xvi [1951], 99-140, xvii [1952], 1-56).

Numerous indigenous Jewish communities, augmented by immigrants from Spain, lived in all the towns, great and small, of the Almohad empire. A first wave of persecutions was unleashed upon them in the initial phase of the conquest (536-43/1141-8). Letters of Jewish merchants originally from this region, discovered recently in the Geniza of Cairo, confirm the fact that ʿAbd al-Muʾmin offered the Jews a choice between conversion to Islam and death. Massacres of Jews were perpetrated at Sidjilmāssa, Marrakesh and Fez (D. Corcos, *L'attitude des Almohades envers les Juifs*, in *Zion* [Jerusalem 1967], 137-60, in Hebrew). These measures forced a large number of Jews to leave their country for Christian Spain, Sicily, Italy and the Middle East. This was in particular the case of the future physician and philosopher Maimonides [see IBN MAYMŪN], who had left his native city, Cordova, for Fez in 544/1149 or thereabouts, then, in 560/1165, emigrated to Palestine before finally settling in Cairo. It was in this city that Maimonides was accused of having abjured the Islam to which he had been converted in the Maghrib. In fact, the similarity, in philosophical terms, between the Almohad and Jewish creeds explains how a temporary conversion could be envisaged by the Jews. A second wave of persecutions of Jews and converts was instigated by the caliph Yaʿḳūb al-Manṣūr, who compelled them, according to al-Marrākushī, to wear distinctive signs, clothing of absurd appearance and of different colours, and destroyed their synagogues. The period of the reign of al-Manṣūr, which also saw the temporary imprisonment of Ibn Rushd and the burning of his books, ended with the temporary disappearance of the Jewish communities of Morocco, an absence which was to last until the end of the 7th/13th century.

Economic life. Surveys of agronomy composed in Spain during the Almoravid period reveal, on the part of the farmers, an intimate knowledge of the land, of fertilisers and of methods of cultivation. The diffusion of a large number of new plants, combined with an effective system of irrigation, contributed to the development of a prosperous agricultural sector. The almanac of Ibn al-Bannāʾ, born in Marrakesh towards the end of the Almohad period, gives the impression that knowledge of agronomy in the Maghrib, although less advanced than in Spain, was well-established. The system of land ownership in Spain was not subject to interference on the part of the Almohads, but in North Africa, to facilitate the collection of taxes and the distribution of *iḳṭāʿs* to the Arab and Berber tribes, the Almohads introduced a land reform, bringing the allocation of land under a single system. The author of the *Ḳirṭās* relates that this novel-

ty, dating back to 554/1159, was instituted by ᶜAbd al-Muʾmin, who had imposed *kharādj* on arable land. As for urban industries, the structures of craft and manufacture common to Muslim cities were maintained under the Almohads. The dimensions of industrial production are illustrated by a list of the manufacturing establishments and workshops of the city of Fez during the reign of the caliph al-Nāṣir, a monarch who had a particular commitment to this city: 3,490 weaving-shops, 27 soap manufacturers, 86 tanneries, 116 dye-works, 12 forges, 11 glassworks, 472 water-mills, 135 factories making construction materials, 1,170 bakeries, 400 paper-mills, 180 potteries, 9,082 shops selling various wares and 2 mints. The same list, probably compiled for purposes of taxation, also provides information on other establishments: 89,236 housing-units, 17,040 private homes, 93 public baths and 42 other baths, 80 public fountains, 785 mosques, 467 inns. The beginning of the Almohad period coincided with the great expansion of European commerce in the direction of North Africa. Peace and trade treaties preserved in European archives show that from 1150 onward agreements were signed between the Almohads and various cities of Europe. These agreements, intended to guarantee the security of commerce, became increasingly precise. They outlawed piracy and guaranteed the good-will of the authorities towards traders and their merchandise. The Pisans, always regarded with favour in Ifrīḳiya, were present in Tunis in the period of ᶜAbd al-Muʾmin, who signed two peace treaties with Pisa (1133 and 1166) and a trade treaty with it (1157). Two further treaties with Pisa (1186 and 1189) regularised trade with Ceuta, Oran, Bougie, Tunis and Spain. The republic of Genoa had concluded numerous treaties between 1155 and 1164 to regulate commerce with the cities of Tripoli, Ceuta, Tunis, Salé and Bougie. Marseilles signed an agreement for the wine trade with Ceuta, Oran, Bougie and Tunis in 1228. In 1181, a treaty was signed between the kingdom of the Two Sicilies and the Balearics under the princes of the Banū Ghāniya. In 1184 the latter signed a peace and trade treaty with Pisa and, in 1188, with Genoa. Morocco saw the first contacts with a view to commercial penetration from the direction of Catalonia. Contacts were limited to the Mediterranean ports, since piracy, a particular scourge on the Atlantic coast, made commercial relations there more difficult [see ḲURṢĀN]. During the 7th/13th century Italians, Provençals and Catalans were in evidence at Ceuta, which negotiated regular contacts with Barcelona in 1227 and with Montpellier in 1233. Other small ports to the east of Ceuta were visited and, to the west, Tangiers, from where coral was exported towards Europe. Trade with Salé was boosted by gold originating from the western Sudan, and penetration by the Castilians towards the interior of Morocco is recorded at a later date. A larger number of the treaties dating from the latter stages of the Almohad period was signed with Tunis, when the Ḥafṣid dynasty was on the point of declaring itself independent from the Almohad state. Products exported at the end of the 6th/12th century from Morocco and sold in Flanders originated from Fez (wax, leather, furs), from Marrakesh (cumin, sugar), from Sidjilmāssa (dates, white alum), from Bougie (leather) and from Tunis (wax, lead sulphate).

Cultural life. The appearance and expansion of Ṣūfism in North Africa and the development of philosophy under the Almohads was often confronted by the intellectual and religious intolerance characteristic of the Almohad movement in its early stages. This spiritual renewal was linked to the intellectual tensions created by the Almohad movement. Justification for the new liberalism was found in an application of the Ghazālian theology, open to philosophy, which dominated the thinking of Ibn Tūmart. The rationalism of Almohadism and, in particular, its attitude towards the attributes of the divinity allowed these two movements to co-exist. The two great philosophers of the age, Ibn Ṭufayl (*ca.* 499-581/1105-85 [*q.v.*]) and Ibn Rushd (520-80/1126-84 [*q.v.*]) lived and wrote at Marrakesh under the patronage of the sultans Abū Yaᶜḳūb Yūsuf and his son Abū Yūsuf Yaᶜḳūb. Another Andalusian, the Ṣūfī philosopher Ibn Sabᶜīn (d. 668 or 669/1270 [*q.v.*]), lived at Ceuta, where he wrote his reply to philosophical questions posed by Frederick II, king of Sicily, to the Almohad caliph ᶜAbd al-Wāḥid al-Rashīd. The Almohad caliphs were no longer opposed to the diffusion of Ṣūfism. The two central figures of Maghribi Ṣūfism, Abū Madyan and Ibn Mashīsh [*q.vv.*] were protected by the Almohads, and a large number of saints, a hundred at least, were interred at Marrakesh during the Almohad period. A significant corpus of literary production made its appearance, in the domains of poetry, history, geography and sciences, often with the encouragement and participation of the sovereign.

Creativity in the traditional literary channels benefited broadly from the effects of the demographic displacement and from more regular contacts between regions created by the Almohad occupation. The arrival of the Andalusians in North Africa contributed to literary activity in general, while their influence was particularly apparent in the functions which they occupied in the Almohad administration and at the court.

The study of monuments and the archaeological excavations conducted since the beginning of this century, most of all in Morocco, by H. Terrasse, H. Basset, J. Meunié, G. Deverdun, J. Caillé and A. Hainaut, have brought to light the principal features of the remarkable Almohad architecture. The major period of monumental construction was limited to the first fifty years, an era of prosperity corresponding to the reigns of the first four sovereigns. The monuments—mosques at Taza, Marrakesh, Tinmallal, Seville, Rabat, Fez; citadels and fortresses at Marrakesh and Rabat; fortifications at Rabat—are still partially in existence today, although the Almohad palaces, the construction of which is described by the chroniclers, have not survived. Almohad architecture combines a puritan simplicity of décor with extraordinary dimensions for the walls and, especially, the minarets. The use of ashlar, dressed stone, brick and wood in construction reveals that in the field of design, as in other areas, the Almohads adopted Hispano-Moorish techniques of construction and had them applied by craftsmen from Spain. At the same time, they retained oriental motifs and techniques as well as local influences. Almohad urbanism, especially visible in the capital Marrakesh but also present at Fez and at Seville, was realised by a series of works of enlargement, management of water, construction of reservoirs and gardens under ᶜAbd al-Muʾmin, and crowned by an administrative centre constructed under Abū Yūsuf Yaᶜḳūb.

The decline. The Almohad historical experience, with exceptional grandeur on the one hand and dismal decadence on the other, has deeply affected mediaeval and modern Maghribī historiography and thought. In his *Muḳaddima*, Ibn Khaldūn reveals the extent to which his historical vision was inspired by the

Almohad phenomenon: a large number of his sociological and political theories are illustrated by examples drawn from Almohad history (Shatzmiller, *L'historiographie mérinide. Ibn Khaldun et ses contemporains*, Leiden 1982, 54-65). For modern historians, the Almohad decline needs to be clearly separated from that of the doctrine, even though the process of their disappearance unfolded simultaneously. R. Le Tourneau and A. Merad see the submission of the state to the Muʾminid dynasty as the principal cause of its disintegration. The appropriation of political power and material benefits in the interests of a dynasty had alienated the Berbers and deprived Berber society of its initial strength. H. Terrasse and Ch.-A. Julien consider Maghribī unity, realised for the first and last time under the Almohads, as a moment of glory, aborted by "the individualism of the Berbers" and "the anarchy of the Arabs". For A. Laroui, Almohad prosperity was built on the riches of an empire, but riches which the Almohads, centred on Morocco, did not themselves produce, and this accounts for their failure. In Spain, the collapse of the Almohad régime was owed to different circumstances. There the opposition of the Mālikī *ʿulamāʾ* was accompanied by general antagonism. The Almohads did not have in Spain the support of the Berber masses which had provided their power-base in North Africa, and the régime was seen as a foreign military occupation. The disappearance of the doctrine is explained by the fact that it never genuinely took root. Almohadism provided neither a corpus of judicial works which could have replaced the Mālikī judicial system nor a response to the spiritual needs of the Muslim community, needs demonstrated by the triumph of Ṣūfism in the same period. In Spain, Almohadism was useful to those who felt the need to approach religion through logic. But those who were capable of harmonising the rational theology developed by Ibn Rushd with Almohad doctrine constituted a tiny minority. Almohadism only affected the circles in which the movement was born and it remained marginal throughout the duration of the Almohad state, while Mālikism continued to be the dominant force.

Bibliography: Documentation concerning the Almohads is very rich in contemporary and later sources, as well as in studies which cannot possibly be listed here in full. A special place in the gamut of contemporary sources is occupied by the fragments published by E. Lévi-Provençal: in the collection *Documents inédits d'histoire almohade*, manuscript fragments from the 1919 "legajo" of Arabic material in the Escorial (Paris 1928), the *Memoirs* of al-Baydhaḳ, companion of the Mahdī, as well as extracts from the *Kitāb al-Ansāb fī maʿrifat al-aṣḥāb*, have been published; publication of these texts enabled G.S. Colin to study the influence of the Berber language on the spoken and written Arabic of the period (*Sur l'arabe marocain de l'époque almohade*, in *Hespéris*, x [1930], 104-20). Also published by Lévi-Provençal is a collection of letters sent by the Almohad administration (*Trente-sept lettres officielles almohades*, Rabat 1941). The chronicle of Ibn Ṣāḥib al-Ṣalāt (d. 549/1198), *Taʾrīkh al-mann bi 'l-imāma*, ed. A. Tazi, Beirut 1965, is essential for events occurring in Spain during the 6th/12th century. For North Africa and the early years of the Almohads, one available source is the chronicle of al-Marrākushī, composed in Egypt in 621/1224, *al-Muʿdjib fī talkhīṣ akhbār al-Maghrib*, ed. R. Dozy, Leiden 1847, French tr., *Histoire des Almohades*, Algiers 1893. Among the chroniclers of the 7th/13th century, the recent discovery and publication of part of the chronicle of Ibn al-Ḳaṭṭān, court secretary during the last years of the Almohad caliph al-Murtaḍā, *Naẓm al-djumān*, ed. M.A. Makki, Tetuan, undated (1964?) provides a detailed account of events as far as the year 533/1138. Fragments of this chronicle have been published by E. Lévi-Provençal under the title *Fragments de chronique almohade anonyme*, in 1925 and 1930. The authors of the 8th/14th century, the century of the great Maghribī historians, supply the best overall view of Almohad history. The most important of these, Ibn ʿIdhārī (d. 712/1312), *al-Bayān al-mughrib fī 'khtiṣār akhbār mulūk al-Andalus wa 'l-Maghrib*, iii, ed. A. Huici Miranda, Tetuan 1960, supplies useful information regarding both the reign of the Almohads in Spain and the transfer of power into the hands of the Marīnids, subjects otherwise poorly documented; Ibn Abī Zarʿ (d. 726/1326), *al-Anīs al-muṭrib bi-rawḍ al-ḳirṭās*, ed. C.J. Tornberg, Uppsala 1834, 110-84, and Ibn Khaldūn (d. 810/1406), *Kitāb al-ʿIbar*, Beirut 1959, vi, 464-551, French tr. de Slane, *Histoire des Berbères*, ii, 161-257. In the 9th/15th century, the anonymous chronicle *Kitāb al-Ḥulal al-mawshiyya fī dhikr al-akhbār al-marrākushiyya*, ed. I.S. Allouche, Rabat 1936, contains further unpublished information.

Secondary studies concentrate on political history, while the absence of a survey regarding the society and economy of this important period is sorely felt: two monographs, by A. Huici Miranda, *Historia politica del imperio almohade*, 2 vols., Tetuan 1956-9, and R. Le Tourneau, *The Almohad movement in North Africa in the twelfth and thirteenth centuries*, Princeton 1969, as well as chapters in the general history of Morocco and the Maghrib, H. Terrasse, *Histoire du Maroc*, Casablanca 1949, i, 261-367; Ch.-A. Julien, *Histoire de l'Afrique du Nord*, Paris 1952, 92-131; A. Laroui, *L'histoire du Maghreb: un essai de synthèse*, Paris 1970, 162-185, Eng. tr. *The history of the Maghrib*, Princeton 1977, 174-200. On communities within the Almohad empire, A. Bel, *Les Benou Ghaniya, derniers representants de l'empire almoravide et leur lutte contre l'empire almohade*, Paris 1903; P. de Cénival, *L'Église chrétienne de Marrakech au XIII^e siècle*, in *Hespéris*, vii (1927), 69-83; and, on the Jews, H.Z. Hirschberg, *A history of the Jews in North Africa*, Leiden 1974, i, 123-39. As regards Almohad doctrine and the thought of Ibn Tūmart, a revision of Goldziher's study has been presented by R. Brunschvig in two articles: *Sur la doctrine du Mahdi Ibn Tūmart*, in *Ignace Goldziher memorial volume*, Jerusalem 1958, ii, 1-13, and *Encore sur la doctrine du Mahdī*, in *Folia Orientalia*, xii (1970), 33-40; see also Le Tourneau, *Sur la disparition de la doctrine almohade*, in *SI*, xxx (1970), 193-201. The organisation and hierarchy of the Almohads are described and analysed by Gaudefroy-Demombynes in the introduction to his translation of Ibn Faḍl Allāh al-ʿUmarī, *Masālik al-abṣār*, Paris 1927, pp. ix-lxviii, and J.F.P. Hopkins, *Medieval Muslim government in Barbary*, London 1958, 85-111; the monetary reform, by A. Prieto y Vives, *La reforma numismatica de los almohades*, in *Miscelánea de estudios y textos árabes*, Madrid 1915 11-115, and the coinage by H. Hazard, *The numismatic history of late medieval North Africa*, New York 1952, 64-8, 143-58, 263-73. On commerce, M.L. de Mas Latrie, *Traités de paix et de commerce*, Paris 1866, ii; A.-E. Sayous, *Le commerce des Européens à Tunis depuis le XII^e siècle*, Paris 1929; Ch.-E. Dufourcq, *L'Espagne catalane et le Maghrib aux XIII^e et XIV^e siècle*, Paris 1966, 157-61. On aspects

of material and cultural life, especially with regard to the city of Marrakesh, G. Deverdun and M.B. Abdeslem, *Deux taḥbīs almohades*, in *Hespéris*, xli (1954), 411-25, and G. Deverdun, *Marrakech des origines à 1912*, Rabat 1959, 151-301; on Fez under the Almohads, details are to be found in Djaznāʾī, *Zahrat al-ās*, text and French tr. A. Bel, Algiers 1923. On Almohad monuments, numerous studies exist, foremost among these being *Sanctuaires et forteresses almohades*, Paris 1932, by H. Basset and H. Terrasse (mosques of Tinmallal and Marrakesh), with an analysis of techniques of construction and decoration. A study of recent excavations in the mosque of Tinmallal: J. Hassar-Benslimane, C. Ewert, A. Touri, J.-P. Wisshak, *Tinmal 1981*, in *Madrider Mitteilungen*, xxiii (Mainz 1982). Also by H. Terrasse, *La mosquée des Andalous à Fès*, Paris 1942, and *La grande mosquée de Taza*, Paris 1943, and by J. Caillé, *La mosquée de Hassan à Rabat*, Paris 1954. (M. Shatzmiller)

AL-**MUWAḲḲAR**, a place in the desert fringes of the early Islamic region of the Balḳāʾ [*q.v.*], in what is now Jordan, some 22 km./14 miles southeast of ʿAmmān and 16 km./10 miles northeast of the Umayyad palace of Mshattā or Mushattā [*q.v.*].

Visible there are the remains of an Umayyad settlement. These include traces of a palace, a tower which may have been part of a mosque, and signs of an extensive irrigation system in the form of sites of three dams nearby plus a fine stone-lined cistern, still much used by Bedouins of the Banū Ṣakhr for watering their herds. When this cistern was being cleaned out in the 1940s, a column and capital were found, the latter with an inscription ascribing the construction work there to one ʿAbd Allāh b. Salīm for the caliph Yazīd [II] (101-5/720-4); the column has gradation marks to show the depth of water (see R.W. Hamilton and L.A. Mayer, *Some eight-century capitals from al Muwaqqar*, etc., in *QDAP*, xii [1946], 63-74; Ṣalāḥ al-Dīn al-Munadjdjid, *Dirāsāt fī taʾrīkh al-khaṭṭ al-ʿarabī*, Beirut 1972, 110-11; the capital is now in the ʿAmmān Museum). According to al-Hamdānī, *Ṣifa*, Riyāḍ 1394/1974, 334, al-Muwaḳḳar lay in the territory of the Banū Salīḥ [*q.v.*]. The site may well have been a Byzantine one, on the *limes* facing the desert Arabs, but was certainly a favoured haunt of the Umayyad caliphs, as attested in contemporary poetry (see al-Bakrī, *Muʿdjam*, Cairo 1364-71/1945-51, iii, 1280; Yāḳūt, ed. Beirut, v, 226; A. Musil, *Palmyrena*, New York 1928, 283, and the references there to the *Aghānī*). From a verse by Abū Nukhayla al-Ḥimmānī [*q.v.* in Suppl.] praising the caliph al-Saffāḥ (*Aghānī*, ed. Būlāḳ, xviii, 150 = ed. Dār al-Kutub, xx, 415), it appears that the early ʿAbbāsids destroyed al-Muwaḳḳar together with others of the Umayyads' desert residences.

There was also, apparently, another al-Muwaḳḳar in Yemen; see al-Hamdānī, *op. cit.*, 124, 249.

Marmardji, *Textes géographiques arabes sur la Palestine*, Paris 1951, 197; G. Lankester Harding, *The antiquities of Jordan*², London 1967, 162. (C.E. Bosworth)

MUWAḲḲIT [see MĪḲĀT].

MUWALLAD (A.), a word belonging to the vocabulary of stock-breeders and designating the product of a crossing (*tawlīd*) of two different animal breeds, thus a hybrid, of mixed blood. It is hardly surprising that it was extended to humans from the time when the feeling arose that the purity of the Arab race had been altered following the conquests, the influx of elements of other stocks and mixed marriages. In a more limited sense, *muwallad* designates a cross-breed, half-caste or even, as Dozy states (*Suppl.*, s.v.) "one who, without being of Arab origin, has been born among the Arabs and received an Arabic education". (Ed.)

1. In Muslim Spain. In al-Andalus, the *muwalladūn* constituted a particular category of the population, but it is notable that neither the *Glossarium latino-arabicum* nor the *Vocabulista* contain this word, which Pedro de Alcala translated as *adoptado*. *Muwallad* has given to Spanish *muladí* and, according to Eguilaz (an opinion rejected by Dozy), *mulato*. The mediaeval Latin transcription was *mollites*.

The occupation, in 92/711, of the Iberian peninsula by Berber-Arab troops encouraged the appearance of neo-Muslims: *musālima* or *asālima*. More precisely still, *aslamī* was used to designate the ex-Christian convert, whereas the term *islāmī* was reserved for the former Jew. Probably due to the fact that, in historical terms, it is statistically more exact to speak of the occupation of al-Andalus than of the conquest, the majority of the population were covered by a pact (*muʿāhid*) that was far superior to that of "vanquished people", a circumstance which implies the minor importance of the number of those who "submitted", susceptible of being transformed into *mawālī* [*q.v.*], a fact confirmed by the *Wathāʾiḳ* of Ibn al-ʿAṭṭār [*q.v.*] which stated that "in al-Andalus the *walāʾ* of conversion is not considered identical to that of manumission (*walāʾ al-iʿtāḳ*)". The clientage of conversion does not entail personal connections or socio-economic obligations and its members are clients not of an individual but of the whole community. The judicial authorities only register this clientage (of conversion) in the case where the individual comes to reside "in a land where it is effective". Consequently, al-Andalus was to have a slightly different evolution from the rest of the Arabo-Muslim empire, for it did not experience the problems provoked by the incorporation of the *mawālī* of the old Sāsānid empire. For Muslim Spain, the question presents itself differently, sc. in terms of *muwalladūn*.

This word, often badly translated (from an ethnocentric angle) as "renegades", designated the descendants of non-Arab neo-Muslims, brought up in the Islamic religion by their recently-converted parents. Thus they are the members of the second generation (the sons) and, by extension, those of the third generation (the grandsons). It should be noted—contrary to a current Hispano-nationalist presumption—that the sons of an Arab father and indigenous mother did not feel themselves to be and were not regarded as *muwallads*. Since the sire was Arab, the offspring was also Arab. This explains why a family of mixed stock (such as the Sevillian Banū Ḥadjdjādj, descendants in the maternal line, through Sara the Goth, of Witiza the penultimate Visigothic monarch) might be the chiefs of the Lakhmid group and upholders of the "hard" Arab policy of exterminating *muwalladūn* and local Christians. It is thus time to accept that Ibn al-Ḳūṭiyya was "Arab" and to stop setting him up as a prototype of a group that he in no way represented.

These *muwalladūn* sometimes kept Roman "family names": Banū Angelino, B. Sabanico, B. al-Longo, B. al-Ḳabṭurno, B. Kūmis, B. Ḳārlo, B. Ḳārlumān, B. Martīn, B. Gharsiya, Ibn Bashkuwāl [*q.v.*], Ibn Ḳuzmān [*q.v.*], etc.

The *musālima*, imperfectly integrated, were not in a

position to claim the effectiveness of their theoretical assimilation (they had to appear not to be seeking their socio-political and economic advancement; furthermore, their conversion was invalid if it had been motivated "by the attraction of a reward"). However, their descendants, being born into Islam, were no longer open to such criticisms and could freely claim the complete assimilation to which they had the right. When this did not take place, the *muwalladūn* felt themselves discriminated against (the Arabs called them *banu 'l-ḥamrā'*, *banu 'l-ʿabīd* or the vile rabble (*al-adhall*), and they reacted violently.

This reaction developed the name of an ideology, that of Muslim egalitarianism. It should be stressed that no example is known of a *muwallad* movement advocating a return to Christianity (the rumour, true or false, of the conversion of ʿUmar b. Ḥafṣūn [*q.v.*] alienated from him all his Muslim allies). Their culture and language were Arabic. It is notable that the leaders of this indigenous party expressed themselves in Arabic, and examples of preserved Romanisms are only exceptionally attributed to them. When the Toledan Ghirbīb b. ʿAbd Allāh instigated his fellow citizens against the Cordovan state, he did so in Arabic verse. The political model in no way envisaged the re-establishment of a Visigothic state, but the setting up of an autonomous Islamic unit.

The 3rd/9th century saw the rise of the *muwalladūn*. Whether as auxiliaries of the government (ʿAmrūs in Toledo, Saragossa and Tudela), as collaborating "seigneurs" (the Banū Ḳasī [*q.v.*] in the Upper March [see THAGHR]) or, on the other hand, as dissidents. There are the Toledan rebellions which resulted in the battle of Wādī Salīṭ (240/854), the uprising of ʿAbd al-Raḥmān Ibn al-Djillīḳī (261/875), who founded his "capital", Badajoz; Saʿdūn al-Surunbākī at Monsalud, Ibn al-Shāliya at Somontin, Daysam b. Isḥāḳ at Murcia and Lorca and, above all, ʿUmar b. Ḥafṣūn at Malaga, Granada and Jaen. The local *muwalladūn* were regarded as a danger to Arab sovereignty, by the Ḳaysī Yaḥyā b. Suḳāla at Elvira and by Kurayb b. Khaldūn at Seville, who attempted to eliminate them. These indigenous Muslims could form a "maritime republic" as did those of Mariyat Badjdjāna [*q.v.*] or call for Christian assistance (that of Ordoño requested by the Toledans and of Alphonso III of Leon by Ibn al-Djillīḳī).

They were a group (*ḳawm*) still very close to the autochthonous non-Muslims, and we frequently see them uniting against the Arabs. The texts provide quite numerous references to these alliances: *al-muwalladūn wa 'l-naṣārā*, *al-musālima wa 'l-naṣārā*, *muwallad wa-asālimat al-dhimma*, *al-muwalladūn wa 'l-ʿadjam*, etc. They were organised, and their bard (*shāʿir al-muwalladīn*), ʿAbd al-Raḥmān al-ʿAblī, was the champion of their cause (*al-muḥāmī ʿan*). In opposition to him was al-Asadī, *shāʿir al-ʿArab al-ḳā'im fīhā maḳām al-ʿAblī fī 'l-muwalladīn*, whom he rivalled in *ʿaṣabiyya* [*q.v.*], each exciting his own people (*ḳawm*). We know that Muḥammad b. Sulaymān b. Talīd (d. 295/908) was *shadīd al-ʿaṣabiyya li 'l-muwalladīn*. But it is curious that there was no Andalusian *shuʿūbiyya* [*q.v.*] except at a late date and not of a "national" character, for its rare representatives only plagiarise the old Persian clichés.

This "party" of indigenous Muslims, so important throughout the 3rd/9th century, disappeared when the group was accepted and integrated into Andalusian society, a phase which may be dated during the first half of the caliphate of ʿAbd al-Raḥmān al-Nāṣir [*q.v.*]. This movement, one of the principal factors of instability from 181/797 to 320/932, was to be so totally effaced that when, after the *Fitna* [*q.v.*], al-Andalus was divided up under the *mulūk al-ṭawā'if* [*q.v.*], certain *taïfas* would claim to be Arab, while others regarded themselves as Berbers or slaves, but none as *muwallad*.

Bibliography: *al-Akhbār al-madjmūʿa*; *Fatḥ al-Andalūs*; Ibn al-Ḳūṭiyya, *Iftitāḥ al-Andalus*; Ibn Ḥayyān, *Muḳtabas*, ii, iii, v; Ibn al-Abbār, *al-Ḥulla al-siyarā'*; F. Simonet, *Historia de los mozárabes de España*; R. Dozy, *Histoire des Musulmans d'Espagne*; E. Lévi-Provençal, *Histoire de l'Espagne musulmane*.

(P. CHALMETA)

2. In Arabic language and literature. Here it refers to any word, linguistic form, or literary feature that is not found in the classical *ʿarabiyya* of pre- and early Islamic times nor the literature written in it, thus: "post-classical". The term is partly due to a semantic extension of the word *muwallad* meaning "not of pure Arab (Bedouin) stock" (see above) from denoting people to characterising their language, and partly based on a figurative understanding of the literal meaning: "s.th. that is produced by making s.th. else give birth to it", thus "a word newly derived from a known root" or "a poetic motif extracted from a known motif".

In the study of language *muwallad* may characterise a word (e.g., virtually all technical terminology of the sciences in Islam is *muwallad*) or any other linguistic phenomenon such as phonetic changes (e.g., *bidāya* for *badā'a* from root *b-d-'*). For the classification of loanwords as *muwallad* see MUʿARRAB.

In literary studies, *muwallad* may refer (a) to poets of the "post-classical" era (already in al-Djāḥiẓ, *Bayān*, i, 71: *wa-min khuṭabā' al-amṣār wa-shuʿarā'ihim wa-'l-muwalladīn minhum Bashshār al-Aʿmā*, i, 74: *shuʿarā' al-muwalladīn*, again mentioning Bashshār and others). As such, *muwalladūn* is often synonymous with *muḥdathūn* [*q.v.*], although the latter is sometimes restricted in use to the early generation of "modern" poets with *muwallad* referring to the later generations. It refers (b) to "new poetic motifs extracted from old ones" (*al-maʿānī al-muwallada*, cf. al-Āmidī, *Muwāzana*, i, 6, here used with a negative connotation!). Ibn Rashīḳ [*q.v.*] gives a brief description of the mechanism of *tawlīd*, in wich he states that it stands midway between *ikhtirāʿ* "original invention" and *sariḳa* "plagiarism" (*ʿUmda*, i, 263-5). Finally, the term is used (c) to denote non-classical proverbs (*mathal* [*q.v.*]) in the great collections of proverbs such as al-Maydānī's *Madjmaʿ al-amthāl*.

Bibliography: Djāḥiẓ, *al-Bayān wa 'l-tabyīn*, ed. Ḥasan al-Sandūbī, Cairo ⁴1375/1956; Āmidī, *al-Muwāzana*, ed. al-Sayyid Aḥmad Ṣaḳr, i, Cairo 1380/1961; Ibn Rashīḳ, *al-ʿUmda*, ed. Muḥammad Muḥyī al-Dīn ʿAbd al Ḥamīd, i, Cairo 1383/1963; Ibn Abi 'l-Iṣbaʿ, *Badīʿ al-Ḳur'ān*, ed. Ḥifnī Muḥammad Sharaf, Cairo ²n.d., 207-11; Tahānawīf, *Kashshāf*, ed. A. Sprenger, Calcutta 1862, s.v.; Ḥilmī Khalīl: *al-Muwallad fī 'l-ʿarabiyya*, Beirut ²1405/1985.

(W.F. HEINRICHS)

MUWĀRABA, (A.), verbal noun from the form III *wāraba*, meaning "to use stratagems, to trick", also has two rare significations, each distant from the other and apparently not reducible to a common root.

In the first place, *muwāraba* denotes in rhetoric the ability to remedy a gaffe or an offensive phrase by repeating the expression in an attenuated form, if not radically modified, or else by trying to make the person addressed believe that he has not properly understood what has been said to him (see Mehren, *Rhetorik*, 123-4; Dozy, *Supplément*, s.v.).

Secondly, the same term appears in the *K. al-*

Mug͟hrib fī d͟hikr bilād Ifrīḳiya wa 'l-Mag͟hrib of al-Bakrī (ed.-tr. de Slane, 3rd ed. Paris 1965, Ar. text 106, tr. 201) with a quite separate and special sense, since it denotes at that time (5th/11th century) a usage widespread among the great Berber tribe of northwestern Morocco, the G͟humāra [*q.v.*] and particularly flattering, the author states, for "their wives' amour propre. At the moment when a man who has just married a virgin is about to consummate the marriage, the young men of the locality clandestinely carry off the recently-married woman and hold her far from her husband for a month or even more; then they bring her back. It often happens that the same woman is carried off several times in succession, especially when she is distinguished by her beauty. The more she is sought out in this way, the happier she is."

The custom described here does not seem to have been attested elsewhere, but it is difficult not to see a link with the Kabyle *ləmwarba/ləmbʷarba*, in which the agglutination of the Arabic definite article *l-* shows the origin of this term, which must have been equally used in Arabic. The noun is the *maṣdar* of the verb *wareb*, which means, notably, in the Kabyle forms of speech, "sleep away from home (of a man); to leave any dwelling or place either after an agreement with the subject or with a third party" (J.-M. Dallet, *Dictionnaire kabyle-français*, Paris 1982, 873), but this meaning applied to a man is totally secondary, since the *ləmwarba* is basically concerned with women and consists for them in returning to their parents, in leaving the conjugal home without having been divorced (Dallet, *loc. cit.*). One thus learns, in effect, that in Kabylia, a husband had the power, without having to pronounce the divorce formula, to send back his wife, who is then *tamwarəbt/t͟hamwarəbt͟h*; she could be brought back again without any other formalities if her parents and she herself were agreable about this, provided that the return of the wife had not been provoked by some grave fault, such as adultery. In this last case, the wife was ignominiously expelled, sometimes with a shaven head, and there was no longer for her any question of returning to her husband, her return in that case being equivalent to having been divorced (see A. Hanoteau and A. Letourneux, *La Kabylie et les coutumes kabyles*, 2nd ed., Paris 1893, 181).

Bibliography: Given in the article.

(CH. PELLAT)

MUWAS͟HS͟HAḤ (A.) (*muwas͟hs͟haḥ* or *muwas͟hs͟haḥa*, pl. *muwas͟hs͟haḥāt*), name of a certain genre of stanzaic poetry, which according to indigenous tradition developed in al-Andalus towards the end of the 3rd/9th century. It is reckoned among the seven post-classical genres of poetry in Arabic [see KĀN WA-KĀN].

Structure. The *muwas͟hs͟haḥ* has a particular rhyme scheme and a special final part (*k͟hard͟ja*). The main body of the poem is always composed in Classical Arabic, while the language of the final part is mostly non-Classical (vernacular Arabic or Romance mixed with vernacular Arabic to a larger or lesser extent [macaronic]; very rarely pure Romance). The stanzas of a poem are all built alike and show a regular alternation of two elements: at the beginning we have lines that rhyme with each other, the rhyme changing from one stanza to the next ("separate rhymes"); they arc followed by lines whose rhyme scheme remains the same throughout the poem ("common rhymes"). The number of stanzas, in the vast majority of poems, is five; rarely one encounters poems with four, six, or seven stanzas. The first stanza is mostly, but not always, preceded by two or more introductory lines (*maṭlaʿ*) which, with regard to rhyme scheme and metre, always exactly correspond with the lines having common rhyme. The number of lines with separate rhyme is mostly three or four, whereas the number of lines with common rhyme is two, three, and quite often also more; the latter may be of different length and are often quite short. The common-rhyme lines of the last stanza are almost always identical with the *k͟hard͟ja*. The rhyme schemes of two simple types of *muwas͟hs͟haḥ* are the following:

muwas͟hs͟haḥ with *maṭlaʿ*	*muwas͟hs͟haḥ* without *maṭlaʿ*
.... *a* .... *b*	
...... *c*	..... *a*
...... *c*	..... *a*
...... *c*	..... *a*
.... *a* .... *b*	..... *b* ..... *b*
...... *d*	..... *c*
...... *d*	..... *c*
...... *d*	..... *c*
.... *a* .... *b*	..... *b* ..... *b*

The lines with separate rhymes are sometimes divided into two (more rarely three or four) segments. The segments of a line may be of equal or different length. The ends of corresponding segments within a stanza usually rhyme.

..*a*..*b*..*c*..*a*
....*d*..*e*
....*d*..*e*
....*d*..*e*
..*a*..*b*..*c*..*a*
....*f*..*g*
....*f*..*g*
....*f*..*g*
..*a*..*b*..*c*..*a*

Poems with exceedingly complicated and even irregular rhyme schemes may be encountered. The *muwas͟hs͟haḥ* in the following example has eight common-rhyme lines and the separate-rhyme lines have two parts: *abcdefcd ghghgh abcdefcd*, *ijijij abcdefcd*, *klklkl abcdefcd*, etc.

Name and terminology. Different explanations have been proposed for the name *muwas͟hs͟haḥ*. The ancient indigenous philologists, followed by J. Ribera and S.M. Stern, derive it from *wis͟hāḥ*, "an ornament worn by women (consisting of) two series of pearls and jewels strung or put together in regular order, which two series are disposed contrariwise, one of them being turned over the other" (cf. Lane, s.v.). A *muwas͟hs͟haḥ* would thus be a poem in which the rhymes alternate in the manner of a *wis͟hāḥ*. According to I. ʿAbbās, however, the basic meaning of *al-muwas͟hs͟haḥ* would be "that which is characterised by a colour different from its normal colour (or by striped pattern), or an embroidered or ornamented garment"; the transposition would thus find its explanation in the comparability of the ornamentation of the material consisting of regularly recurring stripes and the lines of the poems (cf. *Taʾrīk͟h al-adab al-andalusī*, 220 f.). The *muwas͟hs͟haḥ* poet is called *was͟hs͟hāḥ*; composing such poems is termed *taws͟hīḥ* (this term is also used as a synonym of *muwas͟hs͟haḥ*). A *muwas͟hs͟haḥ* with introductory lines (*maṭlaʿ*) is called "complete" (*tāmm*), one without *maṭlaʿ*, "bald" (*aḳraʿ*). The terminology for the various parts of a poem is not homogeneous. The one most commonly used today is found in Ibn Saʿīd al-Maghribī-Ibn K͟haldūn (*Muḳaddima*, iii, 390 ff.): stanza = *bayt*; separate-rhyme lines in each stanza = *g͟huṣn*; common-rhyme lines = *simṭ*. Ibn Sanāʾ

al-Mulk, however, uses the term *bayt* instead of *ghuṣn* and *ḳufl* instead of *simṭ*. While Ibn Sanāʾ al-Mulk has no specific term for "stanza", later the term *dawr* is commonly found in this meaning (cf. *Dīwān* of Ibn al-ʿArabī). The *khardja* (but not the *maṭlaʿ*!) is also called *markaz*.

Themes. One should differentiate between the theme of the poem's main body and that of the *khardja*. With regard to the former, the *muwashshaḥs* are for the most part love poems and panegyrics. Wine poems are also quite common (with the drinking scene often set against the backdrop of a description of nature). Among the love poems those dealing with unrequited love and the distant beloved are preponderant. The panegyrical *muwashshaḥs* mostly begin, as do panegyrical *ḳaṣīdas*, with an amatory prelude (*nasīb*). The existence of *muwashshaḥs* with the theme of ascetism and renunciation of the world (so-called *mukaffirāt*) is attested to by the theorist Ibn Sanāʾ al-Mulk (38). These poems are said always to have been *muʿāraḍas* of secular models. Thematically the *muwashshaḥ* does not differ from *ḳaṣīd* poetry. To be sure, certain themes of the *ḳaṣīd*, such as lampoon (*hidjāʾ*), dirge (*rithāʾ*), and the hunt (*ṭard*), do not occur in the *muwashshaḥ* of the early period. Beginning with the 7th/13th century—possibly even earlier—the *muwashshaḥ* was used by Ṣūfī poets (e.g., Ibn al-ʿArabī) for their purposes. Such mystical *muwashshaḥs*, which continue, as it were, the tradition of the *mukaffirāt*, are often *muʿāraḍas* of secular models.

The *khardja* is a—real or fictitious—quotation, often of a song (or a part thereof). The quotation is put into the mouth of either a person (the honoree, the beloved, a girl in love, the poet himself) or an animal (e.g. a dove) or, finally, a personified thing or concept (e.g. love, a battle). The transition from the poem's main body to the *khardja* in the last stanza is effected by formulae such as "I sang, said; he/she/it sang, said." In a remarkably high number of *khardjas* composed in Romance, the quotation is introduced by a third person feminine singular. As to content, the *khardja* often represents a condensation, a focusing of the gist of the *muwashshaḥ*. "The *khardja* is the seasoning of the *muwashshaḥ*, its salt and its sugar..." (Ibn Sanāʾ al-Mulk, 32). The Romance and macaronic *khardjas* express with particular frequency feelings of separation on the part of the girl for her absent lover. Occasionally the girl in such cases directs her lament to her mother, whom she may address as "mamma". In addition, however, one also encounters coquettish and almost obscene utterances. *Khardjas* of erotic content can also be found in panegyric *muwashshaḥs*: as these mostly start with a *nasīb* (see above), they exhibit a double change of themes: (love - praise - love). Different *muwashshaḥs* may share the same *khardja*, since the poets as well as the critics consider it legitimate to take these quotations over from other poems.

Khardja research. Although the majority of *khardjas* are in vernacular Arabic and, consequently, those written, completely or partially, in Romance form a small minority (8% according to Jones, of which 8% of these, i.e. two or three only, are in pure Romance), the latter have attracted an enormous amount of attention among scholars. Together with the prosody of Hispano-Arabic poetry, they form without doubt one of the most controversial issues in the study of Arabic literature. The existence of Romance *khardjas* has been noticed by earlier scholars, but S.M. Stern must be considered the first who made them generally known and who put *khardja* research on a firm basis. In his article *Les vers finaux en espagnol dans les muwaššaḥs hispano-hébraïques*, in *And.*, xiii (1948), 290-346, he had presented 20 Romance *khardjas* that were characteristically culled from Hebrew *muwashshaḥs* (on this, cf. below). Soon thereafter, however, Stern also discovered the first Romance *khardja* in an Arabic *muwashshaḥ* (and published it, *ibid.*, xiv [1949], 214-18). E. García Gómez followed with *Veinticuatro Jarŷas romances en muwaššaḥas árabes* (*ibid.*, xvii [1952], 57-125). Whereas Stern had always proffered as a mere hypothesis the suggestion that the Romance *khardjas* might be pre-existing *Frauenlieder* related to the Galician-Portuguese *cantigas de amigo* and simply quoted by Arab (and Hebrew) poets in their *muwashshaḥs* (cf. Stern, 58 ff.), certain Romance and German scholars (D. Alonso, R. Menéndez Pidal, Th. Frings, L. Spitzer), rather considered the *khardjas* as proof for the existence of a pre-literary "Mozarabic" *Frauenlyrik* in al-Andalus. The *khardjas* would thus be the oldest extant Romance secular poetry. Criticism of this opinion was first voiced by the Romance scholar H. Lausberg. According to him, the *khardjas* have been composed by the Arab poets themselves "als agudeza- und pathoshaltige Inhaltsgipfel" of the *muwashshaḥs* (in *Arch. f.d. Studium der Neueren Sprachen*, cxcii [1955] 208-90). A further development of this approach was offered by W. Ross. That the poets themselves had pieced together the *khardjas* was, according to Ross, proven by the fact that these lines are written in a mixed language and reflect the milieu and the universe of motifs characteristic of the mixed Andalusian culture of the 11th and 12th centuries (*ibid.*, cxciii [1956], 129-38). This latter opinion, though dormant for some time, has been resuscitated, with a slight shift in emphasis, during the last few years. This happened under the impact of the severe arbitrariness and partial untenability so often characteristic of the decipherment and/or reconstruction of the *khardjas*. Especially García Gómez' book *Las Jarchas romances de la serie árabe en su marco* (Madrid 1965, 2nd ed. Barcelona 1975) met with criticism in this regard. Today, while one side continues to believe that the *khardjas* are "if not authentic popular songs from Muslim Spain, then at least poems of a popular type" (J.T. Monroe, in *Islam: past influence and present challenge*, ed. A.T. Welch and P. Cachia, Edinburgh 1979, 168), the other side is convinced that "there are no cases where the readings are sufficiently certain to justify the assertion that, when taken together, such Romance words constitute a poem in Romance" (R. Hitchcock, in *La Corónica*, xiii [1985], 243). A solid basis for further research is A. Jones' *Romance kharjas* (see *Bibl.*), which contains facsimile reproductions, from the manuscripts, of the analysed *khardjas*.

Prosody. The prosody of the *muwashshaḥ* is as controversial as the nature of the Romance *khardjas*. While Spanish scholars (J. Ribera, E. García Gómez) and lately also American ones (J.T. Monroe, D. Swiatlo) have opined that the prosody of the *muwashshaḥ*, under the influence of Romance poetry, had at least originally been stress-syllabic, non-Spanish European and Arab scholars are mostly convinced that we are dealing here with quantitative metres (first proposed by M. Hartmann; also S.M. Stern, H. Ritter, W. Hoenerbach, T.J. Gorton, A. Jones, J.D. Latham, G. Schoeler, I. ʿAbbās, S. Ghāzī). To be sure, alongside the unchanged Khalīlian metres (*ramal*, e.g., occurs rather often, also *khafīf*, *mudjtathth*, as well as others), there occur, according to this opinion, also modified Khalīlian metres and combinations of feet that do not exist in the Classical *ḳaṣīd* poetry in the same way. It has, therefore, been called an extended or expanded *ʿarūḍ*. The indubitable fact that there is a strong relationship between the *ʿarūḍ* system

and the prosody of the Hispano-Arabic stanzaic poetry (*muwashshaḥ* as well as *zadjal*) has recently led one scholar to propose something like a compromise solution (F. Corriente, in *JAL*, xiii [1982], 76-82, and *JAL*, xvii [1986], 34-49). According to this, the metres of *muwashshaḥ* (and *zadjal*) represent an Andalusian adaptation of *ʿarūḍ*, in the sense that the long quantity of syllables in Classical Arabic prosody is replaced by their stress. The proponent of this hypothesis has to concede, however, that the (allegedly) stressed syllables are almost always graphically long and the unstressed syllables very often graphically short, so that his metrical determinations often do not materially differ from those of the adherents of the quantitative theory. (For a critique of his theory, cf. G. Schoeler, in *BiOr*, xl [1983], cols. 311-32, and A. Jones, in *JSS*, xxvii [1982], 128-30.) At any rate, it is undeniable that practically all *muwashshaḥ*s known to date have metres that display a regular alternation of long and short syllables (thus also J.T. Monroe, in *La Corónica*, x [1981-2], 124). Though rarely, even *kāmil* and *wāfir*, which are heterosyllabic metres, occur. Admittedly, one has to allow for certain poetical licences, all of which by the way have their place in Classical Arabic prosody, especially in *radjaz* (e.g. a less strict handling of *hamza*; *ishbāʿ*, i.e. the lengthening of short syllables; and, vice-versa, the shortening of long syllables, especially in end position). Finally, one should notice that the *aghṣān* and the *asmāṭ* of a poem often have different metres.

Music. The *muwashshaḥ* is a poem meant for musical recitation. This does not mean that a tune was immediately composed for each *muwashshaḥ*. Many *muwashshaḥ*s may very likely never have been sung. From later Hebrew sources (cf. Stern, 26-7) we learn about a specific way of performing the *muwashshaḥ*. Here a chorus would repeat the *maṭlaʿ*, after it had first been sung by a soloist, repeating it after each stanza *aa AA bbbb aa AA*, *cccc aa AA*, etc.). This manner of performance is also indicated in the *Dīwān* of al-Shushtarī by the often-encountered refrain-like repetition of the *maṭlaʿ* after each stanza. About the music itself we know nothing for sure, since contemporary sources are lacking. All attempts at reconstruction are purely hypothetic. They are either based on concerts (*nawbas*) of North African urban singers who, until very recently, had Andalusian *muwashshaḥ*s in their repertoire, or else on mediaeval European-Iberian songs, transmitted with musical notation, which in their formal structure resemble Hispano-Arabic stanzaic poetry and have possibly been influenced by the latter (*Cantigas de Santa Maria* of Alfonso el Sabio). Two recent works may nevertheless be cited here: D. Wulstan, in *JAOS*, cii (1982), 247-64, and L.J. Plenckers, in *The challenge of the Middle East*, ed. I.A. El-Sheikh *et alii*, Amsterdam 1982, 91-111.

Origin. Ibn Bassām, in the article on Ibn Māʾ al-Samāʾ in his *K. al-Dhakhīra*, has preserved an old indigenous tradition on the origin of the genre (ed. I. ʿAbbās, i, 468 ff.). According to it, the inventor is said to have been a certain Muḥammad b. Maḥmūd (or Ḥammūd) al-Ḳabrī. (According to a similar report, going back to ʿAbd Allāh b. Ibrāhīm al-Ḥidjārī (d. 584/1188) and quoted by Ibn Saʿīd-Ibn Khaldūn (*Muḳaddima*, iii, 390), he is alleged to have been Muḳaddam b. Muʿāfā al-Ḳabrī [*q.v.*], a court poet of the Umayyad ʿAbd Allāh (*regn.* 275-300/888-912).) Muḥammad al-Ḳabrī is said to have taken "vernacular and non-Arabic phrases" (*al-lafẓ al-ʿāmmī wa 'l-ʿadjamī*) which he called *markaz* (= *khardja*) and to have built the *muwashshaḥ* upon it. (Because of the terminology, which is difficult to interpret, no-one has up till now succeeded in understanding the report clearly in every detail.) Ibn Bassām continues that, according to another version, the inventor of the *muwashshaḥ* had been Ibn ʿAbd Rabbih (d. 328/940 [*q.v.*]), the author of the *K. al-ʿIḳd al-farīd*; other poets, cited by name, then carried on the further development up to the full-fledged *muwashshaḥ* (with segmented lines). Since M. Hartmann, European scholars have been of the opinion that the *muwashshaḥ* has been developed from the *musammaṭ* [*q.v.*], an older, simpler stanzaic genre of poetry (thus García Gómez, S.M. Stern (with reservations), A. Jones, explicitly G. Schoeler). Others assume an origin independent of the *musammaṭ* (I. ʿAbbās, J.T. Monroe). It is, however, difficult to deny a connection between the two stanzaic genres. Both the *musammaṭ* and the *muwashshaḥ* stanza are divided into lines with separate rhyme and lines with common rhyme (*simṭ*, from which *musammaṭ*). In both cases, there exists a type with *maṭlaʿ* and one without. The basic form of the *musammaṭ* shows the rhyme scheme (*aaa a*) *bbb a, ccc a, ddd a*, etc. (cf. the specimen *apud* Abū Hiffān, *Akhbār Abī Nuwās*, ed. ʿA.A. Farrādj, Cairo 1953, 57-8; an example for a *musammaṭ* with a *maṭlaʿ*, rhyme scheme *aa bbbb a, cccc a*, is adduced by Ibn Rashīḳ, *al-ʿUmda*, i, 179). The further development toward the *muwashshaḥ* may have consisted in the inventor's first replacing the last *simṭ* of the *musammaṭ* (only one line in all types!) by the *khardja* (consisting of two or more lines), which was found or created by him, and then, for the sake of symmetry, assimilating all the remaining *asmāṭ* to the rhyme (and metre) of the *khardja*. The close connection between *musammaṭ* and *muwashshaḥ* is also proven by a recently-made discovery: in Ibn Bishrī's anthology of *muwashshaḥāt*, *ʿUddat al-djalīs*, we find a *muwashshaḥ* with the rhyme scheme *aaaa b, cccc b* (no. 164), which has, as can be seen, only one *simṭ* and could thus be classified as a *musammaṭ* (cf. Jones, *op. cit.*, 11, 24). The convention of closing a poem with a quotation existed already long before the origin of the *muwashshaḥ*; numerous wine poems in Abū Nuwās (all, to be sure, in *ḳaṣīd* form) end with the poet putting the last line or hemistich into the mouth of a singer or songstress; in one case he lets a *mudjūniyya* end in a Persian quotation (ms. Fatih 3775, fol. 101a; cf. E. Wagner, *Abū Nuwās*, Wiesbaden 1964, 214-15, 430).

The great Andalusian *muwashshaḥ* poets. The first poet of whom *muwashshaḥs* are extant is ʿUbāda Ibn Māʾ al-Samāʾ (d. after 421/1030 [*q.v.*]) from the period of the petty kings. Further important *washshāḥūn* from this period are Ibn al-Labbāna (d. 507/1113 [*q.v.*]) and Muḥammad b. ʿUbāda al-Ḳazzāz (on whom see S.M. Stern, in *al-Andalus*, xv [1950], 79-109). The acme of this development is considered to be the time of the Almoravids, in which flourished Ibn Baḳī (d. 545/1150-51 [*q.v.*]), possibly the most famous *muwashshaḥ* poet of all; al-Aʿmā al-Tuṭīlī (d. 525/1130-31 [*q.v.*]; and the philosopher Ibn Bādjdja (d. 533/1139 [*q.v.*]). In the era of the Almohads the most important representative of the genre is the physician Abū Bakr Ibn Zuhr (d. 595/1198-99 [*q.v.*]); for the later period may be mentioned Ibn Sahl al-Isrāʾīlī (d. 649/1251 [*q.v.*]), Lisān al-Dīn Ibn al-Khaṭīb (d. 776/1375 [*q.v.*]), who also compiled a collection of *muwashshaḥs* entitled *Djaysh al-tawshīḥ*, and Ibn Zamrak (d. after 795/1393 [*q.v.*]). Among the mystical and religious poets who used the *muwashshaḥ* for their own purposes one may mention, in addition to Ibn al-ʿArabī (see above), Ibn al-Ṣabbāgh al-Djudhāmī (7th/13th century; on him, see S.M. Stern, *op. cit.*, 86-8), who composed "love

poems" addressed to the Prophet (mostly *muʿāraḍas* on well-known secular *muwashshaḥs*), and the most famous of them all, al-Shushtarī (d. 668/1269); on him, see Brockelmann, I, 274, S I, 483-4; Stern, *op. cit.*, 89-91). In his *Dīwān*, consisting exclusively of mystical poems, one encounters, in addition to *zadjals*, also *muwashshaḥs*, often difficult to distinguish from the former.

Diffusion. Originating in Spain, the *muwashshaḥ* soon conquered the rest of the Arab countries. Via North Africa where, however, remarkably few indigenous *washshāḥūn* can be found (if one excludes Andalusian immigrants) it reached Egypt, Yemen and the Orient. A collection of *muwashshaḥs*, entitled *Dār al-ṭirāz*, whose introduction contains the well-known poetics of the genre, was compiled by the Egyptian Ibn Sanāʾ al-Mulk (d. 608/1211 [*q.v.*]). In the second part of this work, he presents *muwashshaḥs* of his own (35 specimens). While his *Dīwān* does not yet contain any *muwashshaḥs*, such can be found, together with *ḳaṣīdas*, in many later collections of poetry, e.g. those of Ṣafī al-Dīn al-Ḥillī (d. *ca.* 750/1349) and ʿAbd al-Ghanī al-Nābulusī (d. 1143/1731 [*q.v.*]). In North African cities, popular musicians have until recently been using *muwashshaḥs*, among them a considerable number of classical Andalusian ones, as libretti for their concerts (*nawbas*).

Imitations and later survivals. In the *Dīwān* of Ibn Ḳuzmān (d. 555/1160 [*q.v.*]), which consists exclusively of *zadjals*, a large number of these poems show the formal structure of *muwashshaḥs* (so-called *muwashshaḥ*-like *zadjals*). Several of them are *muʿāraḍas* of older *muwashshaḥs* (cf. Stern, *op. cit.*, 171-85). Already, much earlier, Spanish Hebrew poets had imitated the Arabic *muwashshaḥ* and composed secular as well as liturgical *muwashshaḥs* in the Hebrew language. Some specimens date back to the 5th/11th century. The most famous Hebrew *washshāḥūn* are Moshē b. ʿEzra (d. 1135), Yĕhuda Halevi (d. 1140) and Abraham b. ʿEzra (d. 1165). Very often their poems are *muʿāraḍas* of well-known Arabic *muwashshaḥs*. Yĕhuda Halevi, e.g., who was born in Tudela, imitates his compatriot al-Aʿmā al-Tuṭīlī. The importance of the Hebrew *muwashshaḥs* lies not least in the fact that they contain the most readily legible and highest-quality *khardjas* in Romance. The earliest Provençal Troubadour, William of Aquitaine (d. 1127), who flourished at about the same time as the above-mentioned Hebrew *muwashshaḥ* poets, uses stanzaic forms that closely resemble the *muwashshaḥ* (several times the rhyme scheme *aaa bab*, *ccc bcb*, *ddd bdb*, etc., is found in his poetry). This fact is one of the main arguments of the so-called "Arabic theory" which proposes to explain the genesis of Provençal poetry, at least in part, through Arabic influence. The revival of *muwashshaḥs* and other mediaeval Arabic stanzaic forms played an important role at the beginning of modern Arabic literature in the 19th century. The old stanzaic forms were used not only in original poetic efforts but also in the translation of Western poetry (cf. S. Moreh, *Modern Arabic poetry 1800-1970*, Leiden 1976, 11 ff.).

Bibliography (in addition to the works mentioned in the article): the classical *muwashshaḥ* anthologies are: Ibn Sanāʾ al-Mulk, *Dār al-ṭirāz*, ed. Dj. Rikābī, Damascus 1949, ²1977; Ṣafadī, *Tawshīʿ al-tawshīḥ*, ed. A.H. Muṭlaḳ, Beirut 1966; Ibn al-Khaṭīb, *Djaysh al-tawshīḥ*, ed. H. Nādjī and M. Māḍūr, Tunis 1967; Ibn Bishrī, *ʿUddat al-djalīs*, ed. A. Jones,Cambridge 1992. An English translation of Ibn Sanāʾ al-Mulk's anthology of Andalusian *muwashshaḥs* is contained in L.F. Compton, *Andalusian lyrical poetry and old Spanish love songs: The muwashshaḥ and its khardja*, New York 1976. A modern anthology of Andalusian *muwashshaḥs* is Sayyid Ghāzī, *Dīwān al-muwashshaḥāt al-Andalusiyya*, 2 vols., Alexandria 1979. The important passage containing the indigenous tradition about the origin of the *muwashshaḥ* is found in Ibn Bassām, *al-Dhakhīra*, ed. I. ʿAbbās, i, Beirut 1975, 468-70. On Arabic stanzaic poetry in general and on the *muwashshaḥ* in particular (form, content, origin, poets, etc.), see M. Hartmann, *Das arabische Strophengedicht. I. Das Muwaššaḥ*, Weimar 1897; S.M. Stern, *Hispano-Arabic strophic poetry*, ed. L.P. Harvey, Oxford 1974 (fundamental); I. ʿAbbās, *Taʾrīkh al-adab al-Andalusī: ʿaṣr al-ṭawāʾif wa 'l- murābiṭīn*, Beirut ⁵1978, 216-51; G. Schoeler, *Die hispano-arabische Strophendichtung: Entstehung und Beziehung zur Troubadourlyrik*, in *La Signification du bas Moyen-Age...* Actes du 8me Congrès de l'UEAI, Aix-en-Provence 1976, 243-66; idem, *Muwaššaḥ und Zağal*, in *Neues Handbuch der Literaturwissenschaft. 5. Orientalisches Mittelalter*, ed. W. Heinrichs, Wiesbaden 1990, 440-64. On the aesthetics of the *muwashshaḥ*, see J.T. Monroe, *The Muwashshaḥāt*, in *Collected studies in honour of A. Castro's eightieth year*, ed. M.P. Hornik, Oxford 1965, 335-71; V. Cantarino, *Lyrical traditions in Andalusian muwashshahas*, in *Comparative Literature*, xxi (1969), 213-31; A. Jones, *Final taḍmīn in the poems of Abū Nuwās*, in *Felix Arabicus, luminosus britannicus. Essays in honour of A.F.L. Beeston on his eightieth birthday*, ed. A. Jones, Reading 1991, 61-93 (on oriental influences on the *khardjas*). An indispensable work of reference for all *khardja* studies is R. Hitchcock, *The Khardjas: a critical bibliography*, London 1977, new edition planned. The corpus of Romance *khardjas* is published in the following works: K. Heger, *Die bisher veröffentlichten Ḥarğas und ihre Deutungen*, Tübingen 1960; J.M. Sola-Solé, *Corpus de poesía mozárabe (las ḥarğa-s andalusíes)*, Barcelona 1973; A. Jones, *Romance kharjas in Andalusian Arabic Muwaššaḥ poetry*, Oxford 1988 (fundamental). A corpus of Arabic *khardjas* is published by Monroe and Swiatlo, *Ninety-three Arabic Ḥarğas in Hebrew Muwaššaḥs*, in *JAOS*, xcvii (1977), 141-63. Up-to-date reports on *khardja* studies: S. Armistead, *Some recent development in kharja scholarship*, in *La Corónica*, viii (1979-80), 199-203; Hitchcock, *The fate of the kharjas: a survey of recent publication*, in *British Soc. for Middle Eastern Studies Bull.*, xii (1985), 172-90; Armistead, *A brief history of kharja studies*, in *Hispania*, lxx (1987), 8-16; M. Frenk, *Las jarchas mozárabes y los comienzos de la lírica románica*, Mexico 1975. On the prosody of the *muwashshaḥ*, see Jones, *Romance scansion and the Muwaššaḥāt*, in *JAL*, xi (1980), 36-55; Monroe, *¿Pedir peras al olmo?* in *La Corónica*, x (1981-2), 121-47; J.D. Latham, *New light on the scansion of an old Andalusian Muwaššaḥ*, in *JSS*, xxvii (1982), 61-75.

(G. Schoeler)

MUWĀṬIN (A.), the modern Arabic word for "citizen", in the legal sense of the term (meaning "one holding the citizenship or nationality of a sovereign state"). It was coined around the turn of the 20th century from *waṭan*—initially a place of residence and, by extension, a country or *patrie*.

Until the 20th century, there existed no Arabic expression for citizen. The usual term indicating the status of members of the political community was *raʿiyya* [*q.v.*], or its plural form *raʿāyā*, a collective noun best translated as "subjects", with an emphasis on submission to the ruler and also implying the pastoral duties of the ruler. In the 19th century, the

latter expression, traditionally common in Islamic contexts, was extended to include both subjects and citizens of states in the West as well. Only towards the end of the century did writers of Arabic begin to feel uncomfortable with identifying citizens as *raᶜiyya* and turned to look for another term.

Like "citizen", *muwāṭin* signifies relation to a place rather than subjection to a ruler. Yet the term seems to carry an import somewhat different from that which is connoted by "citizen". Whereas the latter, having evolved from the Latin *civis* (a member of the *civitas*), has always implied civic status and rights, relation to a *waṭan* has not. What initially characterised a *muwāṭin* was his being a fellow-member of the fatherland, a compatriot (cf. *muᶜāṣir*, "contemporary"), as distinct from an *adjnabī*, a foreigner. Such a relation, while capable of evoking powerful emotions, carried no necessary civic or political implications. These came to be attached to the term only in recent years, with the gradual adoption in Arab countries of the ideas of individual political rights. Nowadays, while its equivalence with "citizen" in the strict legal sense is universally accepted, the extent of political rights which the word connotes by implication differ from one Arabic-speaking country to another, according to their respective political realities.

Bibliography: For the modern legal use of *muwāṭin* and related terms, see Shams al-Dīn al-Wakīl, *al-Mūdjaz fi 'l-djinsiyya wa-markaz al-adjānib*, Alexandria 1966, esp. 60 ff. See also ḤURRIYYA.

(A. AYALON)

AL-**MUWAYLIḤĪ**, the name of a well-to-do family of silk merchants which traced its ancestry back to the town of Muwayliḥ on the Red Sea coast of Arabia. Two of its members, father and son, became famous at the end of the 19th and beginning of the 20th centuries.

1. IBRĀHĪM, Egyptian political journalist and writer (1844-1906).

When his father died in 1865, he and his younger brother, ᶜAbd al-Salām, took over the administration of the family business. In the same year, a long association between Ibrāhīm and the Egyptian Khedive Ismāᶜīl [*q.v.*] began when the latter gave him positions in the Council of Merchants and in the Court of First Instance. In 1868 Ibrāhīm helped found a publishing house, the first of many such initiatives throughout his career, but in 1872 he suffered a financial setback when he lost the entire family fortune in speculation on the newly-established Stock Exchange. Once again, the Khedive appears to have played a role by rescuing him from financial ruin. In 1879 Ismāᶜīl was forced to abdicate and go into exile. Ibrāhīm al-Muwayliḥī followed him to Italy as tutor to his children and continued to publish newspapers, most notably *al-Ittiḥād*, whose critical commentaries aroused the ire of the Ottoman sultan. Joined by his son, Muḥammad [*q.v.*], Ibrāhīm travelled in 1884 to Paris, where he is said to have assisted Djamāl al-Dīn al-Afghānī and Muḥammad ᶜAbduh [*q.vv.*] in producing their influential newspaper, *al-ᶜUrwa al-wuthkā*. While in France, he himself published a further issue of *al-Ittiḥād* which was so critical of Ottoman foreign policy that his expulsion from France was engineered by the Ottoman authorities. Via Brussels, the two al-Muwayliḥīs travelled to London. There Ibrāhīm changed his tack somewhat, writing articles attacking the policy of the British government of Gladstone and supporting the Ottoman sultan. As a result, Ibrāhīm was invited to Istanbul and, after some initial diffidence, accepted the offer.

In Istanbul, Ibrāhīm was given a formal appointment on the Education Council and made the acquaintance of Münīf Pasha [*q.v.*], the Minister of Education, a contact that provided both Ibrāhīm and his son with an entrée to the famous Fātiḥ Library and its collection of manuscripts. But much of Ibrāhīm's time was taken up with continuing involvement in political intrigue, both local and international. He managed to capture a great deal of the flavour of the political atmosphere in Istanbul in his famous work, *Mā hunālik*, a series of articles first published in the Egyptian newspaper *al-Mukaṭṭam* (beginning with no. 1903 of 20 January 1895), under the pseudonym *Aḥad al-ᶜUthmāniyyīn al-afāḍil* ("an Ottoman worthy"). Besides describing the governmental structure and court protocol in Istanbul, the series went into great detail about the operations of the secret police and every possible aspect of bribery and intrigue. Ibrāhīm returned to Egypt in 1895 and published his articles in book form in the following year, but the work was immediately banned and all copies were ordered sent to Istanbul.

On 14 April 1898, Ibrāhīm began publishing his most famous newspaper, *Miṣbāḥ al-Shark*, which Muḥammad Kurd ᶜAlī in his *al-Mudhakkirāt* ("Memoirs", 1948-51) termed "the best weekly". Both he and his son Muḥammad contributed articles, including commentary on current events, political and social issues, and extracts from works of literature transcribed from the manuscripts in the Fātiḥ Library. The repute of the newspaper reached its height during the publication (November 1898-December 1900) of Muḥammad's series of episodes, *Fatra min al-zaman*, which, after much revision, were published as *Ḥadīth ᶜĪsā ibn Hishām* (1907). During the publication of Muḥammad's episodes, Ibrāhīm also contributed to the genre, with a series of nine episodes entitled *Mirʾāt al-ᶜālam aw Ḥadīth Mūsā ibn ᶜIṣām* (June-July 1899, June-September 1900). As Ibrāhīm resumed his career as political consultant to the Khedive, Muḥammad seems to have gradually taken over the editorial functions at the newspaper. Under his control, the pungent critical articles that had so contributed to the paper's reputation diminished in both quality and number; original articles were replaced by lengthy quotations from Western sources and advertisements. The newspaper ceased publication on 15 August 1903. Ibrāhīm continued to publish articles in newspapers and even founded yet another newspaper named *al-Mishkāt* in 1905. However, he fell gravely ill in December of that year and died on 29 January 1906.

According to Muḥammad Kurd ᶜAlī, Ibrāhīm al-Muwayliḥī was "the greatest writer of his day and a man who could write entertainingly on the dullest subject". Kurd ᶜAlī goes on to disapprove of the way in which Ibrāhīm misquoted their professor, Muḥammad ᶜAbduh, but suggested that "some higher authority was behind Ibrāhīm Bey". Incisive critic, brilliant stylist in the traditional mode, and inveterate political schemer, such is the picture of Ibrāhīm al-Muwayliḥī that emerges from a reading of contemporary accounts, one that is often embellished by many apocryphal tales, the dissemination of which he himself often provoked and encouraged.

2. Muḥammad, son of the preceding, journalist and author of *Ḥadīth ʿĪsā ibn Hishām* (1858?-1930).

The date of his birth is a subject of debate: if 1858, then only fourteen years separate father and son; if 1868, then Muḥammad would have begun to work as a clerk in 1882 at the age of fourteen. The more public early part of his life is inextricably bound up with that of his father, a career that involved contacts with many influential men of Egypt at the time and political activity on both the local and international levels. When the Khedive Ismāʿīl [*q.v.*] was forced to abdicate and go into exile in 1879, Ibrāhīm al-Muwayliḥī joined him in Italy. Muḥammad, nominally in the care of his uncle, ʿAbd al-Salām, in fact left on his own during the turmoil that preceded the ʿUrābī Revolt of 1882, was arrested for distributing a leaflet written by his father, and condemned to death. However, the sentence was commuted to exile, and Muḥammad joined his father in Italy.

Both al-Muwayliḥīs now participated in the flurry of political activity surrounding the exiled Khedive and, in particular, his complex relationships with his homeland and the Ottoman Sultan. Ibrāhīm and Muḥammad were heavily involved in newspaper publication, most notably *al-Ittiḥād* (see 1. above). Eventually, Ibrāhīm was invited to the Ottoman capital, and when, after sending his son, Muḥammad, to assess the situation, he had assured himself of the Sultan's good intentions, he himself moved to Istanbul in 1885. Both al-Muwayliḥīs were now given access to the Fātiḥ Library, where Muḥammad in particular was able to transcribe a number of famous works of Arabic literature, including those of his favourite poet Abū al-ʿAlāʾ al-Maʿarrī [*q.v.*], that were later published on the pages of *Miṣbāḥ al-Shark*.

In 1887 Muḥammad left his father in Istanbul and returned to Egypt. He resumed his career as a journalist, producing articles for a number of newspapers; in *al-Mukaṭṭam*, for example, he wrote —using a variety of pseudonyms (such as "an Egyptian who knows his country" and "*al-Badīʿ*")— about a number of political issues of the time, most especially the Nationalist Party. It was during this period that Muḥammad al-Muwayliḥī made the acquaintance of the Englishman Wilfrid Scawen Blunt, who had been so closely involved in the defence of Aḥmad ʿUrābī after the collapse of the 1882 revolt. He also gained an entrée into the circle of Princess Nāzlī Fāḍil, the niece of the ex-Khedive Ismāʿīl, a côterie that brought together a remarkable group of figures concerned with the reform of Egyptian political and intellectual life, including Muḥammad ʿAbduh, Saʿd and Aḥmad Fatḥī Zaghlūl, Ḳāsim Amīn, Muṣṭafā Fahmī, ʿAlī Yūsuf and Ḥāfiẓ Ibrāhīm. In 1895, Ibrāhīm al-Muwayliḥī returned to Egypt. In the following year, *Mā hunālik* was published. On 14 April 1898, there appeared the first issue of *Miṣbāḥ al-Shark* edited by Ibrāhīm and Muḥammad al-Muwayliḥī (although the former gradually relinquished editorial control to his son). Most of the articles were written by the al-Muwayliḥīs themselves and discussed current political and social issues in a forthright and often sarcastic manner. It was in this newspaper that Muḥammad's most famous work initially appeared in the form of a series of articles under the heading *Fatra min al-zaman*. They were an immediate success; at the instigation of colleagues and friends, they were substantially revised and published as *Ḥadīth ʿĪsā ibn Hishām* in 1907. The work has gone through at least nine editions since then; in 1927, it was adopted as a school text, a process that regrettably led to the exclusion of several of its more critical chapters or sections and the addition of a second, less significant section describing a visit to Paris. It was also in *Miṣbāḥ al-Shark* that Muḥammad's other two major publications first appeared: *Naḳd Dīwān Shawḳī*, a pedantic and somewhat personal series of articles criticising the collected poetry of Aḥmad Shawḳī [*q.v.*], and *ʿIlādj al-nafs*, a collection of philosophical essays published posthumously in 1932.

Within the development of modern Arabic prose narrative, the significance of Muḥammad al-Muwayliḥī's *Ḥadīth ʿĪsā ibn Hishām* lies in its function as a bridge between the classical genres and the emerging tradition of modern Arabic fiction: the former evidenced by the evocation of the *maḳāmāt* of Badīʿ al-Zamān al-Hamadhānī [*q.v.*] both through the use of a similarly named narrator, ʿĪsā ibn Hishām, and the beginning of each episode in the newspaper with a passage of extremely polished *sadjʿ* (rhyming prose); the latter through the accurate and sarcastically critical portrait of Egyptian society during the British occupation. The excursions of ʿĪsā and his companion, the Pasha, through the byways of the Egyptian legal system and later, as observers of a provincial *ʿumda* and his venal companions, through the seedier parts of a rapidly westernising Cairo, provided a vivid and powerful social commentary that stood in marked contrast to the philosophical and romantic-historical focus of the incipient and imported novel genre in Arabic at this period. While Muḥammad al-Muwayliḥī's work was clearly neo-classical in form and style, and while his views were mostly conservative, *Ḥadīth ʿĪsā ibn Hishām* focussed relentlessly on the foibles of Egyptian society, and, by so doing, paved the way for the emergence of later works which formed the beginnings of the novel genre in Arabic.

The final issue of *Miṣbāḥ al-Shark* (15 August 1903) notes that publication would have to be temporarily suspended due to the editor's illness, but no further issues appeared. Muḥammad al-Muwayliḥī gradually withdrew from society, something that some writers attribute to a public scandal (the so-called *ʿĀmm al-Kaff* ("Year of the Slap") in which he found himself embroiled in 1902). Following the death of his father in January 1906, he rarely appeared in public, although between 1910 and 1914 he did serve as Director of the Waḳf Administration. The rest of his life was spent in retirement, from which he would only emerge periodically as a name in a newspaper in order to express his views about topics that aroused his ire. His last published article (in *al-Ahrām*, 30 December 1921) is typical: under the title *Ṣawt min al-ʿuzla* ("Voice from Retirement") he gave his reasons for retiring, and proceeded to express his feelings about the second expulsion of Saʿd Zaghlūl [*q.v.*] from Egypt. A few weeks after finishing the editorial work on *ʿIlādj al-nafs* ("Cure for the Soul"), he died in Ḥulwān on 28 February 1930.

MUWAYS b. **ʿIMRĀN** b. D̲j̲umayʿ b. Ziyād al-Baṣrī, Abū ʿImrān, eminent *mawlā* of Baṣrā who lived in the second half of the 2nd/8th century.

His name is considerably distorted in the sources and in studies, such that the variants encountered include Mūsā (by confusion with Mūsā b. ʿImrān = Moses), Muʾnis, Mawīs, etc.; furthermore, his name would not feature in history at all were it not that al-D̲j̲āḥiẓ [*q.v.*] mentions him quite frequently and that he participated in the movement of politico-religious ideas which developed at Baṣra in the 2nd and 3rd/8th-9th centuries. It is understood that he was wealthy, but it is not known whether he engaged in a lucrative occupation; seeing that he employed a secretary (see al-D̲j̲āḥiẓ, *Buk̲h̲alāʾ*, ed. Ḥād̲j̲irī, 52, tr. Pellat, 85), it is possible that he held an administrative function or traded profitably on the basis of inherited or acquired wealth; alternatively, this assistant may have been involved in the management of the revenues which he earned from an estate called Ziyādānᵘ (al-Balād̲h̲urī, *Futūḥ*, 362; Yāḳūt, i, 645, s.v. al-Baṣra, ii, 964, s.v. Ziyādān), which had been bequeathed to his ancestor Ziyād, *mawlā* of the Banu ʾl-Hud̲j̲aym, who was also the maternal grandfather of the grammarian and Ḳurʾān reader ʿĪsā b. ʿUmar al-T̲h̲aḳafī (d. 149/766 [*q.v.*]) and of his brother Ḥād̲j̲ib.

Al-D̲j̲āḥiẓ, whom he had helped out of an awkward situation in his youth with a gift of 50 *dīnārs* (al-Murtaḍā, *Muʿtazila*, 38) and with whom he did not cease to maintain excellent relations, seems to have regarded him with a deep sense of gratitude, for he always speaks of him with respect and does not fail to eulogise his qualities (see, e.g., on his sincerity, *Ḥayawān*, v, 468). There is no doubt that Muways was a generous patron, and others named as having been beneficiaries of his largesse include Abū Nuwās (see Ibn Manẓūr, *Ak̲h̲bār Abī Nuwās*, Cairo 1924, i, 227), al-Ḥusayn b. al-Ḍaḥḥāk (see *Ag̲h̲ānī*, ed. Beirut, vii, 180; Mūsā b. ʿImrān) and Muḥammad b. Yasīr, who did not hesitate to ask him for the gift of a mule (al-D̲j̲āḥiẓ, *Rasāʾil*, ed. Hārūn, ii, 292-3).

He seems to have brought together in his salon various Baṣran personalities, and it is not impossible that al-D̲j̲āḥiẓ made at his home the acquaintance of al-Naẓẓām [*q.v.*], who is presented as being the mentor of both men. Muways is in any case a striking example of the lack of clarity prevailing in his time regarding the specificality of each of the theological sects and schools which the heresiographers have subsequently taken pains to distinguish one from another and regarding the adherence of militants to a particular one of them. He is, in fact, generally counted among the Murd̲j̲iʾa [*q.v.*], but, while al-Bag̲h̲dādī (*Farḳ*, 190) lists three possible combinations among the latter: *ird̲j̲āʾ* with *ḳadar*, *ird̲j̲āʾ* with *d̲j̲abr* and pure *ird̲j̲āʾ*, al-S̲h̲ahrastānī (in the margins of Ibn Ḥazm, i, 186) adds the K̲h̲ārid̲j̲ī-Murd̲j̲iʾa and includes Muways among the Ṣufriyya [*q.v.*], before making him (i, 190) one of the Murd̲j̲iʾī followers of Abū T̲h̲awbān (the T̲h̲awbāniyya); al-Murtaḍā (*Muʿtazila*, 38) calls him a Muʿtazilī and notes his adherence to the school of al-Naẓẓām, although, for al-K̲h̲ayyāṭ (*Intiṣār*, ed.-tr. Nader, 93/145), he is one of those whom the Muʿtazila prefer not to attach to their group, after Ibn al-Rāwandī has mentioned him among the theologians who agree with the Muʿtazila regarding the principles of divine unicity (*al-tawḥīd*) and justice (*al-ʿadl*), but differ from them regarding the *manzila bayn al-manzilatayn* [*q.v.*]; he must equally have disagreed with their doctrine concerning "the promise and the threat" (*al-waʿd wa ʾl-waʿīd*).

From all these contradictory data, it may be concluded that Muways was not sufficiently sectarian to involve himself specifically with any of the schools mentioned or to embrace exclusively its doctrine, which must in any case have been still imprecise. If he sought the company of Abu ʾl-Hud̲h̲ayl [*q.v.*] or al-Naẓẓām, he could quite well have fashioned for himself an eclectic system which, while borrowing elements from the most moderate K̲h̲ārid̲j̲ī sect, that of the Ṣufriyya, as well as from the Murd̲j̲iʾa, constituted a tendency towards agreement with the Muʿtazila. Whatever the true position, all these speculations seem to a large extent superfluous, since Muways never committed his theological preferences to writing and was probably content with expressing his opinions in the course of discussions in which he took part; hence arise, no doubt, the inconsistencies which have been noted.

(Ch. Pellat)

al-**MUẒAFFAR**, the honorific *laḳab* by which the second of the ʿĀmirid dictators of Muslim Spain is best known, the son of the celebrated al-Manṣūr [*q.v.*], Abū Marwān ʿAbd al-Malik Ibn Abī ʿĀmir al-Maʿāfirī. He was invested with the office of *ḥād̲j̲ib* by the caliph Hi̲sh̲ām II, on the death of his father, on 28 Ramaḍān 392/10 Aug. 1002, and ruled as absolute master the territory of al-Andalus until his death from angina as he was setting out on an expedition against Castille on 16 Ṣafar 399/20 Oct. 1008.

The relatively short period of the *ḥid̲j̲āba* of ʿAbd al-Malik al-Muẓaffar was, until quite recently, almost unknown for lack of documents, and in his *Histoire* Dozy had to pass it over almost in silence, in spite of his importance in the history of the early 11th century in Spain. It has been possible to fill this gap, thanks to the discovery of accounts of the ḥād̲j̲ibate of al-Muẓaffar in the *D̲h̲ak̲h̲īra* of Ibn Bassām and the *Bayān* of Ibn ʿId̲h̲ārī and the chapter devoted to him by Ibn al-K̲h̲aṭīb in his *Aʿmāl al-aʿlām*. The result is the discovery that the septennium of ʿAbd al-Malik was for Muslim Spain a period of peace and prosperity, a regular golden age, just on the eve of the first upheavals which preceded the collapse of the Umayyad caliphate; the chroniclers compare this period to the first week of a marriage (*sābiʿ al-ʿarūs*; cf. Dozy, *Suppl.*, i, 626-7).

Al-Manṣūr had actually left his son and successor an empire not only completely pacified and solidly organised but also enjoying an economic prosperity hitherto unprecedented. ʿAbd al-Malik aimed at following scrupulously the line of conduct laid down for him in his father's last wishes: to preserve and justify the popularity of the ʿĀmirid régime by peace

at home and the continual harassing of the Christian foe beyond the marches (*thughūr*). Every year of Muẓaffar's rule was therefore marked by a summer expedition (*ṣā'ifa*) or a winter one (*shātiya*); in 393/1003 he led his armies against Catalonia (*bilād al-Ifrandj*), laid waste the country round Barcelona and destroyed 35 strongholds before returning to Cordova; in 395/1005, an expedition was led against Castile by the *ḥādjib*; in the following year his objective was the town of Pampeluna [see BANBALŪNA], which he seems to have approached but not reached; in 397/1007 took place, against Catalonia, the expedition known as the "victorious" (*ghazāt al-naṣr*): ʿAbd al-Malik forced his way into Clunia and carried off a vast booty. This triumph earned for him from the nominal sovereign the title of "Victor" (*al-Muẓaffar*) which henceforth replaced his previous *laḳab* of Sayf al-Dawla. In the course of the winter of 398/1007-8, there was an expedition which ended in the capture of a castle of San-Martin which has not been identified. The last expedition undertaken by him as mentioned above came to nothing, but at least enabled him to die like his father on the way to wage war on the infidel.

At home, al-Muẓaffar maintained intact the strong administrative organisation which dated from the reign of ʿAbd al-Raḥmān III [*q.v.*] and which al-Manṣūr had maintained intact, while removing from it the representatives of the Arab aristocracy. On his accession to office, he won the good graces of the Cordovans by reducing taxes by a sixth. He was easily able to dispose of several conspiracies against him. He left to his brother ʿAbd al-Raḥmān Sanchol a heritage which the latter might easily have preserved if he had not at once exasperated his subjects against him by displaying a hateful partiality and attempting to arrogate to himself the caliphate completely.

AL-**MUẒAFFAR**, AL-MALIK, TAḲĪ 'L-DĪN ʿUMAR b. Nūr al-Dawla Shāhanshāh b. Ayyūb, born 534/1139, nephew and army commander of Ṣalāḥ al-Dīn Yūsuf b. Ayyūb (Saladin), one of the leading military and administrative personalities of the 12th century. He was the founder of the branch of the Ayyūbids which ruled in Ḥamāt from 574/1178 until 742/1341.

Only two years younger than Ṣalāḥ al-Dīn [*q.v.*], he became the latter's personal adviser and one of his most capable army commanders. Already in 565/1169 Taḳī 'l-Dīn proved his military competence when he put a successful end to the siege of Damietta by the Franks, two months after Ṣalāḥ al-Dīn had taken over power in Egypt. During the latter's vizierate, Taḳī 'l-Dīn advised him for instance in Alexandria in 567/1172 in the question of developing and realising a strategy for Egypt and the North African coast as far as Barḳa. Later, Ṣalāḥ al-Dīn was to go back on the plan to expand his power towards Ifrīḳiya under his own leadership or that of Taḳī 'l-Dīn. The latter also advised his uncle to rebel openly against the Zangid Nūr al-Dīn b. ʿImād al-Dīn [*q.v.*], a plan which was prudently foiled by Ṣalāḥ al-Dīn's father Yūsuf b. Ayyūb.

It was only after Nūr al-Dīn's death in 569/1174 that Ṣalāḥ al-Dīn assumed full power. Henceforth he entrusted Taḳī 'l-Dīn with important commands, and finally with key positions in his domains. In 571/1175-6 Taḳī 'l-Dīn was governor of Damascus, and as such, accompanied by his son al-Malik al-Manṣūr [*q.v.*], still a child at the time, he assisted Ṣalāḥ al-Dīn during his campaigns in Syria. Meanwhile, two of Taḳī 'l-Dīn's *mamlūks*, Ḳarāḳūsh and Naṣr al-Dīn Ibrāhīm, were on campaigns of conquest in North Africa, which lasted until 582/1186. The actual exploitation of the sources does not permit to decide to what extent Taḳī 'l-Dīn himself wanted to make conquests in Ifrīḳiya at the expenses of the Almohads but could not pursue them as he wished because of other commitments. The chronicle of his son al-Malik al-Manṣūr is reticent on answering this question (*Miḍmār*, 34-8, 53-7, 68-72, 164-8, 292-4, 309-30. The report for the year 578/1182 is missing in the *Miḍmār*).

In 573/1177 Taḳī 'l-Dīn was present at the battle of Ramla [*q.v.*], ill-fated for the Muslims. He bravely resisted the Franks, but lost his youngest son Aḥmad (*Kāmil*, xi, 442), which made him into an implacable hater of the Christians, if Abū Shāma's words are to be believed (*Rawḍatayn*, i, 673-4). Taḳī 'l-Dīn's eldest son Shāhanshāh, favoured by Ṣalāḥ al-Dīn, had been a prisoner of the Templars for seven years, until he was set free against a high ransom and the liberation of all the Templars taken prisoner. In 574/1178 Taḳī 'l-Dīn received from Ṣalāḥ al-Dīn his first dominions in northern Syria, among which were the frontier town of Ḥamāt and its surrounding places, strategically important with respect to Aleppo, then still in Zangid hands, and to Antioch which was in the hands of the Franks. In 575/1179 Ṣalāḥ al-Dīn turned Taḳī 'l-Dīn's tactical competence to his advantage when he, following the other's advice, did not negotiate with the Franks about the surrender of the fortress of Bayt al-Aḥzān; instead, with the money provided for the surrender (100,000 dīnārs), he mustered troops (*Miḍmār*, 24-31). As so often before, Taḳī 'l-Dīn, during the arduous siege and capture of the fortress, showed unusual courage, bravery, urge to attack and loyalty to Ṣalāḥ al-Dīn. He almost died of an injury sustained at this occasion. Shortly before, he had won his greatest victory in the main strategic task entrusted to him, namely to defend the northern frontier of the Ayyūbid realm against the Franks of Antioch and the Rūm Saldjūḳs in Anatolia. With 1,000 men only, he had succeeded in defeating near Ḥiṣn Raʿbān the Rūm Saldjūḳ Ḳilīdj Arslān II [*q.v.*] who was at the head of 20,000 men (Ibn al-Athīr, xi 458).

The *Miḍmār* (43, 60, 93, 95, 105, 106, 110-12, 136, 143, 151, 153) mentions Taḳī 'l-Dīn's military assistance to Ṣalāḥ al-Dīn in the following circumstances: Ṣalāḥ al-Dīn's campaign against Shāh Arman b. Leon, king of Lesser Armenia (576/1180-1); his return to Ḥamāt; the preparation in 577/1181-2 of the campaign against Karak [*q.v.*], occupied by the Templars, and his taking part in Ṣalāḥ al-Dīn's fruitless siege of the fortress in 578/1182; the march of the sultan's army to Damascus; the siege of Tiberias and Baysān [*q.v.*]; the campaigns against al-Ruhā (Edessa) and al-Raḳḳa in al-Djazīra; the siege of al-Mawṣil and the conquest of Naṣībīn; the march against Sindjār, on which his son accompanied him, and the return to Ḥarrān via Ḥamāt after the conquest of the town; the siege of Āmid in 579/1183; the surrender of Aleppo to Ṣalāḥ al-Dīn; the return to

Ḥamāt and the campaigns against Baysān and Karak.

After all these military exploits, Taḳī 'l-Dīn was entrusted with the vice-regency of Egypt in Shaʿbān 579/October-November 1183 (*Miḍmār*, 154-8: *taḳlīd* [*q.v.*] and context; *Barḳ*, 233-5; *Rawḍatayn*, ii, 51-3: investiture of the *wilāya* [*q.v.*]). He also received several *iḳṭāʿ*s [*q.v.*] (his son al-Malik al-Manṣūr, who accompanied him, reports on their revenues, see *Miḍmār*, 154-5). He was also responsible for the education of Ṣalāḥ al-Dīn's son and designated successor al-Malik al-Afḍal [*q.v.*], who was in Cairo. Yet problems arose between tutor and ward. One after the other was summoned to Damascus (*Mufarridj*, iii, 308-9 contains several of Ṣalāḥ al-Dīn's messages to Taḳī 'l-Dīn regarding Egypt). Disappointed and full of bitterness, Taḳī 'l-Dīn considered whether he should not join his *mamlūk*s in North Africa instead of keeping unconditional loyalty to Ṣalāḥ al-Dīn. He arrived in Damascus in 582/1186, where the sultan redistributed crown properties and the most important leading functions. Taḳī al-Dīn complied with Ṣalāḥ al-Dīn's plans and, as compensation for Egypt, he received in northern Syria and al-Djazīra as his possessions Manbidj, Maʿarrat al-Nuʿmān, the former Artuḳid town of Mayyāfāriḳīn [*q.v.*] and Kafar Ṭāb (*Mufarridj*, ii, 177-8, 180-2).

The regions under Ayyūbid control were now connected and directly in the hands of one and the same dynasty. Eastward they stretched beyond the Euphrates. It was in Ṣalāḥ al-Dīn's interest to control and secure this area, so extremely important for recruiting and supplying troops. Al-Mawṣil still was in the hands of a latently hostile vassal, and there was the hidden danger of the Ildeñizids [*q.v.*], of the Rūm Saldjūḳs and, last but not least, of the ʿAbbāsid caliph al-Nāṣir li-Dīn Allāh [*q.v.*] who, like Ṣalāḥ al-Dīn himself, was engaged in an expansive policy in northern Mesopotamia.

At the battle of Ḥiṭṭīn [*q.v.*] in 583/1187, Taḳī 'l-Dīn commanded the right wing, and in the same year the victory of ʿAkkā [*q.v.*] and the conquest of Tibnīn and siege of Tyre occurred (*Rawḍatayn*, ii, 119; *Fatḥ*, 73-4; Ibn al-Athīr, xi, 541-2). In acknowledgement of this loyalty, Taḳī 'l-Dīn was given the ports of Djabala and al-Lādhiḳīya [*q.v.*] which had been reconquered from the Crusaders (Ibn Shaddād, *Sīra*, 89, 94). Thus Ṣalāḥ al-Dīn had put into Taḳī 'l-Dīn's hands all the resources and communications which he needed himself for his campaigns against the Crusaders in northern Syria. Taḳī 'l-Dīn had become the most powerful member of the dynasty in that region and in al-Djazīra. His position of power was only equalled by that of Ṣalāḥ al-Dīn's brother al-Malik al-ʿĀdil [*q.v.*], the vicegerent of Egypt.

The advance of the German Emperor Frederick Barbarossa's army induced Ṣalāḥ al-Dīn to send Taḳī 'l-Dīn to the north in order to watch the Crusaders. Between Djumādā I and Shawwāl 587/June-November 1190, Taḳī 'l-Dīn impeded their advance by brief skirmishes. The situation, at first favourable to him, changed when the siege of ʿAkkā, started by the Franks in 585/1189 as a seemingly hopeless enterprise, dragged on for more than two years. This siege took Ṣalāḥ al-Dīn unaware and unprepared, for ʿAkkā, conquered by the sultan in 583/1187, counted as one of the richest and best-fortified towns of the former kingdom of Jerusalem. In political and economic respects, it had since long outdone Jerusalem, and therefore this siege became a matter of power and prestige for Ṣalāḥ al-Dīn. This is probably the reason why contemporary Ayyūbid and pro-Ayyūbid historiographers impute the fault which had led to the loss of this town, not only to Ṣalāḥ al-Dīn, but also to Taḳī 'l-Dīn, who had been absent at the strategically decisive phase; he thus became the scapegoat.

The Muslim defence of the town was indeed unsuccessful because the troops so urgently requested from al-Djazīra failed to arrive. According to the historiographers, Ṣalāḥ al-Dīn's secretary ʿImād al-Dīn al-Iṣfahānī and Abū Shāma [*q.vv.*] in the first place—and also including Ibn al-Athīr who, though being anti-Ayyūbid, relies in this respect on al-Iṣfahānī's *Fatḥ*—it was mainly Taḳī 'l-Dīn's fault that the troops requested did not appear; he thus caused Ṣalāḥ al-Dīn's defeat (*Fatḥ*, 322, 358, 402-3; *Rawḍatayn*, ii, 186). But they overlooked—or did not want or else not dare to see—that Taḳī 'l-Dīn's reasons for staying away were altogether different from those of the vassals of al-Djazīra, namely the Zangids of al-Mawṣil, of Djazīrat Ibn ʿUmar and of Sindjār, as well as of Muẓaffar al-Dīn Gökbüri of Irbil, and that these reasons cannot be connected.

However, it still requires investigation whether Taḳī 'l-Dīn, loyal until then, instead of recruiting troops in the Artuḳid states of Āmid (Diyār Bakr) and Mārdīn [*q.vv.*], as Ṣalāḥ al-Dīn had ordered him, attacked the vassals there in order to enlarge, against the sultan's will, his own sphere of influence while disregarding the cause of the *djihād*. It is certain that Ṣalāḥ al-Dīn in Ṣafar 587/February 1191, before his nephew and comrade-in-arms struck camp in Syria, entreated him to have the troops arrive in time and not to permit that any event whatsoever occur in the region of Diyār Bakr during his mission, which was not without danger (*Fatḥ*, 322-3). A final conclusion, perhaps with new data, may be reached after all the letters of the Ayyūbid and ʿAbbāsid state chancelleries, now spread all over the world, have been taken into account.

Taḳī 'l-Dīn probably lost control of his enterprise when he tried to penetrate into the unstable and potentially hostile region of the Artuḳid vassals, who in the preceding year had refused military service, and tried to find means for financing the troops destined for Ṣalāḥ al-Dīn by distributing Artuḳid land property as *iḳṭāʿ*. He first conquered the towns of Suwaydāʾ and Ḥānī (*Fatḥ*, 290), possibly while marching on Mayyāfāriḳīn, but then had to defend the latter town against the ruler of Khilāṭ (*Mirʾāt*, fol. 245b. This passage is lacking in the Ḥaydarābād edition), to lay siege to Khilāṭ (*Fatḥ*, 402-3, 405); different version in *Kāmil*, xii, 62-3) and, as a result of this, to attack Malāzgird, 40 km. north of Khilāṭ. The Artuḳid and Ayyūbid troops were thus tied up. The outcome was catastrophic. Taḳī 'l-Dīn died during the siege of Malāzgird on 19 Ramaḍān 587/11 October 1191 (*Fatḥ*, 401-2; *Mufarridj*, ii, 375-9; *Nawādir*, 197-8; *Kāmil*, xii, 63).

It seems that the troops from al-Mawṣil, Sindjār and Djazīrat Ibn ʿUmar were also tied up, independently of Taḳī 'l-Dīn's situation. Djazīrat Ibn ʿUmar was besieged by a local ruler; Gökbüri, for reasons of his own, was not in a position either to send troops to ʿAkkā. These reasons were probably the collapse of Saldjūḳ power in Persia and the attempts at expansion in northern Mesopotamia by the caliph al-Nāṣir li-Dīn Allāh. The disaster of Taḳī 'l-Dīn's expedition in al-Djazīra forced Ṣalāḥ al-Dīn to enter into negotiations with the Crusaders. Taḳī 'l-Dīn's troops accepted his son al-Malik al-Manṣūr Muḥammad [*q.v.*] as his successor.

It is not easy to assess Taḳī 'l-Dīn's personality. He was certainly brave, courageous, daring and

impulsive, and as harsh against non-Muslims as pious in practising the *sharīʿa*. In Alexandria he studied *ḥadīth* with famous traditionists (*Takmila*, i, no. 150). His important foundations (*waḳf*) in Cairo, in Fayyūm and in al-Ruhā (*Wafayāt*, iii, 456, no. 501) were famous. He had the lower and upper town of Ḥamāt, his residence, walled and the citadel on a hill near the curve of the Orontes fortified. He wrote poetry (quoted in *Mirʾāt*, fols. 245b-246b), and his *dīwān* was appreciated by Ibn al-Dawādārī and Abu 'l-Fidāʾ (*Kanz al-durar*, vii, 91; *Taʾrīkh*, iii, 84).

(ANGELIKA HARTMANN)

AL-MUẒAFFAR B. ʿALĪ, commander (*ḥādjib*) high in the service of the local ruler of the Baṭāʾiḥ [*q.v.*] or marsh lands of lower ʿIrāḳ, ʿImrān b. Shāhīn [*q.v.*], and then petty ruler there during the second half of the 4th/10th century. After ʿImrān's death in 369/979, al-Muẓaffar set aside his sons and set up a grandson, a minor called Abu 'l-Maʿālī (373/983-4). He himself in practice exercised all power, although he set up further puppet rulers of the line of ʿImrān until his own death in 376/986-7, after which al-Muẓaffar was succeeded in the Baṭāʾiḥ by a nephew under the title of Muhadhdhib al-Dawla as tributary to the Būyid ruler of Fārs and ʿIrāḳ Sharaf al-Dawla b. ʿAḍud al-Dawla.

Bibliography: Ibn al-Athīr, ed. Beirut, ix, 30-1, 50.

(ED.)

MUẒAFFAR AL-DĪN SHĀH ḲADJĀR, Shāh of Persia, the fifth ruler of the dynasty, was born at Tehran on 25 March 1853, and was the fourth son of Nāṣir al-Dīn Shāh [*q.v.*]. His mother was Shukūh al-Salṭana, a daughter of Fatḥ ʿAlī Mīrzā and a granddaughter of Fatḥ ʿAlī Shāh. Two older sons of Nāṣir al-Dīn were appointed *walī ʿahd* before Muẓaffar al-Dīn, Muʿīn al-Dīn being the first in 1849. On his death on 6 November 1856, Muḥammad Ḳāsim received the title, but he too died as a child on 29 June 1858. It was then that Muẓaffar al-Dīn became *walī ʿahd*. (The designation of Muḥammad Ḳāsim was rather unusual, for his mother was not a Ḳādjār princess.) At the age of twelve Muẓaffar al-Dīn was appointed Governor of Ādharbāydjān. It was believed, for a time, that his elder half-brother Masʿūd Mīrzā (Ẓill al-Sulṭān) or a younger one, Kāmrān Mīrzā (Nāʾib al-Salṭana) might be tempted to contest Muẓaffar al-Dīn's succession, but no challenge was forthcoming when Nāṣir al-Dīn was assassinated on 1 May 1896. Muẓaffar al-Dīn was crowned in Tehran on 8 June 1896, and he died there after suffering much illness on 6 January 1907. He was married several times. The wife who gave birth to his heir Muḥammad ʿAlī Shāh [*q.v.*] on 21 June 1872 was Umm al-Khāḳān. She was the daughter of Muḥammad Taḳī Khān (Amīr Kabīr) and ʿIzzat al-Dawla, a sister of Nāṣir al-Dīn Shāh; but Muẓaffar al-Dīn had divorced her before he became Shāh. On his death he left at least five more sons and twelve daughters.

Muẓaffar al-Dīn's reign was not a happy or auspicious one. When he came to the throne Persia was in a very difficult situation. The country was the focus of intense and growing rivalry between Britain and Russia, central government control over the outlying provinces was weak, and less and less tax revenue was reaching the Treasury. Corruption and venality were widespread in both central and provincial government. The army had fallen into serious decay, and the only effective and reliable body of men was the Cossack Brigade which had been established by Nāṣir al-Dīn in 1878. Soldiers from that force escorted Muẓaffar al-Dīn from Tabrīz to Tehran on his father's assassination, and their role in maintaining a minimal degree of law and order in the capital was crucial, but during Muẓaffar al-Dīn's reign the number of men in the Cossack Brigade never exceeded 1,800. Little sustained and effective administrative, economic or educational reform had been achieved, and a small, but steadily growing, number of Persians were beginning to realize the extent of their country's backwardness and to call for change.

Muẓaffar al-Dīn's character and personality were ill-suited to the tasks of governing so troubled, and potentially turbulent, a country. He was by nature shy, timid and vacillating. He was also sentimental and inclined to be rather superstitious. Several people who knew Muẓaffar al-Dīn well remarked upon "his nervous disposition", and this was in no way reduced by the manner of his father's death. Muẓaffar al-Dīn suffered poor health from an early age, and his sense of hypochondria was well-founded. His most serious illnes was a recurrent kidney infection, but he also suffered from several other conditions, including a weak heart. Despite this, he shared the love of many of his ancestors for riding and hunting and was a good shot. His education was largely traditional, and he had a great fondness for classical Persian poetry and a great love for Persian gardens. As a youth at Tabrīz he had had some European tutors, and while he learned French he was never very confident using that language.

When Muẓaffar al-Dīn ascended the throne he rapidly became aware of the depleted state of the Treasury, and in 1897 he accepted one of the Ṣadr-i Aʿẓam's (Amīn al-Dawla) schemes for administrative reform, namely, the employment of Belgian officials to re-organise and run the country's Customs service. The first of those experts arrived in March 1898 (see

A. Destrée, *Les fonctionnaires belges au service de la Perse 1898-1915*, Tehran-Liège 1976). The reforms introduced were certainly effective, but they were also unpopular. The central government soon began to receive greater income, but the merchants gained little benefit from the higher dues which they now had to pay, while members of the religious classes objected to Christians levying taxes on Muslims. For many Persians, the growing number of Belgians in the country, and the wider range of tasks which they began to undertake, were further evidence of their country's unwelcome subservience to foreign powers. Even the efforts of the Belgians could not meet the government's need for more money and two substantial loans were raised from Russia in January 1900 and April 1902. These further strengthened the view of many Persians that the S̲h̲āh was prepared to sell their country to foreign powers.

Some of the money raised by the Customs reform, and the two loans, was used to make good serious arrears in pay which were owed to some members of the army, but much of the money was also used for the payment of inflated pensions to corrupt officials. One of the other sources of wasteful expenditure was the responsibility of the S̲h̲āh, for Muẓaffar al-Dīn had, like his father, developed a fondness for visiting Europe; he made three journeys there in 1900, 1902 and 1905. While there were medical reasons for these visits, they were, nevertheless, extravagant and expensive; they also gave the S̲h̲āh opportunity to indulge both his curiosity in mechanical inventions, and his sometimes lavish generosity. The first journey, but not apparently the others, resulted in a travel diary similar to the two produced by his father, *Safarnāma-yi Mubārak-i S̲h̲āhans̲h̲āhī* (first edition Tehran 1901, several later editions, Tehran and elsewhere; see G.M. Wickens, *Shah Muzaffar al-Din's European tour, A.D. 1900*, in E. Bosworth and Carole Hillenbrand (eds.), *Qajar Iran: political, social and cultural change, 1800-1925*, Edinburgh 1983, 34-47).

Muẓaffar al-Dīn's first journey was supposed to include time in England, but the sudden death of one of Queen Victoria's children meant that part of the journey had to be abandoned. When the S̲h̲āh did reach England in August 1902, the visit was marred by King Edward's refusal to bestow the Order of the Garter on the Persian monarch (see Sir Denis Wright, *The Persians amongst the English, episodes in Anglo-Persian history*, London 1985, ch. 14). In February of the following year, a special British envoy, Lord Downe, conferred that honour on the S̲h̲āh in Tehran. The timetable of the 1902 European visit was drawn up to meet Muẓaffar al-Dīn's express wish not to be in France on the 14th of July.

Between his second and third visits to Europe, Persia experienced a severe epidemic of cholera (see R.M. Burrell, *The 1904 epidemic of cholera in Persia: some aspects of Qajar society*, in *BSOAS*, li/2 [1988], 258-70). When the disease reached Tehran in late June 1904, Muẓaffar al-Dīn quickly left the city for a camp in the hills near Ṭāliḳān. After cases of cholera were confirmed in the vicinity of that camp, Muẓaffar al-Dīn immediately sought to flee the country; and it was only under intense pressure from the Ṣadr-i Aʿẓam and his two British doctors that the S̲h̲āh was persuaded that such a course of action was likely to be as politically dangerous to his tenure of the throne as it was medically unnecessary, and the scheme was abandoned. The outbreak of cholera also meant that many Belgian officials, as well as British ones along the Persian Gulf coast, were active in trying to enforce measures which would limit the spread of the epidemic, and this too increased their unpopularity with many Persians.

As well as raising foreign loans and increasing the revenues from the Customs administration, Muẓaffar al-Dīn's government also had resort to another economic device used by his father, the sale of commercial concessions to foreign entrepreneurs. Some of these brought little benefit to Persia, but it should be remembered that it was Muẓaffar al-Dīn who, on 28 May 1901, signed a petroleum exploration concession with William Knox d'Arcy which later led to the emergence of the country's oil industry.

There is clear evidence that the standard of provincial government in Persia declined during the reign of Muẓaffar al-Dīn. In Ād̲h̲arbāyd̲j̲ān, the *walī ʿahd* governed in a very rapacious and greedy manner, as did his half-brother, S̲h̲uʿāʿ al-Salṭana, who held the governorship of Fārs on several occasions (that province had ten changes of governorship between 1896 and 1907). By 1905 it was difficult for the government to find officials who were willing to take up administrative posts in turbulent provinces such as Luristān and ʿArabistān. Further evidence of growing unrest and lawlessness is provided by a series of anti-Bābī attacks in several provinces.

It was against this background that the events of the Constitutional Revolution of 1905 and 1906 unfolded (for their sequence, see DUSTŪR. iv. Īrān). The initial demands for administrative, economic and military reforms could have been met by an active and vigorous S̲h̲āh and they need not have involved any serious challenge to the monarchy's claim to absolute power. But as has been noted, to expect such a response from an ailing and fearful Muẓaffar al-Dīn was to expect too much. By the summer of 1906, some Persians were beginning to demand that Persia should have an elected Parliament and a written Constitution. The speed of political events in Tehran in the latter months of 1906 was remarkable. The rush to create a Parliament and to enact the *Ḳānūn-i Asāsī* (the Fundamental Law) was influenced by fears on the part of the "Constitutionalists" about the deteriorating health of the S̲h̲āh and the likelihood that his successor Muḥammad ʿAlī would quickly seek to reassert the authority of the monarchy. Both anxieties were to prove well-founded. Muẓaffar al-Dīn died barely a week after he had signed the Fundamental Law on 30 December 1906, and the new S̲h̲āh quickly showed himself to be a man more akin in character and temperament to his grandfather than his father.

MUẒAFFAR S̲H̲ĀH [see GUD̲J̲ARĀT].

MUẒAFFAR S̲H̲AMS BALK̲H̲Ī, mediaeval Indian Ṣūfī master.

Born of a family from Balk̲h̲ in Afg̲h̲ānistān, the date of his birth is unknown, but may have been in the decade of the 720s/1320s. After an education in Dihlī, he joined his father in Bihār S̲h̲arīf. His intellectual disposition led him to become a disciple of S̲h̲araf al-Dīn Aḥmad Manērī (d. 782/1381) [see MAK̲H̲DŪM AL-MULK]) instead of Aḥmad Čarmpūs̲h̲, his father's poetically-inclined but less well-educated guide. Muẓaffar was sent back to Dihlī again for further studies, and then the Tug̲h̲luḳid Sultan Fīrūz S̲h̲āh appointed him lecturer in the royal *madrasa*. After a conversion experience, he returned to Bihār, where S̲h̲araf al-Dīn Manērī continued his spiritual formation. He reached the stage when he felt liberated from all worldly attachments, except from his wife, but exclaimed to his guide that he would divorce her.

Approving of the sentiment, but not of the idea, Sharaf al-Dīn announced that his training was complete.

Muẓaffar was incapable of staying in one place. He journeyed far and wide, spending time in Mecca and eventually dying at Aden in 803/1400. He received more than 200 letters from his spiritual guide Sharaf al-Dīn, of which only 28 are extant (as *maktūbāt-i djawābī*, in Sharaf al-Dīn, *Sih ṣadī maktūbāt*, Lahore n.d., 301-31). There is an extant, though unpublished collection of Muẓaffar's own letters (mss. Khuda Bakhsh Library, Patna, Pers. no. 2619, and Acc. no. 1859/2 (181 letters in each ms.); a third ms. in the private library of Balkhī Ṣāḥib, Patna), and a small *dīwān* (ed. Patna 1959). His compendious commentary on Raḍī al-Dīn Ṣaghānī's *Mashāriḳ al-anwār* (see Brockelmann, I², 443, S I, 613-14) has not come to light. Although he was the chief successor to Sharaf al-Dīn Manērī, he is more remembered as an intellectual than as a spiritual guide. He was succeeded in this latter role by his nephew Ḥusayn.

MUẒAFFARIDS, one of the successor dynasties which arose in Kirmān, Fārs and ʿIrāḳ-i ʿAdjam following the disintegration of the Īlkhānid empire. Their ancestor, Ghiyāth al-Dīn al-Ḥādjdjī, was allegedly a member of an Arab family from Khʷāf, in Khurāsān, who during the Mongol advance had migrated to Yazd and entered the service of its *atabeg*. His grandson Sharaf al-Dīn al-Muẓaffar was entrusted with the towns of Maybud and Nadūshan; but he was subsequently presented to the Īlkhān, receiving the office of *yasaʾul* or chamberlain, then the command of a thousand (*hazāra*), and later still the task of guarding the roads from Ardistān to Kirmānshāh and from Harāt (not to be confused with the famous city in Khurāsān) to Marwast and Abarḳūh. In 707/1307-8 the hostility of the great *wazīr* Rashīd al-Dīn Faḍl Allāh [*q.v.*] obliged him to return to Yazd.

His son, Mubāriz al-Dīn Muḥammad, who inherited Sharaf al-Dīn's offices in 713/1314, was the real founder of the dynasty. In 718/1318-19 he collaborated with the Īndjūid [*q.v.*] Kay Khusraw b. Maḥmūd Shāh in the overthrow of the last *atabeg* of Yazd, Ḥādjdjī Shāh b. Yūsuf Shāh, and in 719/1319-20 was recognised as governor of Yazd by the Īlkhān Abū Saʿīd. After Abū Saʿīd's death in 736/1335, and the outbreak of conflict between the great *amīrs*, he repulsed an attempt on Yazd by the Īndjūids and gave his allegiance to the Čūbānid [*q.v.*] warlord Pīr Ḥusayn. Rewarded with the governorship of Kirmān, Mubāriz al-Dīn in 740/1339-40 wrested the province from its ruler, Ḳuṭb al-Dīn b. Nāṣir al-Dīn b. Burhān; the latter briefly recovered it with the aid of the Kartid [*q.v.*] *malik* of Herat, but was definitively expelled in Djumādā II 741/November-December 1340. Bam was occupied a few years later following a protracted siege, and Mubāriz al-Dīn was able also to levy tribute on the rulers of Hurmuz, although he had to compete with the Īndjūids.

During the first half of his reign, Mubāriz al-Dīn was faced with repeated bids by the Īndjūid Shaykh Abū Isḥāḳ on Kirmān and Yazd. He had, however, gained the upper hand by 754/1353, when he took Shīrāz from his rival. In 757/1356 Iṣfahān in turn fell to the Muẓaffarid forces, and Shaykh Abū Isḥāḳ was captured and put to death. Prior to this, in 755/1354, Mubāriz al-Dīn's army had suppressed the principality of Shabānkāra in western Fārs. But his efforts further to expand his dominions by profiting from the overthrow of the Čūbānids by the Golden Horde were unsuccessful. Invading Ādharbāydjān in 758/1357, he defeated the Golden Horde general Akhīčūḳ, but was soon compelled to abandon the region to the Djalāyirids [*q.v.*]. His favour towards a grandson, Shāh Yaḥyā, caused friction with his sons, who in conjunction with their cousin Shāh Sulṭān deposed and blinded him on his return to Iṣfahān in Ramaḍān 759/August 1358. He died in Rabīʿ I 765/December 1363-January 1364.

Already under Mubāriz al-Dīn, the Muẓaffarid dominions were parcelled out as appanages for various princes of the dynasty. His eldest son, Shāh Muẓaffar, who predeceased him in 754/1353, is found in charge of Yazd (Kutubī, 26), and after the capture of Shīrāz, which became the capital, Kirmān was granted to the second son, Shāh-i Shudjāʿ (for the correct form of the name, see J. Aubin, *La fin de l'état sarbadâr du Khorassan*, in *JA*, cclxii [1974], 101-2, n. 32). After Mubāriz al-Dīn's deposition, this practice was retained, but led to constant internecine strife. Initially Shāh-i Shudjāʿ became the head of the dynasty, with his residence at Shīrāz, while of his two younger brothers Shāh Maḥmūd ruled in Iṣfahān and Abarḳūh and Sulṭān Aḥmad held Kirmān; their nephew Shāh Yaḥyā was shortly installed in Yazd. But in 765/1363-4 Shāh Maḥmūd rebelled, repulsed Shāh-i Shudjāʿ's punitive campaign against Iṣfahān, and with the aid of Shāh Yaḥyā and the Djalāyirids drove his brother from Shīrāz. Not until the end of 767/late summer of 1366 was Shāh-i Shudjāʿ, who had meanwhile seized Kirmān, able to reoccupy the city. In 768/1366-7 the threat to move on Iṣfahān secured Shāh Maḥmūd's recognition of his sovereignty, but the conflict continued to surface thereafter, and at the time of his death on 9 Shawwāl 776/13 March 1375 Shāh Maḥmūd was host to Shāh-i Shudjāʿ's son Sulṭān Uways, who had rebelled against his father. Despite the existence of a party within the city which favoured Sulṭān Uways, Shāh-i Shudjāʿ was able to take over Iṣfahān without a struggle.

This was perhaps the pinnacle of his success. Like his father, he endeavoured to conquer north-western Iran, briefly occupying Tabrīz, Ḳarābāgh, Arrān and Nakhčiwān [*q.vv.*] in 776/1375 on the death of the Djalāyirid ruler Shaykh Uways, before the onset of winter obliged him to retreat to Fārs. Nor was he yet free from difficulties with his kinsmen. An attempt to chastise Shāh Yaḥyā in Yazd misfired when the prince commanding the expedition, Shāh Yaḥyā's brother Shāh Manṣūr, went over to the enemy, and Shāh-i Shudjāʿ had to go in person to bring his nephew to heel. Not long afterwards, Shāh Manṣūr, who sought help from the Djalāyirids, was established in Shushtar, whence he attacked Shāh-i Shudjāʿ's ally, the ruler of Lur-i Buzurg [*q.v.*]. Shāh-i Shudjāʿ had just returned from an unsuccessful campaign against Shāh Manṣūr when he died on 22 Shaʿbān 786/9 October 1384.

Shāh-i Shudjāʿ had appointed his son Zayn al-ʿĀbidīn as his successor in Shīrāz and had compensated his brother Sulṭān Aḥmad with the renewed grant of Kirmān. But Zayn al-ʿĀbidīn was destined to enjoy his inheritance for only a brief space. First, Shāh Yaḥyā made himself master of Iṣfahān at the in-

vitation of its populace and even tried to take Shīrāz also. He was shortly expelled from Iṣfahān, however, and Zayn al-ʿĀbidīn put his own governor in the city. A far more formidable threat was posed by the Čaghatays of Transoxiana under Tīmūr-i Lang [*q.v.*], to whom the dying Shāh-i Shudjāʿ had written a conciliatory letter and whose sovereignty was in 787/1385-6 recognised by Sulṭān Aḥmad in Kirmān. On Tīmūr's first invasion of southern Iran in 789/1387, Zayn al-ʿĀbidīn fled towards ʿIrāḳ, only to be captured by Shāh Manṣūr and incarcerated at Shushtar. Tīmūr replaced him in Shīrāz with Shāh Yaḥyā, while Sulṭān Aḥmad and Sulṭān Abū Isḥāḳ ruled in Kirmān and Sīrdjān respectively as the conqueror's subordinates. These arrangements were overturned by Shāh Manṣūr; he took advantage of Tīmūr's withdrawal to advance from Shushtar and wrest Shīrāz from Shāh Yaḥyā, who fled once more to Yazd. Shāh Manṣūr's aggressive activities soon provoked a coalition against him, consisting of Sulṭān Aḥmad, Shāh Yaḥyā and Zayn al-ʿĀbidīn, who had meanwhile escaped from prison and ensconced himself in Iṣfahān. But the allies were unable to act in concert, and their defeat in Ṣafar 793/January-February 1391 permitted Shāh Manṣūr to occupy Iṣfahān and blind Zayn al-ʿĀbidīn. Shāh Manṣūr's efforts to construct an alliance against Tīmūr were unavailing. He spent his last months devastating his relatives' territory, and at length fell fighting against Tīmūr's forces in 795/1392-3. The other members of the dynasty had been well received by the conqueror, but in Radjab 795/May 1393 an order was issued for their execution; Zayn al-ʿĀbidīn and Sulṭān Shiblī were spared in view of their blindness and taken to Samarḳand. Of the Muẓaffarid territories, Fārs and Iṣfahān became the principality of Tīmūr's son ʿUmar Shaykh, and Kirmān was conferred on the *amīr* Edigü Barlās. Later, in the confusion following Tīmūr's death, a son of Zayn al-ʿĀbidīn named Sulṭān Muʿtaṣim attempted to seize Iṣfahān, but was killed in 810/1407-8 or 812/1409-10 (Faṣīḥ-i Khʷāfī, *Mudjmal-i Faṣīḥī*, ed. M. Farrukh, Tehran, 1339 sh./1960, iii, 184, 197).

The Muẓaffarids took pains to display an unimpeachable orthodoxy. Mubāriz al-Dīn acquired a reputation for dour enforcement of public morals, and during his conflict with the Īndjūids sought a legitimate basis for his power. In 755/1354 he did homage (*bayʿat*) to the representative of the puppet ʿAbbāsid caliph at Cairo, al-Muʿtaḍid, whose name he inserted in the *khuṭba* and on the coinage, and received a diploma of investiture; it is possible that he had previously negotiated with a scion of the ʿAbbāsid dynasty in India, though our sole source for this episode, Faryūmadī's continuation of Shabānkāraʾī's *Madjmaʿ al-ansāb* (ed. Mīr Hāshim Muḥaddith, Tehran 1363 *sh.*/1984, 316), may be confused. Shāh-i Shudjāʿ in turn obtained a diploma from Cairo in 770/1368-9.

Cultural life flourished under the Muẓaffarids. Khʷādjū Kirmānī [*q.v.*] dedicated to Mubāriz al-Dīn his *Gawhar-nāma*. Shāh-i Shudjāʿ was himself a man of talent who composed verse, and was the patron of poets, notably Ḥāfiẓ [*q.v.*], and scholars such as al-Sayyid al-Sharīf al-Djurdjānī [*q.v.*]. Yet if the Muẓaffarid era appears as a golden age for men of letters, it is difficult to reject the comment by Tīmūr's biographer Shāmī (i, 135), admittedly a hostile witness, on the damage done to the agrarian economy of southern Iran by the princes' incessant feuds.

MUẒAFFARPUR, a town in northern Bihār State of the Indian Union (lat. 26° 7′ N., 85° 24″ E.), and also the name of a District of which it is the administrative centre; the District covers the ancient region of Tirhut between the Ganges and the southern border of Nepal. The region was attacked in the 8th/14th century by the Muslim rulers of Bengal; in the next century it passed to the Sharḳī rulers of Djawnpur [*q.v.*], and then to Sikandar Lōdī of Dihlī. The town of Muẓaffarpur enshrines the name of its founder, the Emperor Akbar's commander Muẓaffar Khān, *dīwān* or head of revenue and finance [see DĪWĀN. v] and then governor of Bengal and Bihār in the later 10th/16th century, and under the Mughals Tirhut was a *sarkar* of the *ṣūba* of Bihār. Under British rule, there was some unrest around Muẓaffarpur during the Sepoy Mutiny of 1857-8; during this same century it became a great centre for indigo growing.

The town was, until the creation in 1912 of the province of Bihār and Orissa, within Bengal. In 1951 the population of the District was 10% Muslim. The town had in 1971 a population of 127,045, and is now the seat of the University of Bihār.

AL-**MUZANĪ**, Abū Ibrāhīm Ismāʿīl b. Yaḥyā (in the *Fihrist*, Ibrahīm), a pupil of al-Shāfiʿī, the "champion" of the Shāfiʿi school of law, was born in 175/791-2 and lived in Egypt. Although he compiled a celebrated compendium (*mukhtaṣar*) of the writings and lectures of his teacher, he was an independent thinker, who differed from his master on many points but not on the fundamentals (*uṣūl*), as the *Mukhtaṣar* eloquently shows (for example, his master's views are bluntly described as wrong: iv, 26; v, 20; etc.). There is even mention of a special *madhhab* of al-Muzanī (al-Subkī, i, 243; al-Nawawī); in this connection reference may be made to the work of Ibn Suraydj (d. 305/917-18), *Kitāb al-Taḳrīb bayn al-Muzanī wa 'l-Shāfiʿī* (*Fihrist*, 213). His pupils spread al-Shāfiʿī's teaching in Syria, in ʿIrāḳ, and in Khurāsān; among others who attended his lectures was al-Ṭaḥawī, later a Ḥanafī (d. 321/933). The Mālikīs and Ẓāhirīs also conducted disputations with al-Muzanī (*Fihrist*, 201, 218). He died in Miṣr on Thursday, 24 Ramaḍān 264/29 May 878 (so in Ibn Khallikān, quoting Ibn Yūnus, *Taʾrīkh*; the statements in the *Fihrist*, Wednesday, 29 Rabīʿ I, and in al-Masʿūdī, Thursday 24 Rabīʿ I, cannot be right, as the days of the week do not fit) and was buried near the *turba* of al-Shāfiʿī in the cemetery of al-Ḳarāfa at the foot of the Muḳaṭṭam Hills.

His principal work, which al-Nawawī (4) still regards as one of the five most important Shāfiʿī works, is the already mentioned *Mukhtaṣar*; according to the *Fihrist*, there were two editions of it: a larger which had fallen into oblivion by the time of the *Fihrist*, and a smaller which was much read and annotated. *Pace* Heffening's statement in *EI*¹ art. s.v., concerning the longer edition, this no longer exists, according to Sezgin. A version which offers a better text without these additions is given in the Gotha ms., Pertsch, *Katalog*, no. 938 (corresponding to the printed text, i, 3-iii, 254). Of the shorter version, which may be the same as the *Mukhtaṣar al-Mukhtaṣar* mentioned in al-Shīrāzī, Ibn Khallikān and Ibn Taghrībirdī, there exists only a fragment in the Berlin ms. Landberg 561 (corresponding to the printed texts, iii, 64-79, but very much abbreviated) and in a commentary (not the work itself, as Ahlwardt, no. 4,442 says) which belongs at the earliest to the 5th/11th century. It has not so far been possible to identify it with one of the numerous commentaries mentioned in Ḥādjdjī Khalīfa, no. 11,628.

His other works, which have not survived, were, according to Ibn Khallikān and al-Subkī: 1. *al-Djāmiʿ al-kabīr* (also mentioned in Ibn Taghribirdī; quoted in the Landberg ms. 561, fols. 5b and 20b); 2. *al-Djāmiʿ al-ṣaghīr* (also in Ibn Taghrībirdī); these two works do not appear to be the same as the two editions of the *Mukhtaṣar*, as Wüstenfeld thought; 3. *al-Manthūr*; 4. *al-Masāʾil al-muʿtabara*; 5. *al-Targhīb fī 'l-ʿilm* (according to Ḥādjdjī Khalīfa, no. 2,934); 6. *Kitāb al-Wathāʾiḳ* (also *Fihrist* and Ḥādjdjī Khalīfa, no. 14,174) perhaps identical with the book mentioned by Ḥādjdjī Khalīfa, iv, 47, on the *shurūṭ*. Al-Subkī (i, 245) also had seen: 7. *Kitāb al-ʿAḳārib* (also Ḥ. Khalīfa, no. 10,315) in which al-Muzanī propounded 40 questions and which was handed down by al-Anmāṭī (d. 288-901); al-Subkī gives a few quotations; 8. *Kitāb Nihāyat al-ikhtiṣār* (?lost), a very brief work giving for the most part al-Muzanī's own views; quotations are given by al-Subkī.

(W. Heffening*)

MUZĀRAʿA (A.), a legal term denoting a lease of agricultural land with profit-sharing. In this widespread type of verbal or written contract the owner of the land arranges with a husbandman (*ʿāmil*) for the latter to have the use of his land for a specified period, during which the husbandman sows, tends and harvests an agricultural crop. The seed may be provided by either the landowner or the husbandman. When the crop is harvested the two parties to the contract divide the proceeds in agreed shares, the share of the landowner constituting the rent (*udjra*) for the lease of his land.

To comply with the requirements of the *sharīʿa*, the *muzāraʿa* must meet eight conditions: (1) the contracting parties must be of sound mind, but need not be free or of legal majority; (2) the location of the land must be certain (*maʿlūm*), and suitable for tillage during the period of the contract; (3) free access to the land must be allowed to the husbandman; (4) the period of the *muzāraʿa* must be stipulated, and must be long enough for one crop (if the crop has not matured at the expiry of the period stipulated, the husbandman is entitled to a wage until the maturity of the crop, deductible from the share of the landowner); (5) the contract must specify whether the landowner or the husbandman is to provide the seed; (6) the share of the profits accruing to the party who has not supplied the seeds must be specified; (7) the type and species of the seed must be specified; and (8) the shares in the produce must be unallocated (*shāʾiʿ*), *i.e.*, neither party to the contract may take his profits from the

produce from one particular area of the leased land. Unilateral cancellation (*faskh*) of this contract is permitted to the provider of the seeds up to the time they are actually sown; otherwise cancellation may occur (as in any other *idjāra*) (1) through the death of one of the contracting parties (unless the immature crop is still in the ground, in which case the contract persists Until it is mature: the heirs of one party cannot force the other to clear the land until the crop has ripened); or (2) through legitimate excuse (*ʿudhr*), *e.g.*, if a judge orders the sale of the land to pay a debt.

MUZĀWADJA (A.), paronomasia, a play on words consisting in the "coupling" (root *z-w-dj*) of two terms which are similar in external form or in meaning and linked by the conjunction *wa-*. For example: (*bayna-hum*) *hardj wa-mardj* "between them there are disagreements", where the two elements have an independent existence; the same applies, in particular, to the formulas used to express totality: *al-kabīr wa 'l-saghīr*, *al-kathīr wa 'l-ḳalīl*, *al-sahl wa 'l-waʿr*, etc., or additionally, expressions such as *al-ghanīma wa 'l-iyāb* "booty and return (safe and sound)".

Every writer concerned with stylistic expression may take advantage of this procedure and enrich as he pleases the arsenal of clichés at his disposal; as a whole, these go back to the period when Arabic was an exclusively oral and hence expressive language. But even in dialect, where a more vivid use of *muzāwadja* might be expected, the puns thus formed seem rather formalised. L. Brunot (see *Bibl.*) has listed about a hundred examples among which there are some which derive from the classical language, such as (*dār l-ʿərs b-əl-ʿoẓọ̄r w-əl bọ̄ẓọ̄r* "he held an extravagant marriage ceremony", corresponding to the expression *ʿudjaruh wa-budjaruh* "his apparent and hidden faults", in which each of the elements has preserved a valid meaning and may be employed separately, unlike the terms of the dialectal expression, which have lost their original sense. In addition, the "tandem" formed by *muzāwadja*, while being fundamentally an intensive form, sometimes possesses a form totally different from the sum of its components. Thus *lā səbt wā-lā ḥadd* "neither Saturday nor Sunday" = "without a pause"; *b-əl-ḥmāl wa-əž-žmāl* "with the loads and the camels" = "in great quantity". This is also the case, for example, with *maʿṭọ̄ṣ-mənṭọ̄ṣ* (*mən bābāh*) "he is the spitting image (of his father)" (lit. sneezed on).

But here, we are confronted with a particular form of *muzāwadja* known as *itbāʿ*. This figure of speech is essentially constituted by the repetition of a qualifying term to which there is added a metaplasm, i.e., the deliberate alteration of a radical consonant, usually the first, but never the third. The phenomenon is very well described by al-ʿAskarī (*Ṣināʿatayn*, 194) with regard to repetition: "When the Arabs introduce a qualificative (*ṣifa*) and wish to reinforce it (*tawkīd*), they are unwilling to repeat it purely and simply; therefore they change one letter (*ḥarf*) and place the word thus formed after the first. For example, they say *ʿaṭshān naṭshan* ("very thirsty"); not wishing to repeat *ʿaṭshān*, they replace the *ʿayn* with a *nūn*. Similarly, *ḥasan basan* ("wonderfully attractive"), *shayṭān layṭān* ("a veritable demon"), etc. The first element of the new lexical unity is called *matbūʿ* or *mutbaʿ*, and the second *tābiʿ*; sometimes the group is strengthened by a third, as in *ḥasan-basan-ḳasan*; only the first has a genuine existence, but *basan* has, curiously, given birth to a denominative verb, *absana* "to be fair of face".

In principle, a true *itbāʿ* must obey three conditions: (1) It should be performed by simple juxtaposition, without a conjunctive particle; (2) It is characterised by a second element formed by a modification of R¹; and (3), it is denied independent existence in the Arabic lexicon.

The first condition poses no difficulty, since the presence of a particle transfers the couplet into the category of *muzāwadja* examined above. The phoneme replacing R¹ is a labial (*b* or *m*), a nasal (*n*) or a liquid (*l*) in 80% of cases. It happens sometimes that the metaplasm (R¹ > R'¹) points to a second radical which already exists, as in *fāḍiḥ-māḍiḥ* "one who abuses with his slanders", so long as this "root" does not itself derive from a *tābiʿ* detached from its *matbūʿ*. In this respect, an interesting example is presented by *djāʾiʿ-nāʾiʿ* "very hungry", which the *LA* discusses at length, concluding, erroneously, that the word *nūʿ* is independent. In fact, this is a true case of *itbāʿ*, but *nāʾiʿ* has been taken for the second term of a couplet quite naturally expressing thirst after hunger; once detached, this *tābiʿ*, considered as meaning "to be thirsty", has given rise to a substantive, which also figures in a *muzāwadja*: *al-djūʿ wa 'l-nūʿ* "hunger and thirst", and even to a verb *nāʿa/yanūʿ* "to be thirsty".

Finally, two qualificatives which have at least R³ in common and possess similar or complementary senses give the impression of constituting an *itbāʿ* since, being not contradictory and mutually exclusive, they are simply juxtaposed: *mudjarrab-mudarrab* "very experienced", *djāmiʿ-māniʿ* "of unassailable thoroughness", *shāʾiʿ-dhāʾiʿ* "of public notoriety". These are not true cases of *itbāʿ*.

Pellat, *Un fait d'expressivité en arabe, l'*itbāʿ, in *Arabica*, iv/2 (1957), 131-49. (Ch. Pellat)

Muzāwadja is also a technical term in rhetoric, again denoting "coupling", but of two themes conveying comparable effects by means of two parallel expressions, as in these verses of al-Buḥturī (*Dīwān*, Cairo 1329, 317):

idha ḥtarabat yawman fa-fāḍat dimāʾuhā tadhakkarati l-ḳurbā fa-fāḍat dumūʿuhā.

"When (the knights) fight one day and *their blood* flows freely,

they remember their kinsmen and *their tears* flow freely".

MUZAYNA, an Arab tribe. They were reckoned by the genealogists among the sons of ʿAmr b. Udd b. Ṭābikha, of ʿAdnān; the *nisba* is Muzanī. At the time of the Prophet Muḥammad, when Muzayna first becomes visible to the historian, it resided south of Medina and consisted predominantly of poor nomads; some members of the tribe may have resided in small villages in the area. It seems fair to assume that they were dependent on Medina for market goods and, perhaps, occasional employment as herdsmen or labourers. An anecdote about the Prophet reflects Muzayna's close ties with Medina, and with the Prophet. According to it, the latter assigned residences (*manāzil*) and places of prayer (*masādjid*) to every clan of the nomads (*al-ʿarab*) except for Muzayna; when they came to ask him why, he said, "My place of prayer is your place of prayer; you are my nomads (*badw*) and I am your settlement (*ḥaḍar*)". This suggests that the Muzayna were seen as virtual nomadic extensions of the population of Medina itself. The tribe had some famous poets, notably Zuhayr b. Abī Sulmā and his son Kaʿb during the *Djāhiliyya* and Maʿn b. Aws in the early Islamic era; their poetry was favoured by the caliph Muʿāwiya.

Muzayna evidently embraced Islam and allied itself with the Prophet from the beginning of his consolidation of control over Medina. The sources mention individuals of Muzayna as participants on the Muslim side at the battles of Badr and Uḥud, and they played a major role in later campaigns of the Prophet such as Ḥudaybiya, Khaybar, the conquest of Mecca and Ḥunayn. At the conquest of Mecca (A.H. 8), Muzayna is said to have contributed 1,300 warriors (or, according to Ibn Hishām, 1,003) out of a total of 10,000 troops, in any case one of the largest single tribal contingents; only the Anṣār, with 4,000, and Djuhayna, with 1,400 (but al-Wāḳidī says only 800) contributed more. At Ḥunayn, according to al-Wāḳidī, the Muzayna tribesmen were led under three separate banners. Some members of the tribe, such as Maʿḳil b. Sinān, were granted a tract of land (*ḳaṭīʿa*) by the Prophet. Although it offered significant backing to the Prophet and may have been numerous, however, Muzayna does not appear to have been particularly powerful; it is difficult to get a clear idea of its clan structure from surviving information, and no major clans or clan leaders are prominent during the life of the Prophet or in later events.

Muzayna remained loyal to Medina during the *ridda*, and helped Abū Bakr defend Medina against other local tribes who tried to overcome it after the death of the Prophet. With the Islamic conquests, some members of the tribe campaigned outside Arabia in the Muslim armies. Most prominent were those who participated in the conquest of ʿIrāḳ and western Persia. There al-Nuʿmān (b. ʿAmr) b. Muḳarrin, his brother (?) Suwayd, Maʿḳil b. Yasār, Bishr b. al-Muḥaffiz, and others are mentioned in Khālid b. al-Walīd's first raids in ʿIrāḳ, at the decisive battle of al-Ḳādisiyya, at the conquest of al-Madāʾin, in the conquest of southern ʿIrāḳ, at the battle of Nihāwand (especially al-Nuʿmān and his brothers), and at Hamadhān, Rayy, Ḳūmis, Ṭabaristān, and Djurdjān. During the conquest era, some Muzanīs were appointed to district governorships (e.g. of Kaskar or of Djundayshāpur) by the caliph ʿUmar.

Following the conquest of ʿIrāḳ, colonies of Muzayna tribesmen took root in Baṣra and Kūfa. Maʿḳil b. Yasār settled in Baṣra, and the Maʿḳil canal constructed there by Ziyād b. Abī Sufyān is said to have been named after him; in the late first century, Bakr b. ʿAbd Allāh al-Muzanī was a somewhat prominent figure in the town's religious life. Other than these details, however, little information has survived on the Muzayna in Baṣra. As for Kūfa, Sayf b. ʿUmar's account of the original settlement of the town states that Muzayna was allocated a quarter along one of the camp's roads; they were apparently reckoned part of the *ahl al-ʿāliya*, who in Kūfa were called the quarter of Medina. Some Muzayna tribesmen came from Kūfa to back ʿAlī b. Abī Ṭālib before the battle of the Camel (A.H. 36), and in A.H. 65 thirty Muzanīs from Kūfa were among the "Penitents" (*tawwābūn*) who fought to the death in remorse for their failure to support al-Ḥusayn b. ʿAlī. Incidental mentions of the Muzayna quarter during the rebellion of al-Mukhtār (A.H. 66) and of Shabīb (A.H. 76) suggest that they lived on the edge of Kūfa or a little apart from other settlements of the town. Thereafter, we read nothing more of the Muzayna of Kufa; presumably they were assimilated to other groups in the vicinity.

Muzayna appears to have taken no significant part in the conquest of Syria, but some may have been recruited under ʿUthmān to help garrison Egypt. Later, a few prominent Muzanīs (especially the Shāfiʿī scholar Abū Ibrāhīm Ismāʿīl b. Yaḥyā al-Muzanī [d. 264/878]) were active in Egypt; but the Muzanīs of Egypt were always a small group, far outnumbered by the South Arabian immigrants (Khawlān, Tudjīb, Ḥaḍramawt, Maʿāfir, etc.). A settlement of Muzayna tribesmen in Spain, at Baena, *ca.* 60 km southeast of Cordova, may have come from Egypt, or may have come directly from the Ḥidjāz.

The majority of Muzayna appears to have remained for centuries near its home territories in the Ḥidjāz following the rise of Islam. Reports of the severe drought of A.H. 18, by which they were hard hit, reveals that Muzayna was still living near Medina and that the tribe still seems to have consisted mainly of nomads. Some Muzanīs, along with other local tribesmen, participated in the siege of ʿUthmān in Medina at the beginning of the first civil war. In A.H. 145, the Medinans and some local nomadic tribes, including Muzayna, backed the rebellion in the Ḥidjāz of the ʿAlid Muḥammad b. ʿAbd Allāh [*q.v.*] "the Pure Soul" (*al-nafs al-zakiyya*), and a number of Muzanīs were taken hostage by the government. The 4th/10th century geographers mention some places south of Medina, and several farther to the east and north-east along the pilgrim road from ʿIrāḳ, as being in Muzayna territory or as being settlements (*manāzil*) of Muzayna, and Muzayna also appears to have made up part of the population of Medina at this time. Increasingly, however, former Muzayna settlements south of Medina were taken over by the Ṭālibids or by the South Arabian tribe of Ḥarb, which entered the area beginning in the later 3rd/9th century. Ibn Saʿīd al-Andalusī (d. 685/1286-7) states that in his day, the region just south of Medina was no longer Muzayna territory. Like many other tribes between Mecca and Medina, Muzayna joined the Ḥarb tribal coalition; unlike many others, however, Muzayna preserved its old name and its identity as a separate group or clan within Ḥarb. In the latter 10th/16th or first half of the 11th/17th century, a significant part of Muzayna-Ḥarb migrated northwards from the Ḥidjāz into Sinai, where they joined the ʿUḳaylāt and Ṣawāliḥa tribes to form the Ṭawara confederation. Muzayna's territories lay in the southern part of Sinai, where they

lived from the produce of the few oases (Nabk, Dhahab) and from sparse flocks, as well as from transport services. The remainder of the Ḥarb-Muzayna left the area near Medina during the early 19th century, making their way to Wādī al-Rima and Ḳaṣīm in central Arabia, particularly during the wars between Muḥammad ʿAlī Pasha and the Wahhābīs in 1815-16.

(F.M. Donner)

al-**MUZDALIFA**, a place roughly halfway between Minā and ʿArafat where the pilgrims returning from ʿArafat spend the night between 9 and 10 Dhu 'l-Ḥidjdja, after performing the two evening *ṣalāt*s. On the next morning they set off before sunrise and climb up through the valley of Muḥassir to Minā. Other names for this place are *al-Mashʿar al-ḥarām*, from sūra II, 194, and Djamʿ (cf. *Laylat Djamʿ*: Ibn Saʿd, ii/1, 129, l. 6); but Djamʿ, according to another statement, comprises the whole stretch between ʿArafat and Minā, both included, so that *Yawm Djamʿ* (*Kitāb al-Aghānī*, vi, 30 l. 11) is explained as the day of ʿArafat and *Ayyām Djamʿ* as the days of Minā. The rites associated with the night of Muzdalifa go back to the old pagan period, which the Arabs themselves recognise when they make Ḳuṣayy introduce the kindling of the sacred fire in this night and say that guiding of the departure for Minā is a privilege of the family of Adwān.

The sacred place in Muzdalifa was the hill of Ḳuzaḥ [see ḳawṣ ḳuzaḥ]. Even after Muḥammad, in deliberate contrast to the pagan practice, had declared all Muzdalifa to be *mawḳif* [see ḥadjdj, i], this hill retained its ancient sanctity. According to Azraḳī, there was a thick round tower upon it on which the Muzdalifa fire was kindled; in the time of Hārūn al-Rashīd it was a fire of wood; later, it was illuminated with wax-candles. In the Muslim period, a mosque was built about 400 yards from the tower, of which al-Azraḳī gives a detailed description, while al-Muḳaddasī speaks of a place of prayer, a public fountain and a minaret. Burton also mentions a high isolated tower at Muzdalifa, but the illumination in the night of Muzdalifa now takes place on the mosque.

(F. Buhl)

MUZDAWIDJ (a.), a technical term of philology, rhetoric and prosody.

It means among philologists the use of two terms in which the form of one is changed to make it resemble that of the other. For example, in this *ḥadīth* (Ibn Mādja, *Sunan*, Cairo 1313, ii, 246): *irdjiʿna maʾzūrāt ghayr maʾdjūrāt*, "return home laden with sin and not with rewards", the word *mawzūrāt* from the root *w-z-r* has been changed into *maʾzūrāt* to give it the same form as *maʾdjūrāt*. It is similar in the phrases (cf. *LA*, xix, 353): *ghadiyyāt wa-ʿashiyyāt*, *ghudayyānāt wa-ʿushayyānāt*, *bi 'l-ghadāyā wa 'l-ashāyā* "mornings and evenings" in which the form of the first word has been adapted to that of the second.

The *muzdawidj*, among rhetoricians, consists in establishing a kind of alliteration between two adjacent words having the same form, the same metrical quantity and the same rhyme (*rawī*); e.g., in this verse of the Ḳurʾān (XXVII, 22): *wa-djiʾtuka min Sabaʾin bi-nabaʾin* "I have brought thee news from Sabaʾ" where we have the resemblance between *Sabaʾin* and *nabaʾin*. We may give as another example this *ḥadīth* (Ibn al-Athīr, *Nihāya*, Cairo 1911, iv, 291 under *h-y-n*): *al-muʾminūn haynūn laynūn* "Believers are peacable and mild in character" and the phrase (cf. xvii, 280, 331) *hayn layn, hayyin layyin* (cf. muzāwadja).

The object of the *muzdawidj* among poets is to make the hemistichs of a poem rhyme together two by two. As a rule, it is used in didactic *urdjūzas* (like the *Alfiyya* of Ibn Mālik); Bahāʾ al-Dīn al-ʿĀmilī, however, in his *Kashkūl* (Cairo 1302) has used it with the *wāfir* and *ramal* metres (76, 78, 83). In Persian and Turkish, it is called *mathnawī* [*q.v.*]. The court astronomer of the caliph al-Manṣūr, al-Fazārī, composed several didactic *urdjūzas*, some of which at least displayed the rhyme scheme *aaa bbb ccc* etc. According to al-Bīrūnī, *Ifrād al-maḳāl*, Ḥaydarābād 1367/1948, 142-4, he imitated in this the Indian star tables, which were written in the poetic form *shulūk* (*śloka*). Yāḳūt, who quotes the opening of al-Fazārī's *zīdj* poem (*Irshād*, ed. Rifāʿī, xvii, 118-19), calls it a *muzdawidja*, but adds at the end that it consists of repetitions of "three verses" (*thalāthat akfāl*). There is a kind of poem in the *radjaz* metre (and sometimes some verses follow strictly the *sarīʿ* metre) called *muzdawidjāt* (a collection of them was published in Cairo in 1299); they consist of strophes of five hemistichs in which the first four hemistichs rhyme together and the fifth ones have a common rhyme. Sometimes the strophe has only four hemistichs, the first three rhyming together and the fourth rhyming jointly, as in *al-Iʿlām bi-muthallath al-kalām* of Ibn Mālik (Cairo 1329) and *Nayl al-arab fī muthallathāt al-ʿArab* of Ḥasan Ḳuwaydir al-Khalīlī (Būlāḳ 1301). The *ḳaṣīda muzdawidja* was also used for narrative, often historical, poems; the earliest are by Abān b. Lāḥiḳī, ʿAlī b. al-Djahm, Ibn al-Muʿtazz and Ibn ʿAbd Rabbih [*q.vv.*].

MYSORE [see MAHISUR].

MYSTICISM [see TAṢAWWUF].

MYTILENE [see MIDILLI].

MZĀB (MZĀB), a region of the Algerian Sahara which currently corresponds to the *wilāya* of Ghardaia (Ghardāya). It extends over an area of approximately 8,000 km², between latitudes 32° and 33° 20′ N. and longitudes 0° 4′ and 2° 30′E. It has the appearance of a vast stony plain, declining in altitude from 700 m. in the west to 300 m. in the east, intersected by deep and tortuous valleys, whence its name of Chebka (*shabka* = network) of the Mzab. This enormous expanse, travelled by the nomadic tribes of the Chaanba, Mekhadma, Said Otba (Shʿāmba, Mkhādma, Saʿīd ʿUtba), contains five centres of sedentary population. First of all there is the Pentapolis, the heart of the Mzab, with its five cities founded by the Ibāḍīs [*q.v.*] in the 5th/11th century which are strung out along the valley of the wadi Mzab over a distance of some 12 km, from east to west: El Ateuf, Bou Noura, Beni Isguen, Melika and Ghardaia (al-ʿAṭf, Bū Nūra, Bni Isgen, Mlīka, Ghardāya). Situated on the meridian of Algiers, it lies 500 km from the latter as the crow flies (600 km by road). In the 11th/17th century, two new ksour (sing. ksar, *ḳaṣr*, pl. *ḳuṣūr*) were founded: Guerrara (Garāra), 85 km to the north-east, then Berriane (Barryān), 40 km to the north of the Pentapolis. The ksar of Metlīlī, 25 km to the south, is a Chaanba fiefdom, closely linked to the Pentapolis. Daya Ben Dahoua (Ḍāyat Ibn (?) Daḥwa) has been developed since the beginning of the 20th century; its palm-groves, cultivated by the Mdabih (Mdābiḥ), grow luxuriantly at a distance of 8 km upstream from Ghardaia. Finally, the most recently established, the oasis of Zelfana, is a site for the sedentarisation of nomads around an area irrigated by deep artesian wells.

The climate of the Mzab is arid with very little rainfall: an annual average of 60 mm over 50 years, with extreme values of 1 mm, recorded in 1895, and of 176 mm. in 1923. Temperatures are mild in winter (11° being the December-January average), although frost sometimes occurs, and even snow in exceptional circumstances. In summer, they rise to an average of 34° C. for July, with a maximum of 50°. The daily amplitude can then be in excess of 20°. The dryness of the atmosphere and the intensity of evaporation prevent the growth of any vegetation other than a variety of coarse grass (*ʿishb*) which flourishes briefly after rainfall, a few tufts in the base of the wadis, and, especially, irrigated crops in the oases. All life is thus dependent on hydraulic resources. These are the flood-waters of the wadis which, diverted by dams, directly irrigate the date palm plantations and add to the subterranean water-level. In former times, the waters of the wadi Mzab (the name is linked by popular etymology to the Arabic *mīzāb* "gutter"), the wadi Nsa or the wadi Metlili used to flow to distances between a 100 and 200 km before disappearing, but the retention-dams constructed for the benefit of the date palm plantations, to encourage filtration and the building up of subterranean stocks, have tapped considerable volumes of water. The subterranean level is reached by wells to a depth of 20 to 30 m, the height of the water varying considerably according to time of year and place. On the other hand, limestone rocks dating from the Cretaceous period contain water-bearing levels, of the type known as "Albian"; the ceiling is at a depth of 400 m in the Pentapolis, supplying water at a depth of 80 m, which implies pumping onto the surface. In Guerrara and Zelfana this water flows naturally, under strong pressure, which ought to facilitate the irrigation of vast areas, but it is also very hot (45° to 55°) and full of impurities causing sealing or furring-up, which poses formidable problems of exploitation.

The Mzab makes its first appearance in history with the Arab conquest. The Khāridjites, many of them Ibāḍīs, fleeing from persecution on the part of the Umayyads as well as on that of the supporters of ʿAlī, arrived in the Maghrib, founded communities in the Djabal Nefūsa [*q.v.*], in Wadi Rīgh and in Wadi Mya, and probably within a fairly short time converted certain Berber tribes of the Mzab, in particular the ancestors of the Saʿīd ʿUtba, currently Mālikīs, whose nomadic itineraries linked Wadi Mya, Mzab and Sersou, where Tāhart [*q.v.*] was for a century-and-a-half the capital of the Ibāḍī kingdom of the Rustamids [*q.v.*]. In 296/909, the last Rustamid *imām* took refuge at Isedraten (Sedrata), a confederation of ksour founded at the end of the 1st/7th century, probably some eight km from what is currently Ouargla (Wārgla < Wārgilān). But the prosperity of the Wadi Mya attracted too much envy: an entrepôt and a northern gateway to the desert, dealing in gold, slaves, cereals, leather and dates, the oasis was too accessible to outside interference, to such an extent that from the beginning of the 5th/11th century the Ibāḍīs began to establish new communities, in the heart of the labyrinth of the Chebka, among their "Beni-Moçab" (Bni Muṣʿab) co-religionists. Tajnint/El Ateuf was founded in 402/1012, At Bounour/Bou Noura in 437/1046 or 440/1048, At Tisjen/Beni Isguen in 440/1048 or 445/1053 and Taghardayt/Ghardaia in 445/1053 or 478/1085. Regarding At Amlight/Melika, the sources are more contradictory: a first ksar was constructed at the base of the slope, around 442/1050; having been destroyed, it was rebuilt on the summit, either in the 6th/12th or the 7th/13th century. In the 11th/17th century, the *djamāʿa* of Ghardaia decided to prohibit any new construction upstream in the valley of the wadi Mzab, to protect its date palm groves from the damage caused by lack of flood-water, such damage having already been inflicted on the trees of Melika and El Ateuf (the groves of Beni Isguen and of Bou Noura, in the neighbouring valleys, were less affected). Under the pressure of demographic growth, it became necessary to found new settlements further afield: Lagara/Guerrara, in 1630, in the valley of the wadi Zegrir and Berriane in 1090/1679 in that of the wadi Nsa. Isedraten was destroyed in 467/1075, and the majority of its inhabitants reached the Mzab, the others taking refuge at Ouargla.
